I. INTRODUCTION AND APPLICATION OF *DAUBERT* PRINCIPLES

The government's Renewed Motion to Exclude Testimony ("Renewed Motion") challenges two of the three defense experts -- economist Jerry Hausman and computer forensics specialist Winston Krone. Both will be available on December 17, 2007 for direct and cross-examination and to satisfy any questions the Court has regarding their opinions and methodology per Federal Rule of Evidence 702, which as this Court recently observed:

permits testimony by experts qualified by "knowledge, skill, expertise, training, or education," to testify "in the form of an opinion or otherwise" based on "scientific, technical, or other specialized knowledge" if that testimony will "assist the trier of fact to understand the evidence or to determine a fact in issue." Fed.R.Evid. 702. The expert's testimony must be based on "sufficient facts or data," it must be "the product of reliable principles and methods," and the expert must have "applied the principles and methods reliably to the facts of the case." *Id.*

Redfoot v. B.F. Ascher & Co., 2007 WL 1593239, * 3 (N.D.Cal. 2007). The expert admissibility determination requires a "difficult, two-part analysis" of reliability and relevance. *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 43 F.3d 1311, 1315 (9th Cir. 1995) (*Daubert II*).

As to Professor Hausman, the government's Renewed Motion runs to both prongs, and as to Mr. Krone only as to reliability. The reliability inquiry is governed by a multi-factor test that considers

(1) whether the proffered theory or **technique has been tested**, (2) whether the theory or technique has been subjected to **peer review and publication**, (3) the **known or potential rate of error** of the technique or theory when applied, and (4) the "**general acceptance**" of the theory or technique in the scientific community. *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. at 593-4. [C]ourts have also found the following factors relevant in assessing the reliability of expert testimony: (1) whether the expert is proposing to testify about matters growing directly out of **independent research** he or she has conducted or whether the opinion was developed expressly for purposes of testifying; (2) whether the expert has unjustifiably **extrapolated from an accepted premise** to an unfounded conclusion; (3) whether the expert has adequately accounted for **obvious alternative explanations**; (4) whether the expert is being as **careful as he would be in his regular professional work**; and (5) whether the **field of expertise claimed by the expert is known to reach reliable results** for the type of opinion offered.

1 *In re Bextra and Celebrex Marketing Sales Practices and Product Liability Litigation*, 2007 WL
 2 4170276, *3 (N.D.Cal. 2007, Breyer, J) (emphasis added), citing *In Re Silicone Gel Breast Impl.*
 3 *Prod. Liab. Lit.*, 318 F.Supp.2d 890 (N.D. Cal. 2004), citing Fed.R.Evid. 702 Advisory Committee
 4 Notes.

5 As to relevancy or ‘fit’ (*Daubert*, 509 U.S. at 591), “[t]he trial court ‘must ensure
 6 that the proposed expert testimony . . . logically advances a material aspect of the proposing
 7 party’s case.’ *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 43 F.3d 1311, 1315 (9th Cir. 1995).
 8 ‘[T]he standard for fit is higher than bare relevance.’ *In re Paoli R.R. Yard PCB Litig.*, 35 F.3d
 9 717, 745 (3d Cir. 1994).” *Redfoot v. B.F. Ascher & Co.*, *supra*, 2007 WL 1593239, * 3.¹

10 Finally, “the district court must still weigh the balancing factors of Federal Rule of
 11 Evidence 403,” which permits the exclusion of relevant evidence “if its probative value is
 12 substantially outweighed by the danger of unfair prejudice, confusion of the issues, or misleading
 13 the jury.” *Id.*, 2007 WL 1593239 at * 4, citing *Daubert*, 509 U.S. at 595.

14 Here, reliability, relevance and Rule 403 considerations all militate in favor of
 15 admitting testimony from both experts. These witnesses are highly qualified and the expertise they
 16 possess is based on well-known and validated principles. Surely the non-conspiratorial reasons for
 17 parallel pricing in the marketplace (Professor Hausman) and the email practices of the defendant
 18 (Mr. Krone) are highly relevant subjects in this prosecution, where *most of the prosecution*
 19 *evidence is emails about price*. The experts’ opinions are known to the government and fully
 20 disclosed, despite the continued objections to data related to Professor Hausman, where the
 21

22
 23 ¹ Under FRE 401 proffered evidence is relevant if it has any tendency to
 24 make the existence of any fact that is of consequence to the determination of
 25 the action more probable or less probable than it would be without the
 26 evidence. Evidence helpful in evaluating the credibility of a witness is of
 consequence to the determination of the action. *Evidence is relevant to a*
matter of consequence to the determination of the case if it has a mere
tendency to impeach a witness’s credibility by a showing of bias or
coercion.

27 *United States v. Hankey*, 203 F.3d 1160, 1171 (9th Cir 2000) (emphasis added) [expert testimony
 28 admitted in criminal case].

1 defense has gone the extra mile. The skilled government team at trial can readily pursue vigorous
 2 cross-examination of the defense experts as to any concerns that their opinions raise.

3 **II. TESTIMONY FROM PROFESSOR HAUSMAN IS RELIABLE AND**
 4 **RELEVANT**

5 A. Defendant Has Complied With Rule 16 Obligations.

6 At pages 3-4 of its Renewed Motion, the government maintains there are “four
 7 reasons” why defendant’s disclosures re Professor Hausman are “deficient.” None of the reasons
 8 holds up.

9 1. Price Data.

