[220] In this case the restraint was clearly too broad geographically. However, had the circumstances of the litigation made it appropriate, in the absence of the supplementary clauses, the court, which has not been reluctant to reform restraints, see Plunkett Chem. Co. v. Reeve, 373 Pa. 513, 95 A.2d 925 (1953), might have kept them out of the business entirely in Philadelphia. It should be noted, however, that no broader protection than that granted could be supported on the basis of the customer-contact theory, which the court appears to follow.

suffice. Perhaps the risk of supplementary covenants can be somewhat moderated by having them as separate documents.

There are no magic words or phrases in drafting employee covenants. It is still probably advisable to draw the covenant so that both activity and geographic-area descriptions are mechanically severable.[221] There are perhaps a few clauses which can do no harm and may do some good. For example, an agreement between the parties that the law of the state of employment is intended to apply is unlikely to be given any effect by a court which feels strongly that the "public policy" of the state of the forum demands that enforcement be denied,[222] but the clause may be given some weight by other courts.[223] Similarly, an agreement that the obligation of the employee is to be assignable in the event of a sale of the company may aid a court in reaching that result at a later date.[224] Courts occasionally note clauses in which the parties agree that a violation will constitute irreparable injury envisaging injunctive relief, even though there is a further arrangement for the deposit of a bond to be forfeited in case of breach.[225]

From an objective point of view, the employee covenant not to compete is an inefficient and often unfair device for allocating the burden of certain business risks. Yet in certain circumstances such covenants are necessary, largely because other legal remedies, although theoretically available, are relatively ineffective in practice. There have been many cases of gross misuse of such covenants in the past, in part because of the failure of many courts to engage in a discriminating analysis of their impact before enforcing them. There is evidence that this attitude is rapidly changing. This fact, added to an increasing awareness by employers that such covenants are not always costless, should bring about a considerable tightening up of practices with respect to them. This result can hardly fail to be beneficial to all concerned.

---

[221] A good example of a geographically severable covenant is found in Welcome Wagon, Inc., v. Haschert, 125 Ind. App. 503, 127 N.E.2d 103 (1955). No example has been found of comparable draftsmanship as to the time element, although some day a draftsman may summon up the courage to try "for six months plus six months plus . . . for a total of . . . years."

ABSTRACT

We investigate the importance of client relationships in the financial advisory industry. We exploit firm-level variation in adoption of the Broker Protocol, which enabled clients to follow their advisers to member firms without fear of litigation. We show that advisers' ability to maintain client relationships is a significant predictor of their employment decisions; that about 40% of client assets follow advisers when they move; and that once clients are "unlocked," firms become less willing to fire advisers for misconduct. Firms that unlock their clients subsequently experience higher levels of misconduct and increase their fees, calling into question whether clients are better off.

1. Introduction

Financial advisers in the United States manage $28 trillion of assets for their clients. The relationships between these advisers—numbering over 760,000 in our data—and their millions of clients are critical for supporting the economic activity generated by these investments. Trust is inherent in these relationships, although the literature has yet to distinguish between whom clients trust (Gennaioli et al., 2015; Gurun et al., 2018; Kostovetsky, 2016). Is it the advisory firm that creates advertisements and develops a brand name that prompts clients to walk into a branch? Or

is it the adviser who develops an intimate financial counseling relationship with the client? From the client's perspective, choosing an adviser or advisory firm is no different from choosing a lawyer or a surgeon. Some clients care more about the adviser than the firm, or the surgeon than the hospital, or the lawyer than the law firm. In these industries, where asymmetric information abounds and the potential for client harm is large, the ability to foster personal relationships with clients has important implications for employees, firms, clients, and ultimately, the industry's competitive landscape.

If clients trust their advisers more than their advisory firms, then advisers will have considerable power within their firms, since it is their relationships with clients that constitute the firm's primary asset (Lavetti et al., 2019). Without constraints on their mobility, advisers can move to a competing firm, perhaps taking many of their clients with them and essentially walking out the door with the firm's assets.

To reduce this power imbalance, firms often use non-compete agreements (NCAs) to legally constrain their employees' mobility.[1] In the presence of the trust relationship, however, these agreements not only restrict the adviser's mobility, but to some extent also lock in clients to the firm where their adviser is employed.[2]

In this paper, we investigate the importance of client relationships in the financial advisory industry. We show empirically that these relationships guide adviser employment decisions, that a large portion of client assets follow advisers when they move, and that firms' decisions to discipline advisers are influenced by their amount of control over these relationships. We then study how the power dynamic between firms and their employees induced by these relationships affects clients, firms, and the structure of the financial advisory industry more generally. We conclude that the effects are far-reaching, impacting the prevalence of adviser misconduct, fee rates, and industry competition.

To assess the importance of client relationships in the financial advisory industry, we need a source of variation in their transferability between firms. For this we rely on the 2004 creation of the Protocol for Broker Recruiting (hereafter, "the protocol") by three major brokerage firms, with the encouragement of the Financial Industry Regulatory Authority (FINRA). The stated purpose of the agreement was to "further clients' interests of privacy and freedom of choice in connection with the movement of their Registered Representatives between firms," although it was also seen as a way to reduce the litigation expenses that had historically been regularly incurred when an adviser would switch firms.[3] The protocol established a set of rules governing adviser departures. Specifically, it allowed an adviser to take client lists and contact information to their new employer without fear of legal action—effectively unlocking clients from firms.

Importantly for the purposes of our identification strategy, the shield from litigation provided by the protocol applies only when both the previous and new employers are signatories to the protocol. Moreover, the protocol agreement was not restricted to its original signatories; since its inception, over 1500 financial firms have joined in a staggered fashion, and very few have exited.

We combine complete records of all firms joining and leaving the protocol with detailed information on all registered brokers and investment adviser representatives to construct a staggered panel of firm entry into, and exit from, the broker protocol. We then exploit within-firm time series variation in the transferability of client relationships induced by variation in membership in the protocol. Together, these data provide us with a very rich setting in which to study the importance of client relationships in the financial advisory industry.

We begin our empirical analysis by assessing the importance of client relationships to advisers. Typically, advisers are compensated as a percentage of their annual "production," defined as the commissions and fees generated from the clients they service, and this compensation rate can vary across investment advisers. The ability to take clients when moving to another firm is therefore important to adviser compensation, so protocol entry should affect advisers' employment decisions. We find that while the entry into the protocol is not associated with a significant change in the overall likelihood of an adviser's departure, there is a substantial shift in the firms that advisers move to. Specifically, the probability of leaving for another firm in the protocol increases by approximately 50%. This effect is offset by a decline in the probability of going to a nonprotocol firm. These results provide strong evidence that the transferability of client relationships is indeed a major factor in adviser employment decisions.

If clients trust advisers, then when advisers change firms their clients should follow, inducing a "relationship-based flow." This particular flow mechanism is distinct from those previously studied, such as flows due to past performance (Lynch and Musto, 2003; Huang et al., 2007), expense ratios (Sirri and Tufano, 1998; Bergstresser et al., 2009) or brokers' incentives (Christoffersen et al., 2013). Available data does not allow direct observation of each adviser's book of business, but we do observe each firm's assets under management (AUM) each year, and are therefore able to relate changes in this value to adviser moves. We show that an adviser leaving one protocol member firm to join another brings substantially more assets than if he were to join a firm that is outside the protocol. Our lower bound estimates suggest that, unconstrained, the average adviser takes about 40% of her clients when she changes firms. This value has not been previously estimated in the literature, and could be of interest to market participants, especially in the context of litigation. The estimated elasticity using changes in number of accounts instead of AUM is nearly identical.

[1] We refer to non-compete agreements, but include also non-solicit agreements, which allow employees to move to competing firms, but not to solicit former clients to move their business. NCAs are also known as non-compete clauses, or covenants not to compete.

[2] Throughout the paper, we use the term "advisers" to refer to both registered investment advisers and registered representatives employed at broker-dealers, who may or may not also be registered investment advisers.

[3] The complete text of the 1,200-word agreement is available at http://www.thebrokerprotocol.com/index.php/authors/read-the-protocol.

From a revealed preference perspective, evidence of relationship-based flows suggests that relaxing constraints on the transferability client relationships—what we term "unlocking clients"—makes both advisers and clients better off. However, as noted above, asymmetric information permeates the financial advisory industry, so there is a potential for advisers to take advantage of their clients. Putting clients in unsuitable or high-fee products, shirking by neglecting their advisory duties, or moving clients to higher fee firms are just a few ways that advisers could exploit their clients' trust. Unlocking clients can also weaken firm governance: it tips the balance of power from firms to advisers, which could make firms laxer with respect to punishing advisers when they engage in misconduct to prevent a decline in assets.[4]

We therefore test whether firms are less likely to discipline their advisers following protocol adoption and whether this leads to increased adviser misconduct at member firms. We find that following protocol adoption, firms become more reluctant to fire advisers after they engage in bad behavior. For the sample of advisers working at large firms, engaging in misconduct increases the probability of being fired by about 23%, but that this discipline is effectively undone when firms join the protocol. We also find that protocol adoption is associated with an increase in the propensity to engage in misconduct by about 40%. Together, these findings support the notion that firms are indeed reluctant to fire employees once they have entered the protocol for fear of losing the assets of those advisers' clients and that this leads to a higher incidence of misbehavior by advisers.

We next estimate the dynamics of fees following protocol adoption. Firms may increase fees to compensate for the possibility of losing assets to adviser departures or because they realize that the trust underlying relationship-based flows can be easily exploited. Alternatively, firms can decrease their fees to attract new clients to compensate for the loss of AUM that follows adviser departures. For a small sample of brokerage firms, we find that firms do not significantly change their fees in the first year of protocol membership, but in the second year fees go up by about 13% from pre-adoption levels. After three years, fees remain about 18% higher than pre-adoption fee levels. These findings, along with those on higher misconduct rates, call into question whether unlocking clients makes them better off.

What is the effect of unlocking clients on firms? If all firms charged the same fees for identical products, then advisers moving within the protocol member firms should just be a zero sum game. Therefore, to answer this question, we need to think about which firms should gain from joining and which should lose. Prior to the protocol, legal settlements between the former and new employer were the norm when advisers moved clients between firms. The new employer would pay the former some percentage of the adviser's annual production. The large brokerage houses that initiated the protocol along with those that joined in the early years likely anticipated that the agreement would lead to zero net flows, and reduced legal costs. They likely did not anticipate the growth of the protocol to include smaller firms. For these firms, the protocol was an opportunity. The status quo legal settlement process made it extremely difficult for small firms to poach employees from larger firms since they did not have the resources to settle up. Protocol adoption made poaching from large firms "free." With this in mind, we analyze firm outcomes by splitting the sample between large and small firms.

Our empirical findings are largely consistent with these arguments. Adoption of the broker protocol matters much more for smaller firms. Smaller firms see abnormal adviser growth from within the industry of about 8.5% in the year they join the protocol. This is driven by poaching advisers from other member firms. Substantial growth only lasts during the first two years, suggesting that small firms strategically join the protocol to poach advisers and grow their client base. Large firms, by contrast, see no net growth in the number of advisers upon adoption of the protocol, but the long-term effects of protocol adoption for these firms is a decline in advisers. We see similar patterns when investigating the impact of unlocking clients on revenue. For small firms, revenue increases by about 27% upon adoption of the protocol and remains persistently higher. Large firms, however, see a temporary increase of about 7% in the first year, which fades away by the second year. These results indicate that if clients were fully unlocked from firms, the financial advisory industry would become less concentrated, allowing small firms to compete with larger firms.

Tempering the benefit of increased competition, we also find that misconduct rates at small firms increase by more than at larger firms following protocol adoption and remain persistently high. An advisers with a large client base at a small firm will wield much more power than at a large firm since her book of business constitutes a larger percentage of firm assets at the small firm. In a sense the "relationship assets" in small firms are much more concentrated, making them less willing to discipline large advisers.[5]

Our findings contribute to the literature that explores incentives and behavior of financial advisers, who play an influential role in determining their clients' asset choices (Mullainathan et al., 2012; Foerster et al., 2017), despite a failure to deliver tangible benefits (Bergstresser et al., 2009; Chalmers and Reuter, 2020). We extend this literature by highlighting the fundamental importance of the relationships between advisers and their clients in this industry. Charoenwong et al. (2017), Dimmock et al. (2018) and Egan et al. (2019) study misconduct in this industry, whereas Clifford and Gerken (2019) investigate the effect of the broker protocol on investment in human capital. We show that significant adviser power can lead to higher fees, laxer firm governance, and increased adviser misconduct.

[4] A recent literature has found that rates of adviser misconduct are persistent within firms, suggesting that some advisory firms do a poor job of disciplining misconduct (Egan et al., 2019).

[5] This idea is similar to Israelsen and Yonker (2017), who show that firms with concentrated human capital experience large declines in firm value when "key" employees depart.

Our findings are also related to the growing literature on the importance of trust in the financial advisory industry (Gennaioli et al., 2015; Gurun et al., 2018; Germann et al., 2018; Kostovetsky, 2016). We provide the first estimate of the percentage of assets an adviser can expect to take when switching firms, which is direct evidence of the importance of trust-based relationships between clients and advisers. Unlike Gurun et al. (2018), who show the impact on asset flows from clients losing trust in regulators, we show that client trust in advisers—rather than advisory firms—shapes asset flows in the financial advisory market. From this perspective, our study complements Kostovetsky (2016), who studies mutual fund flows around management-company ownership changes, finding evidence that clients also place trust in firms.

Finally, our paper is related to the broad literature in labor economics on the use of NCAs in various industries and how it affects human capital mobility. Starr et al. (2018) find that 18% of employees report being bound by non-compete agreements—including 20% of employees with less than a high school education—while 38% of employees report having signed a non-compete agreement at some point in the past.[6] Studies have generally found that NCAs are an impediment to this mobility (Stuart and Sorenson, 2003; Marx et al., 2009; Marx, 2011), and therefore can affect the growth of both industries and geographic regions (Rosegrant and Lampe, 1992; Saxenian, 1996; Franco and Filson, 2006; Klepper, 2002; Klepper and Sleeper, 2005). With the exception of Lavetti et al. (2019), who use a survey of physicians in five states, this literature has relied on state-level variation in enforcement of NCAs. We contribute to this literature by providing the first large-scale evidence of the effects of NCAs on labor mobility and bargaining power using firm-level variation in NCAs. In contrast to previous studies, our design allows us to control for geographic differences in local labor market conditions that could be correlated with NCA enforcement.

2. Empirical methodology

We are interested in estimating the importance of client relationships in the financial advisory industry. To do this, we need variation in advisers' ability to move clients when they switch firms. For this purpose, we construct a staggered panel of firm entry and exit into the broker protocol, which relaxed the enforcement of NCAs for advisers moving within member firms, allowing clients to freely follow their advisers to some firms, but not others.

Importantly, there are very few barriers to protocol membership. Firms entering the protocol must only file a joinder agreement and notify the Securities Industry and Financial Markets Association (SIFMA) of their entry. Leaving is also easy, requiring only written notification ten days prior to exit. This ease of entry and exit alleviates the concern that certain types of firms are systematically excluded and that characteristics of those excluded firms could drive our findings.

One challenge to estimating causal effects using the broker protocol as our source of variation is that firms are likely to join the protocol strategically. Indeed, our results show that this is likely the case. In the analysis that follows, we show that adviser turnover increases significantly in the year a firm joins the protocol, and remains high in the year following protocol membership, but then converges to pre-membership levels, suggesting that firms enter the protocol to poach advisers (see Fig. 2). In the Internet Appendix, we identify characteristics that predict a firm's decision to join the protocol, namely firm size, past growth, being a registered investment adviser (RIA), and the amount of competition among local advisers (Table IA.1).

We must therefore consider two potential sources of endogeneity: omitted factors and reverse causality. First we consider omitted factors that predict protocol membership but cannot be included in the model; these could be be static or time-varying at the level of the firm, branch, or local labor market. We address this concern in three ways. First, we include firm-branch fixed effects in our adviser-level regressions, which allows us to control for any time-invariant, firm- and branch-level omitted variables that could drive protocol adoption. Second, we include county-year fixed effects to remove the effect of any time series trends that could be due to changing local economic conditions or the increasing number of firms entering the protocol across geographies, for example. The inclusion of these fixed effects rules out the possibility that either static or time-varying omitted variables at the local level influence our estimates. Third, while we control for observable firm and branch characteristics that could vary through time, this cannot account for time-varying *omitted* firm and branch characteristics that could drive protocol entry. For example, a firm can adopt a more aggressive corporate strategy that includes aggressive recruiting. This strategy could simultaneously affect many firm-level policies, as well as leading to the firm's decision to join the protocol. Such changes in firm policies would be correlated with protocol adoption, but are not a result of protocol adoption. We deal with this by exploiting several facts: (i) protocol adoption is a firm-level decision that applies to all firm branches regardless of their location, (ii) many firms have branches in different states, and (iii) there is substantial heterogeneity in the level of enforcement of NCAs by state. Therefore, looking within a firm, protocol entry should have stronger effects on branches located in states that have stronger NCA enforcement. Throughout the analysis we test this hypothesis.

The second possible source of endogeneity is reverse causality. When regressing adviser turnover on protocol membership, for example, it is difficult to determine whether firms join the protocol because they seek to poach advisers, or whether joining the protocol causes turnover to increase. We argue that while this source of endogeneity is certainly present at the firm level, firm entry into the protocol acts as an exogenous positive shock to the transferability of client relationships, essentially transforming what were once firm-specific assets to general assets

[6] Greenhouse (2014) provides examples of non-compete agreements in a surprising range of jobs, including summer camp counselors, event planners, and yoga instructors. In 2016, the sandwich chain Jimmy Johns agreed to stop requiring NCAs with its employees as part of a settlement with the New York attorney general's office.

that advisers can take with them if they leave. This is especially true for advisers at large firms. We therefore conduct all of our analysis both with the full sample of observations as well as a subset of advisers who work for large firms, with the assumption that advisers at large firms do not likely influence the decisions of management to join the broker protocol.

3. Data and sample construction

In this section, we discuss the four main data sources utilized in the study and how we use them to construct the adviser-level and firm-level data sets used in our analysis.

3.1. Financial adviser data

Data on financial advisers are extracted from FINRA's web server, which provides consolidated data from its BrokerCheck web site and the Security and Exchange Commission's Investment Adviser Public Disclosure (IAPD) web site. These data include information on all registered representatives (brokers) and investment adviser representatives (investment advisers). Following Egan et al. (2019), we refer to these two groups collectively as "financial advisers." Data extracted from this source include the histories of broker and investment adviser registrations with firms, locations of employment, customer complaints and dispute resolutions, and industry examinations. The data are similar to that used in the main analysis of Egan et al. (2019), but also include advisers working for registered investment advisers that are not also broker-dealers.

3.2. Registered investment adviser data

Data on registered investment advisory firms are from Part 1A of SEC Form ADV, the Uniform Application for Investment Advisor Registration, which we obtained through a series of Freedom of Information Act (FOIA) requests. The SEC granted us all electronic filings made since the electronic filing mandate began in 2001, through the first quarter of 2017. These data include detailed information about investment advisory firms, including their owners, their clients, and any criminal behavior. Importantly, investment advisory firms are required to update their filings annually, including assets under management (AUM). Using these data, we follow Gurun et al. (2018) in constructing an advisory firm-year panel data set.

3.3. Broker-dealer data

Broker-dealers are identified using Form BD, which is filed by all registered broker-dealers. The data were obtained through a FOIA request to the SEC and are augmented with additional information from the SEC's web site listing active broker-dealers by month, dating back to 2007.[7]

3.4. Broker protocol data

Entry and exit dates to the broker protocol are collected from a web site maintained by the law firm Carlile, Patchen, and Murphy, LLP.[8] The site includes a directory of all firms that have ever entered the broker protocol, and provides legal names of firms, their dates of entry and exit, and contact information. We match these firms to FINRA's unique firm-level CRD identifier by matching legal names of these entities to those in the SEC and FINRA databases. This matching is extremely precise because the protocol web site uses legal names of firms.

As of the end of 2016, there were 1515 unique firms that had joined the broker protocol. Of these, we are able to identify the CRD for 1325 firms, or 87.5% of the initial sample. Most firms that we are unable to match appear to be banks or trusts and are therefore not included in the adviser data. Of the matched firms, 1166 (88.0%) had at least one adviser employed in the year prior to joining the protocol. (The remainder are firms that were established and joined the protocol prior to commencing operations or having any registered advisers.)

Table 1 reports firm entry and exit by year into the protocol. The table shows that by December 2016, only 39 of the 1166 firms that had entered the protocol had subsequently left. Entry by number of firms peaked at 214 in the aftermath of the financial crisis, in 2009. Looking at the number of advisers added to the protocol, the two highest years were 2004 and 2009, each with over 57,000 advisers joining. The table also shows that in the early years of the protocol entry was dominated by large broker-dealers, but that smaller registered investment advisers have made up the majority of entrants since 2010. For example, the average firm joining in 2004 had 14,323 advisers, while at the end of our sample period this number had declined to just 32.

Our analysis uses only the period of 2007 onward because of a possible survivorship bias present in our data prior to 2007, which we discuss in detail below. The table shows that our sample includes 99% of the staggered firm entries, 100% of the exits, and 207,791 advisers that were employed when their firms joined the protocol, which is 72% of the population.

Fig. 1 shows the percentage of firms and advisers in the protocol by year. Panel A of the figure shows that protocol membership by firm has steadily increased over the period. By the end of 2016, 6.3% of firms with more than one adviser were party to the protocol. These rates are slightly higher for broker-dealer firms than for non-broker-dealer firms. Turning to the number of financial advisers employed at firms in the protocol, Panel B of the figure shows that by the end of 2016, 38.9% of advisers were employed by firms in the protocol. A much larger proportion of advisers employed by broker-dealers than those employed by non-broker-dealers were covered (43.3% vs. 12.6%).

[8] www.thebrokerprotocol.com.

Table 1
Entry and exit in the broker protocol.
The table shows the number of firms and advisers that entered or exited the broker protocol each year. The number of advisers is the total number of advisers registered with the firm as of the end of the calendar year prior to the entry or exit year. The table also reports the percentage of entering or exiting firms that are registered broker dealers and the percentage of advisers who work for registered broker dealers. Also reported are the total number of entries/exits ("Total") and the total number covered for our sample period ("Sample total"), as well as the percentage of the total covered by our sample, which begins in 2007.

Year	Entry					Exit				
	Number			% BD		Number			% BD	
	Firms	Advisers	Adv./ Firm	Firms	Advisers	Firms	Advisers	Adv./ Firm	Firms	Advisers

% total	99	72				100	100			

3.5. Additional data sources

We obtain data on fee-based assets and fee revenue for a subset of large broker-dealers from *InvestmentNews*' B-D Data Center.[9] These data, which cover approximately 75 broker-dealers per year from 2004 to 2016, are compiled from annual surveys of independent broker-dealers. We obtain annual data on revenue for broker-dealers from Audit Analytics' Broker-Dealer Financial and Operational Combined Uniform Single (FOCUS) Report, which collects data from SEC Form X-17A-5 filings, and contains information on the financial and operating conditions of broker-dealers. We summarize these data in Tables IA.7 and IA.8 of the Internet Appendix, respectively. We also construct a measure of state-level NCA enforceability, "Absence of NCA enforcement," based on data presented in Table 1 of Stuart and Sorenson (2003).

3.6. Sample construction

We construct a data set covering advisers beginning in 2003, but show in the Appendix that the data are free of survivorship bias concerns only beginning in August 2007. Our main tests using these data are therefore conducted with annual panel data from the end of 2007 until the end of 2016. This final survivorship-bias-free sample includes 5,902,522 employee-year observations. We run robustness tests using all available data back to the beginning in 2003, but acknowledge that a possible survivorship bias exists in this extended sample.

Summary statistics for the adviser panel are displayed in Panel A of Table 2. Also shown are the subsamples based on whether the adviser is employed by a firm that is a member of the protocol during the year or not. The table shows that, for 33% of the employee-year observations, advisers work for firms in the protocol. Most financial advisers work for broker-dealers (97%). The average financial adviser has 12 years of experience and advisers at firms in the protocol have about three more years of experience, on average, than advisers at firms not in the protocol. The unconditional probability of an adviser leaving for another firm during the year is 0.092. We decompose adviser movements by whether their destination firm is a protocol member. Not surprisingly, the majority of moves are to nonprotocol firms (79%), since there are many more of them.

We construct a misconduct indicator variable following Egan et al. (2019). During our sample, advisers engage in misconduct 0.5% of the time, which is slightly less than the 0.6% reported in Table 1 of Egan et al. (2019). Advisers employed by protocol member firms appear to be about 75% more likely to engage in misconduct. We also calculate "Past misconduct," which indicates if an adviser has ever engaged in misconduct in the past. Its average is 6.8%, matching the 7% reported by Egan et al. (2019). More generally, our summary statistics closely match those of Egan et al. (2019).

We construct a firm-level sample by collapsing the adviser-level data each year. This gives us 133,519 firm-year observations from 2007 until 2016, for about 13,350 firms per year. In 4% of the firm-years, firms are members of the broker protocol and in 31% firms are broker-dealers. The average firm has 59 advisers, but this distribution is highly skewed with a median of only four. Moreover, broker protocol members have many more advisers than firms that are not members. Within industry turnover, defined as the average of the percentage of advisers leaving the firm for other firms and the percentage of advisers joining the

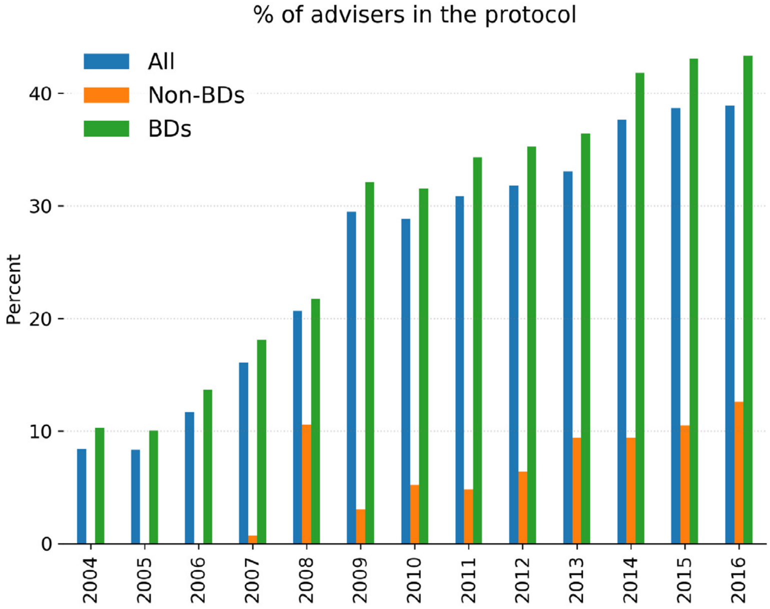
Panel A



Panel B

Fig. 1. Percentage of firms and advisers in the protocol by year. The figure shows the percentage of financial firms that are members of the broker protocol (Panel A) and advisers who are employed by members of the broker protocol (Panel B) by year for all firms that employ at least two financial advisers between 2004 and 2016. These percentages are also decomposed into firms (employers) that are not broker-dealers and firms that are broker-dealers. The survivorship-bias-free sample begins in August of 2007. Advisers who retire prior to August 2007 are missing from the sample.

firm from other firms, is about 6.5% for the average firm, and is predominately driven by turnover with firms that are not in the protocol. At least one misconduct event occurs at firms at a rate of nearly 8% per year and, as previously noted, it is much less frequent among nonprotocol firms.

Our asset flow tests are limited to firms that are registered investment advisers with the SEC. The RIA sample indicator reveals that firms in about 33.7% (44,995 firm-years) of the firm-years also file Form ADV and report AUM. The average firm has $2.2 billion in AUM and 1625 client accounts, but the median AUM is much smaller at $236 million and 450 client accounts. Firms in the protocol manage roughly twice as many assets as those that are not. The average asset and account growth rates are around 7%.

Table 2
Summary statistics.
The table displays summary statistics for variables used in the analysis. Reported in Panel A are summary statistics for the survivorship-bias-free adviser-level panel of advisers who work for employers that employ at least two financial advisers, which includes 5,902,522 adviser-year observations from the end of 2007 through the end of 2016. Reported in Panel B are summary statistics for the firm-level panel of all firms that employee at least two financial advisers, which includes 133,519 firm-year observations from the end of 2007 through the end of 2016. All variables are defined in Tables A.1 and A.2 of the Appendix. Also reported are means of the sample split by whether the employer (adviser-panel) or the firm is a member of the broker protocol at the end of the calendar year and the significance levels of univariate t-tests testing the differences in these means. t-statistics are computed using robust standard errors, clustered by firm. Significance levels are denoted by c, b, and a, which correspond to 10%, 5%, and 1% levels, respectively. Data on AUM is available only for firms that register as investment advisers with the SEC. For about 37% of the firm-year observations, the firm is registered as an investment adviser.

4. Results

In the following sections, we test the importance of client relationships in the financial advisory industry. We begin with advisers by testing whether unlocking clients affects their employment decisions (Section 4.1). Next we focus on clients by asking, when unlocked, what percentage of client assets follow their advisers when advisers switch firms (Section 4.2). For firms, we estimate how unlocking clients affects their willingness to discipline advisers for bad behavior since unlocking clients transfers bargaining power to advisers (Section 4.3). We then test whether laxer monitoring by firms leads to increased financial misconduct (Section 4.4). The dynamics of fees after firms unlock their clients are then explored (Section 4.5). Finally, we ask which firms are the winners

JA0321

and losers from unlocking clients, and what are the implications for the industry (Section 4.6).

4.1. Adviser employment decisions

We begin by estimating the effect of unlocking clients on advisers' decisions to move to another firm ("turnover").

4.1.1. Adviser-level analysis

We estimate the following linear probability model using our annual adviser-employer matched panel from 2007 through 2016:

$$\text{Turnover}_{j,i,c,t+1} = \alpha_{i,c} + \gamma_{c,t} + \beta_p(\text{Firm in protocol})_{j,i,t} + \Gamma'\text{Controls}_{i,t} + \epsilon_{j,i,t}, \quad (1)$$

where $\text{Turnover}_{j,i,c,t+1}$ is an indicator that is one if individual j's employment at firm i in a branch located in county c ends during year $t+1$. $(\text{Firm in the protocol})_{i,t}$ is an indicator variable that is one if firm i is in the broker protocol by the end of year t, and $\alpha_{i,c}$ and $\gamma_{c,t}$ are branch (firm-county) and county-year fixed effects, respectively. Control variables include the log of the number of advisers employed at firm i at the end of year t, the log of the number of years of experience of adviser j by the end of year t, and a series of dummy variables indicating the exams/qualifications of the financial advisers, which follow the definitions used in Egan et al. (2019).[10] The variable of interest is "Firm in protocol." If unlocking clients increases the propensity of advisers to leave their firms, then the estimate of β_p should be significantly positive.

We estimate regression (1) using three alternative definitions of turnover. First, we use "Leave for another firm," an indicator variable that is one if an adviser leaves one firm and joins another. We further decompose this variable into two categories: whether the firm that the adviser joins is a member of the protocol or not, creating the indicator variables "Leave to a protocol firm" and "Leave to a nonprotocol firm."

Since all advisers in a firm are treated simultaneously, our empirical design could have what Abadie et al. (2017) call an "assignment" problem. We address this by clustering standard errors by firm throughout the analysis.[11] Sampling problems are not an issue in our study since the "sample" includes the population of financial advisers.

Panel A of Table 3 shows the regression results for these three turnover variables. In column 1, the estimate of β_p is indistinguishable from zero, indicating that unlocking clients does not increase advisers' propensity to switch firms. However, the evidence in columns 2 and 3 shows that unlocking clients redirects advisers toward other protocol firms and away from nonprotocol firms. The estimate of β_p in column 2 is 1.81, indicating that once advisers' firms join the protocol, those advisers are 1.8% more likely to leave for another protocol firm. The unconditional probability of leaving to join a firm in the protocol is 3.5%, so the economic magnitude of this effect is substantial, increasing the probability by over 50%. The estimate in column 3 indicates that the probability that advisers leave to join nonprotocol firms following their firm joining the protocol declines by about 2.0%. These results are consistent with adviser-client relationships affecting advisers' employment decisions.[12]

To further the argument of causality, in columns 4 through 7 of the table we test whether the effects of unlocking clients due to the relaxation of NCAs are stronger in branches that are located in states that enforce NCAs. To do this, we estimate regression (1) separately for advisers working at branches located in states that enforce NCAs and for those working in states that do not. We then test whether β_p is larger in magnitude for the sample of advisers working in states that enforce NCAs. If advisers are aware of the state-level enforceability of these agreements, then the protocol should have more of an effect on turnover in states that enforce NCAs. Of course, broker protocol can still influence adviser mobility in states where NCAs are not influenced if advisers are unaware of the strength of enforceability in their states.

The coefficient estimates indicate that the effects of the protocol are stronger in states that actually enforce NCAs. The estimates of β_p in column 4 are roughly twice the size of those in column 5 and theses differences are significantly different from zero at the 10% level. Similarly, the decrease in the probability of advisers leaving for firms that are not in the protocol following protocol membership is larger in magnitude for advisers working in states that enforce NCAs. The estimate of β_p is -2.14 in column 6 of Panel A, while the coefficient in column 7 is -1.52. This difference is significant at the 10% level.

Panel B shows the results when the sample is restricted to advisers who work for large firms (those with 100 advisers or more). The sample averages about 590 of these firms per year, which is about the 96th percentile of firm size. These results are less susceptible to reverse causality since individual advisers are less likely to be able to influence their firms' decisions to join the protocol. The results confirm that unlocking clients affects adviser employment decisions.

4.1.2. Firm-level analysis

We next estimate the dynamics of firm-level turnover and adviser growth following unlocking clients. To ensure that our findings are not driven by outliers, all dependent variables are winsorized at the 1st and 99th percentiles. Specifically, we estimate:

$$\text{Turnover/Growth}_{i,t} = \alpha_i + \gamma_t + \beta_{p,0}(\text{Firm joins protocol})_{i,t} + \beta_{p,1}(\text{Firm joins protocol})_{i,t-1}$$

[10] One exception is that we include a dummy variable, "investment adviser," that indicates whether the adviser is currently registered as an investment adviser. Egan et al. (2019), instead use data on exams passed to infer registration as an investment adviser.

[11] Two-way clustering by firm and year is not appropriate, since we only have nine years of data. Standard advice is that there should be at least 50 clusters to make clustering the standard errors appropriate.

[12] Table IA.3 in the Internet Appendix shows the effect of the inclusion of various fixed effects in our model. Branch fixed effects explain the most variation and have largest effect on the magnitude of the estimates of β_p.

Table 3
Adviser turnover.
The table displays regression results from linear probability models estimated using OLS (Eq. (1) in the text) of various turnover measures in the next year on "Firm in protocol," which is an indicator variable that is one if the financial adviser is employed by a firm that is a member of the broker protocol as of the end of the calendar year. The table reports the results using two samples. In Panel A, the analysis uses the entire adviser-level sample described in Panel A of Table 2. In Panel B, the sample is restricted to employees who are employed by firms with at least 100 advisers. Only coefficient estimates on "Firm in protocol" are displayed in Panel B, but the same control variables used in Panel A are included in the models. The dependent variable in column 1 is "Leave for another firm," which is an indicator variable that is one if the adviser who departs in year $t+1$ joins another firm by August of 2017 (the time of download for our data). We further decompose this variables by whether the firm that the adviser joins is a member of the protocol or not, creating the indicator variables "Leave for a protocol firm" and "Leave for a nonprotocol firm." Columns 4 through 7 show regression results for subsamples of advisers split by state-level NCA enforcement. We categorize state-level enforcement of NCAs based on the variable "Absence of NCA enforcement," which is a dummy variable that indicates that the state where the adviser works does not enforce non-compete agreements. This variable is based on Table 1 of Stuart and Sorenson (2003) and used in Samila and Sorenson (2011). We categorize states that do not enforce NCAs as those where "Absence of NCA enforcement"=1 and those that do enforce NCAs as states where "Absence of NCA enforcement"=0. All models include firm-county and county-year fixed effects. County is based on the primary branch where the adviser works. t-statistics are computed using robust standard errors (reported in parentheses), clustered by firm. Using the same robust standard error estimation we also report $\hat{\beta}_{p,\text{yes}} - \hat{\beta}_{p,\text{no}}$ and the associated standard errors. Significance levels are denoted by c, b, and a, which correspond to 10%, 5%, and 1% levels, respectively.

$$+\beta_{p,2}(\text{Firm joins protocol})_{i,t-2} + \beta_{p,>2}(\text{Firm joins protocol})_{i,<t-2} + \Gamma'\text{Controls}_{i,t-1} + \epsilon_{i,t}, \quad (2)$$

where α_i and γ_t are firm and year fixed effects and $(\text{Firm joins protocol})_{i,t}$ is an indicator variable that is one if firm i joins the broker protocol in year t. Therefore, $\beta_{p,s}$ estimates the change in turnover s periods after protocol adoption relative to the firm's average turnover prior to joining the broker protocol. For instance, $\beta_{p,0}$ captures abnormal turnover in the first year of membership. The parameter $\beta_{p,>2}$ captures the average abnormal turnover after three or more years of protocol membership. The lagged log number of advisers is included to control for firm size.

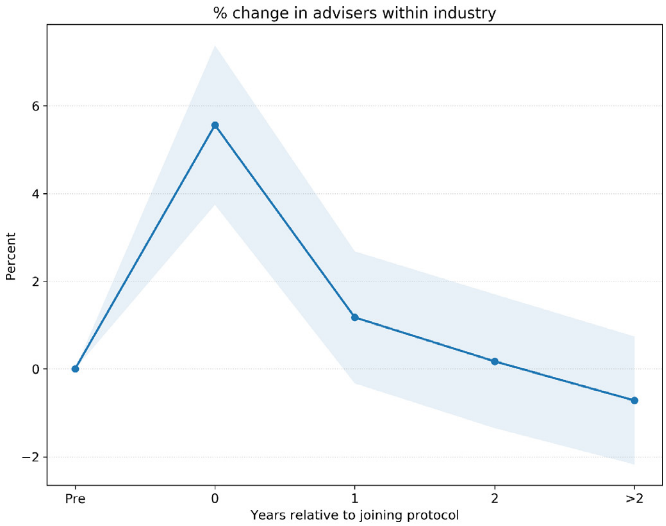
Panel B

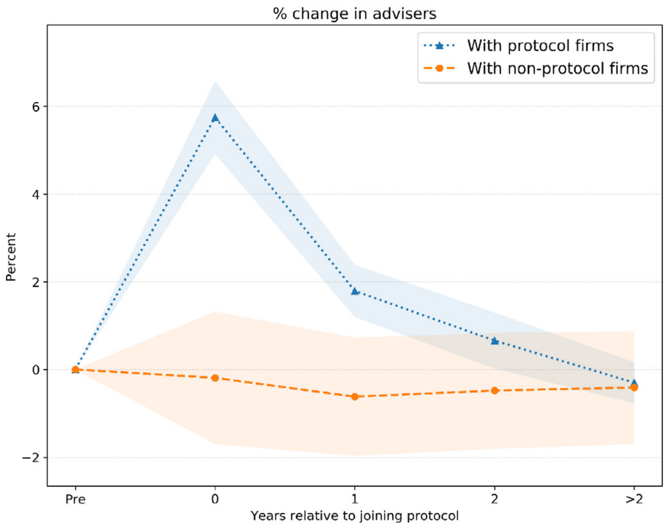
Fig. 2. Adviser turnover: Firm-level dynamics. The figure plots the coefficient estimates and their 10% confidence intervals of the $\beta_{p,t}$'s from Eq. (2), which is a linear probability model with firm and year fixed effects, that regresses various measures of turnover on lags of "Join protocol." Therefore, the coefficient estimates on these indicator variables measure the changes in turnover relative to average turnover prior to a firm joining the broker protocol. The analysis uses the entire firm-level sample described in Panel B of Table 2. The dependent variables are within-industry turnover (Panel A), turnover with firms in the protocol and turnover with firms not in the protocol (Panel B), %Δ in advisers within industry (Panel C), and %Δ in advisers with protocol firms and %Δ in advisers with nonprotocol firms (Panel D), where definitions follow those in Table A.2. Confidence intervals are computed using robust standard errors, clustered by firm.

The estimates of the $\beta_{p,s}$'s from the regressions are plotted in Fig. 2.[13] In addition, adviser growth is decomposed into % join and % leave. The endogenous entry of firms into the protocol is evident in the figures. In Panels A and C, we see that within industry turnover and adviser growth spike in the year that a firm joins the protocol, but subsequently reverts to levels observed prior to membership. Panels B and D show that it is the turnover

[13] Coefficient estimates and their standard errors are displayed in the Internet Appendix in Table IA.2.



Panel C



Panel D

Fig. 2. Continued

with other firms in the protocol that drives this the first year spike, consistent with firms entering the protocol to poach advisers. Also consistent with this is that there is no initial effect on turnover with firms that are not protocol members. Abnormal turnover and adviser growth with protocol firms remains abnormally high for the first years of membership. Turnover with nonprotocol firms does not decline abnormally until the second year of membership, but it remains persistently low thereafter. Adviser growth with nonprotocol firms remains flat through the entire period.

4.2. Relationship-based flows

The results from the previous section are consistent with advisers placing importance on the client relationship. While unlocking clients does not increase adviser propensity to change firms, it does affect the firms that advisers move to. This suggests that clients move with advisers when they switch firms. In this section, we formally test whether clients follow advisers. Finding positive evidence of these relationship-based flows would be consistent with some clients valuing their relationships with advisers more than with their advisory firms.

To test this, we estimate the following fixed effects OLS regression model:

$$\begin{aligned}\Delta \log(\text{AUM})_{i,t} &= \alpha_i + \gamma_t + \beta_{n,o}(\%\Delta \text{in adv. outside industry})_{i,t} \\ &\quad + \beta_{n,n}(\%\Delta \text{in adv. within industry})_{i,t} \\ &\quad + \beta_{n,p}(\%\Delta \text{in adv. with protocol firms})_{i,t}\end{aligned}$$

JA0325

$$+\beta_{p,o}\text{Protocol}_{i,t} \times (\%\Delta\text{in adv. outside industry})_{i,t}$$
$$+\beta_{p,n}\text{Protocol}_{i,t} \times (\%\Delta\text{in adv. within industry})_{i,t}$$
$$+\beta_{p,p}\text{Protocol}_{i,t} \times (\%\Delta\text{in adv. with protocol firms})_{i,t}$$
$$+\beta_p(\text{Firm in protocol})_{i,t} + \Gamma' Controls_{i,t-1} + \epsilon_{i,t}, \quad (3)$$

where $\Delta\log(\text{AUM})_{i,t}$ is the change in the log of AUM of firm i during year t, $(\text{Firm in protocol})_{i,t}$ is an indicator variable if firm i is a member of the broker protocol by the end of year t, and α_i and γ_t are firm and year fixed effects, respectively.

The %Δ in adv. variables are various decompositions of the percentage change in the number of advisers at firm i during year t. "%Δ in adv. within industry" is the percentage change in advisers to and from other firms in our sample. Therefore, it is the difference between advisers joining from other firms and advisers leaving for other firms, regardless of whether those firms are protocol members. "%Δ in adv. outside industry" is the percentage change in advisers entering or leaving our sample. This includes the difference between advisers who enter our sample for the first time and those that leave the profession (i.e., they never show up in our data again) and also the difference between advisers joining after being unemployed for at least a year and those leaving and being unemployed for at least a year. These two components sum to the total percentage change in advisers at the firm during the year, so %Δ in adv.$_{i,t}$=%Δ in adv. outside industry$_{i,t}$+%Δ in adv. within industry$_{i,t}$, where the scaling factor in all measures is the number of advisers at the end of year $t-1$. We separate these components because we hypothesize that advisers moving to or from other firms in the industry are more likely to move assets with them than are rookie advisers, or those who leave the industry. This leads to the prediction that $\beta_{n,n} > \beta_{n,o}$.

Finally, "%Δ in adv. within industry" can be decomposed into advisers moving between protocol- and nonprotocol firms. "%Δ in adv. with protocol firms" is the difference between the percentage of advisers joining from protocol member firms and those leaving for protocol member firms. As before, the scaling factor is the total number of advisers at the end of year $t-1$. Constructing our variables this way allows us to test for differences in the elasticities of AUM to advisers for those joining from or leaving for protocol and nonprotocol firms.

In regression (3), the coefficients $\beta_{n,o}$, $\beta_{n,n}$, and $\beta_{n,n} + \beta_{n,p}$ capture the elasticities of AUM for nonprotocol firms with respect to outside industry advisers, nonprotocol advisers, and protocol advisers, respectively. The coefficients $\beta_{p,o}$, $\beta_{p,n}$, and $\beta_{p,p}$ capture the incremental effect on those elasticities due to firms being in the protocol.

Recall that in order for financial advisers to move assets from one firm to another without legal repercussions, both firms must be members of the protocol. Therefore, our main hypothesis is that changes in AUM should be most sensitive to the changes in advisers at protocol firms moving to and from other protocol firms, or $\beta_{p,p} > 0$. In addition, there is no reason to believe that the change in AUM should be any more sensitive to changes in nonprotocol advisers or changes in advisers from outside the industry if the firm is a protocol member, implying that $\beta_{p,o} = 0$ and $\beta_{p,n} = 0$.

We estimate various forms of regression (3) using a firm-level annual panel data set constructed from electronic filings of Form ADV, as described in Section 3.2. In Table 2, we showed that this sample covers roughly 34% of firm-year observations in the sample. This decline in sample size is due to the fact that not all firms that employ financial advisory firms are RIAs, which are required to make regular filings with the SEC.

Table 4 shows the results of our tests. In column 1, we include only the "%Δ in advisers" as our variable of interest in order to test the general contemporaneous relationship between changes in AUM and changes in advisers. The coefficient estimate is 0.107, which implies that a 1% increase in the number of financial advisers at the average firm is associated with about a 10.7 basis point increase in AUM. In column 2, we decompose the change in advisers between outside and inside the industry changes and further decompose inside industry changes into changes with protocol members and non-members. The estimates show that changes within the industry are associated with much larger changes in AUM. A 1% increase in advisers leaving the industry is associated with about a 4 bps decrease in AUM. The same change in advisers leaving for nonprotocol (protocol) firms within the industry leads to a decrease of about 14 (27) bps. Not only do the estimates show that larger changes in AUM are associated with within industry changes in advisers, but they also show that advisers leaving for protocol firms take roughly double the amount of assets with them relative to advisers leaving for firms outside the protocol. This difference is statistically significant.

In column 3, we estimate the full version of Eq. (3). Consistent with our hypotheses, we find that $\beta_{p,p} = 0.185 > 0$ and we fail to reject the hypotheses that $\beta_{p,o} = 0$ and $\beta_{p,n} = 0$. These findings indicate that changes in AUM are particularly sensitive to changes in advisers with protocol members, especially when the firm itself is a protocol member. Our estimate of the change in AUM for a 1% increase in the number of advisers leaving a protocol firm for firms in the protocol is $14.3 + 12.4 + 3.9 + 6.9 + 18.5 = 56.0$ bps. In other words, an adviser leaving a protocol member firm for another protocol member firm takes, on average, clients with assets worth about half of the average assets of the firm's existing advisers. It is possible that some of this outflow is due to factors other than advisers taking clients with them, but the 18.5 bps due to protocol-to-protocol firm turnover likely represents a lower bound of the size of the effect, as there is no reason to believe that assets would fall by more for firms in the protocol than those outside it when their advisers leave for protocol firms, other than that between protocol members clients are unlocked.

The regressions estimated in columns 4 through 6 use the change in the natural log of the number of accounts managed by the RIA. While the number of accounts is different from the number of clients, Form ADV does not report continuous values for client counts and the number of accounts is a better predictor of the number of clients than is AUM. The estimates using accounts tell a similar story to those using AUM. The only difference is that our

JA0326

Table 4
Relationship-based flows.
Panel A of the table displays regression results from fixed effect OLS regressions (Eq. (3) in the text) of changes in log (AUM) (columns 1 to 3) and changes in log(number of accounts) (columns 4 to 6) on contemporaneous changes in the percentage of advisers employed by the firm (%Δ in advisers) in column 1. In column 2, we decompose the percentage change in managers, by whether they are leaving or joining from outside the industry (%Δ in advisers outside industry) or within the industry (%Δ in advisers within industry), which includes moves to both protocol and nonprotocol firms. We add an additional variable that captures the incremental effect of the protocol, the percentage change in advisers to and from other firms that are members of the broker protocol (%Δ in advisers with protocol firms). In column 3, we interact these measures of percentage changes in advisers with "Firm in protocol," which is an indicator variable that is one if the firm is a member of the broker protocol as of the end of the previous calendar year. The analysis in Panel B follows the same pattern, but decomposes each % net change by including separate variables for the percentage of advisers joining and leaving firms. The analysis uses the firm-year observations from the sample described in Panel B of Table 2, which consists of Registered Investment Advisers with the SEC (about 37% of the sample). All continuous variables are winsorized at the 1st and 99th percentiles to remove the effects of outliers. All models include firm and year fixed effects. *t*-statistics are computed using robust standard errors (reported in parentheses), clustered by firm. Significance levels are denoted by c, b, and a, which correspond to 10%, 5%, and 1% levels, respectively.

test of the coefficient of interest, $\beta_{p,p}$, is not statistically different from zero. AUM fluctuates both with investment performance and flows, while the number of accounts depends only on flows. Indeed, these values in our sample have a correlation of only 0.41. Given this, the fact that our results are consistent across these measures adds to our confidence that we are capturing the common component that drives both, namely client flows.

In Panel B of the table, we decompose each of our measures of the percentage change in advisers into the percentage of advisers joining and leaving, and run regressions analogous to those in Panel A. We do this because we suspect that coefficient estimates on advisers leaving their firms will be much more precise since the average adviser's book of business at their current firm is likely more reflective of their actual book than at the firm to which they move.[14]

The estimates in Panel B show that this is indeed the case. For the most part, the estimates on the coefficients on the "% advisers leave" variables support our main hypotheses. The estimate of $\beta_{p,p}$ using AUM in column 3 is -0.39 and in column 6, using the number of accounts, it is -0.40. Both are similar and statistically different from zero. The coefficient estimates indicate that a 1% increase in advisers leaving for protocol firms from a protocol firm will lead to a decrease in AUM of 80 bps ($= -26.9 - 11 + 4.9 - 7.9 - 39.1$) and a decrease in the number of accounts of 77 bps ($= -21.9 - 11.7 + 6.7 - 9.8 - 39.9$). Of these decreases, we can safely say that half are due to advisers taking clients with them when they switch firms.

In summary, we estimate that when advisers move, that they take about 40% of their book of business with them. This supports the notion that a substantial portion of clients place trust in their advisers over the trust they have in their advisory firms. This has implications for the power dynamic between firms and advisers.

[14] Suppose an adviser works at a firm with $100 million in AUM that has ten advisers. On average, each adviser manages $10 million. If the adviser leaves, taking $5 million with her to a new firm, then we would estimate that a 10% decrease in advisers leads to a 5% decrease in AUM. If the adviser joins a firm with the same AUM/adviser ratio, then we would get a similar estimate on our coefficient "% advisers join," but if the new firm has a greater (smaller) AUM/adviser ratio the coefficient will be smaller (greater), thereby introducing noise to our estimates.

4.3. Disciplining advisers

In the previous section, we showed that unlocking clients leads to a substantial number of clients following their advisers when they switch firms. We therefore ask whether this makes firms reluctant to fire advisers, even when the advisers engage in bad behavior. (Egan et al., 2019), p. 235 find a large presence of repeat offenders among financial advisers and conclude that "this result implies that neither market forces nor regulators fully prevent such advisers from providing services in the future." In other words, clients are ineffective at disciplining "bad" advisers through asset transfers. This is likely drisxsven by information asymmetries. One way firms can mitigate this market imperfection is by disciplining advisers themselves. To test whether unlocking clients reduces firms' incentives to do so, we modify regression (1) to include an indicator variable that is one if the adviser engages in misconduct during year t ("Misconduct"), and the interaction of "Misconduct" with whether the firm is a member of the protocol. Our dependent variable is forced turnover, which is defined as turnover in which the adviser is subsequently unemployed for at least 90 days, on the assumption that few individuals would choose to be unemployed for that long. Formally, we estimate:

$$\begin{aligned}\text{Turnover}_{j,i,c,t+1} &= \alpha_{i,c} + \gamma_{c,t} + \beta_m(\text{Misconduct})_{j,t} \\ &\quad + \beta_p(\text{Firm in protocol})_{j,i,t} \\ &\quad + \beta_{p,m}(\text{Firm in protocol})_{j,i,t} \times (\text{Misconduct})_{j,t} \\ &\quad + \Gamma'\text{Controls}_{i,t} + \epsilon_{j,i,t}, \end{aligned} \tag{4}$$

where definitions of all variables follow those previously described. β_m measures turnover sensitivity to misconduct, which should be positive, at least in egregious cases of misconduct. β_p measures the difference in turnover propensity for firms once they join the protocol. If firms fear relationship-based outflows, then they may be more reluctant to fire advisers following protocol entry, implying that this coefficient could be negative. $\beta_{p,m}$ captures the difference in turnover sensitivity to misconduct attributable to firms being protocol members.

The results are presented in Table 5 for the full sample and the sample of advisers who work for firms with at least 100 advisers. Following the earlier adviser-level anal-

JA0328

Table 5
Turnover sensitivity to misconduct.
The table displays regression results from linear probability models estimated using OLS (Eq. (4) in the text) of forced turnover in the next year on "Misconduct," which is an indicator variable if the adviser engaged in misconduct, as defined by Egan et al. (2019), during the year; "Firm in protocol," which is an indicator variable that is one if the financial adviser is employed by a firm that is member of the broker protocol as of the end of the calendar year; and the interaction of the two. The dependent variable is an indicator variable that is one if the adviser joins another firm after 90 days of being unemployed. The table reports the results using two large samples and two subsamples of each. In columns 1 through 3, the analysis uses the entire adviser-level sample described in Panel A of Table 2. In columns 4 through 6, the results are reported for the sample of advisers employed by firms with at least 100 advisers. Each of these samples is split by state-level NCA enforcement using the variable "Absence of NCA enforcement," as outlined in Table 3. All models include firm-county and county-year fixed effects. t-statistics are computed using robust standard errors (reported in parentheses), clustered by firm. Using the same robust standard error estimation we also report $\hat{\beta}_{p\times m,\text{yes}} - \hat{\beta}_{p\times m,\text{no}}$ (the difference between the coefficient estimates on the interaction term of "Firm in the protocol" and "Misconduct" between the "yes" and "no" samples.) and the associated standard errors. Significance levels are denoted by c, b, and a, which correspond to 10%, 5%, and 1% levels, respectively.

ysis on turnover, both of these samples are further split by state-level NCA enforcement, and we test whether protocol membership has a larger impact on turnover sensitivity to misconduct in states that enforce NCAs.

The results from the full sample (column 1), indicate that engaging in misconduct increases the probability of being fired by 46 bps, which is about a 15% increase in the unconditional probability of forced turnover. In the same sample, being a member of the protocol essentially undoes this discipline. The estimate of $\beta_{p,m}$ is −0.54 and is significant at the 5% significance level.

Splitting the sample between advisers who work in states that do and do not enforce NCAs (columns 2 and 3), we find that advisers who work in states that enforce NCAs are more likely to be fired for engaging in misconduct, but advisers at firms that relax the enforcement of NCAs by being members of the protocol are not more likely to be fired for engaging in misconduct. This suggests that both state-level enforcement of NCAs and firm-level enforcement are important to the balance of power between firms and advisers. In the sample of advisers who work in states that do not enforce NCAs, we find that engaging in misconduct does not increase the probability of being fired irrespective of whether the advisers' firm is a protocol member or not.

Focusing on the sample of advisers working for firms with at least 100 advisers, we find similar results. In general, these results are consistent with firms being more reluctant to fire employees once they unlock clients for fear of losing AUM.

4.4. Misconduct

Since firms are less likely to discipline their advisers for misconduct, it is natural to ask whether this affects the propensity of advisers to engage in misconduct. We therefore test whether adviser misconduct in-

Table 6
Adviser misconduct.
The table displays regression results from linear probability models estimated using OLS of a measure of adviser misconduct on "Firm in protocol." The analysis uses the adviser-level data described in Panel A of Table 2 and the dependent variable is "Misconduct" multiplied by 100. "Misconduct" is an indicator variable that is one if the adviser engaged in misconduct during the year, as defined by Egan et al. (2019). The results are reported for two different fixed effect models for the full sample and the samples financial advisers working for firms with at least 100 advisers. The models estimated in columns 1 and 2 include county-year and firm-county fixed effects and those in columns 3 and 4 include county-year and financial adviser fixed effects. t-statistics are computed using robust standard errors (reported in parentheses), clustered by firm. Significance levels are denoted by c, b, and a, which correspond to 10%, 5%, and 1% levels, respectively.

Sample	All (1)	≥ 100 advisers (2)	All (3)	≥ 100 advisers (4)
Firm in protocol	0.104	0.131[c]	0.148[b]	0.195[a]

creases once firms unlock clients by joining the protocol. We regress "Misconduct," an indicator variable described in Section 4.3, on "Firm in protocol," controls, and two different specifications of fixed effects. In the first specification, we include firm-county and county-year fixed effects. Egan et al. (2019) show that advisers' past misconduct is a strong predictor of future misconduct, so we add "Past misconduct" as a control in these regressions. In the second specification, we include adviser fixed effects, instead of firm-county. Adviser fixed effects could be important to include to control for any time-invariant, unobservable, individual characteristics of managers.

The results of these tests are presented in Table 6. In columns 1 and 2 of the table, which uses the model with firm-county and county-year fixed effects, the coefficient estimates on "Firm in protocol" are both positive, but only significantly statistically different from zero in the sample of advisers working for large firms (t-statistics of 1.5 and 1.7). Once adviser fixed effects are included in the model, the coefficient estimates on "Firm in protocol" become both statistically and economically significant. The estimate in column 4, which is calculated using the sample of advisers working for employers with at least 100 advisers, indicates that the probability that an adviser engages in misconduct increases by 20 bps once his employer joins the protocol. Compared to an unconditional probability of misconduct of 47 bps, this is an increase in likelihood of over 40%. We confirm the robustness of our results to various subsamples as well as extending the sample period back to 2003; these results are presented in Table IA.6 of the Internet Appendix. In all models that include adviser fixed effects, our inferences are unchanged.[15]

4.5. Fee rates

In this section, we investigate the dynamics of advisory fees following protocol adoption. Firms can increase their fees to compensate for the increased probability of relationship-based outflows or because they seek to exploit relationship-based inflows. Alternatively, firms can lower fees to attract relationship-based inflows from advisers seeking lower rates for their clients.

A broker-dealer can generate revenue from two main sources, commissions and fees. Because a commission-

[15] Clifford and Gerken (2019) investigate the relationship between advisers receiving customer complaints and broker protocol membership and find a weak negative relationship (10% significance level). Unlike the misconduct measure of Egan et al. (2019), their measure includes complaints that were dismissed, withdrawn, or are still pending. Since we are interested in adviser malfeasance we do not include disclosures where the adviser is exonerated. In untabulated tests, we find no significant relationship between protocol membership and total customer complaints, but weak evidence that frivolous customer complaints decrease with protocol membership.

