IN THE UNITED STATES DISTRICT COURT  
FOR THE DISTRICT OF COLUMBIA

FEDERAL TRADE COMMISSION, . Docket No. CA 97-0701  
Plaintiff, . Washington, D.C.  
v. . May 20, 1997  
STAPLES, INC., . 9:15 a.m.  
and  
OFFICE DEPOT, INC.  
2200 Old Germantown Road  
Delray Beach, FL 33445  
Defendants.

TRANSCRIPT OF TRIAL  
BEFORE THE HONORABLE THOMAS F. HOGAN  
UNITED STATES DISTRICT JUDGE

APPEARANCES:

For the Plaintiff: GEORGE S. CARY, ESQ.  
U.S. Federal Trade Commission  
6th and Pennsylvania Ave., N.W., H-374  
Washington, D.C. 20580  
MELVIN H. ORLANS, ESQ.

1 P R O C E E D I N G S

2 THE COURT: Good morning, counsel.

3 THE DEPUTY CLERK: Civil action 97-0701, Federal  
4 Trade Commission v. Staples, Inc. et al. Counsel, please  
09:36 5 identify yourselves for the record, beginning with your  
6 names.

7 MR. CARY: George Cary for the Plaintiff, U.S.  
8 Federal Trade Commission. At counsel table with me are  
9 Robert Doyle, James Fishkin, Mel Orlans, and our first  
09:36 10 witness for the morning.

11 THE COURT: Thank you. Good morning.

12 MR. KEMPF: Don Kempf for the Defendants. And with  
13 me are my partner Gene Assaf, who will conduct the  
14 cross-examination of the first witness this morning. And  
09:36 15 then the usual suspects: Mr. Curran, Mr. Gidley, Mr. Smith,  
16 our client Mr. Stenberg and Mr. Fuente. And the young woman  
17 back there is Stacy Saponja, who is one of our legal  
18 assistants. I think I introduced Mr. Prentice over in the  
19 chair, there, who helped with the charts yesterday.

09:36 20 THE COURT: Thank you. I understood there is a  
21 preliminary matter. Do counsel want to talk about it at the  
22 bench or in open court? Doesn't matter to me.

23 MR. CARY: I think we can handle it in open court.

24 THE COURT: As long as you are not getting into  
09:37 25 some confidential matters.

1           MR. CARY: It is not confidential. We think we  
2 have resolved it. The issue has to do with the  
3 econometrician, experts Dr. Hausman and Professor  
4 Ashenfelter. As Your Honor might recall, we had a discussion  
09:37 5 during the course of Professor Ashenfelter's deposition with  
6 respect to the distinction between his case-in-chief  
7 testimony and his rebuttal testimony.

8           We received last night -- as part of that  
9 discussion, it was represented by counsel that Mr. Hausman  
09:37 10 was completed with his work and would be doing no further  
11 work. Last night we received a computer disk. I have no  
12 idea what is on it, because it was in a computer disk form.  
13 There was no printout associated with it, but it purported to  
14 be some additional work that Professor Hausman had done in  
09:37 15 response to Professor Ashenfelter.

16           So what we have is a situation where Professor  
17 Hausman did some work and Professor Ashenfelter responded to  
18 it, and Professor Hausman responded to that. Professor  
19 Ashenfelter said at his deposition he would respond to that.  
09:38 20 And now, two days before Professor Hausman is to testify, he  
21 has come up with some new work.

22           Counsel and I have discussed it, and we believe  
23 that the -- that we have resolved it in the following way.  
24 Professor Ashenfelter will be deposed before his rebuttal  
09:38 25 testimony, which will be on Friday. Professor Hausman will

1 be deposed before his testimony in defense, which will be on  
2 Thursday. So that means Wednesday night, and then that  
3 material can come in. Now, there is --

4 MR. GIDLEY: Let's be clear here about why we are  
09:38 5 at the podium. Last night was a busy night. I received at  
6 10:00 two new analyses from Dr. Ashenfelter, first an update  
7 of his so-called pass-through analysis. At the deposition I  
8 had examined him on a 30 SKU version of that analysis. Last  
9 night I received a brand-new study, a 49 SKU analysis. It is  
09:38 10 different. It's a different study, and I would like to  
11 examine him before he stands up in open court this morning.  
12 I have not had a chance to read it through carefully. It's  
13 just a bunch of computer runs.

14 The second thing that I received last night for the  
09:39 15 first time is another pricing regression, and I have had no  
16 opportunity to depose Dr. Ashenfelter.

17 We did produce last night rebuttal diskettes from  
18 Dr. Hausman in response to Dr. Ashenfelter, and how we deal  
19 with that I think is a separate issue. We are perfectly  
09:39 20 willing for Dr. Hausman to stand for deposition, because we  
21 don't fear that. And we see that we need some kind of  
22 orderly process here, and that is exactly what we  
23 contemplated.

24 But at the deposition last week, we asked very  
09:39 25 clearly that we be limited in the direct today, and it was

1 only last Wednesday that we were in deposition to the 30  
2 SKU study and the pricing regressions that were done. And I  
3 think that is a very reasonable limitation. If they want to  
4 bring Dr. Ashenfelter back with some new work later in this  
09:39 5 week, we can have an intervening deposition.

6 MR. CARY: Let me provide the Court with a little  
7 bit of additional background here. The problem that we have  
8 had from the beginning in this case is that the parties  
9 control the data. They are the ones that have the numbers in  
09:40 10 terms of what their prices are, what their sales are, et  
11 cetera. And what they have done from the beginning of this  
12 process is to dribble it out in a way that is self-serving,  
13 in a way that controls -- that supports their conclusions.

14 Now, what has happened here is that Professor  
09:40 15 Hausman originally gave us some data. We looked at that and  
16 figured out the problems. He said, no, no; here is some more  
17 data we got from the parties. These 46 SKUs, for example, is  
18 a perfect example of that. All Professor Ashenfelter did was  
19 say, Just give me the data, and I will pump through and do  
09:40 20 what I can do with it. They have provided this data very  
21 recently; and he said, Okay, I will run the same analysis  
22 that I ran before.

23 With respect to the other study, again, Professor  
24 Hausman came up with this thing and Professor Ashenfelter  
09:40 25 said, Fine, bring on the data and I will run my analysis.

1 Trouble is, there is always a lag between when we get the  
2 data and when he can complete the analysis. And that's  
3 what's driving the process.

4 MR. GIDLEY: In my country, Your Honor, and I think  
09:41 5 it was your ruling at the deposition, we should have the  
6 opportunity, given the complexity and seriousness of the  
7 manner here before us, to depose an expert before he  
8 testifies to a study.

9 THE COURT: Let me make sure I understand the  
09:41 10 problem first. The first, we had a problem with Hausman, and  
11 that will be attempted to be reconciled, for producing this  
12 material yesterday sometime.

13 And now the Defendants are saying that they have a  
14 problem with today's witness. Is he on today?

09:41 15 MR. GIDLEY: Yes.

16 THE COURT: Because he produced a new study.

17 MR. GIDLEY: Two new studies, Your Honor.

18 MR. CARY: Let me make this very clear. What he  
19 has done is he set out to duplicate the analysis that  
09:41 20 Professor Hausman has done. And he is prepared to testify as  
21 to what happens when you duplicate that analysis. The  
22 problem is that the parties provide additional data and they  
23 use the additional data that they didn't give us previously  
24 as a way to argue that his analysis is wrong. What he has  
09:42 25 done is taken the additional data that he received about a

1 week ago from these parties and he has run the same analysis  
2 on that new data. And he is prepared to testify that the  
3 conclusion doesn't change.

09:42 4 THE COURT: Do you have any other witnesses here  
5 today?

6 MR. CARY: Yes, Your Honor, we do.

7 THE COURT: Well, it seems to me Defendants should  
8 have a chance to look at this study that was just done  
9 yesterday, apparently, or supplied yesterday, before he  
09:42 10 testifies about it. I do not want to delay the case and I do  
11 not want to start these depositions any more than we have  
12 already allowed in mid-trial. It is getting far too late.

13 On the other hand, if this material was just  
14 supplied, I think the experts are right to look at it and use  
09:42 15 it. If the Defendants want a couple of hours to look at the  
16 study and review it with their expert before Dr. Ashenfelter  
17 testifies, I will give them a chance to do that. And we can  
18 take up another witness in the meantime and have him come  
19 back and testify. I won't stop his testimony and have a  
09:43 20 deposition taken at this point.

21 MR. CARY: Thank you, Your Honor.

22 MR. GIDLEY: All right, Your Honor.

23 THE COURT: If you want to regroup and call someone  
24 else for an hour or two for the Defendants to look through  
09:43 25 this new study and talk to their expert about it, we can do

1 that. I will put another witness on instead until later  
2 today and then we can call Dr. Ashenfelter back.

3 MR. CARY: We will be happy to make Professor  
4 Ashenfelter our last witness.

09:43 5 THE COURT: All right.

6 MR. DOYLE: Your Honor, the Commission calls Robert  
7 Gellman of the Tandy Corporation. Mr. Gellman is represented  
8 by Ray Hill of Tandy Corporation, Your Honor.

9 THE COURT: Also, I received over the evening  
09:43 10 recess several Third Party or witness -- potential witnesses,  
11 filings to keep certain matters confidential under seal. And  
12 I assume that counsel have gotten all of those as well. I  
13 think the rules should be these people who filed these  
14 materials should contact counsel on both sides to find out if  
09:44 15 these materials are going to be used or not. And if they  
16 are, then alert the Court so we can take up that issue before  
17 the testimony comes in or the documents are referred to.  
18 Because I don't have any idea that these people -- that these  
19 documents will be used in the trial or not. So counsel have  
09:44 20 to be advising the people who are concerned. And if there is  
21 a concern, I will take that up before the document or the  
22 witness testifies about it. All right.

23 You can be sworn.

24 THE DEPUTY CLERK: Raise your right hand, please.

25 ROBERT GELLMAN, GOVERNMENT'S WITNESS, SWORN

1 DIRECT EXAMINATION

2 BY MR. DOYLE:

3 Q. Would you state your name for the record, please.

4 A. Robert Gellman.

09:45 5 Q. By whom are you employed, sir?

6 A. Tandy Corporation.

7 Q. How long have you been employed by Tandy Corporation?

8 A. 24 years.

9 Q. Could you tell us what relationship Computer City has to  
09:45 10 Tandy Corporation?

11 A. Computer City is a division of Tandy Corporation.

12 Q. Do you hold a position in Computer City?

13 A. Yes, sir.

14 Q. And your position is what, again, sir?

09:45 15 A. Vice-president, operations.

16 Q. Now, can you tell the Court a little bit about Computer  
17 City. What are the product lines carried by Computer City?

18 A. Computer City is a computer supercenter chain. We carry  
19 a full selection of computer end equipment, and also  
09:45 20 software, accessories, supplies, peripherals, and a full  
21 assortment of services to support our customers.

22 Q. How many stores, sir, does Computer City have?

23 A. 93.

24 Q. And are they located nationwide?

09:45 25 A. We are in the US, Canada, and Europe.

1 Q. When was Computer City founded?

2 A. June of 1991 was when we publicly announced the format.

3 Q. Sir, what are the primary product lines of Computer  
4 City? Can you elaborate on that, please.

09:46 5 A. Certainly. In end equipment we carry desktop computers;  
6 notebooks; printers; other imaging products, such as  
7 scanners; a large selection of software products, from  
8 productivity to entertainment, education; a large selection  
9 of options, peripherals and supplies and accessories.

09:46 10 Q. Have you been with Computer City since its founding in  
11 1991?

12 A. Yes, sir.

13 Q. Can you describe the various positions you have held  
14 since 1991?

09:46 15 A. Initially, I was the western division manager,  
16 responsible for half of the U.S. for the store operations. I  
17 was promoted to vice-president of operations in January of  
18 1993. In August of 1995 was made vice-president of North  
19 American sales. And in January of 1997 I became  
09:47 20 vice-president of operations with expanded responsibilities  
21 for real estate and store planning.

22 Q. Now, when you say that you have responsibility for store  
23 planning, can you elaborate on that, please?

24 A. My department is responsible for all of the things  
09:47 25 necessary to build a Computer City store, from fixture layout

1 to planigrams to retrofits, remodels and the like.

2 Q. If a store was going to be expanded, would you be  
3 involved in that?

4 A. Yes.

09:47 5 Q. If a product line was going to be extended within a  
6 store, a major product line extension, would you be involved  
7 in that, sir?

8 A. Yes, sir.

9 Q. Would you be involved in a major modification of a  
09:47 10 retail store?

11 A. Yes, sir.

12 Q. Are you familiar, sir, with the term "office supplies"?

13 A. Yes, I am.

14 Q. What does that term mean to you, sir?

09:48 15 A. It is a broad definition of the large assortment of  
16 products that could include end equipment such as computers  
17 and office equipment, and supplies, consumable supplies.