10 In Professor Hausman’s 2003 “Appendix: Econometric Analysis of DRAM Prices”
 11 (accompanying Bunzel Decl., Exh. A, Dkt. 209) that was filed October 26, 2007 in this action as
 12 part of defendant’s original disclosure and summary, he states “I collected quarterly data from
 13 1994-2002.” That quarterly data is set forth with numeric specificity in table form in that filing.
 14 (Bunzel Decl., Exh. J.) In defendant’s supplemental disclosure, dated November 21, 2007, it is
 15 specified that the data comes from “Consulting Reports from International Data Corporation (IDC,
 16 Framingham, MA 01701).”

17 The government by letter dated November 26, 2007, Exh. 4 to its Renewed Motion,
 18 raised questions regarding the IDC reports, and the defendant responded by letter dated
 19 November 28, 2007, Exh. 5 to the Renewed Motion at p. 3, that Professor Hausman did not retain
 20 copies of the underlying IDC pricing data but it could be obtained from IDC directly.

21 Following receipt of the Renewed Motion that continues to imply the government
 22 cannot get the data itself, a staff librarian at the Bartko firm (with no more and likely much less
 23 information than the government team) easily contacted IDC and reached terms on contracting to
 24 purchase the IDC DRAM pricing and market data for the 1999-2002 years relevant to the current
 25 case, for \$10,000. (Bunzel Decl., ¶ 14.) We so advised the government in writing and asked that
 26 it withdraw the objection as to the IDC data, which the government has stubbornly refused to do.
 27 (Bunzel Decl., Exhs. M, N.) There is no question that the defense has timely provided
 28

1 “specification” of these records as required by this Court’s Order, consistent with *United States v.*
 2 *Reliant Energy*, 2007 WL 640839 at *2 (N.D. Cal. 2007).²

3 2. Work Papers.

4 In our November 28, 2007 letter, Renewed Motion Exh. 5, p. 3, counsel advised the
 5 government that Professor Hausman has retained no work papers. Obviously, this statement is
 6 qualified by the reports and analysis Professor Hausman made in 2003 already in the record in this
 7 case, including “Appendix: Econometric Analysis of DRAM Prices” (accompanying Bunzel
 8 Decl., Exh. A, Dkt. 209.) Professor Hausman’s summary and proffer below, and his testimony at
 9 the hearing December 17, 2007 are and will be that the Econometric Analysis is the final version
 10 of his work papers supporting the June 17, 2003 Report and his June 24, 2003 testimony before the
 11 ITC. The logarithmic calculations themselves are for ease of reference again attached at Bunzel
 12 Decl., Exhibit J. Any fair reading of the Econometric Analysis and supporting calculations reveals
 13 that Professor Hausman made, and the government has, a detailed roadmap to the application of
 14 the established economic theories underlying his opinion that the known characteristics of the
 15 DRAM marketplace drive price similarities among competitors.

16 3. Other Documents.

17 Attached as Exhibits C, D, E, F, G, H, I and K to the Bunzel Decl. are extensive
 18 data and materials that the defendant provided to the government with our November 21, 2007
 19 supplemental disclosure letter (*Id.*, at Exh. B), pursuant to this Court’s Final Pretrial Order. The
 20 government’s Renewed Motion at p. 3:23-6 raises three documentary concerns. The first is the
 21 IDC reports, discussed above at § II A 1. The second are the SEC filings of Micron, which were
 22 produced with the November 21, 2007 letter and are re-attached at Bunzel Decl., Exhs. G and H.
 23 The third is a report known as “IC Insights, Inc., 2003 (The McClean Report)”, which is properly
 24 specified in the defense November 21, 2007 letter attachment (Bunzel Decl., Exh. B.).

25
 26 ² And we have done more. At great expense, we ordered and contracted to pay for the
 27 subject reports and will offer to make them available to the government. (Bunzel Decl., ¶ 15.) At
 28 some point, the zeal of a public officer to win at all costs should be moderated by reason and
 justice. As to the IDC reports, that point has surely been reached.

1 The government complains that this latter document can only be obtained through a
 2 subscription service, Renewed Motion at 3:25-6. That is correct (Bunzel Decl., ¶ 13.) We have
 3 attached at Bunzel Decl., Exh. L the url link to the IC Insights' website, which describes the
 4 McClean Report that now "in its 11th year" is a "highly acclaimed study that thoroughly examines
 5 the integrated circuit industry" and "is available in a three-ring binder or on CD-ROM." The
 6 government can obtain it as readily as the defense.³

7 4. No Report For This Case.

8 Citing no authority, and ignoring plenty, the government finally complains at
 9 p. 4:2-6 that Rule 16 requires a report in this case. As a practical matter, this *Daubert* exercise and
 10 the summary and proffer immediately below, eliminate any conjured prejudice against Professor
 11 Hausman reciting opinions based on independent analysis not prepared for this litigation.
 12 Moreover, the government in its zeal to silence strong defense evidence ignores that *Daubert* and
 13 the Rule 702 Advisory Committee Note recognize that the reliability of expert opinions is
 14 *enhanced* where the experts are "proposing to testify about matters growing naturally and directly
 15 out of research they have conducted independent of the litigation" as opposed to where they "have
 16 developed their opinions expressly for purposes of testifying." Rule 702 Notes of Advisory
 17 Committee on 2000 Amendments, citing *Daubert II*, 43 F.3d at 1317.

18 B. Summary and Proffer of Professor Hausman's Testimony.

19 The government argues at p. 2 of its Renewed Motion that the "bases and reasons"
 20 for defense expert Jerry Hausman's testimony are not disclosed. This is disingenuous. What
 21 follows is a summary of Professor Hausman's qualifications, opinions and the "bases" for his
 22 reasoning, with reference to the materials that the government *already* has. After being awarded
 23 degrees at Brown (A.B. *summa cum laude*, 1968, Phi Beta Kappa) and Oxford (B.Phil. 1972, Ph.D
 24 1973), as a Marshall scholar, Professor Hausman began teaching at M.I.T., where since 1992 he
 25 has been the MacDonald Professor. He has been a Visiting Professor at Harvard, Oxford, Beijing,

26
 27 ³ It would appear that the 2003 McClean Report was cited by Professor Hausman only as a
 28 data source confirming the escalating cost of new DRAM fabrication facilities. (Bunzel Decl.,
 Exh. A, Dkt. 209, Report at fn. 1 page 2.)