JA0330

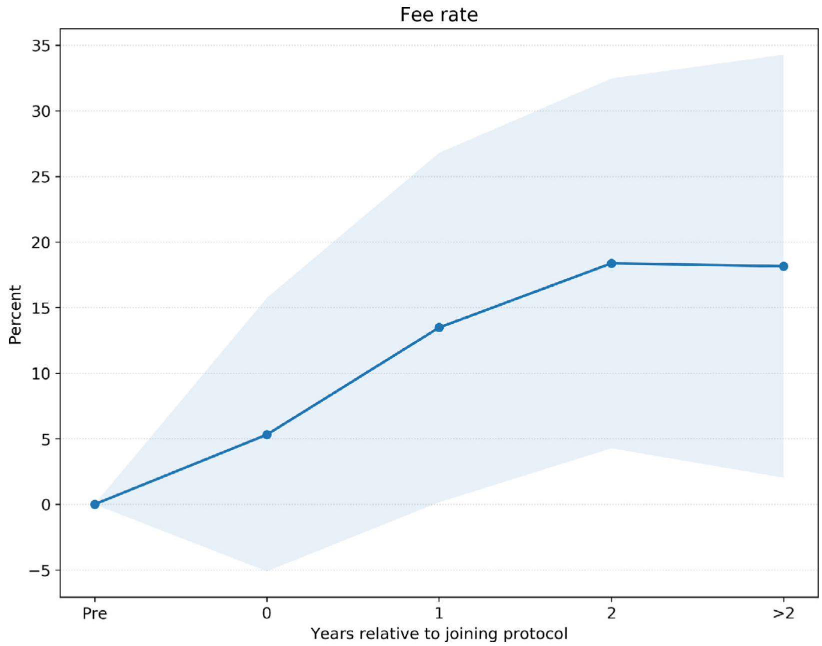

Fig. 3. Fee rates. The figure plots the coefficient estimates and their 10% confidence intervals of the $\beta_{p,t}$'s from Eq. (2), which is a linear regression model with firm and year fixed effects, that regresses "fee rates" on lags of "Join protocol." Therefore, the coefficient estimates on these indicator variables measure the changes in fees rates relative to their average prior to a firm joining the broker protocol. The analysis uses the sample of firms covered by the *InvestmentNews* annual independent B-D surveys from 2004 to 2016 with complete data as outlined in Section 3.5 of the text. The dependent variable is "Fee rate," which is the fee revenues divided by the fee-based AUM. Confidence intervals are computed using robust standard errors, clustered by firm.

based broker derives his income from selling particular investment products (such as mutual funds), a potential conflict of interest can arise between brokerages and their clients. For instance, Mullainathan et al. (2012) find that some advisers in the United States steer investors from well-diversified portfolios to high-fee mutual funds. Such opportunistic behavior has also been found in other financial products (Anagol et al., 2017) and other countries (Bhattacharya et al., 2012; Hackethal et al., 2012). A brokerage fee, on the other hand, is a flat rate that customers pay brokers to manage money regardless of the type of investment the client has in her portfolio. This flat rate is generally expressed as a percentage of AUM.

To test our hypotheses, we use broker-dealer revenue breakdown information from the B-D Data Center maintained on the *InvestmentNews* web site. As discussed in Section 3.5, our data set covers 2004 to 2016 and contains approximately 75 large broker-dealers per year. For each of these firms, we observe both the total revenue and fee revenue, as well as the total assets under management that generated the fees. From these, we calculate the "Fee rate", i.e., Fee rate = Fee revenues / Fee-based AUM. Table IA.7 in the Internet Appendix displays summary statistics of this sample. It shows that it is composed of large broker-dealers and the average fee rate is 1.0%.

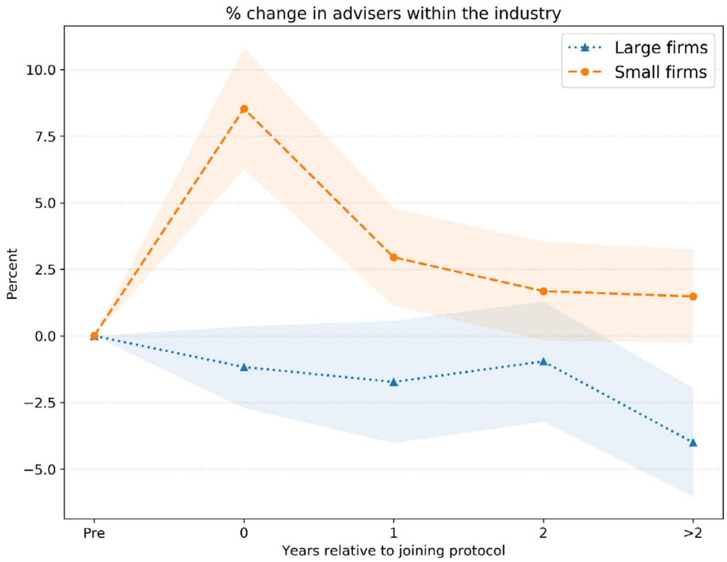
We calculate how firms adjust their fee rates in response to unlocking clients by estimating Eq. (2) with fee rate as the dependent variable. The model includes firm and year fixed effects, so the coefficients on the β_p's capture the abnormal changes in the fee rate since prior to protocol adoption. Fig. 3 plots the coefficients' estimates on the β_p's and their 10% confidence intervals. It shows that in the year of protocol adoption fee rates do not increase significantly. However, in the second year rates increase about 14 bps and by year three they increase another 4 bps to 18 bps, where they remain significantly higher. Compared to the average fee rate of 100 basis points, the increase is not only statistically significant, but also economically large. These results suggest that unlocking clients led to higher fees, at least at large broker-dealers.

4.6. Winners and losers to unlocking clients

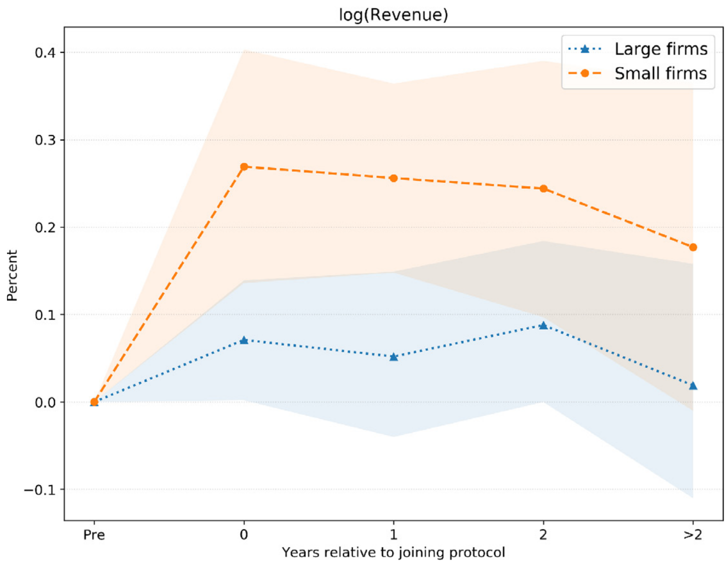
We next investigate the effect of unlocking clients on firms. If all firms within the protocol charge the same fees for identical products, then advisers moving from firm to firm is zero sum game. In fact, this was likely the expectation of the originators and early adopters of the protocol: that net relationship flows with other large brokerages would be small, but that litigation costs would decline. As time went on, however, small firms began joining the protocol, as we show in Table 1. These firms stood to gain from the protocol because it protected them from prohibitively large settlement payouts that they would have had to make if they poached advisers from larger firms in the absence of the agreement. We therefore suspect that small firms are the ultimate beneficiaries of unlocking clients.

We split the sample between small (fewer than 100 advisers) and large (100 or more advisers) firms and explore the firm-level dynamics around protocol adoption on adviser growth, revenue, and misconduct. To do this, we es-

JA0331



Panel A



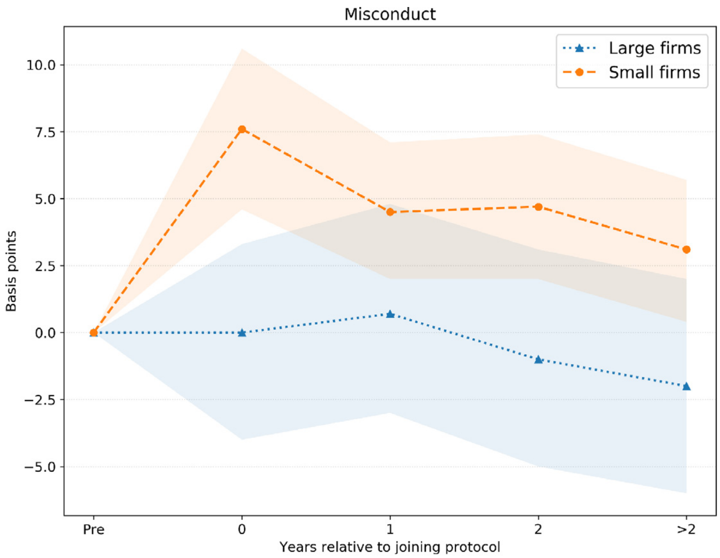
Panel B

Fig. 4. Firm-level outcomes by firm size. The figure plots the coefficient estimates and their 10% confidence intervals of the $\beta_{p,t}$'s from Eq. (2), similar to Figs. 2 and 3 for samples of small (less than 100 advisers) and large firms (100 or more advisers). The dependent variables are within industry turnover (Panel A), the natural log of total revenue (Panel B), and a firm level misconduct dummy (Panel C), where definitions follow those in Table A.2. The analysis and Panels A and C uses the entire firm-level sample described in Panel B of Table 2, split by firm size. The analysis in Panel B uses the sample of broker-dealers covered by the FOCUS data, as described in Section 3.5 and summarized in Table IA.8 in the Internet Appendix. Confidence intervals are computed using robust standard errors, clustered by firm.

timate Eq. (2) with these alternative dependent variables. Fig. 4 plots the coefficient estimates and their 10% confidence bounds. The data on revenue is from FOCUS reports and is only available for broker-dealers. These data are described in Section 3.5 and summary statistics are provided in Table IA.8 in the Internet Appendix.

In Panel A, the dependent variable is "%Δ in advisers within industry." The figure shows that small firms saw massive growth in the first two years following protocol adoption. In the first year, small firms, on average, grew their advisory teams through poaching by over 8%. During the second year of protocol membership, they grew another 3%. In subsequent years, their growth was almost 2% above pre-adoption levels, but not significantly different from zero. Large firms, on the other hand, saw no abnormal growth in the initial years of proto-

JA0332



Panel C

Fig. 4. Continued

col adoption and by the fourth year these firms began to shrink.

Estimates of changes in revenue, displayed in Panel B, tell a similar story. Small firms saw dramatic increases in revenue following protocol adoption. In the first year of protocol adoption, the revenue of small firms increased by 27%, on average, and this increase remained fairly steady over time. Large firms saw a more muted response. Revenue increased by only 7% in the first year.

In Panel C we also see that the prevalence of misconduct spikes among small firms after unlocking clients, but not among large firms. This may not be surprising. For small firms, each adviser's relationships represent a larger proportion of the firms' total assets. In other words, the relationship assets are much more concentrated for small firms. Therefore, losing one adviser is much more costly to a small firm than a large firm. This makes small firms less likely to discipline advisers for bad behavior, similar to the idea of key human capital put forth by Israelsen and Yonker (2017).[16]

Together, these results suggest that if all clients were unlocked in the industry, small firms would be the beneficiaries, although it is not clear whether this is good or bad for clients.

5. Robustness

5.1. Subsample analysis

To check the robustness of the results, we replicate all adviser-level results (Tables 3, 5, and 6) for three different subsamples. The results are displayed in the Internet Appendix in Tables IA.4, IA.5, and IA.6, respectively.

First, we limit the sample to advisers who are brokers. Several studies of financial advisers (i.e. Egan et al. (2019); Clifford and Gerken (2019)) exclude those who are investment advisers, but not brokers from their samples. To ensure that our results are not driven by these advisers, we exclude them. In general, the main results are unchanged. This is not that surprising since the majority of financial advisers are registered brokers.

Next, we estimate our results for the subsample of advisers who work for only one firm. When advisers are registered with multiple firms simultaneously, a choice must be made about which firm is the main employer. Again, we do our best by basing our choice on the initial registration date, but other choices could be made. The main results do not materially change when limiting the analysis to this sample.

Finally, we reproduce the results for the extended sample from 2003 to 2016, acknowledging that this sample could have a survivorship bias. This bias is particularly important for analysis including forced turnover and misconduct, since advisers who are either fired or engage in misconduct are likely to disappear from the sample. Indeed, both the turnover sensitivity to misconduct and misconduct results are weaker in this sample. However, the results on turnover are in line with the main analysis.

5.2. Binary choice models

As an alternative to the linear probability models used to estimate the results displayed in Tables 3, 5, and 6, we estimate our results using binary choice models, but leave the results untabulated.[17] Because maximum likelihood es-

[16] In unreported results, we confirm that unlocking clients leads to laxer discipline among small firms by replicating the analysis in Table 5 for the sample of firms with fewer than 100 advisers.

[17] These results are available upon request.

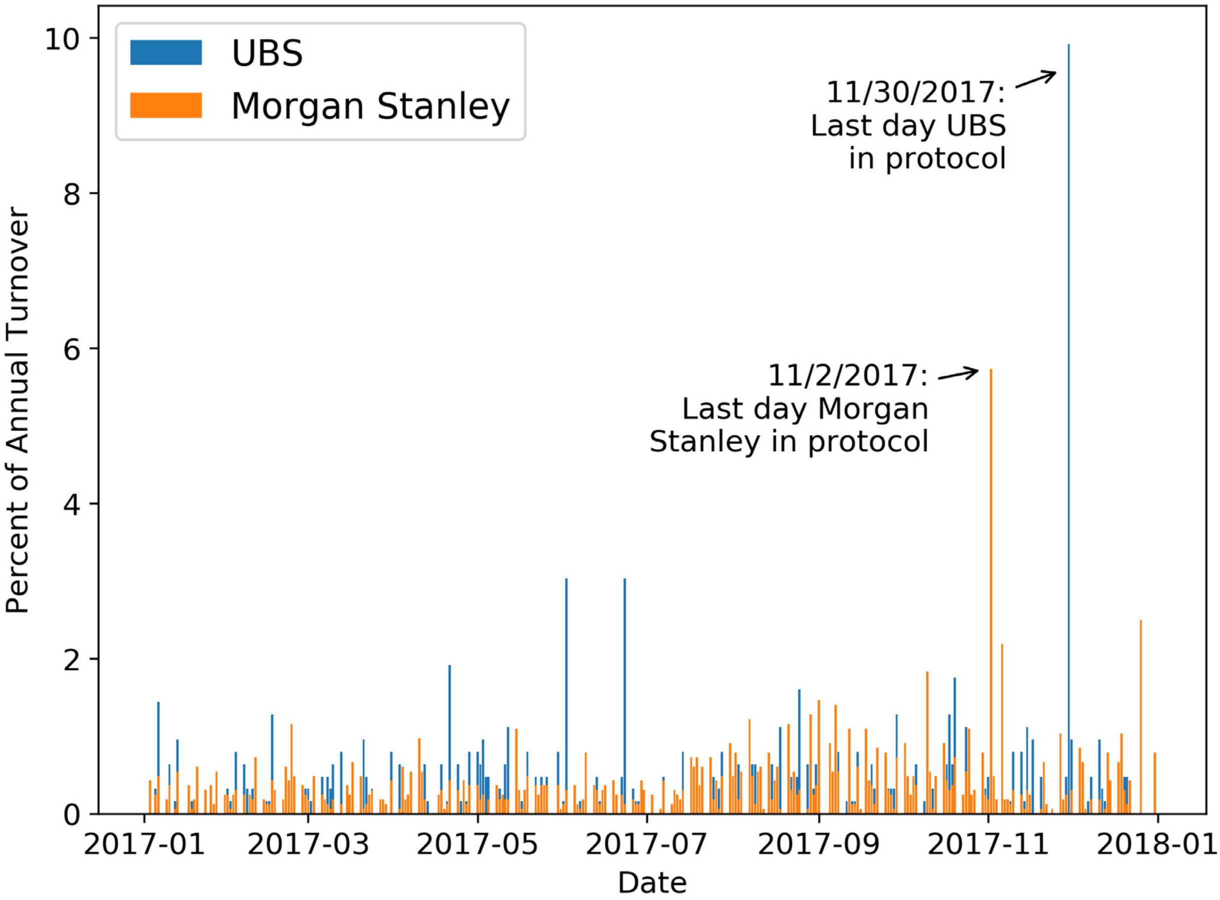


Fig. 5. Protocol withdrawal and adviser exits. The figure plots the percentage of 2017 annual turnover occurring each business day of the year for Morgan Stanley (blue) and UBS Financial Services (orange). On October 24, 2017, Morgan Stanley submitted a letter indicating that it would like to withdrawal from the broker protocol. UBS followed suit on November 20, 2017. It takes ten days for the withdrawal to take effect. Therefore, the last days that Morgan Stanley and UBS Financial Services were members of the broker protocol were November 2, 2017 and November 30, 2017, respectively. Those dates are indicated on the graph above. (For interpretation of the references to color in this figure legend, the reader is referred to the web version of this article.)

timation of nonlinear binary choice models has computational difficulties when the number of fixed effects is large, we first estimate our results using both probit models and linear probability models omitting fixed effects from the models. We find that both models give consistent results across all of our results.

Stammann et al. (2016) develop a package in R, called "bife," that can handle one dimension of high-dimensionality fixed effects. They call their estimator a "bias-corrected logit estimator." We reestimate the results using this estimator, which allows us to include branch fixed effects in our specifications. Since we cannot also include county-year fixed effects, we include yearly fixed effects to absorb general economic conditions. All specifications include the control variables included in our baseline models. Again, we find that all of our earlier results hold. Finally, we include adviser fixed effects in the misconduct regressions analogous to those in Table 6, column 3. We find that the coefficient on "Firm in the protocol" is positive, but not statistically different from zero (p-value= 0.23). We conclude that our results are robust to estimation using binary choice models.

5.3. Out-of-sample evidence: protocol withdrawals and adviser exits

As an out-of-sample test of the impact of unlocking clients on adviser turnover decisions, we take advantage of two recent events that followed our initial data collection. In October and November of 2017, two major financial advisory firms exited the broker protocol. To withdraw from the broker protocol firms, must submit a letter of their intent, but the actual withdrawal does not become effective for ten business days. We therefore examine whether an abnormal percentage of advisers leave these firms during the nine-day window after the withdrawal submission, but prior to the withdrawal taking effect.

Fig. 5 plots the percentage of 2017 annual turnover occurring each business day of the year (daily number of advisers leaving the firm scaled by total number advisers leaving the firm during 2017) for Morgan Stanley and UBS Financial Services. Morgan Stanley submitted its withdrawal notice on October 24, 2017 and UBS followed suit on November 20, 2017. Because of the ten-day grace period, the last days that Morgan Stanley and UBS Financial Services were members of the broker protocol were November 2, 2017 and November 30, 2017, respectively. These dates are indicated in Fig. 5. The average percentage of annual turnover per day is 0.39% (=1/257) during 2017. On the final days that Morgan Stanley and UBS were members of the protocol, they experienced 5.73% and 9.92%, respectively, of their daily attrition for the entire year. That is, on November 2, 62 advisers left Morgan Stanley and on November 30, 94 advisers left UBS. While we do not conduct formal statistical tests, note that the standard deviation of daily turnover for Morgan Stanley and UBS in 2017 was 0.48% and 0.73%, respectively. This indicates that exits were over ten standard deviations from the mean for both brokerages on their last days in the broker protocol and in both cases they were the maximum for the year. It is also worth noting that, of those advisers who left either Morgan Stanley or UBS on those dates, only two (1.3%) joined firms that were not members of the broker protocol.

6. Conclusion

We demonstrate the importance of client relationships in the financial advisory industry. Our evidence shows that these relationships are critical for clients, advisers, and their firms. They drive advisers' employment decisions: advisers are much more likely to move to firms to which they can freely transfer their clients. Clients value their relationships with their advisers, and follow them to new firms. When unconstrained, advisers move about 40% of client assets with them when they switch firms. These relationships are also important to firms, which become less willing to discipline their advisers for misconduct, for fear of experiencing relationship-based outflows.

An important question is what would be the implication if all clients in the industry were unlocked. How would this affect advisers, clients, firms, and the industry? While we cannot provide a definitive answer, our results give us some clues.

We believe that advisers would stand to gain the most, since they would effectively gain control of a portion of the revenue-generating assets of firms. Unfortunately, we do not observe adviser preferences or wages, but, by revealed preference, advisers would not voluntarily move to another firm unless it makes them better off. Increases in adviser welfare could come through higher wages, better product offerings to clients, or more favorable working conditions.

What about clients? Again, by revealed preference, we suspect that clients believe that they would be better off. After all, why else would they follow their advisers? However, two of our empirical findings question whether that's really the case. First, we find that the lax monitoring of firms induced by unlocking clients leads to a greater incidence of adviser misconduct. Second, we show that following protocol entry, firms raise their fees permanently by about 18 bps, albeit for a small sample of large broker-dealers. Again, our assessment is limited by data. We do not observe the actual products into which clients are allocated, nor do we observe the relevance of clients' allocations to their goals and objectives. The finding that misconduct increases following protocol adoption is somewhat informative, since, as Egan et al. (2019) report, 21% of client complaints are related to the suitability of their investments.

We conclude that unlocking clients would likely benefit small firms over large. We show that protocol adoption affected small firms dramatically more than large firms. It enabled small firms to freely poach advisers from large firms and to gain clients' assets. Essentially, a policy of unlocking clients would level the playing field among firms. A blanket policy could alter the competitive landscape within the industry.

Some legislators in Washington have also expressed concern that NCAs are used by firms to suppress the wages of lower level employees.[18] Theory suggests that employee compensation should be greater in the absence of NCAs because of the creditable threat of employees moving to competitors. While we cannot directly observe compensation data, our results suggest that the relaxation of NCA enforcement leads to a significant increase in the bargaining power of financial advisers. Future research could explore more directly the effects of NCAs on compensation in other industries.

Appendix

A.1. Verifying the survivorship-bias-free sample

We use historical brokerage and investment adviser registration dates for advisers to construct a survivorship-bias-free adviser-firm-year panel data set. Data from the SEC's IAPD web site provides historical beginning and ending investment adviser registration dates, while FINRA's BrokerCheck web site provides beginning and ending registered representative (broker) registration dates. Financial advisers can be dually registered, or registered only as a broker or investment adviser. When constructing the employment spells, we use the union of dates spanned by broker and investment registrations to determine the dates of employment of dually registered financial advisers with their firms.

We downloaded these data in July 2017, after an update to FINRA's web site Terms of Use explicitly provided permission for researchers to download the data for academic purposes.[19] The FINRA web site states that it maintains information on the web site for brokers who have been registered within the last ten years, or possibly longer,[20] indicating that we can have confidence that our sample is free of possible survivorship bias beginning in 2007.

To verify this, we calculate the last year that each financial adviser is included in the data. Panel A of Fig. A.1 shows the distribution of these final years. Almost none of the advisers file their final deregistration prior to 2007, which is ten years prior to when we collected the data.[21] It therefore appears that FINRA deletes entire adviser histories from the publicly available data once they have

[18] See, for example, https://www.c-span.org/video/?c4796572/sen-van-hollen-questions-ftc-chair-joseph-simons.

[19] See item 5 of FINRA BrokerCheck Terms of Use, modified July 17, 2017.

[20] See www.finra.org/investors/about-brokercheck.

[21] The figure does not include 2017. About 68% of advisers in the sample are still registered in 2017.

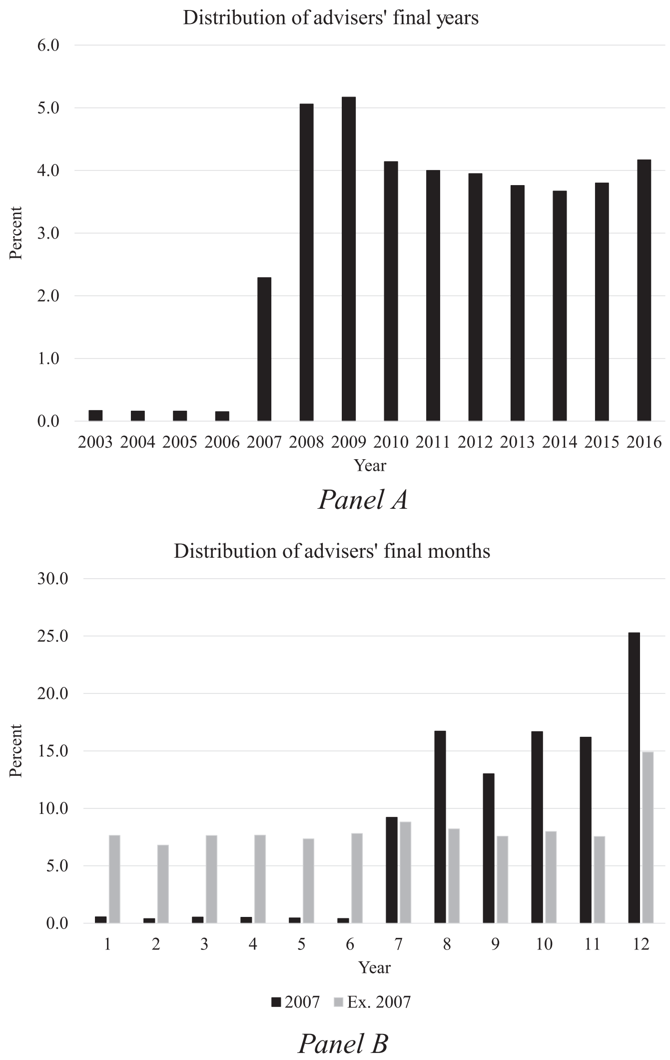

Fig. A.1. Distribution of advisers' final years and months. Panel A of the figure displays the distribution of the advisers' final years of registration for data extracted from the BrokerCheck and IAPD web sites in July of 2017 for the years 2003 to 2017. The year 2017 is not included in the graph, but accounts for 68% of the observations. Panel B shows the distribution of final months for 2007 and for the years 2003–2016, excluding 2007.

been de-registered for ten years. Panel B provides additional support for this claim by comparing the distribution of an adviser's final month of registration in 2007 to all other years. The typical distribution is fairly even across all months, although there's an uptick in December. But, in 2007 the sample is completely different: there are almost no final de-registrations until July in that year, which is precisely ten years before we downloaded the data.

In light of this evidence, we conclude that our data are free of survivorship bias only during the period beginning in August, 2007.

A.2. Additional information on sample construction

One complication in constructing the employee-employer matched data set is that the data provide registration dates, rather than actual employment dates. An adviser could, for example, de-register but stay with a firm in a nonadvisory role. This is unlikely to be much of an issue, however, because the cost of maintaining registration is low relative to the potential benefits, so even if financial advisers move into different roles, they will most likely keep their registrations active. Nevertheless, we assume that an adviser is continually employed with a firm if his registration ends but then begins again at the same firm within 365 days, provided that the adviser has not registered with another firm during the intervening period. We also remove registrations lasting less than two weeks.

A second complication is that many financial advisers are registered simultaneously with multiple firms. In our sample, 91.9% of advisers-year observations are from advisers registered with one firm, while the corresponding numbers for those registered at two firms is 7.7%. The remaining 0.4% of observations represents advisers simultaneously registered at more than two firms. In cases of mul-

JA0336

tiple employment, we assume that the primary employer is the firm with which the adviser has been registered the longest. We provide evidence of robustness to this assumption by showing that our main results hold when focusing only on observations for advisers who work for a single employer.

Finally, we limit our sample to firms with at least two advisers located within the United States, since we are interested in the effects of non-compete agreements.

A.3. Variable definitions

Table A.1
Adviser-level variable definitions.

Adviser-level variables	Definition	Source
Firm in protocol	An indicator variable that is one if any of the adviser's employers are members of the protocol as of the end of the calendar year.	Broker protocol web site, IAPD, BrokerCheck
Log (number of advisers)	Log of the total number of advisers employed by the adviser's primary employer at the end of the calendar year.	IAPD, BrokerCheck
Log (years experience)	Log of the number of years since the adviser is first registered as a financial adviser at any firm.	IAPD, BrokerCheck
Investment adviser	An indicator variable that is one if the adviser is registered as an investment adviser during the year.	IAPD
Sec. agent st. law (63)	An indicator variable that is one if the adviser passed the Series 63 exam by the end of the year.	IAPD, BrokerCheck
Gen. sec. rep. (7)	An indicator variable that is one if the adviser passed the Series 7 exam by the end of the year.	IAPD, BrokerCheck
Inv. co. prod. rep. (6)	An indicator variable that is one if the adviser passed the Series 6 exam by the end of the year.	IAPD, BrokerCheck
Gen. sec. principal (24)	An indicator variable that is one if the adviser passed the Series 24 exam by the end of the year.	IAPD, BrokerCheck
Number of other qual.	The number of exams passed other than Series 6, 7, 24, 63, 65, or 66 by the end of the year.	IAPD, BrokerCheck
Past misconduct	An indicator variable that is one if the adviser has a misconduct record as of the previous year, where misconduct is defined according to Egan et al. (2019).	IAPD, BrokerCheck
Absence of NCA enforcement	An indicator variable that is one if the state where the adviser works does not enforce non-compete agreements.	Table 1 of Stuart and Sorenson (2003); Samila and Sorenson (2011).
Leave for another firm	An indicator variable that is one if the adviser leaves his/her firm during the year and subsequently joins another firm in the data.	IAPD, BrokerCheck
Leave for a protocol firm	An indicator variable that is one if the adviser leaves his/her firm during the year and subsequently joins a firm that is a member of the protocol.	Broker protocol web site, IAPD, BrokerCheck
Adviser-level variables	Definition	Source
Leave for a nonprotocol firm	An indicator variable that is one if the adviser leaves his/her firm during the year and subsequently joins a firm that is not a member of the protocol.	Broker protocol web site, IAPD, BrokerCheck
Forced turnover	An indicator variable that is one if "Leave for another firm" is one and the number of days before joining another firm is greater than 90.	IAPD, BrokerCheck
Misconduct indicator	Following Egan et al. (2019), this is an indicator variable that is one if any of the following disclosures appear for an adviser during the year: Customer Dispute—Settled; Employment Separation After Allegations; Regulatory—Final; Criminal—Final Disposition; Customer Dispute—Award/Judgment; or Civil—Final. These six types of disclosure are selected from a total of 23 categories.	IAPD, BrokerCheck
Broker-dealer indicator	An indicator variable that is one if the adviser's primary employer is a registered broker-dealer.	Form BD, IAPD, BrokerCheck
Primary employer	Employer who has employed the adviser the longest.	IAPD, BrokerCheck

Table A.2
Firm-level variable definitions.

Firm-level variables	Definition	Source
Firm in protocol	An indicator variable that is one if any of the firm is a member of the protocol as of the end of the calendar year.	Broker protocol web site
Log (number of advisers)	Log of the total number of advisers employed by the firm at the end of the calendar year.	IAPD, BrokerCheck
Within industry turnover	The average of the percentage of the firm's advisers leaving for other firms and the percentage of the firm's advisers joining from other firms, where percentages are calculated based on the number of advisers at the firm at the end of the previous calendar year.	IAPD, BrokerCheck
Turnover with firms in protocol	The average of the percentage of the firm's advisers leaving for firms in the protocol and the percentage of the firm's advisers joining from firms in the protocol, where percentages are calculated based on the number of advisers at the firm at the end of the previous calendar year.	IAPD, BrokerCheck
Turnover with firms not in protocol	The average of the percentage of the firm's advisers leaving for firms not in the protocol and the percentage of the firm's advisers joining from firms not in the protocol, where percentages are calculated based on the number of advisers at the firm at the end of the previous calendar year.	IAPD, BrokerCheck
%Δ in advisers	The percent change in the total number of advisers at the firm.	IAPD, BrokerCheck
%Δ in advisers outside industry	The difference in the percentage of rookie advisers hired by the firm (registering for the first time) and the percentage of the firm's advisers leaving the industry (deregistering for the last time), where percentages are scaled by the total number of advisers at the firm at the end of the previous calendar year.	IAPD, BrokerCheck
%Δ in advisers within industry	The difference in the percentage of advisers hired from other firms within the industry by the firm and the percentage of the firm's advisers leaving for other firms in the industry, where percentages are scaled by the total number of advisers at the firm at the end of the previous calendar year.	IAPD, BrokerCheck
%Δ in advisers with protocol firms	The difference in the percentage of advisers hired from protocol member firms and the percentage of the firm's advisers leaving for protocol member firms, where percentages are scaled by the total number of advisers at the firm at the end of the previous calendar year.	Broker protocol web site, IAPD, BrokerCheck
Misconduct dummy	An indicator variable that is equal to one if any of the firm's advisers engaged in misconduct, as defined by the "Misconduct indicator," during the calendar year.	IAPD, BrokerCheck
Broker dealer indicator	An indicator variable that is one if firm is a registered broker-dealer.	Form BD, IAPD, BrokerCheck
RIA indicator	An indicator variable that is on if the firm is a registered investment adviser.	SEC Form ADV, IAPD, BrokerCheck
ΔLog (AUM)	Change in the log of total assets under management from the end of the previous fiscal year to the end of the current fiscal year.	SEC Form ADV, Part 1a, Item 3F2c
Log (AUM)	Log of total assets under management at the end of the fiscal year.	SEC Form ADV, Part 1a, Item 3F2c

JEL No. J08,J31,J38,J61

ABSTRACT

We analyze how the legal enforceability of noncompete agreements (NCAs) affects labor markets. Using newly-constructed panel data, we find that higher NCA enforceability diminishes workers' earnings and job mobility, with larger effects among workers most likely to sign NCAs. These effects are far-reaching: changes in enforceability impose externalities on workers across state borders, suggesting that enforceability broadly affects labor market dynamism. We provide evidence that NCA enforceability primarily affects wages through its effect on workers' outside options; moreover, workers facing high enforceability are unable to leverage tight labor markets to increase earnings. We motivate these findings by embedding NCA enforceability in a search model with bargaining. Finally, higher NCA enforceability exacerbates gender and racial earnings gaps.

1 Introduction

By several metrics, the U.S. labor market failed to produce economic gains for the majority of workers in the four decades prior to 2020. Average real hourly earnings changed little[1] and the share of income accruing to labor declined from 65 percent in the late 1940s to 63 percent in 2000, before accelerating downward to 58 percent in 2016.[2] Various forces have been posited to underlie these trends, including the decline of labor unions (Farber et al., 2018), the rise of superstar firms (Autor et al., 2017), and the rise of domestic outsourcing (Weil, 2014; Goldschmidt and Schmieder, 2017).

Another potential explanation that has received increasing attention is firms' use of postemployment restrictions, the most salient of which are noncompete agreements (NCAs). NCAs contractually limit a worker's ability to enter into a professional position in competition with his or her employer in the event of a job separation. NCAs are common: Starr et al. (2021) find that approximately 18% of workers in 2014 were bound by NCAs, whereas Colvin and Shierholz (2019) found this range to be between 28 and 47 percent in 2019.[3] The legal *enforceability* of NCAs—that is, the terms under which an employer can enforce one—is determined by state employment law. Making NCAs easier to enforce may hinder earnings growth by limiting workers' ability to seek higher-paying jobs or to negotiate higher earnings at their current job. At the same time, others contend that enforceable NCAs can *increase* earnings by making firms more willing to invest in training, knowledge creation, and other portable assets that raise workers' productivity (Rubin and Shedd, 1981; Starr, 2019).

Though the enforceability of NCAs has received increasing scrutiny from policymakers at state and national levels,[4] there remains an incomplete understanding of the labor market effects of NCAs, primarily due to three factors. The first is a lack of comprehensive panel data on NCA enforceability. Researchers have, to date, relied largely on either cross-sectional measures of states' enforceability or case studies of

[1] Desilver, Drew, "For Most U.S. Workers, Real Wages Have Barely Budged in Decades," *Pew Research Center*, August 7, 2018.

[2] President's Council of Economic Advisors Issue Brief "Labor Market Monopsony: Trends, Consequences, and Policy Responses" October 2016.

[3] Specifically, 15% of the workers in Starr et al. (2021)'s representative sample reported being bound by NCAs, and another 29.7% were unsure if they were bound by NCAs. Starr et al. (2021) report a level of 18.1% based on a multiple imputation methodology. The range reported by Colvin and Shierholz (2019) represents an imputation based on a survey of business establishments and a broad range of assumptions on the percentage of workers within those establishments bound by NCAs.

[4] The Workforce Mobility Act of 2018 (US Senate Bill 2782, introduced by Chris Murphy) states "No employer shall enter into, enforce, or threaten to enforce a covenant not to compete with any employee of such employer" (`https://www.congress.gov/bill/115th-congress/senate-bill/2782/text?r=6.`). The Freedom to Compete Act of 2019 (US Senate Bill 124, introduced by Marco Rubio) has similar language (`https://www.congress.gov/bill/116th-congress/senate-bill/124/all-info`). In January 2023, the Federal Trade Commission issued a Notice of Proposed Rulemaking which would prohibit NCAs, with limited exceptions, across the economy.

a single state or a handful of states with law changes affecting specific segments of the workforce. This approach has drawbacks: cross-sectional variation in enforceability might be correlated with other unobserved differences across states, and small samples of targeted law changes may not generalize to the population. Second, prior work, which we describe below, has found seemingly conflicting evidence regarding the earnings effect of NCA *use* versus *enforceability*, creating challenges for interpreting the effects of NCAs on worker outcomes. Finally, the literature has not yet thoroughly identified the mechanisms through which enforceable NCAs affect labor markets. Without a clear understanding of *why* NCA enforceability affects workers, it is difficult to generalize empirical evidence to, for example, predict how various proposals to change enforceability might affect the functioning of labor markets.

We present comprehensive evidence on the effect of NCA enforceability on workers' earnings and job mobility. We begin by constructing a new panel dataset to use within-state changes in NCA laws to identify the overall labor market effects of NCA enforceability, including spillover effects within local labor markets. We then provide evidence for a key mechanism through which NCA enforceability affects earnings—namely, its effect on workers' outside options and costs of job mobility. Finally, we show that the earnings effect of NCA enforceability exhibits economically meaningful heterogeneity across demographic groups, contributing a new insight into the determinants of earnings inequality in the United States.

We guide our empirical analysis with a model, based on the search model of Bagger et al. (2014), of how changes in NCA enforceability affect workers' earnings. We show that the effect of increasing NCA enforceability on overall earnings can be decomposed into two terms. The first term relates to the difference in earnings between workers who are and are not bound by enforceable NCAs; the sign of this term is ambiguous due to the offsetting ways that an enforceable NCA raises a worker's earnings (via faster human capital accumulation) and lowers it (via reduced job mobility). The second term reflects the spillover effect of stricter enforceability on the earnings of workers not bound by NCAs. We show that this term is unambiguously negative under the assumption that strict NCA enforceability reduces the job offer arrival rate for all workers. We provide empirical evidence to support this assumption.

To identify the causal effects of NCA enforceability, we created a new dataset with annual measures of NCA enforceability for each of the 50 US states and the District of Columbia from 1991 to 2014. This dataset includes both judicial and legislative decisions that change state-level NCA enforceability, coded to match the criteria developed by leading legal scholars to quantify enforceability. The vast majority of these law changes (90.4%) occur due to judicial decisions via court rulings. An important component of the judicial process is *stare decisis*, or the doctrine of precedent. A consequence is that judges are more constrained than legislators in allowing economic or political trends to affect decisions, a fact that is useful for our research design. We combine our enforceability dataset with earnings and mobility outcomes from a range of datasets including the Current Population Survey, Job to Job Flows, and the Quarterly Workforce Indicators, all from the US Census Bureau, as well as the Job Openings and Labor Turnover Survey from the Bureau of Labor Statistics.

We find that increases in NCA enforceability decrease workers' earnings and mobility. Moving from the 25^{th} to the 75^{th} percentile in enforceability is associated with an approximately 2% decrease in the average worker's earnings. The earnings effects are almost entirely driven by declines in implied hourly wages. The effect is even stronger among occupations, industries, and demographic groups in which NCAs are used more frequently (according to Starr et al. (2021)). We also find that NCA enforceability reduces worker mobility, particularly among groups where NCAs are used more frequently. An out-of-sample extrapolation implies that rendering NCAs unenforceable nationwide would increase average earnings among *all* workers by 3.2% to 14.2%. The midpoint of this interval (8.7%) is roughly equal to the estimated effects of very large increases in employer consolidation on affected workers' earnings (Prager and Schmitt, 2019); it is also approximately equal to the estimated earnings premium that accrues to workers who enter occupations with government-mandated licensing, and roughly half the size of the earnings premium associated with membership in a labor union.

To interpret this overall negative earnings effect, we then conduct an empirical test to isolate the spillover effects of NCA enforceability on workers who are not themselves bound by NCAs. We show that these spillovers are negative—as predicted by our model—and are economically meaningful. Focusing on local labor markets that are divided by a state border, we show that a change in NCA enforceability in one state indirectly affects the earnings and mobility of workers located in an adjoining state. This finding suggests that the treatment effects of NCA enforceability impact a larger population than the relatively small share of workers bound by NCAs, and the magnitudes suggest that spillovers account for a meaningful share of the overall earnings effects of enforceability.

We then conduct two empirical tests of our proposed mechanism that strict NCA enforceability reduces earnings through its effect on workers' job offer arrival rates. First, we test for heterogeneity in the earnings effect using two separate proxies for the extent to which changes in state-level NCA enforceability affect workers' outside options. Strict NCA enforceability has an especially negative earnings effect in industries in which workers are less likely to move jobs across state lines (as measured in the Job-to-Job flows dataset), and in occupations in which workers have lower cross-occupational mobility (as measured by Schubert et al. (2021)). That is, strict NCA enforceability reduces earnings the most when it has the largest impact on workers' outside options.

The second test of our proposed mechanism revisits prior research that considers how tight labor markets enable workers to increase their earnings. We embed NCA enforceability in an empirical model, first used by Beaudry and DiNardo (1991), that considers how a worker's current earnings depend on prior labor market conditions. Previous research has found that workers' current earnings are strongly correlated with the most favorable labor market conditions over their current job spell. This relationship is consistent with the extra job offers workers might receive in tight labor markets enabling them to either negotiate a higher wage with their current employer (Beaudry and DiNardo, 1991) or find a job with higher match quality (Hagedorn and Manovskii, 2013). We find that this relationship continues to hold but only in states where NCAs are relatively unenforceable. In contrast, strict NCA enforceability ties workers' earnings to labor market conditions at the start of their job spell, rather than to the most favorable conditions they have experienced since then. This finding implies that strict NCA enforceability erodes workers' ability to leverage tight labor markets to achieve higher earnings, consistent with the hypothesis that NCAs "undermine workers' prospects for moving up the income ladder" (Krueger, 2017).

Finally, we document economically meaningful heterogeneity in the earnings effect of NCA enforceability across demographic groups. Given gender differences in willingness to commute (Le Barbanchon et al., 2019), geographically-restrictive NCAs (or state-level enforceability changes) may have larger effects on womens' outside options than on mens'. Prior work also suggests women tend to be less willing to violate the terms of their NCA than are men (Marx, 2022). Similar evidence suggests that state-level NCA enforceability changes may disproportionately affect the outside options of Black workers, due to racial differences in the propensity to move in response to economic opportunities (Sprung-Keyser et al., 2022). Consistent with this evidence, we find that stricter NCA enforceability reduces earnings for female and for non-white workers by twice as much as for white male workers. Using a standard earnings decomposition, our estimates imply that the 75-25 differential in NCA enforceability accounts for 1.5-3.8% of the earnings gaps between white men and other demographic groups.

Relationship to the Literature: Our findings most directly contribute to a growing literature on the earnings effects of NCA enforceability. Prior work examining case studies of individual bans on NCAs—including an Oregon ban on NCAs for hourly workers (Lipsitz and Starr, 2021) and a Hawaii ban on NCAs for tech workers (Balasubramanian et al., 2022)—has found that these bans led to higher earnings.[5] Two papers have studied what happens to executives' earnings when NCAs are easier to enforce, with mixed results: Garmaise (2011) uses three NCA law changes and finds that earnings decrease, while Kini et al. (2019) uses a broader set of law changes and interprets their findings as implying that earnings increase. Studies using cross-sectional variation in NCA enforceability have similarly reached mixed results: Starr (2019) finds that earnings are lower in states with higher NCA enforceability, whereas (Lavetti et al., 2018) finds the opposite relationship for doctors.

[5] An exception is Young (2021), who finds that a ban on NCAs in Austria for low-wage workers had limited effects on earnings.

We make several contributions to this literature. Our paper is the first to provide comprehensive panel-based evidence of the earnings effects of enforceability changes for all states and all labor market sectors, using what legal scholars believe is the most accurate measure of NCA enforceability to date (Barnett and Sichelman, 2020). Second, we provide the first panel-based evidence that NCA enforceability has spillover effects onto workers unaffected by legal changes, and that these spillovers account for a meaningful share of the overall earnings effects of NCA enforceability.[6] Finally, we connect our empirical analyses to a job ladder model of the labor market, which provides testable mechanisms through which NCA enforceability affects earnings—namely, by reducing workers' offer arrival rates. The connection to the model aids the interpretation of our empirical findings and provides insight into the types of workers whose earnings would be most affected by proposed policy discussions to make NCAs more or less easily enforceable. We further elaborate on these contributions in Section 8.

We also complement the vibrant literature that considers other economic effects of NCA enforceability, including on entrepreneurship and investment (Jeffers, 2018), employee spinoffs (Starr et al., 2018; Marx, 2022), startup performance (Ewens and Marx, 2018), worker mobility (Marx et al., 2009), and innovation (Johnson et al., 2023).

Our findings also contribute to broader and growing work on employer monopsony power and workers' outside options. Recent work has examined sources of monopsony power, including the role of search frictions (Manning, 2013; Berger et al., 2023; Jarosch et al., 2019), and local employer concentration (Azar et al. (2017), Benmelech et al. (2022), Prager and Schmitt (2019), Berger et al. (2022)). Our results imply that strict NCA enforceability effectively endows employers with a degree of monopsony power, by affecting workers' outside options, even in the absence of explicit changes in employer concentration, which we interpret through a lens of search frictions. In this spirit, our theoretical assumption (and empirical finding) that enforceable NCAs reduce earnings by reducing the value of workers' outside options complements other work showing the importance of outside options on earnings (Caldwell and Danieli, 2018; Schubert et al., 2021). One benefit of our study is that changes in NCA enforceability isolate changes in labor market competition, whereas other factors that might affect labor market power (such as mergers) also directly affect product market competition, though NCAs may have ramifications in product markets as well (Lipsitz and Tremblay, 2021; Johnson et al., 2023).

Finally, our findings provide new insight into a longstanding debate in law and economics regarding freedom of contracting (see, e.g., Bernstein (2008) for an overview).

[6] Starr et al. (2019) also test for spillovers from enforceable NCAs. Our findings complement theirs by 1) focusing on enforceability (rather than on *use* of enforceable NCAs), 2) using within-state variation in enforceability (rather than cross-sectional variation across states), and 3) using a border county design to isolate spillovers from other potential omitted variables that may jointly affect wages and enforceability.

Appealing to the Coase theorem, advocates of the freedom to contract suggest that freely-bargained-for NCAs must increase match surplus, which may be split between workers and employers. Evidence that NCAs are not freely bargained-for (e.g., because employers present them after the beginning of the employment relationship (Marx, 2011), or because workers are unaware of their existence Starr et al. (2021)), already reveals one shortcoming of this argument. Our paper reveals another: enforceable NCAs impose substantial negative externalities on other workers.

2 Conceptual Framework

In this section, we provide a concise overview of NCAs and the role of legal enforceability, and then present a brief conceptual framework (based on a model which is fully described in Appendix A) to guide our empirical analysis.

An NCA prevents a worker from moving to a job at a competing firm. The exact terms of an NCA are contract-specific, and they typically depend on the nature of competition. For example, in a nontradeable industry in which client lists are important for production, an NCA might dictate that the worker cannot move to another job in the same industry and within a specified geographic radius (e.g. within 25 miles, or within the same state). In an industry in which trade secrets are essential for firms to retain a competitive edge, the NCA might dictate that the worker cannot depart for another employer in the same industry anywhere in the country. More generally, the dimensions of employment mobility that an NCA might restrict could be some combination of geographic, temporal, occupational, or industrial.

While in theory any employment contract could include an NCA, the likelihood that an NCA would be upheld in court depends on the conditions under which a court would rule an NCA to be enforceable—that is, the legal enforceability.

Our focus in this paper is on the effects of NCA *enforceability*, as opposed to NCA *use*. One reason for this focus is data limitations: to our knowledge, there do not exist long panel data for a representative sample of workers on the use of NCAs in the US. A more fundamental reason is that restricting attention to *use* would miss at least two important ways that the legal enforceability of NCAs might affect the labor market.

First, changes in the enforceability of NCAs likely impact both the incidence of NCA use (the extensive margin) and the bindingness of NCAs already signed (the intensive margin). On the extensive margin, cross-sectional studies have found that states with higher NCA enforceability have a larger share of physicians (Lavetti et al., 2018), CEOs (Kini et al., 2019), managers (Shi, 2023), and hair stylists (Johnson and Lipsitz, 2019) that sign NCAs.[7] On the intensive margin, a change in enforceability could alter the effect of an NCA for workers who have already signed one. Though

[7] This evidence is not unanimous, however: Starr et al. (2021) find essentially no difference in NCA use by states' enforceability in a representative sample of US workers.

NCAs are used in states in which they are unenforceable (Lavetti et al., 2018; Starr et al., 2021), employers are in a better position to leverage a worker's NCA when enforceability is easier.[8] Higher NCA enforceability could also lead employers already using NCAs to write broader and more restrictive NCAs.

Second, as we will discuss, changes in NCA enforceability could have spillover effects on earnings beyond the set of workers that sign NCAs.

To provide a theoretical foundation for how NCA enforceability affects earnings, we extend a job search model of the labor market developed in Bagger et al. (2014) by allowing workers to have NCAs, and by varying levels of NCA enforceability. Briefly, Bagger et al. (2014) is a job ladder model in which workers match with firms of varying productivities, and they subsequently have the opportunity to take higher-paying jobs or leverage outside offers for pay increases. Worker pay also depends on human capital accumulation. The Bagger et al. (2014) model provides a natural foundation for our purpose, as its focus on the role of human capital accumulation versus job mobility highlights two competing channels through which enforceable NCAs could affect earnings.[9]

We briefly summarize here the insights from the model that guide our empirical analysis. We formally present the extended model in Appendix A.

Let $\bar{w}$ denote average earnings, θ denote NCA enforceability, and γ denote the fraction of workers bound by NCAs. As we derive in Appendix A, the effect of a change in NCA enforceability on average earnings is the sum of two terms:

$$\frac{d\bar{w}}{d\theta} = \gamma(\bar{w}^C - \bar{w}^F) + (1 - \theta\gamma)\frac{d\bar{w}^F}{d\theta} \tag{1}$$

Here, $\bar{w}^C$ and $\bar{w}^F$ denote the average earnings of the subset of constrained workers bound by an NCA and unconstrained workers not bound by one, respectively.

The first term reflects the difference in average earnings between workers bound and not bound by NCAs, scaled by the proportion of workers bound by NCAs. The sign of this difference is indeterminate. On the one hand, workers with NCAs might

[8] This argument holds even if a worker is not fully informed about the enforceability of the NCA she has signed. As long as employers *are* informed, and there is some probability that workers can learn, then employers will know the NCA has less bite in expectation when it is not legally enforceable. Put another away, a worker may get a signal of the NCA enforceability regime when she informs her employer of an outside offer she has received: for example, if enforceability is weak, the employer is unlikely to contend it, whereas if enforceability is strict the employer might saliently inform the worker of the legal environment.

[9] We use the term "human capital accumulation" to reflect a range of investments that firms could make in workers. This could include general human capital training (Rubin and Shedd, 1981), but also the sharing of trade secrets or client lists. All of these investments raise a worker's productivity, but they come with different (from the firm's perspective) costs. For example, general training is costly at the time of investment, whereas sharing a client list is only costly in expectation (if a worker takes the list to a competitor). Of course, some forms of investment in workers will be unaffected by NCA enforceability, such as training a worker needs to perform her job. Our focus is on investment in "portable" assets a worker can take with them in the event of a job separation.

experience faster human capital accumulation or require a compensating earnings differential for lost future mobility, both of which could make this term positive. On the other hand, workers with NCAs are unable to climb the job ladder to higher-productivity firms or to leverage outside offers for pay increases, both of which make this term negative. This indeterminacy ultimately makes the effect of NCA enforceability on earnings an empirical question. We provide this empirical evidence in Section 4.

The second term reflects the effect of increased NCA enforceability on the earnings of unconstrained workers not bound by NCAs, scaled by the proportion of workers not bound by enforceable NCAs. We show that this term is strictly negative. This negative spillover effect arises because of a key assumption that we make: higher NCA enforceability reduces the arrival rate of new job offers for all workers.[10] A slower offer arrival rate dampens a key element of earnings growth, namely workers' ability to climb the job ladder and leverage outside offers with their current employer.[11] We provide evidence for the validity of this assumption and estimate the spillover effects of NCA enforceability in Section 5.

While the overall earnings effect of enforceability is indeterminate, the mechanism that drags down earnings, for constrained and free workers alike, is the slowed arrival rate of job offers. We generate two testable predictions to assess the explanatory power of this mechanism. First, the earnings effect of enforceability will be more negative for workers whose outside options enforceability affects the most. This relationship arises because such workers will experience a particularly large slowdown of offer arrival rates (but the human capital accumulation of bound workers will not change). Second, strict NCA enforceability will prevent workers from taking advantage of tight labor markets to move to better matches or to negotiate for higher earnings. We test both of these predictions in Section 6.

[10] One reason this might happen is that higher NCA enforceability could decrease the number of searching firms, for example by depressing new firm entry (Starr et al., 2018; Jeffers, 2018). Additionally, the use of enforceable NCAs by some firms can increase recruitment costs for all firms: if firms cannot directly observe whether a job applicant is currently bound by an NCA, this can slow down the recruiting process on average and decrease the value of posting vacancies (Starr et al., 2019; Goudou, 2022).

[11] An alternative mechanism that could give rise to negative spillovers is if firms using enforceable NCAs pay lower wages, and this leads other firms to be able to also pay lower wages by worsening their workers' outside option (Beaudry et al., 2012). However, it is unlikely that this mechanism could fully explain our results, given our evidence (presented in Section 5) that higher NCA enforceability leads firms to post fewer vacancies, which is hard to rationalize under the Beaudry et al. (2012) framework. In addition, there is no clear empirical consensus that workers who *sign* an NCA earn lower wages: some studies find positive correlations between wages and NCA use (Lavetti et al., 2018; Starr et al., 2021).

3 Data

3.1 State-Level NCA Enforceability

The cornerstone of our paper is a state-level panel dataset with annual measures of states' NCA enforceability. The enforcement of NCAs is governed by employment law, which is determined at the state level. As described by Bishara (2010), NCA laws vary widely across states, and over time within states, in subtle but meaningful ways. For example, there is substantial variation in what is considered a "reasonable" contract, or what is considered a protectable business interest that justifies an NCA. The various aspects that govern the enforceability of NCAs change through case law and, more rarely, through statutes passed by state legislators.

We draw from authoritative legal experts to create an index of each state's legal enforceability of NCAs for each year from 1991 through 2014. Our main primary sources are Bishara (2010), who adopts careful legal analysis to quantify enforceability along a meaningful scale, and a series of legal treatises that Bishara draws from titled "Covenants Not to Compete: A State by State Survey," updated periodically by Malsberger, a leading legal expert on the topic (Malsberger, 2023). Bishara (via Malsberger) identifies seven quantifiable dimensions governing the extent to which an NCA is enforceable. For example, one dimension (Q3a) indicates the extent to which employers are legally required to compensate workers who sign NCAs at the beginning of a job spell. Another dimension (Q8) reflects whether the NCA is enforceable when the employer terminates the employee who signed the NCA (as opposed to a voluntary separation). Table C.1 lists each of the dimensions. Bishara (2010) developed a theoretically-grounded approach to quantify states' treatment of each dimension on an integer scale from 0 (unenforceable) to 10 (easily enforceable). To create an overall enforceability index, Bishara proposed a weighted sum of these seven dimensions, and he chose weights designed to reflect the relative importance of each law component, based on his opinion as a subject expert. Using these rules, Bishara (2010) quantified each dimension and an overall index for each state for the years 1991 and 2009.

We use these legal texts to create a panel version of each state's enforceability from 1991–2014 as follows. We obtained Bishara's internal notes that provide explanations of the legal aspects behind each of his coding decisions.[12] We hired law students to familiarize themselves with the quantification system by going through the Malsberger texts and Bishara's notes for the 1991 enforceability scores. The law students then attempted to use the Malsberger texts to match Bishara's 2009 scores for all of the legal components in every state. After calibrating their own scoring of 2009 with Bishara's, they quantified the changes in enforceability between 1991 and 2009 using the Malsberger texts, imposing Bishara's 1991 and 2009 scores as endpoints. They then extended the panel to 2014. See Section C.1 for a more detailed discussion of

[12] We thank Norm Bishara for generously sharing this dataset with us.

the methods, procedures, and principles we used to construct this database.

Once the seven dimensions of enforceability were coded, we constructed a composite *NCA Enforceability Score* for each state-year from 1991-2014 using the same weights for each of the seven dimensions proposed by Bishara (2010).[13]

Differences in how states interpret these dimensions have led to substantial differences in the *NCA Enforceability Score* across states. At the extreme ends of this spectrum, Florida Statute 542.335 explicitly allows the use of NCAs as long as a legitimate business interest is being protected, the agreement is in writing, and the agreement is reasonable in time, area, and line of business.[14] The law allows for a large variety of protectable interests (such as trade secrets, training, and client relationships), permits the beginning of employment or continued employment to act as "consideration" (i.e., compensation) for an NCA, allows the courts to modify NCAs to make them enforceable, and renders NCAs enforceable even when an employer terminates an employee. At the other end of the spectrum, North Dakota Century Code 9-08-06 explicitly bans all NCAs in employment contracts.[15] Quantifying these statutes, Florida has the highest NCA Enforceability Score during our time period (which we normalize to 1), and North Dakota has the lowest score (which we normalize to 0).

Furthermore, law changes have led to sizable changes in the NCA Enforceability Score *within* states over time. Law changes can occur through either statutory provisions (by the state legislature) or through precedent-setting court decisions. Over 90% of the law changes during our sample period arise from court decisions. Each of these involves an instance in which an employer or worker filed a dispute over an NCA, and in deciding whether the NCA was enforceable the judge overruled legal precedent. Consider, for example, a state Superior Court case in Pennsylvania: Insulation Corporation of America v. Brobston (1995). The case concerned an employee of an insulation sales company who had signed an NCA. After being terminated for poor performance, he was hired by a competitor of his original employer, in alleged violation of the NCA. While the NCA in question was ultimately not enforced, the court's decision set new precedent that NCAs may generally be enforced following employer termination: "...the circumstances under which the employment relationship is terminated are an important factor to consider in assessing... the reasonableness of

[13]In some state-years, there is no legal precedent for a particular dimension of the enforceability index. Following Bishara (2010), we code these values as missing. The composite NCA enforceability index is a weighted average of scores on each of the seven legal dimensions. When the score for one of the dimensions is missing, we omit it from the calculation of that weighted average, as in Bishara (2010). Though we defer to Bishara (2010) that this is the appropriate way to treat missing values, there are other sensible approaches. In Section C.2, we show that missingness is ultimately quite rare, and we show that our main estimates are insensitive to how we treat missing values.

[14]Florida Statute 542.335. Full text available at `http://www.leg.state.fl.us/statutes/index.cfm?App_mode=Display_Statute&URL=0500-0599/0542/Sections/0542.335.html`

[15]North Dakota Century Code 9-08-06. Full text available at `https://www.legis.nd.gov/cencode/t09c08.pdf`

enforcing the restrictive covenant."[16] Future cases cited this precedent in adjudicating matters concerning employee termination: for example, in *All-Pak, Inc., v. Johnston* the court wrote that "We emphasized [in Brobston]...that the reasonableness of enforcing such a restriction is determined on a case by case basis. Thus, the mere termination of an employee would not serve to bar the employer's right to injunctive relief."[17] That is, *Brobston* set a precedent that NCAs *could* be enforceable even if the employee was terminated. *Insulation Corp. of America v. Brobston* therefore resulted in the component of the NCA Enforceability Score specific to treatment following employer termination (Q8) to change from 4 (out of 10) to 7 in Pennsylvania; the resulting change in Pennsylvania's overall NCA Enforceability Score was equal to roughly a third of a standard deviation in the distribution across our sample period.

Table 1 summarizes differences in levels of NCA enforceability across the country and within states over time, between 1991 and 2014. With the exception of the numbers of law changes, states, index increases, and index decreases, the descriptive statistics in Table 1 are weighted to reflect population demographics by matching the scores from each state-year to corresponding observations in the CPS ASEC and using the relevant weights provided by the Census Bureau.