18 Q. Now, when you say "consumables," what do you mean by  
19 consumable office supplies?

09:48 20 A. I guess the way I look at it is there is basically two  
21 categories. Computer related; those would be consumables  
22 that would be utilized by computer products, such as  
23 printers. And then non-computer-related, which would be  
24 things like pens, pencils, notebooks, Post-it notes, et  
25 cetera.

1 Q. And pens, pencils and Post-its and notebooks, you would  
2 consider to be non-computer-related consumables?

3 A. Yes.

4 Q. Let me ask you this, sir. With respect to the end  
09:49 5 products that you talked about, which are within your  
6 definition of office supplies, could you elaborate on those  
7 products as well?

8 A. It certainly includes computers, printers. It would  
9 include options and peripherals, fax machines,  
09:49 10 telecommunications equipment. And certainly durable products  
11 also, whether they be cassette cases or other products that  
12 are utilized to hold consumable products.

13 Q. So you look at office supplies as durables and  
14 consumables, if I could use your terminology; is that right?

09:49 15 A. They are both within that category, yes, sir.

16 Q. Let me ask you a couple of questions, sir, about the  
17 consumable category. With respect to the consumable  
18 category, I think you said there is a computer-related and a  
19 non-consumer-related consumable category. How many product  
09:49 20 Stock Keeping Units does Computer City have within the  
21 computer-related-consumable office supply segment?

22 A. We carry a little over 200 SKUs that could be considered  
23 computer-related supplies, the majority of which are  
24 consumable; not all of which are consumable.

09:50 25 Q. On the other side, sir, the non-consumer -- the

1 non-computer-related consumables, how many Stock Keeping  
2 Units does Computer City carry in that category?

3 A. Insignificant. I can't think of one, offhand.

4 Q. Those are pens, paper, Post-its; can you elaborate on  
09:50 5 that?

6 A. Paperclips, staplers, the kind of products that you  
7 would find in an office that are not necessarily tied into a  
8 computer.

9 Q. Now, sir, does Computer City have a marketing goal that  
09:50 10 it likes to project to the public?

11 A. Well, our mission statement and our strategy is to do a  
12 great job of providing computer products and solutions to the  
13 experienced computer user. And we are targeting primarily  
14 the "SOHO" customer, the small office, home office customer.

09:51 15 Q. Sir, did there come a time in the 1991-92 time frame  
16 when Computer City expanded into the non-computer-related  
17 consumable office supplies?

18 A. In late 1991 we opened our first eight stores. We were  
19 certainly testing a lot of different products to see what our  
09:51 20 customers would purchase. Included in that assortment were  
21 less than 20 consumable non-computer-related products, like  
22 Post-it notes, Bic pens. We also carried at one time or  
23 another chocolate diskettes. We had a gift shop where we  
24 sold computer-related clothes. All of these were tests to  
09:52 25 find out whether our customers would pick those products up

1 while they were in our store buying other things.

2 Q. Can I ask you to focus on the non-computer-related  
3 consumables that the company expanded into the '91-92 time  
4 frame. Were you involved in that decision?

09:52 5 A. Yes.

6 Q. Can you tell us what motivated the company to move into  
7 that category?

8 A. It was purely a test to determine whether customers,  
9 while they are in the store buying computers, would also pick  
09:52 10 up, impulsively, unrelated consumable office supplies.

11 Q. Was that expansion a successful expansion for Computer  
12 City, sir?

13 A. We discontinued carrying those items sometime in 1992,  
14 because we weren't able to price it competitively. We were  
09:53 15 only eight stores, and we are not able to get the purchasing  
16 economies that would allow us to price it competitively and  
17 felt if we were extremely overpriced compared to the market,  
18 it sent out a bad message to our customers.

19 Q. What would be the bad message that was sent out to your  
09:53 20 customer if you were unable to price those products  
21 competitively?

22 A. Well, clearly part of our strategy is to provide  
23 competitive prices to our customers. If they come into a  
24 store and see benchmark products that are priced considerably  
09:53 25 higher than what they feel they are worth, where they can buy

1 it at another retailer, that would send out a bad message  
2 that maybe our computers are overpriced or the other products  
3 are overpriced in our store.

4 Q. So the bad message would impact adversely on your core  
09:54 5 business. Is that what you are saying?

6 A. Well, yeah. I mean, the bottom line is we are in  
7 business to make a profit. We have a choice of either  
8 selling the product at little or no gross margin, or selling  
9 it at a price considerably higher than market, because we did  
09:54 10 not have the purchasing capability that our competitors did.  
11 And we elected not to carry it.

12 Q. Now, sir, in or around 19 -- I guess it was April or May  
13 of 1997, did you expand your existing office supply product  
14 line again?

09:54 15 A. Yes, we did.

16 Q. Can you tell the Court about that expansion.

17 A. We have expanded to carry additional computer-related  
18 consumer consumable products like labels that print in laser  
19 or ink jet printer, ink jet cartridges, and a variety of  
09:54 20 other specialty items that would run in a printer. We have  
21 expanded using some additional products from Avery. I think  
22 it is 17 or 18 additional SKUs.

23 Q. I think you said consumer -- I'm sorry?

24 A. Consumer products.

09:55 25 Q. Computer-related consumables; is that right?

1 A. Yes, sir.

2 Q. Now, when you say "computer-related," how does that fit  
3 into your core business?

4 A. Well, again, our target customer is the experienced  
09:55 5 computer user, the "SOHO" customer. They not only buy  
6 equipment, but they also need the supplies to be able to get  
7 functionality out of their purchases. And when they are in  
8 our stores, we are hopeful these are things they are already  
9 buying that they might purchase from us. If we have a  
09:55 10 reasonable assortment at a competitive price, we think we can  
11 get a part of that market.

12 Q. Now, sir, with respect to these computer-related  
13 consumable products that were added in 1997, how many Stock  
14 Keeping Units were added?

09:56 15 A. Approximately 17.

16 Q. Now, sir, are there plans to extend further the number  
17 of Stock Keeping Units in the computer-related-consumable  
18 category?

19 A. We are in a very dynamic business. We are constantly  
09:56 20 looking for additional products that our customers would like  
21 to purchase. So the answer is, we will continue to add  
22 additional products and see whether they are accepted by our  
23 customer.

24 Q. Given your position as vice-president of operations, if  
09:56 25 there was to be an expansion in the computer-related

1 consumable area that required some store configuration, you  
2 would know that, wouldn't you, sir?

3 A. If it was a major addition, yes, sir.

4 Q. Are there plans for that type of store modification  
09:56 5 related to computer-related consumables?

6 A. No, sir.

7 Q. Now, sir, with respect to the non-computer-related  
8 consumables that you tried back in '91-92, are there any  
9 plans at the company to revisit that expansion?

09:57 10 A. We will always revisit it. We have no plans at this  
11 time, but we are always revisiting opportunities to increase  
12 sales and gross margin.

13 Q. Are you aware, sir, of any of the intentions of the  
14 company to expand again into that product line?

09:57 15 A. I am not aware of any at this time.

16 Q. You would know that, wouldn't you, if it required a  
17 store modification?

18 A. Yes, sir, that is correct.

19 Q. Now, sir, based upon your understanding of the company,  
09:57 20 does Computer City plan to become an office supply  
21 superstore?

22 A. No, we do not.

23 Q. Does it have a business plan for the expansion of the  
24 non-computer-related consumables that you tried back in  
09:57 25 1991-92?

1 A. No, we do not.

2 Q. Is there a strategy to move into that area?

3 A. There is no strategy to move into that area. But again,  
4 we will continuously review products that we could add to our  
09:58 5 mix, based on our customers' need.

6 Q. Are you aware of any plans to expand an existing retail  
7 store to accommodate the movement into the  
8 non-computer-related consumable category?

9 A. No, I am not.

09:58 10 MR. DOYLE: Your Honor, I have no other questions.

11 THE COURT: Thank you.

12 MR. ASSAF: Gene Assaf.

13 Good morning, Mr. Gellman.

14 THE WITNESS: Good morning.

15 CROSS-EXAMINATION

16 BY MR. ASSAF:

17 Q. Let's talk a little bit about Computer City's  
18 competition. First of all, you heard the term "category  
19 killer"?

09:58 20 A. Yes, sir.

21 Q. Is Computer City a category killer?

22 A. Certainly my definition of a category killer is someone  
23 that offers a tremendous selection of name-brand products  
24 with competitive prices and all of the services that a  
09:59 25 customer might demand, so they can go into one location and

1 meet all of the needs of that particular niche. And based  
2 upon that definition, yes, sir, we are.

3 Q. Is it fair to say that Computer City is a computer  
4 superstore?

09:59 5 A. That is correct.

6 Q. What are the other computer superstores?

7 A. Certainly the primary competitor is CompUSA and Micro  
8 Center.

9 Q. Can you think of any computer superstores?

09:59 10 A. I cannot think of any other national computer centers or  
11 computer superstores. There are some local players, and by  
12 that I am talking about people where that is their sole  
13 business of selling computer products.

14 Q. So Computer City, CompUSA and Micro Center are the major  
09:59 15 computer superstores nationwide?

16 A. That is correct.

17 Q. Are they -- are Micro Center and CompUSA Computer City's  
18 only competitors in the sale of computer products?

19 A. Absolutely not.

10:00 20 Q. Why do you say that?

21 A. First of all, we compete with anybody that might -- we  
22 compete for anybody that has a dollar to spend. But  
23 certainly as far as our particular products are concerned,  
24 there are consumer electronic chains like Incredible

10:00 25 Universe, which was part of Tandy. Circuit City, Best Buy,

1 Campo on and on, that carry a significant portion of computer  
2 products, supplies, software and accessories. The office  
3 supply supercenters carry a significant amount of computer  
4 end equipment. Wholesale clubs, Wal-Marts, even small  
10:00 5 specialty stores like Radio Shack are competitors to Computer  
6 City.

7 Q. What about regional or local computer stores?

8 A. Certainly you have those. And you have local bars,  
9 resellers, ma-pa shops. Anyone that is selling a computer or  
10:01 10 software or accessories or supplies, we consider to be a  
11 competitor.

12 Q. Let's talk a little bit about Computer City's pricing.  
13 Does Computer City have national uniform prices for every  
14 product?

10:01 15 A. We have national uniform pricing for what I will call  
16 benchmark products for the end equipment and for the majority  
17 of the products that we sell.

18 Q. Well, does Computer City have any price zones where  
19 prices are different in one zone as opposed to another?

10:01 20 A. We do have the systems to be able to have price zones,  
21 but there are many products that are uniform across all five  
22 of the price zones.

23 Q. How many price zones does Computer City have?

24 A. Five.

10:02 25 Q. On the products that -- withdrawn.

1           Leaving aside the products that are uniform in  
2 price across the country, let's talk about the products that  
3 differ within the zones. How does Computer City determine  
4 how price zones differ on certain products?

10:02 5    A. Let me see if I can answer the question this way. The  
6 intent was for us to be able to adjust prices downward in  
7 extremely competitive markets. We used to be in Los Angeles,  
8 which was an extremely competitive market. And we found that  
9 it was necessary to lower our prices below our chain price in  
10:02 10 that particular competitive situation.

11           The reality is that, number one, we have strong  
12 competition in every market that we participate in. And  
13 number two, that our advertising is national in scope, so  
14 when we promote an item we have to have the same price in  
10:03 15 every store. So therefore, even though we have the systems,  
16 the reality is that most of our prices are national.

17    Q. With respect to pricing, does Computer City have a rule  
18 regarding the products that are advertised across price zones  
19 having to have the same price?

10:03 20    A. Yes, we do.

21    Q. So you will never get into a situation where you run a  
22 circular in one city that has a lower price next to a city  
23 that is a different price zone?

24    A. That is correct.

10:03 25    Q. FTC ever complain to you about having different price

1 zones?

2 A. Not that I am aware of, no, sir.

3 Q. So, Computer City's prices are low all the way across  
4 the United States. They are just lower in some markets.

10:04 5 A. That is correct.

6 Q. Let's talk about -- I think Mr. Doyle said  
7 non-computer-related consumable office supplies?

8 A. Okay.

9 MR. DOYLE: Your Honor, I object to that. That was  
10:04 10 not my characterization. It was the witness'  
11 characterization.

12 BY MR. ASSAF:

13 Q. Let's talk about non-computer-related consumable office  
14 supplies. Computer City doesn't sell a lot of those  
10:04 15 non-computer-related consumable office supplies, does it?

16 A. No, they don't.

17 Q. But Computer City sells office supplies, doesn't it?

18 A. We do carry some office supplies.

19 Q. And Computer City sells what you understand to be  
10:04 20 consumable office supplies, doesn't it?

21 A. Consumable and durable.

22 Q. Are some of the things that you sell toner and  
23 cartridges?

24 A. Absolutely, yes.

10:04 25 Q. Diskettes?