1 and numerous other universities, and has edited most of the major professional economics
 2 journals. Professor Hausman has served on and testified before many governmental commissions
 3 (including the Federal Trade Commission in 2005) and has authored over 200 professional papers,
 4 reports and books on economics, competition and antitrust as well as having done academic
 5 research and consulting in the semi-conductor and DRAM industry for over 25 years. (Bunzel
 6 Decl., Exh. A, Dkt. 209, CV.) In short, Prof. Hausman's fellowships, honors and awards reflect
 7 his status as one of the preeminent United States economists specializing in econometrics,
 8 competition and antitrust.⁴ As to relevant testimony and opinions:

9 • Prof. Hausman was engaged by Micron Technologies, Inc. ("Micron") to
 10 investigate and give his opinion in connection with an ITC proceeding that covered the same time
 11 period as charged in this case. There was no written engagement agreement.

12 • The scope of the engagement was to study and give his independent opinion
 13 about the structure of and activities in the DRAM market in the United States 2000-2002 and the
 14 effect of subsidies to Hynix.

15 • In conducting his analysis, Prof. Hausman reviewed those documents
 16 identified at Bunzel Decl., Exhs. C-K, on which his opinions are in part based.

17 • Michael Sadler was one of the Micron executives with whom Professor
 18 Hausman discussed the DRAM market.

19 • None of the Micron executives or representatives disclosed to
 20 Prof. Hausman that Micron and the Department of Justice had entered an agreement in which
 21 Micron admitted to price fixing activity in violation of the Sherman Act in the DRAM industry in
 22 the United States during the period of his investigation or disclosed to him anything about Micron
 23 participating in any conspiracy or agreements to violate the Antitrust Laws with respect to DRAMs
 24 during that period.

25 • Prof. Hausman will testify that as an expert witness "candor" from those
 26 engaging him to provide economic evidence is important to both the fact and substance of his
 27 opinion. Complete, honest and truthful information was critically important to Professor Hausman
 28 in the report and testimony he gave when engaged by Micron to make his investigation of the
 DRAM market.

 • Prof. Hausman investigated the structure, characteristics and activity in the
 DRAM market in the United States during 2000 to June 2002.

⁴ The John Bates Clark Medal, awarded to Prof Hausman in 1985 (CV p. 1) is "awarded
 biannually to an outstanding economist under the age of 40 – a distinction said to be predictive of,
 and perhaps even more prestigious than, receipt of the Nobel in economic science." *New York
 Times Book Review*, October 21, 2007, p. 13.

- 1 • Prof. Hausman's work preceded and was independent of this litigation.
- 2 • Prof. Hausman authored a report about the results of his engagement by
- 3 Micron, dated June 17, 2003, and he testified at the ITC June 25, 2003 (Bunzel Decl., Exh. A,
- 4 Dkt. 209.)
- 5 • Prof. Hausman's work papers for this engagement are the Appendix to his
- 6 ITC report with the regression equation computer output and there are no other work papers.
- 7 (Bunzel Decl., Exh. A, Dkt. 209, June 17, 2003 Report ("Report") Appendix: Econometric
- 8 Analysis of DRAM Prices; Bunzel Decl., Exh. J, calculations.)
- 9 • The methodologies used by Prof. Hausman are tested, subject to peer review
- 10 and publication, have known potential error rates, and are generally accepted. (*Id.*)
- 11 • No one claimed in the ITC proceeding (including opposing experts) that the
- 12 data or methodologies used by Prof Hausman were inaccurate or unreliable.
- 13 • Prof. Hausman concluded that the DRAM industry is among the most
- 14 dynamic in the world with rapid technological change and requirements of massive investments by
- 15 producers to remain competitive. (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 2.)
- 16 • DRAM prices were constantly decreasing during the studied period, with
- 17 factories running at full capacity and inventory levels kept low. (Bunzel Decl., Exh. A, Dkt. 209,
- 18 Report, p. 4.)
- 19 • DRAM demand is inelastic in the short run. (Bunzel Decl., Exh. A,
- 20 Dkt. 209, Report, p. 4.)
- 21 • The DRAM market is extremely competitive. (Bunzel Decl., Exh. A,
- 22 Dkt. 209, Report, p. 5.)
- 23 • DRAMs are small and light and transported rapidly by air with negligible
- 24 transportation costs. (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 3.)
- 25 • There is a near-perfect flow of information regarding DRAM pricing world-
- 26 wide. (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 4.)
- 27 • Large volumes of DRAM were bought and sold every day throughout the
- 28 United States on the basis of price. (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 3.)
- Free flow of information and low transportation costs resulted in a very
- efficient arbitrage of DRAM prices. (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 4.)
- DRAM producers unable to be competitive have routinely exited the
- market creating intense price competition (Bunzel Decl., Exh. A, Dkt. 209, Report, p. 5.)
- Prof. Hausman concluded that DRAMs are a commodity product that traded
- primarily on the basis of price.

1 • The market characteristics described above are in the expert opinion of
2 Prof. Hausman the most likely factors that brought about similar prices for DRAMs sold by Hynix,
3 Micron, Infineon, Samsung and others in the United States 1999-2002.