There are 73 within-state NCA law changes over our sample period, and these are dispersed roughly evenly across the Northeast, Midwest, South, and West regions. The average law change results in a change in the magnitude of the NCA Enforceability Score that is about 6.4% of the average score over this period, and the within-state standard deviation in enforceability is equal to roughly 12% of the overall standard deviation. Figure B.1 displays this variation visually. Panel A is a histogram of the level of NCA enforceability across all states over our sample period 1991–2014. Panel B is a histogram of the magnitude (in absolute value) of NCA law changes over this same sample period. Ninety-five percent of law changes result in a score change of 0.15 or less; 0.15 is roughly the difference between the 25th (0.66) and 75th (0.81) percentiles of the NCA score distribution (in levels) over our sample period.

Figure 1 shows the timing of NCA law change events. Changes were relatively evenly dispersed throughout the study time period. There are a few more enforceability increases than decreases, though both are well-represented. Figure 2 shows the CPS ASEC sample-weighted mean NCA Enforceability Score across states over the sample period. NCA enforceability has been generally flat or increasing over time, with an especially steep increase during the mid to late 1990s.

[16] Insulation Corp. of America v. Brobston, 667 A.2d 729, 446 Pa. Superior Ct. 520, 446 Pa. Super. 520 (Super. Ct. 1995).

3.1.1 Are NCA Law Changes Predictable?

If changes in NCA enforceability were correlated with underlying legal, economic, political, or social trends, this could reflect a potential source of endogeneity that would make it challenging to use these changes to isolate the effects of enforceability on earnings. For example, changes to enforceability might be preceded by an increasingly litigious business climate that could itself be caused by changing labor market conditions.

A priori, there are good reasons to expect this concern to be minimal. In most cases, the judicial decisions that change legal precedent are initiated by a case that is idiosyncratic to a particular occupation, industry, or employment relationship; however, the consequences of these decisions affect the state's labor law more broadly. Relative to legislators, judges are less influenced by stakeholder pressure that could sway their decision-making because of the doctrine of *stare decisis*.[18] Furthermore, evidence overwhelmingly suggests that judges do not base their decisions purely on policy preferences, but rather on a wide range of motivations (Epstein and Knight, 2013), implying that judges' decisions to break from precedent in an NCA case are unlikely to be related to underlying trends in the labor market.

Nonetheless, we use two approaches to empirically test this possibility more thoroughly. First, we test whether NCA law changes are preceded by a spike in court cases involving NCA litigation. Second, we test whether states' political, social, and economic characteristics predict NCA law changes.

As our first approach, we test whether changing litigiousness predicts NCA law changes. Following Hiraiwa et al. (2023) and Marx (2022), we use data from Courthouse News Service to identify instances of a filed dispute over an NCA in a US court. As in Hiraiwa et al. (2023), we collect all filings containing the strings "noncompetition," "non-competition," "not to compete," "noncompete," "restrictive covenant," or "postemployment restraint."[19] The data begin in 2002, and we collapse to the state-year level, tabulating counts of cases.[20]

For each state that experiences an NCA law change, we consider the window of time starting five years prior to the law change,[21] and we use state-year observations with no legal change during the same window as the controls for that state. We refer to a treatment state and its matched controls as a "block." We use a stacked

[18]For a discussion of stare decisis, see Knight and Epstein (1996).

[19]We omit cases including the term "sale," which often refers to NCAs ancillary to the sale of a business, as these cases are typically handled differently than standard employee NCAs under state law

[20]From 2002–2014, there were roughly 700 court filings about NCAs per year. Compare this number to the roughly 2.5 NCA law changes due to court decisions that occur per year during that same period. That is, roughly 0.38% of court filings result in a decision in which the judge overturned precedent. Interestingly, this proportion is quite similar to the proportion (0.5%) of Supreme Court decisions in which the Court reversed its own Constitutional precedent (Schultz, 2022).

[21]We obtain qualitatively similar results if we choose different time windows.

event study (focusing only on the pre-period) to test whether NCA law changes are preceded by a spike in case counts. Formally, we use a Poisson pseudo-maximum likelihood model (due to the dependent variable being count data) to estimate:

$$Y_{s,b,t} = \sum_{\tau=0}^{5} \alpha_\tau I^\tau_{s,b} + \mu_{s,b} + \rho_{b,t} + \varepsilon_{s,b,t}$$

where $Y_{s,b,t}$ is the count of cases in state s at time t, observed in estimation block b; α_τ is the event-time coefficient of interest on $I^\tau_{s,b}$, which is an indicator for whether a legal change occurred τ years after the observation time t in state s; $\mu_{s,b}$ are fixed state-by-block effects; and $\rho_{b,t}$ are fixed block-by-time effects. $\varepsilon_{s,b,t}$ is the error term. The estimation blocks (b) correspond to sub-experiments in the stacked difference-in-difference design (Cengiz et al., 2019; Deshpande and Li, 2019); see Section 4.2.2 for more details.

We present the $\hat{\alpha}_\tau$ coefficient estimates in Appendix Figure B.2. There is no positive trend in cases prior to legal changes. This alleviates concerns that NCA law changes are due to an increased trend toward conflict or toward legal interest in NCAs, which may itself be due to changing labor market or business conditions.

As our second approach, we use a variety of data sources to test whether other changes in political, social, or economic characteristics predict NCA law changes. These include the University of Kentucky Center for Poverty Research's National Welfare Data (University of Kentucky Center for Poverty Research, 2018) on population, workers compensation beneficiaries, an indicator for whether the state governor is a member of Democratic party, the share of state house and senate representatives (respectively) in the Democratic party, minimum wage, and the number of Medicaid beneficiaries. We also use the database constructed in Caughey and Warshaw (2018) to obtain measures of policy liberalism (liberalism in the state as reflected by government policy) and mass liberalism (liberalism in the state as reflected by responses of individuals to policy questions), both of which are measured separately on social and economic dimensions. From this dataset, we also obtain the percentage of voters who identify as Democrats. For more details on the construction of these measures, see Caughey and Warshaw (2018). Next, we gather data on the ideologies of state legislatures from McCarty and Shor (2015), including the State House and State Senate ideology scores, in aggregate as well as separately by Democrats and Republicans. Finally, we include data on union membership from Hirsch and Macpherson (2019).

Table 2 presents the results from a regression in which the dependent variable is a state's annual NCA enforceability, and the independent variables are each of the 20 characteristics noted above (lagged by one year), as well as state and Census division by year fixed effects (we use these same fixed effects in our subsequent analysis). Out of 20 variables, the vast majority have coefficients that are both economically and statistically insignificant. Only two of these 20 variables are statistically significant at the 10% level (the minimum wage and the State Senate Democrats ideology score), and only the minimum wage is significant at the 5% level. A joint F test on the statistical significance of these predictors is insignificant at the 10% level ($p = 0.197$).[22] Furthermore, the partial R^2 of the model, after residualizing on division by year and state fixed effects, is 0.114, implying that these predictors collectively explain only 11% of the variance in within-state changes to NCA policy. Thus, these results provide supportive evidence that NCA law changes are not strongly determined by underlying economic, political, or social trends. In subsequent analysis, we provide further corroborating evidence by showing that earnings do not differentially change in years *prior* to an NCA law change.

3.2 Data on Earnings and Mobility

We gather data on earnings, employment, mobility, and other labor market outcomes from four sources: the Current Population Survey (CPS) Annual Social and Economic Supplement, the Job-to-Job Mobility dataset, the Quarterly Workforce Indicators (QWI) dataset, and the CPS Occupational Mobility and Job Tenure Supplement (JTS). We describe each of these datasets, and how they fit into our analysis, in turn.

First, we gather individual-level data on earnings and employment from the CPS ASEC (otherwise known as the March Supplement).[23] The ASEC is a CPS supplement collected each March that contains information about the wage and salary income of respondents. The CPS also includes respondents' demographic and geographic information.[24] We restrict the ASEC sample to include individuals who reported having worked for a private-sector employer (not self-employed) in the year prior to being surveyed. We include the years 1991 to 2014, restrict to individuals who were between the ages of 18 and 64 at the time they were surveyed, and remove observations for which earnings or hours variables have been topcoded. The resulting ASEC dataset contains approximately 1.5 million observations, 1.2 million of which represent full-time workers. We deflate earnings and wages in the ASEC using the Consumer Price Index. We match NCA enforceability measures by state and year.

Second, we use the Job-to-Job Flows (J2J) dataset from the U.S. Census Bureau to examine the effect of enforceability on job mobility. Derived from the Longitudinal-

[22] It is not surprising that two out of twenty predictors are statistically significant. The probability of finding two or more significant predictors (at the 10% level) out of twenty, conditional on each of the predictors having zero true effect and each being independent (which is surely not true in practice, but provides an adequate benchmark) is approximately 0.88 ($1 - 0.90^{20}$).

[23] Sarah Flood, Miriam King, Renae Rodgers, Steven Ruggles, and J. Robert Warren. Integrated Public Use Microdata Series, Current Population Survey: Version 6.0 [dataset]. Minneapolis, MN: IPUMS, 2018. `https://doi.org/10.18128/D030.V6.0`

[24] While the ASEC is relatively small compared with, for example, the American Communities Survey (ACS), its existence precedes our earliest data on NCA enforceability (whereas the ACS does not). We are therefore able to leverage all changes in NCA enforceability from 1991-2014. Our results are quite similar if we instead use the ACS. We corroborate our estimates using the universe of earnings data (the QWI).

Employer Household Dynamics dataset,[25] these data contain aggregate job flows between cells defined by combinations of age, sex, quarter, origin job state, destination job state, origin employer industry, and destination employer industry. We aggregate these data to the level of the state-industry-year, and we create multiple measures of job mobility that could potentially be affected by NCA enforceability: (1): the *total count* of job-to-job separations; (2): the count of job-to-job separations in which the separating worker's destination job is in a *different* industry or (3): *the same* industry, respectively, than his or her origin job; and (4): the count of job-to-job separations in which the separating worker's destination job is in a *different* state or (5): *the same* state, respectively, than his or her origin job.

Third, we use the Quarterly Workforce Indicators (QWI) dataset from the Census Bureau. Like the J2J, the QWI is a public use file that aggregates data from the LEHD, and it contains data on earnings, as well as numbers of hires and separations, at the county-quarter level for the near-universe of private workers, stratified by sex and age group. We use the QWI both to complement the CPS in our estimation of the earnings effects of NCA enforceability, and also to investigate spillovers from enforceability. One drawback with the QWI for our purposes is that the QWI is not a balanced panel over our sample period, as some states did not begin reporting the necessary data until the late 1990s or later. For this reason, we are left with only 44 legal changes (instead of the universe of 73 legal changes) when using the QWI.

Fourth, in our investigation of the mechanism underlying the relationship between enforceability and earnings, we use data from the CPS Occupational Mobility and Job Tenure Supplement (JTS) over the years 1996 to 2014. The JTS is conducted biannually in either January or February. Among other things, it includes questions about the respondent's history of employment, such as "How long have you been working [for your present employer]?"[26] We use responses to this question to calculate the year that the worker began his or her job spell, which allows us to match individuals to the enforceability score at the time of hire. Our outcome variable of interest is weekly earnings, and we use additional variables as controls. We merge in annual national unemployment rates between 1947 and 2014 from the Bureau of Labor Statistics website for the analysis, which we describe in Section 6.

[25]U.S. Census Bureau. (2019). Job-to-Job Flows Data (2000-2019). Washington, DC: U.S. Census Bureau, Longitudinal-Employer Household Dynamics Program, accessed on April 7, 2020 at https://lehd.ces.census.gov/data/#j2j. Version R2019Q1.

[26]Note that "for your present employer" may alternatively be "for company name from basic CPS/as a self-employed person/at your main job." See http://www.nber.org/cps/cpsjan2016.pdf.

4 The Effect of NCA Enforceability on Workers' Earnings and Mobility

In this section, we examine the effect of NCA enforceability on earnings and mobility. We then consider whether these effects are more pronounced among workers who are most likely to have signed an NCA, and we then show that our estimates are stable to numerous robustness checks and sensitivity analyses.

4.1 Main Results on Earnings and Mobility

We use a difference-in-difference design to estimate the effects of NCA enforceability on earnings, leveraging intra-state variation in NCA enforceability over time. Our basic regression model is

$$Y_{ist} = \beta * Enforceability_{st} + X_{it}\gamma + \rho_s + \delta_{d(s)t} + \varepsilon_{ist}, \quad (2)$$

where Y_{ist} is the outcome of interest, $Enforceability_{st}$ is a state's annual composite NCA enforceability score across the 7 dimensions described in Section 3, X_{it} is a vector of individual-level controls, ρ_s is a fixed effect for each state, and $\delta_{d(s)t}$ is a fixed effect for each Census division by year.[27] The coefficient of interest, β, is identified from changes in earnings in states that change their NCA enforceability, relative to other states in the same Census division over the same period. Standard errors are clustered by state. A key identifying assumption is $E(Enforceability_{st}\varepsilon_{ist}|\rho_s, \delta_{d(s)t}) = 0$: conditional on state and division-year effects, changes in enforceability are uncorrelated with the error term. The evidence in Section 3.1.1 supports this assumption.

We report results in Table 3. Columns 1-4 use data from the ASEC, restricted to full-time workers between the ages of 18 and 64 who reported working for wage and salary income at a private employer the prior year.[28] The coefficient in Column 1 implies that an enforceability increase equal to 10% of the observed variation in our sample period leads to a 1.2 percent decline in earnings ($exp(-0.118 * 0.1) - 1, p = 0.002$). As another way to convey the magnitude of this estimate, consider that the 25^{th} and 75^{th} percentiles of *Enforceability* observed in our sample are 0.66 and 0.81, respectively. Moving from the 25^{th} to the 75^{th} percentile in *Enforceability* thus leads to a 1.7 percent average decline in annual earnings ($exp(-0.1175 * 0.15) - 1 = 0.017$). Adding fixed effects for broad occupation codes in Column 2 diminishes the point estimate slightly but improves its precision ($p < 0.001$).

A negative effect of *Enforceability* on annual earnings could reflect either a decline in hours worked or a decline in workers' implied hourly wage. In Column 3, the

[27] There are 9 Census divisions that partition the United States. We include division-year fixed effects to account for potential time-varying shocks to different areas of the country.

[28] All results are very similar if we include part-time workers.

dependent variable is instead the log of a worker's reported weekly hours:[29] While the point estimate is negative, it is relatively small and statistically insignificant ($p = 0.24$). In Column 4 the dependent variable is the individual's implied log hourly wage (calculated as annual earnings divided by fifty-two times usual weekly hours). The estimated coefficient is nearly identical to the coefficient on annual earnings.

Finally, in Column 5, we corroborate the estimates in Columns 1–4 that used the CPS ASEC sample by using data from the QWI. We run essentially the same regression specification as Column 1, except that we are able to include fixed effects for each county (rather than state)[30] and each division-year-quarter (rather than division-year). We weight the regression by county-level employment. The estimated coefficient is slightly larger than that in Column 1 and statistically significant.

Figure 3 visually illustrates the joint distribution of NCA enforceability and log annual earnings using binned semiparametric scatterplots. The dots in each graph depict the conditional mean log annual earnings for bins of NCA enforceability levels, controlling for the same variables included in Column 2 of Table 3 (state fixed effects, Census division-by-year effects, 1-digit occupation effects, and individual demographic controls). The conditional means are constructed using the semiparametric partial linear regression approach developed in Cattaneo et al. (2023).

Panel (a) shows the full joint distribution for all states and years. Panel (b) excludes California and North Dakota to visually focus on the states and years that provide nearly all of the identifying variation in our estimates. Both figures depict a clear negative relationship between enforceability and earnings. Using the test developed in Cattaneo et al. (2023), we fail to reject the hypothesis that the relationship between log earnings and NCA enforceability is linear in the full distribution (p=0.992). This test reinforces the choice of a linear regression specification in Equation 2.

In Appendix Table B.1 we report estimates from the same models shown in Table 3, but in each model we include the additional political and economic controls described in Section 3.1.1. The point estimates are slightly attenuated but similar with these controls: the coefficients in the ASEC log earnings and log wage models are -0.087 and -0.085, respectively ($p < 0.01$ in each model) and the coefficient in the QWI log average earnings model is -0.121 ($p < 0.01$).

It is instructive to benchmark our results against the estimated earnings effects of other labor market characteristics or institutions. One particularly instructive comparison is the effect of explicit employer concentration on earnings: Prager and Schmitt (2019) find that large changes in employer concentration, caused by local hospital mergers, caused a 6.5 percent decline in earnings among the most affected workers. As two comparable institutions, the household income premium associated with membership in a labor union is an estimated 15-20 log points (Farber et al.,

[29]We include part-time workers in this regression to avoid selecting the sample based on the dependent variable.

[30]The estimate is essentially unchanged if we instead use state fixed effects.

2018); the income premium for workers in an occupation that requires a government-issued occupational license is estimated to be 7.5% Gittleman et al. (2018).[31] To derive a comparable effect of NCA enforceability, we can extrapolate our estimates to consider what would happen to earnings under a national policy that rendered all NCAs unenforceable. We generate predicted earnings for each individual in the 2014 ASEC sample using coefficients from Column 1 of Table 3, for two different levels of NCA score: first, the NCA score observed in 2014 in that individual's state, and second, at the lowest observed NCA enforceability level (0). These predictions imply that average earnings among *all* workers would likely increase by 3.2% to 14.2% nationally if NCAs were made unenforceable.[32] The midpoint of this interval (8.7%) is similar to the effect of a large change in employer concentration, roughly one-half the household premium from labor union membership, and comparable to the premium attained by workers in occupations with government-mandated licenses.[33]

Our NCA Enforceability Score pools seven dimensions of NCA enforceability, but these dimensions might differ in their earnings effects. In Appendix Table B.2, we reestimate the effect of changes in NCA law on earnings in a specification analogous to Column 1 of Table 3, but focusing on each individual component of the composite NCA score separately. The first seven rows represent separate regressions identical to Equation 2, except that $Enforceability_{st}$ is replaced with each respective element of the NCA score described in Table C.1.[34] With two exceptions (which are both insignificant at the 10% level), the estimated effect of each score is negative; among those that are negative, the coefficients are significant at the 5% level for three components. Two of the dimensions yielding the largest negative earnings effect are those requiring consideration (i.e. compensation), both at the outset of employment (Q3a)

[31] Estimates of the earnings premium associated with occupational licensing vary widely: for example, Redbird (2017) finds no earnings premium using a 30-year comprehensive panel of licensing laws.

[32] Specifically, let X_i be the vector of the values of all variables (including fixed effects), except for NCA enforceability score, that are present in the regression in Column 1 of Table 3 for each individual, i, in 2014. Let γ be the vector of respective coefficients estimated in the same regression, and let β_{Low} and β_{High} be the bounds of the 95% confidence interval for the coefficient on $Enforceability_i$, the NCA Enforceability Score for individual i's state of residence in 2014. Then, if $\hat{Y}_{i,1,j} = \gamma X_i + \beta_j Enforceability_i$ represents predicted earnings for individual i for $j \in \{Low, High\}$, and $\hat{Y}_{i,2} = \gamma X_i$ represents predicted earnings for individual i when $Enforceability_i = 0$, we report the averages of $[\hat{Y}_{i,2} - \hat{Y}_{i,1,j}]/\hat{Y}_{i,1,j}$.

[33] This prediction of the effect of a national ban on NCAs requires a strong assumption of linearity, since such a ban would lead the average worker to experience an NCA score change far outside the distribution of identifying variation underlying our regressions in Table 3. However, the roughly linear relationship between earnings and NCA enforceability illustrated in Figure 3 suggests that this assumption is not unreasonable.

[34] Estimating a model with each component of the score separately likely introduces some omitted variable bias, as elements of the score are correlated with each other. However, including all individual components of the score in the same regression causes the sample size to shrink significantly due to missingness in some of the components (where missingness indicates that the question has not been legally settled). That model, however, generates coefficients qualitatively similar to those shown in Table B.2.

and after employment has already begun (Q3bc), consistent with evidence in Starr (2019). No single dimension drives our results, and the dimensions with the largest effects are consistent with what one might expect based on theory and prior results.

4.1.1 Effects of Enforceability on Job Mobility

While the main focus of our analysis is the earnings effect of NCA enforceability, we also estimate its effect on worker mobility. This analysis is useful because it serves as validation that the variation in enforceability is capturing what NCAs are designed to do—restrict workers' mobility.

Table 4 presents estimates based on job-to-job flows data from the J2J dataset. We measure the number of job-to-job changes at the state-year-quarter-sex-age group-industry level. We then estimate a Poisson pseudo-maximum likelihood model with the following specification:

$$\mathbb{E}\left[J_{stia}\right] = \exp\left[\beta * NCA_{st} + \lambda * High\ Ind_i\ \times NCA_{st} + \gamma X_{ia} + \theta_{si} + \phi_{d(s)ti} + \varepsilon_{stia}\right]$$

where J_{stia} is the count of job-to-job changes[35] in state s, quarter t, origin industry i, and demographic group (age and sex) cell a. NCA_{st} is the NCA enforceability score, and $High\ Ind_i\ \times NCA_{st}$ is an interaction between industries with high rates of NCA use (as measured in Starr et al. (2021): see Section 4.3.2 for more detail), and the NCA enforceability score. X_{ia} contains indicator variables for male workers and each of the age bins in the J2J data.[36] θ_{si} is a fixed state by origin industry effect, and $\phi_{d(s)it}$ is a fixed census division by origin industry by quarter-year effect.

In Column 1 we estimate the effect of the origin state NCA enforceability score on the overall number of job-to-job changes and find a small and statistically insignificant effect. However, in Column 2 we interact NCA enforceability with an indicator for whether the origin job was in a high NCA-use industry, and find that NCA enforceability substantially reduces job-to-job separations in high-use industries. The coefficient on $High\ Ind_i \times NCA_{st}$ is negative (-0.241) and highly significant ($p < .01$). The estimate implies that moving from the 25$^{\text{th}}$ to the 75$^{\text{th}}$ percentile of NCA enforceability decreases the number of job-to-job changes by 3.7% in high-use industries.

In Columns 3 through 6 we test whether NCA enforceability affects not just the *level*, but also the *direction* of job mobility, based on two forms of restrictions often used in NCA contracts. In Columns 3 and 4 we test for effects on job-to-job transi-

[35]Following Johnson et al. (2023), we use job change counts, instead of rates, as our dependent variable. We do this because NCA enforceability also affects the denominator of the rate—employment—which makes interpretation difficult. In untabulated results, we find that a regression of log employment on NCA enforceability (using QWI data in a specification identical to Column 5 of Table 3, using baseline employment as weights) yields a coefficient of -0.13 ($p = 0.047$), corresponding to a 1.9% decrease in employment when moving from the 25$^{\text{th}}$ to the 75$^{\text{th}}$ percentile of enforceability.

[36]These are age ranges 14-18, 19-21, 22-24, 25-34, 35-44, 45-54, and 55-64.

tions that occur across (Col. 3) and within (Col. 4) the origin job industry. Focusing on high-use industries, we find no statistically significant impact of NCA enforceability on across-industry job transitions, but we find a large and significant negative effect on transitions within-industry in high-use industries. Specifically, we estimate that moving from the 25th to the 75th percentile of NCA enforceability decreases the number of within-industry job changes by 5.9% in high-use industries. This evidence is consistent with Marx (2011) and Mueller (2022), who find that technical professionals and inventors bound by NCAs or subject to stricter NCA enforceability take "career detours" to different industries and occupations to avoid potential lawsuits.

In Columns 5 and 6 we test for effects on job-to-job transitions that occur across (Col. 5) and within (Col. 6) the state of the origin job. We again find no statistically significant impact of NCA enforceability in high-use industries on across-state job transitions, but we find a large and significant negative effect on transitions within the origin state in high-use industries. We estimate that moving from the 25th to the 75th percentile of NCA enforceability decreases the number of within-state job changes by 4.1% in high-use industries. This evidence is consistent with the fact that the restrictions in many NCAs are geography-specific, so are more likely to affect the rates of in-state moves.

This evidence illustrates that our measures of NCA enforceability influence mobility decisions: exactly what NCAs are designed to do. The results also motivate our investigation into one mechanism through which NCA enforceability affects earnings, which we describe in Section 6.

4.2 Dynamic Effects on Earnings and Robustness to Heterogeneous Treatment Effects

We use a distributed lag model to check whether earnings exhibit differential pretrends in the years prior to an NCA law change, and how earnings evolve in the subsequent years after a law change. We corroborate this analysis with an event study model centered around a state's first NCA law change, which also addresses potential bias from heterogeneous treatment effects that might affect our baseline estimates.

4.2.1 Distributed Lag Estimates on Earnings

Two potential concerns with the estimates from difference-in-difference specifications are 1) the plausibility of the parallel trends assumption that treatment and control states would counterfactually follow common trends in the absence of a law change in the treated state, and 2) whether the regression estimates reported in Table 3 mask dynamic treatment effects that change over time.

To address these concerns, we complement our difference-in-difference estimates with a distributed lag model, which allows us to assess the dynamic effects of an

NCA law change in the years immediately before and after the change takes place. A distributed lag model is similar to an event study model: Schmidheiny and Siegloch (2020) show that a distributed lag model with leads and lags is in fact numerically identical to an event study model with binned endpoints.

We estimate the distributed lag regression in first differences, similar to the approach used by Fuest et al. (2018)[37] using the QWI sample, which is based on the universe of jobs in the U.S.. In this specification, the unit of observation is a county $c(s)$, demographic group g (defined as combinations of sex and age), and quarter t. The model we estimate using QWI data is:

$$\ln w_{c(s),g,t} - \ln w_{c(s),g,t-1} = \sum_{k=-3}^{k=5} \beta_k [Enforceability_{s,t-k} - Enforceability_{s,t-k-1}] + \Omega_g + \gamma X_{s,t} + \delta_{d(s),t} + \varepsilon_{c(s),g,t}.$$

The dependent variable, $\ln w_{c(s),g,t}$, is the natural logarithm of average earnings in the relevant bin. Ω_g contains indicator variables for worker sex and each age bin. $X_{s,t}$ includes the same state-level political, economic, and social measures described in Section 4.1. $\delta_{d(s),t}$ is a fixed Census division-by-year-quarter effect. We weight observations by employment and cluster standard errors by state.

As illustrated by Schmidheiny and Siegloch (2020), because the distributed lag model measures treatment effect changes, to obtain event study estimates we calculate the cumulative sum of the distributed lag coefficients away from the normalized year, $j = -1$.

We report the results from this model in Panel A of Figure 4. The figure depicts two noteworthy features. First, there is little evidence of a pre-trend in earnings, supporting the assumptions (and the evidence in Section 3.1.1) that NCA law changes were conditionally exogenous to underlying economic trends and to underlying changes in the frequency of litigation or the use of NCAs which could simultaneously impact earnings. Second, earnings begin to decline in the first year following the law change, and the effects grow in magnitude until year three, becoming statistically significant by year two.[38]

[37] Our setting is similar to that in Fuest et al. (2018), who estimate the effects of corporate tax changes on earnings. They consider tax changes across municipalities that occur at staggered times, can occur multiple times in one municipality over the panel, and are of different magnitudes, all of which is also true in our setting.

[38] The gradual increase in the earnings effect could be due to delays in knowledge about law changes, frictions in adjusting contracting terms, or grandfathering of contractual provisions, among other factors. The earnings effect growing over time is also consistent with our proposed mechanism that higher enforceability leaves workers less able to benefit from outside job offers to improve their earnings—a mechanism we test for in Section 6—which is an effect that would compound over time. Lipsitz and Starr (2021) and Young (2021), who study the effects of NCA bans in the state of Oregon and in Austria, respectively, both also find that the earnings effects of NCA bans grew over time.

4.2.2 Stacked Event Study

While the distributed lag model reported in Panel A of Figure 4 corroborates our baseline two-way fixed effects (TWFE) model, recent research has illustrated that both of these approaches can be biased in the presence of heterogeneous treatment effects. Our empirical design leverages differential timing in changes across states to a continuous treatment that can change multiple times over the sample period. Several recent papers have highlighted that staggered timing of changes can cause TWFE to be biased because of comparisons where states that experience early law changes serve as controls for states with later law changes (Goodman-Bacon, 2018)). While alternative estimators have been proposed to overcome this bias for a binary treatment (e.g., Callaway and Sant'Anna (2021)), continuous variation in treatment can create additional complications that are the subject of ongoing research (De Chaisemartin and D'Haultfoeuille, 2022b).

To address these concerns, we draw inspiration from recent work and conduct a stacked event-study around a state's first law change during our sample period. The stacked design has been used in other recent applied settings (Cengiz et al., 2019; Deshpande and Li, 2019), and De Chaisemartin and D'Haultfoeuille (2022a) show that the treatment effect of a unit's first change can be estimated without bias. We identify the subset of NCA law changes that satisfy the following criteria: 1) they are a state's first law change during the sample period, 2) they occur at least 4 years after the start of the QWI sample period (which varies by state since states entered QWI in different years), 3) they occur at least 5 years before the end of the sample period (2014), and 4) they are not followed by subsequent countervailing law changes.

We use the 11 states that never experienced a law change during our sample period (never changers) as the set of eligible control states. For each treatment state, we create a panel dataset for that treatment and its control states, comprising the three years prior and five years following the treatment state's law change. We consider two sets of control states for each treatment state: 1) all 11 never changer states, and 2) the subset of never changers in the same Census region.[39] Two treatment states satisfy requirements (1) to (4) above but lack a control state in their Census region with QWI data in the pre-period; these two treatment states get dropped from the specification restricting to control states in the same region. Overall, the sample restrictions leave us with 10 law changes (14% of the 73 total changes) when we require controls to be in the same region, and 12 law changes when we allow control states to be out-of-region. Thus, a tradeoff with this specification is that, while it

[39]This model is different than our baseline that compares treated states to control states in the same Census division. The reason is that in this model there are only 11 eligible controls control states, leaving an overly sparse set of control states if we required they be in the same Census division (of which there are 9). We present estimates that do and do not require control states to be in the Census *region* (of which there are four) to balance the tradeoff between accounting for geographic-specific shocks that could matter for wages, while also ensuring we have a large enough comparison group.

helps us overcome the potential biases associated with TWFE, it is not guaranteed that the estimates we obtain will represent a population-level average.

We then stack these individual panel datasets (estimation blocks) and estimate the difference in outcomes between treated and control states in each year relative to the law change. We estimate the following regression equation:

$$\ln w_{c,b,g,t} = \sum_{\tau=-4}^{\tau=6} \alpha_\tau I^{\tau}_{s(c),b} \times \text{Score Change}_{s(c),b} + \mu_{c,b} + \rho_{r(c),b,t} + \Omega_g + \gamma X_{s,t} + \varepsilon_{c,b,g,t} \quad (3)$$

where $\ln w_{c,b,g,t}$ is log average earnings of group g in county c in estimation block b in year t. $I^{\tau}_{s(c),b}$ is equal to 1 if year t is τ years relative to state $s(c)$'s first NCA law change (where state $s(c)$ contains county c), and $\text{Score Change}_{s(c),b}$ is equal to the magnitude of the law change that defines block b—i.e., the NCA score from that first law change (and is therefore zero for all control states). $\mu_{c,b}$ is a fixed county–block effect, $\rho_{r(c),b,t}$ a fixed block–region–year effect, where $r(c)$ is the Census region containing county c (or simply block–year when not requiring that controls be in the same Census region). As in the distributed lag model, Ω_g contains indicators for sex and age categories and $X_{s,t}$ contains state-level political, economic, and social variables. Following Cengiz et al. (2019), we cluster standard errors by state–block. We weight observations by employment.

Panel B of Figure 4 graphically displays the estimates of the α_τ coefficients from two versions of Equation 3 that do and do not require that control states be in the same Census region. In both specifications, the pre-period coefficients have some noise but are close to (and statistically indistinguishable from) zero. As with the distributed lag model, the coefficients grow for several years following the law change, and are statistically significant in both specifications after year three. The coefficient magnitudes are quite similar across the two models. Using a stacked difference-in-difference (as opposed to a two-way fixed effects) model,[40] we estimate an overall earnings effect of -0.246 ($p < .01$), as reported in Column 1 of Table B.3.[41] This magnitude is quite a bit larger than the baseline TWFE coefficient of -0.137 using the QWI data (Table 3), though the estimates are not directly comparable since they are estimated on a different set of law changes and over a different time horizon.

Another advantage of the stacked model is that we can estimate separate treatment effects for each individual law change. This exercise is useful because, for example, it enables us to check whether our estimates are driven by one or two law

[40]This regression model is:

$$\ln w_{c,b,g,t} = \beta \times \text{Enforceability}_{s(c),b,t} + \mu_{c,b} + \rho_{b,r(c),t} + \Omega_g + \varepsilon_{c,b,g,t} \quad (4)$$

[41]For this table, we report results from the specification that requires that control states be in the same Census region and that does not condition on the additional state-year level variables in $X_{s,t}$ in Equation 3.

changes, or whether the earnings effect of enforceability is negative in a broad range of states. Figure B.3 reports point estimates and 95% confidence intervals on *Enforceability* from different regressions that each estimate the stacked diff-in-diff model analogous to Equation 4, separately for each of the 10 treatment states in the estimation sample. The point estimates are negative for 8 of the 10 states, implying that our estimated earnings effects are not driven by a few outliers, but rather are broadly represented in a range of states.

4.2.3 Long-Panel Event Study

While our stacked model in Section 4.2.2 addresses the potential sources of bias common to difference-in-difference models with staggered treatment timing, an additional complication in our setting is the non-absorbing nature of NCA policies: states have the ability to change NCA enforceability multiple times, such as reversing or enhancing previously changed laws. We address this issue by employing a long-panel event study design, in which the event in each treated state is simply the change in NCA enforceability between the beginning and end of the panel. To do so, we include the years 1991-1993 and 2012-2014 (the first and last three years in our panel) for each state, and we calculate the change in the NCA enforceability score over this time period.[42] We use the CPS ASEC data for this analysis, since many states only started reporting data to QWI after 1993.

Figure B.4 displays results. As in the stacked event studies and the distributed lag model, there is no evidence of a trend in earnings that is different for treated versus untreated states. Earnings are substantially lower (higher) in states that experienced NCA enforceability increases (decreases) in the intervening years, with coefficients that are significantly different than zero and of essentially identical magnitude to our estimates in Panels A and B of Figure 4.

This result provides evidence that our results are not being driven by peculiarities of the methods we employ, as well as demonstrating that the effects of NCA enforceability changes appear to persist in the long run.

4.3 Assessing Robustness of Our Estimates to a Range of Concerns

4.3.1 Interpreting Estimates from a Continuous Treatment Variable

Recent research reveals that difference-in-difference estimates can be challenging to interpret when the treatment variable is continuous (Callaway et al., 2021). In light of this concern, we can use our stacked event study model to assess whether our

[42]For states in which there were enforceability changes in the first three years or in the last three years, we omit the odd year out (and keep the two identical years). There were no states with multiple changes in either of those periods.

estimated earnings effects are driven by the scaling of our enforceability variable or by particular types of law changes. We report results in Table B.3. Column 1 reports the overall estimated earnings effect from the stacked difference-in-difference model. In Column 2 we replace the continuous NCA score with a signed indicator variable that is equal to 1 in the years following a positive law change, to -1 following a negative change, and to 0 otherwise. This model yields a coefficient of -0.018 ($p < 0.01$). To interpret this coefficient, consider that the average NCA law change in this estimation sample resulted in an absolute change in the enforceability index of 0.077; together, these imply an effect size of NCA enforceability of $-0.018/0.077 = -0.234$), similar to the effect size we directly estimate with the continuous variable.

We then estimate if the *direction* of the law change matters. In Columns 3 and 4 we separately estimate the effects of positive and negative enforceability changes, using the same signed indicator variable in place of the continuous enforceability measure. We obtain an estimate of -0.018 in each model ($p = 0.019$ and $p = 0.012$, respectively). The symmetric effects illustrate that our estimated earnings effects are general to both increases and decreases in enforceability.

Finally, in Columns 5 and 6 we estimate separate effects for small and large NCA law changes, as defined by whether the treatment state's NCA score change (in absolute value) is below or above the median. The average small change leads the mean treated state's NCA score to change by 0.039 in absolute value, and the estimated earnings effect (using the signed indicator variable for treatment) is -0.017 ($p = 0.008$). The average large change leads the mean treated state's score to change by 0.121 in absolute value, and the estimated earnings effect is -0.024 ($p = .026$). These differences suggest that the scale of our enforceability measure has economic content: the magnitude of NCA law changes, and not just the sign of the change, affects wages.

These estimates show that the earnings effects are not driven by a particular direction or magnitude of law change.

4.3.2 Heterogeneous Earnings Effects Based on Prevalence of NCA Use

In this section, we examine heterogeneity in the effect of enforceability by prevalence of NCA use. This exercise serves two useful purposes. First, it serves as a test of the robustness of the results reported in Section 4.1. If we find that enforceability has larger earnings effects among groups less likely to be bound by NCAs, it might raise questions about the research design. Second, this exercise offers a closer sense of the impact that changes in NCA enforceability will have on the earnings of groups more likely to be exposed to NCAs.

While we do not observe whether individual workers have or have not signed an NCA, Starr et al. (2021) report several sources of heterogeneity in NCA use by worker characteristics. We focus on three sources: workers' education, occupation, and industry. First, Starr et al. (2021) find that workers with a Bachelor's degree or higher are significantly more likely to sign NCAs than workers without a college degree. Second, Starr et al. (2021) find heterogeneity in use across 22 occupation categories and 19 industry categories. We use the occupation and industry in which an individual reports working to the CPS to classify workers as working in *High or Low NCA Use Occupations* and *High or Low NCA Use Industries*.[43] We replicate our main difference-in-difference specification, Equation 2, except that we now add an interaction term of *Enforceability* with an indicator for *College Educated Worker*, *High NCA Use Occupation*, or *High NCA Use Industry* (as well as an indicator for the respective main effects).

Table 5 reports these heterogeneity estimates. Column 1 reports the baseline average effect on earnings, corresponding to Column 1 in Table 3. Column 2 includes an interaction of NCA Enforceability Score with an indicator for whether a worker has a college degree (*College Educated Worker*). The main effect on *NCA Enforceability Score* is close to zero and statistically insignificant, implying that enforceability has little to no effect on earnings for non-college-educated workers. On the other hand, the interaction term $(-0.138, p < .01)$ implies that enforceability has a much stronger effect on the earnings of college-educated workers. The sum of the main effect on *NCA Enforceability Score* and the interaction effect implies that going from the 25^{th} to 75^{th} percentile of enforceability leads to a 2.6% decrease in earnings for college-educated workers $(exp((-0.038 - 0.138) * 0.15) - 1 = -0.026, p < .01)$, an earnings effect that is over 50 percent larger than the earnings effect for the whole population implied by Column 1 of Table 3.

Column 3 reports heterogeneity by occupational use of NCAs. The estimates imply that going from the 25^{th} to 75^{th} percentile of enforceability leads to a 2.1% decrease in earnings in high-use occupations $(exp((-0.085 - 0.059) * 0.15) - 1 = -0.021, p < 0.01)$; the effect for low-use occupations is about 60% as large $(p = 0.02)$, and the difference is statistically significant $(p < 0.01)$. Finally, Column 4 reports heterogeneity by industries' use of NCAs. Going from the 25^{th} to 75^{th} percentile of enforceability leads to a 2.4% decrease in earnings in high-use industries $(p < 0.01)$; the effect for low-use industries is roughly 60% as large $(p < 0.01)$, and the difference is statistically significant $(p < 0.01)$.

In Column 5, we simultaneously estimate the heterogeneous impacts of NCA enforceability along these three categories. The coefficients on the interactions of NCA Score with *High Use Occupation* and *High Use Industry* attenuate, but remain neg-

[43]We define Low NCA Use Occupations as Farm, Fish and Forestry; Legal Occupations; Grounds Maintenance; Food Preparation and Serving; Construction; Extraction; Transport and Materials Moving; Office Support; and Community and Social Services, and High NCA Use Occupations as all others. Low NCA Use Industries are Agriculture and Hunting; Accommodation and Food Services; Arts, Entertainment, and Recreation; Construction; Real Estate; Transportation and Warehousing; Retail Trade; Other Services; and Management of Companies. These occupations and industries represent those with NCA use below or above the national average, according to Figures 5 and 6 in Starr et al. (2021).

ative and significant. The interaction of NCA Score with *College Educated* changes little and remains statistically significant.[44]

4.3.3 Accounting for Potentially Endogeneous NCA Law Changes

Considering that the vast majority of NCA law changes arise from court decisions rather than statutory changes; that economic, social, political, and legal factors do not collectively predict changes in NCA enforceability (Table 2 and Figure B.2); and that there is no evidence of pre-trends in the distributed lag and event study models, it is exceedingly unlikely that NCA law changes are endogenous to omitted variables that could contaminate our estimates. Still, we can conduct some additional analyses to further address this concern.

Even though the majority of NCA law changes arise through court decisions, one might worry that the few changes arising from statutory changes might be endogenous to underlying trends in ways that could bias our results. We directly address this concern in Panel A of Table B.4, where we re-estimate our baseline TWFE model but exclude the 8 states that ever experience a statutory NCA law change. The estimated coefficient on *NCA Enforceability Score* is similar to our baseline estimates in Table 3; the standard errors (unsurprisingly) increase in size, though the estimates remain statistically significant.

While judicial decisions are less prone to endogeneity than are statutory changes from legislative action, there is some evidence that judges' decision-making can be swayed by external forces like business interests, particularly for judges that are elected rather than appointed (Katz, 2018). To ensure that our results are not driven by confounding influences on elected judges, we obtained data on how judges are selected across states from Bannon (2018). We recreate our main TWFE analyses a) excluding the 6 states that have partisan judicial elections (i.e., judges are selected via election and the judge's political party is listed on the ballot) and b) excluding the 21 states in which judges are elected (whether or not the elections are partisan). We report results in Panels B and C of Table B.4, respectively. If anything, our point estimates are *larger* in magnitude with these restricted samples (they become substantially more imprecise in Panel C, which is to be expected since we are eliminating over 40% of the states in our sample). Since judicial elections are a key mechanism through which political or economic preferences of voters might affect judicial decisions, this evidence provides further reassurance against this potential form of endogeneity.

[44]Since college-educated workers tend to get paid more than those without a college degree, this stability of the *College Educated* estimate is consistent with the evidence in Starr et al. (2021) that NCA use is increasing in workers' annual earnings.

4.3.4 Robustness to Construction of NCA Enforceability Index

Though our construction of the NCA Enforceability index reflects the reasoning and judgment of leading legal scholars, a natural question is whether some of the decisions that go into this index affect our results. Two such decisions are how we treat missing values of individual enforceability components and the weights we give to each individual component in constructing the aggregate index. In Appendices C.2 and C.3, we show that our estimates are insensitive to alternative approaches to both of these decisions.

5 Spillover Effects of NCA Enforceability on Earnings

The results in Section 4 demonstrate that NCA enforceability has a negative effect on overall earnings. How do these estimates relate to our model? As described in Section 2 (and shown in Equation 13 in Appendix A), the effect of enforceability on average earnings is a weighted sum of two terms: 1) the average difference in earnings between workers that are and are not bound by NCAs and 2) the spillover effect of enforceability on earnings of workers not bound by NCAs. Theoretically, this second term is unambiguously negative: strict NCA enforceability will decrease the earnings of workers not bound by NCAs. This effect arises due to the assumption that strict enforceability slows down the job offer arrival rate for workers who are not constrained by NCAs, reducing their ability to leverage outside offers and climb the job ladder. In this section, we discuss existing evidence supporting this assumption and provide new evidence to corroborate it. We then show that enforceability does have spillover effects that are present and economically meaningful. Finally, we provide a brief discussion of what our results can say about the first term in Equation 13, the difference in average earnings between constrained and free workers, which our model suggests is indeterminate.

5.1 Effects of Enforceability on Job Vacancies

Our model predicts that NCA enforceability reduces earnings of workers not bound by NCAs under the assumption that NCAs cause offer arrival rates to fall for all employed workers in a labor market, not just those bound by NCAs. Prior work supports this assumption. Using survey data, Starr et al. (2019) find a large and significant negative effect of the interaction of incidence of NCA use in a state-industry cell and NCA enforceability on job offers received in either the prior year or over the course of their job spell—even among workers who are not bound by NCAs. Similarly, Goudou (2022) finds a decreased job-finding rate in industries with greater NCA incidence, consistent with his model that enforceable NCAs make job vacancies more difficult for firms to fill.[45]

We provide additional corroborating evidence for the prediction that NCAs reduce offer arrival rates using data on job vacancy posting rates. Vacancy rates measure the existence of potential jobs both for workers bound by NCAs and those who are not (and, arguably, more so for those who are not, since those bound by NCAs are unable to take certain jobs) (Bagger et al., 2022). Our primary proxy for offer arrival rates is the number of unemployed people per job opening, a metric used by the Bureau of Labor Statistics that reflects how tight or slack the labor market is. A higher ratio indicates that it would take longer for a worker to receive a job offer, on average. We additionally consider the number of job openings to demonstrate that changes in the ratio are not solely driven by changes in the number of unemployed people. Both of these measures are available at the state–year level starting in 2001 from the Job Openings and Labor Turnover Survey (JOLTS) conducted by the BLS.[46]

In Table 6, we present estimates of the impact of NCA enforceability on these measures of job offer arrival rates. Formally, we estimate an analog of Equation 2 at the state-time level, with no individual controls, and with t representing a month-year. Column 1 shows that stricter NCA enforceability leads to increases in the count of unemployed individuals per job opening: going from the 25^{th} to the 75^{th} percentile of enforceability leads to a reduction in that rate of 0.27 ($p = 0.094$), or 10.7% relative to a mean of 2.51. In other words, when enforceability is stricter, the number of individuals vying for any given vacancy increases. Column 2 shows that, while statistically insignificant, this effect is driven, at least in part, by changes in the count of job openings: going from the 25^{th} to the 75^{th} percentile of enforceability leads to a reduction in job openings of 3.4%.

These results, taken together with the existing literature, corroborate the assumption that NCA enforceability reduces offer arrival rates to workers in the labor market, especially for those who are not bound by NCAs.

5.2 Estimating Spillover Effects of NCA Enforceability

Having provided empirical support for our model's assumption that NCA enforceability affects offer arrival rates for all workers, we now turn to the implication of this assumption: that changes to NCA enforceability have spillover effects on the earnings of workers not bound by NCAs.

To test this prediction, we examine whether changes in NCA enforceability in

[45]Other factors, however, could push this relationship the other way: in theory, NCAs could encourage recruitment by providing more flexible contracting structures. See Potter et al. (2022) for the implications that follow from that assumption.

[46]We use monthly data aggregated across industries (total nonfarm) at the state level, seasonally adjusted. The BLS does not report data at a more granular level. See `https://www.bls.gov/jlt/data.htm`

a "donor" state affect workers who share a local labor market with that state but work in a different state. Our goal is to directly assess the extent of spillovers onto workers not directly affected by a change in NCA enforceability. Consider the St. Louis metro area, which includes counties in Missouri but also several counties across the state border in Illinois. If Illinois experiences an NCA law change, does it affect the earnings of workers employed on the Missouri side of the St. Louis metro area? And vice versa if Missouri experiences a law change?

We measure local labor markets as commuting zones, which are clusters of counties that have strong commuting ties and have been used in many prior studies as measures of local labor markets (e.g., Autor et al. (2013)). We identify commuting zones that straddle state borders: these commuting zones are local labor markets that include business establishments in two states and are therefore subject to two different NCA enforcement regimes. We remove 8 commuting zones that contain counties in more than 2 states to ensure clarity in defining the donor state. These restrictions leave us with a set of 137 commuting zones and 742 counties in them. In our main analysis, we focus on the 545 counties in these commuting zones that themselves lie directly on state borders; with this restriction, we avoid counties such as Los Angeles County, which shares a commuting zone with counties in Arizona but is nearly 200 miles driving distance from anywhere in Arizona.

We employ data from the QWI, which, as described in Section 3, includes quarterly earnings and employment flows at the county level, separated by various firm characteristics and worker demographics. Each observation in the dataset represents a unique year, quarter, county, sex, and age group cell.

To test for spillovers, we use an analog of the difference-in-difference model corresponding to Equation 2 to estimate the impact of a change in NCA enforceability across a state border, among workers employed in a commuting zone that straddles the state border. The outcome variable is the log of average quarterly earnings within each cell for all private sector employees. We estimate the model:

$$\begin{aligned} Y_{ctga} = \phi_0 + \phi_1 * Enforce_{ct} + \phi_2 * BorderEnforce_{ct} \\ + \phi_3 * Female_g + \psi_a + \zeta_c + \Omega_{d(c)t} + \varepsilon_{ctga}, \end{aligned} \tag{5}$$

where c indexes county, t indexes year-quarter, g indexes sex, a indexes age group, and $d(c)$ indexes the Census division in which county c is located. ψ_a and ζ_c are fixed age group and county effects, respectively. $\Omega_{d(c)t}$ is a Census division by year-quarter fixed effect. The primary coefficient of interest is ϕ_2, which is an estimate of the spillover effect on workers in county c of enforceability in the state that borders the commuting zone in which county c is located. ϕ_1 estimates the direct effect of enforceability in a worker's own state, analogous to our estimates thus far. We cluster standard errors two ways by state and commuting zone.

We report results in Table 7. Column 1 verifies that the direct relationship between (own) state NCA scores and earnings holds in this restricted sample. The coefficient on *Own State NCA Score* is -0.160 and statistically significant ($p < 0.01$). This magnitude is slightly larger than the main estimates reported in Table 3. Column 2 includes the *Donor State NCA Score*. In this model the direct effect of *Own State NCA Score* increases slightly to -0.181, $p < 0.01$, while the coefficient on *Donor State NCA Score* reveals evidence of meaningful spillover effects: the coefficient is -0.137 ($p = 0.059$), which equals 76% of the own state effect.

In the next section we conduct several tests to evaluate the reliability and clarify the interpretation of these spillover estimates.

5.3 Assessing the Interpretation of Spillover Estimates

We conduct three tests to corroborate the interpretation that the estimates in Table 7 reflect spillover effects of NCA enforceability across state borders. First, we test whether the magnitude of spillover effects varies in proportion to the relative sizes of the labor forces on each side of a bisected commuting zone. Second, we estimate heterogeneity in the magnitude of spillover effects by distance from state borders. Finally, we consider whether alternative mechanisms can explain our spillover results.

We first examine heterogeneity in spillover effects among border counties. Intuitively, in a commuting zone bisected by a state border, the magnitude of a spillover effect from a donor state's law change should be smaller if the donor state comprises a small share of total employment in the commuting zone. Conversely, if the donor state is the primary location of employers in the commuting zone, a change in NCA enforceability in the donor state should create a larger change in job offer arrival rates (and thus earnings) across the border in the neighboring state.

Column 3 of Table 7 shows our estimates of this heterogeneity. Along with their main effects, we include interactions of the 'own state' and 'donor state' NCA Scores with the share of the commuting zone labor force that is employed on the 'own state' side of the border. Since the unit of observation in this regression is at the county-demographic group-quarter level, we calculate these shares at the demographic group (age-sex combinations) level.[47] The results show that spillover effects are heterogeneous in a manner consistent with the logic above. The main effect of *Donor State NCA Score*, representing the spillover effect in a county that comprises zero percent of its CZ's employment (and thus where the donor state comprises essentially all of the CZ's total employment), is negative (-.167, $p = 0.032$). However, the spillover effect is substantially smaller in counties that account for a large share of employment in their commuting zone. In the extreme case in which a county contains 100% of commuting zone employment, the estimated spillover effect is close to zero (-0.009 =

[47] We also include the main effect of this ratio but do not report its coefficient in the table.

-0.167 + 0.157) and statistically insignificant ($p = 0.891$).[48]

Our main estimates of spillover effects consider earnings in adjacent pairs of counties bisected by state borders. Our second test of the interpretability of these estimates relies on the intuition that the magnitude of spillovers should attenuate with distance to the state border; if they did not one might worry our spillover estimates are driven by a spurious correlation. In Table B.6 we present three supplemental estimates from samples that include (1) interior counties that are neither in commuting zones that straddle state borders nor on state borders; (2) the subset of these interior counties that lie at least 50 miles from any state border; and (3) the subset that lie at least 100 miles from a border. We assign to each county a 'Donor State NCA Score' that corresponds to the state geographically closest to that county.[49] Reassuringly, the point estimate on *Nearest Neighboring State's NCA Score* is substantially attenuated in each of these three subsamples, with coefficients -0.059, -0.027, and -0.036, respectively.[50] None of the coefficients are statistically significant.

As a third test, we examine whether spillover effects of NCA enforceability could be driven by alternative mechanisms that we have not considered. We have argued theoretically (and shown empirically in Section 5.1) that strict NCA enforceability slows job offer arrival rates, and that this is the mechanism that underlies negative spillover effects on earnings. However, other explanations are possible. For example, workers may decide to find a job across state lines if their own state increases NCA enforceability. Such behavior would cause an outward shift in labor supply in border states, causing the market-clearing wage to decline. We find no evidence, however, that such worker behavior can explain the spillover effects on earnings. In Table B.7, we present estimates of the spillover effects of enforceability on workers' *mobility*. The structure mimics Table 7, except that our dependent variables are the log quarterly

[48]Unlike the analysis with the QWI dataset that we reported in Table 3 and Figure 4, we leave the regressions in Table 7 unweighted. We do this for two reasons. First, we weight the prior QWI analysis by employment to estimate an average treatment effect for the US population; because the sample in Table 7 is limited to border counties, weighting serves no such purpose. Second, spillover effects (as we show) are more pronounced in counties with a small share of employment. Therefore, an estimate that weights observations by employment would likely reveal little to no average impact of Donor State NCA Score. We report a weighted version of Table 7 in Table B.5, which indeed shows an attenuated average effect. However, Column 3 reveals that the heterogeneity based on employment shares in the CZ in Column 3 persists in the weighted specification, as expected.

[49]Specifically, we calculate the distance between county centroids. If the centroid of a county in a different state is less than m miles from the centroid of the focal county, we exclude that focal county from the relevant regression. We assign Donor state NCA scores by finding the county in a different state whose centroid is closest to the focal county's centroid, and using that donor state's NCA score. Note that this approach to assign Donor state NCA scores is slightly different from the approach used in the results reported in Table 7, where we assigned the cross-border state's NCA score to be a focal county's Donor score. These two approaches to assigning Donor Score are often identical, but they diverge in a handful of cases; this discrepancy drives the slight divergence in estimates of earnings effect of the *Donor State Score* reported in Table B.6 and Table 7.

[50]At the same time, however, the point estimate on *Own State NCA Score* reveals that the direct effect of own-state NCA score remains stable across these various geographic restrictions.

number of hires and separations from QWI in Columns 1 to 3 and 4 to 6, respectively. Across all six columns, enforceability in a worker's *own* state has a negative effect—of roughly similar magnitude—on hires and separations, corroborating the mobility results we found in Section 4.1.1 using the J2J dataset. The spillover effects (reported in Columns 2 and 5) are imprecisely estimated, though they are negative and of a magnitude that is 53-66% smaller than the direct effect.[51] Thus, there is no evidence that workers move across state lines in response to an NCA law change in their own state; if anything, these estimates suggest that strict NCA enforceability *reduces* cross-border mobility.

Collectively, these results on earnings and mobility provide evidence that NCA enforceability reduces earnings and labor market churn, even across state borders. Though we cannot observe which workers sign NCAs, these results suggest that NCA use has external effects on workers and firms that do not use them, consistent with the theoretical considerations discussed in Section 2.

5.4 Interpreting Enforceability Effects in the Presence of Spillovers

The spillover effects reported above have two important implications for interpreting our estimates of the overall earnings effect of NCA enforceability.

The first implication is theoretical. As described in Section 2, the overall effect of enforceability on average earnings depends not just on spillovers, but also on a second term: the average difference in earnings between constrained workers bound by an enforceable NCA and unconstrained workers not bound by one. This term can be positive or negative and is what makes the overall effect on average earnings indeterminate. We are not able to directly estimate this term in this paper; nevertheless, the spillover results allow us to provide some perspective on it.

We first note that, even if a panel dataset on NCA use existed (which, to our knowledge, does not), it is not obvious that the causal effect of signing an NCA is straightforward to identify. The decision by workers and firms to use NCAs is likely to be correlated with many unobserved worker and firm characteristics, such as intangible capital and opportunities for investments, causing endogenous selection into employment contracts with NCAs (Starr et al., 2021). This endogeneity makes it challenging to estimate the causal effect of signing an NCA on earnings. Some prior correlational studies indicate that workers who are bound by NCAs have 5–6% higher earnings than observationally similar workers not bound by one (Starr et al., 2021; Starr and Rothstein, 2022). However, these comparisons likely suffer from omitted variable bias; Balasubramanian et al. (2023) estimate a *negative* effect of signing an NCA on earnings when accounting for plausible selection effects.

[51] Additionally, Columns 3 and 6 document an identical pattern of heterogeneity to that observed on earnings: an NCA law change in a donor state has a larger effect on mobility in a focal county among counties comprising a small portion of the commuting zone's total employment, compared to counties comprising a large share.

That said, our results can provide some perspective on the magnitude of this term. As shown in Table 7, the spillover effect of NCA enforceability in a border state is roughly three-quarters of the magnitude of the direct effect in a worker's focal state, our empirical analog of $\frac{d\bar{w}}{d\theta}$ from Equation 1. If our estimate of spillovers is a perfect empirical analog of $\frac{d\bar{w}^F}{d\theta}$, this comparison suggests that $\bar{w}^C - \bar{w}^F$ is *negative* (that is, earnings for workers bound by NCAs are less than earnings for workers without NCAs). On the other hand, if our spillovers analysis underestimates $\frac{d\bar{w}^F}{d\theta}$ (for example, if "true" local labor markets are smaller than Commuting Zones), then our results still leave open the possibility that $\bar{w}^C - \bar{w}^F$ is positive. Regardless, this comparison indicates that, whatever the sign of $\bar{w}^C - \bar{w}^F$, a meaningful share of the overall earnings effect of NCA enforceability is borne by workers not actually bound by NCAs.

The second implication is econometric. Our primary estimating equation (Equation 2) relies on the stable unit treatment value assumption (SUTVA): that control units—states not experiencing legal changes—do not have counterfactual earnings trajectories that are affected by treated units (states experiencing law changes). However, our spillover estimates indicate that this assumption is violated for some control units—namely, counties in control states that are located near the border of a treated state. Since the direction of contamination is the same as the direction of the main effect, this suggests that our primary specification, which includes these contaminated counties, may underestimate the earnings effect of enforceability. We examine this concern in Table B.8, which replicates Column 5 of Table 3, but restricts the sample to counties progressively further away from a state border. Excluding counties near state borders increases the magnitude of the coefficient, though the estimates also become noisier due to the decrease in the number of counties included in the sample.

6 Does NCA Enforceability Reduce Earnings By Worsening the Value of Outside Options?

According to our model, the key channel through which NCA enforceability lowers earnings is by slowing down the arrival rate of new job offers. For constrained workers, NCAs explicitly prevent workers from considering outside job offers that compete with their current employer. For unconstrained workers not bound by an NCA, Corollary A.6 demonstrates that this slowdown occurs if high enforceability leads employers to post fewer vacancies (as shown in Section 5.1). Fewer job offers mean that workers have less ability to use improvements in outside options to negotiate for higher earnings and to climb the job ladder (that is, find better-paying jobs).

In this section, we use two approaches to test whether this "outside options" channel explains the negative earnings effect of NCA enforceability. First, we show that the earnings effect of changes in NCA enforceability is largest for those workers whose outside options are most affected by changes in enforceability in their state.

Second, we show that NCA enforceability disrupts workers' ability to take advantage of tight labor markets to raise earnings.

6.1 Heterogeneous Earnings Effects Based on Workers' Outside Options

As demonstrated in the second part of Corollary A.6, if strict NCA enforceability reduces earnings by preventing workers from leveraging outside options, then changes in enforceability will have a larger effect on the earnings of workers whose set of outside options is most affected by NCA enforceability.