1 A. Yes, sir.

2 Q. They are all consumable office supplies?

3 A. Yes, sir.

4 Q. Now, you even recently have added some office supplies

10:05 5 to Computer City's line, haven't you?

6 A. We have -- yes, sir, we have.

7 Q. Would you tell the Court what you have added just

8 recently?

9 A. In the last 30 days we have expanded the line of labels

10:05 10 and other consumables that function in printers by adding 17.

11 SKUs from Avery. And we have added a telecommunications

12 department that carries single and multi-line phones,

13 answering machines, fax machines, cordless phones, and corded

14 phones.

10:05 15 Q. And as we sit here today, isn't it the case that

16 Computer City is right now currently reviewing the potential

17 of adding even more office supplies to serve the needs of its

18 customers?

19 A. To serve the needs of the "SOHO" customer, that is

20 correct.

21 Q. What do you mean by "SOHO" customer?

22 A. It is an industry jargon for the small office, home

23 office segment of the business.

24 Q. And is Computer City committed to the "SOHO" customer

10:06 25 for their office needs?

1 A. We are committed to provide them with computer  
2 solutions. And if while they are in our store to buy those  
3 computer products, we are able to sell them some related  
4 products at a profitable price, we would like to do that.

10:06 5 Q. You have come a long way from Texas, and I would like to  
6 give you an opportunity to tell us a little more about the  
7 story of Computer City. Would you explain to the Court what  
8 Computer City has done in terms of its growth from 1991 until  
9 today.

10:07 10 A. Computer City was a very aggressive retail chain. We  
11 announced the concept in June of 1991 and within 90 days  
12 opened our first eight stores. And within three years we had  
13 exceeded one billion dollars in revenue, which we are told is  
14 the second fastest growing retail chain. We continue to add  
10:07 15 30 stores, roughly, per year under a very aggressive program,  
16 achieving just short of 2 billion dollars in revenue. We are  
17 now at a point where we are spending less time on store  
18 expansion and more time on maturing our retail chain, growing  
19 corporate sales, and doing a better job of servicing the  
10:07 20 needs of the "SOHO" customer.

21 Q. So, Computer City has gone from one store to 93 stores  
22 in what, five years?

23 A. Yes, sir.

24 Q. And in that time has generated revenues, annual revenues  
10:08 25 of over 3 billion dollars a year?

1 A. No, sir. Just short of 2 billion.

2 Q. That is your goal?

3 A. One of our goals.

4 Q. In this national growth of Computer Cities across the  
10:08 5 country, what types of customers have you reached out to, to  
6 try to serve their needs?

7 A. Well, there is all kinds of customers out there, and we  
8 don't want it to exclude any of them. We certainly are  
9 retailers, so we have a retail presence, and that does give  
10:08 10 us the opportunity to sell to the new consumer to "SOHO,"  
11 because many of those customers do buy retail as versus an  
12 in-bound or outbound sales force. We also do a significant  
13 portion of our business with a corporate sales group,  
14 business to business, if you will, selling to medium and  
10:09 15 large corporations. But our primary focus is on the  
16 experienced computer user as versus the neophyte.

17 Q. Again on this growth point, Mr. Gellman, would you  
18 explain to the Court whether Computer City had seen any  
19 efficiencies in their volume discounts as you have grown from  
10:09 20 one store to 93?

21 A. Well, certainly we have been able to negotiate more  
22 favorable terms with our vendors as we became a more  
23 significant customer to them. In the early days we had the  
24 strength of Tandy Corporation, so there was a lot of  
10:10 25 credibility. And they believed in our vision and our

1 commitment, and that helped us establish good pricing. But  
2 as we become more significant to our vendors' distribution, I  
3 think that we have also been able to get bigger shares of  
4 soft dollars, market development funds, co-op dollars, other  
10:10 5 types of support that have made us a more profitable  
6 company.

7 Q. What are soft dollars?

8 A. Soft dollars are additional funds that a vendor makes  
9 available to their customers, either to help fund advertising  
10:10 10 or to help with promotional activities, to help better train  
11 the associates in the store as to the product knowledge,  
12 those kinds of things.

13 Q. So as Computer City has grown to be a national category  
14 killer, you found it easier to get more soft dollars and  
10:11 15 co-op programs from your vendors?

16 A. Certainly as we became more important to those vendors,  
17 they were more committed to us being successful.

18 Q. Lawyers have to ask this question. When you get more  
19 co-op dollars and more soft money and you are able to train  
10:11 20 your associates better, do you think that makes you a better  
21 company?

22 A. Absolutely.

23 Q. When you responded to Mr. Doyle's question about  
24 Computer City's business, you used the phrase "dynamic  
10:11 25 business world." What do you mean by a dynamic business

1 world?

2 A. It is ever-changing. Five and a half years ago I think  
3 we had a vision that we were going to sell only to an  
4 experienced computer user, and we found out that as prices  
10:11 5 came down and equipment -- and as software became more  
6 intuitive, there was a whole new world of folks that had  
7 never touched a computer before that were coming to our  
8 stores. Technology is changing, cycles on product are  
9 changing every 90 days. CPUs become obsolete, it seems. So  
10:12 10 you have got to be -- it's a dynamic business we are in. It  
11 is an ever-changing business, and you've got to constantly  
12 adjust to what the customer demands and is expecting when  
13 they visit your store.

14 Q. And Computer City and Tandy is committed to meet the  
10:12 15 needs of its customers as this dynamic marketplace continues  
16 to evolve?

17 A. Absolutely.

18 MR. ASSAF: No more questions, Mr. Gellman.

19 THE COURT: Mr. Doyle, some redirect here?

20 MR. DOYLE: A couple.

21 REDIRECT EXAMINATION

22 BY MR. DOYLE:

23 Q. Mr. Gellman, I believe you said that the prices are  
24 uniform for most of your products across the nation?

10:12 25 A. Yes, sir.

1 Q. So you don't see lots of variation from city to city?

2 A. That is correct.

3 Q. And you would not see prices differing dramatically from  
4 place to place, would you?

10:12 5 A. That is correct.

6 Q. And that would include your consumable office supply  
7 products as well; is that right?

8 A. Yes, sir.

9 Q. Now, with respect to the more favorable terms that you  
10:12 10 have gotten from your vendors through your increase in size,  
11 that came from internal expansions, didn't it, sir?

12 A. Would you repeat the question, please?

13 Q. In terms of the more favorable terms that you have been  
14 able to get from your vendors, that has come from your growth

10:13 15 -- from internal expansion?

16 A. Well, I think it is internal expansion, increasing  
17 market share. There are a lot of factors, but they look at  
18 their customer base and they know who their best customers  
19 are and they will tend to give their best pricing to their  
10:13 20 best customers.

21 Q. And you have grown internally from the one store to the  
22 80 or 90 stores?

23 A. Well, we certainly added more units, and I would like to  
24 think we are also doing a better job in average volume per  
10:13 25 location.

1 MR. ASSAF: Your Honor, no further questions.

2 Thank you, Mr. Gellman.

3 THE COURT: Thank you, sir.

4 MR. CARY: Your Honor, the Government calls

10:14 5 Professor Warren-Boulton.

6 THE COURT: All right.

7 FREDERICK WARREN-BOULTON, GOVERNMENT'S WITNESS, SWORN

8 MR. CARY: Good morning, Dr. Warren-Boulton.

9 THE WITNESS: Good morning.

10 DIRECT EXAMINATION

11 BY MR. CARY:

12 Q. Would you please state your name for the record.

13 A. Frederick R. Warren-Boulton.

14 Q. And what is your occupation, sir?

15 A. I am an economist, specializing in industrial  
16 organization, which is the study of the behavior of firms and  
17 markets. I am currently a principal at Micra, Micra Economic  
18 Consulting and Research Associates, a consulting and research  
19 firm in Washington, D.C.

20 Q. Dr. Warren-Boulton, did you provide a declaration in  
21 this matter?

22 A. Yes, I did.

23 Q. Is your curriculum vitae or your resume attached to that  
24 declaration?

25 A. I believe so.

1           MR. CARY: Your Honor, for the Court's reference,  
2 Dr. Warren-Boulton's declaration is at PX, and it includes  
3 his full curriculum vitae.

4           THE COURT: Okay.

5 BY MR. CARY:

6 Q. Dr. Warren-Boulton, would you please describe briefly  
7 your educational background.

8 A. Yes. I have a bachelor's degree in economics from Yale  
9 University, a master of public affairs from the Woodrow  
10 Wilson School at Princeton University, and my Ph.D is in  
11 economics from Princeton University.

12 Q. After you graduated with your Ph.D degree, what did you  
13 do?

14 A. I became a professor of economics, as an assistant and  
15 associate professor of economics at Washington University in  
16 St. Louis from roughly 1972 until 1983.

17 Q. And in 1983, what did you do?

18 A. I came to Washington.

19 Q. What did you do in Washington?

20 A. From 1983 until 1989 I was the chief economist for the  
21 antitrust division in the Department of Justice, first as the  
22 director of the economic policy office and then as, I guess,  
23 the first deputy assistant attorney general, which is a long  
24 title which does not mean that you are an attorney.

25 Q. What were your responsibilities as a deputy assistant

1 attorney general?

2 A. I supervised and was involved with all of the analysis  
3 -- antitrust analysis of mergers at the division,  
4 monopolization cases; price-fixing. In addition, the filings  
5 by the division in front of regulatory agencies and general  
6 public policy issues, such as revisions of the merger  
7 guidelines.

8 Q. Were you also responsible for formulating the division's  
9 economic position with respect to mergers during the Reagan  
10 administration?

11 A. Yes. That would be included both in terms of the way we  
12 went on analyzing mergers and the general policy issues such  
13 as the merger guidelines.

14 Q. After leaving the Department of Justice, what positions  
15 have you held?

16 A. I have been a resident scholar at the American  
17 Enterprise Institute. I was a visiting lecturer at the  
18 Woodrow Wilson School at Princeton University and a research  
19 associate professor of psychology at the American University,  
20 locally.

21 Q. Dr. Warren-Boulton, can you explain how someone with a  
22 Ph.D in economics became a professor of psychology?

23 A. By accident. Psychology and economics isn't all that  
24 different. We both try to predict behavior. Economists do  
25 it in boring ways. Questions like how do consumers respond

1 to a price change. Psychologists look at it in more  
2 interesting ways, which is, you know, how do people respond  
3 to different reinforcements. But prices can be really looked  
4 at as reinforcements, and the quantity that you buy is like  
5 behavior. So essentially it is a very similar set of  
6 questions, just very different techniques.

7 Q. Now, as a principal of Micra, what are your  
8 responsibilities?

9 A. Micra largely does research, writes reports, provides  
10 consulting and expert witnesses.

11 Q. And as a principal of Micra, have you reviewed mergers  
12 and acquisitions?

13 A. Yes. At Micra, in contrast to the division, where one's  
14 responsibilities, shall we say, are sort of fairly broad, and  
15 one would look at a very, very large number of mergers, at  
16 Micra and before, I have been involved in merger analysis at  
17 the detailed level.

18 Q. Have you testified in Federal Court on mergers?

19 A. In the general area of antitrust, yes. Most recently  
20 for the Department of Justice in U.S. v. Englehart. And  
21 actually, my maiden effort was also for the Justice  
22 Department in U.S. v. AT&T, for which my mother has never  
23 forgiven me.

24 Q. Have you been involved in reviewing any mergers on  
25 behalf of private parties?

- 1 A. Yes. Although --
- 2 Q. Have you done any retail merger cases?
- 3 A. Yes. I was the expert for Bon-Ton in Bon-Ton v. May  
4 Department Stores, which was an acquisition of retail -- of  
5 department stores in Rochester.
- 6 Q. Have you done any publication in the world of industrial  
7 organization?
- 8 A. Yes. Unless you do, you can't get tenure. And I  
9 published in the area of industrial organization, mergers,  
10 efficiencies from mergers; broadly speaking, those areas.  
11 And regulation.
- 12 Q. When were you first retained by the Federal Trade  
13 Commission in connection with the Staples matter?
- 14 A. I believe in December of last year, the first meeting.  
15 Or I can recall a meeting on New Year's Eve, which is why the  
16 date is more or less fixed in my mind.
- 17 Q. What were you asked to do by the FTC?
- 18 A. I was asked to look at the merger and evaluate the  
19 potential effect of the merger on competition in the sale of  
20 office supplies.
- 21 Q. Did you reach a conclusion?
- 22 A. Eventually, yes.
- 23 Q. What conclusion did you reach?
- 24 A. Well, I think the overriding conclusion that I have  
25 reached is that even after taking into account potential for

1 efficiencies -- any reasonable potential for efficiencies  
2 from this merger, that this merger can be expected to lead to  
3 a large and significant increase in the price of consumable  
4 office supplies.