4 • Prof. Hausman also concluded that Hynix pricing in the United States had
5 significant economic effects that resulted in Hynix and other suppliers selling at economically
6 irrational (low) levels. (Bunzel Decl., Exh. A, Dkt. 209, June 24, 2003 Testimony (“Testimony”),
7 p. 56.)

8 • Professor Hausman has no knowledge of whether an illegal price-fixing
9 agreement existed among Micron and other DRAM producer companies during the period of the
10 investigation, but based on his investigation, his opinion was that the price parity in the
11 marketplace likely resulted from the competitive economic factors he analyzed in the market.

12 • Professor Hausman has been told that the Department of Justice is charging
13 that Mr. Swanson joined and participated in a conspiracy to fix prices of DRAMs sold to the major
14 OEMs during April 2001 to June 2002 (which period was included in the period he investigated).
15 The economic factors Professor Hausman analyzed negate the existence of such a price fixing
16 conspiracy.

17 This summary will be similar to Professor Hausman’s testimony at the *Daubert*
18 hearing and at trial. And his testimony and opinions are reliable and relevant.

19 C. Professor Hausman’s Expert Opinions Are Reliable.

20 The government’s claim that Hausman’s testimony is “not reliable” and is not based
21 on “scientific, technical or other specialized knowledge” borders on the irresponsible. First, as
22 noted above and unlike experts engaged in many cases, his opinion was not “developed expressly
23 for purposes of testifying” in support of Mr. Swanson. *See In re Bextra and Celebrex Marketing*
24 *Sales Practices and Product Liability Litigation, supra*, 2007 WL 4170276, at *3, citing *In Re*
25 *Silicone Gel Breast Impl. Prod. Liab. Lit., supra*, 318 F.Supp.2d at 890 (citing Fed. R. Evid. 702
26 Advisory Committee’s Notes). Indeed, if anything, Professor Hausman’s opinion is more reliable
27 than a specifically engaged expert witness because his investigation and analysis was made after
28 he was engaged by Micron, whose senior executives are the main witnesses upon which the
government relies in their case *against* Mr. Swanson. Professor Hausman’s proffered testimony
strongly and positively meets each of the factors presented in a Daubert analysis:

His technique has been tested. The econometric model used by Professor Hausman
is fully described, is well accepted in the profession and is discussed at length in standard

1 handbooks. (See, e.g. J. Hausman, "Specification and Estimation of Simultaneous Equation
2 Models" in Handbook of Econometrics, Vol. 1, Ed. Z Griliches and M. Intriligator (1983), and
3 numerous articles authored by Professor Hausman. (Bunzel Decl., Exh. A, Dkt. 209, Report,
4 Appendix: Econometric Analysis of DRAM Prices, p. 2, fn. 2.)

5 His theories and techniques have been subject to peer review and publications.
6 Professor Hausman's CV lists dozens of peer reviewed articles in the standard and well accepted
7 professional literature and over 200 published articles, papers and professional presentations.
8 (Bunzel Decl., Exh. A, Dkt. 209, CV.)

9 Error rate is understood. Professor Hausman explained (and the government was
10 given) the parameter estimates from the model which was the basis for his conclusion. Professor
11 Hausman noted that the model "fits the data well, explaining over 98% of the observed variation in
12 DRAM prices. In addition, the model passes the test of overidentifying restrictions, which
13 indicates that the model is specified correctly and that the instruments are valid." (Bunzel Decl.,
14 Exh. A, Dkt. 209, Report, Appendix: Econometric Analysis of DRAM Prices, pp. 2-3.)

15 The methodologies are generally accepted. Professor Hausman's analysis and work
16 is classic and accepted (see particularly the 60 papers of publications listed under "Econometrics"
17 and "Applied Micro Analysis" at the witness' CV pp. 7-12. (Bunzel Decl., Exh. A, Dkt. 209, CV.)
18 Professor Hausman also has been teaching econometrics and competition for the past 35 years at
19 Massachusetts Institute of Technology. He has testified and made presentations before courts,
20 agencies, and professional societies as well as conducting academic research in the semiconductor
21 and DRAM industry since the early 1980's. He is probably the premier economist on this subject
22 matter in the United States. There can be no doubt that Professor Hausman's field of expertise is
23 well "known to reach reliable results for the type of opinion offered." *In re Bextra and Celebrex*
24 *Marketing Sales Practices and Product Liability Litigation, supra*, 2007 WL 4170276 at *3.

25 The government complains that Professor Hausman used "worldwide" selling
26 prices. Of course he did, because DRAMs are a commodity product, selling primarily on the basis
27 of price. More significantly, Professor Hausman's Report and his testimony focused on the United
28

1 States and the “presence of Hynix in the market place” and its impact upon “prices for DRAMs in
2 the United States and world wide” (Bunzel Decl., Exh. A, Dkt. 209, Testimony, p. 51.)

3 The government also complains that Professor Hausman’s independent
4 investigation and analysis should not be considered reliable because he did not consider Micron’s
5 “price fixing conduct violative of the Sherman Act” or the “guilty pleas by four DRAM
6 manufacturers and 15 DRAM employees.” (Renewed Motion p. 6:9-14, repeating verbatim
7 arguments made in original motion p. 7:4-10). Of course, this is a key point: Micron did not
8 disclose to him or to the ITC their concealed misconduct. Professor Hausman will be subject to
9 cross-examination by the government and it can expose these facts.