We consider two margins that could govern the impact of enforceability on workers' outside options: the likelihood that a worker can move across state lines, or switch occupations. The ease with which a worker can move across state lines could directly affect the outside option bite of NCA enforceability among both constrained and unconstrained workers. Because NCAs often restrict movement within a local geographic area, all else equal an NCA eliminates a smaller share of outside options for workers who are more mobile across state lines. If higher state-level NCA enforceability slows down in-state job offer arrival rates, this has less of a bite for unconstrained workers who are more mobile across state lines. Similarly, NCAs often restrict within-occupation mobility (Marx, 2011; Johnson and Lipsitz, 2019). For workers who are outwardly occupationally mobile, such limitations will be less restrictive, since a smaller portion of potential job offers are limited by the use of enforceable NCAs.

We measure variation in cross-state mobility at the industry level using the J2J data (described above in Section 4.1.1). J2J includes a variable equal to the share of job-to-job changes that are across state lines at the state-industry-year (where industry corresponds to 2-digit NAICS code). We collapse this measure to the industry level by averaging across all states for the years 2000—2006.[52] This process gives us a measure of the share of job changes that are across state lines for each 2-digit NAICS industry. One complication for our purposes is that (as shown in Table 4) the share of job changes across state lines is potentially endogenous to NCA enforceability. To partially address this issue, in some specifications we also control for each industry's incidence of NCA *use* as used in Section 4.3.2.

We measure variation in cross-occupational mobility at the occupation level using data from Schubert et al. (2021). Schubert et al. (2021) use data from 16 million resumes compiled by Burning Glass Technologies over the period 2002–2018 to construct the "occupational leave share:"[53] the share of job transitions in which a worker

[52]We choose this time-window to avoid any confounding effects from the 2007–2009 Great Recession.

[53]We are incredibly grateful to the authors, who directly provided us with the dataset on each occupation's share of job changes that are to a different occupation.

switches occupations, at the 6-digit SOC occupation level.[54]

We first consider heterogeneity in the earnings effects of NCA enforceability across industries, based on the share of job changes in each industry that are across state lines (the "cross-state leave share"). Panel (a) of Figure 5 displays this relationship graphically. The figure is a scatterplot in which the unit of observation is a 2-digit NAICS industry: on the vertical axis is the earnings effect of NCA enforceability in that industry,[55] and on the horizontal axis is the industry's share of job changes across state lines. The relationship is positive, meaning that the earnings effect of enforceability is attenuated when workers can more easily move across state lines. Column 1 of Table B.9 displays corresponding regression results:[56] a one standard deviation increase in the share of an industry's job changes that are across state lines attenuates enforceability's negative effect on earnings by 0.050 log points ($p = 0.052$), or roughly half of the main effect. Column 2 shows that this estimate is robust to also interacting NCA enforceability with each industry's NCA incidence.

We next consider heterogeneity in the earnings effect across occupations, based on the "occupational leave share." Panel (b) of Figure 5 displays a scatterplot in which the unit of observation is a 6-digit SOC occupation: on the vertical axis is the earnings effect of NCA enforceability in that occupation,[57] and on the horizontal axis is the occupation's share of job changes in which the worker switches occupations. The relationship is positive, which again demonstrates that the earnings of workers whose outside options are less affected by NCAs are less affected by enforceability. Column 3 of Table B.9 displays corresponding regression results:[58] a one SD increase in the share of an occupation's job changes that are to a different occupation attenuates enforceability's negative effect on earnings by 0.011 log points ($p < .01$), or roughly 17% of the main effect. Column 4 shows that this estimate is robust to also interacting NCA enforceability with each occupation's NCA incidence.

These analyses show remarkably consistent evidence that strict NCA enforceability has the largest effect on the earnings of workers whose outside options are most

[54]In theory, this measure could also be endogenous to NCA enforceability, for example if workers bound by NCAs are more likely to switch occupations to escape their NCA (Marx, 2011). Unfortunately, the occupational leave share measure is only measured nationally, so we cannot construct it for the state of California (like we did for industry-level cross-state job transitions.)

[55]Using the QWI dataset, we separately regress earnings on NCA enforceability for each industry, and we save the coefficient from each regression. In each regression, we include fixed effects for state, sex, age group, and year–quarter–region, and we weight observations by employment.

[56]Here, we run a single regression with an interaction term. We also normalize the "cross-state leave share" to be mean 0 and standard deviation 1 for interpretability.

[57]Using the CPS ASEC (which is required since it includes information on workers' occupations), we separately regress earnings on NCA enforceability for each occupation, and we save the coefficient from each regression. In each regression we include fixed effects for state, year–region, and we include basic demographic controls. For this plot, we restrict attention to occupations with at least 5,000 observations in our sample period, comprising roughly the most common 100 occupations.

[58]Here, we run a single regression with an interaction term. We also normalize the "cross-occupation leave share" to be mean 0 and standard deviation 1 for interpretability.

plausibly impacted by the use and stringency of NCAs in their state.

6.2 NCA Enforceability Reduces Workers' Ability to Leverage Tight Labor Markets

The results in the prior section corroborate our model's implication that strict NCA enforceability reduces earnings by slowing down workers' arrival rate of outside offers, thus interrupting an important channel of workers' overall earnings growth (Bagger et al., 2014). In this section, we consider a second way that NCA enforceability might interrupt this channel of earnings growth: by reducing workers' ability to take advantage of tight labor markets to raise their earnings.

We embed NCA enforceability in an empirical model, first used by Beaudry and DiNardo (1991), that considers how a worker's current earnings depend on prior labor market conditions. Beaudry and DiNardo (1991) (hereafter, BDN) consider a model in which firms insure workers against negative productivity shocks using implicit contracts. Their model implies that improvements in labor market conditions enable workers to bargain for higher earnings that persist through their job spell—but only if their mobility is costless (that is, they can easily switch jobs). In this case, because the worker can threaten to quit if her outside option improves, improvements in labor market conditions compel employers to raise wages. If, instead, workers' mobility is costly, they cannot credibly threaten to leave, and improvements in labor market conditions will not translate into higher earnings.

BDN develop a simple empirical test of their model. If mobility is costless, a worker's current earnings will be correlated with the most favorable labor market conditions over the course of her current job spell; if mobility is costly, her earnings will be correlated with the initial market conditions at the start of the spell. BDN find strong evidence consistent with costless mobility: the effect of the most favorable labor market conditions over a worker's job spell (measured as the minimum unemployment rate over the spell) exceeds and washes out any effect of the unemployment rate at the time of hire (predicted by an implicit contracts model with costly mobility) or the contemporaneous unemployment rate (predicted by a spot market).[59]

More recently, Hagedorn and Manovskii (2013) (hereafter, HM) propose a different explanation for why current earnings could be tied to prior labor market conditions. HM model workers' earnings as set in spot markets (in contrast with Beaudry and DiNardo (1991)). However prior labor market conditions still affect a worker's current earnings through their effect on a worker's current match quality. In favorable labor markets, workers receive many job offers and are able to climb the job ladder, enabling workers to choose a job with a higher match quality. HM show that their model rationalizes the same reduced form relationship between current earnings and

[59] Other papers in this literature have replicated this baseline result, using different datasets and time periods (e.g., Molloy et al., 2016; Schmieder and Von Wachter, 2010).

history of unemployment rates, but they provide evidence to suggest their model better explains this relationship than BDN.

While BDN and HM provide differing reasons for why prior labor market conditions matter for current earnings, they both illustrate ways that strict NCA enforceability attenuates workers' ability to take advantage of tight labor markets. By slowing down the arrival rate of job offers that workers might otherwise expect, strict NCA enforceability interrupts both channels through which tight labor markets translate to higher earnings, by preventing them from climbing the job ladder (in the spirit of HM) and by diminishing the *threat* of climbing the job ladder (in the spirit of BDN). Both of these mechanisms are important elements of earnings growth in the search model of Bagger et al. (2014).

To test this idea, we revisit the empirical model used by BDN and HM that relates a worker's earnings to prior labor market conditions. We hypothesize that when NCAs are more easily enforceable, a worker's current earnings will be less correlated with the most favorable market conditions during her job spell—and more correlated with initial labor market conditions—relative to workers in states where NCAs are less enforceable.

We begin by replicating the baseline analysis of BDN using the CPS JTS,[60] and limiting our analysis to full-time, private sector workers, for the years 1996-2014 (compared to BDN, who used the years 1976 to 1984).[61] We estimate the model:

$$\ln w_{(i,t+j,t)} = \Omega_1 X_{i,t+j} + \Omega_2 C(t,j) + \rho_{s(i,t)} + \delta_{d(i,t)t} + \varepsilon_{i,t+j}, \tag{6}$$

where $w_{(i,t+j,t)}$ is the earnings of individual i at time $t+j$ who began her job spell at time t. $X_{i,t+j}$ is a vector of individual level characteristics. Following BDN, in $X_{i,t+j}$ we include race, Hispanic status, sex, marital status, age, age squared, tenure, tenure squared, education, and industry dummies. $C(t,j)$ is a vector of unemployment rates which, depending on the model, include *Initial UR* (the unemployment rate at the beginning of the individual's job spell) and/or *Minimum UR* (the lowest unemployment rate between the beginning of the job spell and the time of measurement of earnings). Following BDN, we use annual national unemployment rates from the Bureau of Labor Statistics. $\rho_{s(i,t)}$ is a fixed effect for the state in which worker i lives in year t. $\delta_{d(i,t)t}$ is a fixed census division by year effect.[62]

This model departs in some ways from the BDN specification. First, we do not include Metropolitan Statistical Area (MSA) fixed effects: doing so decreases our sample size by approximately 25% (due to individuals whose MSA has been omitted

[60] Hagedorn and Manovskii (2013) use a similar specification to Beaudry and DiNardo (1991), though they use the National Longitudinal Survey of Youth rather than the CPS.

[61] We omit years prior to 1996 due to a lack of data availability: though BDN use CPS data collected prior to 1996, the dataset we employ (the CPS JTS) has only been collected since 1996.

[62] BDN do not use state fixed effects; we include them to harmonize this model with our benchmark earnings models and to only use within-state variation in enforceability.

from public use extracts of CPS supplements). In their stead, we use dummy variables for metropolitan area status (as used in Equation 2). Second, we do not consider the contemporaneous unemployment rate, which is collinear with $\delta_{d(i,t)t}$. Each of these adjustments ultimately has little impact on our estimates.[63]

We report these results in Table 8. Columns 1–3 replicate the Beaudry and DiNardo (1991) main results for our sample period. In Column 1 we include only the unemployment rate at the time of hire (*Initial UR*): our estimated coefficient has a smaller magnitude than that estimated in BDN (ours: -0.008; BDN: -0.030), but it is negative and statistically significant ($p < 0.01$). Column 2 uses, instead, the minimum unemployment rate over the course of the worker's job spell (*Minimum UR*); we find a negative and statistically significant effect. Column 3 mimics the main finding of BDN: including both *Initial UR* and *Minimum UR* attenuates the coefficient on *Initial UR* close to zero but leaves the coefficient on *Minimum UR* negative and significant ($p < 0.01$). In other words, on average, prior experience with tight labor markets leads to higher current earnings—consistent with either a model of implicit contracts with costless mobility (Beaudry and DiNardo, 1991) or a model in which match quality matters for earnings (Hagedorn and Manovskii, 2013).

To test the hypothesis that NCA enforceability shuts down the ability of workers to leverage strong labor markets (via either improvements in bargaining position or moves to stronger matches), we estimate the model:

$$\ln w_{(i,t+j,t,s)} = \Omega_1 X_{i,t+j} + \Omega_2 C(t,j) + \Omega_3 Enf_{t,s} + \Omega_4 C(t,j) * Enf_{t,s} + \varepsilon_{i,t+j}, \qquad (7)$$

where $Enf_{t,s}$ is the NCA enforceability score in state s at time t, the beginning of the worker's job spell. This model allows the effect of labor market conditions to vary with the strength of NCA enforceability at the time the worker was hired. If NCA enforceability affects the cost of mobility in an implicit contracts environment, or if NCA enforceability prevents workers from attaining better match quality, we expect two effects. First, we expect the coefficient on $Enf_{t,s} \times$ *Minimum UR* to be positive, indicating that employees have *less* ability to leverage favorable labor markets over the course of their job spell when NCA enforceability is high. Second, we expect the coefficient on $Enf_{t,s} \times$ *Initial UR* to be *negative*, indicating that earnings are *more* responsive to labor market conditions at the time of hire when NCA enforceability is high.

We report the results in Columns 4 and 5. Column 4 mirrors Column 3, but includes an additional control: NCA enforceability at the employee's time of hire

[63]Inclusion of MSA fixed effects (unreported) has little effect on our estimates. Our estimates are also robust to excluding Census division-by-year fixed effects, and to using state-level unemployment rates in lieu of national unemployment rates, which allows us to include contemporaneous unemployment rates in our regressions (since they are not collinear with division-year fixed effects). We choose to use national rates to follow BDN, and also because state-level unemployment rates could in theory be an outcome of NCA enforceability policies.

($Enf_{t,s}$). Encouragingly, the coefficients on *Initial UR* and *Minimum UR* do not change, indicating that NCA enforceability is not acting as a de facto proxy for one of the unemployment rates.

In Column 5, we include the interactions demonstrating the change in the cost of mobility. First, consider the main effects of *Initial UR* and *Minimum UR*, which indicate the effect of initial and most favorable labor market conditions, respectively, for a state with the lowest NCA enforceability. These coefficients mirror, and amplify, the findings from BDN and HM: a higher initial unemployment rate for a worker in a low-enforcing state does not reduce her earnings today—if anything it leads to *higher* earnings—whereas the main effect of *Minimum UR* indicates that a worker's earnings today are strongly responsive to her most favorable labor market condition over her tenure. In other words, earnings in a state with low NCA enforceability are *even more* aligned with an implicit contracts model of costless mobility, or alternatively reflect a *greater* ability of workers to find high-quality matches, relative to the overall population.

Next, consider the two interaction terms, indicating the differential effects of these conditions for a worker in the highest enforcing state. The coefficient on $Enf_{t,s} \times$ *Initial UR* (-0.017; $p < 0.01$) shows that a higher unemployment rate at the time of hire affects current earnings much more negatively when NCAs are more enforceable. The coefficient on the other interaction term, $Enf_{t,s} \times$ *Minimum UR* (0.020; $p < 0.05$), shows that the most favorable labor market condition over job tenure has a much more muted effect on current earnings for workers in states with higher enforceability. Combining the main effect on *Minimum UR* with this interaction term reveals that the most favorable labor market condition over the course of tenure has essentially no effect on the earnings of a worker in a state with the highest observed enforceability ($-0.028 + 0.020 = -0.008, p = .19$).

These results provide even more evidence to support the theory that strict NCA enforceability reduces earnings by limiting workers' outside options. The increased rate of job offers that workers can expect in tight labor markets can have long-lasting positive effects on their earnings, either by increasing their bargaining power or by enabling them to switch to better matches. The estimates in Table 8, however, show that this effect is effectively shut down when NCAs are strictly enforced.

7 Heterogeneity in NCA Enforceability's Earnings Effect by Sex and Race

We have shown that strict NCA enforceability has a particularly detrimental earnings effect in industries and occupations in which state-level NCA enforceability has the largest effect on workers' outside options. Extending this logic suggests that the earnings effect of NCA enforceability may differ across demographic groups. For example, it is plausible that NCA enforceability has a larger effect on women's outside options than men's. Women tend to be less willing than women to commute far distances for their job (Le Barbanchon et al., 2019; Caldwell and Danieli, 2018), and married women are less likely to relocate in response to labor market opportunities than are married men (Jayachandran et al., 2023), both of which could be due to imbalanced household gender norms. Women are also less willing (and able) to violate NCAs than are men (Marx, 2022). These differences would imply that geographically-restrictive NCAs (or state-level enforceability changes) would have a larger effect on women's outside options than on men's. Similar differences could arise for racial minorities relative to White individuals: Black individuals are less likely to migrate far away from their hometown, and they are less likely to migrate in response to earnings increases elsewhere (Sprung-Keyser et al., 2022). Together with our model, these differences predict that NCA enforceability will cause greater earnings penalties for historically disfavored workers.

Figure 6 displays results from two regressions that add demographic group indicators, alone and interacted with NCA Score, to the regression reported in Column 1 of Table 3.[64] (Table B.10 reports the underlying regression estimates.) The coefficients reported in the Figure are on the interaction of the relevant group indicator with the *NCA Enforceability Score*, and they represent the impact of NCA enforceability on the earnings of individuals in that group. We report coefficients from two models: our main estimate and a second model that includes interactions between the *NCA Enforceability Score* and indicators for college-educated, high-NCA-use occupations, and high-NCA-use industries, alone and interacted with *NCA Enforceability Score*, in order to account for the fact that workers in different demographic groups may hold different jobs and have different education levels, on average.

The figure reveals meaningful heterogeneity in the earnings effect across demographic groups. In the baseline model the estimates are negative and statistically significant for all demographic groups; however, the magnitudes of earnings effects for Black men and other female minority workers are 94% and 145% larger, respectively, than the effect for White men.[65] A test of equality of the earnings effects across all six groups is strongly rejected ($p < 0.001$). These differences persist in the regression specification with additional controls—the test of equality in coefficients yields a p-value below 0.001.[66]

[64] We make two additional modifications to the regression specification. First, we remove the restriction that workers must be working full-time to avoid selecting the sample on an outcome that is known to differ across men and women, though the results do not meaningfully change if we reimpose the full-time restriction. Second, we include more detailed (interacted) demographic categories in the model.

[65] The p-values of pairwise comparisons reported in Figure 6 are Bonferroni-corrected to account for five pairwise comparisons.

[66] We note that our results do not accord with a model in which the penalties faced by non-White workers and women are additive; this pattern has been observed in other work on racial and gender earnings gaps (Paul et al., 2022).

These results suggest that strict NCA enforceability not only reduces earnings *on average*, but it also exacerbates existing disparities across demographic groups. In Column 2 of Appendix Table B.10 we show that these coefficients imply that moving from the 25^{th} to 75^{th} percentile of the NCA Score distribution would decrease average earnings of white men by approximately 1.3%, vs. decreases ranging from 1.5% to 3.2% for the other demographic groups. Together with the estimates in Column 1, these results imply that if a state that enforces NCAs at the 75^{th} percentile of the distribution were to switch to enforcing NCAs at the 25^{th} percentile of the distribution, the earnings gap between white men and each other demographic group would close by 1.5% for nonblack, nonwhite men, 1.9% for black women, 2.3% for white women, 3.6% for black men, and 3.8% for nonblack, nonwhite women.

Of course, we cannot say conclusively that the disparate impacts of NCA enforceability by sex and race arise from differential impacts on outside options. Still, these results do provide further (albeit indirect) evidence that our model has explanatory power for understanding the mechanism through which strict NCA enforceability reduces earnings. A promising avenue for future research would be to more comprehensively examine the ways in which NCAs differentially impact workers of different demographic groups.

8 Comparison to Prior Studies: How Generalizable Are the Earnings Effects of NCA Enforceability?

Ours is not the first paper to consider the earnings effect of NCAs and NCA enforceability. Prior work on this topic has considered the effects of NCA use and/or enforceability for specific subsets of workers or subsets of law changes. Relative to this important work, our paper provides the first estimates of earnings effects of NCA enforceability for a broad, representative sample of the US labor force using all law changes over a 24-year period. We also connect our empirical analysis to a theoretical model, which both helps interpret the reduced form effect of NCA enforceability on earnings and implies sources of heterogeneity in those effects. Collectively, these features of our paper allow us to revisit these prior studies, some of which find facially contrasting results.

First, our paper helps make sense of seemingly conflicting findings on the effects of NCA *use* versus NCA *enforceability*. Prior work tends to find that NCA use has either no association or a positive association with earnings (Balasubramanian et al., 2023; Lavetti et al., 2018; Starr and Rothstein, 2022; Starr et al., 2021). In contrast, studies of enforceability of NCAs (including ours) tend to find negative impacts on earnings

(Lipsitz and Starr, 2021; Balasubramanian et al., 2022; Garmaise, 2011).[67] Our paper rationalizes these disparate findings. Our model shows that the effect of increasing enforceability on earnings is the sum of two terms: the difference in earnings between workers who do and do not sign enforceable NCAs (which we show can be positive or negative), and the spillover effect on non-signers (which we show theoretically and empirically is unambiguously negative).[68] Thus, our model provides an explanation for why there could be positive/null earnings effects of use and negative earnings effects of enforceability.[69]

Second, our paper can help rationalize heterogeneity in the estimated earnings impacts of NCA enforceability among existing studies. For example, Lipsitz and Starr (2021) find a 2-3% earnings effect of a ban on NCAs for low-wage workers in Oregon, while Balasubramanian et al. (2022) find a 4-5% earnings impact of a ban on NCAs for high-tech workers in Hawaii. Our model suggests that the differences in the magnitudes of these effects could be due to disparities in the outside options of workers in these different segments of the labor force. In Section 6.1, we find that workers whose outside options are most impacted by NCA enforceability (for example, because NCAs typically cover specific locations, occupations, or industries) are those whose earnings are most affected by changes in enforceability. There is evidence that low-wage workers are more mobile across industries than are high-wage workers, perhaps due to differences in the industry-specificity of human capital.[70] By comparison, high-tech workers may have skills that are more industry-specific, meaning their outside options would be more affected by NCA use and enforceability. [71] At a more extreme tail of the labor market, Garmaise (2011) estimates that CEOs at large publicly-traded US firms have 8.2% lower earnings growth under stricter NCA enforceability. This especially large earnings effect is consistent with CEOs having

[67] An exception is (Young, 2021), who finds that an NCA ban in Austria for low-wage workers had a limited effect on earnings.

[68] This insight is particularly useful for interpreting the results from Kini et al. (2019), who estimate the interaction effect of NCA enforceability and NCA use on CEO earnings. They find a *positive* effect of this interaction term (suggesting CEOs with enforceable NCAs get an earnings premium) but a *negative* effect on the main effect of enforceability, which is consistent with negative spillovers. See Table 7, Column 1 of that paper.

[69] Another potential explanation for these differences is that the correlation between NCA use and earnings may not reflect a causal effect, since factors such as access to proprietary knowledge may simultaneously contribute to the use of NCAs and higher earnings. See Starr and Rothstein (2022) for a deeper discussion of this point.

[70] Figure 1 of Lipsitz and Starr (2021) shows that workers in lower earnings brackets are much more likely to change industries than are workers in higher brackets.

[71] At the same time, high-tech workers might be more mobile across state lines than the typical worker, enabling them to escape increases in NCA enforceability in their origin state, which could explain why the 4–5% earnings increase from the Hawaii ban from Balasubramanian et al. (2022) is smaller than our implied overall earnings increase from a nationwide NCA ban (8.7%). Indeed, in the J2J data, the share of job changes that are across state lines in NAICS code 51 (which contains several high-tech industries based on Balasubramanian et al. (2022)'s definition) is 20%, compared to 15% across all other sectors.

substantially lower outside-occupation mobility than other occupations (which the data from Schubert et al. (2021) shows is the case).

Finally, our paper offers the most comprehensive understanding of the labor market effects of NCA enforceability to date. We show that the effect on earnings is negative for a wide range of states (as displayed in Figure B.3), implying that the negative effects in prior case studies are not aberrations. At the same time, we show substantial heterogeneity in the earnings effects across industries and occupations—something not feasible to estimate in a single case study. These analyses can inform which groups are likely to be most affected by ongoing policy discussions to restrict or ban NCAs. Finally, we offer (and provide evidence for) a theoretical channel through which NCA enforceability affects earnings; this extends prior work that has, for example, referenced the role of worker mobility but has been unable to explicitly test why lower mobility would translate to lower earnings.

9 Conclusion

Using newly-assembled panel data on state-level NCA enforceability, we show that stricter NCA enforceability leads to a decline in workers' earnings and mobility. The earnings effect of NCA enforceability extends across legal jurisdictions, illustrating that NCA enforceability has far-reaching consequences on labor market outcomes that likely extend far beyond the subset of workers that actually sign NCAs. Multiple sources of evidence indicate that strict enforceability reduces earnings by dampening workers' outside options, shutting down a primary way that workers can otherwise attain higher pay over the course of their careers. Finally, strict enforceability has an especially negative effect on the earnings of women and racial minorities and thus exacerbates existing disparities in the labor market.

Our results also inform a longstanding debate regarding freedom of contract. An argument frequently cited in this debate is that workers would not sign NCAs if they were made worse off by doing so. Evidence that workers sign NCAs either unwittingly or after they have any chance to bargain over them (Marx, 2011) already casts doubt on this argument. Our findings that NCAs create negative *market-level* externalities provide a further challenge to this argument.

Our findings suggest several avenues for future research. An important question is how incomplete markets interact with workers' willingness to sign NCAs: for example, liquidity-constrained workers might sign NCAs that are damaging to their lifetime earnings if they are unable to alternatively accept an initial earnings cut to pay for training or other human capital investment; in this case, NCA enforceability might exacerbate inequality between high- and low-wealth individuals. The earnings effects of NCA enforceability might also interact with unionization and other labor market institutions. Finally, given our findings that strict NCA enforceability reduces the extent to which strong labor markets translate into higher earnings, it is possible that increases in NCA enforceability (or in NCA use) have contributed to the decline in the labor share of income over the past several decades.

10 Tables and Figures

Table 1: Descriptive Statistics on NCA Law Changes, 1991-2014

Region	Northeast	Midwest	South	West	Total
Average Index	0.75	0.79	0.76	0.40	0.69
Standard Deviation of Index	0.10	0.12	0.13	0.35	0.25
Maximum Index	0.97	0.97	1.00	0.91	1.00
Minimum Index	0.63	0.00	0.47	0.07	0.00
Number of Law Changes	15	19	23	16	73
Number of States in Region	9	12	17	13	51
Number of Index Increases	11	14	13	9	47
Number of Index Decreases	4	5	10	7	26
Average Magnitude Positive Index Change	0.03	0.05	0.08	0.05	0.05
Maximum Positive Index Change	0.15	0.11	0.24	0.19	0.24
Average Magnitude Negative Index Change	-0.05	-0.03	-0.04	-0.02	-0.04
Maximum Negative Index Change	-0.06	-0.06	-0.17	-0.09	-0.17
Between-State Standard Deviation	0.09	0.25	0.12	0.22	0.18
Within-State Standard Deviation	0.03	0.03	0.04	0.03	0.03

Notes: Statistics in the table represent data from 1991–2014, and the unit of observation is a state-year. The minimum and maximum of the NCA Score are normalized to 0 and 1, respectively. With the exception of the numbers of law changes, states, index increases, and index decreases, the descriptive statistics in Table 1 are weighted to reflect population demographics by matching the scores from each state-year to corresponding observations in the CPS ASEC and using the relevant weights provided by the Census Bureau

Figure 1: Timing of NCA law changes from 1991 through 2014

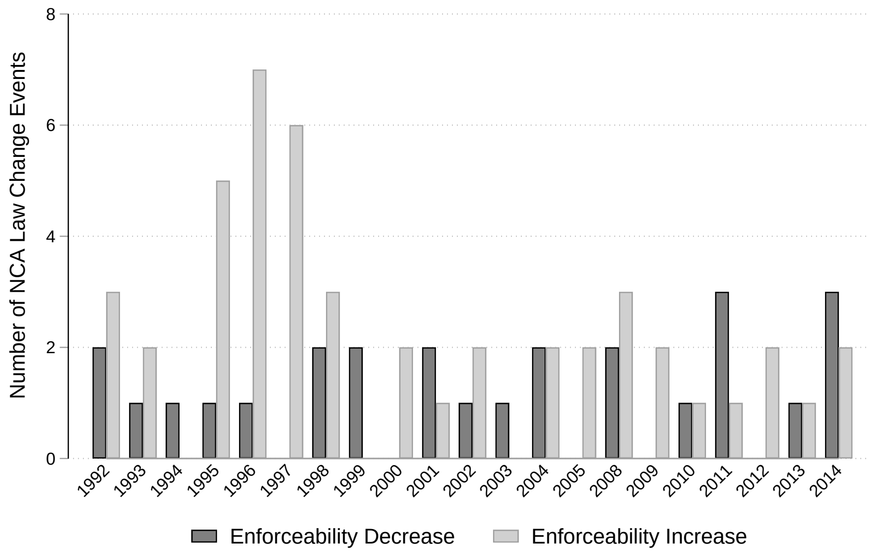

Figure 2: Average NCA Enforceability Score from 1991 to 2014

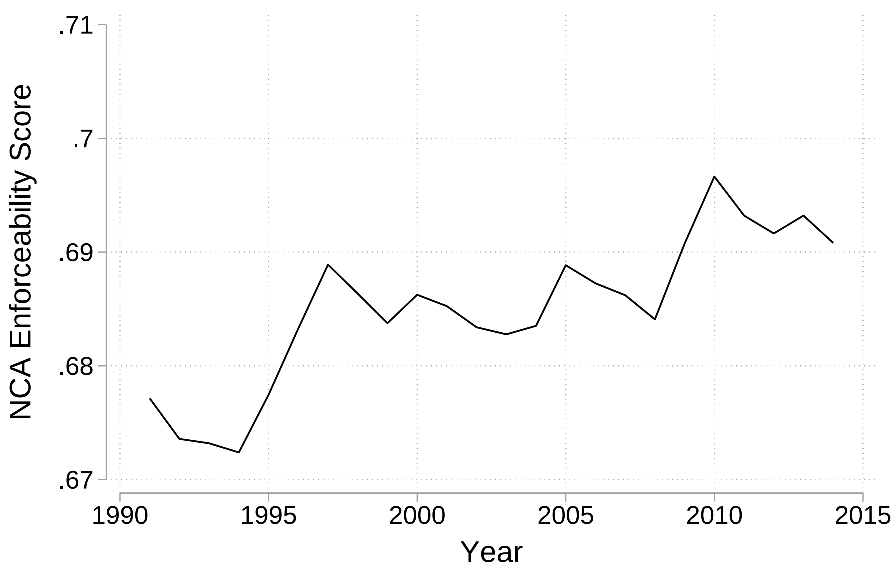

Notes: The series in this figure represents the population-weighted average NCA Score in the US in each year.

Table 2: Can Economic and Political Factors Explain Changes in NCA Enforceability?

Dependent Variable:	NCA Enforceability

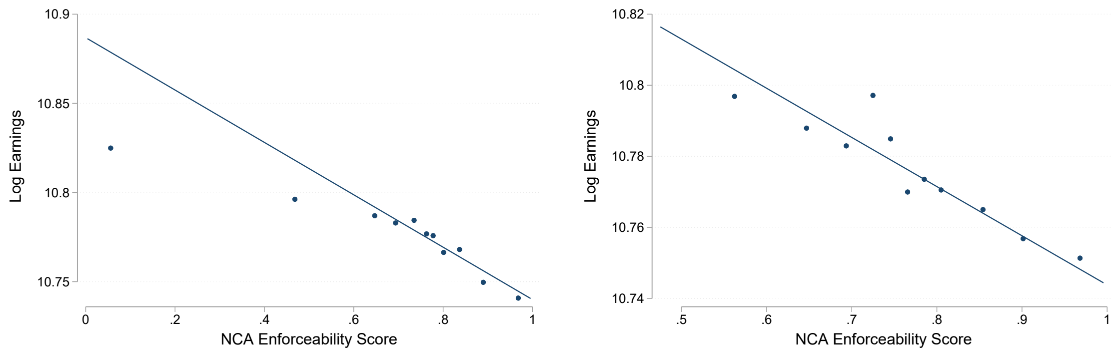
Time FE	Div x Year	Div x Year	Div x Year	Div x Year	Div x Quarter
Occupation FE	N	Y	Y	Y	N
Sample	ASEC	ASEC	ASEC	ASEC	QWI

ASEC samples use years from 1991-2014 and include individuals between ages 18-64 who reported working for wage and salary income at a private employer. All ASEC regressions include controls for male, white, Hispanic, age, age squared, whether the individual did not complete college, and indicators for the metropolitan city center status of where the individual lives. Column (5) includes controls for male, age group, and county fixed effects. The dependent variable in Column (4), log hourly wage, is calculated as the log of total annual earnings and salary income last year divided by (usual weekly hours last year times 52). Columns (1), (2), and (4) include full-time workers only, while Column (3) includes part-time workers to avoid selection on the dependent variable.
SEs clustered by state in parentheses. ***P<.01, **P<.05, *P<.1

Figure 3: The Relationship between NCA Enforceability and Earnings:
Binned Scatterplots



(a) Full Joint Distribution (b) Joint Distribution Excluding CA & ND

Figures are binned scatterplots depicting the conditional joint distribution of NCA enforceability and log annual earnings, controlling for the same variables included in Column 2 of Table 3 (fixed state effects, census division-by-year effects, 1-digit occupation effects, age, age-squared, and indicators for white, Hispanic, male, less than college education, and metro area status.) Conditional means are constructed using the semiparametric partial linear regression approach developed in Cattaneo et al. (2023). Panel (a) includes all states and years, panel (b) excludes California and North Dakota to visually focus on the main sources of identifying variation that we use for estimation.

Table 4: The Effects of NCA Enforceability on Job Mobility

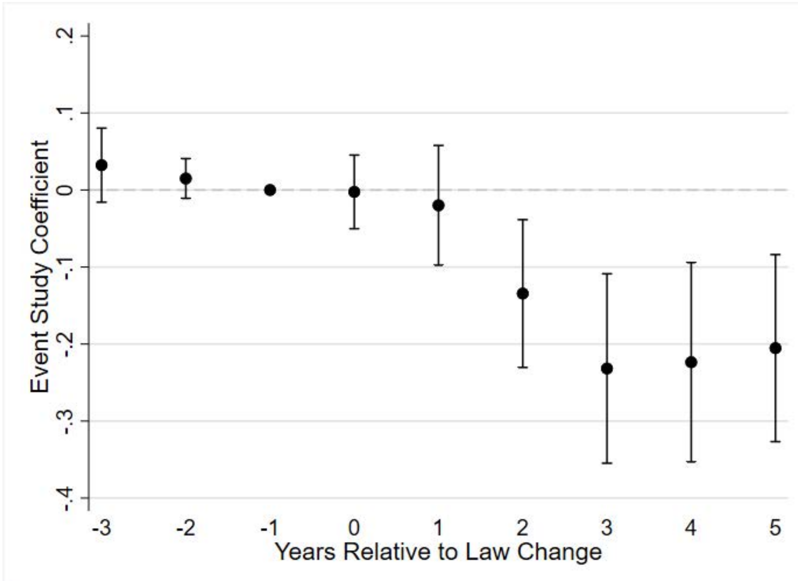
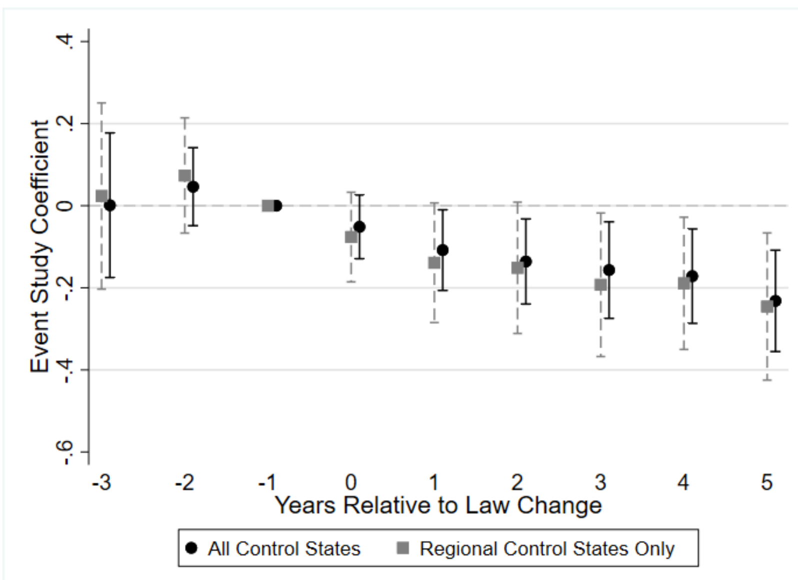
Mean Dep Var	1,421.69	1,421.69	794.65	627.60	165.38	1,256.38

Estimates are Poisson pseudo-likelihood coefficients from a model using LEHD Job-to-Job flows data from 1991-2014. Each observation is a state-sex-age group-quarter-industry cell. All regressions include controls for sex, age group, and fixed state-by-origin-industry effects and census-division-by-origin-industry-by-year-by-quarter effects. Regressions are weighted by employment, and standard errors are clustered by state. ***P<.01, **P<.05, *P<.1.

Figure 4: Dynamic Effects of NCA Enforceability Changes on Earnings from Two Different Models



(a) Distributed Lag Model



(b) Stacked Event Study

The graphs plot two estimates of the dynamic effects of NCA law changes on earnings, from a distributed lag model (Panel A), and a stacked event study model (Panel B). Both regressions use data from QWI. See Section 4.2.1 for the regression equations and further details. The coefficients represent the effect of an NCA law change that occurred j years ago ($j \in \{-4, 5\}$) on log earnings. The coefficient representing one year prior to law change is normalized to zero. In Panel A, the dependent variable is the yearly change in the log average earnings in a county-group; in Panel B the dependent variable is the log average earnings in a county-group. Standard errors are clustered by state.

Table 5: Heterogeneous Effects of NCA Enforceability on Earnings by Education, Occupation, and Industry

R^2	0.275	0.275	0.290	0.292	0.304

The sample in all columns is the CPS ASEC from 1991-2014 and includes individuals between ages 18-64 who reported working for wage and salary income at a private employer the prior year. All regressions include fixed effects for state, fixed effects for Census region by year, and individual controls for male, white, Hispanic, age, age squared, whether the individual did not complete college, and indicators for the metropolitan city center status of where the individual lives. In Columns (3) and (4), High NCA Use Occupations are occupations with NCA use greater than the national average, as tabulated by Starr et al. (2021).
SEs clustered by state in parentheses. ***P<.01, **P<.05, *P<.1

Table 6: The Effects of NCA Enforceability on Job Openings

	Unemployed People Per Job Opening (1)	Job Openings (2)
NCA Enforceability Score	1.783*	-0.225
	(1.045)	(0.233)
Observations	8568	8568
R^2	0.922	0.9308
Estimation Methodology	OLS	Poisson

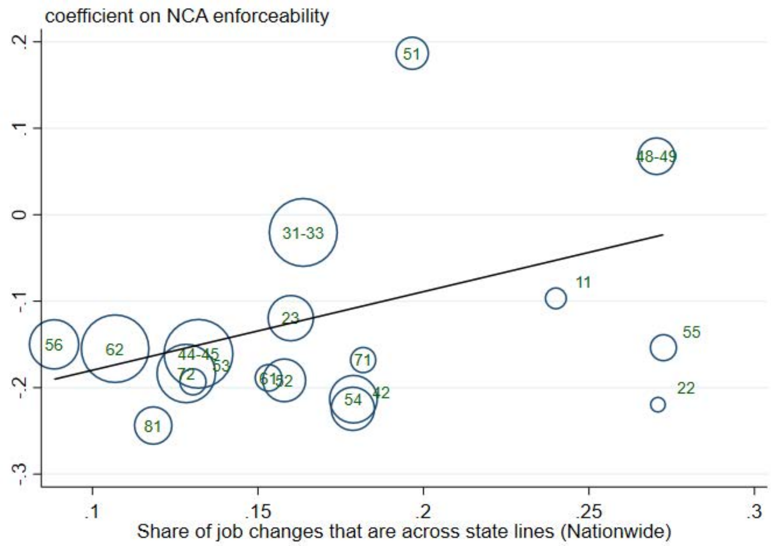
Estimates are OLS or Poisson pseudo-likelihood coefficients from a model using BLS JOLTS data from 2001-2014. Each observation is a state-year-month cell. All regressions include fixed state and census-division-by-year-by-month effects. Regressions are weighted by employment, and standard errors are clustered by state. ***P<.01, **P<.05, *P<.1.

Table 7: The External Effects of NCA Enforceability on Earnings

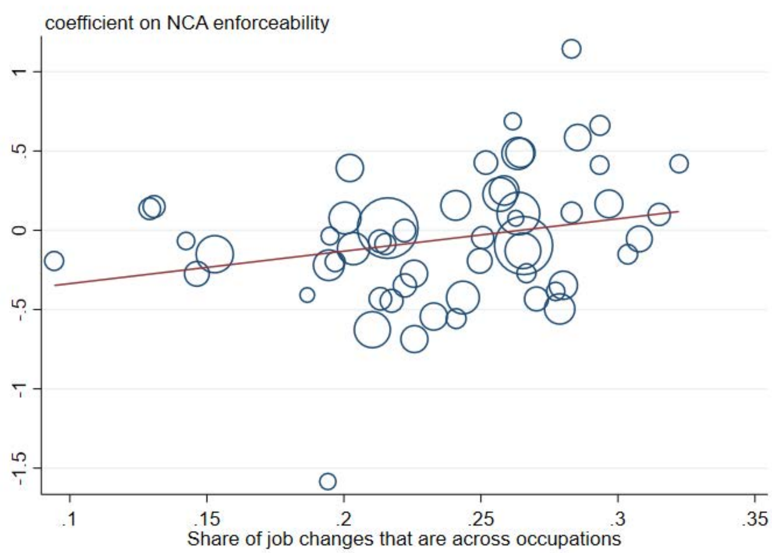
	(1)	(2)	(3)
Own State NCA Score	-0.160***	-0.181***	-0.161**
	(0.058)	(0.066)	(0.069)
Donor State NCA Score		-0.137*	-0.167**
		(0.071)	(0.075)
Own Cty Emp/CZ Emp × Own State NCA Score			-0.110
			(0.150)
Own Cty Emp/CZ Emp × Donor State NCA Score			0.157***
			(0.054)
Observations	615191	615191	613762
R^2	0.899	0.899	0.902

The dependent variable is log earnings. The sample is the QWI from 1991-2014 restricted to counties directly on state borders in commuting zones that straddle a state border. An observation is a county-sex-age group-quarter. All regressions include controls for sex, age group, as well as division by year by quarter and county fixed effects. Own Cty Emp/CZ Emp is the ratio of sex- and age-group-specific employment in own county divided by sex- and age-group-specific employment in the entire commuting zone. Standard errors are clustered by own state in Column (1), and two-way clustered by own state and commuting zone in columns (2) and (3). ***P<.01, **P<.05, *P<.1

Figure 5: NCA Enforceability Has a Larger Effect on Earnings When it Has a Bigger Impact on Workers' Outside options



(a) Industry-level cross-state mobility [QWI]



(b) Occupation-level cross-occupation mobility [CPS]

Each figure is a scatterplot relating the earnings effect of NCA enforceability against the "bite" of enforceability on workers' outside options, using two dimensions of this "bite." In Panel (a), a unit of observation is a 2-digit NAICS industry: on the vertical axis is the earnings effect of NCA enforceability in that industry (estimated using the QWI dataset) and on the horizontal axis is the share of job transitions in that industry that are across state lines (measuring using the J2J dataset). In Panel (b), a unit of observation is a 6-digit SOC occupation: on the vertical axis is the earnings effect of NCA enforceability in that occupation (estimated using the CPS ASEC dataset) and on the horizontal axis is the share of job transitions in that occupation that to different occuaptions (based on data from Schubert et al. (2021)). See Section 6.1 for details.

Table 8: NCA Enforceability Changes How Workers and Employers Negotiate Implicit Contracts

	Log Earnings

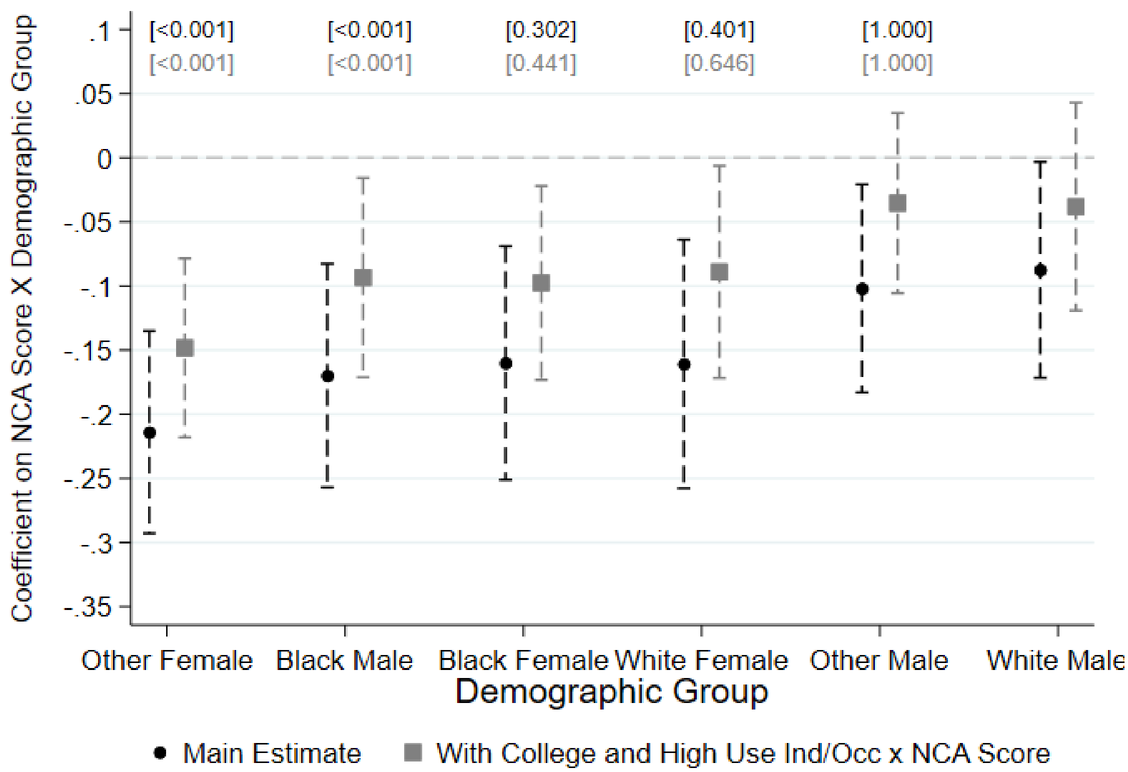
R^2	0.364	0.364	0.364	0.364	0.364

The dependent variable is log weekly earnings. All regressions include state, Census division by year, and industry fixed effects, as well as controls for quadratics in age and tenure, and indicators for high school or less, black, Hispanic, married, union member, metro center status, and female.
SEs clustered by state in parentheses. ***P<.01, **P<.05, *P<.1

Figure 6: Heterogeneous Effects of NCA Enforceability on Earnings by Race and Sex



The figure depicts coefficients from two regressions of earnings on NCA Score, interacted with demographic groups. The first regression builds on Column 1 of Table 3, adding indicators for each demographic group, as well as interactions of those indicators with NCA Score (the coefficients on which are depicted in the figure, along with 90% confidence intervals). The second regression adds controls for college education, high-NCA-use occupation, and high-NCA-use industry, and each of these controls interacted with NCA Score. The values in brackets report Bonferroni-corrected p-values for the *difference* between each coefficient and the coefficient for white males, with the main estimates in the first row and the estimates including extra controls in the second row.

A Formalization of Theory

This appendix considers an augmentation of the model of Bagger et al. (2014). Bagger et al. (2014)'s baseline model of workers' earnings growth over their career uses a search and matching framework with human capital accumulation and on-the-job search. We consider a modification in which some workers sign NCAs with a firm, preventing their job mobility while employed by that firm. We consider channels linking earnings and NCAs posited in Section 2, and derive conditions under which those channels would lead to the expected relationships in the model.

A.1 Summary of Bagger et al. (2014)

First, we introduce and summarize the model of Bagger et al. (2014). In that model, unemployed and employed workers match with prospective employers at rates λ_0 and λ_1, respectively. Workers produce according to their human capital: a worker with human capital level h_t produces, in log terms, $y_t = p + h_t$, where p is the productivity of the firm, drawn from exogenous distribution $F(p)$. Workers are paid according to a piece rate: their earnings are (again, in log terms) $w_t = r + p + h_t$, where $R = e^r \leq 1$ is the piece rate. The logged piece rate, r, is actually negative, meaning that it represents the amount of productivity that is "returned" to the employer. When exponentiated, the piece rate, R, therefore represents the *share* of productivity that is "returned" to the employer.

When unemployed workers match with a new employer, their earnings are determined by setting the piece rate such that the worker receives a share, β, of the value of their match above and beyond the value of unemployment, which is assumed to be the value of matching with the least productive firm type, p_{min}. Employed workers who contact new employers may leave their current job (if the new employer is able to offer more attractive contract terms) or may leverage an outside offer to receive an earnings increase (if the incumbent employer is able to offer more attractive contract terms), in either case receiving a share, β, of the match-specific rents above and beyond their relevant threat point. Workers also exogenously separate from their employers at rate $\delta \in [0, 1]$ (and immediately rematch at rate $\kappa \in [0, 1]$), and leave the labor force altogether at exogenous rate $\mu \in [0, 1]$. The discount rate is ρ.

We selected this model as a baseline due to the harmony between the drivers of earnings growth in the model and the channels through which NCAs could affect earnings that we discussed in Section 2. In the baseline model, workers' earnings growth occurs because of growth in their human capital, h_t , and their ability to search for higher-paying jobs. These two mechanisms for earnings growth match well to potential roles for NCAs. First, NCAs are typically justified as a solution to a hold-up problem, where firms are not willing to invest in workers' human (or other) capital (e.g., training, imparting trade secrets, client lists, etc.) for fear that the worker will depart the firm and therefore deny the firm its return on investment.[72] Therefore, an NCA in this model should cause h_t to grow at a greater rate, as the firm is more willing to invest in the worker. Second, NCAs prevent workers from changing jobs or threatening to change jobs, meaning that workers will not be able to increase earnings by moving to a firm offering higher earnings, or by leveraging an outside offer to increase their earnings at their current firm. The tradeoff between these two competing mechanisms will partially determine the difference in the rates of earnings growth with and without an NCA for the worker.

A.2 Modifications to Bagger et al. (2014)

We hypothesize that NCAs and NCA enforceability impact labor markets through three primary channels: first, via the offer arrival rates, second, via human capital accumulation, and third, via the ability of constrained workers to change jobs (and, similarly, to use the threat of changing jobs in earnings bargaining). We model NCA enforceability as an exogenous parameter, θ, which may be viewed as the probability that a randomly selected NCA will be enforced (therefore, $\theta \in [0, 1]$).

The first modification we make is that workers with enforceable NCAs are unable to change jobs. We let workers sign NCAs with exogenous probability γ when they commence their first employment relationship, which are enforceable with probability θ. The offer arrival rate of new jobs for employed workers with NCAs is zero, or $\lambda_1^C = 0$, where C indicates that the worker is *constrained* by an enforceable NCA.[73] This modification means that if a worker has an enforceable NCA, they will continue to work for the same employer unless they experience an exogenous separation.[74] Though assuming that NCAs strictly prohibit job changing is a simplification (because, for example, workers may be able to buy out of NCAs or can move to firms in different industries or geographic locations), this assumption substantially improves tractability and does not change the predictions of the model, assuming the friction to job switching is great enough. We could instead model NCAs as introducing a cost

[72] One reason that enforceable NCAs might raise investment is due to incomplete markets: namely, that liquidity-constrained workers cannot "pay" for general human capital training in the form of lower initial earnings, but they *can* sign an NCA. See (Rubin and Shedd, 1981) for more discussion on this topic.

[73] The superscript C and F will be used frequently to differentiate functions and parameters that differ between signers (constrained workers) and non-signers (free workers).

[74] We make two additional modifications related to this one. First, we assume that, after an exogenous separation, a worker who had previously signed an NCA will continue to work in a job with an NCA. This assumption significantly increases tractability by limiting flows between the two types of jobs. One way to view this assumption is that workers work in industries that use NCAs or in industries that do not; this could occur due to the value of accumulated industry-specific human capital. The second assumption is that workers may immediately find new work upon an exogenous separation with their employer. This assumption also increases tractability of the model. Furthermore, we view it as reasonable: roughly half of states do not enforce NCAs when employees are fired, leaving such workers able to find other jobs quickly in the event of an involuntary separation.

on job switching. In the limit, if the cost is steep enough to limit job changes, this is identical to assuming that the worker is unable to change jobs.

The second modification we make is assuming that the offer arrival rate for workers without NCAs is lower when NCA enforceability is stricter (θ is larger). One plausible foundation for this assumption is that, when enforceability is nonexistent, firms can be sure that a worker to whom they offer a job will be unencumbered by an NCA. However, when enforceability is strict, firms may worry that they will ultimately have to pay high costs to buy workers out of their NCA (see, e.g., Shi (2023)) or that the worker ultimately will not be able to work for the offering firm. This higher expected cost or greater uncertainty effectively raises the recruitment cost to the firm, reducing the rate at which firms are willing to make offers (see Starr et al. (2019)). Whether or not this foundation is exactly accurate, the relationship between NCA enforceability and job posting is empirically testable: indeed, we find in Section 5 that NCA enforceability causes lower rates of *vacancy posting* (which, notably, does not simply affect workers bound by NCAs) and higher ratios of unemployed workers to vacancies. These results directly underpin this modification to the model.

Specifically, we allow the offer arrival rate for employed workers without enforceable NCAs (workers who are *free* to move), λ_1^F, to vary with θ. We assume that $\frac{d\lambda_1^F(\theta)}{d\theta} < 0$: the more strictly NCAs are enforced in the labor market, the less often workers will be contacted on-the-job.

The final modification we make is to assume that workers with enforceable NCAs accumulate human capital at a faster rate. In Bagger et al. (2014), accumulation of human capital, h_t, is stochastic, with the deterministic component of workers' human capital at time t represented by $g(t)$. Here, we define $g^C(t)$ and $g^F(t)$ to be the deterministic component of, respectively, a constrained and free worker's human capital at time t. Since human capital evolves faster for those with NCAs, if $g^C(t-1) = g^F(t-1)$, then $g^C(t) > g^F(t)$. This assumption is a natural implication of the argument that NCAs solve a hold-up problem. Firms might be unwilling to invest in human capital of workers who can freely leave, because they do not expect to recoup the returns on their investment. NCAs, by ensuring that workers cannot freely leave, incentivize firms to invest in workers, causing workers' human capital to develop more rapidly.[75]

Under these modifications, we now generate multiple predictions which relate directly to the empirical work found in this paper.

[75] Rubin and Shedd (1981) formalize this argument in a model of incomplete markets, in which liquidity-constrained workers cannot "pay" for general skills training in the form of lower initial earnings, so signing NCAs is an alternative way to facilitate such training that would not otherwise occur.

A.3 Effects of Enforceability on Average Earnings

First, we examine what happens to average earnings when NCAs become more easily enforceable (that is, when enforceability becomes "stricter"). Earnings depend on human capital (which develops more rapidly for workers with enforceable NCAs) and on mobility (which is is lower when NCAs are more easily enforceable). This tension generates the ambiguous effect of (enforceable) NCAs on earnings.

Since we do not observe NCA use, our empirical investigation focuses on average earnings (across enforceable NCA signers and non-signers). For notational simplicity, we define $\bar{w}_t^k \equiv E[w_{i,t}|j(i) = k]$ for $k \in \{C, F\}$, where $j(i)$ denotes whether worker i is constrained by an enforceable NCA or free to change jobs. These values represent average earnings, at time t, for the two respective types of workers. Thus, the average earnings in period t, which we denote $\bar{w}_t$, is given by $\bar{w}_t = \theta\gamma\bar{w}_t^C + (1 - \theta\gamma)\bar{w}_t^F$.[76] The value $\theta\gamma$ is the probability that the worker is bound by an enforceable NCA (the product of the probability of having an NCA, γ, and the probability that it is enforceable, θ).

The quantity we are therefore interested in computing is $\frac{d\bar{w}}{d\theta}$: the change in average earnings which results from a change in NCA enforceability. Omission of the subscript, t, indicates that we are interested in the derivative of average earnings in steady state. Taking the derivative and rearranging, this quantity has three components:

$$\frac{d\bar{w}}{d\theta} = \gamma(\bar{w}^C - \bar{w}^F) + \theta\gamma\frac{d\bar{w}^C}{d\theta} + (1 - \theta\gamma)\frac{d\bar{w}^F}{d\theta} \tag{8}$$

We consider each component in turn.

A.3.1 Difference in Average Earnings

We begin with $\gamma(\bar{w}^C - \bar{w}^F)$. Intuitively, this term captures the additional weight put on earnings of workers subject to enforceable NCAs in overall average earnings. As θ rises, more workers are subject to enforceable NCAs, and the overall average is pushed closer to average earnings for constrained workers, $\bar{w}^C$.

As in Bagger et al. (2014), with our modifications, the earnings of worker i at any time t is given by $w_{i,t} = \alpha_i + g^{j(i)}(t) + \varepsilon_{i,t} + p_{i,t} + r$, where α_i is a worker heterogeneity parameter, $g^{j(i)}(t)$ is the deterministic component of human capital accumulation of the worker, and $\varepsilon_{i,t}$ is a stochastic worker human capital shock. Firm productivity, $p_{i,t}$ (where i represents the worker and t represents time), and r (the piece rate of the worker) round out earnings.

In order to calculate the difference in earnings across workers with and without enforceable NCAs, we compare the individual components of earnings. By assump-

[76]Note that flow balance into and out of unemployment implies that an identical proportion of C and F type workers are employed in steady state, and we therefore may omit that proportion in calculation of average earnings.

tion, ε is distributed identically across workers and across time, and α is distributed identically across workers, so in expectation, there are no differences in ε or α for workers with and without enforceable NCAs.

By assumption, human capital evolves at a higher rate for those with enforceable NCAs: if $g^C(t-1) = g^F(t-1)$, then $g^C(t) > g^F(t)$.

What is left to compare are firm productivities and the piece rates of workers. Workers with NCAs will face a worse (i.e., first order stochastically dominated) distribution of firm productivities because they are unable to search for higher-paying jobs—*i.e.* they are unable to climb the job ladder. In fact, since they are immobile and exit occurs independently of firm productivity, the distribution of productivities at firms at which NCA-constrained workers are employed (denoted by $L^C(p)$) is exactly equal to the exogenous productivity distribution for a worker entering employment: $L^C(p) = F(p)$.[77]

The steady state distribution for those who do not have enforceable NCAs is derived in Bagger et al. (2014) (equation A15): $L^F(p) = \frac{(\mu+\delta)F(p)}{\mu+\delta+\lambda_1(\theta)\bar{F}(p)}$, where $\bar{F}(p) = 1 - F(p)$. Since workers only move *up* the job ladder, $L^F(p)$ first-order stochastically dominates $L^C(p)$, regardless of the value of θ. Note that, since $\lambda_1'(\theta) < 0$ by assumption, as enforceability becomes stricter, the distribution of firm productivities shifts leftwards (i.e., $\frac{dL^F(p)}{d\theta} \geq 0 \; \forall p$).

Finally, we turn to piece rates. Piece rates for workers without enforceable NCAs evolve identically to those in the baseline model of Bagger et al. (2014). However, the piece rate for enforceable NCA signers does not evolve over time: lacking the ability to change the piece rate by leveraging outside offers or engaging in job-to-job mobility, the piece rate for a worker with an NCA is determined at the advent of their job spell.

In Bagger et al. (2014), the piece rate (r) is a function of the most recent firm from which the worker was able to, or would have been able to, extract all available surplus (by virtue of having a high enough competing offer)[78]:

$$r = -\int_{q_{i,t}}^{p_{i,t}} \phi(x,\theta)dx$$

[77] We note that an alternate modeling assumption would be that NCAs directly affect the productivity distribution of firms. For example, strict NCA enforceability could directly reduce productivity, as might be suggested by work showing that firms are less innovative when NCAs are more enforceable (Johnson et al., 2023). One concern might be that this assumption generates dynamics in *average* wages that are similar to the effects of enforceability on average earnings that we present in Section 4, making it hard to disentangle whether our proposed mechanism or this alternative assumption drives these empirical results. However, this alternative assumption cannot explain other results, such as those in Sections 5 and 6.2 that show heterogeneous earnings effects, which *can* be explained by our own modeling assumptions.