5 Q. Now, you testified that your overriding conclusion was  
6 that the merger would result in a large increase in the price  
7 of office supplies. Do you come to any preliminary  
8 conclusions on the way to reaching that final conclusion?

9 A. Yes. There are a number of steps in that process. The  
10 first is to define the product market, and I believe that the  
11 relevant product market is indeed the sale of consumable  
12 office products through office superstores.

13           Second is that the participants in that market  
14 currently are the three current office superstores: Office  
15 Depot, Staples and OfficeMax.

16           Third, that before considering efficiencies or at  
17 least absent efficiencies, this merger could be expected to  
18 result in a very large increase in the price of consumable  
19 office supplies.

20           And then finally going back, I guess, to the  
21 original conclusion, which is that even after taking into  
22 account reasonable efficiencies, this merger appears to be  
23 likely to result in a significant increase in the price of  
24 consumables.

25 Q. What type of evidence did you look at in forming these

1 conclusions?

2 A. Well -- whoops. We have a slide that is more  
3 informative. This case is very unusual in that we have  
4 access to very diverse sources, types of evidence. The three  
5 broad types I have looked at are from the documents, various  
6 documents of the parties and others.

7 In addition to that, however, we have also had the  
8 results of econometric evidence from an econometric model, a  
9 very detailed large-scale one.

10 And then third, we also have looked at the  
11 information that can be provided about the likely effects of  
12 this market from looking at that financial markets.

13 Q. Financial markets, you mean the stock market?

14 A. In the stock market, yes.

15 Q. And is this a methodology that you would typically  
16 follow in reviewing a merger?

17 A. It's a methodology I typically follow, yes.

18 Q. Can you describe the type of business records you looked  
19 at in considering the effects of this merger?

20 A. We looked at the -- first is the kinds of documents that  
21 you went over rather extensively yesterday. Internal  
22 documents that looked at differences across pricing zones for  
23 Staples, depending on whether it was three-player,  
24 two-player, or non-competitive zones. I've also looked at  
25 the internal planning documents and internal pricing strategy

1 documents. I have looked at the reports of financial  
2 analysts, and I have read numerous depositions and  
3 declarations of industry participants.

4 Q. Why is the review of internal company documents  
5 important in assessing the competitive effects of the merger?

6 A. Internal documents, particularly ones written -- for  
7 obvious reasons that we probably don't need to belabor --  
8 before the merger was announced, give you access to two  
9 things. It gives you access to the expertise and the  
10 knowledge of industry participants, which are unique. And  
11 second, it also can provide you with some guide as to what  
12 the incentives, effects, expectations from this merger are.

13 Q. Now, the second type of evidence that you described was  
14 econometric evidence. Would you explain what the term  
15 "econometric evidence" means.

16 A. "Econometric" refers to the applications of statistical  
17 analysis to economics. Similarly, cliometrics is -- for  
18 those of you who like Greek, is the application of  
19 statistical evidence to history. Econometrics is the  
20 application of statistical analysis to economic issues.

21 Q. Sorry to have interrupted you there a little bit.

22 A. That is all right.

23 Q. What --

24 A. Econometrics.

25 Q. What econometric analysis was performed in this case?

1 A. In this case a large-scale econometric model was  
2 constructed by Professor Orley Ashenfelter of Princeton,  
3 under, I guess, my direction, to look at the effects that  
4 are -- to enable us to better predict the effects of merger.

5 Q. And do you know where the data came from for that  
6 econometric study?

7 A. Yes. It came from the parties.

8 Q. What does the econometric analysis allow you to do?

9 A. The econometric analysis, first of all, allows us to  
10 look at the relationship between the prices; in this case,  
11 the prices of Staples, because that is the data we had. The  
12 prices, and the presence, absence, amount of other retailers  
13 that are alleged to or arguably might have an affect on that  
14 pricing.

15 So the first thing it lets you do is it lets you  
16 disentangle out the effects of different alternative causes  
17 for prices. And in addition, it allows you to hold constant  
18 for other things that might be affecting prices, like local  
19 costs and things like that.

20 The idea is to take a mass of confusing data and to  
21 be able to basically unscramble an omelet. Try to figure out  
22 -- out of all of this, let's figure out what the independent  
23 effect is, of all of these different things that could be  
24 affecting what it is that we are interested in explaining.

25 In this case what we are interested in explaining

1 is the prices charged by Staples and particularly how that  
2 varies depending on competition. We want to make sure we  
3 don't have it confused with a bunch of other things.

4 Q. In other words, going back to my presentation yesterday,  
5 it is a way to explain why the red bars are higher than the  
6 yellow bars and the green bars?

7 MR. KEMPF: Your Honor, I object. That is a  
8 leading question.

9 THE COURT: I will sustain it.

10 That is all right, I sustained it. He can just ask  
11 another question.

12 BY MR. CARY:

13 Q. Withdrawn. Does the econometrics allow you to figure  
14 out what is causing observed differences in prices?

15 A. Strictly speaking, by itself, if you had econometrics  
16 with no theory, it would show correlation. However, in this  
17 case the issue really is, is it reasonable on the basis of  
18 economic theory to believe, for example, that the presence of  
19 competitors affects prices? Or is it more reasonable that  
20 prices affect the presence of competitors?

21 In this case, the market has to be structured with  
22 an underlying understanding of the economics and economics  
23 theory. That the variables, the explanatory variables that  
24 are on the right-hand side of this equation -- it's a big  
25 equation and it basically says-- it's like a recipe. Here's

1 a price of staples, and that price of staples is equal to --  
2 and then you have all these things that might affect the cost  
3 of staples.

4           And economic theory enables you to go from the idea  
5 that what's on the right-hand side of this equation, the  
6 explanatory variables are in fact causal; that they are the  
7 ones that determine the left-hand side, rather than the other  
8 way around.

9 Q. So it allows you to test that hypothesis?

10 A. Yes.

11 Q. You also testified that you looked at evidence from the  
12 financial markets. Can you briefly describe what evidence  
13 you looked at?

14 A. We looked in particular at the effect of the merger --  
15 or more exactly, changes in the probability that this merger  
16 would go through, on the stock market values of the parties;  
17 the parties combined; and a number of other firms including,  
18 obviously, OfficeMax, which are arguably or are believed to  
19 be competitors or might be competitors, or any firm that  
20 might be thought of as potentially in the relevant market.

21 Q. What is the significance of this type of financial  
22 market evidence?

23 A. Well, the idea behind this is extraordinarily simple,  
24 and you don't need to be an economist or even a rocket  
25 scientist to understand it. And if you just read the Wall

1 Street Journal virtually daily now, the idea basically is  
2 that if you -- there are two scenarios. One is the  
3 anti-competitive scenario, one is the pro-competitive  
4 scenario. In the anti-competitive scenario, what happens is  
5 two firms merge. They gain market power, they raise their  
6 prices, they reduce their output. And that's, by the way,  
7 holding all else constant. It means what the rise in their  
8 prices would have been but for the merger. In other words,  
9 they either raise their prices or they-- or they don't lower  
10 them by as much as they would have. So we have an  
11 anti-competitive scenario in which we have market power  
12 leading to higher prices.

13           And then the question is what happens to rivals.  
14 And if in fact prices have gone up in the market as a result  
15 of the merger, then rivals will gain. They have the  
16 opportunity to raise their prices and they have the  
17 opportunity to expand on output. This event will be  
18 profitable for that rival.

19           And if the market believes that this merger is  
20 going to result in higher prices, then what you should see is  
21 a result is, because they expect that the profitability of  
22 these rivals would go up, we should see a significant  
23 increase in the market value of the share price of those  
24 values.

25           The other scenario is the pro-competitive

1 scenario. It's the efficiency story. It says that we will  
2 merge these two firms and there are going to be big  
3 efficiencies and little or no increase in market power. So  
4 the efficiency effects will offset the market power effects.  
5 The result is that the merging firms will increase their  
6 output more than they would have and they will reduce their  
7 prices by more than they would have. And the rivals will  
8 look at this, and that is bad news for the rivals. It has  
9 lower prices and it will either reduce its output -- it's  
10 going to have to cut its prices. In any event, its profits  
11 are going to, will fall. When its profits fall, when you  
12 expect a firm's profits to fall, if that is understood in the  
13 financial market, then the share prices of that firm will  
14 fall.

15           So we basically have a fairly simple test in  
16 whether the financial markets believe prices are going to go  
17 up or down after this merger. If the financial markets  
18 believe the prices are going to go up after this merger, then  
19 what we should see is a significant price increase in the  
20 share prices of rivals. The obvious candidate, of course, is  
21 OfficeMax.

22           On the other hand, if the financial markets think  
23 that this merger is going to lead to large efficiencies and  
24 further drops in prices, this will be bad for OfficeMax and  
25 we should see that a change in the probability of this

1 merger, an increase in the probability of the merger, should  
2 result in a fall in the value of OfficeMax.

3 Q. Did you review that data?

4 A. Yes.

5 Q. What conclusion did you come to, briefly?

6 A. The key word being "briefly". An increase in the  
7 probability of this merger has a very large and significant  
8 effect on the share price of OfficeMax. And of all the other  
9 firms we tested, the only other firm that this merger or a  
10 change in the probability of this merger has an affect on  
11 appears to be CompUSA, and it is a much smaller effect.

12 Q. Going back to OfficeMax, in which direction is this  
13 effect?

14 A. Oh. When the probability of the merger goes up, the  
15 share price of OfficeMax goes up. When the probability goes  
16 down, the share price of OfficeMax goes down. That  
17 connection is a very, very strong and very clear one. You  
18 can simply see it right in front of you on the graphs. And  
19 of course, being economists, we also tested it on the model  
20 and regressed it, and got significant numbers and things like  
21 that.

22 Q. In other words, it is consistent with the  
23 anti-competitive scenario of higher prices that you testified  
24 to?

25 A. Yes.

1 MR. KEMPF: Your Honor, I object at this point.

2 THE COURT: It is a non-jury trial. It is all  
3 right. Go ahead.

4 BY MR. CARY:

5 Q. Why did you use these three types of evidence in  
6 formulating these opinions, and how do these three types of  
7 evidence interact in forming your opinion?

8 A. Well, other than more evidence is better than less, they  
9 are -- come from different sources. And to a large extent  
10 often they address different aspects of the case.

11 Q. Were the results from these three types of evidence  
12 consistent, in your view?

13 A. Yes. They were highly consistent, all coming to the  
14 same conclusion.

15 Q. What was that conclusion?

16 A. As I said before, that this merger can be expected to  
17 lead to significant price increase for consumable office  
18 supplies.

19 Q. Will you please characterize the quality of the evidence  
20 that you have seen in this case, relative to the other cases  
21 that you have reviewed when you were in the Government?

22 A. I would describe it as extraordinarily strong, I'd say  
23 both in terms of the range of the evidence that is available  
24 in this case and the strength of the individual components.

25 Q. Mr. Kempf has argued in this proceeding that this case

- 1 rests upon a very novel, revolutionary antitrust theory. Is  
2 this a case that you would have recommended when you were in  
3 the Reagan administration in the '80s?
- 4 A. On basis of this evidence, yes.
- 5 Q. Now, when you go about analyzing a merger, what question  
6 is it that your analysis is designed to answer?
- 7 A. The fundamental question is whether or not the merger  
8 can be expected to allow the merging parties to gain or  
9 better exercise or facilitate the exercise of market power.
- 10 Q. What is market power?
- 11 A. Market power is usually defined as the ability to raise  
12 prices above competitive levels for -- and sustain that for  
13 some period.
- 14 Q. Why is it important to prevent the exercise of market  
15 power?
- 16 A. Because the exercise of market power leads to higher  
17 prices. That leads to inefficiencies of misallocation of  
18 resources and a transfer of income from consumers to  
19 shareholders.
- 20 Q. Is there a particular methodology that you follow while  
21 reviewing the evidence?
- 22 A. Yes. I think the best guide how to evaluate a merger is  
23 the Department of Justice/FTC merger guidelines.
- 24 Q. Can you describe what the steps of that analysis are?
- 25 A. Broadly, four steps. The first step in the merger

1 guidelines is to define a relevant market and identify the  
2 participants in that market.

3           The second step is to ask by how much has the  
4 structure changed in that market. Ey how much has  
5 concentration changed in that market. How far have you moved  
6 towards a monopoly.

7           The third step is, if on the basis of your first  
8 two the merger looks problematic, you then check to see if  
9 entry that would be sufficient to either prevent a price  
10 increase or to reverse it within a relatively short time  
11 period, if there is a sufficient probability that that entry  
12 will occur so as -- so that that price increase would not  
13 happen.