10 In sum, Professor Hausman’s methods and bases easily meet the first *Daubert*
11 prong.

12 D. Professor Hausman’s Expert Opinions Are Relevant and Helpful.

13 The Court’s Final Pretrial Order, Dkt. 247 filed November 16, 2007, states at pp.
14 5-6 that “economic evidence” testimony from Mr. Hausman is proper “in order to rebut the
15 existence of the alleged conspiracy itself or [to] tend to negate the fact that [the alleged conspiracy]
16 occurred” and, citing *Continental Baking Co. v. United States*, 281 F.2d 137 (6th Cir. 1960), that
17 “if defendant denies [as Mr. Swanson does] entering into an illegal price fixing agreement, he is
18 permitted to present to the jury his explanation of the factors that brought about similar prices.”
19 *See also*, ABA Section of the Antitrust Law, Criminal Antitrust Litigation Handbook (2d Ed.
20 2006) 255, 308-309.

21 Professor Hausman’s expert testimony is just such substantial evidence rebutting
22 the conspiracy charged against Mr. Swanson, by opining that parallel pricing in the DRAM market
23 Mr. Swanson faced in this country is explained by economic factors and not illegal agreements.
24 *Continental Baking, supra*, 281 F.2d at 143-4; *United States v. Goodman*, 850 F.2d 1473, 1479
25 (11th Cir. 1988) and cases cited therein at fn. 8; *United States v. Louis Trauth Dairies*, 1994
26 WL 876373 (S.D. Ohio 1994); and Criminal Antitrust Litigation Handbook, *supra*, pp. 308-309
27
28

1 and authorities cited at fns. 197 and 200.⁵ See also *Ohio Valley Electric Corporation v. General*
 2 *Electric Company*, 244 F.Supp. 914, 952 (DCNY 1965) [defendant's economic data as to costs,
 3 profits, and capacity showing "that uniform price movements in this industry" do "not indicate
 4 conspiracy" is evidence that "certainly must be permitted."]; *In Re Polypropylene Carpet Antitrust*
 5 *Litigation*, 93 F.Supp.2d 1348, 1355 (ND Ga. 2000) [opinion testimony regarding "climate of the
 6 polypropylene market during the relevant time period" is testimony that "may be helpful to the
 7 trier of fact."]

8 The government seriously over-reaches at p. 5 of its Renewed Motion by arguing
 9 that a prior and irrelevant defense brief, Dkt. 223 at p. 7, meets the issue of this motion. That brief
 10 responded to the government's motion at Dkt. 179 seeking to permit evidence of plea agreements,
 11 in which the government had argued that the plea agreements would rebut potential defense
 12 experts who might contest the existence of "a conspiracy." *Id.* at 9.⁶ As we have explained to the
 13 government (*see* letter dated Nov. 28, 2007, Exh. 5 to government's Renewed Motion), the
 14 comment in the earlier brief meant that Professor Hausman is in no position to opine that the
 15 DRAM companies and their overseas executives did not reach illegal agreements or conspire to fix
 16 prices contrary to the pleas. He can't know that and his opinion does not seek to contradict the
 17 pleas of other parties.

18 Instead, Professor Hausman's testimony rebuts the charge *against Mr. Swanson*, a
 19 U.S. salesperson who struggled daily with competitive price wars, and is sound circumstantial

20
 21 ⁵ The government at its Renewed Motion at p. 5 seeks to distinguish application of
 22 *Continental Baking* by citing *United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150, 228-31
 23 (1940). The government ignores that the primary reason given by the Court in *Socony-Vacuum* for
 24 excluding defense offers of proof into other causes for price stability, was that the additional
 25 evidence sought was "cumulative" since "the record is replete with evidence showing the
 condition of the oil industry" at times relevant to the indictment. *Id.* at 229-30. Here by contrast,
 the government seeks to strip the defense of the *only* expert economic and market evidence
 offered. Application here of the later and more directly relevant *Continental Baking* holding is not
 disturbed by *Socony-Vacuum*.

26 ⁶ The Court ruled that the plea agreements are admissible in any event. Final Pretrial Order
 27 pp. 18-19, noting that the plea agreements are *not* admissible to show the defendant's guilt.
 28 Whatever relevance (we see none) that defendant's brief in opposition to the plea agreement
 motion has now, defendant surely did not mislead the Court or obtain any benefit from the earlier
 statement.

1 explanation that the “economic factors” Mr. Swanson faced drove price similarities in a highly
 2 commoditized market, and not any illegal agreement he made or participated in. *See United*
 3 *States v. Chas. Pfizer & Co., Inc.*, 281 F.Supp. 837, 847 (S.D.N.Y. 1968), *rev’d on other grounds*,
 4 *United States v. Chas. Pfizer & Co, Inc.*, 426 F.2d 32 (2nd Cir. 1970) [in order to show defendants
 5 were following “an economically dictated practice of conscious parallelism of prices, rather than
 6 engaging in any illegal conspiracy to fix prices” defendants may offer “explanatory economic
 7 evidence,” citing *Continental Baking*.]

8 Hundreds of the government’s proposed trial exhibits directly concern the very
 9 close pricing between the competing DRAM companies, and the charge against the defendant is
 10 that he participated in price stabilization and price-fixing. The government wants to argue that the
 11 emails sent to Mr. Swanson and his actions concerning pricing must mean he “joined” a
 12 conspiracy, and it impermissibly seeks to exclude relevant other explanations for Mr. Swanson’s
 13 conduct concerning close pricing in the DRAM market. The government ignores the statement in
 14 this Court’s Final Pretrial Order that under such circumstances, Mr. Swanson

15 “is entitled to present to the jury his explanation [through expert
 16 testimony] of the factors that brought about similar prices.”