[78] Note that the piece rate is negative: earnings are given by $w_t = r + p + h_t$, where $p + h_t$ is the marginal product of the worker (p is the firm's productivity and h_t is the worker's productivity due to human capital accumulation). Therefore, the piece rate r represents the share of the worker's productivity that is allocated to the firm.

where $\phi(x,\theta) = (1-\beta)\frac{\rho+\delta+\mu+\lambda_1(\theta)\bar{F}(x)}{\rho+\delta+\mu+\lambda_1(\theta)\beta\bar{F}(x)}$, $\bar{F}(x) = 1 - F(x)$ is the exogenous distribution of firm productivities from which workers draw upon matching with a firm, and $q_{i,t}$ represents the productivity of the last firm from which the worker was able to extract all surplus, by virtue of leveraging a competing offer (see Equation 6 in Bagger et al. (2014) for details on the derivation of this equation). The greater is $q_{i,t}$, the greater the worker's earnings will be. If $q_{i,t} = p_{i,t}$, then the worker was able to extract all surplus from their current firm and therefore $r = 0$: they return none of the full value of productivity to the employer.

In the case of an enforceable NCA signer, the last "job" from which the worker was able to extract all surplus was unemployment, since workers cannot leverage outside options or job hop. The piece rate of signers is therefore determined by the worker having outside option p_{min} (the lowest productivity a firm can have), since by assumption, the value of unemployment is equal to the value of employment in the least productive firm. Simplifying (since $\lambda_1^C = 0$ for signers by assumption), the piece rate of NCA signers will be:

$$\begin{aligned} r &= -\int_{p_{min}}^{p_{i,t}} \phi(x,\theta)dx \\ &= -\int_{p_{min}}^{p_{i,t}} (1-\beta)\frac{\rho+\delta+\mu+\lambda_1^C\bar{F}(x)}{\rho+\delta+\mu+\lambda_1^C\beta\bar{F}(x)}dx \qquad = -(p_{i,t}-p_{min})(1-\beta) \end{aligned}$$

The earnings processes of signers of enforceable NCAs versus nonsigners are therefore given by:

$$\begin{aligned} &\text{Nonsigners: } w_{i,t}^F = \alpha_i + g^F(t) + \varepsilon_{i,t} + p_{i,t} - \int_{q_{i,t}}^{p_{i,t}} \phi(x,\theta)dx \\ &\text{Signers: } w_{i,t}^C = \alpha_i + g^C(t) + \varepsilon_{i,t} + p_{i,t} - (p_{i,t}-p_{min})(1-\beta) \end{aligned} \tag{9}$$

We now compare *expected* earnings for workers with and without an NCA. First, we examine workers new to the workforce:

Proposition A.1. *In steady state, workers signing enforceable NCAs will receive higher initial earnings in expectation than workers not signing NCAs: for i that transition from unemployment to work in period t,* $E_{i,t-1}[w_{i,t}|j(i) = C] > E_{i,t-1}[w_{i,t}|j(i) = F]$.

Proof. In the first period in which workers match, the firm productivity distributions are identical (since workers have not had a chance to switch jobs). In expectation, α_i and $\varepsilon_{i,t}$ are identical for those with and without NCAs. By assumption, $E_{t-1}[g^C(t)] > E_{t-1}[g^F(t)]$, so the proposition is proven if

$$E_{i,t}[(p_{i,t}-p_{min})(1-\beta)] < E_{i,t}\left[\int_{p_{min}}^{p_{i,t}} \phi(x,\theta)dx\right],$$

since the worker initially bargains with outside option p_{min}.

Rewriting the left hand side, we must show that

$$E_{i,t}\left[\int_{p_{min}}^{p_{i,t}}(1-\beta)dx\right] < E_{i,t}\left[\int_{p_{min}}^{p_{i,t}}\phi(x,\theta)dx\right],$$

which is true since $\phi(x,\theta) > (1-\beta) > 0$, regardless of the value of θ. □

The proof of this proposition highlights two reasons for greater (initial) pay with enforceable NCAs: first, a greater accumulation of human capital leading to greater productivity, and second, the compensating differential associated with NCAs (which is embedded in $\phi(x,\theta)$). Workers who initially match with NCAs are compensated to some extent for their limited future mobility.

However, as workers remain at their jobs longer, three things happen: first, workers with enforceable NCAs accumulate more human capital. Second, workers without enforceable NCAs climb the job ladder, moving to jobs with greater firm productivities, $p_{i,t}$. Third, when workers without enforceable NCAs leverage outside offers, they negotiate better piece rates, r. The first increases earnings by more for those who sign enforceable NCAs, while the latter two increase earnings by more for those who do not sign enforceable NCAs. The overall comparison, then, is indeterminate: if human capital grows more quickly than mobile workers climb the job ladder and negotiate better piece rates, workers with NCAs will have earnings that grow more quickly than those without, and vice versa. We summarize in Proposition A.2, but first introduce the condition used in the proposition. The condition states that the growth rate of human capital is lower than the growth rate of the lost ability of the worker to bargain for higher earnings. Ultimately, the goal of the proposition is to show that there is a direct tradeoff between human capital growth and job mobility which governs earnings dynamics.

Condition 1.

$$\begin{aligned} E_t[(g^C(t+1) - g^C(t)) - (g^F(t+1) - g^F(t))] \\ < \left(\int_{q_{j,t}}^{p_{j,t}}\int_{p_{j,t-1}}^{p}\phi(x,\theta)dxdF(p)\right) \\ + \left(\int_{p_{j,t}}^{p_{max}} p - p_{j,t} - \left(\int_{p_{j,t}}^{p}\phi(x,\theta)dx - \int_{q_{j,t}}^{p_{j,t}}\phi(x,\theta)dx\right)dF(p)\right) \end{aligned}$$

Proposition A.2. *Suppose worker i has an enforceable NCA and worker k does not. Conditional on remaining employed and experiencing identical shocks in period t (i.e., $\varepsilon_{i,t} = \varepsilon_{k,t}$), in steady state, expected earnings growth is faster for k than for i under Condition 1: i.e., $E_t[w_{i,t+1}] - w_{i,t} < E_t[w_{k,t+1}] - w_{k,t}$ whenever Condition 1 holds, and $E_t[w_{i_t+1}] - w_{i,t} > E_t[w_{k,t+1}] - w_{k,t}$ when it does not.*

Proof. The condition is a (reversible) algebraic simplification of the inequality $E_t[w_{i_t+1}] - w_{i,t} < E_t[w_{k,t+1}] - w_{k,t}$. The left hand side may be rewritten as:

$$E_t[\alpha_i + \varepsilon_{i,t+1} + g^C(t+1) + p_{i,t+1} - (1-\beta)(p_{i,t+1} - p_{min})] - [\alpha_i + \varepsilon_{i,t} + g^C(t) + p_{i,t} - (1-\beta)(p_{i,t} - p_{min})]$$

Since $p_{i,t} = p_{i,t+1}$ for i, who has an NCA, this reduces to $E_t[g^C(t+1) - g^C(t) + \varepsilon_{i,t+1} - \varepsilon_{i,t}]$. The right hand side may be rewritten as

$$\begin{aligned}
&E_t[\alpha_k + \varepsilon_{k,t+1} + g^F(t+1) + p_{k,t+1} - \int_{q_{k,t+1}}^{p_{k,t+1}} \phi(x,\theta)dx] - [\alpha_k + \varepsilon_{k,t} + g^F(t) + p_{k,t} - \int_{q_{k,t}}^{p_{k,t}} \phi(x,\theta)dx] \\
&= E_t[g^F(t+1) - g^F(t) + \varepsilon_{k,t+1} - \varepsilon_{k,t}] \\
&\qquad - \left[\int_{q_{k,t}}^{p_{k,t}} \left(\int_{p}^{p_{k,t}} \phi(x,\theta)dx - \int_{q_{k,t}}^{p_{k,t}} \phi(x,\theta)dx\right) dF(p)\right] \\
&\qquad + \left[\int_{p_{k,t}}^{p_{max}} p - p_{k,t} - \left(\int_{p_{k,t}}^{p} \phi(x,\theta)dx - \int_{q_{k,t}}^{p_{k,t}} \phi(x,\theta)dx\right) dF(p)\right] \\
&= E_t[g^F(t+1) - g^F(t) + \varepsilon_{k,t+1} - \varepsilon_{k,t}] \\
&\qquad + \left(\int_{q_{k,t}}^{p_{k,t}} \int_{q_{k,t}}^{p} \phi(x,\theta)dxdF(p)\right) \\
&\qquad + \left[\int_{p_{k,t}}^{p_{max}} p - p_{k,t} - \left(\int_{p_{k,t}}^{p} \phi(x,\theta)dx - \int_{q_{k,t}}^{p_{k,t}} \phi(x,\theta)dx\right) dF(p)\right]
\end{aligned}$$

We expand the expectation by using the fact that the lowest productivity level a worker will be able to leverage to achieve an increase in earnings is $q_{k,t}$. If the worker contacts a new employer whose productivity is less than $q_{k,t}$, productivity will not change and the worker will not renegotiate the piece rate. If the worker contacts a new employer with productivity between $q_{k,t}$ and $p_{k,t}$, they will remain employed at productivity $p_{k,t}$ but will renegotiate the piece rate. Finally, if the worker contacts a new employer with productivity above $p_{k,t}$, the worker will change jobs, changing both productivity and the piece rate.

Combination of the reduced right and left hand sides yields the condition stated in the proposition. □

Proposition A.2 simplifies the condition under which workers have larger earnings growth with NCAs versus without. An alternative way of interpreting this proposition is that, when the inequality condition holds, workers without NCAs will see earnings increases relative to workers with NCAs.

Averaging over workers in the population, Propositions A.1 and A.2 immediately generates an indeterminacy with respect to the overall rank ordering of average earnings. When Condition 1 does not hold, average *initial* earnings are greater for workers with enforceable NCAs and earnings growth is faster for workers with enforceable

NCAs, meaning that average earnings for workers with enforceable NCAs are greater than for those without. However, when Condition 1 holds, greater earnings growth for workers without enforceable NCAs may overtake greater initial earnings for workers with enforceable NCAs, leading to the possibility that average earnings are greater for workers without enforceable NCAs.

Corollary A.3. *Condition 1 is necessary, but not sufficient, for* $\bar{w}_t^F > \bar{w}_t^C$.

A.3.2 Effects on Average Earnings for Constrained and Free Workers

The impact of θ on $\bar{w}_t^C$ is straightforward:

Proposition A.4. $\frac{d\bar{w}_t^C}{d\theta} = 0$

Proof. Using Equation 9:

$$\frac{d\bar{w}_t^C}{d\theta} = \frac{d}{d\theta}\left[E[\alpha_i + g^C(t) + \varepsilon_{i,t} + p_{i,t} - (p_{i,t} - p_{min})(1-\beta)]\right]$$

Since the distribution of $p_{i,t}$, $L^C(p)$, is independent of θ (since it is always equal to $F(p)$), and since $\frac{dE[\alpha_i]}{d\theta} = \frac{dE[\varepsilon_{i,t}]}{d\theta} = \frac{dE[g^C(t)]}{d\theta} = 0$, the proposition is shown. □

The impact of θ on $\bar{w}_t^F$ is less straightforward. In Bagger et al. (2014), the value function for a given worker is given by $V(r, h_t, p)$, and the value function of an unemployed worker (who does not have a piece rate, r, or a productivity, p) is given by $V_0(h_t)$. It is straightforward to write $V_0(h_t)$ recursively, using the transition probabilities given in Bagger et al. (2014), as:

$$V_0(h_t) = w_u + \frac{\lambda_0}{1+\rho}\int_{p_{min}}^{p_{max}} E_t[V(r_0, h_{t+1}, x)]dF(x) + \frac{1-\lambda_0}{1+\rho}V_0(h_t), \tag{10}$$

where w_u represents the flow value of unemployment.

We index workers such that workers $i \in [0, u]$ are unemployed, and workers $i \in [u, 1]$ are employed. Let average earnings in period t for workers who do not have enforceable NCAs be given by $\bar{w}_t^F = \int_{i=u}^{1} w_{i,t}di$, and let $\bar{w}$ represent average earnings in steady state. Then:

Proposition A.5. *In steady state, average earnings are increasing in the arrival rate of offers to employed workers. Formally,* $\frac{d\bar{w}}{d\lambda_1} > 0$.

Proof. Consider the generic value functions for employed and unemployed workers, $V(r, h_t, p)$ and $V_0(h_t)$. Integrating each across workers and summing the two expressions yields

$$\int_0^u V(0, h_{i,t})di + \int_u^1 V(r_i, h_{i,t}, p_i)di,$$

where variables indexed by i represent worker i's human capital, piece rate, or the productivity of their matched firm, respectively.

Using the recursive definition of $V(r, h_t, p)$ given by Equation 5 in Bagger et al. (2014), as well as the recursive definition of $V_0(h_t)$ given in Equation 10, and simplifying (making use of the fact that, in steady state, the distribution of h is identical across time periods), this expression may be written as:

$$\frac{1+\rho}{\rho}\left(\int_{i=0}^{u} V(0, h_{i,t})di + \int_{i=u}^{1} V(r_i, h_{i,t}, p_i)di\right) = \int_{i=0}^{u} w_u di + \int_{i=u}^{1} w_{i,t} di$$

This expression is intuitive: the sum of the per-period value accrued by workers in the model is given by the sum of payments to unemployed workers and payments to employed workers. Taking derivatives of both sides with respect to λ_1, and exchanging the order of differentiation and integration (since u is not a function of λ_1, as shown in Bagger et al. (2014)), we generate the following expression for $\frac{d\bar{w}}{d\lambda_1}$:

$$\frac{d\bar{w}_t}{d\lambda_1} = \int_{i=0}^{u} \frac{dV(0, h_{i,t})}{d\lambda_1} di + \int_{i=u}^{1} \frac{dV(r_i, h_{i,t}, p_i)}{d\lambda_1} di \tag{11}$$

It therefore suffices to show that the right hand side is positive.

The first term may be rewritten to simplify the proof of this fact. First, we substitute for $V(r_0, h_t+1, x)$ using Equation (3) in Bagger et al. (2014) into Equation 10:

$$V_0(h_t) = w_u + \frac{\lambda_0}{1+\rho}\int_{p_{min}}^{p_{max}} (1-\beta)V_0(h_t) + \beta E_t[V(0, h_{t+1}, x)]dF(x) + \frac{1-\lambda_0}{1+\rho}V_0(h_t),$$

Next, we solve for $V_0(h_t)$:

$$V_0(h_t) = \frac{1+\rho}{\rho+\lambda_0\beta}w_u + \frac{\lambda_0\beta}{1+\rho}\int_{p_{min}}^{p_{max}} E_t\left[V(0, h_{t+1}, x)\right]dF(x)$$

Therefore, for worker i:

$$\frac{dV(0, h_{i,t})}{d\lambda_1} = \frac{\lambda_0\beta}{1+\rho}\int_{p_{min}}^{p_{max}} E_t[\frac{dV(0, h_{t+1}, x)}{d\lambda_1}]dF(x) \tag{12}$$

Moving to the second term of the right hand side of Equation 11, Equation (2), the unnumbered equation which follows (2), and Equation (3) from Bagger et al. (2014) show that each $V(r_i, h_{i,t}, p_i)$ may be rewritten as either:

$$(1-\beta)E_t[V(0, h_{t+1}, p')] + \beta E_t[V(0, h_{t+1}, p)]$$

or

$$(1-\beta)V_0(h_t) + \beta E_t[V(0, h_{t+1}, p)]$$

Therefore, given these expressions and Equation 12, the proposition is proven if $\frac{dV(0,h_t,p)}{d\lambda_1} > 0$, $\forall h_t, p$.

This fact is straightforward. Consider Equation (5) in Bagger et al. (2014), the recursive definition of $V(r, h_t, p)$. Since $r = 0$ in the case we are considering, an increase in λ_1 simply increases the probability that the worker moves to a higher quality firm to get paid more (the third line of Equation (5)) or stays at their current firm but negotiates better earnings (the fourth line), and decreases the probability that the worker stays at their current firm. Therefore, the result is shown. □

Since $\frac{d\bar{w}^F}{d\theta} = \frac{d\bar{w}^F}{d\lambda_1} \cdot \frac{d\lambda_1}{d\theta}$, and since $\frac{d\lambda_1}{d\theta} < 0$ by assumption, we immediately get the following results:

Corollary A.6. $\frac{d\bar{w}^F}{d\theta} < 0$ *and* $\frac{d\left[\frac{d\bar{w}^F}{d\theta}\right]}{d\left[\frac{d\lambda_1}{d\theta}\right]} > 0$

The first result says that earnings for free workers are decreasing in NCA enforceability. The second result says that the relationship between NCA enforceability and earnings for free workers is steeper when NCA enforceability has a greater (negative) impact on the arrival rate of offers.

A.3.3 Overall Effect on Average Earnings

We now return to the overall effect of θ on average earnings, $\frac{d\bar{W}}{d\theta}$. First, we may reduce Equation 8 using Proposition A.4:

$$\frac{d\bar{w}}{d\theta} = \gamma(\bar{w}^C - \bar{w}^F) + (1-\theta\gamma)\frac{d\bar{w}^F}{d\theta} \tag{13}$$

Due to the indeterminacy in the sign of $\bar{w}^C - \bar{w}^F$, the sign of the overall expression is also indeterminate. If $\bar{w}^C - \bar{w}^F < 0$, then by A.6, $\frac{d\bar{w}}{d\theta} < 0$. If $\bar{w}^C - \bar{w}^F > 0$, then $\frac{d\bar{w}}{d\theta}$ may be positive or negative.

A.4 Empirical Implications of Theoretical Results

Overall, our empirical results are able to address several of the model's implications.

First, our results in Section 4 resolve the indeterminacy of the sign of $\frac{d\bar{w}}{d\theta}$.

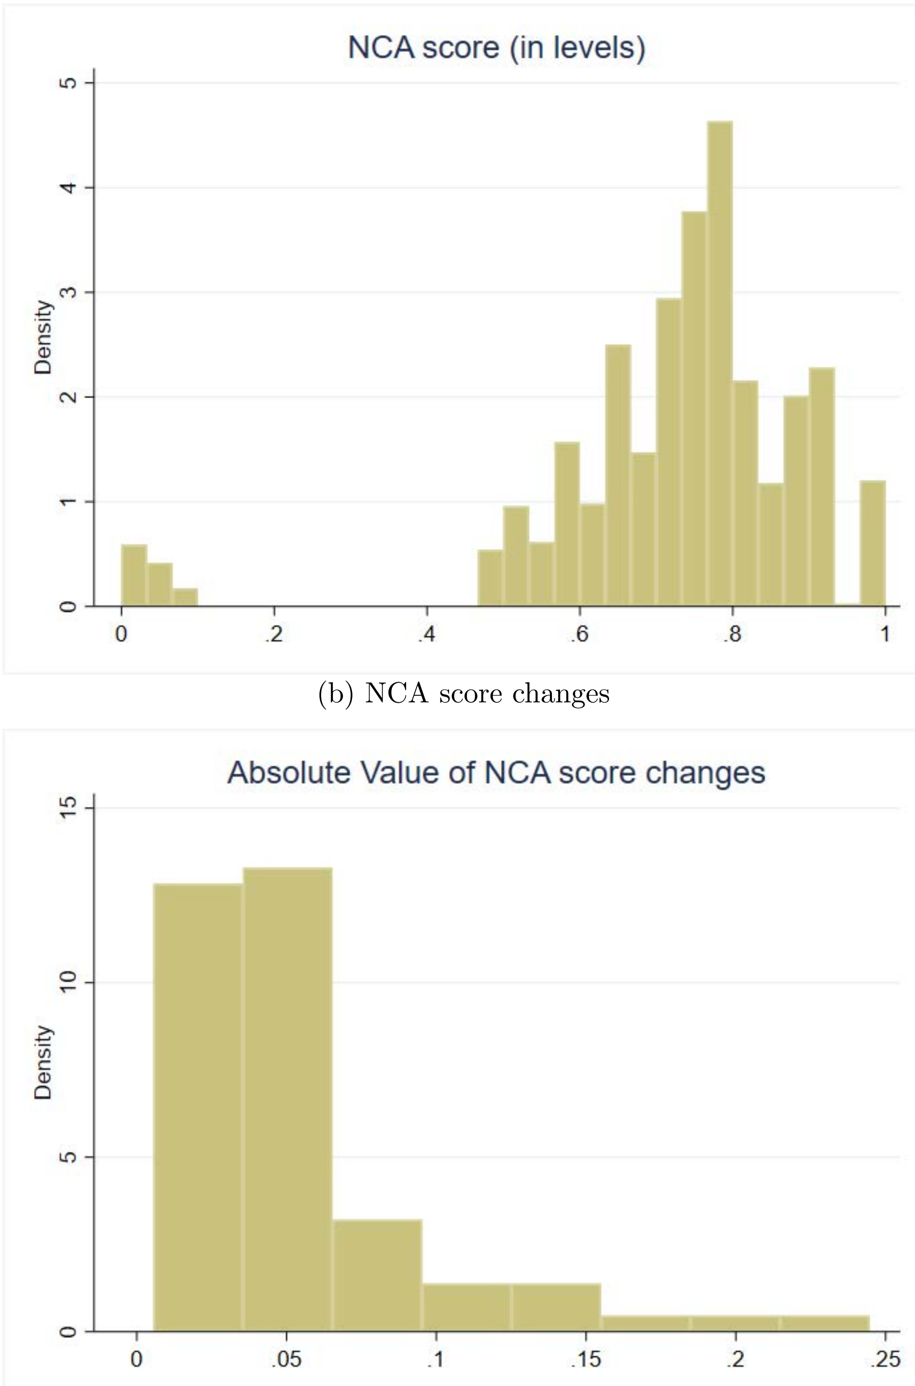
Second, our results in Section 5 test the model's prediction that $\frac{d\bar{w}^F}{d\theta} < 0$ (the first half of Corollary A.6).

Third, in Section 6, we test the second half of Corollary A.6: that stricter NCA enforceability will have a more negative effect on earnings when enforceability has a larger impact on a worker's offer arrival rate. We test this corollary two ways. In Section 6.1, we directly test this prediction by estimating whether the earnings effect of NCA enforceability are heterogeneous depending on the degree to which workers' offer arrival rates would be affected by NCA enforceability. In Section 6.2, we indirectly test this prediction by estimating whether strict NCA enforceability attenuates the degree to which strong labor market conditions translate into higher earnings over the course of a worker's job spell.

B Appendix Figures & Tables

Figure B.1: The Distribution in NCA Scores Across states, 1991–2014 (in Levels and Changes)

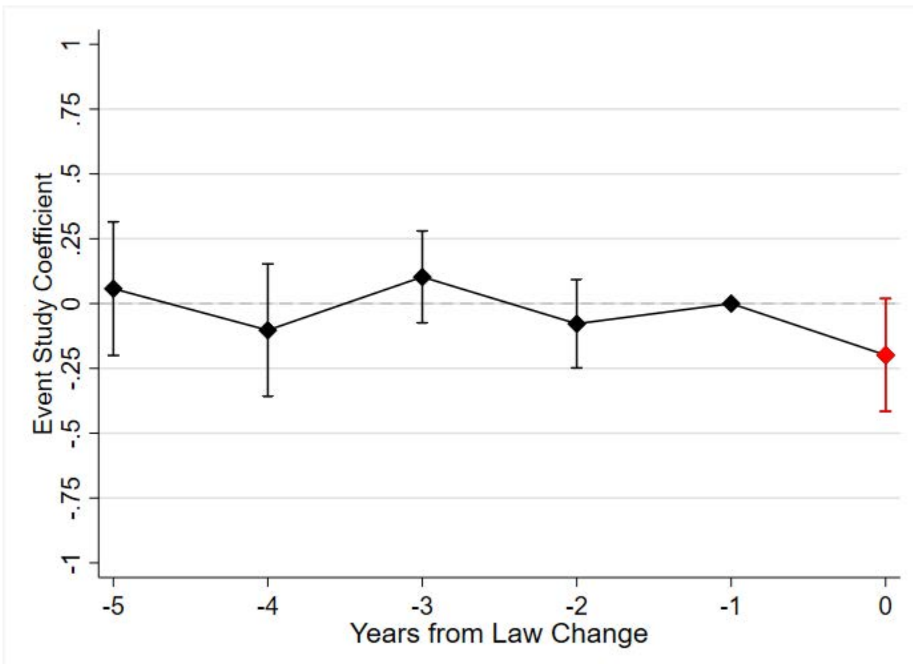
(a) NCA score levels



(b) NCA score changes

Notes. Panel (a) is a histogram of the NCA enforceability score in levels, at the state-year level over our sample period 1991–2014. Panel (b) is a histogram of the size (in absolute value) of score changes over this same sample period.

Figure B.2: Do NCA Court Filings Increase Prior to Legal Changes?



Notes: This figure presents the pre-period of a stacked difference-in-difference design, where the coefficients (vertical axis) represent the net impact of being in the state which has a future legal change versus states which do not.

Table B.1: The Effect of NCA Enforceability on Earnings:
Robustness to Political & Economic Controls

	Log Earnings		Log Hours	Log Wage	Log Average Earnings

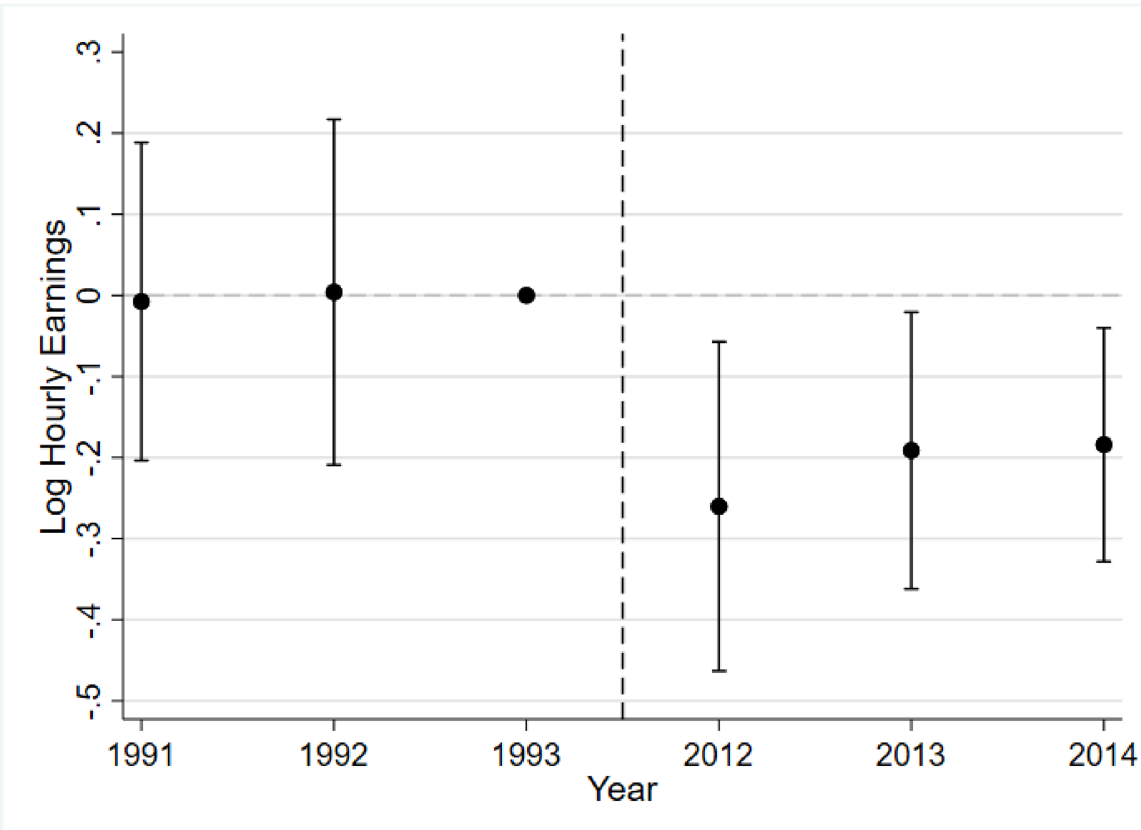
Notes: This figure presents the point estimate and 95% confidence interval from separate stacked difference-in-difference models estimated separately for each "focal" treatment state in the estimation sample for the stacked event study model described in Section 4.2.2.

Figure B.4: Long-Panel Event Study



The sample includes the years 1991-1993 and 2012-2014 for each state, dropping "odd year out" observations for each state (for states for which there were enforceability changes in the first three years or in the last three years). The estimating equation includes controls for sex, age, age squared, level of education, race, Hispanic status, and whether or not the respondent lives in a metropolitan area, as well as state and Census division-by-year fixed effects. Coefficient estimates and 95% confidence intervals pictured (normalized to coefficient estimate for 1993).

Table B.4: The Effect of NCA Enforceability on Earnings: Excluding States in which NCA Law Changes Could in Theory be Endogenous

	(1)	(2)	(3)	(4)	(5)

The dependent variable is log weekly earnings. The sample in all columns is the CPS ASEC from 1991-2014 and includes individuals between ages 18-64 who reported working for wage and salary income at a private employer the prior year. All regressions include fixed effects for state, fixed effects for Census division by year, fixed effects for broad occupational class, and individual controls for male, white, Hispanic, age, age squared, whether the individual completed college, and indicators for the metropolitan city center status of where the individual lives. In Column (4), High NCA Use Occupations are occupations with NCA use greater than the national average, as tabulated by Starr et al. (2021). A separate indicator for High NCA Use Occupation is included in those regressions. SEs clustered by state in parentheses. ***P<.01, **P<.05, *P<.1

C Appendix: Creating our Database of Noncompete Laws

C.1 Law Database Construction Procedures and Principles

The state-year level NCA database that we constructed for this paper was guided by the method developed in Bishara (2010) for quantifying the enforceability of state NCA laws on seven dimensions. These seven dimensions are themselves defined by the organization system used in a series of legal reference books by Brian Malsberger titled "Covenants Not to Compete: A State-by-State Survey." There are currently fourteen editions of this reference book, published respectively in 1991 (1st), 1996 (2nd), 2002 (3rd), 2004 (4th), 2006 (5th), 2008 (6th), 2010 (7th), 2012 (8th), 2013 (9th), 2015 (10th), 2017 (11th), 2018 (12th), 2021 (13th), 2022 Edition (Ebook). There are additionally several supplemental editions of the Malsberger text that update new information between these editions. The supplements include: 1999 Cumulative Supplement, 2003 Supplement, 2005 Supplement, 2009 Supplement, and 2016 Supplement.

The Malsberger series is organized around 12 guiding legal questions, in addition to 11 sub-components of these questions. For each of these 23 components in each state, the series describes the current state of the law, including detailed descriptions of relevant case decisions or statues, and discussion of how the law has changed, including which cases were precedential. In constructing a method to quantify the enforceability of NCAs, Bishara (2010) chose seven of these questions and sub-components to be used in an enforceability index. Bishara's quantification method also includes his expert opinion on weights that should be used for each of these seven elements to construct a weighted index that reflects the relative legal importance of the components. The rationales behind the choices of these weights is discussed in Bishara (2010). The weighted index is designed to measure cardinal differences in laws, as opposed to an ordinal ranking of states.

Table C.1 shows the seven components and weights used to construct the enforceability index, along with a few benchmark enforceability scores for each legal component.

Bishara (2010) uses these questions, along with the Malsberger series, to develop two cross-sectional measures of the enforceability index, for every state in 1991 and 2009. Accompanying the paper, Professor Bishara also shared with us a document that contains his internal notes that helped guide the decision-making process behind the assignment of the scores. These internal notes provide important context for decisions about scores that do not perfectly align with the approximate benchmarks shown in Table C.1.

In the construction of our panel measures of NCA enforceability, our guiding principle was to treat the expert opinion expressed in Bishara (2010), and the ac-

Table C.1: Bishara (2011) Rating of the Restrictiveness of Non-Compete Agreements

Question #	Question	Criteria	Question Weight
Q1	Is there a state statute that governs the enforceability of covenants not to compete?	10 = Yes, favors strong enforcement 5 = Yes or no, in either case neutral on enforcement 0 = Yes, statute that disfavors enforcement	10
Q2	What is an employer's protectable interest and how is that defined?	10 = Broadly defined protectable interest 5 = Balanced approach to protectable interest 0 = Strictly defined, limiting the protectable interest of the employer	10
Q3	What must the plaintiff be able to show to prove the existence of an enforceable covenant not to compete?	10 = Weak burden of proof on plaintiff (employer) 5 = Balanced burden of proof on plaintiff 0 = Strong burden of proof on plaintiff	5
Q3a	Does the signing of a covenant not to compete at the inception of the employment relationship provide sufficient consideration to support the covenant?	10 = Yes, start of employment always sufficient to support any CNC 5 = Sometimes sufficient to support CNC 0 = Never sufficient as consideration to support CNC	5
Q3b/c	Will a change in the terms and conditions of employment provide sufficient consideration to support a covenant not to compete entered into after the employment relationship has begun? Will continued employment provide sufficient consideration to support a covenant not to compete entered into after the employment relationship has begun?	10 = Continued employment always sufficient to support any CNC 5 = Only change in terms sufficient to support CNC 0 = Neither continued employment nor change in terms sufficient to support CNC	5
Q4	If the restrictions in the covenant not to compete are unenforceable because they are overbroad, are the courts permitted to modify the covenant to make the restrictions more narrow and to make the covenant enforceable? If so, under what circumstances will the courts allow reduction and what form of reduction will the courts permit?	10 = Judicial modification allowed, broad circumstances and restrictions to maximum enforcement allowed 5 = Blue pencil allowed, balanced circumstances and restrictions to middle ground of allowed enforcement 0 = Blue pencil or modification not allowed	10
Q8	If the employer terminates the employment relationship, is the covenant enforceable?	10 = Enforceable if employer terminates 5 = Enforceable in some circumstances 0 = Not enforceable if employer terminates	10

Source: Bishara (2010). Notes: The questions in the table correspond to the NCA law components used in the IV estimates throughout the paper. In the paper and tables, we refer to Q1 as the 'Statutory Index', to Q2 as the 'Protectible Interest Index', to Q3 as the 'Burden of Proof Index', to Q3a as 'Consideration Index Inception', to Q3b and Q3c together as 'Consideration Index Post-Inception', to Q4 as 'Blue Pencil Index', and to Q8 as 'Employer Termination Index'. In the raw data, the laws are scaled in each state-year from 0 to 10, as indicated by this table. In the estimations, each component is rescaled to range from 0 to 1, where 0 is the least restrictive observation in the data and 1 is the most.

companying replication materials, as truth, and to find the timing of law changes between 1991 and 2009 that align with the cross-sectional measures and reflect as closely as possible the decision-making process used by Bishara in the construction of the cross-sectional measures.

Operationally, we implemented this database construction process by hiring two third-year law student research assistants (one at Ohio State University and one at Duke University) to make the decisions about the timing and magnitude of law changes. The research assistants were first trained by reading Bishara (2010), reading the relevant components of Malsberger (1991), and going through the notes from Prof. Bishara to understand how different scores were assigned in 1991. The law students then attempted to blindly match Bishara's scores in 2009 for each of the seven law components for all states. They were told which of the components were scored correctly and iterated the calibration process until there was a match with the Bishara 2009 index. The students then went through all of the editions of Malsberger between 1991 and 2009 and coded the timing of changes in enforceability for each of the components in each year. The same RAs then extended the index forward beyond 2009 using subsequent editions of Malsberger. The RAs did not interact directly with each other and were hired in series such that independent revisions and refinements to the database were made over time.

After these two law students completed the raw state-question-year enforceability scores, we hired a third law student at Duke to go over the index completely and construct an accompanying file that includes citations to each case or statute that generated each of the law changes in the database, citations to the locations in the Malsberger series that describe each change, and write brief overviews of the legal substance of each change.

Using the raw component scores, we constructed a weighted average NCA enforceability index using the same quantification system developed in Bishara (2010). In this system, the index score is calculated by taking the weighted total score in each state-year. This quantification system sometimes yields missing values for particular components of the NCA enforceability index in certain state-years. Missing values exist when a state has never had a court case or written a legislative statute that codified a particular dimension of NCA law. In constructing the weighted average enforceability index, Bishara (2010) adjusts for missing components by calculating the weighted sum of non-missing components and scaling the total upwards by the maximum possible score (550) divided by the maximum achievable score given the missing values in a state-year. Since our primary guiding principle is to follow the approach developed in Bishara (2010), we do the same.

One nominal (but important) way that we deviate from Bishara is that we normalize the scale of the index by dividing all scores by the maximum observed score in any state-year. This results in an index that ranges from 0 to 1 and has an interpretation as the range of the observed policy space.

C.2 Sensitivity of Results to Treatment of Missing Values

A natural concern is whether our estimated earnings effects of NCA enforceability hinge on the treatment of missing values in the Bishara NCA enforceability index. Here we discuss the sensitivity of our approach to decisions about the treatment of missing values.

Of the 8,568 component-state-year law measures in our sample period (51 states*24 years*7 components), 900 (10.5%) are missing. Given that our empirical models use within-state variation, the NCA components that are always missing in a state do not meaningfully contribute to our identifying variation. Of the 900 missing values, 744 (83%) fall into this category of being always missing for all years in the corresponding states. The remaining 156 missing values (1.8%) change from being missing to non-missing over time, which typically means that a new case was decided in which a judge opined on the issue the index is measuring.

We also consider alternative ways one might treat missing values. One alternative approach is to replace missing values with their future non-missing values. This approach might be reasonable if judicial decisions that go from missing to non-missing reflect cases in which a judge's decision reflected reasoning that was implicitly known by legal experts but not yet codified in the law. Redefining the index in this way causes switches to/from missing to become static values, so they no longer contribute to identification. We reconstruct the NCA index using this different assumption and rerun the main results, which are presented in Table C.2.

Table C.2: Robustness to Changes in Assumption about Missing NCA Index Components

	Log Earnings		Log Hours	Log Wage	Log Average Earnings
	(1)	(2)	(3)	(4)	(5)
Baseline Estimates	-0.118***	-0.107***	-0.021	-0.106***	-0.137***
	(0.036)	(0.028)	(0.017)	(0.027)	(0.034)
Alternative NCA Enforceability Score	-0.108***	-0.095***	-0.023	-0.095***	-0.135***
	(0.037)	(0.029)	(0.018)	(0.028)	(0.034)
Observations	1216726	1216726	1545874	1216726	3548827
R^2	0.275	0.357	0.132	0.346	0.941
Geographic FE	State	State	State	State	County
Time FE	Div x Year	Div x Year	Div x Year	Div x Year	Div x Quarter
Occupation FE	N	Y	Y	Y	N
Sample	ASEC	ASEC	ASEC	ASEC	QWI

The point estimates are slightly attenuated under this alternative assumption, but the qualitative patterns (and 95% confidence intervals) all overlap with our baseline estimates.

C.3 Sensitivity of Results to Weights Used in Enforceability Index

The weights used to construct the enforceability index were chosen by Professor Bishara to reflect the legal importance of each dimension in determining whether an NCA was enforceable. Bishara notes that "Because this data includes an element of assigning weights to influence the ranking based on the importance of the question to the dependent variable of strength of enforcement, the data can easily be utilized to highlight other outcomes by adjusting the emphasis and rationale for the weight factors" (Bishara, 2010).

We assess the sensitivity of our main results from Table 3 to choices of alternative weights. To do this, we sequentially increased or decreased the weight of each NCA law component by 50%, recalculated the weighted average index, and used the reweighted index to rerun the main earnings, hours, and wage models. As shown below in Table C.3, the main estimates are not very sensitive to these changes in weights. In both the log earnings and log wage models the largest deviation of any coefficient is 11% of the baseline estimate. In all cases, the estimates remain statistically significant.

A second approach we take to gauge the sensitivity of our estimate to the choice of weights is to use the weights from Starr (2019), which uses a confirmatory factor analysis model to infer the weights that optimize model fit. We reconstruct the weighted average NCA index using Starr (2019) statistical weights and again find estimates that are quite similar to our baseline results, as shown in Table C.4.

Table C.3: Robustness to Changes in NCA Index Weights

Non-Compete Agreements: A Review of the Literature

John M. McAdams[1]
Federal Trade Commission

December 31, 2019

Abstract

Non-compete agreements (NCAs) are employment contracts that limit the post-employment options of workers. On the one hand, they potentially solve an investment hold-up problem, allowing firms to make mutually beneficial investments in workers. On the other hand, the agreements potentially erode workers' future bargaining position by limiting their outside options. In this paper, we review the economic literature on non-compete agreements in the U.S.

Keywords: Non-compete agreements, worker mobility, training, investment holdup

JEL codes: J2, J6, K3, L4, M5

I would like to thank Dan Hosken, Dave Schmidt, and Brett Wendling for helpful comments. All errors are my own.

I. Introduction

Non-compete agreements (NCAs) are employment contracts that limit the ability of an employee to join or start a competing firm after a job separation. The past decade has seen burgeoning interest from academics, policymakers, and the media over non-compete agreements—partly due to concern over whether labor markets have been becoming less competitive, and partly due to several high-profile examples of non-competes involving low-skilled occupations such as sandwich makers, dog walkers, and warehouse workers.[2]

This interest has spurred several state enforcement actions and legislative proposals to limit the perceived harm that non-competes cause.[3] For example, Oregon, Massachusetts, and Washington have passed laws in recent years rendering non-competes unenforceable against low-wage workers. As their very name might suggest, non-compete agreements have also drawn the attention of competition authorities. For instance, the Chairman of the Federal Trade Commission has stated the agency is considering issuing a rule to limit the use of non-compete agreements.[4] This is part of a broader push by the U.S. competition agencies to address competition issues in labor markets.[5] Alongside the increased attention from policymakers and legislators has been a flurry of economic research into non-compete agreements and their effects on labor and product markets. Reviewing this economic literature is the purpose of this paper.

States vary considerably in their legal enforcement of non-compete agreements between employers and workers.[6] Several states do not enforce non-competes at all, or do not enforce them for certain classes of workers.[7] Most states, though, will enforce non-compete agreements to a certain extent. The relative strictness of a state's enforceability regime depends on a number of dimensions. This includes whether the agreements can be enforced for both voluntary and involuntary separations, or only voluntary ones; whether employers must provide additional consideration beyond the job itself to the employee for signing the agreement; whether the firm has a sufficient "protectable interest" to motivate the use of a non-compete; and how the state courts treat agreements that contain provisions which are invalid according to state law.[8] For

[6] States themselves do not "enforce" non-compete agreements directly; it is private employers who do. We follow the economic literature in using the terms "enforce" and "enforceability" to reflect whether a state would uphold a non-compete if an employer attempted to enforce one through the courts.

[7] California and North Dakota do not enforce non-competes at all. Other states do not enforce them for specific groups such as technology workers (Hawaii), low-wage workers (Oregon and Washington), and health care workers (various states). Within the legal sector, non-competes are generally not enforceable in any state.

[8] A non-compete agreement which contains an invalid provision can be nullified completely ("red-pencil doctrine"), the invalid provision can be deleted while keeping the rest of the agreement intact ("blue-pencil doctrine"), or the

convenience, researchers often combine the various dimensions of enforceability into a single index. California and North Dakota, two states that do not enforce NCAs, show the lowest levels of enforceability, while Florida and Connecticut display the highest.[9]

Data on non-compete use in the U.S. are sparse. The government surveys that are standard in the study of U.S. labor markets do not ask about non-compete use. Researchers have conducted four surveys of non-compete use in the U.S., one of which is national in scope and covers a broad range of occupations, and three of which cover specific occupations. These surveys are the basis of many studies within the literature. The national survey finds that 18% of workers in the U.S. were bound by an NCA as of 2014, and 38% had signed one at some point during their career (Starr, Prescott, and Bishara ["SPB"] 2019b). Moreover, the incidence of non-competes is generally higher in technical and high-skilled occupations and industries. The other three surveys find a sizeable incidence of non-compete agreements among specific occupations, as discussed below.

Curiously, the existing research consistently finds that non-compete use is common across states regardless of how enforceable the agreements are. In fact, non-competes are only somewhat less common in states where they are completely unenforceable as compared to states with stricter enforceability. The previously mentioned national survey finds that 18% of workers across the U.S. are bound by non-competes, compared to 19% in California and North Dakota—two states where NCAs are unenforceable (SPB 2019b). Two surveys of individual occupations show a similar pattern.[10]

There are several potential explanations for why firms offer non-competes, and why workers accept them. Non-competes potentially solve a "holdup" problem for certain types of investment (e.g., training, information sharing), allowing firms to make mutually beneficial investments in their workforce. Non-competes also allow firms to reduce recruitment and training costs by lowering turnover, and firms may offer a wage premium to compensate signers. Nevertheless, non-competes restrict workers' employment options *ex post*. Thus, workers may experience lower mobility, less competition for their services, and a worse bargaining position vis-à-vis their current employer.

The presence of non-compete agreements also has implications for innovation and entrepreneurship. By limiting the flow of workers to competitors, non-compete agreements simultaneously increase the returns to research and development (R&D) at incumbents while reducing knowledge transfer to new or existing competitors, with the net effect on innovation being ambiguous. The trade-off is analogous to that of patent protection, with stricter protections encouraging investment but temporarily limiting competition. NCAs may also tend to diminish entrepreneurship, as they limit the ability of workers to start competing firms. In theory, this

---

invalid provisions can be rewritten so as to render them valid ("equitable reform" or "reformation"). Bishara (2011) is a thorough summary of state statutes and case law on the various dimensions of enforceability.

[9] See, for example, Figure 1 in Balasubramanian et al. (2018).

[10] Johnson and Lipsitz (2018) report that 31% of physicians in California have signed an NCA (vs. 45% nationally). Garmaise (2011) finds that 58% of firms in California have their executives sign NCAs (vs. 70% nationally).

reduction in firm entry could reduce competition in product markets and further reduce competition over wages, though direct evidence does not exist.

There is relatively little research into why non-compete agreements appear in markets for low-skilled workers. Its incidence among low-wage and low-skill workers tends to be lower than among the more affluent or skilled, but still non-trivial: SPB (2019b) report that 12% of individuals earning less than $20,000 per year were covered by a non-compete, compared to 21% of those earning $60-80,000. There are several possible theories. First, turnover tends to be higher in low-wage occupations,[11] and non-competes will tend to limit turnover either by inducing longer tenure or by screening out more mobile individuals. Second, if poorer households tend to be credit constrained, they may have difficulty funding certain types of training themselves that would otherwise be profitable to undertake. Non-competes potentially offer a mechanism through which firms can fund the cost. Third, low-wage workers are more likely than average to be bound by the minimum wage, and firms can extract additional surplus from workers when the minimum wage limits the ability of wages to do so.[12] Further research is necessary to understand why firms offer low-skilled workers non-competes and why those workers sign them.

Although the literature has made important strides in studying non-competes and their effects on workers, firms, and end consumers, further work is needed. Due to the limited availability of data and a paucity of natural experiments (e.g., law changes) to assess the impact of non-competes, much of the literature relies on cross-sectional comparisons of signers and non-signers, or high-enforceability states and low-enforceability ones. The more credible empirical studies tend to be narrow in scope, focusing on a limited number of specific occupations (e.g., executives) or potentially idiosyncratic policy changes with uncertain and hard-to-quantify generalizability (e.g., banning non-competes for technology workers in Hawaii). There is little evidence on the likely effects of broad prohibitions of non-compete agreements. Further research, perhaps exploiting more recent law changes or new sources of data, is necessary to establish the causal impact such agreements have on market participants.

The remainder of the paper is organized as follows. Section II outlines the theory behind non-compete use and Section III reviews the data and evidence. Section IV concludes.

II. Theory

This section discusses several channels through which non-compete agreements affect labor and product markets, many of which are not necessarily mutually exclusive. The focus is on highlighting the potential mechanisms through which the agreements operate rather than offering a detailed exposition or critique of the theories. Section III reviews the empirical evidence and suggests which channels receive more support from the data.

A. Effects in the Labor Market

Non-compete agreements potentially offer a solution to a key problem that would otherwise limit investments in the employer-employee relationship, but at the same time may introduce frictions in the labor market, change the bargaining positions of workers and employers, and reduce (ex post) competition over wages. Before discussing the theory specific to non-compete agreements, we briefly overview the theory of worker-firm bargaining in order to frame the discussion.

In the simple, benchmark model of the labor market with perfect competition and no frictions, firms pay workers a wage equal to the full value they contribute to the firm, known as their value of marginal product (Borjas 2013).[13] A worker's value of marginal product incorporates their education, skills, training, and other attributes that contribute to productivity.

Deviating from perfect competition yields the possibility that a given worker-firm pair yields positive rents that the two can bargain over in a Nash-type bargaining game (Cahuc, Postel-Vinay, and Robin 2006). In a Nash bargaining model, equilibrium wages will be determined by the bargaining power and outside options of each party to the negotiation. A worker's outside options could include outside wage offers generated from on-the-job search, expected wage offers from job search during unemployment, or non-market activities. A worker with generous outside wage offers, for example, will have greater negotiating leverage and hence will tend to receive higher wages than a worker with less generous offers.[14] Similarly, a firm's outside options could include recruiting and training a replacement employee, leaving a job opening vacant, or filling a vacancy using an employee from elsewhere in the firm. A firm facing high recruiting and training costs will have less leverage and hence will have to pay higher wages in equilibrium.

1. Lock-in

One potential effect of non-compete agreements is to alter the bargaining positions of workers and firms. Balasubramanian et al. (2018) model how non-competes narrow the outside options and reduce the bargaining power of workers who sign them. The consequence will be lower worker mobility and longer tenure, as well as a flat or declining wage profile over the life of a job, all else equal. Balasubramanian et al. (2018) refer to this effect as "lock in".

The possibility of lock-in raises the question as to why a worker would sign a non-compete to begin with if the firm was expected to use it during future negotiations to extract a higher share of the match surplus. It is possible that workers either heavily discount the future (myopia), do not understand the implications of the clauses to begin with, or are offered sufficient additional compensation so that they are willing to accept the non-compete.

[13] Our discussion throughout generally focuses on wages, but a similar logic applies to non-wage compensation or workplace amenities.
[14] In a structural model estimated using French data, Cahuc, Postel-Vinay, and Robin (2006) find that inter-firm wage competition is a much more important determinant of the worker's share than the worker's bargaining power, especially for lower skilled workers.

2. *Mitigating holdup*

Employees are free to leave their employer at any time. Cognizant of this mobility, firms may forgo making certain investments in their workforce knowing that employees would be able to subsequently quit and appropriate the value of the investment. This is an example of a "hold-up" problem (Rubin and Shedd 1981; Grossman and Hart 1986). Common examples of investments likely to be subject to hold-up in the present context include non-tangible assets such as training, information (trade secrets or production processes), and client lists.[15]

Non-compete agreements are one arrangement that can mitigate the hold-up problem.[16] They do this by discouraging worker attrition before the firm has had time to recoup the cost of its upfront investment, and thus permit firms to make investments in its workers that are mutually beneficial and that it otherwise may not decide to do (Rubin and Shedd 1981). As the employee-employer relationship becomes more valuable, firms will tend to pass on some portion of the higher profits in the form of higher wages, assuming firms do not possess all the bargaining power in the relationship.[17] Thus, to the extent that non-compete agreements mitigate holdup, we should expect to see wages rise over a worker's tenure, all else equal.

The lock-in and holdup mitigation channels are not mutually exclusive. If the data suggest that wages are flat or fall over a worker's tenure, though, that suggests that the lock-in channel tends to dominate. Similarly, if wages tend to rise, that suggests that holdup mitigation tends to be the dominant mechanism.

While mitigating holdup will tend to increase wages, it generates ambiguous implications for worker tenure and mobility, depending on the relative increase in worker productivity at the incumbent firm as compared to at firms that are outside the scope of the non-compete (Balasubramanian et al. 2018). To the extent that mobility does decline as a result of increases in investment facilitated by non-competes, it is because the worker's current job has become *more* attractive relative to alternatives, unlike with lock-in. Thus, unlike declines in wages, declines in worker mobility are not necessarily informative about whether non-compete clauses are harmful.

Garmaise (2011) argues that non-competes have potentially offsetting effects on investments in training. Reducing holdup tends to increase the incentive for firm-sponsored training. But limiting an employee's outside options of employment will tend to decrease their incentive to

[15] In Becker's (1962) seminal model, firms may find it profitable to make investments in human capital that increases worker productivity at their specific firm ("firm-specific" training), but will generally not sponsor training that raises productivity at other firms. Firm-specific training is unlikely to be subject to a hold-up problem because it is by definition not valuable at other firms.

[16] Alternatively, workers could pay firms *ex ante* a portion of the value of the investment, or could post a bond that would be forfeited if the worker were to leave.

[17] Existing studies are consistent with firms sharing rents to some extent with employees in both union and non-union settings (Blanchflower, Oswald, and Sanfey 1996; Van Reenen 1996). Cahuc, Postel-Vinay, and Robin (2006), however, find that low-wage workers have little to no bargaining power in their study of the French labor market. Evidence on the returns to firm-specific human capital (tenure)—a market with one buyer and one seller—is also consistent with firms and workers splitting rents (Topel 1991; Altonji and Williams 2005). Outside of a bargaining framework, it is common to see compensation schemes designed around splitting rents (e.g., profit sharing, performance bonuses).

invest in portable (general) skills. Thus, the net impact on human capital accumulation is theoretically ambiguous.

3. Labor market frictions

Both mechanisms above (increased returns to tenure and lock-in) are consistent with a decline in worker mobility among individuals who have signed non-compete agreements. A reduction in worker mobility will tend to increase recruitment costs for all firms as the pool of potential applicants for a given posting will shrink. This type of friction can have important implications for wages and productivity. Worker mobility is an important source of wage growth for younger workers, with job changes accounting for approximately a third of early career wage growth (Topel and Ward 1992). In matching models of labor markets, increases in frictions such as recruitment costs will lead to a reduction in average match quality and hence lower aggregate productivity (Jovanovic 1979, 2015).

The presence of non-compete agreements in labor markets may also increase recruitment costs if there is uncertainty regarding whether a potential hire has signed one. Many workers are unsure whether or not they have signed a non-compete. One national survey reports that 30% of respondents did not know whether they had signed one (SPB 2019b). Firms, fearing litigation over hiring a worker bound by a non-compete, may need to expend resources to learn whether potential hires had signed a non-compete with their prior employer.
At the same time, by reducing worker mobility, non-compete agreements reduce turnover costs for the firms that use them. They may also reduce turnover through a screening mechanism: workers who are more likely to leave a job after a short stay will tend to select out of applying for jobs where non-competes are a requirement.

Provided that the firm's benefit from reducing turnover exceeds the cost imposed on the worker, the cost savings will be passed on to workers via higher wages. In perfectly competitive labor markets, workers will capture the entirety of the savings (Johnson and Lipsitz 2017). The premium paid to workers to accept workplace disamenties such as a non-compete agreement is commonly referred to as a compensating differential (Rosen 1974).

Non-compete agreements offer an option for firms to capture a greater portion of the surplus generated from their match with workers in the presence of downward rigidity in wages, such as in the presence of a minimum wage (Johnson and Lipsitz 2017).[18] When a firm cannot adjust total compensation through wages, they may instead adjust along non-wage dimensions such as firm-sponsored training (Schumann 2017), employer-provided health insurance (Marks 2011), or pension coverage (Simon and Kaestner 2004). Johnson and Lipsitz (2017) argue that offering or requiring non-compete agreements is yet another way for firms to adjust compensation (downward, as they impose costs on workers) and capture a larger share of the match surplus.

[18] Minimum wage laws are one example of downward rigidity, but firms may have a number of rationales for not reducing wages below a certain threshold: incentive provision in an efficiency wage model (Shapiro and Stiglitz 1984), concern over fairness (Akerlof and Yellen 1990), or to encourage employee cooperation (Fehr and Falk 1999).

Non-compete agreements can be seen as a non-wage attribute of a job that provide a benefit to firms (in the form of lower turnover costs) while imposing a cost on workers (reduced mobility), with the result being a transfer in the match surplus from workers to firms. In the context of minimum wage laws, firms are able to pay what are effectively sub-minimum wages. While this reduces the utility of inframarginal workers, it also expands the set of workers for which it is profitable for firms to hire. This expansion in employment will attenuate the disemployment effects of minimum wage laws. Johnson and Lipsitz (2017) propose this as one rationale for why non-compete agreements are observed in low-skilled labor markets, where minimum wage laws are more likely to be binding.

4. Reduced firm entry and competition for workers

Not only can non-compete agreements prevent workers from joining competing firms, but they can also prevent workers from founding new firms. If fewer new firms are formed, or if startups are hobbled by a dearth of qualified employees, then demand for workers in industries with a high incidence of non-compete agreements will be lower than otherwise. This mechanism will tend to reduce the wage competition for workers by reducing the frequency and attractiveness of outside offers.

B. Effects in Product Markets

By limiting mobility, non-compete agreements potentially tie up potential entrepreneurs, increase expected litigation costs over non-competes, and raise hiring costs for employed talent. These factors suggest that non-competes have the potential to reduce firm entry. Lower firm entry could dampen competition and product variety in product markets.

The implications of non-competes for innovation are ambiguous. On the one hand, greater worker mobility may lead to knowledge spillovers that spread information to other firms, enhancing their productivity. Gilson (1999) attributes the success of Silicon Valley, with its large concentration of innovative technology firms, to the unenforceability of non-competes in California and concomitant cross-pollination of ideas from a mobile workforce. On the other hand, firms may be reluctant to invest in risky R&D when departing workers can transfer proprietary information to competitors. By restricting the outflow of workers with non-competes, incumbent firms are in a better position to capture the returns to risky R&D investments. When it comes to innovation, the trade-offs involved are analogous to those in patent protection, with stricter protections encouraging investment but temporarily limiting competition.

III. Evidence

We first outline the data used in the literature, as well as some general features and limitations of the empirical models used to assess the effects of non-competes. Then, we turn to the empirical findings of the literature.

A. Data

The standard surveys used in studying U.S. labor markets (e.g., Current Population Survey, American Community Survey, and National Longitudinal Surveys) do not ask about non-compete agreements. Thus, the literature on non-competes relies on four surveys administered by academics to quantify their incidence, as well as to study their impact. One survey is national in scope and covers multiple industries and occupations, and the other three focus on individual industries or occupations. Separately, several papers combine state-level measures of non-compete enforceability with data on various worker and firm outcomes from more traditional government surveys.

The 2014 National Noncompete Survey Project surveyed 11,505 individuals on the use of non-compete agreements and other information using an online survey administered by the survey firm Qualtrics (Prescott et al. 2016; SPB 2019b). The survey collected data from individuals employed in the private sector or for a public healthcare organization, and covered all states, occupations, and (private) industries. Of those in the target sample who began taking the survey, 29% completed it and survived a number of quality checks implemented by the authors. The authors discuss several potential concerns over the validity of their survey instrument—to be included, an individual must participate in online surveys, have responded to the offer to take the survey, and have completed it. If the decision to respond to the survey is somehow correlated with non-compete use, then that could introduce bias into empirical work based on the survey.

The National Noncompete Survey finds that 18% of workers in the U.S. were bound by an NCA as of 2014, and 38% had signed one at some point during their career (SPB 2019b). Moreover, NCAs are prevalent across a number of industries, occupations, and skill levels, though they are more common among technical and high-skill occupations and industries. For example, non-competes are most prevalent in architecture and engineering (36%), computer and math-related jobs (35%), and management (30%). Nevertheless, they also appear with some frequency in grounds maintenance (11%), food preparation and service (11%), and construction and extraction (12%).[19] Non-compete incidence tends to be increasing with educational attainment as well, with holders of professional (39%) and master's degrees (29%) having the highest incidence, while high school graduates (13%) and those with some college (12-14%) have the lowest.[20]

Other surveys focus on specific occupations or industries. Garmaise (2011) and Kini, Williams, and Yin (2019) collect information on non-compete use among executives at public companies from public filings with the Securities and Exchange Commission (SEC) (e.g., 10-Ks and 10-

[19] SPB (2019b), Figure 5.
[20] SPB (2019b), Figure 3.