14           And then finally, if the merger still looks  
15 problematic, you would proceed to investigate efficiencies  
16 and ask whether or not the efficiencies that might be  
17 expected from the merger would be large enough to negate any  
18 price increase.

19 Q. Why don't we take these four steps one at a time,  
20 starting with product market definition. What is the purpose  
21 of defining a relevant product market in a merger analysis?

22 A. The purpose of defining a relevant product is -- is to  
23 ensure that -- it is like a reality check, if you like. We  
24 define a relative -- I am sorry. . We define a product market  
25 under the guidelines as that group of products which is large

1 enough so that a hypothetical monopolist of that group of  
2 products would find it profitable to impose a small but  
3 significant price increase, usually taken to be about 5 to 10  
4 percent.

5           So the first step is to define the set of products  
6 such that, if they were a monopoly -- if somebody achieved a  
7 monopoly over that set of products, there would be a  
8 substantial harm to competition.

9 Q. Can you describe the process that one goes through in  
10 defining the product market?

11 A. Yes. Under the merger guidelines, you begin small and  
12 grow. And you begin with the product sales of the merging  
13 parties, and you would first ask the question, If we took  
14 only the products of the merging parties and you went to  
15 monopoly or you merged, would that result in a small but  
16 significant price increase. If the answer is no, you  
17 continue to add products to the market and reask the  
18 question.

19           Now suppose that the hypothetical monopolist had a  
20 monopoly over this wider range of products. Would he be able  
21 to -- would he find it profitable to impose a small but  
22 significant price increase? You continue that process until  
23 you've expanded your market large enough so that you have got  
24 -- my favorite term is, you have got something worth  
25 monopolizing. It is something under which, if you gained a

1 monopoly over that range of products, that set of products,  
2 that you would find it profitable to raise prices by  
3 something on the order of 5 percent.

4 Q. Are you aware of the term "smallest market principle"?

5 A. Yes. The smallest market principle says that you stop  
6 there. You don't keep adding every possible product to the  
7 market. And when you're adding participants to the market,  
8 you don't just keep adding participants. You stop. The  
9 whole idea is to stop when you get to the point where a  
10 hypothetical monopolist of that product would have the  
11 incentive to raise prices by a small but significant amount.  
12 Otherwise, you risk simply hiding the effects of the merger  
13 if you expand the market definition too large, into what you  
14 might call the kitchen sink. What you are basically doing is  
15 that you won't see something that is there.

16 Q. You testified at the beginning that you have come to the  
17 conclusion that consumable office supplies sold through  
18 superstores is a relative product market for antitrust  
19 purposes. What are the distinguishing characteristics of  
20 this product market that lead you to that conclusion?

21 A. Well, I would look at an office superstore as something  
22 that offers consumers who are interested in one-stop  
23 shopping, and low prices, or for office supplies, or who need  
24 a very wide variety to choose from. That can be measured in  
25 various ways. In particular, you can ask how many SKUs of

1 office supplies does an office superstore carry versus a  
2 Kmart or a Wal-Mart. And you can sort of get into long  
3 debates about whether it's 300 or 400 or 500 versus 6,000.

4 My feeling about this is that perhaps the easiest  
5 and simplest way to resolve this is to simply go look at it.  
6 I think that if you drive to Staples and Office Depot up in  
7 Rockville, you will see what an office superstore looks  
8 like. It looks completely different. It is really a totally  
9 different format. And I think that if you go up a little  
10 further and go to BJ's or CompUSA; and ultimately, I suppose  
11 if you want to drive all the way up to Germantown and visit a  
12 Wal-Mart, what will happen is -- I think essentially one  
13 visit is worth a thousand affidavits, which I think is the  
14 line that you stole from me the other day.

15 Q. Yes, I did. I apologize for that.

16 Are there other retailing formats that in your  
17 experience have similar characteristics that would lead one  
18 to conclude they form a separate product market distinct from  
19 other types of retailers?

20 A. The obvious one is the one that Mr. Stenberg himself  
21 cites as the genesis for this, which is the supermarket. In  
22 fact, I think that Mr. Stenberg got this idea from his  
23 experience in supermarkets, and has characterized office  
24 superstores as basically a supermarket for office supplies.  
25 And I find that to be a really pretty accurate description.

1 Q. Are there other retailers that sell many of the same  
2 products as supermarkets?

3 A. In my experience, since I shop at Safeway; I also buy  
4 groceries from PriceCo, and the 7-Eleven on the corner, and a  
5 very small grocery on Connecticut Avenue, depending on how  
6 much I need to buy and when.

7 Q. Now, in your view, would the availability of groceries  
8 from each of those sources lead to you a conclusion that a  
9 merger between Safeway and Giant would never create an  
10 antitrust problem?

11 A. No. I am really going to PriceCo and 7-Eleven and  
12 Safeway for different assortments. What I am trying to get  
13 at Safeway, if I can't go to Safeway I would have to go to  
14 Giant. There is a big difference between Safeway and PriceCo  
15 on food, and a much bigger difference than there is between  
16 Safeway and Giant.

17 Q. Now, the parties here have argued that the market share  
18 of Staples and Office Depot ought to be considered against  
19 the universe of all office supplies sold anywhere in the  
20 country through whatever outlet. Do you agree with that  
21 characterization?

22 A. No. I think that the whole exercise of what we are  
23 trying to do here is to try to define a market in such a way  
24 that it will facilitate the answer to the question, will this  
25 market be -- will this merger be expected to lead to a price

1 increase? You don't want to simply define a market as  
2 arbitrarily large, because, as I say, you will simply miss  
3 the effect. In the smallest market principle, the whole idea  
4 is that you stop expanding the market until you get to the  
5 point where you find a significant price increase.

6 Q. Going back one step to the whole genesis of the  
7 superstore and your description a little bit of the  
8 background of that, have office superstores been a successful  
9 retailing format concept?

10 A. Yes, they have been very successful. Office superstores  
11 have first, and from my point of view most important, clearly  
12 have resulted in large priced falls to consumers. As a  
13 matter of fact, the chart which I think the Plaintiffs put up  
14 yesterday was a really nice demonstration of this. They  
15 showed that the entry of an office superstore in a market  
16 resulted in price falls in an index, as I recall, from 135 to  
17 110, about a 22 or something like that price decrease.

18 So, the entry of office superstores in the market,  
19 the first office superstores, have clearly been highly  
20 beneficial for consumers. It has been even more beneficial  
21 when there has been two or three office superstores.

22 Other indicators, of course, are the number of  
23 stores using the office superstore format of the three chains  
24 have expanded very rapidly. It has been a -- particularly  
25 for Staples, a highly profitable business, which economists

1 like. And something else which economists like that probably  
2 most people don't is evidence of how efficient they have  
3 been, is that they have driven out a very large number of  
4 independent stationers. I think the number has dropped from  
5 something like 15,000 down to 6,000. In that sense I think  
6 it parallels the history of the supermarkets and the  
7 mom-and-pop grocery stores.

8 THE COURT: You mentioned the word "Plaintiffs."  
9 You meant the Defendants put up on the chart?

10 THE WITNESS: Yes. My apologies.

11 THE COURT: The people being sued; right?

12 THE WITNESS: Yes, the Defendants.

13 MR. KEMPF: The good guys.

14 BY MR. CARY:

15 Q. Given this history that you have described with the  
16 growth of the superstore, and given the differences in the  
17 characteristics that you testified are apparent just from  
18 observation between a superstore and a mass merchandiser or a  
19 computer store, does that lead you to any preliminary  
20 conclusions as to what the appropriate product market is?  
21 A. I think on the face of it, somebody looking at this  
22 being announced, would say this certainly looks like it has  
23 all of the characteristics of separate market. And it is a  
24 reasonable way to begin, if you like, at a provisional market  
25 by simply looking at the characteristics. It does something

1 different in different ways and really seems to have a  
2 significant effect.

3 Q. Once having established the superstores as a provisional  
4 market in this way, what do you then do to test this  
5 provisional market?

6 A. Well, you would want to start looking at other kinds of  
7 information. Internal information as to how the parties  
8 characterized themselves and their market. And empirical  
9 information that might let you test more precisely just what  
10 the expected effect would be from a merger to a monopoly,  
11 would be in this case.

12 Q. Referring you back to the charts that you put on the  
13 board here, you have some documents that are listed here.  
14 Were these documents part of the review that you did to test  
15 this provisionally accepted market?

16 A. Yes. And many of them are documents that you referred  
17 to earlier yesterday.

18 Q. Okay. Going down the document list, the parties do  
19 identify other office superstores as their primary  
20 competitors and Staples tracks other superstores. You note  
21 that Office Depot under certain circumstances identifies Best  
22 Buy, but Staples identifies only other office superstores.  
23 And the similar is not true of Staples designating cities  
24 without office superstores as noncompetitive in all the  
25 documents, they clearly regard their primary competitors as

1 being office superstores, as I say, with a possible exception  
2 of Best Buy by Office Depot. So that is their own internal  
3 perception.

4           If you look at the second point there, if you look  
5 at the Staples strategic pricing documents of -- you know,  
6 which basically lays out their rules for how they price.  
7 They basically say that is what they do. Their primary  
8 competition is other superstores and they price against other  
9 office superstores. And assuming they do what they say they  
10 do, you can almost stop there.

11           In addition, in the documents as you went through  
12 yesterday, the documents contain a wealth of what you might  
13 call simple cross-sectional comparisons across zones for  
14 Staples, in which you can look at each zone, identify whether  
15 it is a one-player or two-player or three-player zone. And  
16 you can calculate average prices of those zones simply by the  
17 internal documents, and compare those across zones. And  
18 that, of course, is one thing you can do just out of the  
19 documents, without going any further.

20 Q. That is your second point, there, Staples and Office  
21 Depot base pricing primarily on office superstore  
22 competition?

23 A. Yes.

24 Q. Now, you testified that to some extent Office Depot  
25 recognizes Best Buy. Do both of these firms completely

1 ignore non-office superstores in their documents?

2 A. No. And nor would it be reasonable to do that, for  
3 several reasons. You know, if we were doing a merger of, as  
4 I say, Safeway and Giant, I would expect to see references to  
5 7-Eleven or PriceCo, even though they would regard each other  
6 as their primary competitors. So, people will recognize  
7 anybody that they will lose sales to is in some sense a  
8 competitor. The issue is, who are the primary competitors  
9 that you face.

10 Q. Now, if you're making a distinction between a primary  
11 competitor and another competitor, under what circumstances  
12 in the documents have you seen references to other  
13 competitors?

14 A. Well, in particular I would expect in this, given the  
15 data here, that when an office superstore faces competition  
16 from other office superstores, in those markets its primary  
17 concern will be with respect to the pricing and the behavior  
18 of the other office superstores. By necessity, if you are  
19 the only office superstore in town, you are not looking at  
20 another office superstore in terms of your competition. What  
21 you are looking at is whatever is there in that town or what  
22 is available in that town.

23 The real issue is -- with identifying competitors  
24 is at what price level. When prices are -- when you have  
25 multiple office super supplies in the market -- stores in the

1 market, and prices are low, then the office superstores are  
2 low because they are competing with each other. And if you  
3 had a merger or if you looked instead to a market in which  
4 you only have one office superstore, what we'd expect is that  
5 prices will be higher.

6           And prices will continue to rise until competition  
7 appears from somewhere. There is always some kind of  
8 competition. The issue in merger analysis is how far do  
9 prices have to go before that price rise is checked by these  
10 other competitors. Just as in a supermarket you ask the  
11 question, how high would supermarket prices have to go before  
12 so many people would decide to go to 7-Eleven or PriceCo or  
13 something like this as to make a further price increase  
14 unprofitable.

15 Q. All right. And now, once you analyze that question,  
16 does that require that you include these other firms that are  
17 competing, as you have described it in markets where there is  
18 only one superstore, and prices are high in the relevant  
19 market?

20 A. No. You would again stop at the point where you have  
21 added enough competitors, to the point where a merger amongst  
22 that group would result in a significant price increase. I  
23 mean, if you add more people -- if you added Best Buy and you  
24 kept adding people, you get a larger market. But presumably  
25 you get a larger price increase in that market as well. So,

1 it's a balancing act. Simply the exercise of adding more  
2 firms to the market doesn't result in a prediction that  
3 somehow the price effect of the merger is going to be less  
4 severe.

5 Q. Dr. Warren-Boulton, in reviewing the company's documents  
6 and the like, did you find any evidence as to what a  
7 potential price increase might be if Staples and Office Depot  
8 were permitted to merge?

9 A. Yes. From two sources, as I said. Both the internal  
10 documents and from the econometrics study. And I think we're  
11 about to get a table here.