17 That should be the beginning and end of the relevance inquiry on the *Daubert* motion.⁷

18 E. Professor Hausman’s Percipient Testimony is Admissible.

19 The government argues at p. 7 of its Renewed Motion that percipient testimony of
 20 Professor Hausman -- Micron and Sadler concealing material information from him *regarding the*
 21 *subject of this very case* -- is either extrinsic under Rule 608(b), or excludable as confusing or
 22 cumulative under Rule 403. The government’s case citations to *Brown v. Gutierrez*, 2006 WL
 23 3065574, *3 (N.D.Cal. Oct. 27, 2006) and *United States v. Chu*, 5 F.3d 1244, 1249 (9th Cir. 1993)

24

 25 ⁷ Expert testimony will also be helpful to the trier of fact in rebutting government witnesses.
 26 *Alcala v. Woodford*, 334 F.3d 862, 876-879 (9th Cir. 2003) [affirming writ allowing an expert
 27 psychologist to impeach the one critical witness implicating the defendant]. Expert testimony is
 28 properly used for impeachment, to attack credibility, and to provide circumstantial evidence
 contradicting an opposing witness. *United States v. Hankey, supra*, 203 F.3d at 1170-75 (9th Cir.
 2000) prosecution expert on gangs was “certainly helpful to the jury” in explaining why the
 witness “would lie on Hankey’s behalf.”]

are off-point, because Professor Hausman's percipient testimony is not offered to demonstrate Mr. Sadler's or other Micron executives' general "character for truthfulness," which is the subject of Rule 608(b) and these cases.

Rather, the concealment here is relevant to *credibility*, *bias* and *motivation* of Micron and Mr. Sadler to do whatever it takes to destroy Hynix, including concealing information about contemporaneous alleged price-fixing from the ITC tribunal and Micron's own expert witness. This creates substantial reasonable doubt about whether any Micron contacts with Mr. Swanson were for price-fixing purposes (as the government contends Mr. Sadler, its key and sole competitor witness, will testify) or rather for gathering information to support an ITC proceeding *planned* and *conceived* during the indictment period -- a program so important to Micron that it would conceal its own inconsistent conduct to assure a punishing result against Hynix. In sum, Rule 608(b) does not apply where the purpose of the testimony is to show bias, credibility and motivation. *U.S. v. Abel*, 469 U.S. 45, 50-51 (1984).⁸

Nor is the testimony from Professor Hausman about concealment cumulative. First, the importance of candor to an esteemed expert is not something Micron executives can testify to at all.⁹ Second, we do not know until trial what Mr. Sadler or others at Micron will say regarding the concealment, and how Professor Hausman's testimony may impeach the government's witnesses. And third, even if Micron witnesses admit concealment, it could be downplayed or colored as collateral by witnesses whose amnesty and cooperation the government has contracted, as opposed to testimony coming from an impartial witness such as Professor Hausman.¹⁰ The

⁸ "Bias, of course, covers all varieties of favor. See 3A Wigmore, Evidence, § 945 at 782, (Chadbourn rev. 1970)." *United States v. Hankey*, *supra*, 203 F. 3d at 1171. "*Proof of bias is almost always relevant* because the jury, as finder of fact and weigher of credibility, has historically been entitled to assess all evidence which might bear on the accuracy and truth of a witness's testimony." *United States v. Abel*, *supra*, 469 U.S. at 52, emphasis added.

⁹ See fn. 7 above.

¹⁰ Permitting extrinsic evidence to contradict collateral direct-examination "testimony has been justified on the grounds that the witness should not be permitted to engage in perjury, mislead the trier of fact, and then shield himself from impeachment by asserting the collateral-fact doctrine." 2A Charles A. Wright & Victor J. Gold, *Federal Practice and Procedure*, § 6119 at 116 (1993). *Dorn v. Burlington Northern Santa Fe R.R. Co.*, 397 F.3d 1183, 1193-94 (9th Cir. 2005) [abuse of discretion to exclude testimony that would rebut, if not impeach, plaintiff's expert].

1 Court at trial will be readily able to rule on the admissibility of Professor's Hausman's percipient
 2 testimony under the correct standard -- which is Rule 607 and not Rule 608(b) as the government
 3 contends:

4 Rule 608(b) prohibits the use of extrinsic evidence of conduct to
 5 impeach a witness' credibility in terms of his general veracity. In
 6 contrast, the concept of impeachment by contradiction permits courts
 to admit extrinsic evidence that specific testimony is false, because
 contradicted by other evidence.

7 *U.S. v. Castillo*, 181 F.3d 1129, 1132 (9th Cir. 1999).

8 Impeachment by contradiction is governed by the common law rules, subject to
 9 Rule 403 considerations. *Id.* at 1133. Micron's concealment is neither collateral nor confusing,
 10 but was rather concealment of the co-conspirator conduct *alleged in this case*, highly germane to
 11 motivation, bias and credibility. Rule 403 should hardly apply to exclude evidence of such
 12 material concealment:

13 'Relevant evidence is inherently prejudicial; but it is only unfair
 14 prejudice, substantially outweighing probative value, which permits
 15 exclusion of relevant matter under Rule 403. Unless trials are to be
 16 conducted as scenarios, or unreal facts tailored and sanitized for the
 17 occasion, the application of Rule 403 must be cautious and sparing.
 Its major function is limited to excluding matter of scant or
 cumulative probative force, dragged in by the heels for the sake of
 its prejudicial effect.' quoting *United States v. Mills*, 704 F.2d 1553,
 1559 (11th Cir. 1983).

18 *United States v. Hankey, supra*, 203 F.3d at 1172.

19 In sum, the time to determine the admissibility of Professor Hausman's percipient
 20 testimony about concealment is at trial, not in a *Daubert* motion.