Qs). Many firms disclose whether their top executives have signed a non-compete in their SEC filings. This information is then combined with data on executive compensation from Standard & Poor's ExecuComp database. ExecuComp is a frequently studied database that tracks details on the compensation for the five highest paid executives of large public companies. Garmaise (2011) finds that about 70% of large, publically traded firms have their top executives sign non-compete agreements over the 1992 to 2004 period. Since some firms may require a non-compete but not disclose that fact publically, this figure is likely a lower bound. Kini, Williams, and Yin (2019) find that 26% of CEOs in their data covering 1992 to 2014 have executed non-compete clauses.[21]

Johnson and Lipsitz (2017) survey non-compete use among hair salons using an e-mail survey conducted in 2015 through a national hair stylist professional trade group, the Professional Beauty Association. A total of 218 salon owners responded with information on non-compete use, training, hiring practices, compensation, and other characteristics of the business. The authors estimate that the response rate to the survey was 31%, conditional on an individual having opened the e-mail survey. Among respondents, 30% of salon owners said they had their most recent hire sign a non-compete, and 39% said they had at least one hire in the past sign one.

Lavetti, Simon, and White (2018) implemented a survey on non-compete use among primary care physicians using web-based and mailed surveys. A total of 1,976 physicians across five states (California, Texas, Illinois, Georgia, and Pennsylvania) responded to the 2007 survey, which had a response rate of 70%. Beyond non-compete use, the survey elicited information on compensation and physician and firm characteristics. They estimate that about 45% of primary care physicians in group practices are bound by a non-compete agreement.

A number of other papers combine a state-level measure of enforceability with worker and firm outcomes from government surveys or data sources in order to compare high vs. low enforceability regimes. For example, Balasubramanian et al. (2018) derive data on worker mobility and wages from the Longitudinal Employer-Household Dynamics survey and the Current Population Survey. Several studies (e.g., Marx, Strumsky, and Fleming 2009; Conti 2014) use public data on patent filings in order to measure R&D and the mobility of inventors. These papers do not observe whether or not a given worker has signed an NCA, or whether a given firm offers NCAs to its workers. As such, they do not offer estimates of the incidence of non-compete use.

B. Empirical Approaches Used in the Literature

There are three general approaches in the literature to assess the effects of non-compete agreements. Some papers follow multiple approaches.

The first is to use state policy changes in enforceability, such as changes in state statutes or changes in judicial interpretations of state statutes. Papers following this approach include Marx,

[21] 42% of CEOs in their sample have reported signing an employment contract, of which 62% have an NCA. This latter figure grew from 46% in 1992-93 to 63% in 2013-14, which demonstrates the growing use of NCAs among executives.

Strumsky, and Fleming (2009), Garmaise (2011), Carlino (2017), Balasubramanian et al. (2018), and Johnson, Lavetti, and Lipsitz (2019), among others. Exploiting policy changes can be a credible way of assessing the impact of state laws and regulations.

In the literature on non-competes, though, there is a paucity of changes in enforceability, with papers often relying on one or a handful of policy changes, such as Hawaii's ban on non-competes for tech workers or Michigan's reversal of its prohibition.[22] The dearth of policy changes raises two problems: assessing external validity and quantifying the uncertainty regarding estimated effects. While the studies exploiting state policy changes are well executed, it is far from clear whether the estimated effects are likely to extend to other states (with, e.g., a different composition of firms for workers to switch to), industries (with, e.g., different opportunities for training), or occupations. Non-compete incidence varies markedly across industry and occupation, which suggests that the underlying determinants of use do as well. Although research directly examining heterogeneity in effects across different groups is sparse, Fallick, Fleischman, and Rebitzer (2006) do find that non-competes matter only for tech workers and not other occupations. Regarding quantifying the uncertainty of any estimated effects, under certain conditions, estimating standard errors in the presence of a small number of treated units can lead to important biases when using clustered standard errors, as is common in this literature.[23] Thus, extra care should be taken in interpreting the precision and statistical significance of estimates.

Even when such policy changes are available to the researcher, the possibility that non-competes have external effects on non-signers complicates evaluating the effects of changes in non-compete enforcement. Several papers provide evidence of such spillover effects (Starr, Frake, and Agarwal *forthcoming*; Johnson, Lavetti, and Lipsitz 2019). For example, Johnson, Lavetti, and Lipsitz (2019) show that changes in NCA enforceability can affect workers in areas across the border from states changing their non-compete policy. In such a setting, estimating the impact of changes in enforceability using a difference-in-differences model is complicated by the fact that outcomes in control states may be affected by the changes in policy of contiguous (treated) states, and treated states may be affected by changes in policy of other adjacent (treated) states. It is not obvious exactly what parameter is identified by such a model.

The second approach evaluates the impact of having a high incidence of non-compete agreements in a state with high enforceability in a difference-in-differences (or triple differences) framework. These studies do not exploit policy changes over time (as above), but rather use within-state groups as controls, such as industries with a low-incidence of non-compete agreements. Thus, differences across states in worker outcomes between high and low enforceability are compared for high incidence industries and low incidence industries. Practically, the use of within-state control groups allows the inclusion of state fixed effects to

[22] Johnson, Lavetti, and Lipsitz (2019) is an exception, which exploits 70 changes in an enforceability index over the 1991 to 2014 period.

[23] See, e.g., Imbens and Kolesár (2016) and MacKinnon and Webb (2018). Lipsitz and Starr (2019) is the only paper using a small number of policy changes (one, in its case) that addresses this issue. They find that p-values are—in some specifications and samples—substantially higher when correcting standard errors to account for the small number of treated units.

control for any unobserved factors that are common to both low and high incidence industries within a state (e.g., cost of living, broad labor market conditions). Examples include Starr (2019), Balasubramanian et al. (2018), Starr, Balasubramanian, and Sakakibara (2017), and Starr, Frake, and Agarwal (2018).

There are several limitations to this second, difference-in-differences approach. First, the types of industries that have low and high incidences of non-competes are markedly different. Non-compete agreements tend to be more prevalent in higher skilled and technical industries such as information technology (IT) and engineering.[24] Any state-level laws or economic factors that affect low-skill workers differently than high-skill workers could potentially bias the models' estimates, to the extent that such laws or factors are correlated with enforceability. For example, state minimum wage laws tend to raise the wages of low-skilled workers more than high-skilled workers.[25] If states that set higher minimum wages tend to have weaker or stronger non-compete enforceability, state fixed effects would be of no use and the estimated impact of non-compete use would be biased.

Another limitation in this second approach is that the underlying variation in non-compete use is poorly understood. It is not clear why—within low- or non-enforcing states—NCAs are common in some industries but not others.[26] Moreover, it is not clear why the *same* industry has a low incidence in some states but high incidence in other states.[27] Without a firm understanding of what drives non-compete use, it is impossible to ascertain whether the necessary exclusion restriction holds and hence whether a difference-in-differences model produces unbiased estimates of the impact of non-compete incidence and enforceability.

The third approach compares labor market outcomes of signers with non-signers after conditioning out the observable characteristics of each group in a regression framework. Some examples include Johnson and Lipsitz (2017), Lavetti, Simon, and White (2018), and Starr et al. (2019). By comparing signers to non-signers, this approach is able to estimate the effect of treatment on the treated. The other two only estimate an intent to treat effect, which does not isolate the effect on signers themselves without information on the change in incidence due to treatment (which none of the studies attempt to estimate).[28]

An important limitation of this approach is the possibility of selection on unobservable worker and firm characteristics that is correlated with NCA use. A general concern with evaluating worker compensation, including arrangements that include non-compete clauses, is that workers are likely to select into jobs that offer a compensation scheme that best meets the preferences and abilities of that worker (Lazear and Shaw 2007). For example, if workers who are most likely to benefit from on-the-job training tend to select into jobs which offer more training, then

[24] SPB (2019b), Marx, Strumsky, and Fleming (2009).
[25] In Johnson and Lipsitz's (2017) model, non-compete use is predicted to be higher in areas where the minimum wage is more likely to be binding, implying that NCAs and minimum wage laws would be correlated.
[26] This fact is not lost on the authors themselves. Starr, Frake, and Agarwal (2018) write that "we have little understanding why the incidence varies in non-enforcing states, given that such provisions are unenforceable".
[27] See Figure 1 in Starr, Frake, and Agarwal (2018), which shows incidence by state and industry. This means that a given industry acts as a treated unit in some states but a control in others.
[28] Angrist and Pischke (2009), pp. 158-164. This assumes there are no externalities to the presence of NCAs.

comparing workers who have signed non-competes to those who have not will tend to overstate their impact on training. Similarly, if workers who select into jobs with strong training opportunities tend to be more productive in general (positive selection), then comparing signers with non-signers would tend to overstate the effect of non-competes on worker outcomes. Firms may also select into states based on state characteristics, such as state taxes, unionization levels, worker productivity, or environmental regulations, which could potentially be correlated with non-compete enforceability.

Beyond selection, it is possible that unobservable features of compensation are correlated with non-compete use. For instance, technology-based startups may tend to offer a higher portion of compensation in stock options (due to cash flow constraints) and also tend to rely more heavily on proprietary information and production processes (and hence require NCAs of their employees). Evaluating the effect of NCAs on wages alone could potentially under- or over-state the impact on total compensation.

To address these two limitations, the literature incorporates controls for worker and firm characteristics in order to reduce any confounding influence of selection. For example, SPB (2019b) control for worker characteristics (gender, education, age, hours and weeks worked, number of past employers), firm characteristics (size, multi-state status), characteristics of employment (other post-employment covenants such as non-disclosure agreements, compensation features such as the presence of health insurance, a retirement plan, etc.), and state-level factors (unemployment, size of labor force). A number of papers also incorporate a test due to Oster (2017) which quantifies how important selection on unobservables would have to be in order to reverse the sign of the coefficient on the policy variable of interest.[29] They generally find that selection on unobservables would have to be "implausibly" strong to reverse their findings.

C. Effects in the Labor Market

Studies of the labor market effects of non-compete agreements have examined a number of outcomes, with particular focus on investments in non-tangible assets (e.g., worker training), worker mobility, and wages.

1. Investments in non-tangible assets (training, information, and client lists)

Non-compete agreements offer an opportunity for firms to invest in various non-tangible assets that might otherwise be subject to holdup. The most common investments analyzed in the literature are training (investments in human capital), sharing information with workers, and sharing client lists with workers. The bulk of the empirical literature finds that workers signing non-compete agreements, or workers who reside in areas with a higher incidence of NCAs, receive more training, more access to information, and more access to client lists. Nevertheless, there is some variation in this finding depending on the type of non-compete and occupation. Garmaise (2011) argues that non-competes have potentially offsetting effects on investments in training: they increase the incentive for firm-sponsored training but decrease that of self-

[29] Starr, Prescott, and Bishara (2019a), SPB (2019b), Starr (2019), Starr, Frake, and Agarwal (*forthcoming*).

sponsored training. The overall impact on human capital accumulation, then, is theoretically ambiguous. Using a credible source of variation—changes in state policy in Florida, Louisiana, and Texas—he finds wage effects among top executives of public companies that are consistent with workers in higher enforceability states tending to receive more firm-sponsored training. Notably, though, he finds that the decline in (self-sponsored) general training is even greater, leading to lower levels of overall human capital investment (and hence wages). Note, though, that he does not directly analyze data on worker training, but rather infers the effects of NCAs on training from its effects on compensation.

The remaining studies rely on comparing non-compete signers with non-signers, or comparing outcomes in high enforceability states to low enforceability states, while attempting to control for selection using observable characteristics of individuals. Starr (2019) estimates that moving a state from non-enforcement to average enforcement would increase the incidence of worker training by 18%. NCAs also allow firms to train employees sooner in the employment relationship. Uncertainty regarding an employee's tenure will tend to lead firms to delay investing in costly training as they screen employees for those who will quit soon, but the presence of enforceable non-competes allows firms to reduce this uncertainty and move up training opportunities (Starr 2019). Among hair stylists, Johnson and Lipsitz (2017) find that NCA use is associated with a 14% higher likelihood of firms providing on-the-job training. Starr et al. (2019) find that the timing of when a worker receives an NCA matters: although they find no overall effect of NCA use on training, workers receiving early notice (prior to accepting a job) are 11% more likely to have received training.

Like investments in human capital, client lists and information are "mobile" in the sense that they are attached to the worker rather than the firm, and workers may exploit such investments once they quit. Surveying primary care physicians within group practices, Lavetti, Simon, and White (2018) find that physicians receive more patient referrals when they have signed a non-compete agreement. Starr et al. (2019) find, however, that timing once again matters: workers receiving early notice of an NCA are more likely to have firms share information with them, while those receiving late notification are substantially less likely.

Gurun, Stoffman, and Yonker (2019) study non-compete clauses in the financial advisory industry. The relationships that financial advisers form with clients may allow financial advisers to take clients with them when moving firms or founding a new firm. Such behavior may attenuate firms' incentives to, for instance, engage in marketing activities that would build its employed advisers' portfolio of clients. To address this issue, many firms in the industry require non-compete agreements. Gurun, Stoffman, and Yonker (2019) find that relaxing the enforceability of non-compete agreements leads to important shifts in the assets under management at financial advisory firms, consistent with financial advisers bringing clients with them when switching firms.

2. *Worker mobility and labor market frictions*

By limiting the post-employment options of workers who sign them while also potentially increasing the returns to sticking with a given employer, non-compete agreements are predicted to increase worker tenure and decrease job switching.

The empirical evidence consistently bears this out, including the studies using state policy changes to identify the effects of interest. For American workers generally, Johnson, Lavetti, and Lipsitz (2019) find that moving from a policy of NCA unenforceability to the highest enforceability observed across U.S. states in their sample is predicted to reduce the month-to-month probability of workers changing employers by 26.1%.[30] Similarly, for low wage (hourly) workers, Lipsitz and Starr (2019) show that Oregon's ban on enforcing non-competes led to an increase in transitions across employers of 12.2 to 18.3%.

Studies of individual industries and occupations also find that higher NCA enforceability is associated with lower worker mobility. Inventors in Michigan were 8.1% less likely to switch jobs after Michigan strengthened its enforcement of non-compete agreements in the mid-1980s, with even lower switching rates among those with firm-specific and technological expertise (Marx, Strumsky, and Fleming 2009). Hawaii's ban on NCAs for technology workers led to an 11% increase in mobility, relative to comparable workers in other states, in years subsequent to the ban (Balasubramanian et al. 2018). Top executives were substantially (47%) less likely to change jobs within industries as non-competes became more strictly enforced, and their tenure increased by 16% (Garmaise 2011).

CEO turnover is more responsive to a firm stock performance when the firm's CEO has a signed non-compete agreement (Kini, Williams, and Yin 2019). This is consistent with firms being reluctant to fire executives for lackluster performance if their CEO is able to join a competitor. Financial advisers are substantially more likely to switch firms when non-competes are not enforced against them (Gurun, Stoffman, and Yonker 2019). However, Gurun, Stoffman, and Yonker (2019) find that a reduction in the enforcement of non-competes leads to an increase in misconduct among financial advisers, which is consistent with firms being reluctant to discipline employees who can take assets (clients) with them when they switch jobs.

The more correlational studies in the literature also conclude that non-competes tend to lengthen employee tenure. Nationwide, workers in average-enforcing states have had 8% fewer jobs than similar workers in non-enforcing states (Balasubramanian et al. 2018). Workers in states with a higher incidence of non-competes tend to have longer tenure, and that the effect of incidence is even higher in states with stronger enforceability. Starr, Frake, and Agarwal (*forthcoming*) find that a 10 percentage point increase in the incidence of NCA use is associated with an 0.8 year increase in tenure in average- vs. non-enforcing states (a 12% increase over the mean). IT workers in Silicon Valley and elsewhere in California exhibit higher rates of mobility compared to comparable workers in other states, though this pattern appears to be unique to IT and does not extend to other industries within California (Fallick, Fleischman, and Rebitzer 2006).

Not only do non-compete agreements affect the mobility of workers who sign them, but some evidence suggests they also affect the mobility of those who have *not* signed one by increasing uncertainty in the hiring process. Starr, Frake, and Agarwal (*forthcoming*) show that, among workers who have not signed a non-compete agreement, higher incidences of non-competes tend to reduce job offers in high enforceability states more than low enforceability states (i.e., the

[30] This estimate is only marginally statistically significant, however. Their sample covers uses CPS data over the 1991 to 2014 period.

interaction between incidence and enforceability is negative in the regression model).[31] Their model predicts that a 10 percentage point increase in the incidence of non-competes is associated with a 21% lower rate of job offers over the previous year, in average enforceability states relative to non-enforcing states. This finding suggests that the prevalence of non-competes in certain industries could potentially increase frictions in the labor market, generally, not just among those who have signed the agreements. The importance of the externality will depend on how costly it is for firms to discover whether potential hires are bound by a non-compete.[32] Since this paper relies on cross-sectional comparisons of states at different levels of incidence and enforceability, though, rather than (say) an exogenous policy shock, the results should be interpreted with some caution.

Although much of the focus in the literature is on how non-competes introduce frictions in the labor market, one study suggests they may reduce one friction of particular importance to low-wage workers. Johnson and Lipsitz (2017) find that non-competes mitigate the disemployment effects of the minimum wage by allowing firms to pay what is essentially a sub-minimum wage (reducing the wedge between reservation wages and a binding minimum wage). They replicate Dube, Lester, and Reich's (2016) study and find that minimum wage laws have no effect on employment in states with relatively strong enforcement of non-competes, but have negative effects on employment in states which do not enforce non-competes. This finding suggests that non-competes may serve to reduce an important friction in the labor market for low-wage workers. Nevertheless, the fact that non-compete use does not appear to vary considerably across states with different levels of enforceability, as several surveys find, suggests that it may not be the presence of non-competes themselves that are tempering the impact of the minimum wage, but rather other unobservables that are simply correlated with enforceability. If this is true, then it is not clear how important a role that non-competes are playing.

3. Firm entry

The evidence on non-compete enforceability and firm entry is mixed. Using Michigan's (lone) law change, Carlino (2017) finds that an increase in enforceability had no impact on the number of firm startups, and had a small (but statistically insignificant) increase in the rate of job creation by startups.

The remainder of the literature, relying more heavily on cross-sectional comparisons, finds that non-compete enforceability is associated with less entry.

Stuart and Sorenson (2003) study "liquidity events" (initial public offerings and acquisitions), which provide an influx of liquid assets to senior employees. They show that these events generally increase the rate of new firm foundings in the biotech industry, but that non-compete enforceability attenuates this effect, likely because potential entrepreneurs are prevented from starting competitor firms by non-compete agreements.

---

[31] Curiously, though, within states of average or below average enforceability, workers in high incidence industries are more likely to generate job offers than those in low incidence ones.
[32] In the case of executives, the information is likely to be relatively easy to come by. For instance, Garmaise (2009) gleans it from public 10-K filings.

Samila and Sorenson (2011) study the differential response of states with high and low enforceability regimes to shocks to venture capital availability. They find that states with less strict NCA enforceability respond to such shocks with higher levels of firm startups and employment. These responses are consistent with non-competes inhibiting new firm creation more, on net, than they encourage investments in human capital or knowledge.

Starr, Balasubramanian, and Sakakibara (2017) provide evidence that higher enforceability is associated with fewer spin-off firms within the same industry as their predecessor.[33] Nevertheless, those spin-offs that do appear are (on average) larger, faster growing, and have a higher likelihood of surviving the initial years. They argue that this is because non-compete agreements introduce expected litigation costs for spin-offs, and these costs dissuade less profitable and smaller firms from ever forming. As with Carlino (2017), this is consistent with greater enforceability leading to startups that are more durable.

4. *Wages*

There are several channels through which NCAs can affect wages, including increasing investments in human and other non-tangible forms of capital, and reducing wage competition by improving the bargaining position of employers and reducing entry of competitors. The empirical evidence on which channel tends to dominate is mixed.

Using state policy changes, Johnson, Lavetti, and Lipsitz (2019) and Lipsitz and Starr (2019) find that increasing enforceability leads to lower wages. For U.S. workers generally, Johnson, Lavetti, and Lipsitz (2019) estimate that moving from NCAs being unenforceable to the highest level of enforceability observed in their sample would lead to an 8.9% drop in average wages. Since only a fraction of workers actually sign non-competes, the effect of strengthening enforceability will be quite a bit higher on those bound by one. Using the 18% incidence estimate from SPB (2019b) and assuming away spillovers on non-signers, a back-of-the-envelope calculation suggests average wage effects on non-compete signers of nearly 50% (0.89/0.18)! These wage effects only appear among (relatively) more educated workers, though: they find no effect of increasing enforceability on workers with less than a college education.

Lipsitz and Starr (2019) estimate that Oregon's ban on non-competes in 2008 led to a 2.2 to 3.1% increase in average wages for low wage (hourly) workers relative to several control groups. Moreover, they find no wage effects for workers with less than a high school degree. However, the timing of Oregon's law banning non-competes is unfortunate from an inferential point-of-view as it coincides with the onset of the Great Recession, the most severe recession since the Great Depression and one which had significant consequences for labor markets. This raises the possibility that the paper's estimated effects are confounded by macroeconomic factors that—similar to NCAs—also influence wage growth and worker mobility, as well as by the differential policy responses by states.[34] Indeed, in Lipsitz and Starr (2019), the mobility of workers in

---

[33] They define industry according to the four-digit NAICS code.

[34] Research on regional recessions finds that the timing of recessions (both the onset and recovery) differs across states (Hamilton and Owyang 2012). This includes states in the same Census region or division, which are used as

Oregon increased (relative to control states) soon after the ban took force in 2008, but average wages did not increase until a full three years post-ban (in 2011). Actual (or threatened) worker mobility is an important channel through which we expect workers to achieve wage growth in Oregon after its ban on non-competes. The fact that Oregon saw an increase in mobility without an increase in average wages raises the possibility that there are confounding factors at play.

Three studies that also exploit state policy changes but concentrate on individual occupations yield mixed findings. Garmaise (2011) provides evidence that increases in non-compete enforceability from state policy changes led to 8.2% lower growth in the compensation of top executives (25% of the mean growth rate). Kini, Williams, and Yin (2019), on the other hand, show that higher enforceability is associated with higher initial compensation among CEOs who have signed non-competes, consistent with the existence of compensating differentials. They find that a one-standard-deviation increase in their enforceability index is associated with an 11.7% increase in the total initial compensation of CEOs bound by NCAs in their sample. Balasubramanian et al. (2018) show that wages rose among new tech hires by 4.2% after Hawaii eliminated the enforceability of non-compete agreements for technology workers.

Several other, more correlational studies find that NCA signers earn higher wages, consistent with non-competes mitigating holdup. Starr et al. (2019) show that workers bound by non-competes earn 7% higher wages compared with comparable unbound workers. Lavetti, Simon, and White (2018) find that wage growth among primary care physicians in group practices is sharply higher among those having signed a non-compete compared with those who have not, which they attribute to greater within-group patient referrals. They estimate that physicians who sign non-competes experience earnings growth that is eight percentage points higher in each year of the first four years as compared to non-signers, and that their earnings are cumulatively 35 percentage points higher after 10 years.

The particulars of the negotiation process appear to matter. Although Starr et al. (2019) find that NCA signers tend to earn more, the wage premium appears among those who received early notification of the non-compete. Those receiving early notice (about two thirds of the sample) receive 10% higher wages than comparable individuals do, while those receiving late notice (about one third of the sample) receive no wage premium.

Other studies find evidence that workers who sign non-competes tend to earn less and experience lower wage growth over their tenure. Starr (2019) finds that wages are lower among workers, generally, in high enforcement states; in particular, moving from non-enforcement to average enforcement is predicted to lower wages by 4%. Balasubramanian et al. (2018), in a similar setup and using the same data, show that tech workers are predicted to receive average wages that are 2.0-2.8% lower in average vs. non-enforcing states. They also show that wages in

---

control groups in some of the difference-in-differences specifications, and (plausibly) states with a pre-2008 trend in wages or mobility similar to Oregon's, which are used in the synthetic control approach. States also varied in their policy responses to the Great Recession, including changing the maximum duration and generosity of unemployment insurance as well as state minimum wage policy. Lipsitz and Starr (2019) do control for changes in state minimum wages.

average enforcing states tend to be lower even early in the employment relationship (at quarter four of the current job spell).

D. Effects in Product Markets

Less firm entry as a result of a higher incidence of non-compete agreements, as discussed above, is suggestive of the fact that competition in product markets may also be attenuated, though no paper has directly studied the link. Given the importance of non-competes in more technical occupations and industries (Marx, Strumsky, and Fleming 2009; SPB 2019b), the impact may tend to be more acute in technical and scientific industries.

A number of papers, though, do consider the implications of non-competes for innovation. Innovation is often measured, somewhat crudely, using data on patent applications. Although patents do not capture every type of innovation in the economy, they have the advantage of being readily measurable as well as available across a number of different industries. Patents are typically assigned a particular geography based on the address of the inventor or inventors, which appears on the application. Patent activity is common enough that it can be analyzed at the state- or even Metropolitan Statistical Area-level.

Samila and Sorenson (2011), in addition to entrepreneurship and employment, also study the impact of venture capital shocks on innovation. They find that states with less enforceability tend to have more new patents. Together, these responses are consistent with non-competes inhibiting new firm creation and innovation more, on net, than they encourage investments in human capital or knowledge.

Several papers find that stricter non-compete enforceability leads to more innovation, consistent with their reducing information spillovers to competitors. Carlino's (2017) evaluation of Michigan's accidental increase in enforceability finds an increase in the number of mechanical patents in Michigan (the most important patent class in the state), though declines in several smaller patent types. The lower mobility among inventors documented by Marx, Strumsky, and Fleming (2009) was likely an important factor in limiting information transfer among Michigan firms. Conti (2014) finds that firms in states with stronger non-compete enforceability tend to pursue riskier R&D projects than firms in states with weaker enforcement.

Little work has been done on whether any cost changes due to the presence or absence of non-competes are ultimately passed on to end consumers. There are two exceptions. Hausman and Lavetti (2019) argue that the use of non-competes can increase the cost structure of physician practices, and that these costs are ultimately passed on to consumers. They document that a 10% increase in their enforceability index is associated with a 4.3% increase in average commercial prices for physician services. Gurun, Stoffman, and Yonker (2019) find that eliminating the enforcement of non-competes among a group of financial advisory firms led to higher fees for end consumers. They argue that a lack of enforceable non-competes increases the cost of worker attrition (as advisers are able to bring clients with them), which is then passed on to consumers.

IV. Conclusion

Although suggestive, the existing empirical literature on non-compete agreements suffers from several important limitations that raise questions as to whether it has successfully estimated the causal effect of such agreements on mobility, wages, entrepreneurship, and innovation. Due to the limited availability of data and a shortage of natural experiments to assess the impact of non-competes, much of the literature relies on cross-sectional comparisons of signers and non-signers, or high-enforceability states and low-enforceability ones.

Nevertheless, the literature offers some tentative findings. Across the board, the literature finds that non-compete agreements are associated with longer worker tenure and less mobility. The findings for other outcomes, however, are mixed. The papers relying on state policy changes for identification find that non-competes lead to more firm-sponsored training among top public executives (Garmaise 2011) but lower wages generally (Johnson, Lavetti, and Lipsitz (2019) and for technology workers specifically (Balasubramanian et al. 2018). Estimates for executives at public companies are mixed (Garmaise 2011; Kini, Williams, and Yin 2019). Studies relying on cross-sectional comparisons tend to find that non-competes are associated with more training and information sharing, as well as higher wages in some instances.[35]. Regarding firm entry and innovation, the only paper using state law changes (Carlino 2017) finds no discernable effect of a state law that changed non-compete enforceability.

Further research is needed in several areas. First, the determinants of why workers sign non-competes and why firms offer them is not well understood. Second, it is puzzling why non-compete incidence is only weakly correlated with state enforceability. Third, there are only a handful of studies of specific industries and occupations (physicians, tech workers, and hair stylists). Given the wide variation across jobs in the potential for investments and the possibility of lock-in, further work would help shed light on where non-competes are likely to increase or decrease efficiency and welfare. Fourth, exploiting further changes in policy or enforcement would be useful in sharpening the empirics used in this literature, which relies somewhat more heavily on cross-sectional comparisons of non-compete signers with non-signers and high-incidence states with low-incidence ones. These changes could consist of state law changes, increases in enforcement action (as has occurred recently in Washington and Illinois), or changes in firm or franchise use of non-compete agreements. Fifth, little work has been done to study how non-compete agreements affect end consumers.

[35] The sign and magnitude of the effect on wages does vary in the studies based on occupation and characteristics of the negotiation (e.g., early vs. late notice).

AGENCY RULES WITH THE FORCE OF LAW: THE ORIGINAL CONVENTION

Thomas W. Merrill and Kathryn Tongue Watts***

The Supreme Court recently held in United States v. Mead Corp. *that agency interpretations should receive* Chevron *deference only when Congress has delegated power to the agency to make rules with the force of law and the agency has rendered its interpretation in the exercise of that power. The first step of this inquiry is difficult to apply to interpretations adopted through rulemaking, because often rulemaking grants authorize the agency to make "such rules and regulations as are necessary to carry out the provisions of this chapter" or words to that effect, without specifying whether "rules and regulations" encompasses rules that have the force of law, or includes only procedural and interpretive rules.* Mead *therefore requires that courts decipher the meaning of facially ambiguous rulemaking grants. This Article argues that throughout most of the Progressive and New Deal eras, Congress followed a convention for signaling when an otherwise ambiguous rulemaking grant was intended to confer delegated authority to make rules with the force of law. Under this convention, rulemaking grants coupled with a statutory provision imposing sanctions on those who violate the rules were understood to authorize rules with the force of law; rulemaking grants not coupled with any provision for sanctions were understood to authorize only interpretive and procedural rules. Although this understanding can be detected in the Administrative Procedure Act of 1946 (APA), the Supreme Court's decisions construing rulemaking grants after the adoption of the APA betray no awareness of the convention. In the 1970s and early 1980s, the D.C. Circuit and Second Circuit, in an effort to encourage greater use of rulemaking, adopted in place of the convention a presumption that facially ambiguous rulemaking grants always authorize rules with the force of law. As a result, courts held that some agencies, such as the FTC, FDA, and NLRB, had legislative rulemaking powers that Congress almost certainly had not intended. Because the Supreme Court has never endorsed the presumption of the D.C. and Second Circuits, it is not constrained in the aftermath of* Mead *from drawing upon the original convention in discerning whether Congress intended to delegate power to make rules with the force of law. Strong arguments exist in favor of adopting the convention as a general canon for interpreting facially ambiguous rulemaking grants. Compared to the current approach that treats all rulemaking grants as presumptively authorizing legislative rules, the convention is generally more faithful to congressional intent and to constitutional values associated with the nondelegation doctrine. These advantages, however, must be weighed against the fact that adopting such a canon at this late date would almost certainly upset reliance interests, most prominently in the FDA context.*

INTRODUCTION

Whether Congress has delegated to particular agencies the authority to make rules with the force of law has been, until very recently, a question of little interest in the administrative law community. Controversies simmered in the 1960s and 1970s over whether the Federal Trade Commission (FTC), the Food and Drug Administration (FDA), and the National Labor Relations Board (NLRB) had power to engage in legislative rulemaking. But these debates are now largely forgotten. An unarticulated assumption took hold sometime after the 1970s that virtually every agency is free to make policy in any mode it chooses, including legislative rules, interpretive rules, policy statements, or adjudication. Administrative lawyers have come to believe that an agency's intent in promulgating a rule, not Congress's intent in delegating power to the agency, determines whether an agency's action has the force of law.

This assumption may soon change. The Supreme Court's recent decisions in *Christensen v. Harris County*[1] and *United States v. Mead Corp.*[2] thrust the question whether agencies have been delegated authority to act with the force of law to the forefront of the most contested issue in administrative law: the scope of the *Chevron* doctrine, which directs courts to accept reasonable agency interpretations of ambiguous statutes.[3] *Christensen* and *Mead* hold that *Chevron*'s high level of deference applies only to agency interpretations that have the "force of law."[4] Moreover, *Mead* makes clear that agencies act with the force of law only if Congress intended to delegate authority to them to so act.[5] To decide whether *Chevron* deference is appropriate, reviewing courts will therefore have to focus on the intended scope of Congress's authorization.

Unfortunately, *Mead* provides incomplete guidance about how courts should undertake this inquiry. One problem is that both *Christensen* and *Mead* involved agency action considerably more informal than either legislative rulemaking or formal adjudication, both of which unquestionably have the force of law.[6] *Christensen* involved an opinion letter written by the head of the Wage and Hour Division of the Department of Labor. *Mead* considered a letter ruling issued by the Customs Service indicating what tariff would be applied to a particular importation of goods. The Court held in both contexts that these actions did not have the force of law, and hence that *Chevron* did

not apply.[7] But the factors that *Mead*, the more fully considered decision, discussed as being relevant to whether tariff classification letters have the force of law are not likely to provide much help in the rulemaking or formal adjudication context.

With respect to rulemaking, which is the focus of this Article, the central difficulty going forward is that nearly all agency rulemaking grants are facially ambiguous concerning whether the agency is authorized to make rules with the force of law. Statutes typically give agencies the power "to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this title,"[8] or "to make such rules and regulations . . . as may be necessary in the administration of this Act."[9] The phrase "rules and regulations" in these statutes could refer to legislative rules — that is, rules that have legally binding effect on the general public — or it could refer to interpretive rules that do not have such binding effect.[10] If "rules and regulations" refers to the former type of rule, then Congress has delegated power to the agency to act with the force of law, and under *Mead* the agency would be eligible for *Chevron* deference. However, if "rules and regulations" refers to the latter type of rule, then *Mead*'s threshold inquiry presumably would not be satisfied, and the agency would not be eligible for *Chevron* deference.[11]

[10] For the definition of "legislative" rules (and other classifications of rules), *see infra* Part I, pp. 476–77.

[11] *Mead*, 533 U.S. at 232 (indicating that interpretive rules "enjoy no *Chevron* status as a class").

Although the language of most rulemaking grants is facially ambiguous, we argue in this Article that these grants were not ambiguous during the formative years of the modern administrative state — up to and beyond the enactment of the Administrative Procedure Act (APA) in 1946. Throughout the Progressive and New Deal eras, Congress followed a drafting convention that signaled to agencies whether particular rulemaking grants conferred authority to make rules with the force of law as opposed to mere housekeeping rules. That convention was simple and easy to apply in most cases: If Congress specified in the statute that a violation of agency rules would subject the offending party to some sanction — for example, a civil or criminal penalty; loss of a permit, license, or benefits; or other adverse legal consequences — then the grant conferred power to make rules with the force of law. Conversely, if Congress made no provision for sanctions for rule violations, the grant authorized only procedural or interpretive rules. Congress followed this convention from the second decade of the twentieth century through the enactment of the APA, and it can be discerned in statutes enacted as recently as 1967.[12]

The most remarkable aspect of this drafting convention is that modern administrative lawyers are not aware of its existence. How could a convention that Congress consistently followed during the formative years of the administrative state simply disappear from legal consciousness? The explanation, we suggest, lies in the fact that during the time the convention was developed and followed by Congress, no appellate court rendered a decision that required it to determine whether Congress had conferred authority on an agency to make rules with the force of law. In administrative law, as in other areas of American law, legal knowledge is transmitted through the study of appellate opinions. With no opinion to flag the issue, questions about the meaning of ambiguous rulemaking grants were ignored in post-World War II treatises and instructional materials devoted to administrative law. As a result, knowledge of the convention died out. When, in subsequent years, the Supreme Court occasionally encountered cases that implicated the meaning of such rulemaking grants, none of the parties alerted the Court to the existence of the convention, even if it would have been in their interests to do so — presumably because their lawyers did not know about it.

The collective amnesia about the drafting convention eventually had important consequences. In the 1960s, courts and commentators began to urge an expanded use of rulemaking by agencies and a reduced emphasis on adjudication. Eventually, two influential federal

appellate judges who strongly favored greater use of rulemaking — Judges J. Skelly Wright of the D.C. Circuit and Henry Friendly of the Second Circuit — authored important opinions construing facially ambiguous rulemaking grants to the FTC and FDA as authorizing legislative rulemaking.[13] These holdings were inconsistent with what Congress had intended, as measured by the convention. Although some commentators expressed unease about allowing the FTC and FDA to engage in legislative rulemaking under their general rulemaking grants,[14] neither Congress nor the Supreme Court attempted to reverse these decisions.

Soon, the assumption took hold that facially ambiguous rulemaking grants always include the authority to adopt rules having the force of law. In 1991, for example, the Supreme Court upheld a legislative rule promulgated by the NLRB pursuant to its general rulemaking grant under the National Labor Relations Act.[15] Although the case involved the first broad-scale exercise of legislative rulemaking by the NLRB since its creation in 1935,[16] no Justice questioned whether the agency had the authority to promulgate such a rule.[17] Similarly, the Supreme Court's *Chevron* decision treated as legally binding a rule adopted by the Environmental Protection Agency (EPA) pursuant to its general rulemaking powers under the Clean Air Act.[18] The *Chevron* Court never questioned whether the Act's facially ambiguous rulemaking grant authorized the agency to promulgate a legislative rule.[19]

This history is highly relevant to whether agencies have authority to act with the force of law. *Christensen* and *Mead* appear to contemplate that courts will engage in a statute-by-statute determination of

[19] Indeed, the Court did not even cite the EPA's general rulemaking provision as authority in its opinion.

whether agencies can exercise such authority. For any statute enacted before the revisionist Wright-Friendly view took hold, the convention in most cases provides the key to unlocking Congress's delegatory intent. The convention is obviously less reliable as a guide to congressional intent for statutes enacted after Wright and Friendly wrote their opinions, since the background understanding against which Congress acts has arguably shifted. Nevertheless, courts may wish to consider adopting the convention as a general canon for determining the presumptive meaning of facially ambiguous rulemaking grants. The ultimate objective of *Chevron*, as interpreted in *Mead*, appears to be to develop a set of signals by which Congress can indicate when agencies, rather than courts, are to serve as the primary interpreters of federal statutes. From this perspective, the original convention for distinguishing between legislative and housekeeping grants — whether Congress prescribed some sanction for rule violations — not only has the imprimatur of history, but would also serve as a clear rule for Congress, agencies, courts, and regulated entities to follow in determining whether the critical delegation occurred. Perhaps most importantly, such a canon — by identifying an unambiguous signal from Congress of its intent to delegate power to act with the force of law — would reinforce an important nondelegation principle: executive branch agents have no inherent authority to act with the force of law and instead possess such power only when it has been deliberately given to them by the people's representatives in Congress.[20]

This Article is divided into seven Parts. Part I begins by describing two reasons why it is important to know whether facially ambiguous rulemaking grants confer power to adopt rules with the force of law. First, legislative rules are subject to special procedural obligations,[21] known as notice-and-comment procedures. To determine whether an agency has promulgated a legislative rule and hence must follow these procedures, we need to know whether Congress has delegated authority to the agency to issue rules that have the force of law. Second, and more urgently, the Supreme Court in its recent *Christensen* and *Mead* decisions has confined the scope of the *Chevron* doctrine to agency interpretations that have the force of law. To implement the *Mead* doctrine, it is necessary to determine when particular rulemaking grants confer authority to make rules with the force of law.

Sawyer, 343 U.S. 579, 585 (1952) (stating that the President's authority to seize control of steel mills "must stem either from an act of Congress or from the Constitution itself"). For a thorough, but quite dated, discussion of historical sources relating to the existence of inherent presidential power to act with the force of law, see JAMES HART, THE ORDINANCE MAKING POWERS OF THE PRESIDENT OF THE UNITED STATES 110–19 (1925).

[21] *See* Administrative Procedure Act, 5 U.S.C. § 553 (2000).

Anticipating that some interpreters will want to know whether it is possible to ascertain Congress's delegatory intent without recourse to legislative history, Part II canvasses the chief textualist approaches to interpreting facially ambiguous rulemaking grants. We conclude that the meaning of such grants will often remain inconclusive if interpreters examine them through a purely textualist lens, without any reference to history.

Part III turns to history and shows how Congress in the first half of the twentieth century relied on a convention for distinguishing between legislative and nonlegislative rulemaking grants. This convention emerged in the wake of two Supreme Court decisions, *United States v. Eaton*[22] and *United States v. Grimaud*,[23] that considered whether Congress could delegate to administrative agencies the authority to impose criminal penalties for violations of agency regulations. In answering this question, the Court focused on whether Congress had adopted legislation specifically authorizing criminal sanctions for rule violations,[24] and thus provided a point of reference for differentiating between legislative and housekeeping grants. After *Grimaud*, Congress repeatedly deployed the device of including or omitting sanctions for rule violations in a statute as a way of signaling whether an agency had received legislative rulemaking authority. We show that numerous important regulatory statutes enacted in the Progressive and New Deal eras followed this pattern, and that the convention can be discerned in the text and legislative history of the APA.

Despite the fact that legislative actors adhered to the convention through the adoption of the APA, Supreme Court decisions touching on rulemaking grants in the subsequent decades betrayed no awareness of the convention. As we recount in Part IV, the outcomes of the Court's decisions through the 1960s were, with one exception, consistent with the convention.[25] Nevertheless, the Court's general failure to attend to the distinction between grants of legislative authority and grants of housekeeping authority increasingly caused lower courts and commentators to view agency intent, rather than congressional intent, as the key factor in identifying legislative rules.

As support for agency rulemaking grew in the 1960s, advocates inside and outside certain agencies began to urge that facially ambiguous rulemaking grants that had been long regarded as authorizing only housekeeping rules provide a basis for legislative rulemaking. As chronicled in Part V, these efforts eventually led to the successful exer-

24 *See Eaton*, 144 U.S. at 677; *Grimaud*, 220 U.S. at 517.

25 The exception is *Thorpe v. Housing Authority*, 393 U.S. 268 (1969), discussed *infra* notes 342–354 and accompanying text.

cise of general legislative rulemaking powers by three federal agencies that had not previously wielded such powers: the FTC, FDA, and NLRB.[26] Opinions by Judges Wright and Friendly sanctioning the exercise of general legislative rulemaking authority by the FTC and the FDA in effect established a presumption that facially ambiguous rulemaking grants confer legislative rulemaking authority.

Part VI describes one vestige of administrative practice that deviates from the Wright-Friendly presumption: the tax world, which adheres to the view that the Treasury Department's general rulemaking grant authorizes only interpretive rules. This view, however, rests on the distinction between general and specific grants of rulemaking authority rather than on whether Congress attached legal sanctions to rule violations. Thus, even the tax world deviates from the original congressional understanding as reflected in the convention.

Finally, Part VII considers how courts should use this history in determining whether Congress has delegated power to agencies to make rules having the force of law, the inquiry that *Christensen* and *Mead* require. We consider how Congress, agencies, and courts might use the convention either as a key to understanding legislative intent on a statute-by-statute basis, or as a canon of presumptive congressional intent that overcomes *Mead*'s greatest weakness — its failure to provide a clear rule for identifying the scope of the *Chevron* doctrine.

I. WHY THE MEANING OF RULEMAKING GRANTS MATTERS

Agency rules come in several types.[27] A basic distinction is between "legislative" rules and "nonlegislative" rules.[28] Legislative rules

---

[26] The FDA's story is somewhat different from those of the FTC and the NLRB: although the agency's general rulemaking grant does not confer legislative rulemaking powers, according to the convention the FDA does have legislative rulemaking powers under several *specific* rulemaking grants. *See infra* section V.B.2, pp. 557–65.

[27] For an overview of the different kinds of rules that agencies can make under the APA regime, see 1 KENNETH CULP DAVIS & RICHARD J. PIERCE, JR., ADMINISTRATIVE LAW TREATISE § 6.3 (3d ed. 1994); Michael Asimow, *Nonlegislative Rulemaking and Regulatory Reform*, 1985 DUKE L.J. 381, 383–88 (distinguishing legislative from nonlegislative agency rules, describing the difficulty of distinguishing them in practice, and describing the functions of nonlegislative rules); William T. Mayton, *A Concept of a Rule and the "Substantial Impact" Test in Rulemaking*, 33 EMORY L. REV. 889, 895–910 (1984) (describing the rulemaking process and several proposed conditions for the creation of agency rules); Richard J. Pierce, Jr., *Distinguishing Legislative Rules from Interpretative Rules*, 52 ADMIN. L. REV. 547, 549–54 (2000) (describing the differences between legislative rules and interpretive rules under the APA in terms of their effects and the procedures used to make them); Peter L. Strauss, *The Rulemaking Continuum*, 41 DUKE L.J. 1463, 1466–68 (1992) (outlining four kinds of rulemaking activity under the APA: "formal rulemaking," which has stringent procedural requirements, and "informal rulemaking," which has less stringent procedural requirements (both of which result in rules with the force of law); "publication rulemaking," which includes statements of policy and interpretive statements; and other "rules" of "lesser dignity" such as guidance documents and press releases).

[28] *See* Asimow, *supra* note 27, at 383.

are those that have the force and effect of law. From the perspective of agency personnel, regulated parties, and courts, these rules have a status akin to that of a statute.[29] Nonlegislative rules do not have the force and effect of law; rather, they are simply statements about what an agency intends to do in the future.

Another distinction is between "substantive" rules and "procedural" rules. Substantive rules regulate the primary behavior of parties outside the walls of the issuing agency — addressing how much pollution they can emit, what they must disclose in proxy statements, and so forth.[30] The most important type of substantive rules are legislative substantive rules, which regulate primary behavior with the force of law. Such rules are typically referred to as either "legislative rules" or "substantive rules" for short; we will refer to them throughout this Article as "legislative rules." Substantive rules can also be nonlegislative in nature. "Interpretive rules" are nonbinding substantive rules that advise the public about how an agency interprets a particular statute or legislative rule that it administers.[31] "Policy statements" are nonbinding substantive rules that advise the public about how the agency intends to exercise some discretionary power that it has.[32] Procedural rules, in contrast to substantive rules, govern what happens inside an agency — how it is organized, how it conducts hearings, and so forth. Like substantive rules, these too can be either legislative or nonlegislative in character.[33] This Article will not consider procedural rules in detail.

The distinction between legislative rules (that is, substantive legislative rules) and other types of rules is important in administrative law for several reasons.[34] First, the APA generally requires agencies to en-

---

[29] *See* ATTORNEY GENERAL'S COMM. ON ADMIN. PROCEDURE, ADMINISTRATIVE PROCEDURE IN GOVERNMENT AGENCIES, S. DOC. NO. 77-8, at 100 (1st Sess. 1941) [hereinafter FINAL REPORT] (distinguishing "legally binding regulations" that receive statutory force from "interpretive regulations," under which the "statutes themselves and not the interpretations remain in theory the sole criterion of what the law authorizes"). We realize that to say that a legislative rule has a status akin to a statute begs the question of what qualities distinguish a statute. We have more to say about this in Part III, *infra* pp. 493–528, where we unpack the historical convention for differentiating between legislative and nonlegislative rulemaking grants.

[30] *See* U.S. DEP'T OF JUSTICE, ATTORNEY GENERAL'S MANUAL ON THE ADMINISTRATIVE PROCEDURE ACT 30 n.3 (1947).

[31] *See id.*; *see also* Am. Mining Cong. v. Mine Safety & Health Admin., 995 F.2d 1106, 1109 (D.C. Cir. 1993) (quoting and discussing U.S. DEP'T OF JUSTICE, *supra* note 30, at 30 n.3).

[32] *See* U.S. DEP'T OF JUSTICE, *supra* note 30, at 30 n.3.

[33] *See* Joseph v. U.S. Civil Serv. Comm'n, 554 F.2d 1140, 1153 n.24 (D.C. Cir. 1977); 1 DAVIS & PIERCE, *supra* note 27, § 6.6, at 252–54.

[34] In addition to the two reasons discussed in the text, three others deserve mention. First, because legislative rules are legally binding, in an enforcement action the agency need only show that a party violated the rule to prove it acted illegally; in contrast, if the agency invokes an interpretive rule, it is the statute itself, not the rule, that is controlling. Thus a legislative rule can ease an agency's burden of proof and narrow the issues to be litigated. *See* JERRY L. MASHAW ET

gage in notice-and-comment rulemaking before developing legislative rules, but not before making procedural rules, interpretive rules, or policy statements.[35] In identifying legislative rules for the purposes of APA notice-and-comment requirements, recent appellate decisions have held that two conditions must be satisfied: "Congress has delegated legislative power to the agency and . . . the agency intended to exercise that power in promulgating the rule."[36] In practice, the decisions that apply this two-part test focus almost exclusively on the second part — whether the agency intended to make a rule that has the force and effect of law.[37] As far as we are aware, the first part — whether Congress has delegated power to the agency to make rules that have the force of law — has never been the focus of any appellate opinion considering whether a particular rule is legislative and hence subject to the procedural requirements of § 553.

The judicial indifference to the first half of the test is puzzling. With rare exceptions, nearly all of the rulemaking grants adopted by Congress in the twentieth century do not specify whether they authorize legislative rules, procedural rules, interpretive rules, or policy statements. Instead, they simply speak of "rules and regulations" and leave it at that.[38] Examining the bare language of these statutes, therefore, courts cannot tell whether Congress "has delegated legislative power to the agency."[39] By focusing only on agency intent in determining whether a rule is legislative for § 553 purposes, then, courts implicitly assume that facially ambiguous rulemaking grants confer the

---

AL., ADMINISTRATIVE LAW: THE AMERICAN PUBLIC LAW SYSTEM 448 (4th ed. 1998). Second, under some statutes a legislative rule, unlike an interpretive rule, is not open to judicial review in an enforcement action. *See, e.g.*, 42 U.S.C. § 7607(b)(1) (2000) (providing that petitions for judicial review of a rule made pursuant to certain sections of the Clean Air Act must be filed within sixty days of the rule's promulgation). Third, legislative rules are more likely than interpretive rules to be subject to judicial review before an agency brings an enforcement action. *See* 1 DAVIS & PIERCE, *supra* note 27, § 6.2, at 228; Peter L. Strauss, *Publication Rules in the Rulemaking Spectrum: Assuring Proper Respect for an Essential Element*, 53 ADMIN. L. REV. 803, 817–22 (2001).

[35] *See* 5 U.S.C. § 553(b)–(c) (2000).

[36] *American Mining Congress*, 995 F.2d at 1109; *see also* Am. Postal Workers Union v. U.S. Postal Serv., 707 F.2d 548, 558 (D.C. Cir. 1983) ("A rule can be legislative only if Congress has delegated legislative power to the agency and if the agency intended to use that power in promulgating the rule at issue."); *cf. Joseph*, 554 F.2d at 1153 n.24 (noting that whether a rule is legislative depends on "the authority and intent with which [it is] issued").

[37] For example, in *American Mining Congress*, after stating the two-part test, the court devoted the balance of its opinion to discussing a variety of circumstances that indicate agency intent to make rules with the force of law. *See American Mining Congress*, 995 F.2d at 1109–13.

[38] *See infra* section III.C, pp. 503–19 (describing grants of rulemaking authority in numerous twentieth-century statutes).

[39] *American Mining Congress*, 995 F.2d. at 1109.

power to make legislative rules. Later in the Article, we explain the origins of this unstated presumption and question its validity.[40]

A second reason that the distinction between legislative and other types of rulemaking is important concerns the standard that courts apply in reviewing agency interpretations of their statutory authority. The issue here is whether courts will review agency interpretations of statutes under the highly deferential *Chevron* test,[41] or the multifactor *Skidmore* standard,[42] or whether they will instead determine the meaning of the statute de novo.[43] The Supreme Court recently held in *Christensen v. Harris County*[44] and *United States v. Mead Corp.*[45] that *Chevron* applies only to agency interpretations that have the "force of law."[46] Agency interpretations that do not have the force of law receive only whatever deference is due under the *Skidmore* standard.[47] In elaborating the "force of law" criterion, the Court in *Mead* adopted a two-part test similar to that used to distinguish between legislative and nonlegislative rules in the APA rulemaking-requirements context: "We hold that administrative implementation of a particular statutory provision qualifies for *Chevron* deference when it appears that Congress delegated authority to the agency generally to make rules carrying the force of law, and that the agency interpretation claiming deference was promulgated in the exercise of that authority."[48]

In applying the two-part *Mead* test, lower courts may do what they have done in the APA cases: ignore the first part and concentrate solely on the second. But this response is unlikely. The Court in *Mead* made clear that *Chevron* deference is grounded in a congressional intent to delegate primary interpretive authority to the agency. Its opinion referred throughout to congressional intent, expectations, contempla-

[41] *See* Chevron U.S.A. Inc. v. Natural Res. Def. Council, Inc., 467 U.S. 837, 842–44 (1984) (holding that courts must defer to an agency's interpretation of an ambiguous statute if the interpretation is reasonable).

[42] *See* Skidmore v. Swift & Co., 323 U.S. 134, 140 (1944) (requiring courts to consider agency interpretations of ambiguous statutes, to assess these interpretations against a variety of contextual factors, and to defer to such interpretations to the extent that they are persuasive).

[43] For a general discussion of these three standards of review and their respective domains, see Thomas W. Merrill & Kristin E. Hickman, Chevron*'s Domain*, 89 GEO. L.J. 833, 852–63 (2001).

[44] 529 U.S. 576 (2000).

[45] 533 U.S. 218 (2001).

[46] *See id.* at 226–27; *Christensen*, 529 U.S. at 587. Neither *Mead* nor *Christensen* explained why courts should give more deference to decisions that have the force of law and less deference to decisions that do not. For a discussion of some reasons supporting this proposition, see Merrill & Hickman, *supra* note 43, at 874–82.

[47] *See Mead*, 533 U.S. at 234–35.

[48] *Id.* at 226–27; *see also id.* at 237 (holding that *Skidmore* rather than *Chevron* applies "where statutory circumstances indicate no intent to delegate general authority to make rules with force of law, or where such authority was not invoked").

tions, thoughts, and objectives.[49] The Court also discussed a number of factors that led it to conclude that Congress had not delegated authority to the Customs Service to act with the force of law when it authorized the agency to issue tariff classification rulings. Specifically, the Court considered whether Congress required the agency to engage in relatively formal procedures before acting, whether Congress authorized the agency to adopt rules or precedents that generalize beyond a single case, and whether Congress authorized the agency to prescribe legal norms that apply uniformly throughout its jurisdiction.[50] The Court conspicuously framed each of these factors in terms of congressional rather than agency intent.

If courts take seriously the relevance of Congress's intent to give an agency's rules the force of law, and heed the passages in *Mead* that appear to say that the inquiry into congressional intent should proceed by looking to all conceivably relevant factors, the result in most cases will be highly unpredictable. The central problem, again, is that Congress typically authorizes agencies to adopt "rules and regulations," but does not specifically say "legislative" rules and regulations.[51] And without any direction in the legislative text, the all-things-considered *Mead* framework provides little guidance to lower courts, agencies, and regulated parties about how to discern congressional intent in any given set of circumstances. Thus, it is likely to sow confusion among lower courts, inhibit agency planning, and generate additional legal costs. It is also likely to undermine congressional control over the allocation of interpretive authority, for while Congress can be explicit in new legislation, an unpredictable framework makes it difficult to determine how courts will construe existing legislation.[52] Given the dif-

---

49 *See id.* at 229–34.

50 *See id.*

51 *Mead* also creates problems in determining whether agencies should receive *Chevron* deference for interpretations embodied in procedural rules. Procedural rules, like substantive legislative rules, can have the force of law. *See* 1 DAVIS & PIERCE, *supra* note 27, § 6.6, at 252–54 (noting that procedural rules are sometimes legislative and sometimes merely guidelines). Moreover, there is little doubt that when Congress enacts a facially ambiguous grant of authority to an agency to adopt "rules and regulations," it intends at the very least to include in this grant the authority to make procedural rules. Thus, procedural rules will often satisfy *Mead*'s basic requirement for *Chevron* deference — a delegation of authority from Congress to act with the force of law. *Cf.* Merrill & Hickman, *supra* note 43, at 905–06. On the other hand, *Mead* places considerable emphasis on whether Congress has required that an agency follow notice-and-comment procedures in issuing a rule, *see Mead,* 533 U.S. at 230–31, and the APA specifically exempts procedural rules from notice-and-comment procedures, *see* 5 U.S.C. § 553(b) (2000). Thus, one of the signals of congressional intent to make rules legally binding emphasized by *Mead* — the requirement of notice-and-comment procedures — is irrelevant. The Supreme Court recently reserved judgment on the degree of deference owed to a particular procedural rule. *See* Edelman v. Lynchburg Coll., 122 S. Ct. 1145, 1150 (2002).

52 *See* Thomas W. Merrill, *The* Mead *Doctrine: Rules and Standards, Meta-Rules and Meta-Standards*, 54 ADMIN. L. REV. 807, 819–26 (2002).

ficulty in determining actual congressional intent, "some version of constructive — or perhaps more frankly said, fictional — intent must operate in judicial efforts to delineate the scope of *Chevron*."[53] The need to attribute some intent to Congress, in turn, raises the question whether there is any background principle that courts can apply in a manner that is reasonably faithful to Congress's actual intent and that simultaneously resolves disputes over the nature of delegated authority in a reasonably predictable manner.

II. TEXTUALIST INTERPRETATION OF FACIALLY AMBIGUOUS RULEMAKING GRANTS

What does Congress mean when it gives agencies the power to make such "rules and regulations" as may be necessary to implement or administer an act? In Part III, we discuss how Congress historically followed a convention to signal its intent to grant either legislative rulemaking authority or merely housekeeping authority.[54] Once we understand this convention, we can discern Congress's probable intent in most instances. But to confirm the existence of this convention we must examine the legislative histories of numerous statutes. Using legislative history to resolve questions of statutory interpretation is controversial. Some interpreters, such as Justice Scalia, have insisted that questions of statutory interpretation should be resolved solely in terms of the objective meaning of a statute rather than by reference to Congress's subjective intentions.[55] Such "textualist" interpreters look to the language of a statute, its structure, and canons of interpretation in resolving statutory meaning, but ordinarily avoid legislative history, such as committee reports and floor debates.[56] However, a survey of the techniques of interpretation typically deployed by textualists sug-

---

[53] David J. Barron & Elena Kagan, Chevron's *Nondelegation Doctrine*, 2001 SUP. CT. REV. 201, 203; *see also* Russell L. Weaver, *The Emperor Has No Clothes:* Christensen, Mead *and Dual Deference Standards*, 54 ADMIN. L. REV. 173, 186–87 (2002) ("Because Congress never explicitly states that a particular agency is given the power to interpret with the 'force of law,' the Court must focus on 'implicit' manifestations of intent if the 'force of law' standard is to be workable.").

[54] *See infra* pp. 493–528. By "housekeeping authority" we mean the authority to promulgate nonlegislative substantive rules (interpretive rules and policy statements) and procedural rules.

[55] *See* Antonin Scalia, *Common Law Courts in a Civil-Law System: The Role of United States Federal Courts in Interpreting the Constitution and Laws, in* A MATTER OF INTERPRETATION 29–37 (Amy Gutmann ed., 1997) (arguing that "legislative history should not be used as an authoritative indication of a statute's meaning").

[56] *See id.* at 17–18, 23–37; *see also* Daniel A. Farber & Philip P. Frickey, *Legislative Intent and Public Choice*, 74 VA. L. REV. 423, 453–457 (1988); John F. Manning, *Textualism as a Nondelegation Doctrine*, 97 COLUM. L. REV. 673, 675–76 (1997); Thomas W. Merrill, *Textualism and the Future of the* Chevron *Doctrine*, 72 WASH. U. L.Q. 351, 352 (1994). *See generally* William N. Eskridge, Jr., *The New Textualism*, 37 UCLA L. REV. 621 (1990) (describing the "new textualism" of Justice Scalia and Judge Easterbrook).

gests that these tools cannot clearly resolve the meaning of ambiguous rulemaking grants in most instances.

A. *Language*

All interpreters regard a statute's language as the most important datum in statutory interpretation.[57] And indeed, sometimes the language of a rulemaking grant expressly specifies whether the grant includes the authority to adopt legally binding rules. For example, a few statutes state that the rules promulgated by an agency shall have "the force and effect of law."[58] Other rulemaking grants unambiguously limit their reach to procedural rules, providing, for example, that an agency has the power to issue "suitable *procedural* regulations to carry out the provisions" of an act.[59]

More often, however, the language used in rulemaking grants is ambiguous, stating only that an agency has the power to make "rules and regulations as may be necessary to carry out the provisions of this title,"[60] or "to make such rules and regulations . . . as may be necessary in the administration of this Act."[61] It is possible that the varying language used in different grants could be given different meanings. For example, a grant that gives power to an agency to "enforce" an act or a provision of an act might be construed as authorizing legislative rules, whereas grants that speak only of "administering" an act might not.[62]

---

[57] Even those interpreters who formulate the inquiry in terms of ascertaining legislative purpose or intent routinely "start with the assumption that the legislative purpose is expressed by the ordinary meaning of the words used." Sec. Indus. Ass'n v. Bd. of Governors, 468 U.S. 137, 149 (1984) (quoting *Richards v. United States*, 369 U.S. 1, 9 (1962)); *see also* Eskridge, *supra* note 56, at 621 (stating that "[t]he statute's text is the most important consideration in statutory interpretation").