12 This is the exercise basically you go through in  
13 market definition. You ask the question, having identified a  
14 provisional market, can we now ask what would happen to  
15 prices in that market if a hypothetical monopolist -- if you  
16 had a hypothetical monopoly over that market. In our case,  
17 having identified a provisional market as the -- consisting  
18 of consumable office supplies sold through an office  
19 superstore format, and identifying the three participants,  
20 the issue will be what would happen if you had a merger  
21 amongst the three in that market.

22 What the merger guidelines say is that you should  
23 stop when you have enough people or enough products in that  
24 products market so you can expect to see at least a 5 percent  
25 price increase. As you can see, for all office supplies we

1 are way over that simply with our three participants.

2 Q. Let's back up a little bit and take each one of these  
3 cells here one at a time. The top cell is the zone Staples  
4 prices. Staples, Office Depot, OfficeMax versus Staples.  
5 What does that mean?

6 A. That is the simple comparison. That is, I guess, the  
7 bottom line number from all of the charts that you were  
8 putting up yesterday. It looks at the average price in  
9 Staples' pricing zones, comparing three-player markets with  
10 one-player markets. And what it shows is the average price  
11 in Staples-only markets is 10.4 percent. This is basis  
12 points, because that is what everybody uses. So, it's 1,040  
13 basis points, which is 10.4 percent higher for all office  
14 supplies, with a -- not surprisingly, a larger percentage  
15 difference for price-sensitive items, 12.52 percent, than for  
16 non-price sensitive items, five-point -- 8.99 percent. But  
17 this number is basically the bottom line number that comes  
18 out from the charts you were putting up the other day.

19 Q. Now, the next line, this is my attempt at high-tech,  
20 Your Honor. Right here, it says zone OD prices. Office  
21 Depot, Staples, OfficeMax, versus Office Depot. What is  
22 that?

23 A. It is essentially the similar procedure, but what it is  
24 based on is in the Office Depot documents looking at Office  
25 Depot prices. And what you see there is that there is less

1 of a difference in Office Depot prices between one-player and  
2 three-player markets than there is at Staples. It's still  
3 pretty high.

4 Q. This is basically comparing what the prices are where  
5 there are three competitors with what the prices are where  
6 Office Depot is in the market by itself.

7 A. Yes. The second one, yes.

8 Q. And that would be 7.66 percent.

9 A. Correct.

10 Q. In other words, Office Depot would have the ability to  
11 raise prices 7.66 percent if it faced no competition?

12 A. That is the inference between the cross-section  
13 comparison, yes.

14 Q. Now, down the bottom it says econometric model fixed  
15 effects. I'm not going to ask you to explain what fixed  
16 effects is at this point, but why don't you explain for us  
17 what you mean "econometric model" there?

18 A. Let me tell you why you would want to go to an  
19 econometric model. Because these are averages across zones,  
20 you may be concerned that there may be other influences that  
21 are going on out here; that other omitted variables, in  
22 economics terms, or other causes of what could be doing  
23 this. This is essentially a correlation.

24 And so the question that you would ask is, is that  
25 10.4 percent -- does that really reflect the effect of

1 competition or could there be other things going on that is  
2 producing that effect that correlate or confused this  
3 competition.

4 Q. What type of things might those be?

5 A. Well, the obvious first candidate is cost. For example,  
6 suppose that you thought that costs were much higher in  
7 markets which happen to be single-player markets, and much  
8 lower in markets where you happen to have three players. And  
9 if you simply compare one-player and three-players, what you  
10 might find is much higher prices in the one-player market.  
11 But in the scenario that we've just created, the reason for  
12 that isn't necessarily because there is just one player. It  
13 could well be partially or totally because costs are so much  
14 higher in a one-player market.

15 If you look at that across markets, what you do  
16 see, for example, is these two one-player markets which have  
17 very high costs; Manhattan for Staples, and Hawaii for Office  
18 Depot. On the other hand, if you look at the other cities,  
19 you expect to see the causation or the going in the opposite  
20 direction. In general, small towns or small rural areas that  
21 will tend to just have one supply chain there, it also will  
22 tend to have relatively low costs.

23 Larger urban markets which might be -- you might  
24 expect to find two or three office supply chains, might be  
25 expected to have higher costs. So when you look at the

1 documents and you say to yourself, Is there anything that  
2 springs out at you from the documents? Is there an 800-pound  
3 gorilla here that you look at it and say, Ah-ha, there is  
4 clearly something else going out there.

5 I don't see anything in the documents that leads me  
6 to perceive there is a significant bias in that number.

7 Q. Okay. And then you run all of the data through the  
8 econometric data to test that and see if there is anything  
9 else out there; is that correct?

10 A. That's correct. And your colleague's term, we have a  
11 black box. And out of this black box comes 8.66. That  
12 number actually has just gone down by a percentage point,  
13 because I understand Professor Ashenfelter has just had  
14 access to some more information from the parties and has  
15 lowered his black-box estimate to somewhere in the range  
16 of 8. But it's still in that ballpark, yes.

17 Q. And again, this is basically to hold constant for cost.  
18 What else does it hold constant for and adjust for?

19 A. That result simulates the effect of the merger. And  
20 what it holds constant for is the presence of a  
21 non-office-superstore competition. And it also holds  
22 constant for variations across time and across regions in  
23 terms of costs and other factors that might be piercing this  
24 result. Essentially what it tries to do is separate out  
25 purely the effects of office superstore competition from all

1 of the other possible factors.

2           And as you can see when you do that, it does turn  
3 out that you get somewhat smaller numbers.

4 Q. Now, in the econometric model, does that take into  
5 account the presence of Wal-Mart stores?

6 A. Yes.

7 Q. And Best Buy stores?

8 A. Yes.

9 Q. And the warehouse club stores?

10 A. Several, yes.

11 Q. And Kmart?

12 A. Yes.

13 Q. Computer stores?

14 A. Yes.

15 Q. And after having taken an account of all of those  
16 different types of retailers, the econometric models yielded  
17 the result of roughly 8 percent?

18 A. That's right.

19 Q. Given the distribution of all of those markets and all  
20 of those stores, the question that the model was intended to  
21 ask here was, if you had a merger to monopoly of all three  
22 office superstores, what is the price increase that you could  
23 expect to observe, even after taking into account the role of  
24 other suppliers of office supplies and of different costs and  
25 things like that?

1           Given that conclusion, what is the implication of  
2 that for the product market definition at issue in this case?

3 A.   The implication is that the relevant product is indeed  
4 the supply of consumable office supplies through an office  
5 super supply format.

6 Q.   Have you reviewed some materials presented by the  
7 parties, some graphs they put up on the board yesterday which  
8 showed that when a Price Club or another retailer opens in  
9 the nearby location to a Staples or an Office Depot, that  
10 that has an effect on their total sales?

11 A.   Yes.

12 Q.   Does the fact that another retailer opening has an  
13 effect on Staples or Office Depot's sales affect your  
14 analysis that those dealers ought to be excluded from the  
15 relevant market?

16 A.   Let me answer that question this way.  First, when  
17 another retail store opens near your retail store, your sales  
18 may go up or down, because that other retail store may  
19 attract customers to your store as well.  There is a  
20 balancing act.  And you may win some and you may lose some.

21           In fact, I believe Mr. Stenberg once described his  
22 favorite place to locate as a shopping center that had a Home  
23 Depot and a PriceCostco.  And so in fact his sales would go  
24 up if a PriceCostco was located right next to him.

25           But the more fundamental problem is, even if the

1 entry of another store locating somewhere near you meant that  
2 you would lose sales, that's the wrong question that we are  
3 trying to ask. We are trying to ask the question, What did  
4 it do to your prices? Not what did it do to your sales? And  
5 even if you have what I think the parties are calling a large  
6 hit; even if, for example, the entry of a Best Buy nearby  
7 would result in a significant reduction in sales, there are  
8 two real qualifications that you want to make in interpreting  
9 that evidence. The first is even if it results in a  
10 significant effect in your prices, you go back to this issue  
11 that you don't want to add every single potential or supplier  
12 to the market, even if it has some effect on your prices.  
13 Remember, what we are trying to do is we are trying to  
14 construct a market that will inform us as to the central  
15 issue in this question, which is, will prices go up? So even  
16 if there is an effect on your prices, you may not need to  
17 include them in the market.

18           And second is a point which is not exactly obvious,  
19 and that is that even if the entry of a rival retailer near  
20 you results in a loss of sales, it doesn't necessarily mean  
21 that you will reduce your prices. And you might even raise  
22 them. And the classic example of this turns out to be  
23 generic drugs. If you look at what happens to the prices of  
24 prescription drugs when a patent expires and generic  
25 manufacturers appear. All of us intuitively would expect

1 that the manufacturers of prescription drugs would react by  
2 saying, Whoops, competition has arrived and what I am going  
3 to do is I am going to drop my prices. It turns out that in  
4 drugs, what happens is that the generic drugs appeal to a  
5 particularly price-conscious group of customers. So the  
6 entry of a generic drug means that while the prescription  
7 drug manufacturer may lose sales, what he has lost is his  
8 sales to his most price-sensitive customers.

9 His best response in that circumstance turns out  
10 sometimes to be to say, Okay, I don't like it, it is a hit.  
11 But my response is instead of lowering my prices in response  
12 to this entry, what I do is I raise my prices.

13 So, fundamentally, the hits analysis asks the wrong  
14 question. The question we want to know is, what will be the  
15 effect or what is the effect of these other suppliers on the  
16 prices charged by Staples. Not what is their affect on  
17 sales.

18 THE COURT: Can we take a break?

19 MR. CARY: Sure, Your Honor.

20 THE COURT: We have been here since 9:30. It is  
21 time for morning recess for 15 minutes. We will be back at  
22 20 past 11:00 on the clock on the wall here. So be back at  
23 20 past 11:00. Thank you.

24 (Brief recess.)

25 BY MR. CARY:

1 Q. We were talking about the parties' hits analysis, and  
2 you were explaining that the relevant question is not how  
3 much their sales might be affected, but rather how their  
4 pricing is affected in terms of whether the hit -- whether  
5 the alternative vendor ought to be included within the  
6 market. Can you explain why a reduction in the sales is not  
7 dispositive on the question of whether the firm moving into  
8 the area ought to be included in the market?

9 A. Well, essentially, as I think I said before, for two  
10 reasons. The first is that the reduction in sales, while the  
11 entry of a new firm that reduces your sales may reduce your  
12 sales, they may not induce you to keep your prices low.

13 And the second, of course, is that once again, you  
14 know, in trying to figure out what the expected effect of the  
15 merger is likely to be, if you don't follow the smallest  
16 market principle and stop when you get to a relevant market,  
17 and just keep going, you will miss the effects that you are  
18 looking for.

19 Q. Going back to the econometric work that you described,  
20 what does that work show about which firms have a significant  
21 effect upon Staples' prices?

22 A. Well, two things are done in the econometric model that  
23 are relevant to this question. The first is in defining the  
24 model, which is the 8.86 percent there. And the second was  
25 asking as to just can we determine what the role and

1 importance of all of these other chains that have been  
2 proposed as having a significant limiting affect on Staples.

3           And so the experiment was performed, if you like,  
4 with the data, asking the question as, Suppose that we ran  
5 the experiment in the data of simply closing down all of each  
6 type of store. So the floor experiment is, for example, all  
7 of the Wal-Marts disappear. Or alternatively, then we run  
8 the same experiment and ask, What happens if all Sam's Clubs  
9 disappear from the data set? We can ask that question in  
10 those markets in which Wal-Mart competes with Staples, what  
11 will be the effect of having Wal-Mart just disappear, on the  
12 prices charged by Staples? We go through that exercise  
13 similarly for each one of these other chains that have been  
14 proposed as having a significant effect on prices. And we  
15 ask the right question, which is what is the effect on  
16 Staples' prices, not what is the effect on their volume or  
17 the quantity of their sales.

18 Q. Okay. Now, if you examine the econometric results with  
19 that question in mind, what result do you find?

20 A. What you find is that this entire set -- and I don't  
21 know if I need to read them all off, but I guess it is  
22 Wal-Mart, Sam's, Computer City, Best Buy, Price Club, BJ's,  
23 CompUSA, Kmart and Target. Of this entire set, we only find  
24 a statistically significant affect on Staples' pricing from  
25 closing all of the Best Buys, and we also find a

1 statistically significant effect from closing all of the  
2 CompUSAs.

3           Now, the Best Buy effect is not only significant,  
4 statistically, but also quantitatively very sizable. The  
5 best estimate here is that if all of the Best Buys simply  
6 closed, then in areas where they do compete with Staples,  
7 Staples would raise their prices by 3.7 percent. In the case  
8 of CompUSA, while the effect is statistically significant,  
9 the effect is really quite small. It is less than 1  
10 percent.