21 **III. COMPUTER EXPERT KRONE'S OPINIONS ARE RELIABLE AND** 22 **RELEVANT**

23 **A. Summary and Proffer of Krone's Testimony.**

24 Winston Krone is presently and has been a Managing Director of SafirRosetti, a
 25 national firm of which he is also Director of Computer Investigations. In that capacity he has
 26 consulted about and led many investigations concerning the analysis of electronic evidence,
 27 computer privacy and intellectual property rights, combining forensic and traditional investigation
 28

1 techniques and technology. He was educated at Oxford University (BA in Law), took his graduate
 2 law work at Guildford School of Law, and became a Solicitor, United Kingdom, High Court,
 3 practicing with Baker & McKenzie for four years. He was admitted to the California bar in 1998.
 4 He also worked with the U. S. State Department where he served as Senior Legal Officer in
 5 Kosovo, Rwanda and Bosnia. He has specialized training in computer investigation, software
 6 applications for analysis of computer mirror images and has done graduate work in computer
 7 science and computer forensics at the University of New Haven (Bunzel Decl., Exh. O, Dkt. 210,
 8 pp. 6-7.)

9 Mr. Krone's opinion is that Gary Swanson received over 11,662 emails during a
 10 one year period of the 17-month period relevant to Mr. Swanson's indictment, and opened less
 11 than 49% of them (5,557 were opened). His opinion is also that during a longer two-year period
 12 June 29, 2001 to July 1, 2003 (covering also the one year after the charges against him – to which
 13 the government objects), he opened 12,945, or less than 55%. To support his opinion he will
 14 testify to the following:

15 • Based upon Hynix backup tapes that were delivered by Hynix counsel to his
 16 firm, Mr. Krone arranged to restore those tapes and to extract the underlying data to a computer.

17 • Mr. Krone determined that the underlying Hynix data on the tapes had been
 18 obtained at three separate times in 2001, 2002 and 2003, and had been converted into the datafiles
 19 on the tapes in a manner consistent with automated conversion, which gives Mr. Krone a high
 degree of confidence that the data on the tapes is the same as the underlying data from which the
 tapes were made.

20 • Mr. Krone's firm used a forensic software product called EnCase (version 5)
 21 to analyze and review the data in the restored files. This permitted analysis without changing, and
 22 thus preserving, the underlying metadata, and to search those files for any files with the name
 "Swanson" or any similar derivatives of the Swanson name.

23 • The results of that search produced two Swanson PST files that were
 24 Outlook mailboxes, and two Swanson Lotus Notes mailboxes. One of the Lotus Notes mailboxes
 was not functioning and could not be opened.

25 • Mr. Krone's firm used a software program, Paraben E-mail Examiner,
 26 which could analyze the individual emails within the three functioning mailboxes into separate
 27 fields within each email.

• The two Outlook mailboxes contained emails dated from June 29, 2001 to July 1, 2003. Each of the individual Outlook emails contained metadata which included a field entitled "Status". The emails were searched for "Status = U" (for unread) and "Status = Not U" (for read). This allowed Mr. Krone to perform a number count of all Outlook emails with status U for unread.

• Mr. Krone tested the Paraben program by searching it against a fixed control sample of emails where his firm already manually counted the "read/unread" items. This confirmed the accuracy of the Paraben program.

• The functioning Lotus Notes mailbox contained emails for the period October 1999 through May 10, 2001. The individual Lotus Notes emails did not contain any metadata that would allow a determination of the status of the individual emails as read or unread. Using the Paraben program, Mr. Krone's firm determined that there was no field comparable to the Outlook field which could be flagged as "read/unread". Mr. Krone's firm opened the Lotus Notes mailbox using a Lotus Notes program, and determined that all of the Lotus Notes E-mails were marked "Unread". This was consistent with a recognized problem of Lotus Notes mail that has been transferred to another location.

• Based upon this investigation of the Outlook mailboxes and a further manual check, Mr. Krone determined that during the period June 29, 2001 through July 1, 2003, there were 23,557 emails remaining in the inbound Swanson mailboxes of which 10,612 were status unread. Accordingly, Mr. Krone determined that slightly more than 45% of the emails in Mr. Swanson's mailboxes were status "unread."

• Mr. Krone also has determined that the one Outlook mailbox with emails dated from June 29, 2001 to the close of the day June 14, 2002, contains 11,662 incoming emails remaining in the Swanson mailbox, of which 6,015 were status unread. Accordingly, Mr. Krone determined that 51.5% of the emails in that mailbox were status "unread."¹¹

• Mr. Krone was requested to determine specifically, with respect to 24 government trial exhibits selected by Swanson trial counsel, whether they were read or unread by Mr. Swanson. He determined that 23 were unopened and 1 was opened. (Bunzel Decl., Exh. P, letter dated November 7, 2007 and chart).

B. Mr. Krone's Testimony Is Reliable and Relevant.

The government's case is based in very large part upon email traffic and presently includes over 200 trial exhibits containing electronic mail. Mr. Swanson was sent well over twenty-five thousand emails during the relevant period, and Mr. Krone's testimony will better

¹¹ The government raises at p. 9:18-20 of its Renewed Motion the objection that the post-indictment period data is not relevant. Accordingly, Mr. Krone has now analyzed the data for the approximate 1 year period within the indictment time-frame, resulting in the unread percentage of 51.5%.

1 inform the jury about the volume of Mr. Swanson's email traffic and will tend to prove that nearly
 2 half of that electronic mail was not opened by him. This is both direct and circumstantial evidence
 3 supporting Mr. Swanson's defense that he had little or no knowledge about many of the reports,
 4 communications and simply loose gossip contained in the emails relied upon by the government
 5 and purportedly sent to him. Depending upon the court's rulings at pre-trial and during the actual
 6 trial, there may be other email traffic subject to similar or other infirmities.