[58] *E.g.*, Agricultural Adjustment Act, ch. 25, § 10(c), 48 Stat. 31, 37 (1933) (codified as amended at 7 U.S.C. § 610(c) (2000)).

[59] 42 U.S.C. § 2000e-12(a) (2000) (emphasis added); *see also* Interstate Commerce Act, ch. 104, § 17, 24 Stat. 379 (1887) (repealed 1978) ("Said Commission may, from time to time, make or amend such general rules or orders as may be requisite for the order and regulation of proceedings before it . . . .").

[60] *E.g.*, Securities Act of 1933, ch. 38, § 19(a), 48 Stat. 74, 85 (codified as amended at 15 U.S.C. § 77s(a) (2000)); *see also* Natural Gas Act, ch. 556, § 16, 52 Stat. 821, 830 (1938) (codified as amended at 15 U.S.C. § 717*o*) (giving the Federal Power Commission the "power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this Act").

[61] *E.g.*, Longshoremen's and Harbor Workers' Compensation Act, ch. 509, § 39(a), 44 Stat. 1424, 1442 (1927) (codified as amended at 33 U.S.C. § 939(a) (2000)); *see also* Motor Carrier Act, 1935, ch. 498, § 204(a)(6), 49 Stat. 543, 546 (repealed 1983) (providing that the ICC has the power "[t]o administer, execute, and enforce all other provisions of this part, to make all necessary orders in connection therewith, and to prescribe rules, regulations and procedure for such administration").

[62] This possibility is suggested in passing in *American Trucking Ass'ns v. United States*, 344 U.S. 298, 311 (1953): "We cannot agree with appellants' contention that the rule-making authority

Or, rulemaking grants might be differentiated on the ground that a grant that authorizes an agency to "carry out" the provisions of an act[63] is more legislative in tone than a grant that gives an agency the power to make rules for the "administration" of an act[64] or to promulgate rules "as may be necessary in the execution of its functions."[65]

Briefs filed with the Supreme Court have occasionally made arguments of this nature.[66] But only rarely have courts suggested that different verbal formulations signify the conveyance of different types of powers.[67] In the end, whether any particular formulation is "legislative" or "interpretive" remains debatable. For example, it has been argued that a conferral of authority "to enforce" the provisions of an act is both a signal that legislative rulemaking authority has been given and a signal that the agency possesses only interpretive rulemaking authority.[68] Given the general language used in most rulemaking grants, it is not ordinarily possible simply by analyzing the text to determine whether such grants confer legislative as opposed to procedural and interpretive powers.

B. Structure

The overall structure of statutes provides another important consideration that meets with approval from textualist interpreters. As Justice Scalia has stated, a "provision that may seem ambiguous in isolation is often clarified by the remainder of the statutory scheme."[69] Structural arguments usually focus on the internal structure of a single

. . . merely concerns agency procedures and is solely administrative. It ignores the distinct reference in the section to enforcement."

63 *See* statutes cited *supra* note 60.

64 *See* statutes cited *supra* note 61.

65 Communications Act of 1934, ch. 652, § 4(i), 48 Stat. 1064, 1068 (codified as amended at 47 U.S.C. § 154(i) (2000)) ("The Commission may perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this Act, as may be necessary in the execution of its functions.").

66 For example, in *Mourning v. Family Publications Service, Inc.*, 411 U.S. 356 (1973), the petitioner argued that a rulemaking grant to carry out "the purpose" of an act was broader than a grant to carry out "the provisions" of an act. *See* Brief for Petitioner at 24, *Mourning*, 411 U.S. 356 (1973) (No. 71-829). Similarly, in *American Trucking*, the appellants argued that the power the Motor Carrier Act gave to the ICC to "prescribe rules, regulations, and procedure for such administration" of the Act was specifically limited to rules and regulations for "administration." Appellants' Petition for Rehearing at 10–12, E. Motor Express, Inc., v. United States, 344 U.S. 298 (1953) (No. 35).

67 Nor are we aware of any evidence from legislative history that Congress has ever placed any significance on these divergences in verbal formulations.

68 *Compare American Trucking*, 344 U.S. at 311 (stating that the power of "enforcement" suggests a legislative grant), *with* Brief for Petitioner, *supra* note 66, at 23–24 (arguing that the power of "enforcement" suggests an interpretive grant).

69 United Sav. Ass'n of Tex. v. Timbers of Inwood Forest Assocs., 484 U.S. 365, 371 (1988); *see also* Eskridge, *supra* note 56, at 660–63 (noting a rise in the use of structural arguments by the Supreme Court).

act, but occasionally such arguments also consider the relationship between the act under consideration and related statutes.[70]

Important clues about the meaning of a rulemaking grant can sometimes be gleaned from its placement in an act. One potential indicator of meaning is the grant's location in the administrative or organizational sections of an act.[71] For example, the general rulemaking grant in the Social Security Act of 1935 appears in Title XI, the "General Provisions" title, which contains statutory definitions, a severability clause, and the short title of the Act.[72] A general rulemaking grant in the Communications Act of 1934 also appears in the "General Provisions" title of the Act, which contains organizational provisions relating to the Federal Communications Commission (FCC) and its divisions, as well as statutory definitions.[73] Similarly, the general rulemaking grant in the Internal Revenue Code appears in Subtitle F, which pertains to "Procedure and Administration."[74] The placement of each of these grants may signal that the grant pertains to housekeeping matters only and hence does not authorize legislative rules.

In contrast, the placement of other rulemaking grants suggests that they authorize legislative rules. The most compelling example is a statute that includes both general and more specific rulemaking grants that overlap. For instance, a statute may contain both a general rulemaking grant that authorizes the promulgation of all rules and regulations necessary to carry out the administration of "this subchapter," and one or more narrower rulemaking grants that authorize rules necessary to carry out "this section."[75] The Securities Exchange Act of 1934, the Internal Revenue Code, and the Clean Water Act, among

[70] *See, e.g.*, FDA v. Brown & Williamson Tobacco Corp., 529 U.S. 120, 148–49 (2000) (reviewing numerous statutes other than the Federal Food, Drug, and Cosmetic Act in determining that the FDA does not have authority to regulate tobacco products).

[71] *See, e.g.*, Federal Food, Drug, and Cosmetic Act, ch. 675, § 701(a), 52 Stat. 1040, 1055 (1938) (codified as amended at 21 U.S.C. § 371(a) (2000)); Civil Aeronautics Act of 1938, ch. 601, § 205, 52 Stat. 973, 984; Social Security Act, ch. 531, § 1102, 49 Stat. 620, 647 (1935) (codified as amended at 42 U.S.C. § 1302 (2000)); Communications Act of 1934, ch. 652, § 4(i), 48 Stat. 1064, 1068 (codified as amended at 47 U.S.C. § 154(i) (2000)); Packers and Stockyards Act, 1921, ch. 64, § 407, 42 Stat. 159, 169 (codified as amended at 7 U.S.C. § 228 (2000)).

[72] Social Security Act, § 1102, 49 Stat. at 647.

[73] Communications Act of 1934, § 4(i), 48 Stat. at 1068.

[74] I.R.C. § 7805 (2000).

[75] *See, e.g.*, Securities Act of 1933, ch. 38, §§ 19–20, 48 Stat. 74, 85–86 (codified as amended at 15 U.S.C. §§ 77s–77t (2000)) (giving the SEC general rulemaking powers in section 19(a) of the Act and then providing in section 20 that the SEC may institute proceedings against any person who violates "any rule or regulation" promulgated by the SEC under the authority of the Act); Natural Gas Act, ch. 556, §§ 16, 20–21, 52 Stat. 830, 832–33 (1938) (codified as amended at 15 U.S.C. §§ 717*o*, 717s–717t) (giving the Federal Power Commission general rulemaking powers in section 16 and then providing in sections 20 and 21 for enforcement of the Commission's rules and regulations).

other statutes, fit this pattern.[76] Although both the general grant and the specific grants are often ambiguous on their face, given the overlap it is reasonable to argue that the general grant confers only housekeeping powers, while the narrower grants confer legislative powers. After all, if both the general grant and the specific grants conferred the same type of power (either legislative or housekeeping), then the statute would include a significant redundancy.[77] By construing the general grant to confer the more generally available housekeeping powers — the power to issue procedural or interpretive rules — and construing the specific grants to confer the more jealously guarded power — the power to issue legislative rules — the redundancy disappears.[78]

The structural argument based on overlapping rulemaking grants is not necessarily decisive, however. One problem is that interpretive rulemaking (and perhaps procedural rulemaking as well) has long been viewed as an "inherent" power of all executive institutions.[79] Whether this power is inherent or not, in 1874 Congress granted to the heads of

---

[76] With respect to the Securities Exchange Act, see 15 U.S.C. § 78w, which grants general rulemaking authority to the SEC; *id.* § 78m, which grants authority to make rules regulating periodical reports of registered securities; and *id.* § 78n, which grants authority to make rules regulating proxies. With respect to the Internal Revenue Code, see I.R.C. § 7805(a) (2000), which grants general rulemaking authority; and *id.* § 1502, which grants rulemaking authority dealing with consolidated returns of affiliated corporations. For the Clean Water Act, see *infra* notes 632–635 and accompanying text.

[77] *See* Gustafson v. Alloyd Co., 513 U.S. 561, 574 (1995) (stating that the "Court will avoid a reading which renders some words altogether redundant" (citing *United States v. Menasche*, 348 U.S. 528, 538–539 (1955))).

[78] For judicial decisions recognizing this point in the regulatory context, see *AT&T Corp. v. Iowa Utilities Board*, 525 U.S. 366, 408 (1999) (Thomas, J., concurring in part and dissenting in part) (arguing that the majority's construction of a general rulemaking grant in the Communications Act to extend to new authority conferred on the FCC by the Telecommunications Act of 1996 renders specific grants of rulemaking authority in the latter Act redundant); and *In re Permanent Surface Mining Regulation Litigation*, 653 F.2d 514, 524 (D.C. Cir. 1981) (considering but rejecting the same argument in the context of the general rulemaking grant in the Surface Mining Control and Reclamation Act of 1977). For commentary recognizing the point in connection with the Internal Revenue Code, see Ellsworth C. Alvord, *Treasury Regulations and the Wilshire Oil Case*, 40 COLUM. L. REV. 252, 257 (1940) (arguing that "some difference was intended by Congress" or else it would not have granted the Treasury both specific and general rulemaking powers); and Stanley S. Surrey, *The Scope and Effect of Treasury Regulations Under the Income, Estate, and Gift Taxes*, 88 U. PA. L. REV. 556, 558 (1940) (contending that rules issued under specific rulemaking grants must be construed to possess different attributes than rules issued under the general rulemaking grant, because otherwise "the careful particularization of Congress in these other sections would be without meaning").

[79] *See* Kenneth Culp Davis, *Administrative Rules — Interpretative, Legislative, and Retroactive*, 57 YALE L.J. 919, 930 (1948) (stating that "the power to issue interpretative regulations is commonly inherent or implied"); Frederic P. Lee, *Legislative and Interpretive Regulations*, 29 GEO. L.J. 1, 24 (1940) ("[T]he power of an administrative officer or agency to prescribe interpretive regulations is not necessarily a delegated power. The authority to exercise such power need not be found in an Act of Congress."); John B. Olverson, Jr., Note, *Legislation by Administrative Agencies*, 29 GEO. L.J. 637, 640 (1941) ("In the mere interpretation of a statute, the administrative agency need not be empowered by such statute to make regulations.").

executive departments general authority to adopt rules governing their employees and affairs.[80] This "Housekeeping Act," which is codified at 5 U.S.C. § 301, provides that: "The head of an Executive department or military department may prescribe regulations for the government of his department, the conduct of its employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property."[81] Because executive agencies have long possessed these powers, one could argue that it would be redundant for Congress to give such agencies an additional general grant of power authorizing *only* interpretive and procedural rules. Therefore, to avoid redundancy between the Housekeeping Act and the agency's statute, the general rulemaking grant in the statute should be treated as legislative.

The matter is more complicated still. Section 301's housekeeping grant applies only to the heads of executive departments and military departments, not independent administrative agencies.[82] As a result, it might not be redundant for Congress to give independent agencies such as the FTC, FCC, and NLRB general grants of power to adopt housekeeping rules. Such grants could simply be viewed as substitutes for the housekeeping grant already given to department heads.[83]

---

[80] *See* REV. STAT. § 161 (1873–1874).

[81] 5 U.S.C. § 301 (2000). The Housekeeping Act consolidated into one place various housekeeping powers that had been conferred on department heads in prior acts. *See, e.g.*, Act of July 27, 1789, ch. 4, §§ 1–2, 1 Stat. 28, 29 (giving the Secretary for the Department of Foreign Affairs power over all the records, books, and papers of his office and giving the Secretary the power to "perform and execute such duties" as the President shall entrust to him); Act of Aug. 7, 1789, ch. 7, § 2, 1 Stat. 49, 50 (giving the Secretary of the Department of War power over its records, books, and papers); Act of April 30, 1798, ch. 35, §§ 2–3, 2 Stat. 553, 554 (giving the Secretary of the Navy possession and charge of all books, records, and documents pertaining to the Department of the Navy). Notes presented to Congress by the commissioners who drafted the revised statutes explained the purpose of section 161 as follows:

> This section is suggested by section 8 of the act of 22 June, 1870, which reads as follows: "That the Attorney General is hereby empowered to make all necessary rules and regulations for the government of said Department of Justice, and for the management and distribution of its business." Substantially the same power seems to be conferred, though in vague and uncertain language, by the earlier acts organizing the other Departments. The commissioners have thought it advantageous that the power should be stated in terms, and be conferred alike on all the Secretaries.

1 REVISION OF THE UNITED STATES STATUTES AS DRAFTED BY THE COMMISSIONERS APPOINTED FOR THAT PURPOSE 80 (1872) (citation omitted). Thus, although the language used in REV. STAT. § 161 conferred what could be viewed as very broad procedural rulemaking powers on department heads, the commissioners' notes indicate that they were not attempting to enlarge the powers granted by earlier acts.

[82] *See* 5 U.S.C. § 301; *see also id.* § 101 (defining the term "executive department").

[83] However, if Congress intended general rulemaking grants to independent agencies, such as the FTC and the NLRB, merely to be substitutes for section 301's housekeeping grant, one would expect that Congress would not give general rulemaking grants to executive departments (since section 301's housekeeping grant already covers executive officers). But this is not the case, as Congress has frequently given executive department heads both general and specific rulemaking

Thus, structural arguments about overlapping grants do not definitively resolve the meaning of facially ambiguous rulemaking grants, at least not in all cases.

C. Canons of Interpretation

Canons of interpretation are another tool accepted by most textualists. Three types of canons in particular are potentially relevant in determining the meaning of ambiguous rulemaking grants: the rule of lenity, nondelegation canons, and what this Article will call the *Petroleum Refiners* canon.

1. The Rule of Lenity. — The rule of lenity requires courts to construe ambiguous statutes imposing criminal liability narrowly to provide fair notice to potential offenders and to constrain the discretion of prosecutors and courts.[84] Thus, where violation of an agency rule would expose persons to criminal sanctions, the rule of lenity provides a rationale for construing an ambiguous rulemaking grant as authorizing only interpretive rules. This application of the rule of lenity is particularly relevant where Congress has prescribed criminal sanctions for violating legislative agency rules and has given the agency multiple rulemaking grants, some of which are ambiguous. A potential offender would know that violating some agency rules could give rise to criminal sanctions but would not be able to tell whether rules promulgated pursuant to an ambiguous rulemaking grant are included in that category.

Of course, this canon applies only where rule violations are criminally punishable. Courts do not ordinarily apply the rule of lenity to statutes that impose only civil sanctions.[85] The Supreme Court has also curtailed the rule of lenity in recent years, and there is some question whether it applies at all in the context of judicial review of administrative regulations.[86]

---

grants in statutes. *See, e.g.*, Act of June 17, 1902, ch. 1093, § 10, 32 Stat. 388, 390 (giving the Secretary of the Interior general rulemaking powers); Act of June 28, 1934, ch. 865, § 2, 48 Stat. 1269, 1270 (same). This fact would seem to counter any argument that general rulemaking grants should be viewed as mere substitutes for section 301.

[84] *See generally* Patricia G. Chapman, *Has the* Chevron *Doctrine Run out of Gas? Senza Ripieni Use of* Chevron *Deference or the Rule of Lenity*, 19 MISS. C. L. REV. 115, 142–43 (1998) (explaining that the "rule of lenity requires a reviewing court to prefer a narrow (as opposed to a generous) reading of an ambiguous penal or punitive statute, allowing penalties only if the language of the statute is clear or if legislative intent to punish the prohibited actions can be unmistakably ascertained").

[85] *See* United States v. Thompson/Ctr. Arms Co., 504 U.S. 505, 518–19 n.10 (1992).

[86] *See* Babbitt v. Sweet Home Chapter of Cmtys. for a Greater Or., 515 U.S. 687, 704 n.18 (1995) (applying *Chevron* rather than the rule of lenity in reviewing an agency regulation that could give rise to criminal sanctions, and stating "[w]e have never suggested that the rule of lenity should provide the standard for reviewing facial challenges to administrative regulations whenever the governing statute authorizes criminal enforcement").

2. *Nondelegation Canons.* — Canons based on the nondelegation doctrine[87] are also potentially relevant in interpreting the meaning of ambiguous rulemaking grants.[88] Courts have never vigorously enforced the original nondelegation principle — that Congress may not delegate powers that are "strictly and exclusively legislative."[89] Congressional delegations of significant discretionary powers, including rulemaking powers, began in the First Congress and have been a feature of our government ever since.[90] Nevertheless, courts have employed the nondelegation doctrine as a canon of statutory construction.[91]

One familiar nondelegation principle provides that a congressional delegation of authority to an agency must contain an "intelligible principle" to guide and constrain the agency's behavior.[92] Courts could invoke the intelligible principle requirement as support for interpreting ambiguous rulemaking grants narrowly, on the ground that such grants fail to provide meaningful guidance to agencies about which sorts of rules are permitted. Thus, Stanley Surrey, a prominent tax

---

[87] The nondelegation doctrine is based on Article I, Section 1 of the Constitution, which vests "all legislative Powers herein granted . . . in a Congress of the United States." U.S. CONST. art. I, § 1.

[88] *See generally* Cass R. Sunstein, *Nondelegation Canons*, 67 U. CHI. L. REV. 315 (2000) (arguing that nondelegation canons act as rules of construction that prevent agencies from making decisions on their own without authorization from Congress).

[89] Wayman v. Southard, 23 U.S. (10 Wheat.) 1, 42–43 (1825). As Chief Justice Marshall admitted in *Wayman*, the line between those "important subjects" that must be entirely regulated by the legislature itself and those lesser subjects that might be delegated to others was not drawn exactly. *Id.* at 43; *see* James Hart, *The Exercise of Rulemaking Power*, *in* THE PRESIDENT'S COMM. ON ADMIN. MGMT., REPORT OF THE COMMITTEE WITH STUDIES OF ADMINISTRATIVE MANAGEMENT IN THE FEDERAL GOVERNMENT 311, 322 (1937) (noting a "general trend over many years in the direction of an increase in the number of rules and regulations issued by various Federal agencies in pursuance of delegated authority"); *see also* Marshall Field & Co. v. Clark, 143 U.S. 649, 694 (1892) ("There are many things upon which wise and useful legislation must depend which cannot be known to the law making power, and must, therefore, be a subject of inquiry and determination outside of the halls of legislation."); 1 FRANK J. GOODNOW, COMPARATIVE ADMINISTRATIVE LAW 27–28 (1893) ("No legislature, however wise or far-seeing, can, with due regard for the interests of the people, which differ with the locality and change with the passage of time, regulate all the matters that need the regulation of administrative law.").

[90] *See* United States v. Grimaud, 220 U.S. 506, 517 (1911) ("From the beginning of the Government various acts have been passed conferring upon executive officers power to make rules and regulations — not for the government of their departments, but for administering the laws which did govern.").

[91] *See* Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst., 448 U.S. 607, 646 (1980) (ruling that courts should construe statutes to avoid open-ended delegations of legislative power); *see* Sunstein, *supra* note 88, at 316 (arguing that "certain canons of construction operate as nondelegation principles").

[92] This requirement, rooted in *J.W. Hampton, Jr., & Co. v. United States*, 276 U.S. 394, 409 (1928), is still occasionally litigated. *See, e.g.*, Whitman v. Am. Trucking Ass'ns, 531 U.S. 457, 472–76 (2001) (holding that Congress had articulated an "intelligible principle" when it granted the EPA the power to promulgate national ambient air quality standards).

scholar, once suggested that the grant of authority to the Treasury Department to adopt rules "needful . . . for the enforcement" of the Internal Revenue Code does not constitute a delegation of legislative rulemaking power, because such a sweeping grant lacks an intelligible principle.[93]

The intelligible principle argument, however, overlooks the fact that the content of an agency's legislative rulemaking will be constrained not only by the grant of rulemaking authority, but also by limitations in the relevant act's substantive provisions. The existence of this additional constraint on agency discretion, together with the Court's extreme reluctance to second-guess Congress regarding the degree of guidance that agencies should receive, probably means that any argument about ambiguous rulemaking grants based on the intelligible principle requirement would fail.[94]

Another nondelegation principle that is perhaps more helpful in interpreting ambiguous rulemaking grants is that an agency may not bind the public with the force of law unless Congress has delegated it the power to do so.[95] In our system of separation of powers, it has always been assumed that the President, members of the executive branch, and federal administrative agencies have no inherent power to make law.[96] By the late nineteenth century, courts had recognized a corollary to this principle: administrative agencies cannot make legislative rules absent a delegation of this power from Congress.[97]

---

93 *See* Surrey, *supra* note 78, at 557–58. For more discussion of Surrey's arguments, see *infra* pp. 574–75.

94 The Court has found the requisite intelligible principle lacking in only two statutes. *See* A.L.A. Schechter Poultry Corp. v. United States, 295 U.S. 495, 529–42 (1935); Pan. Ref. Co. v. Ryan, 293 U.S. 388, 414–20 (1935).

95 *See* Bowen v. Georgetown Univ. Hosp., 488 U.S. 204, 208 (1988) ("It is axiomatic that an administrative agency's power to promulgate legislative regulations is limited to the authority delegated by Congress."); Chrysler Corp. v. Brown, 441 U.S. 281, 302 (1979) ("The legislative power of the United States is vested in the Congress, and the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes."); 1 DAVIS & PIERCE, *supra* note 27, § 6.3, at 234 ("[A]n agency has the power to issue binding legislative rules only if and to the extent Congress has authorized it to do so.").

96 *See supra* note 20 and accompanying text.

97 *See, e.g.*, FRANK J. GOODNOW, THE PRINCIPLES OF THE ADMINISTRATIVE LAW OF THE UNITED STATES 326–27 (1905) ("[T]he general rule in this country is that the administrative authorities possess only the delegated ordinance power — that is, they may issue ordinances only where the power to issue such ordinances has been expressly given to them by the legislature."); Morris M. Cohn, *To What Extent Have Rules and Regulations of the Federal Departments the Force of Law*, 41 AM. L. REV. 343, 345 (1907) ("It has been held that heads of departments have no right, in the absence of statute, to make regulations upon a subject, so as to bind third persons.").

The understanding that a clear delegation is necessary before agencies can bind the public may be related to the rule, first set forth in the nineteenth century, that a municipality cannot act

One historically significant manifestation of this understanding is *Interstate Commerce Commission v. Cincinnati, New Orleans, & Texas Pacific Railway Co.*,[98] the now largely-forgotten *Queen and Crescent Case*,[99] in which the Supreme Court held that the Interstate Commerce Commission (ICC) had no power to prescribe future railroad rates.[100] The Interstate Commerce Act of 1887[101] unquestionably gave the ICC the power to determine whether current rates were reasonable.[102] But the Act contained only a narrow grant of procedural rulemaking authority.[103] The Court held that the power to adjudicate whether rates were reasonable could not be construed to imply the power to set future rates by rule,[104] because delegations of power to bind the public with the force of law are "never to be implied."[105] The Court noted that whether Congress had given the ICC the power to set future rates had "been most strenuously and earnestly debated" by the parties,[106] and concluded that because the question was debatable, the Act had to be construed as not implying that power.[107]

---

unless authorized to do so by the state of which it is a part. John F. Dillon explained the rule, which became known as "Dillon's Rule," as follows:

> It is a general and undisputed proposition of law that a municipal corporation possesses and can exercise the following powers, and no others: First, those granted in express words; second, those necessarily or fairly implied in or incident to the powers expressly granted; third, those essential to the declared objects and purposes of the corporation, — not simply convenient, but indispensable.

1 JOHN F. DILLON, COMMENTARIES ON THE LAW OF MUNICIPAL CORPORATIONS § 89, at 145 (4th ed. 1890).

98 167 U.S. 479 (1897).

99 The *Queen and Crescent Case*, evidently referring to the nicknames of Cincinnati and New Orleans, two principal cities that the railroad served, was the name that some contemporary commentators gave the case. *See, e.g.*, ERNST FREUND, ADMINISTRATIVE POWERS OVER PERSONS AND PROPERTY 148 (1928).

100 *See The Queen and Crescent Case*, 167 U.S. at 506.

101 Ch. 104, 24 Stat. 379 (repealed 1978).

102 *See The Queen and Crescent Case*, 167 U.S. at 505–07.

103 *See* Interstate Commerce Act, § 17, 24 Stat. at 386 ("Said Commission may, from time to time, make or amend such general rules or orders as may be requisite for the order and regulation of proceedings before it . . . .").

104 *See The Queen and Crescent Case*, 167 U.S. at 509.

105 *Id.* at 494.

106 *Id.*

107 *See id.* at 509. Two other prominent nondelegation decisions of this era also emphasized the importance of an express delegation of power to act with the force of law. In *Marshall Field & Co. v. Clark*, 143 U.S. 649 (1892), the Supreme Court upheld a delegation of power to the President to suspend certain portions of the Tariff Act of 1890. *See id.* at 680–94. The Court emphasized that one important factor in reaching this result was that Congress, not the President, had fixed the standard and declared that the President should ascertain when that standard had been met. *See id.* at 692–93. Similarly, in *Buttfield v. Stranahan*, 192 U.S. 470 (1904), the Court upheld the Secretary of the Treasury's power to set standards for imported tea. *Id.* at 496. The Court again stressed that it was Congress, not the Secretary, that had declared it unlawful to import any tea falling below the Secretary's standards. *See id.* An Attorney General's opinion pub-

The *Queen and Crescent Case* suggests a nondelegation canon in the form of an "express statement" rule: all grants of rulemaking authority confer only housekeeping powers, unless Congress expressly confers the power to make legislative rules.[108] Such a rule, if consistently followed, would eliminate any disputes about the extent of ambiguous rulemaking grants. Unless Congress states in the text of the grant that agency rules will have the "force of law," or includes other words to that effect, the grant authorizes only interpretive and procedural rules. But the *Queen and Crescent Case* is the only time the Court suggested such an express statement rule.[109] For whatever reason, the *Queen and Crescent Case* and its maxim that legislative rulemaking power is "never to be implied" were soon forgotten.[110]

A similar but less draconian canon would insist not on an express statement, but only on some clear expression of congressional intent to confer power to act with the force of law. A number of decisions, including some of fairly recent vintage, contain language consistent with this proposition.[111] The difference between a "clear intent" rule and the ordinary rule that statutes should be given the meaning that Congress more likely than not intended is rather hazy. Presumably, under a clear intent rule, something more than a preponderance of the evidence is required to find a delegation of power.[112] Under the clear intent version of the canon, courts would construe ambiguous rulemaking grants to authorize only nonlegislative rules unless the ordinary tools of statutory interpretation — including, of course, the language

---

lished in 1904 read these decisions as resting on the proposition that only Congress can declare what action has the force of law:

> In [*Marshall Field*] it was specifically declared [by Congress] that the free importation of certain articles *should be suspended* upon a certain contingency, to be ascertained by the President; in [*Stranahan*], that it *should be unlawful* to import any merchandise or tea below the standards directed to be fixed by the Secretary of the Treasury.

25 OFFICIAL OPINIONS OF THE ATTORNEYS-GENERAL OF THE UNITED STATES 249, 254 (John L. Lott & James A. Finch eds., 1906).

[108] An "express statement" rule would require an affirmative statement in the text of the statute. In contrast, what this Article calls a "clear intent" rule would merely require a clear manifestation of legislative intent in view of the totality of the statutory context. *See* Merrill & Hickman, *supra* note 43, at 888. On the nature of clear statement rules more generally, including both express statement and clear intent rules, see William N. Eskridge, Jr. & Philip P. Frickey, *Quasi-Constitutional Law: Clear Statement Rules as Constitutional Lawmaking*, 45 VAND. L. REV. 593 (1992).

[109] Perhaps the case owes its singularity to the fact that Congress soon overruled the specific result by giving the ICC power to prescribe future rates. *See infra* note 150 and accompanying text.

[110] A LEXIS search reveals that the *Queen and Crescent Case* has been cited by the Supreme Court only three times since 1933.

[111] *See* cases cited *supra* note 95. This Article argues that the Court's decisions in *United States v. Eaton*, 144 U.S. 677 (1892) and *United States v. Grimaud*, 220 U.S. 506 (1911), rest implicitly on such a clear intent canon. *See infra* section II.B, pp. 499–503.

[112] *See* Gary Lawson, *Proving the Law*, 86 NW. U. L. REV. 859, 890–91 (1992).

and structure of the act — clearly reveal that Congress intended to confer legislative rulemaking authority.[113]

3. The Petroleum Refiners *Canon.* — A third potentially relevant canon lacks the pedigree of either the rule of lenity or the nondelegation doctrine. For want of a better term, this Article calls it the *Petroleum Refiners* canon, after the leading federal appellate opinion that adopted this approach.[114] The *Petroleum Refiners* canon provides that ambiguous grants of rulemaking authority should be construed to give agencies the broadest possible powers, so that they will have flexibility in determining how to effectuate their statutory mandates. In contrast to the nondelegation canons, this canon derives not from fundamental principles of separation of powers but from pragmatic considerations, including the convenience of allowing agencies to make legislative rules on all matters properly within their jurisdiction. The *Petroleum Refiners* canon thus bears an affinity with the Supreme Court's pronouncement in *SEC v. Chenery Corp.*[115] that agencies should be free to choose between rulemaking and adjudication in determining how to formulate policy.[116] *Chenery* itself presented no question about the meaning of an ambiguous rulemaking grant.[117] Nevertheless, the *Chenery* doctrine is often invoked for the more general proposition that agencies should have discretion to choose the format in which they articulate policy. In this more general sense, the doctrine provides analogical support for the *Petroleum Refiners* canon.

While the Supreme Court has acknowledged the importance of construing rulemaking grants liberally so as not to "undermine the flexibility sought in vesting broad rulemaking authority in an administrative agency,"[118] it has never explicitly endorsed the *Petroleum Refiners* canon. As we shall see, however, two prominent federal courts of appeals have construed ambiguous rulemaking grants as conferring legislative rulemaking authority, and these opinions can be read as embracing the *Petroleum Refiners* canon.[119] In effect, these courts have adopted the exact opposite of the *Queen and Crescent Case*

---

113 Section 558(b) of the APA, which provides that "[a] sanction may not be imposed or a substantive rule or order issued except within jurisdiction delegated to the agency and as authorized by law," 5 U.S.C. § 558(b) (2000), supports such a canon. *See also infra* pp. 525–26 (discussing the significance of § 558(b) in light of the convention discussed in Part III).

canon: ambiguous grants confer legislative rulemaking power unless Congress has expressly limited the grant to interpretive or procedural rulemaking.

* * *

In sum, given their ambiguous language, the uncertain implications of structural arguments, and the unavailability of conflicting canons, the meaning of ambiguous rulemaking grants is often debatable if they are examined through a purely textual lens. This Article, therefore, turns to a consideration of what history teaches about the meaning of such grants.

III. THE CONVENTION CREATED

Although grants of authority allowing agencies to adopt "rules and regulations" appear to be facially ambiguous concerning whether they authorize rules having the force of law, the history of rulemaking during the Progressive and New Deal eras reveals that key participants in the legislative process did not regard such grants as ambiguous. Starting around World War I, Congress began following a convention for indicating whether an agency had the power to promulgate legislative rules. Under this convention, the requisite textual signal was provided by the inclusion of a separate provision in the statute attaching "sanctions" to the violation of rules and regulations promulgated under a particular rulemaking grant. If the statute prescribed a sanction, then the authority to make "rules and regulations" included the authority to adopt legislative rules having the force of law. If the statute did not include a sanction, the authority to make "rules and regulations" encompassed only interpretive or procedural rules.

The "sanctions" took various forms.[120] The clearest case, of course, was when Congress imposed criminal or monetary civil penalties on

---

[120] During the relevant time period, the required legal consequences were generally referred to as "sanctions," but the concept of a "sanction" was given a meaning broader than criminal or civil monetary penalties. This understanding accords with the APA, adopted in 1946, which defined "sanction" as follows:

> "[S]anction" includes the whole or a part of an agency —
> (1) prohibition, requirement, limitation, or other condition affecting the freedom of any person;
> (2) withholding of relief;
> (3) imposition of any form of penalty or fine;
> (4) destruction, taking, seizure, or withholding of property;
> (5) assessment of damages, reimbursement, restitution, compensation, costs, charges, or fees;
> (6) requirement, revocation, or suspension of a license; or
> (7) taking other compulsory or restrictive action.

Ch. 324, § 2, 60 Stat. 237, 238 (1946) (codified as amended at 5 U.S.C. § 551 (2000)).

persons who violated an agency's regulations.[121] On other occasions, however, the sanctions might take the form of the forfeiture or destruction of property,[122] the revocation of licenses,[123] or the denial of benefits.[124] In contrast, if the statute was silent regarding the legal consequences for failure to conform to regulations, it was understood as granting the agency the power to make only housekeeping rules.[125]

This convention can be seen as resting on two propositions that participants in the legal system widely shared in the first half of the twentieth century. The first is that "law" means roughly what John Austin defined it to mean: general commands backed by the threat of sanctions.[126] In other words, law — as distinguished from moral norms or principles of justice — is a directive enforced by the infliction of punishment or the imposition of other material sanctions by the state.[127] The second proposition is that only the legislature, as opposed to the executive and the judiciary, has the power to determine when directives will be given the force of law. This principle, of course, is

---

[121] *See, e.g.*, Federal Water Power Act, ch. 285, § 25, 41 Stat. 1063, 1076 (1920) (repealed 1935) (attaching criminal penalties to violations of the Federal Power Commission's rules and regulations).

[122] *See, e.g.*, Tea Importation Act, ch. 358, § 6, 29 Stat. 604, 606 (1897) (repealed 1996) (providing for the destruction of impure tea that falls below the standards set by the Secretary of the Treasury if the owner fails to export such tea outside of the United States within six months of the examination).

[123] *See, e.g.*, Warehouse Act, ch. 313, pt. C, § 25, 39 Stat. 486, 490 (1916) (codified as amended at 7 U.S.C. § 252(a) (2000)) (providing that the Secretary of Agriculture may suspend or revoke any warehouseman's license for any violation of the rules and regulations made under the Act); Grain Standards Act, ch. 313, pt. B, § 7, 39 Stat. 482, 484 (1916) (codified as amended at 7 U.S.C. § 85) (providing for the suspension or revocation of any grain inspector's license for any violation of the rules and regulations made under the Act).

[124] *See, e.g.*, Social Security Act Amendments of 1939, ch. 666, § 205(a), 53 Stat. 1360, 1368.

[125] *See, e.g.*, Federal Trade Commission Act, ch. 311, § 6(g), 38 Stat. 717, 722 (1914) (codified as amended at 15 U.S.C. § 46(g) (2000)) (declaring that the FTC has the power "to classify corporations and to make rules and regulations for the purpose of carrying out the provisions of this Act" but providing no sanctions for the violation of those rules and regulations).

[126] *See* JOHN AUSTIN, THE PROVINCE OF JURISPRUDENCE DETERMINED 13–15 (Prometheus ed. 2000) (1832).

[127] As one authority put it:

> A rule of conduct which lacks a means of enforcement is not an expression of the will so much as of the mere wish of the state; and such a rule, if not enforceable by legal processes, should not even be graced with the title of a law of imperfect obligation.

HART, *supra* note 20, at 28. On the continuity between Austin's command theory and the tenets of the Langdellian legal formalism of the late nineteenth and early twentieth centuries, see ANTHONY J. SEBOK, LEGAL POSITIVISM IN AMERICAN JURISPRUDENCE 83–104 (1998). Up until the middle of the twentieth century, jurisprudential writings demonstrate a continuing emphasis on the importance of sanctions in identifying those directives that can be said to have the force of law. *See, e.g.*, EDWIN W. PATTERSON, AN INTRODUCTION TO JURISPRUDENCE 119–26 (2d ed. 1946). Only later did conceptions of law as having obligatory force without regard to sanctions gain currency. *See* H.L.A. HART, THE CONCEPT OF LAW 86–88 (1st ed. 1961) (discussing the "internal aspect of rules," which leads to obedience to law without regard to sanctions being imposed for noncompliance).

the version of the nondelegation doctrine that underlies the *Queen and Crescent Case*: agencies have no inherent authority to act with the force of law and can exercise such power only if Congress has delegated it to them.[128]

Combined, the first and second propositions produce the convention: First, under the Constitution, only Congress has the authority to specify when an agency can act with the force of law (the nondelegation proposition). Second, agencies act with the force of law only when their rules are backed by sanctions (the Austinian proposition). Consequently, Congress can indicate whether agencies have the authority to act with the force of law by specifying whether the rules they promulgate will be backed by sanctions.

The convention did not emerge full-blown at any one moment. Rather, it gradually developed around the second decade of the twentieth century as Congress created new administrative entities and considered what kind of rulemaking authority to give them. Moreover, as we shall see, the convention was never explicitly memorialized in an authoritative text, such as a statute, a legislative drafting guide, or a prominent judicial decision. It remained part of the unwritten "common law" of legislative drafting in the first half of the twentieth century. Accordingly, the only way to establish the existence of the convention is to examine a significant number of regulatory statutes and their associated legislative histories, supplemented by contemporary writings by knowledgeable participants in the legislative and administrative processes.[129]

A. *Early History: The Diversity of Rulemaking Grants*

Although it was originally thought that Congress could not delegate powers that were "strictly and exclusively legislative,"[130] congressional grants of rulemaking power actually began in the first session of Congress. The twenty-fourth statute enacted in 1789 provided that the

---

128 *See supra* pp. 490–91.

129 A note about our method of identifying facially ambiguous rulemaking grants is appropriate at this juncture. We began by identifying and analyzing numerous nineteenth- and early twentieth-century regulatory statutes, which we located through a variety of sources, including case law, legal articles and books about rulemaking, and by scanning the United States Code's Popular Name Table, which lists acts and the years in which they were enacted. We next identified those regulatory statutes that include facially ambiguous rulemaking grants and sought to determine whether there was any authority discussing whether these grants conferred legislative or merely housekeeping powers.

We did not systematically attempt to identify facially ambiguous rulemaking grants in statutes passed after the New Deal era; they undoubtedly number in the thousands. We did, however, encounter a number of these grants in the course of our research and we mention them in the Article when relevant.

130 Wayman v. Southard, 23 U.S. (10 Wheat.) 1, 42–43 (1825); *see also* Field v. Clark, 143 U.S. 649, 692 (1892).

United States government would continue to pay previously granted pensions for one year "under such regulations as the President of the United States may direct."[131] Similarly, a statute passed in the second session of the first Congress prohibited unlicensed trade with American Indian tribes, instructed the executive department to issue licenses to individuals engaged in trade with Indians, and provided that the licenses were to be "governed in all things touching the said trade and intercourse, by such rules and regulations as the President shall prescribe."[132]

From 1789 through most of the nineteenth century, delegations of rulemaking power generally ran to the President.[133] Occasionally, however, such grants ran to other officers. For example, in 1813 Congress passed a tax assessment and collection act that gave the Secretary of the Treasury the power to "establish regulations suitable and necessary for carrying this act into effect."[134] Notably, the statute expressly stated that these regulations "shall be binding on each assessor in the performance of the duties enjoined by or under this act."[135] About the same time, Congress passed an act involving taxation of foreign commerce in which it declared that "the Secretary of the Treasury shall give such directions to the collectors, and prescribe such rules and forms to be observed by them, as may appear to him proper for attaining the objects of this act."[136]

Whereas early rulemaking grants were largely confined to military, foreign affairs, tax, and internal government matters, Congress in the late nineteenth century began to legislate over a wider range of activities, including the control and disposition of federal lands and the regulation of interstate commerce. Practical realities necessitated that the officers administering these statutes adopt implementing regula-

[132] Act of July 22, 1790, ch. 33, 1 Stat. 137, 137.

[133] For a thorough study of the early delegations of administrative rulemaking power, see JOHN PRESTON COMER, LEGISLATIVE FUNCTIONS OF NATIONAL ADMINISTRATIVE AUTHORITIES 50 (1927). Comer divides the history of rulemaking into four periods: (1) 1789–1824; (2) 1825–1860; (3) 1861–1890; and (4) 1891–1926. He reports that:

> [T]he legislature was inclined to share the burden of legislation with the Executive often during the first period; that this practice continued to some extent during the second; that Congress was liberal in delegating discretion during the third period; and that during the fourth period the practice was generally established. Furthermore, . . . although the President received a major portion of all delegated legislation during the first three periods, a division of labor was appearing in the administrative branch of the government and the basis for practically all legislative powers exercised at the present time by the major departments was being laid.

tions.[137] Not surprisingly, therefore, Congress became increasingly willing to transfer rulemaking authority to the agencies it was creating.[138]

Some of the statutes enacted by Congress expressly indicated that the regulations promulgated under their authority would have the "force of law."[139] In 1871, for example, Congress passed an act involving the safety of vessels that gave a supervising board the power to "establish all necessary rules and regulations required to carry out in the most effective manner the provisions of this act for the safety of life, which rules and regulations, when approved by the Secretary of the Treasury, shall have the force of law."[140] Similarly, in 1870, Congress passed an internal revenue act that gave the Secretary of the Treasury the power to make "all needful rules and regulations, not inconsistent with law, to be observed in the execution of this act, which shall have the force and effect of law."[141]

Other statutes did not explicitly state that agency rules and regulations would have the force of law, but their context implied this conclusion. In the Timber and Stone Act of 1878,[142] for example, Congress authorized citizens in western states and territories to cut timber on public land. Section 1 of the Act authorized the Secretary of the Interior to prescribe rules and regulations "for the protection of the tim-

137 *See* Marshall Field & Co. v. Clark, 143 U.S. 649, 694 (1892) ("There are many things upon which wise and useful legislation must depend which cannot be known to the law making power, and, must, therefore, be a subject of inquiry and determination outside of the halls of legislation." (quoting *Commonwealth ex rel. McClain v. Locke*, 72 Pa. 491, 499 (1873)) (internal quotation marks omitted)). *See generally* 1 FRANK J. GOODNOW, COMPARATIVE ADMINISTRATIVE LAW 27–28 (1897) ("The needs of the government make it necessary that many details in the law be fixed less permanently than by statute. No legislature, however wise or far-seeing, can, with due regard for the interests of the people, which differ with the locality and change with the passage of time, regulate all the matters that need the regulation of administrative law.").

138 *See* COMER, *supra* note 133, at 51.

139 Congress's use of the "force of law" language during these years may have been influenced by court decisions holding that internal governmental regulations, navy regulations, and military regulations made pursuant to acts of Congress had the "force of law." *See, e.g.*, Gratiot v. United States, 45 U.S. (4 How.) 80, 117 (1846) (holding that the army regulations at issue had the "force of law"); *see also Ex Parte* Reed, 100 U.S. 13, 22 (1879) (extending the holding of *Gratiot* to navy regulations); *In re* Major William Smith, 23 Ct. Cl. 452, 459 (1888) (holding that army regulations may have the "force of law"); BRUCE WYMAN, THE PRINCIPLES OF THE ADMINISTRATIVE LAW GOVERNING THE RELATIONS OF PUBLIC OFFICERS 285 (1903) (stating that regulations dealing with administration within the executive branch are "usually summed up in the ordinary decision by the statement that these regulations have the force of law"); *cf.* United States v. Ormsbee, 74 F. 207, 210 (E.D. Wis. 1896) (holding that regulations made by the Secretary of War involving access to water on the government's land had the "force of law" when Congress expressly prohibited any use of the water "unless approved and authorized by the secretary of war").

140 Act of Feb. 28, 1871, ch. 100, § 23, 16 Stat. 440, 449. The Supreme Court in 1908 pointed to the "force of law" language in this statute in holding that regulations promulgated under the Act were entitled to the force and effect of law. *See* La Bourgogne, 210 U.S. 95, 132 (1908).

141 Act of July 14, 1870, ch. 255, § 34, 16 Stat. 256, 271.

142 Ch. 150, 20 Stat. 88.

ber and of the undergrowth growing upon such lands, and for other purposes."[143] Section 3 specified that any person violating the provisions of the Act or any rules and regulations made under it would face potential criminal charges, imprisonment, and a fine of up to $500.[144] Consequently, even though Congress never expressly declared that the rules and regulations would have the "force and effect of law," the unmistakable effect of the Act was to give the Secretary of the Interior the authority to bind persons with the force of law.

The Tea Importation Act of 1897,[145] which sought to regulate the quality of tea imported into the United States, provides another example of Congress implicitly endowing agency rules with the force of law. Section 3 of the Act gave the Secretary of the Treasury the power to establish uniform standards for tea purity, quality, and fitness.[146] Section 5 provided that any tea falling below the uniform standards set by the Secretary could not be released from the customs house unless it met those standards upon reexamination.[147] In other words, Congress conditioned the right to import tea on compliance with the Secretary of the Treasury's regulations, effectively giving these regulations the force of law.[148]

By contrast, other statutes, exemplified by the landmark Interstate Commerce Act of 1887 (ICA),[149] included rulemaking grants that were expressly limited to matters of agency procedure and organization. Section 17 of the ICA gave the ICC the general power to "make or amend such general rules or orders *as may be requisite for the order and regulation of proceedings before it*, including forms of notices and the service thereof, which shall conform, as nearly as may be, to those in use in the courts of the United States."[150]

[143] *Id.* § 1, 20 Stat. at 88.

[144] *Id.* § 3, 20 Stat. at 89.

[145] Ch. 358, 29 Stat. 604 (repealed 1996).

[146] *Id.* § 3, 29 Stat. at 605. This delegation of legislative rulemaking power to the Secretary of the Treasury to determine tea standards was challenged in *Buttfield v. Stranahan,* 192 U.S. 470 (1904), but the Supreme Court upheld the statute, concluding that Congress fixed "a primary standard, and devolved upon the Secretary of the Treasury the mere executive duty to effectuate the legislative policy declared in the statute." *Id.* at 495.

[147] Tea Importation Act of 1897, § 5, 29 Stat. at 606.

[148] In contrast, section 10 of the Act gave the Secretary of the Treasury general rulemaking powers, authorizing him to "enforce the provisions of this Act by appropriate regulations." *Id.* § 10, 29 Stat. at 607. The Act was silent as to the effect of the regulations promulgated under this section.

[149] Ch. 104, 24 Stat. 379 (repealed 1978).

[150] *Id.* § 17, 24 Stat. at 386 (emphasis added). In 1889, Congress added a provision to the Act that gave the ICC the power "to execute and enforce the provisions of this act." Amendments to the Interstate Commerce Act, ch. 382, § 3, 25 Stat. 855, 858 (1889). This added provision made no mention of executing and enforcing the Act through rules and regulations; it simply gave the ICC the power "to execute and enforce" the Act. *Id.* In 1906 the ICA was amended by the Hepburn Act to give the ICC specific power to establish maximum rates by rule. *See* Hepburn Act, ch.

B. *The Importance of* Eaton *and* Grimaud

The increased use of rulemaking toward the end of the nineteenth century gave rise to two Supreme Court decisions that provided the impetus for a more uniform understanding about the proper form of rulemaking grants. No question was presented in either case about the meaning of a facially ambiguous rulemaking grant. Rather, the issue before the Court in both cases was one of authority: whether the federal government could impose criminal sanctions upon an individual for violating rules of conduct set forth in a regulation adopted by an agency pursuant to delegated authority. The Court's eventual answer focused on whether Congress had expressly provided by statute that those who violate a rule of conduct set forth in a regulation can be criminally punished. This response suggested a logical way of differentiating between delegations of legislative and nonlegislative authority. By specifically providing for the imposition of sanctions for the violation of a given regulation, Congress resolved any question of authority and also sent an unambiguous signal of its intent that the resulting rules have the force of law.

In *United States v. Eaton*,[151] the Court considered whether a wholesale oleomargarine dealer could be held criminally liable for failing to conform to a regulation, promulgated under the Oleomargarine Act, that required such dealers to keep books of receipts and disposals and to make returns to the Commissioner of Internal Revenue. Section 20 of the Act authorized the Commissioner to make "all needful regulations" for carrying out the Act's provisions.[152] The government argued that the prosecution was justified by section 18 of the Act, which made it a criminal offense for any manufacturer or distributor of oleomargarine to fail to do anything "required by law in the carrying on or conducting of his business."[153] The government urged that the regulation adopted by the Commissioner under section 20 created

3591, § 4, 34 Stat. 584, 589 (1906). This provision of the Hepburn Act overruled the holding in the *Queen and Crescent Case*, 167 U.S. 479 (1897), described *supra* pp. 490–91. *See* ROBERT E. CUSHMAN, THE INDEPENDENT REGULATORY COMMISSIONS 70–74 (1941). The grant was further broadened in the Transportation Act of 1920, ch. 91, 41 Stat. 456, to permit the ICC to prescribe specific rates or maximum and minimum rates. *See id.* § 418, 41 Stat. at 484–85. Neither amendment, however, changed the provision in the original Act limiting the general rulemaking grant to rules of procedure.

[151] 144 U.S. 677 (1892). The case involved a prosecution under the Oleomargarine Act, a statute designed to protect the dairy industry from competition from oleomargarine. *See* Geoffrey P. Miller, *Public Choice at the Dawn of the Special Interest State: The Story of Butter and Margarine*, 77 CAL. L. REV. 83 (1989).

[153] *Id.* at 686.

duties that were "required by law," and hence fell within the terms of the general prohibition of section 18.[154]

The Court rejected this contention. Relying on a blend of nondelegation and lenity precepts, the Court stated that the prosecution violated the principle that "a sufficient statutory authority should exist for declaring any act or omission a criminal offence."[155] Although Congress had made it a criminal offense to neglect to do a thing "required by law," Congress had not expressly made it a criminal offense to neglect to do a thing required only by a regulation.[156] The Court did not hold that Congress could never make it a crime to violate a regulation adopted by an agency. It did suggest, however, that if such a delegation of legislative authority were ever to be permitted, Congress would have to speak "distinctly" in criminalizing failures to abide by agency regulations.[157]

Eaton established one thing that Congress could not do: it could not delegate to an agency the authority to issue regulations backed by criminal penalties without explicitly identifying the regulations that, if violated, would give rise to such penalties. It was unclear, however, whether the decision stood for the broader principle that it was impermissible to impose any type of legal consequence, criminal or civil, for the violation of a regulation that lacked the proper delegation of authority from Congress.[158] The answer would depend on whether subsequent courts read *Eaton* as being grounded primarily in the doctrine of lenity, and hence limited to criminal sanctions, or whether they read it as being grounded in broader principles of nondelegation.

For nearly two decades, it remained uncertain whether Congress could delegate authority to an agency to adopt regulations that would give rise to criminal sanctions.[159] The Court finally resolved the ques-

---

155 *Id.* at 688.

156 *Id.*

157 *See id.*

158 At least one case decided in the early twentieth century applied *Eaton* outside the criminal context. *See* Van Lear v. Eisele, 126 F. 823, 828 (E.D. Ark. 1903) ("It is true, in the case at bar the rules do not make the acts of a physician not registered a criminal offense; still, so far as the complainant is concerned, the statute is highly penal, for it deprives him of a valuable right — the right to practice the profession, which, under the laws of the state where he seeks to exercise this right, he is permitted to do.").

159 In 1897, the Court reaffirmed *Eaton* but distinguished the case before it in finding the regulation valid and upholding the prosecution. *See In re* Kollock, 165 U.S. 526, 533 (1897). On the question whether Congress could make violations of regulations criminal offenses with a sufficiently clear delegation, the lower courts were divided. *Compare* Dastervignes v. United States, 122 F. 30, 33–35 (9th Cir. 1903) (holding that violation of an administrative regulation *can* constitute a criminal offense), United States v. Rizzinelli, 182 F. 675, 678, 684 (D. Idaho 1910) (same), United States v. Moody, 164 F. 269, 271 (W.D. Mich. 1908) (same), United States v. Ormsbee, 74 F. 207, 208–09 (E.D. Wis. 1896) (same), *and* United States v. Breen, 40 F. 402, 403–04 (E.D. La. 1889) (same), *with* United States v. Matthews, 146 F. 306, 310 (E.D. Wash. 1906) (holding that a broad

tion in the 1911 case of *United States v. Grimaud*.[160] The defendants were criminally charged with grazing sheep on a forest reservation without a permit.[161] The Secretary of Agriculture had promulgated the permit requirement under authority given by the Forests Reserve Act to "make such rules and regulations and establish such service as will insure the objects of such reservation[s]."[162] The Act further provided that "any violation of the provisions of this Act *or such rules and regulations* shall be punished as is provided for [in section 5388 of the Revised Statutes]."[163]

The defendants argued that Congress could never delegate to an executive agency the power to adopt rules and regulations punishable by criminal sanctions. The Supreme Court disagreed. In contrast to *Eaton*, which had rested on a blend of nondelegation and lenity reasoning, the Court in *Grimaud* framed its analysis exclusively in terms of whether the delegation was permissible. The Court read the history of the nondelegation doctrine to mean that:

> [W]hen Congress [has] legislated and indicated its will, it [can] give to those who were to act under such general provisions "power to fill up the details" by the establishment of administrative rules and regulations, the violation of which [can] be punished by fine or imprisonment fixed by Congress, or by penalties fixed by Congress or measured by the injury done.[164]

Eaton was readily distinguished because that case had ruled that "while a violation of the regulations might have been punished as an offense if Congress had so enacted, it had, in fact, made no such provision so far as concerned the particular charge then under consideration."[165] The present case was entirely different: "[T]he very thing which was omitted in the Oleomargarine Act has been distinctly done in the Forest Reserve Act, which, in terms, provides that 'any violation of the provisions of this act or such rules and regulations of the Secretary shall be punished . . . .'"[166]

Grimaud thus established what Congress could do: it could delegate power to an agency to adopt regulations subject to criminal penalties,

---

criminalization of any violations of regulations to be set by the Secretary of the Interior represented an invalid delegation of legislative authority), *and* United States v. Blasingame, 116 F. 654, 654 (S.D. Cal. 1900) (same).

provided that Congress itself legislated the penalties.[167] Moreover, because criminal sanctions are the most severe type of sanction for violating an agency regulation, there was little doubt after *Grimaud* that Congress could provide other types of sanctions for violating agency regulations as well. In other words, *Grimaud* established that Congress can delegate authority to agencies to promulgate regulations that have a variety of legal consequences — as long as Congress itself spells out by statute what those consequences are.

Neither *Eaton* nor *Grimaud* spoke directly to the question of how facially ambiguous rulemaking grants should be interpreted.[168] Nevertheless, the decisions established points of reference that Congress could use in signaling whether particular grants authorized rules and regulations having the force of law. If Congress specifically provided that the violation of a regulation would result in the imposition of sanctions, such as criminal penalties, then the rule would have the force of law (*Grimaud*). If Congress did not so provide, an agency could not enforce the rule with criminal penalties (*Eaton*), and it was doubtful whether it could be enforced with any type of civil sanction.[169] Both cases assumed that the place to look for determining whether a regulation has the force of law is the statute that delegated rulemaking power to the agency. This understanding, of course, was consistent with the version of the nondelegation principle underlying the *Queen and Crescent Case*, which the Court decided during the same era:[170] executive officers and agencies can act with the force of law only if Congress has delegated to them the power to do so.

After *Grimaud*, cases involving administrative rules and regulations appeared before the Court on occasion. Some of these decisions recognized the distinction between legislative and nonlegislative rules, and they reflected the understanding that legislative rules are those that impose legal consequences on persons who violate them.[171] More

---

[167] *See, e.g.*, McKinley v. United States, 249 U.S. 397 (1919) (upholding the constitutionality of convictions for violating regulations that the Secretary of War issued under delegated authority in which Congress prescribed the sanctions for rule violations).

[168] Significantly, however, in a case decided shortly after *Grimaud*, the Court dismissed out of hand the contention that either the Housekeeping Act, 5 U.S.C. § 301 (2000), or a general rulemaking grant given to the Commissioner of the General Land Office could serve as the source of a legislative rule. *See* United States v. George, 228 U.S. 14 (1913). Quoting these provisions in a footnote, the Court observed: "It will be seen that they confer administrative power only. . . . [A]nd certainly, under the guise of regulation legislation cannot be exercised." *Id.* at 20.

[169] One scholar explained the significance of both cases as follows: "[T]he court will not *presume* the intended policy of allowing the commission or delegate to inflict a penalty or create a new crime in any case; therefore the authority to do that must at least be clearly expressed in the statute." John B. Cheadle, *The Delegation of Legislative Functions*, 27 YALE L.J. 892, 918 (1918).

[170] *See supra* notes 99–109 and accompanying text.

[171] *See* AT&T v. United States, 299 U.S. 232 (1936) (holding that an FCC accounting rule had binding effect because Congress had delegated legislative rulemaking authority to the agency, and

than thirty years elapsed, however, before the Court decided a case implicating the authority of an agency to promulgate legislative rules based on a facially ambiguous rulemaking grant.[172] Congress, in the meantime, entered a period of unprecedented activity in terms of the delegation of rulemaking authority to administrative agencies.

C. The Convention Emerges

After *Eaton* and *Grimaud*, the structure of rulemaking grants in regulatory legislation assumed a much more uniform pattern. Express references to regulations having the "force of law," which were not infrequent in the nineteenth century,[173] became relatively rare, as did express qualifications limiting regulations to matters of procedure. Instead, "rules and regulations" became the standard refrain, but now Congress sometimes coupled the grant of authority to adopt rules and regulations with a specific provision imposing sanctions on rule violators, and sometimes it did not. The legislative histories of these statutes, to the extent they clarify the intended meanings of these grants, indicate that knowledgeable participants in the legislative process understood the presence or absence of a provision establishing a sanction for rule violations as the key variable differentiating legislative rulemaking grants from housekeeping ones. The convention that emerged, however, was most likely familiar only to staff attorneys working for Congress and for the agencies that Congress created. There is no evidence that knowledge of the convention extended to most members of Congress themselves, to the courts, or — at least during the early years of this formative period — to the commentators who began making note of the growing importance of rulemaking.[174]

---

the FCC had promulgated the rule within the scope of that authority); Ariz. Grocery Co. v. Atchison, Topeka & Santa Fe Ry. Co., 284 U.S. 370, 376–78 (1932) (holding that the ICC had no power to impose a sanction on a party for conduct that is "in direct conformity with the Commission's own prior valid legislative pronouncement"); Standard Computing Scale Co. v. Farrell, 249 U.S. 571, 574 (1919) (describing legislative regulations as those that "prescribe a course of action to be enforced by the power of the State"). Most notably, in *Columbia Broadcasting System, Inc. v. United States*, 316 U.S. 407 (1942), the Court discussed at some length the nature of rules that have the force of law. The specific holding was that such rules, when issued by the FCC, are subject to pre-enforcement judicial review under the Urgent Deficiencies Act. *Id.* at 417. The Court did not reach the issue of authority because the Communications Act of 1934 included a specific grant of authority to make the rules in question. *Id.* at 416.