11           What this process would do, it looks at each one of  
12 these firms. And recalling that we are looking at a data set  
13 over the last 20 months. So the relevant question is, taking  
14 that period over the last 20 months, what would have happened  
15 to Staples' pricing? Who was constraining Staples' pricing?  
16 The answer is, outside of the other office superstores, the  
17 only one outside of that group that looks like it has any  
18 significant effect on the pricing of Staples would be Best  
19 Buy. The others have a statistically negligible impact.

20 Q. And, again, the Best Buy effect is in about 3 and a half  
21 percent range, where the Office Depot effect is around 8  
22 percent range?

23 A. 8 percent, yes.

24 Q. Does the fact that Best Buy has this effect, require its  
25 inclusion in the relevant product market?

1 A. No. Again, for two reasons. One is that you already  
2 have a relevant market without including Best Buy. But the  
3 other reason I think is a good illustration of why you want  
4 to look at different kinds of evidence. In looking at that  
5 question, as I say, you can look at the documents. You can  
6 look at the econometric evidence and you can look at the  
7 events study, the effect of the stock market. Apply that to  
8 this question, which is, should Best Buy be in the market?

9           If you look at the econometric evidence that we  
10 have just gone through, Best Buy looks like a good  
11 candidate. If you were to add a fourth participant to the  
12 market, you would add Best Buy. In addition, if you look at  
13 Office Depot's documents, what you find is that Best Buy is  
14 the only non-office superstore that anybody identifies as a  
15 real competitor. For both of those reasons you might say  
16 maybe we should add Best Buy.

17           But then you also look at the documents, and what  
18 you find is that Best Buy has been very active in the office  
19 supply industry over the past 20 months. They have been  
20 making a real effort to be a real presence in the office  
21 supply. And they have essentially run this as an experiment,  
22 is my understanding from reading those documents is that they  
23 have decided that this was not as profitable as they hoped it  
24 would be and they have pulled back at least significantly.  
25 They have made an attempt to -- and had a significant effect

1 over this period on Staples prices. But given that they have  
2 changed their strategy, and now if you are forward looking --  
3 as you must be in the merger analysis -- that would say while  
4 Best Buy might have been in the market in the last 20 months,  
5 it is unlikely to be in the properly defined market looking  
6 forward.

7           Finally, you also want to look at the events  
8 study. And you want to ask the question, again looking  
9 forward, because that is what the stock market does, does the  
10 stock market think this is going to be a great thing for Best  
11 Buy in the same ways it thinks it will be a great thing for  
12 OfficeMax. And the answer is no. There is no significant  
13 impact. The significant impact is on Best Buy which once  
14 again says, looking forward that you wouldn't want to include  
15 it.

16 Q. If one were to include Best Buy in a relevant market,  
17 would that change your conclusion as to whether this  
18 transaction is likely to be anticompetitive?

19 A. No. Even if you include Best Buy, if you were talking  
20 in terms of numbers, you would still be talking from two to  
21 one in some markets, three to two in some markets, and four  
22 to three in some markets. In addition to which, the  
23 increases in concentration, if you do something more complex  
24 than count heads -- which is what the HHI does. It counts  
25 the market shares, those increases in concentration, if you

1 define the market to include Best Buy, it would still be very  
2 large and a large number of markets.

3 Q. Have you reviewed the market share charts that have been  
4 submitted into evidence in this proceeding?

5 A. I have seen them, yes.

6 Q. Have you seen that they in essence add one firm at a  
7 time and recalculate the Herfindahl indexes?

8 A. That is an exercise you can go through. If you don't  
9 know where to stop, you can keep adding firms until you say  
10 what happens to concentration, assuming that all those firms  
11 are the same and belong in the relevant market. The main  
12 point is that you are supposed to stop when you get to a  
13 market in which there would be a substantial price increase  
14 if there was a merger amongst all of the participants in that  
15 market, and not keep going. And that point you arrive at, in  
16 my opinion, before you would include Best Buy or anybody else  
17 in the market.

18 Q. It would include only the three office superstores?

19 A. Yes.

20 Q. Have you assessed the relevant geographic markets in  
21 this case?

22 A. Yes. I think the geographic market is relatively  
23 uncontroversial. And that is that I think everybody would  
24 agree it is local.

25 Q. And why would you conclude that it is local?

1 A. Well, you want to think about geographical markets both  
2 in terms of the abilities of consumers to substitute from  
3 outside of that market, and also think about it in terms of  
4 whether or not the presence of firms outside of that  
5 geographic market might influence the pricing of firms within  
6 that market.

7 In terms of the first point, if you are a consumer  
8 of consumer office supplies in Washington, D.C., it really  
9 doesn't matter to you very much if another office supply  
10 company is in, you know, Philadelphia. There is a limited  
11 distance that you are going to travel. So in terms of  
12 consumer substitution, the market is clearly highly local.

13 The other possibility that you might want to  
14 consider is that firms in the local area might constrain  
15 their pricing because of potential competition from firms  
16 that are outside. So, for example, Staples or Office Depot  
17 in Washington might lower their prices or keep their prices  
18 lower, because of the presence of, say, OfficeMax out there,  
19 somewhere else. And under certain circumstances that kind of  
20 potential competition at the wing can in fact influence  
21 prices. It doesn't appear to in this case, and the reason  
22 for it is pretty simple. And that is that potential  
23 competitors outside of the local market would influence your  
24 prices if you thought that they could enter very rapidly,  
25 like hit and run, with very small sunk costs. And if they

1 did enter it would take a while before you could adjust your  
2 prices. So you had to be prepared. You had to cut your  
3 prices in anticipation to block entry.

4 In this case, the costs of entry are largely sunk.  
5 And there doesn't seem to be any reason why incumbents would  
6 delay their pricing. So that, since you know that if the  
7 entrant does enter you can always drop your price then, there  
8 is no gain to dropping your price early. And dropping your  
9 price early is not going to deter somebody from entering,  
10 because he is going to want to know what is the price after  
11 he enters. He doesn't care what the price is before he  
12 enters.

13 The operative word in this is that potential  
14 competition from outside of the geographic markets is not a  
15 binding constraint. And the best strategy from the point of  
16 view of office supply firms in individual markets is look at  
17 the competition from other office supplies in that market.  
18 And basically, even if you think somebody is going to come in  
19 later, you know, the best decision is to make hay while the  
20 sun shines.

21 Q. Make hay while the sun shines. Where did that  
22 expression come from?

23 A. That actually comes from an Office Depot document, the  
24 District 8, where the writer was talking about the fact that  
25 there was not competition in the market, but perhaps

1 OfficeMax might enter. So given the competition was on the  
2 horizon, we better make hay while the sun shines.

3           Again, I stole that line, but then you stole my  
4 earlier line.

5 Q. Now, going back to your description of the circumstances  
6 where it would not make sense to lower your pricing in  
7 anticipation of entry, you used the word "sunk" costs. What  
8 is a sunk cost?

9 A. A sunk cost in this context would be an expenditure that  
10 you would have to make to enter a market that you would not  
11 be able to recover if you leave the market. It would be all  
12 of the expenditures of entering in the market and setting up  
13 and getting leases, things like that. If you exited the  
14 market you might be able to sell off something, but in that  
15 process of entering and exiting you would have left a lot  
16 behind. And what you left behind is basically sunk, you have  
17 to write it off.

18 Q. Again, remind us how that is relevant to the conclusion  
19 with respect to a geographic market.

20 A. Well, given that there are sunk costs to entering, an  
21 entrant can't just come in on hit-and-run entry; basically  
22 enter and drop the price, make money, and until you have had  
23 a chance to drop your price, the incumbent has a chance to  
24 drop his price. What happens is, by the time he has entered,  
25 the incumbent can adjust prices, lower his prices. And it

1 will turn out to be a very expensive proposition for you to  
2 try to do that, because if it is not profitable for you to  
3 stay at the lower prices, and you have to leave, you will  
4 have lost your sunk costs.

5 Q. If there is sunk cost, it is less likely you would stay?

6 A. Yes.

7 Q. I think we have now covered basically the first two of  
8 the merger guidelines checklist that you laid out for us at  
9 the beginning. Product market, geographic market.

10 The third element that you mentioned was entry  
11 conditions. Can you describe what the relevance of entry  
12 conditions is to the analysis of the anti-competitive  
13 effects?

14 A. Well, after you have looked at a structural analysis,  
15 after you identified the market and looked at the change of  
16 concentration in that market, if -- as I said, if the merger  
17 still looks problematic, then you have to ask the question,  
18 Is it possible or likely that there is sufficient entry out  
19 there of firms who, in response -- if the merging parties  
20 tried to raise prices, that there are potential entrants out  
21 there that could come in, and that the entry of those firms  
22 would be enough to either dissuade the merging parties from  
23 ever raising prices at the prospect of that entry; or if they  
24 did try to raise prices, that that entry would happen  
25 sufficiently quickly so that it would drive those prices back

1 down to premerger levels within a very short time period.

2 Q. Okay. Now, this assumes an anti-competitive pricing  
3 effect in the merger in the first instance?

4 A. Yes.

5 Q. Did you examine the prospects for an anti-competitive  
6 price increase here?

7 A. Yes. And we did that in a couple of ways.

8 Q. In making the analysis whether a merger is likely to  
9 have an affect on prices, absent later deficiencies, what  
10 kinds of evidence do you look to?

11 A. Well, in terms of looking at that process, you would go  
12 through both a structural analysis, and you would also look  
13 at the quantitative evidence.

14 Q. Let's start with the structural analysis. Can you  
15 describe what the structural analysis is and what kind of  
16 evidence you looked at?

17 A. The structural analysis basically asks, having defined  
18 the market and having determined the participants and  
19 defining the geographical market, you can now ask how much of  
20 a change in structure is going to occur because of that  
21 merger. One way to do it is to compute HHIs in every  
22 market. I think broadly speaking this is a market in which  
23 these firms are growing rapidly. And the fundamental nature  
24 of the structural change can probably best be addressed by  
25 saying that there are -- particularly if you look at the

1 immediate effects, there are 41 markets out there. And in 16  
2 of those markets that the FTC has identified we will go from  
3 two to one office superstores, and in the other 25 markets we  
4 are going to go from three to two. So the immediate effects  
5 are in a group of markets we will go from two to one, and  
6 another group will go three to two. That is a large  
7 structural change and one which would generally be expected  
8 to result in a significant price increase if you define the  
9 market correctly.

10 Q. You said these firms are expanding rapidly, and that is  
11 also relevant to your analysis of the likely competitive  
12 affects. How is the expansion of the firms relevant to that  
13 analysis?

14 A. Well, the expansion, it is relevant because that,  
15 amongst other reasons, might lead you to believe that the  
16 immediate structural effects that you observed might  
17 underestimate the effect of the merger. And at some point I  
18 have a slide from -- looks like -- that's right, yes.

19 This is taken from Staples' 1996 strategy update.  
20 And essentially it looks at their expectation of the overlap  
21 between Staples and other office super supply stores, between  
22 1995 and approximately the year 2000.

23 As you can see, at the time the update was written,  
24 approximately 17 percent of Staples stores were in the  
25 markets where there was no superstore competition. 29

1 percent, they faced only Office Depot. 37 percent, only  
2 OfficeMax. And 17 percent were in three-player markets.

3           And this is their expectation, their forecast of  
4 what, but for the merger, would be happening by the year  
5 2000. And what you can see is that these firms are on a very  
6 rapid collision course with each other. They are, or would  
7 be absent the merger, expanding into each other's markets  
8 rapidly. By the year 2000, instead of 17, we would see only  
9 12 percent of Staples stores would be in Staples-only  
10 markets.

11           The biggest increase, of course, is in the number  
12 of three-player markets. It would go from 17 to 69 percent.  
13 And from our point of view in terms of looking at the overlap  
14 with Office Depot from the merger, what you probably want to  
15 do is add the 29 and 17. And the overlap between Staples and  
16 Office Depot will then go from 46 percent of Staples' stores  
17 all of the way up to 76 percent. So, these firms are facing  
18 a significant increase in the extent to which they will face  
19 each other in head-to-head competition.

20 Q. Let me throw on the screen a document that you have  
21 selected from the parties' records. Is this one of the  
22 documents that you reviewed?

23 A. Yes. That's from the Staples' '96 update and it is  
24 discussing exactly this phenomenon, which is looking into the  
25 future; what is likely to happen, but for this merger, of

1 course. The competitive pressures, three-player markets  
2 increase to 76 percent, are going to increase. So  
3 competitive pressures increase as the overlap moves to 76  
4 percent between -- I presume that means between -- actually,  
5 its ODP overlap markets increase to 76 percent. It is hard  
6 sometimes to tell what they are meaning, but I interpret that  
7 to saying the increased overlap with Office Depot to 76  
8 percent will lead to increase in competitive pressure.

9 Q. This is PX 14, Your Honor.

10 THE COURT: All right.

11 BY MR. CARY:

12 Q. What do you expect the impact on prices to be of -- as  
13 you called it, the increasing head-to-head competition  
14 between these firms?