7 The methodology employed by Mr. Krone in his investigation and analysis is well
 8 accepted and has been tested in hundreds of cases. The EnCase software used by Mr. Krone's firm
 9 is standard in the field:

10 Reports from the field indicate that computer data acquired and
 11 processed with EnCase has been successfully admitted into evidence
 12 in thousands of trials and preliminary hearings throughout the world.
 13 There are no known instances of sustained objections to
 14 EnCase-based computer evidence on authentication grounds related
 15 to the use of EnCase.

16 (Bunzel Decl., Exh. Q, EnCase Legal Journal (2d Ed. June 2001), p 45.) The most recent edition
 17 of that Legal Journal confirmed the consistent and unbroken line of authorities admitting
 18 EnCase-based evidence, and includes numerous appellate and trial court decisions affirming the
 19 validity of using EnCase software. (Bunzel Decl., Exh. R, EnCase Legal Journal (April 2007)
 20 pp 59-87.) The other software product used by Mr. Krone, Paraben E-Mail Examiner, is also
 21 widely used by law enforcement officials and other forensic experts.¹²

22 Mr. Krone made appropriate checks on his analysis, and there can be no responsible
 23 question about Mr. Krone's forensic capabilities, the technology he used or his methodology in
 24 making his investigation. As the Court of Appeals recently ruled, reliability is "not the correctness
 25 of the expert's conclusions but the soundness of his methodology" and that it is helpful if it "will
 26 assist the trier of fact." *Stillwell v. Smith & Nephew, Inc.*, 482 F.3d 1187, 1192 (9th Cir. 2007),
 27 quoting *Daubert II* and Rule 702. With the government's heavy reliance upon email traffic,
 28 reliable expert opinion about a user's practice in reading (or not reading) that email is pertinent.

¹² Paraben email recovery software is routinely used by the Dept. of Justice. (See DEA Microgram Bulletin, March 2006, p. 10, Bunzel Decl. Exh. S.)

1 The government's claim that Mr. Krone's "proffered testimony is inherently
 2 unreliable" (Renewed Motion p. 7:17-19) is simply a disguised speculation that a user (here
 3 Mr. Swanson) may be able to manipulate an email communication from "read" to "unread" or to
 4 change the status of an email by hiding an opening of the mail after it was archived. While these
 5 are matters for cross-examination of Mr. Swanson or Mr. Krone, they do not reach or detract from
 6 the methodology Mr. Krone used to reach his conclusion. This is not, as asserted by the
 7 government, an issue of "reliability" (Renewed Motion p. 9, Bendall Report, pp. 3-7) but, as the
 8 government's expert's four possible "scenarios" suggest, simply hypothesizing a theoretical
 9 manipulation by the user. The *Daubert* "gate keeping" role is no substitute for "[v]igorous
 10 cross-examination," *Daubert*, 509 U.S. 579, 596 (1993), and Mr. Krone's testimony is
 11 methodologically sound, technically supported and unequivocal.¹³

12 The government also complains that Mr. Krone examined only 24 of the
 13 government's many trial exhibits and determined that only 1 of those 24 had been opened. Based
 14 on defense strategy, trial counsel made a selection of certain trial exhibits, which it asked
 15 Mr. Krone to investigate. (Bunzel Decl., Exh. P.) We are not familiar with any authority, and the
 16 government has cited none, requiring trial counsel to instruct an expert to investigate more than is
 17 needed to meet defendant's purpose. The government has resources and an expert who apparently
 18 is continuing his analysis of all of the Swanson's email traffic. The government may make such
 19 arguments and offer such opinion as a part of its case.

20 The government's final complaint is that there could be a change in the read/unread
 21 status when Hynix changed its program and users' messages "migrated" in June 2001 from one
 22 system (Lotus Notes) to another (Outlook). (Renewed Motion 9:13-17, Bendall Report p. 7, fn. 2.)
 23 We have no evidence that any messages "migrated" as the government informed its expert. The
 24 electronic data strongly suggests that Hynix stopped using Lotus Notes and began using

25
 26 ¹³ See also, *Olin Corporation v. Certain Underwriters at Lloyd's London*, 468 F.3d 120, 134
 27 fn.5 (2nd Cir. 2006) [cross-examination is "an appropriate way of attacking" expert testimony,
 28 "rather than complete exclusion."]; *Bergen v. F/V St. Patrick*, 816 F.2d 1345, 1352 (9th Cir. 1987)
 ["The weakness in the underpinnings of [expert] opinions may be developed upon cross-
 examination and such weakness goes to the weight and credibility of the testimony." (citations).]

1 Microsoft's Outlook. This change would have preserved all messages. Moreover, the Lotus Notes
2 (covering generally the period *before* Swanson is alleged to have joined the conspiracy) were not
3 searchable for read/unread and Mr. Krone has addressed this issue (Bunzel Decl., Exh. O, Dkt.
4 210, pp. 4-5).

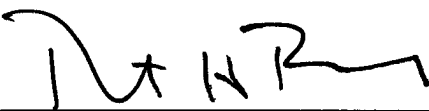

5 The only remaining complaint by the government is that it would be "unfairly
6 prejudice[d]" by Mr. Krone's opinion about the number of emails that were "read" and "unread".
7 (Renewed Motion p. 10:8-10.) In view of the government's heavy reliance on emails, it is not
8 surprising that the government dislikes Mr. Krone's conclusion. But that is a matter for argument
9 and cross-examination. It does not implicate the standards of reliability or accepted methodology.

10 **IV. CONCLUSION**

11 For the foregoing reasons, the government's motion to exclude defendant's experts
12 should be denied in the interests of justice.
