CLASS 17 WRITTEN ASSIGNMENT

Instructions

Submit by email by 3:00 pm on Thursday, October 28
Send to wdc30@georgetown.edu
Subject line: Merger Antitrust Law: Assignment for Class 17

Assignment: Calls for answers to the following questions

1.   Consider the following shares for fresh orange juice:

	Orange Juice Production (million gal.)	Share
Tropicana	291.4	45.0%
Coca-Cola	136.0	21.0%
Fresh OJ	136.0	21.0%
OJ Natural	46.0	7.1%
Others (6)	38.2	5.9%
	647.6	100.0%

Assume that all diversion occurs within orange juice (that is, there is no switching to a nonorange juice option) and that switching within orange juice is gallon for gallon. Using the relative market share method, what are the diversion ratios from Coca-Cola to each of the other orange juice products?

2.   Same shares as before, but now when Coca-Cola increases its price by 5%, 10% of Coca-Cola lost sales divert to something other than orange juice (the "outside option"). Using the relative market share method, what are the diversion ratios to the other orange juice products taking into account this outside diversion?

3.   Products A and B are being tested as a candidate relevant market. Each is priced at $140 per unit, has an incremental cost of $110, and sells 2000 units. For every dollar increase in the price of Product A, for any given price of Product B, Product A loses 40 units of sales to products outside the candidate market and 10 units of sales to Product B (for a total loss of 50 units), and likewise for Product B. Under these conditions, what price would a hypothetical monopolist of Products A and B charge if (a) it had to increase prices of both products by the

same amount, and (b) if it increased the price of only one product? (c) Are Products A and B a relevant market?

If you have any questions, send me an email. See you in class.