15 A. Well, I think that if you look at the level of  
16 competition between them currently, while highly desirable, I  
17 think both as an economist and reading the documents and the  
18 opinions of others, I think there's a general expectation  
19 that that competition, at least absent this merger, can be  
20 expected to intensify, both as the overlap increases, and  
21 also as these individual local markets approach what the  
22 parties' call saturation, which is basically the largest  
23 number of stores that can -- of office superstore format that  
24 can fit in the market.

25 And I think if you think of the process of the

1 growth of the office superstore sales with any one market,  
2 when they first enter, they are essentially competing with  
3 independent stationers and other relatively high cost  
4 suppliers. And as we've noted, the first office superstore  
5 to enter, and then the second, offers a significant price  
6 discount off what they are charging. But you know, when you  
7 are still small in the market relative to the saturation  
8 level, you know, as you grow, you can continue to take sales  
9 away from independent stationers by continuing to offer that  
10 25 to 30 percent discount off. During that process, there  
11 really isn't any real need to sort of, you know, beat each  
12 other's brains out in terms of the office superstores. You  
13 can get enough market share, you can grow rapidly enough  
14 simply by taking share away from the independents.

15           Finally, though, as you reach saturation, you are  
16 in a situation in which you have already backed out the  
17 independent retailers. And the only way now to gain market  
18 share is if you like to turn on each other. And that is  
19 essentially the pattern that, as an economist, I would expect  
20 to see in these kinds of markets. And that also is  
21 consistent with what both parties have described of this  
22 story, and it is very consistent with what financial analysts  
23 have expressed; although when the financial analysts have  
24 talked about it, of course, from their point of view it is a  
25 real concern. From their point of view, as markets approach

1 saturation, the concern is that this would lead to irrational  
2 pricing, which is what in the antitrust field we call  
3 competitive pricing.

4 Q. Let me show you a document that you have selected from  
5 the materials that you have reviewed, PX 9. Can you describe  
6 this document and explain its relevance to your analysis.

7 A. Yes. This is a quote in Staples for Success with Tom  
8 Krasnow and it discusses --

9 Q. Who is Tom Krasnow?

10 A. At Staples. And it is a description of their pricing in  
11 the relatively early days. And it talks in the rest of the  
12 -- this is blown up for this section. It is all well worth  
13 reading, as is indeed all of Staples for Success. Excellent  
14 book, from my point of view. And it discusses basically the  
15 early days in which the office superstores and the Price  
16 Clubs opened up the price war with each other. And Krasnow's  
17 reaction to that, or description of it, basically says we in  
18 the industry didn't get more rational in 1992. It is not in  
19 any company's self-interest to have a price war because you  
20 get lots of market share without having a price war. And  
21 having a price war among low-price competitors doesn't get  
22 you more market share. It didn't serve any purpose.

23 Now, what that's basically saying is that if you  
24 have a group of low cost competitors such as office  
25 superstores, and you are dealing with high cost competitors

1 or different stores, there is no point in vigorous  
2 competition amongst the low cost suppliers until you back out  
3 all of the high cost suppliers, so you don't gain much of any  
4 market share as a group. That is what we expect to see, is  
5 that as these markets approach saturation the competition is  
6 going to have a bigger impact than than it has today.

7 Q. Dr. Warren-Boulton, are you familiar with the term "next  
8 best substitute" in the merger guidelines?

9 A. Yes.

10 MR. KEMPF: Your Honor, does that yes mean no?

11 BY MR. CARY:

12 Q. Let me ask the question slightly differently. What is  
13 the relevance of the closeness of competition between two  
14 firms for the analysis of the merger?

15 A. The -- when you look at a structure analysis and just  
16 think of it as three to two, you are implicitly assuming that  
17 all three are the same. If you actually look at the  
18 particular situation, they may not be three homogeneous  
19 firms. Looking at this case, looking at it as simply three  
20 to two, as three equivalent firms going to two firms is  
21 misleading. This is really a merger amongst not only the two  
22 largest but the two most efficient and perhaps the two most  
23 aggressive pricers in this market. A merger between Office  
24 Depot and Staples is really very different from the merger  
25 between, say, OfficeMax and Staples. While that merger may

1 result in a price increase, that a merger amongst the two  
2 largest and lowest price competitors means that a merger that  
3 takes you from three to two has a bigger impact in that  
4 circumstance than if they were all of equivalent size.

5 Q. In other words, OfficeMax is the highest priced of the  
6 three competitors?

7 A. More that, in terms of both the documents and  
8 particularly in terms of the econometric analysis we do,  
9 OfficeMax has a much weaker constraining influence on Staples  
10 than does Office Depot. Throughout the econometric and also  
11 the simple comparison analysis, what you find is that the  
12 presence of Office Depot has a much bigger impact on Staples'  
13 pricing than the presence of OfficeMax. That is a very clear  
14 result that just -- it shines through all of the data.

15 Q. You have described the structural analysis of the  
16 merger. Are there other things that you can do to test the  
17 structural analysis or to explore other potential  
18 anti-competitive effects of the --

19 A. The structural analysis may not give you a precise  
20 prediction of the size of the increase, of the amount of  
21 increase that you might expect. So to do that we can look at  
22 two other pieces of evidence. Once again, if we switch to  
23 our earlier table -- or you can ask the question, what  
24 happens in a simple cross-section results, the tables that  
25 you were putting out yesterday? If we then ask the question,

1 what is the average effect across all Staples stores? Some  
2 of those, some of those markets are going to -- the zones are  
3 going to go from three-firm to two-player zones. Some will  
4 go from two-player to one-player zones. If we look at the  
5 average effect across all of the zones, what kind of price  
6 differential do we observe? And in a case of Staples --

7 Q. Let me interrupt you a minute, just to make sure we are  
8 all understanding this. To contrast this portion of the  
9 table from the one we saw earlier, the earlier portion was  
10 designed to answer what question?

11 A. It was designed to ask what is the market definition  
12 issue. The market definition issue asks, what happens when  
13 you have a monopoly, three-to-one in this particular example.

14 Q. And this slide, what is this one designed to answer?

15 A. This one is designed to answer what is the actual effect  
16 of not a merger to a monopoly, but what is the actual effect  
17 of this merger. Some partial distance in that direction.

18 Q. And what does this tell us?

19 A. The second one is what we are just discussing now, which  
20 is if we look at the cross-sectional comparisons, across  
21 zones for Staples. What we find is if you take the average,  
22 if you weight the average of three-to-two, two-to-one, the  
23 same as in the figure we had before with the three circles,  
24 what you would get is an average differential of between --  
25 when Office Depot is there and not there after the merger, of

1 about 9.09 percent. So assuming that there aren't other  
2 effects which are causing this, the implication is that the  
3 merger would result in approximately 9 percent price increase  
4 across all Staples stores.

5 Q. And again, this is using all of the data that the  
6 parties made available?

7 A. Yes.

8 Q. Let's go to the third line from the top, the one where  
9 it says econometric model, fixed effects?

10 A. That is the econometric model which Dr. Ashenfelter has  
11 contributed. Once again, I think he has some new data from  
12 the parties, and that he should probably take maybe another 1  
13 percent off that number. So that econometric estimate, which  
14 holds constant for all of the other factors that might be  
15 relevant, comes up with an estimate of something in the order  
16 that the merger can be expected to result in approximately 7  
17 percent price increase across the board for Staples.

18 Q. And again, that is holding constant for differences in  
19 costs, differences in the number of competitors, differences  
20 in the identity of competitors, and the differences in the  
21 number of non-superstore vendors in the markets?

22 A. It is holding constant for everything that I could think  
23 of or that the parties have suggested, or that we can get  
24 data on. It is a pretty thorough large model.

25 Q. Now, there is also the top line. There it says Staples

1 '96 strategy, and it says all office supplies, 500 to a  
2 thousand, or 5 to 10 percent. Can you explain where that  
3 number comes from?

4 A. That is the Staples 96 strategy update. It is a fairly  
5 complex document, and it does a couple of things. It enables  
6 you to get a feeling for what the parties think the price  
7 decreases would likely be, absent the merger, because of  
8 increase in competitive pressure. And depending on what  
9 question you are trying to answer, which is like what happens  
10 on a three-to-two market or two-to-one market.

11 You can try to back out, if you like, the numbers  
12 in that document to try to figure out what are they  
13 assuming. What do the parties believe is the difference in  
14 pricing between markets where Office Depot is present and  
15 what isn't? So it is the internal belief as to how much of a  
16 difference it makes, depending on when Office Depot was  
17 there. And depending on the question and how you do it, you  
18 can get numbers anywhere from 5 to 10 percent.

19 Q. Can you give us a general idea -- I know it is spelled  
20 out in more detail in your declaration. A general idea how  
21 you went about calculating that number.

22 A. You can do it a lot of ways. The simplest example is  
23 that in it makes a reference to what happened in New York,  
24 Long Island and Connecticut when Office Depot entered. Now  
25 that is in our terms of going from a three-player to a

1 two-player. So we expect something, you know, from the other  
2 evidence, such as for example the Prudential study, something  
3 on the order of 5 or 6 percent. They report that the effect  
4 on Staples' margins when Office Depot turned it from a  
5 two-player into a three-player, was 169 basis points. I  
6 think that is probably on the earlier slide.

7           To get from there to prices is not all that  
8 complicated. It is really basically just two steps. If you  
9 have 160-basis-point increase in the margin overall, that is  
10 for all of the sales of the office superstore. Now, the  
11 effect on prices, from what we can see, will be concentrated  
12 primarily or exclusively on office supplies. Okay. We are  
13 not alleging a market in computers or printers or anything  
14 like that.

15           Office supplies, consumable office supplies of the  
16 type that we are talking about here where we think there  
17 would be a significant price effect from the merger, account  
18 for about 40 percent of all of those sales. So if you get a  
19 160-basis-point change over 40 percent, then that means that  
20 you divide the 160 by, you know, .4, and you get 3.25 basis  
21 points.

22           I am sorry. Then what you have to do is, you have  
23 to remember that a basis point is not saying it is a price  
24 point. One basis point in the margin results in  
25 approximately 1.4-basis-point difference in the price. So,

1 you would take the change in the margin, divide it by .4, and  
2 multiply it by times 1.5, and you get a number of 4 or 5  
3 percent.

4 Q. That would be in a three-to-two type situation?

5 A. Yes.

6 Q. These are all basically ways to check and recheck the  
7 conclusion that there will be a price effect as a result of  
8 this transaction?

9 A. Yes. You are looking at just a very wide range. You  
10 are looking at a number of different possible estimates,  
11 directions, as you can collect. And they are all highly  
12 consistent.

13 Q. Has Staples considered similar acquisitions to this one  
14 in the past?

15 A. Yes. Staples has considered merging in the past with  
16 Office Depot, and also with OfficeMax.

17 Q. And did Staples consider in the course of those mergers  
18 what their ability to raise prices might be as a result?

19 A. Yes. In looking at those documents, there was a leak in  
20 both of those cases that they would lead to higher prices for  
21 those mergers as well.

22 Q. Dr. Warren-Boulton, going back to the slide that you put  
23 on the board, can you summarize your conclusions with respect  
24 to the likelihood of anti-competitive effects of this  
25 transaction?

1 A. I would say that the evidence from the large number of  
2 sources, structural evidence, of the evidence in the  
3 cross-sectional comparisons, the evidence from internal  
4 documents showing intentions and expectations, the evidence  
5 from the econometric model, all point to the same conclusion;  
6 which is that at least before taking into consideration  
7 nationwide efficiencies, not efficiencies that would change  
8 of the national level, that this merger can be expected to  
9 result in a large and significant increase in prices for  
10 consumer office supplies. Somewhere along the order of 7  
11 percent is probably about as good a number as any.

12 Q. Between 5 and 10 percent?

13 A. Yes. That would make it quite safe.

14 MR. CARY: Your Honor, if this is a convenient time  
15 for the Court, this is a good breaking point in terms of our  
16 examination, if this would be a good time for lunch.

17 THE COURT: You are going to go into the efficiency  
18 part now?

19 MR. CARY: Yes, Your Honor.

20 THE COURT: Let me see the timing.

21 MR. KEMPF: How much time do you have? I know you  
22 have more. About how much longer?

23 THE COURT: 15 minutes?

24 MR. CARY: 45 minutes.

25 MR. KEMPF: It is up to the Court.

1           THE COURT: We can take lunch and come back a  
2 little early so we don't lose any time.

3           MR. CARY: Thank you, Your Honor.

4           THE COURT: All right. We will take our luncheon  
5 recess at this time. We will take it for one hour and be  
6 back at 1:00 this afternoon, be ready to go at 1:00.

7 (Court Recessed For Lunch)