[172] *See* Nat'l Broad. Co. v. United States, 319 U.S. 190 (1943), discussed *infra* pp. 529–32.

[173] *See supra* notes 139–141 and accompanying text.

[174] As rulemaking became increasingly common, commentaries began to catalog different kinds of rules and regulations and their legal effects. *See, e.g.*, COMER, *supra* note 133; FREUND, *supra* note 99, at 211–23; John A. Fairlie, *Administrative Legislation*, 18 MICH. L. REV. 181 (1920); Fred T. Field, *The Legal Force and Effect of Treasury Interpretation*, *in* THE FEDERAL INCOME TAX 91 (Robert Murray Haig ed., 1921). These commentators initiated the process of dividing rules into categories similar to those commonly employed today (for example, legislative or substantive, procedural, interpretive). But they had little or nothing to say about how agencies and courts

1. Progressive-Era Rulemaking Grants. — Not long after *Grimaud*, Congress enacted a statute with a facially ambiguous rulemaking grant that will play a large role in our story: the Federal Trade Commission Act of 1914 (FTCA).[175] The Act created the FTC to serve as both an adjudicatory and an investigative body. Section 5 set forth the FTC's quasi-judicial adjudicatory functions, including its power to file complaints, hold hearings, determine whether violations of the FTCA had occurred or were occurring, and issue cease and desist orders.[176] Section 6 set forth the investigative powers of the FTC, including its power to demand reports from corporations and to publish information deemed to be in the public interest.[177]

The FTCA contained only one reference to rules and regulations: section 6(g) provided that the FTC had the power "[f]rom time to time to classify corporations and to make rules and regulations for the purpose of carrying out the provisions of this Act."[178] The statute included no sanction for violations of such rules and regulations. In contrast, the Act empowered the FTC to bring suit to prevent violations of the Act[179] and set forth remedies for violations of the FTC's cease-and-desist orders.[180] The failure to provide any sanction for the violation of rules adopted under section 6(g), along with the placement of

should distinguish between grants of legislative authority and grants of merely procedural and interpretive authority. Particularly striking in this regard are Comer's rather hapless comments:

> [T]he terms of investment of rule-making power are not always so coupled with the law, or the subdivisions thereof, that the enforcing officer can readily see what his real power is. Thus, the general law of 1789, which gives to the heads of departments the power to prescribe rules and regulations not inconsistent with law, may or may not bestow upon the Secretary of the Treasury the authority to make rules and regulations for carrying out the provisions of the current income-tax law. A similar power bestowed specifically upon the Secretary of the Navy may or may not enable him to issue binding regulations for enforcing a particular policy entrusted to his care. A blank delegation of such power for enforcing the Packers Act may not give the Secretary of the Agriculture authority to promulgate rules for putting into effect specific provisions of that Act. . . . The officer must make the first guess and let the court determine whether such source is the correct one for effectuating the particular policy in question.

COMER, *supra* note 133, at 133–34. Comer, a political scientist at Williams College, evidently drew his knowledge of rulemaking primarily from documentary sources, including, of course, appellate opinions. Since these sources contained no reflection of the convention as of the time he wrote (1927), it is not surprising that he regarded the meaning of facially ambiguous rulemaking grants as essentially a mystery.

175 Ch. 311, 38 Stat. 717.

176 *Id.* § 5, 38 Stat. at 719–21 (codified as amended at 15 U.S.C. § 45 (2000)).

177 *Id.* § 6, 38 Stat. at 721–22 (codified as amended at 15 U.S.C. § 46).

178 *Id.* § 6(g), 38 Stat. at 722.

179 Congress empowered the FTC only to prevent violations of the Act, not of the rules and regulations promulgated under it. Section 5 declared the use of "unfair methods of competition in commerce" to be unlawful and gave the FTC the power to prevent violations. *Id.* § 5, 38 Stat. at 719.

180 Section 5 empowered the FTC to bring suit to enforce its cease and desist orders whenever any person failed to comply. *Id.* § 5, 38 Stat. at 719–20.

the rulemaking grant in section 6, which conferred the FTC's investigative powers, clearly suggests that Congress intended the rulemaking grant to serve as an adjunct to the FTC's investigative duties, regarding which Congress had not given the agency the authority to act with the force of law.

The legislative history of the Act supports the conclusion that the FTC's rulemaking grant did not confer legislative rulemaking authority.[181] Section 6(g)'s general rulemaking grant originated in the House Bill of 1914,[182] which conferred only investigative powers on the FTC, such as the power to require reports from corporations and to classify corporations.[183] In contrast, the bill that passed the Senate granted adjudicative and investigative powers[184] but included no rulemaking provision at all.[185] As a consequence, when the Conference Committee met, the only rulemaking provision under consideration was the one included in the House bill. Under established practices for reconciling bills in conference, the Committee could not have granted the FTC legislative rulemaking powers, because neither bill granted the agency such authority.[186]

Statements made during floor debates after the Conference Committee incorporated the rulemaking provision into the bill confirm that Congress did not intend section 6(g) to confer legislative authority. In response to questions about the scope of the FTC's powers, Representative Covington, a member of the Conference Committee, distinguished the powers given to the FTC from those delegated to the ICC under the Hepburn Act, which had given the ICC the power to prescribe future rates.[187] Covington stated that the "Federal Trade Com-

---

181 *See* Burrus & Teter, *supra* note 14, at 1124 ("The legislative history of the Federal Trade Commission Act compels the conclusion that Congress had no intention to confer any 'legislative' rulemaking power upon the Commission."); Glen E. Weston, *Deceptive Advertising and the Federal Trade Commission: Decline of Caveat Emptor*, 24 FED. B.J. 548, 570 (1964) ("There is simply no indication in the legislative history of intent to confer any such power and plenty of evidence of an intent not to empower the FTC to make 'legislative' rules.").

182 *See* S. DOC. NO. 63-573, at 15 (2d Sess. 1914) (comparing the House, Senate, and Conference versions of the bill).

183 *See id* at 11.

184 *See id.* at 7–9, 10–13.

185 *See id.* at 15.

186 *See* LORY BRENEMAN, SENATE MANUAL CONTAINING THE STANDING RULES, ORDERS, LAWS, AND RESOLUTIONS AFFECTING THE BUSINESS OF THE UNITED STATES SENATE, S. DOC. NO. 106-1, § 28.2, at 51 (1999) ("Conferees shall not insert in their report matter not committed to them by either House, nor shall they strike from the bill matter agreed to by both Houses.").

187 Hepburn Act, ch. 3591, § 4, 34 Stat. 584, 589 (1906). Representative Covington also stated:

> [T]here is no analogy between the power of the Interstate Commerce Commission under the Hepburn Act and the power of the Federal trade commission in regard to unfair competition. There is, however, a perfect analogy between the former power of the Interstate Commerce Commission under the Cullom Act and the power of the Federal trade commission. Under the Cullom Act the Interstate Commerce Commission had the

mission will have no power to prescribe the methods of competition to be used in the future."[188] In addition, he explained that the FTC, unlike the ICC, "will not be exercising power of a legislative nature" in issuing its orders.[189]

In subsequent years, the courts, Congress, the agency, and knowledgeable commentators all shared the understanding that section 6(g) did not confer legislative rulemaking power on the FTC. In a leading separation of powers decision, *Humphrey's Executor v. United States*,[190] the Supreme Court surveyed the powers of the FTC and concluded that it exercised only "quasi-legislative" and "quasi-judicial" functions. The principal "quasi-legislative" power the Court identified under section 6 was "making investigations and reports [on unfair forms of competition] for the information of Congress."[191] The Court did not mention the rulemaking grant in section 6(g), presumably because the litigants in the case — and the Court itself — assumed that this provision did not confer any power on the FTC to make legislative rules.

Similarly, the FTC described its own rulemaking power as excluding the authority to issue legally binding rules. In its 1922 *Annual Report*, for example, the FTC complained of the frequent confusion that existed over the extent of its authority:

> One of the most common mistakes is to suppose that the commission can issue orders, rulings, or regulations unconnected with any proceeding before it. It is frequently asked to do this, not only in a broad general way, but also to issue warnings to concerns alleged to be using unfair practices. . . . It is hoped, in time, to bring about a thorough understanding of the fact that the commission can not and will not function by any method not authorized in its organic act, whereby complete investigation, careful consideration, and, in short, due process of law and full respect for the moral and legal rights of both parties to controversies are assured.[192]

> power only to determine whether an existing rate was unreasonable, and, if it so found, to order the railroad to cease and desist from charging that rate. The Federal trade commission will have precisely similar power in regard to an existing method of competition.

51 CONG. REC. 14,932 (1914).

[188] *Id.*

[189] *Id.*

[190] 295 U.S. 602 (1935).

[191] *Id.* at 628.

[192] ANNUAL REPORT OF THE FEDERAL TRADE COMMISSION 36 (1922). Subsequent annual reports also support the conclusion that section 6(g) was confined to supplementing the FTC's investigative powers. *See* ANNUAL REPORT OF THE FEDERAL TRADE COMMISSION 81 (1925) (pointing to investigatory powers, under section 6, as the main basis for the work carried out by the economic division, which investigates general business conditions); *see also* George Rublee, *The Original Plan and Early History of the Federal Trade Commission*, 11 PROC. ACAD.

Lastly, the *Final Report* of the Attorney General's Committee on Administrative Procedure of 1941 reflects the same understanding.[193] The report, which was instrumental in leading to the APA, noted that "[r]elatively few of the administrative agencies studied by the Committee lack power to prescribe regulations for the control of activities which are subject to their authority."[194] But one of the agencies that the *Final Report* pointed to as lacking legislative rulemaking powers was the FTC.[195] Similarly, a monograph on the FTC prepared by the Attorney General's Committee on Administrative Procedure concluded that rules issued by the FTC should be called "advisory interpretations" rather than "rules," because "[n]othing in the statutes administered by the Commission makes any provision for the promulgation of rules applicable to whole industries."[196]

The Packers and Stockyards Act of 1921,[197] which regulated the meat packing industry, provides further evidence of the emergence of the drafting convention. The original House committee bill did not require either packers or stockyard operators to comply with any rules or regulations promulgated under the Act, nor did it include any general rulemaking grant.[198] By contrast, the Senate committee bill included a general rulemaking grant that unquestionably conferred legislative rulemaking authority. The bill declared that it was the "duty" of every packer and operator to comply with the Secretary's regulations and that conduct contrary to such regulations was "unlawful."[199] The bill also set forth the procedures for ordering a packer or operator to cease and desist from violating a regulation.[200]

During Senate floor debate, the provision of the Senate bill requiring that packers and stockyard operators comply with rules and regulations generated much discussion. Senator Stanfield criticized the provision, arguing that it gave the agency power to "practically enact a law under which the packer will become a criminal."[201] Similarly, Senator Wadsworth expressed concern that the agency might "issue[] a

POL. SCI. 666, 671 (1926). For Rublee, a drafter of the FTCA and one of the agency's first Commissioners, it was "perfectly clear" that the FTC had no authority to give advance advice about the legality of business practices, and he did not even mention the rulemaking grant. *Id.*

201 *Id.* at 2493.

rule or regulation which imposes an almost impossible condition of affairs upon a man engaged in one of these businesses."[202] Senator Norris defended the rulemaking provision, stating:

> I am one who has always looked with a jealous eye upon the granting of power to convict any man or establish a criminal offense for the violation of a rule or regulation that is not set out in the statute; but we can not set out here — no living man could set out here — every rule and every regulation that will be necessary to properly care for this big business.[203]

In the end, the bill that Congress passed into law reflected something of a compromise between the House and Senate views. The Act had four titles. Title I provided general definitions, Title II set forth the statutory provisions regulating packers, Title III regulated stockyards, and Title IV included the general provisions of the Act.[204] Title III subjected stockyard operators to penalties for violations of the rules and regulations promulgated by the Secretary under a specific rulemaking grant included in that title.[205] Title II, however, did not include a specific rulemaking grant with respect to the packers. In addition, Congress included a general rulemaking grant in Title IV, but no penalties were attached to this grant.[206] There is little doubt that the rulemaking grant in Title III was understood to confer power to adopt legislative rules. To be sure, the conferees deleted any reference to stockyard operators having a "duty" to comply with regulations or to violations of regulations being "unlawful." But the rulemaking grant in Title III was coupled with a provision imposing criminal sanctions for rule violations,[207] and was clearly understood to confer legislative rulemaking authority.

The critical question is what the members of the House and Senate understood the general rulemaking grant in Title IV to mean. This grant, unlike the one contained in Title III, contained no provision for sanctions for rule violations. Remarks by Senator Kenyon on the Senate floor explaining the compromise bill[208] indicate that Congress un-

---

[202] *Id.* at 2494.

[203] *Id.* at 2493.

[204] Packers and Stockyards Act, 1921, ch. 64, 42 Stat. 159.

[205] Section 306(a) required stockyard owners to file schedules of their rates with the Secretary, and section 306(b) gave the Secretary the power to prescribe the form, manner, and detail of the schedules. *See id.* § 306(a), (b), 42 Stat. at 164 (codified at 7 U.S.C. § 207 (2000)).

[206] *Id.* § 407, 42 Stat. at 169 (codified as amended at 7 U.S.C. § 228).

[207] The Secretary's rules regarding the schedules were given legislative effect by Congress in section 306(h), which provided that "[w]hoever willfully fails to comply with the provisions of this section or of any regulations or order of the Secretary made thereunder shall on conviction be fined not more than $1,000, or imprisoned not more than one year, or both." *Id.* § 306(a), (b), (h), 42 Stat. at 164–65 (codified at 7 U.S.C. § 207).

[208] *See* 61 CONG. REC. 4642 (1921) (noting "three amendments [including amendment 17, which provided that the Secretary may make rules and regulations] adopted by the Senate were

derstood the ambiguous grant in Title IV to authorize only procedural rules. He noted that this grant "gave the Secretary of Agriculture the right to establish rules and regulations *of procedure*," and characterized the provision as "not an especially important amendment."[209] The legislative history of the Packers and Stockyards Act thus offers an example of a grant coupled with sanctions understood to confer legislative power, combined with a grant lacking any provision for sanctions understood to authorize only housekeeping-type rules.

Congress also appeared to follow the convention when enacting subsequent statutes that created new agencies and delegated rulemaking power to them.[210] One prominent example is the Longshoremen's and Harbor Workers' Compensation Act of 1927.[211] As enacted, the Act included a general rulemaking grant[212] but made no provision for sanctions for rules adopted under the grant. The *Final Report* of the Attorney General's Committee of 1941 confirms that the statute did not confer legislative rulemaking power: it noted that the United States Employees' Compensation Commission, the administrative agency initially charged with implementing the Act, was one of the "[r]elatively few" agencies that lacked the power to prescribe regulations having the force and effect of law.[213]

2. *New Deal-Era Rulemaking Grants.* — With the advent of the New Deal, Congress increased the pace at which it created new agen-

---

retained in conference. On the remaining Senate amendments the Senate conferees were compelled to accede to the insistence of the House conferees").

209 *Id.* at 4643 (emphasis added).

210 For example, the Federal Water Power Act, passed in 1920, is consistent with the convention. *See* Federal Water Power Act, ch. 285, 41 Stat. 1063 (1920). Section 4(h) of the Act gave the Federal Power Commission general rulemaking powers, authorizing it to "perform any and all acts, to make such rules and regulations, and to issue such orders not inconsistent with this Act as may be necessary and proper for the purpose of carrying out the provisions of this Act." *Id.* § 4(h), 41 Stat. at 1067. Section 25 of the Act provided criminal penalties for violations of the Commission's rules and regulations, and section 26 granted the Attorney General the power to institute proceedings for the revocation of licenses whenever any licensee violated the rules or regulations of the Commission. *Id.* §§ 25–26, 41 Stat. at 1076.

211 Ch. 509, 44 Stat. 1424.

212 Section 39 provided: "Except as otherwise specifically provided, the United States Employees' Compensation Commission shall administer the provisions of this Act, and for such purpose the commission is authorized . . . to make such rules and regulations . . . as may be necessary in the administration of this Act." *Id.* § 39, 44 Stat. at 1442. The current version of the Act is substantially the same, except that the rulemaking grant runs to the Secretary of Labor. *See* 33 U.S.C. § 939(a) (2000).

213 *See* FINAL REPORT, *supra* note 29, at 98 n.18. The Act was amended in 1958 to give the Secretary of Labor power to issue safety regulations. *See* Longshoremen's and Harbor Workers' Compensation Act amendment, Pub. L. No. 85-742, § 41(a), 72 Stat. 835, 835 (1958) (codified as amended at 33 U.S.C. § 941(a) (2000)). The amended Act specifically made the violation of these regulations — unlike regulations issued under the original Act — an offense punishable by criminal fines. *Id.* § 41(f), 72 Stat. at 836 (codified as amended at 33 U.S.C. § 941(f)). Under the convention, therefore, the safety regulations were clearly legislative.

cies. There is no evidence, however, of any change in the convention for differentiating between legislative and housekeeping grants. For example, the Securities Act of 1933,[214] the Securities Exchange Act of 1934,[215] and the Motor Carrier Act of 1935[216] all contained facially ambiguous general rulemaking grants. In each case, these statutes also included provisions giving teeth to the rules promulgated under the acts — such as criminal penalties or fines — and empowered the agencies charged with administering the statutes to bring suit to enforce their rules and regulations. These statutes have always been regarded as conferring legislative rulemaking authority.[217]

---

[214] Ch. 38, 48 Stat. 74. Section 19(a) of the 1933 Act gave the SEC broad general rulemaking powers by authorizing it "from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this title." *Id.* § 19(a), 48 Stat. at 85 (codified as amended at 15 U.S.C. § 77s(a) (2000)). Congress gave teeth to the rules and regulations promulgated by the SEC through two statutory sections. First, section 20(b) gave the SEC the power to bring an action in any district court to enjoin acts or practices that constitute or will constitute a violation of the provisions of the Act, or any rule or regulations prescribed under the Act. *Id.* § 20(b), 48 Stat. at 86 (codified as amended at 15 U.S.C. § 77t). Second, section 24 provided that "[a]ny person who willfully violates any of the provisions of this title, or the rules and regulations promulgated by the Commission under authority thereof . . . shall upon conviction be fined not more than $5,000 or imprisoned not more than five years, or both." *Id.* § 24, 48 Stat. at 87 (codified as amended at 15 U.S.C. § 77x). According to the convention, these two statutory provisions indicate Congress's intent to give the SEC the authority to bind persons outside the agency with the force of law.

[215] Ch. 404, 48 Stat. 881. Section 23(a) provided that "[t]he Commission and the Federal Reserve Board shall each have power to make such rules and regulations as may be necessary for the execution of the functions vested in them by this title." *Id.* § 23(a), 48 Stat. at 901 (codified as amended at 15 U.S.C. § 78w(a)(1)). According to the convention, Congress indicated its intent to give legislative effect to these rules and regulations through two statutory provisions. First, section 21(e) gave the SEC the power to bring an action seeking to enjoin the violation of any rule or regulation promulgated under the Act. *Id.* § 21(e), 48 Stat. at 900 (codified as amended at 15 U.S.C. 78u). Second, section 32 set forth penalties for violations of any rules or regulations promulgated by the SEC. *Id.* § 32, 48 Stat. at 904–05 (codified as amended at 15 U.S.C. § 78ff).

[216] Ch. 498, 49 Stat. 543 (repealed 1983). Although the ICC was not given general rulemaking powers in the Interstate Commerce Act, ch. 104, 24 Stat. 379 (1887) (repealed 1978), section 204(a)(6) of the Motor Carrier Act gave the ICC general legislative rulemaking powers over motor carriers. *See* Motor Carrier Act, 1935, § 204(a)(6), 49 Stat. at 546. Section 204(a)(6) provided that the ICC has the power "[t]o administer, execute, and enforce all other provisions of this part, to make all necessary orders in connection therewith, and to prescribe rules, regulations and procedure for such administration." *Id.* Congress indicated its intent to give these rules and regulations legislative effect in sections 222(a) and (b). *See id.* § 222(a), 49 Stat. at 564 ("Any person knowingly and willfully violating any provision of this part, or any rule, regulation, requirement, or order thereunder, or any term or condition of any certificate, permit, or license, for which a penalty is not otherwise herein provided, shall, upon conviction thereof, be fined not more than $100 for the first offense and not more than $500 for any subsequent offense."); *id.* § 222(b), 49 Stat. at 564 ("If any motor carrier or broker operates in violation of . . . any rule, regulation, requirement, or order . . . the Commission or its duly authorized agent may apply to the district court of the United States for any district where such motor carrier or broker operates, for the enforcement of such provision of this part, or of such rule, regulation, requirement, order, term, or condition.").

[217] *See* FINAL REPORT, *supra* note 29, at 98–99.

The National Labor Relations Act (NLRA) of 1935,[218] by contrast, contained a facially ambiguous general rulemaking grant but lacked any textual signal indicating Congress's intent to attach legislative effect to such rules. Section 6(a) provided: "[t]he Board shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this Act."[219] However, the Act did not give the NLRB the power to enjoin or prosecute violations of the rules promulgated under this grant, nor did it provide any statutory penalties for nonconformance with the NLRB's rules and regulations. According to the convention, these omissions indicate that Congress did not intend to grant legislative rulemaking powers to the NLRB.

The legislative history of the NLRA substantiates this conclusion. Upon consideration of different versions of the bill, one Senator made a proposal to limit the NLRB's rulemaking powers under what became section 6(a) to such "*reasonable* rules and regulations as may be necessary to carry out the provisions of this Act."[220] However, the proposal was rejected because, according to a Senate memorandum, "[i]n no case do the rules have the force of law in the sense that criminal penalties or fines accrue for their violation, and it seems sufficient that the rules prescribed must be 'necessary to carry out the provisions' of the act."[221] The *Final Report* of the Attorney General's Committee of 1941 confirms this legislative history: it notes that the NLRB's "power to 'make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this chapter' has been assumed to extend only to matters of procedure."[222]

Perhaps the strongest evidence of the continued operation of the convention during the New Deal years appears in statutes that contain multiple rulemaking grants. Several important New Deal measures, including the Social Security Act of 1935,[223] the Walsh-Healey Act of

[223] Ch. 531, 49 Stat. 620.

1936,[224] and the Food, Drug, and Cosmetic Act of 1938,[225] share this trait.

As originally adopted in 1935, the Social Security Act contained both a general grant of rulemaking power and several more specific rulemaking grants.[226] Congress specified no legal consequences for violations of rules promulgated under the general grant. It was understood that this provision did not authorize legislative rules.[227] In contrast, the Act did attach sanctions to rules and regulations promulgated under specific rulemaking grants included in the statute,[228] and under the convention these would authorize legislative rules.[229]

The Walsh-Healey Act, which Congress enacted to regulate federal government contracts, also contained both a general rulemaking grant and specific, narrower rulemaking grants.[230] The Act gave the Secretary of Labor the "authority from time to time to make, amend, and

---

224 Ch. 881, 49 Stat. 2036.

225 Ch. 675, 52 Stat. 1040.

226 *See* Social Security Act, § 1102, 49 Stat. at 647 (setting forth, in Title XI concerning the "general provisions" of the Act, a grant giving the Secretary of the Treasury, the Secretary of Labor, and the Social Security Board the power to make rules and regulations "necessary to the efficient administration of the functions with which each is charged under this Act").

227 *See* FINAL REPORT, *supra* note 29, at 98 nn.18–19 (listing the Social Security Board as an example of an agency that was given the power to act via case-by-case adjudication but was "not given power to elaborate the law they apply by adopting general regulations").

228 For example, section 808 of Title VIII, which dealt with taxes with respect to employees, gave the Commissioner of Internal Revenue the power to "make and publish rules and regulations for the enforcement of this title." Social Security Act § 808, 49 Stat. at 638. Section 810(a) gave teeth to the rules and regulations promulgated under section 808 by subjecting anyone who:

> [B]uys, sells, offers for sale, uses, transfers, takes or gives in exchange, or pledges or gives in pledge, except as authorized in this title or in *regulations made pursuant thereto*, any stamp, coupon, ticket, book, or other device, prescribed by the Commissioner of Internal Revenue under section 807 for the collection or payment of any tax imposed by this title, shall be fined not more than $1,000 or imprisoned for not more than six months, or both.

Id. § 810(a), 49 Stat. at 638 (emphasis added).

229 In 1939, Congress adopted extensive amendments to the Social Security Act, including a new rulemaking grant. The new grant gave the Social Security Board "full power and authority to make rules and regulations." The rulemaking grant was facially ambiguous regarding whether it granted legislative, or merely interpretive, rulemaking authority. One provision of the amendments, however, mandated that when the Social Security Board denied a claimant benefits for failing "to submit proof in conformity with any regulation" issued under the general rulemaking grant, the court reviewing the denial of benefits "shall review only the question of conformity with such regulations and the validity of such regulations." Social Security Act Amendments of 1939, ch. 666, § 205(g), 53 Stat. 1360, 1370. In other words, the regulations, provided they were consistent with the Act, were to have legislative effect in determining eligibility for benefits. Because the statute specifically provided that a violation of a regulation could result in a sanction — denial of benefits — the new rulemaking grant authorized legislative rules under the convention.

230 Walsh-Healey Act, ch. 881, 49 Stat. 2036 (1936); *see, e.g.*, *id.* § 4, 49 Stat. at 2038 (codified as amended at 41 U.S.C. § 38 (2000)) (granting the Secretary of Labor the authority to "administer the provisions of this Act . . . and to prescribe rules and regulations with respect thereto"); *id.* § 1(b), 49 Stat. at 2036 (codified as amended at 41 U.S.C. § 35) (stating that the Secretary of Labor will determine the minimum wage).

rescind such rules and regulations as may be necessary to carry out the provisions of this Act."[231] The Act provided no sanctions for violations of the rules promulgated under this general grant. By contrast, rules and regulations issued pursuant to section 6, which authorized the Secretary to make rules setting reasonable "exemptions" from the minimum rate and maximum hour provisions of the Act,[232] are legislative according to the convention, because such exemptions necessarily would affect the conduct of contractors by exempting them from the Act's requirements.

Support for this conclusion appears in a monograph on the Act prepared in 1939 for the Attorney General's Committee on Administrative Procedure, which summarized the significance of the differing treatment of rules and regulations promulgated under sections 4 and 6 as follows:

> The rules and regulations made by the Secretary under section 6 have vitality because they affect the nature of the performance required of a contractor. For the rules and regulations under section 4, however, *no sanction* is provided; they have no dispositive effect, except in so far as they operate as controls upon the Division itself; as administrative interpretations of the statute they may be given respectful judicial consideration if the interpretations be contested in court actions, but they are not binding as acts of subordinate legislation having the force and effect of law.[233]

The Federal Food, Drug, and Cosmetic Act (FDCA)[234] similarly attached varying legal consequences to different rules and regulations based upon the source of rulemaking authority within the Act. The FDCA repealed the Pure Food Act of 1906,[235] which did not confer legislative rulemaking authority over standards of identity for food or tolerances for poison residues in food.[236] Because a primary goal of the 1938 Act was to give greater powers to the Secretary of Agricul-

[234] Ch. 675, 52 Stat. 1040 (1938).

[235] Ch. 3915, 34 Stat. 768 (repealed 1938). The 1906 Act did include a general rulemaking grant, which provided that "the Secretary of the Treasury, the Secretary of Agriculture, and the Secretary of Commerce and Labor shall make uniform rules and regulations for carrying out the provisions of this Act." *Id.* § 3, 34 Stat. at 768–69. This grant was understood to authorize only interpretive or procedural rules. *See* Lee, *supra* note 79, at 9 (noting that the 1906 Act did not contain any specific authorization for the promulgation of legislative regulations and did not make observance of the regulations promulgated under the act compulsory).

[236] *See* Wesley E. Forte, *The GMP Regulations and the Proper Scope of FDA Rulemaking Authority*, 56 GEO. L.J. 688, 691 (1968).

ture,[237] Congress included important rulemaking provisions in the FDCA.[238]

The key rulemaking provisions appear in section 701, which has been described as "schizophrenic" because of the mixed rulemaking provisions included within it.[239] Section 701(a) granted general rulemaking power to the Secretary, stating that the Secretary could "promulgate regulations for the efficient enforcement of this Act."[240] Then sections 701(e), (f), and (g) set forth detailed procedures, including procedures for public hearings and judicial review of regulations, that the Secretary was required to follow when promulgating regulations under certain enumerated, specific rulemaking grants.[241] Notably, section 701(e) does not refer to section 701(a), and therefore rules promulgated under section 701(a) are not subject to section 701(e)'s procedural safeguards.

Under the convention, the specific rulemaking provisions that were subject to the procedural safeguards of sections 701(e), (f) and (g) conferred *legislative* rulemaking authority.[242] For example, section 401 gave the Secretary the power to promulgate regulations fixing standards of identity for food.[243] Those regulations are given legislative effect by various sections that expressly make violations of section 401 regulations unlawful and subject to criminal penalties.[244]

---

[237] *See* Lee, *supra* note 79, at 18 (noting that "attempts to change over from a system of interpretive regulations to legislative regulations embodying definitions and standards of identity for all foods" were a part of the push for new comprehensive food and drug legislation).

[238] Congress initially charged the Secretary of Agriculture with administering the FDCA. This power was transferred to the Federal Security Administrator in 1940, and later to the Secretary of Health, Education, and Welfare (HEW). The Secretary of HEW delegated his powers under the Act to the FDA, which is a unit of HEW. *See* 1 JAMES T. O'REILLY, FOOD AND DRUG ADMINISTRATION § 2:02 (1992) (explaining that Congress never created the FDA but that HEW instead delegated its powers under the FDCA to the FDA).

[239] Forte, *supra* note 236, at 693.

[240] Federal Food, Drug, and Cosmetic Act, ch. 675, § 701(a), 52 Stat. 1040, 1055 (1938) (codified at 21 U.S.C. § 371(a) (2000)).

[241] *Id.* § 701(e)–(g), 52 Stat. at 1055–56 (codified as amended at 21 U.S.C. § 371(e)–(g)).

[242] *Cf.* Robert H. Becker, *Thoughts for Food*, 28 FOOD DRUG COSM. L.J. 679, 685 (1973) ("For those areas in which the FDA is specifically authorized to promulgate substantive rules or regulations having the force and effect of law, e.g., food standards regulations, Section 701(e) provides that any person who is adversely affected may file objections and request a public hearing on those objections.").

[243] *See* Federal Food, Drug, and Cosmetic Act, § 401, 52 Stat. at 1046 (codified as amended at 21 U.S.C. § 341).

[244] The following provisions gave section 401 regulations legislative effect: (1) section 403(g), 52 Stat. at 1047 (codified as amended at 21 U.S.C. § 343(g)), which declared that a food shall be deemed "misbranded" if it failed to conform to any standard of identity promulgated under section 401; (2) section 301(a), 52 Stat. at 1042 (codified as amended at 21 U.S.C. § 331(a)), which made it unlawful to introduce into interstate commerce any "misbranded" food; (3) section 303(a), 52 Stat. at 1043 (codified as amended at 21 U.S.C. § 333(a)), which provided criminal penalties for introducing any "misbranded" food into interstate commerce; and (4) section 304, 52 Stat. at 1044–

In contrast to the regulations subjected to the procedural safeguards of section 701(e), nothing in the Act indicated that a regulation issued under the authority of section 701(a) would subject the violator to any sanction, penalty, or other legal consequence. This silence suggests Congress's intent to *withhold* legislative rulemaking powers under that section.[245]

Legislative history supports this conclusion. During debate on the Act, Congress divided sharply over whether to give the Secretary the power to promulgate definitions, standards, and regulations having the force and effect of law.[246] Congress ultimately granted specific legislative rulemaking powers to the Secretary only after intense debate about what procedural safeguards the Act should employ to constrain those powers.[247] In contrast to the serious attention Congress gave to the procedural safeguards set forth in sections 701(e), (f), and (g), the general rulemaking grant of section 701(a) passed almost unnoticed.[248] As one scholar writing in 1968 pointed out, the lack of attention paid to section 701(a), coupled with the absence of procedural safeguards attached to section 701(a) rulemaking, carry great significance because

---

45 (codified as amended at 21 U.S.C. § 334), which subjected any food that was "misbranded" to seizure and condemnation.

A similar analysis applies to the other rulemaking grants covered by section 701(e). For example, the following provisions gave section 403(j) regulations legislative effect: (1) section 403(j), 52 Stat. at 1046 (codified as amended at 21 U.S.C. § 343(j)), which declared that food that "purports to be or is represented for special dietary uses" shall be deemed "misbranded" if its label fails to "bear[] such information concerning its vitamin, mineral and other dietary properties as the Secretary [prescribes] by regulations"; (2) section 301(a), 52 Stat. at 1042 (codified as amended at 21 U.S.C. § 331(a)), which made it unlawful to introduce into interstate commerce any "misbranded food"; (3) section 303, 52 Stat. at 1043 (codified as amended at 21 U.S.C. § 333), which provided criminal penalties for introducing any "misbranded" food into interstate commerce; and (4) section 304, 52 Stat. at 1044–45 (codified as amended at 21 U.S.C. § 334), which subjected any misbranded food to seizure and condemnation. Similarly, the following statutory provisions gave section 406(b) regulations legislative effect: (1) section 406(b), 52 Stat. at 1049 (repealed 1960), which provided that "[t]he Secretary shall promulgate regulations providing for the listing of coal-tar colors which are harmless and suitable for use in food and for the certification of batches of such colors"; (2) section 301(i), 52 Stat. at 1042 (codified as amended at 21 U.S.C. § 331(i)), which prohibited the unauthorized use of any mark, stamp, tag, or label authorized or required by the 406(b) regulations; and (3) section 303, 52 Stat. at 1043 (codified as amended at § 333), which provided criminal penalties for violating any of the provisions of section 301, including its prohibition of the unauthorized use of any marks, stamps, tags, or labels authorized or required by section 406(b) regulations.

245 *See* Forte, *supra* note 236, at 693 n.29 (noting that there is no specific provision providing that a violation of section 701(a) is a violation of the Act and concluding that this omission is "probably due to the fact that Congress intended § 701(a) to authorize interpretive, not substantive, regulations").

246 *See id.* at 692 (noting that serious questions were raised in Congress about both the advisability of authorizing legislative rulemaking and the procedural safeguards necessary to prevent arbitrary rules).

247 *See id.* at 692–94.

248 *See id.* at 693.

"[i]t seems inconceivable that Congress, after five years of debate on the procedural limitations to be placed on the promulgation of some substantive regulations, would authorize the issuance of other regulations having the force and effect of law without debate and without any procedural safeguards."[249]

Statements in Senate and House reports confirm that Congress did not intend section 701(a) to grant legislative rulemaking authority. A House Report, for example, described section 701 as follows:

> Section 701 relates generally to regulations. In the case of regulations, the violation of which constitutes an offense, it is required that appropriate notice of a public hearing be given and that adequate time shall be given after the promulgation of a regulation before it becomes effective. . . .
>
> Section 701(e), (f), and (g) of the committee amendment set forth the procedure governing the formulation and judicial review of certain regulations to be issued by the Secretary. . . .
>
> Such regulations are not merely interpretive. They have the force and effect of law and must be observed. Their violation may result in the imposition of criminal penalties, or in the confiscation of the goods involved if shipped in interstate commerce, or in their exclusion from the country if imported.[250]

This report indicates that key participants in the legislative process understood that by attaching sanctions to violations of certain rules and regulations, they elevated those regulations to legislative status. Given the understanding that these rules were legislative, Congress felt it necessary to attach important procedural safeguards to their issuance. No one urged the need to attach safeguards to rules promulgated under section 701(a), because those rules would carry only interpretive effect.

Overall, the text, structure, and legislative history of statutes Congress enacted through the end of the New Deal show a remarkably consistent adherence to the convention's framework for distinguishing between legislative and housekeeping grants. The key was not whether the rulemaking grant was general or specific. Members of Congress referred to the presence or absence of sanctions as the basis for distinguishing between legislative and housekeeping grants on sev-

---

249 *Id.* at 694; *see also* Becker, *supra* note 242, at 681–82 ("In light of this history of express and specific safeguards governing the authority to issue the substantive regulations authorized by the statute, it seems strange to suggest that the same statute was also intended to authorize the issuance of other unspecified regulations having the force and effect of law, whose violation could also result in the imposition of criminal penalties, without any provision for hearings and with judicial review essentially limited to whether the Agency action is arbitrary or capricious."); Merrill S. Thompson, *FDA — They Mean Well, But . . .*, 28 FOOD DRUG COSM. L.J. 205, 209 (1973) ("It simply doesn't make sense that Congress would bother with 701(e) if it intended to give the Commissioner such powers under 701(a).").

250 H.R. REP. NO. 75-2139, at 9–10 (1938).

eral occasions when debating rulemaking grants[251] but did not refer to the generality of rulemaking grants as a basis for making such distinctions. In fact, Congress occasionally adopted very general rulemaking grants and attached sanctions to violations of rules issued under them in the *same section of an act*, thereby signaling that the rules promulgated under the grant would be treated as binding.[252]

Despite the strength of the evidence supporting the existence of the convention, there is at least one rulemaking grant from the New Deal era in which the convention does not seem to capture congressional intent: the general rulemaking grant found in Title I of the Communications Act of 1934.[253] The problem stems from the mixture of regulatory schemes that Congress borrowed from other acts in putting together the Communications Act.[254] Title I, which copied many of its provisions from the ICA, sets forth the Act's general organizational provision. Section 4(i) of Title I contains a general rulemaking grant providing that the FCC "may perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this Act as may be necessary in the execution of its functions."[255] Title II governs common carriers. Title III, which regulates broadcasting, borrowed many of its provisions from the Radio Act of 1927,[256] including

---

[251] *See* COMPARISON OF S. 2926 (73D CONGRESS) AND S. 1958 (74TH CONGRESS), *supra* note 221, at 1319, 1349 ("In no case [S. 2926 or S. 1958] do the rules have the force of law in the sense that criminal penalties or fines accrue for their violation. . . ."); *see also* H.R. REP. NO. 75-2139, at 9–10 (1938) (containing FDCA legislative history).

[252] For example, the Taylor Grazing Act of 1934, ch. 865, 48 Stat. 1269, included in section 2 a general rulemaking grant and also specified the sanctions for violating rules promulgated under it:

> The Secretary of Interior shall make provision for the protection, administration, regulation, and improvement of such grazing districts as may be created under the authority of the foregoing section, and he shall *make such rules and regulations and establish such service, enter into such cooperative agreements, and do any and all things necessary to accomplish the purposes of this Act* and to insure the objects of such grazing districts, namely, to regulate their occupancy and use, to preserve the land and its resources from destruction or unnecessary injury, to provide for the orderly use, improvement, and development of the range; . . . *and any willful violation of the provisions of this Act or of such rules and regulations thereunder after actual notice thereof shall be punishable by a fine of not more than $500.*

Id. § 2, 48 Stat. at 1270 (codified at 43 U.S.C. § 315a (2000)) (emphasis added).

[253] Ch. 652, 48 Stat. 1064.

[254] *See* Glen O. Robinson, *The Federal Communications Act: An Essay on Origins and Regulatory Purpose*, *in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, at 3, 5 (Max D. Paglin ed., 1989) ("To be sure the provisions borrowed from the Interstate Commerce Act were specifically reworded to apply specially to communications carriers, but they are largely transplants from another regulatory regime all the same."); *see also* S. REP. NO. 73-781 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra*, at 711, 711–12 (explaining that the Communications Act borrows and rearranges provisions of the ICA and the Radio Act of 1927).

[255] Communications Act, ch. 652, § 4(i), 48 Stat. at 1068 (codified as amended at 47 U.S.C. § 154(i) (2000)).

[256] Ch. 169, 44 Stat. 1162.

several specific rulemaking grants.[257] Title IV includes the Act's procedural and administrative provisions. Finally, Title V contains the Act's penal provisions. One provision of Title V, section 502, sets forth a general provision subjecting any person who violates any rule or regulation issued under the Act to criminal penalties.[258]

If we apply the convention to the Communications Act, the omnibus provision of criminal sanctions for rule violations in section 502 has the effect of transforming all rulemaking grants in the Act — including the grant in section 4(i) — into grants of legislative rulemaking authority. Given the structure and history of the Act, however, it is doubtful that this is what Congress intended. Section 4(i) was based on section 17 of the ICA,[259] which granted only procedural rulemaking powers. In addition, section 4(i) appears in Title I amid provisions relating to the general administrative organization of the FCC — far away from the penal provisions in section 502 of Title V.[260] Finally, section 4(i) was part of the original draft bill and passed through the

---

[257] *See, e.g.*, Communications Act, § 303(f), 48 Stat. at 1082 (codified as amended at 47 U.S.C. § 303(f)) (giving the FCC power to "[m]ake such regulations not inconsistent with law as it may deem necessary to prevent interference between stations and to carry out the provisions of this Act"); *id.* § 303(i), 48 Stat. at 1082 ((codified at 47 U.S.C. § 303(i)) giving the FCC the "authority to make special regulations applicable to radio stations engaged in chain broadcasting"); *id.* § 303(j), 48 Stat. at 1082 (codified at 47 U.S.C. § 303(j)) (granting the FCC the power to "make general rules and regulations requiring stations to keep such records of programs, transmissions of energy, communications, or signals as it may deem desirable"). In 1937, Title III of the Communications Act was amended to add a provision authorizing the FCC to "[m]ake such rules and regulations and prescribe such restrictions and conditions not inconsistent with law, as may be necessary to carry out the provisions of this Act." Amendments to the Communications Act of 1934, ch. 229, § 6(b), 50 Stat. 189, 191 (1937) (adding section 303(r)). All of these various rulemaking grants included within Title III were given legislative effect by section 312(a), which provided for license revocation if any licensee violated any of the Commission's regulations. Communications Act, § 312, 48 Stat. at 1086–87 (codified as amended at 47 U.S.C. § 312(a)).

[258] Section 502, which was part of the 1934 Act, subjects any person "who willfully and knowingly violates any rule, regulation, restriction, or condition" imposed by the FCC under the authority of the Communications Act to a fine of up to $500 for each day during which such offense occurs. Communications Act, § 502, 48 Stat. at 1100–01 (codified at 47 U.S.C. § 502).

[259] A comparison of the language used in section 17 of the ICA with sections 4(h) through (j) of the Communications Act shows that section 4(i) was based upon section 17 of the ICA. *Compare* Communications Act, § 4(i), 48 Stat. at 1068 (codified as amended at 47 U.S.C. § 154(i)) ("The Commission may perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this Act, as may be necessary in the execution of its functions."), *with* Interstate Commerce Act, ch. 104, § 17, 24 Stat. 379, 385–86 (1887) (repealed 1978) ("Said Commission may, from time to time, make or amend such general rules or orders as may be requisite for the order and regulation of proceedings before it, including forms of notices and the service thereof, which shall conform, as nearly as may be to those in use in the courts of the United States.").

[260] Section 502, 48 Stat. at 1100, borrowed language from section 32 of the Radio Act of 1927. *See* Radio Act of 1927 ch. 169, § 32, 44 Stat. 1162, 1173 (repealed 1934); *see also* S. REP. NO. 73-781 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra* note 254, at 711, 721 (explaining that section 502, which provides penalties for violations of rules and regulations of the FCC, is "copied from section 32 of the Radio Act").

legislative process without comment or change.[261] It was not even deemed significant enough to warrant a summary in the Senate, House, or Conference Committee reports.[262] It is most unlikely that this provision would have been entirely uncontroversial if it had been understood as conferring general legislative rulemaking authority on the FCC.[263]

The Communications Act suggests that Congress was not infallibly attentive to the drafting convention in signaling which rulemaking grants are legislative and which are not. The most likely explanation for this oversight, in the case of section 4(i) of the Communications Act, is that the general rulemaking grant drew so little attention, and was physically placed in the statute at such a great distance from section 502, that no one noticed section 502 was written in such a way that it literally applied to section 4(i). Had someone noticed the interaction between section 4(i) and section 502, we suspect that section 502 would have been revised to make clear that the penal provision reached only those rules issued under specific rulemaking grants included in the Communications Act, such as those rulemaking provisions borrowed from the Radio Act and placed in Title III. But apparently no one noticed. The Communications Act thus presents an example of a statute in which the inference of legislative intent drawn from the application of the convention should probably be disregarded, given other, contrary evidence of legislative intent.[264]

[261] *Compare Hearings on S. 2910 Before the Senate Comm. on Interstate Commerce*, 73d Cong. 4 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra* note 254, at 123, 126 (reprinting original proposed bill), *with* Communications Act, § 4(i), 48 Stat. at 1068 (text of statute as enacted).

[262] *See* H.R. REP. NO. 73-1918, at 45–46 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra* note 254, at 733, 777–78; H.R. REP. NO. 73-1850, at 4–5 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra* note 254, at 723, 726–27; S. REP. NO. 73-781, at 3 (1934), *reprinted in* A LEGISLATIVE HISTORY OF THE COMMUNICATIONS ACT OF 1934, *supra* note 254, at 711, 713.

[263] As enacted in 1934, Title II (pertaining to common carriers) did not contain a general rulemaking grant. Thus, if section 4(i) had been understood to confer legislative rulemaking authority regarding all of the FCC's functions, this provision would have significantly expanded the agency's authority over interstate telephone and telegraph carriers. *See infra* note 264. Although they have not framed their discussion in terms of the convention, the courts have been uncomfortable with a broad reading of section 4(i). *See, e.g.*, California v. FCC, 905 F.2d 1217, 1240 n.35 (9th Cir. 1990); AT&T Co. v. FCC, 487 F.2d 865, 876–78 (2d Cir. 1973). The question whether section 4(i) authorizes legislative rules was briefed in *AT&T Corp. v. Iowa Utilities Board*, 525 U.S. 366 (1999), but was not mentioned in any of the opinions. *Compare* Brief for California at 46 n.21, *Iowa Utilities Board* 525 U.S. 366 (1999) (Nos. 97-826, 97-829, 97-830, 97-831, 97-1075, 97-1087, 97-1099, 97-1141) (arguing that section 4(i) is not a grant of legislative authority), *with* Brief for FCC at 19 n.5, FCC v. Iowa Utilities Bd. (No. 97-831) (arguing that Congress gave the FCC expansive general rulemaking powers and pointing to the codified version of section 4(i) as a source of those rulemaking powers).

[264] In 1938, Congress amended section 201 of Title II of the Communications Act to add a general grant of authority to "prescribe such rules and regulations as may be necessary in the public

D. *The Office of Legislative Counsel*

One notable institutional development took place at approximately the same time Congress began systematically following the convention: the creation of the Office of Legislative Counsel in both the Senate and the House.[265] The offices began as a pilot project organized by Columbia Law School in 1916 but became permanent two years later.[266] According to Frederic P. Lee, one of the lawyers who served in both the House and Senate offices in their early days,[267] the offices were

---

interest to carry out the provisions of this Act." Amendments to the Communications Act, ch. 296, 52 Stat. 588, 588 (1938) (codified at 47 U.S.C. § 201(b)). Although the language of this additional rulemaking grant appears to be very broad, the legislative history suggests that its intended scope was narrowly confined to matters concerning the furnishing of reports of positions of ships at sea. One senator explained during debate on the Senate floor that the amendment "relates only to information which comes from vessels at sea as to their location." 83 CONG. REC. 6291 (1938) (statement of Sen. White); *see also* S. REP. NO. 75-1652, at 3 (1938) (noting that the amendment allows free reporting services regarding ships at sea, but that it subjects this free service "to rules, regulations, and limitations which the Commission finds desirable in the public interest"). Nonetheless, in *Iowa Utilities Board*, the Supreme Court held that section 201(b) constitutes a general grant of legislative rulemaking authority that extends to all of the FCC's jurisdiction over common carriers. *Iowa Utilities Board*, 525 U.S. at 377–78. Justice Scalia's opinion for the Court contained no discussion of the history of section 201(b), which suggests a far narrower purpose for that grant.

Whether *Iowa Utilities Board* was correct about section 201(b) if we view the matter through the lens of the convention is a closer call than the question whether section 4(i) should be regarded as a grant of legislative rulemaking authority. Obviously, the omnibus penal provision in section 502 also applies to section 201(b), making section 201(b) presumptively legislative under the convention. And section 201(b), unlike section 4(i), is not in a separate title of the Act dealing with definitions and administrative provisions, nor was it borrowed from another statute that conferred only procedural authority. The correct analysis here probably turns on whether one is willing to credit the sort of legislative history that appears in committee reports and floor statements that bear on legislative purpose (a large topic beyond the scope of this Article). If one is willing to credit such materials, then the presumptive conclusion about section 201(b) drawn from the convention should probably be overcome by evidence that Congress intended this grant to apply only to locational signals from vessels at sea. If one is not willing to credit this kind of evidence, but only the inferences that can be drawn from the text of statutes (which of course is Justice Scalia's general position, *see* Scalia, *supra* note 55, at 29–37), then the presumptive conclusion based on the convention should probably stand and the Court was correct in *Iowa Utilities Board* to conclude that section 201(b) confers general legislative authority over all matters within the FCC's jurisdiction under Title II.

265 For background, see GEORGE B. GALLOWAY, THE LEGISLATIVE PROCESS IN CONGRESS 409 (1953); KENNETH KOFMEHL, PROFESSIONAL STAFFS OF CONGRESS 183–200 (1962); and Frederic P. Lee, *The Office of the Legislative Counsel*, 29 COLUM. L. REV. 381 (1929). For an interesting case study that discusses the continuing importance of this office, see Victoria F. Nourse & Jane S. Schacter, *The Politics of Legislative Drafting: A Congressional Case Study*, 77 N.Y.U. L. REV. 575, 588–90 (2002).

266 *See* Lee, *supra* note 265, at 385–86.

267 Lee served as Assistant Legislative Counsel to the U.S. House of Representatives from 1919 to 1923 and as Legislative Counsel to the U.S. Senate from 1923 to 1930. *See* Lee, *supra* note 79, at 1 n.*. Later he served as Special Counsel to the Secretary of Agriculture. *Id.* Both the House and Senate Offices of Legislative Counsel in these years were small and were staffed by attorneys with extensive experience. *See* GALLOWAY, *supra* note 265, at 409 (noting that the principal at-

strictly nonpartisan and professional.[268] Their functions included providing legal research to members of Congress, reviewing and commenting on proposed legislation, and most importantly, drafting bills.[269] In drafting legislation, the lawyers in the offices paid particular attention to problems of constitutionality, administrability, and judicial review. As Lee recounted:

> In all matters of drafting, knowledge of constitutional and administrative law is invaluable. . . . [M]ost of the complex legislative problems today involve extensive executive machinery for enforcement and administration. In the legislative provision for this machinery there must be met the many administrative and constitutional law problems involved in the form in which executive action may properly express itself and in the judicial review of such action.[270]

We are not aware of any direct evidence about the kind of advice the Offices of Legislative Counsel provided to members of Congress concerning how to signal whether a statute authorized legislative rulemaking. But one very powerful piece of circumstantial evidence exists. Lee published another article in the *Georgetown Law Journal* in 1940 detailing how to distinguish between legislative and interpretive regulations.[271] In this article, Lee used the term "substantive" to describe two types of rules: "legislative" regulations, which prescribe what the law shall be and have the force and effect of law; and "interpretive" regulations, which merely construe a statute and do not have the force and effect of law.[272] According to Lee, whether a "substantive" regulation is "legislative" or "interpretive" depends upon the grant of rulemaking authority in the statute, and in particular, whether Congress specified some sanction for violation of the rules.[273] As Lee

torney in the House Office served for thirty years, from 1919 to 1949); Harry W. Jones, *Bill-Drafting Services in Congress and the State Legislatures*, 65 HARV. L. REV. 441, 444 (1952) (stating that in 1951 there were ten lawyers on the House side and eleven lawyers on the Senate side). The website of the House Office of Legislative Counsel observes that the "Office has traditionally been career-oriented, with unusually low turnover among the legal staff." *See* http://legcoun.house.gov/about.html (last modified July 16, 2002).

268 Lee, *supra* note 265, at 397–98.

269 *See generally id.* at 388–97 (describing the Senate office's many functions).

270 *Id.* at 391.

271 Lee, *supra* note 79.

272 *Id.* at 2.

273 *Id.* at 3. Lee further explains:

> The clear situations involving legislative regulations are those where non-conformity to the regulations results in criminal penalties or civil penalties or penalty taxes; or where non-compliance may result in exclusion of goods from importation or exportation, or in their forfeiture; or where non-compliance may result in denial, suspension or revocation of permits or other privileges or in denial of subsidy or benefit payments; where taxes are directed to be computed on the basis of such regulations; or where Congress authorizes regulations prescribing tolerances, variations, or exemptions relaxing a statutory rule. In addition Congress may in the statute declare specifically that the regulations shall have the force and effect of law. More often a statute granting authority to make

explained, if the "power to prescribe a substantive regulation is delegated by statute, but *no sanctions* are imposed by statute for failure to conform to the regulation, then it is interpretive."[274] Only if the statute provides legal sanctions for violations of the regulations do those regulations have the force and effect of law.[275]

The implications of Lee's *Georgetown* article are considerable. His comments about how one identifies a grant of legislative, as opposed to interpretive, rulemaking authority exactly track the convention we have described. This understanding almost certainly reflects his extensive tenure as an attorney in the House and Senate Offices of Legislative Counsel — a tenure that coincided with the period during which Congress routinely observed the convention. Since the members of Congress frequently called upon the attorneys in the Offices of Legislative Counsel for assistance in drafting statutes to create administrative agencies and to confer powers on them,[276] and since the attorneys sought to implement faithfully the wishes of their superiors,[277] one can only conclude that the convention described by Lee was the device used by the attorneys in these offices to signal the intentions of Congress.[278]

Lee's views about how to distinguish between legislative and interpretive grants of rulemaking authority are generally consistent with

> regulations attaches none of these sanctions to the regulations, is silent as to their force and effect, and is intended to cover only interpretive regulations or regulations affecting internal departmental functions. Particularly is this so of the usual broad grants that authorize "such regulations as may be necessary to carry out the provisions of this Act" or which are similarly phrased, sometimes with the additional requirement that the regulations be "not inconsistent with law."

Id. at 19–21 (footnotes omitted).

[274] *Id.* at 3 (emphasis added).

[275] *Id.* at 21.

[276] *See supra* notes 269–270 and accompanying text.

[277] *See* Lee, *supra* note 265, at 398.

[278] In one instance, we have direct evidence that a senior attorney in the Office of Legislative Counsel played a role in formulating the language defining an important rulemaking power. Lee's superior in the House Office of Legislative Counsel from 1919 to 1923 was Middleton Beaman, who would continue to serve as the first legislative draftsman in the House Office until 1949. *See* GALLOWAY, *supra* note 265, at 409. James Landis, who was closely involved in the drafting of the Securities Act of 1933, reported that Beaman suggested (and Congress accepted) changes to the wording of the section of the Act that imposes sanctions on persons who violate rules promulgated by the SEC. *See* James M. Landis, *The Legislative History of the Securities Act of 1933*, 28 GEO. WASH. L. REV. 29, 36–38 (1959). Beaman appears fully to have shared Lee's views about the importance of paying close attention to provisions of bills defining agency powers. As he wrote in an early article:

> Of course I do not mean that a statute should leave nothing to administrative discretion, for it may well be that the most effective administrative device is to create an administrative board to make rules and regulations; but what I wish to make clear is that the administrative machinery, whatever it may be, whether court procedure, penalty provisions, or what not, must be carefully worked out.

Middleton Beaman, *Bill Drafting*, 7 LAW LIBR. J. 64, 68 (1914).

other legal commentary in the New Deal period, up to and beyond the enactment of the APA.[279] For example, in a monograph written in the early 1950s, Frank Cooper of Michigan Law School enumerated those circumstances in which congressional intent to authorize legislative rulemaking was clear: where "the statute specifically declares that the regulations shall have the force and effect of law"; where "the statute provides penalties that will result from noncompliance with the regulations"; where the statute makes "noncompliance with the regulations a ground for revocation of permits or licenses"; or where the statute authorizes "regulations which will relax a statutory rule otherwise applicable."[280] Cooper further noted that many statutes contain general rulemaking grants that are facially ambiguous regarding whether they authorize legislative or interpretive rulemaking. In such cases, he wrote, "the courts usually treat the regulation on the same basis as in cases where there can be no doubt but that the regulation is merely interpretative."[281]

E. *The Administrative Procedure Act*

If the prevailing understanding was that agencies could make rules with the force of law only if Congress had provided by statute some sanction for violations of those rules, one would expect to find this understanding reflected in the language and legislative history of the APA. Insofar as legislative history is concerned, such evidence abounds in the work of the Attorney General's Committee on Administrative Procedure, a blue-ribbon committee appointed by President Roosevelt in the late 1930s to undertake a comprehensive survey of administrative agencies and their procedures.[282] The committee pro-

[but] it must be made clear by Congress that the violation of the particular type of ordinance in question is meant to be punished."); Hans J. Morgenthau, *Implied Regulatory Powers in Administrative Law*, 28 IOWA L. REV. 575, 582 (1943) (noting that whereas "legislative regulations lay down the law and have the force and effect of law, deriving from a specific delegation of power and supported by statutory sanctions, interpretative regulations only construe the statute and have no more the force and effect of law than the interpretation of a private individual"); Olverson, *supra* note 79, at 640 ("If the statute provides that nonconformance to the regulation will result in the imposition of legal sanctions specified by Congress, the regulation is legislative and has the force and effect of the statute itself. A regulation is said to be interpretive if the power to issue it is delegated by statute, but the statute does not impose legal sanctions for failure to conform to the regulation.").

[282] *See* Clark Byse, *In Memoriam: Walter Gellhorn: Administrative Law Scholar, Teacher, Reformer*, 96 COLUM. L. REV. 589, 590–91 (1996). For a detailed history of the APA, see George B.

duced twenty-seven monographs that described the decisionmaking processes of various agencies and a summary report entitled *Administrative Procedure in Government Agencies*,[283] better known as the committee's *Final Report*.[284] Both the monographs and the *Final Report*, which are considered "classics of administrative law scholarship" and which laid the intellectual groundwork for the drafting of the APA,[285] contain statements that confirm the existence of the convention. The *Final Report*, for example, distinguishes between interpretive and legislative regulations by focusing on whether the statute imposes sanctions to compel observance of the regulations.[286] It explains that the "statutes themselves and not the regulations remain in theory the sole criterion of what the law authorizes or compels and what it forbids."[287] Specifically, the *Final Report* describes legislative regulations as follows:

> Many statutes contain provisions which become fully operative only after exercise of an agency's rule-making function. Sometimes the enjoyment of a privilege is made conditional upon regulations, as, for example, where Congress permits the importation of an article "upon such rules and regulations as the Secretary of the Treasury may prescribe," or allows utilization of public forests in accord with regulations to be laid down by administrative officers. Sometimes the extent of an affirmative duty is to be fixed by regulations, as, for example, where employers are commanded to pay wages not less than those prescribed in administrative regulations. Sometimes a prohibition is made precise by regulations, as, for example, where the sale of dangerous drugs is forbidden and the determination of what drugs are dangerous is left to administrative rules. In such instances the striking characteristic of the legislation is that *it attaches sanctions to compel observance of the regulations*, by imposing penalties upon or withholding benefits from those who disregard their terms.[288]

Shepherd, *Fierce Compromise: The Administrative Procedure Act Emerges from New Deal Politics*, 90 NW. U. L. REV. 1557 (1996).

283 FINAL REPORT, *supra* note 29.

284 Peter L. Strauss, *Changing Times: The APA at Fifty*, 63 U. CHI. L. REV. 1389, 1389–90 (1996).

285 *Id.*

286 FINAL REPORT, *supra* note 29, at 27.

287 *Id.* at 100.

288 *Id.* at 27 (emphasis added). The Final Report listed the NLRB, the FTC, the Social Security Board, and the United States Employees' Compensation Commission (the agency originally authorized to enforce the Longshoremen's and Harbor Workers' Compensation Act) as agencies that lack the power to adopt legislative rules and regulations. *Id.* at 98 n.18. The inclusion of the Social Security Board in the list fails to account for the 1939 amendments to the Social Security Act. *See supra* notes 228–229 and accompanying text. According to one of the monographs published by the Attorney General's Committee on Administrative Procedure, in 1940 the Social Security Board was in the process of developing a comprehensive set of regulations to implement the Act. *See* ATT'Y GEN.'S COMM. ON ADMIN. PROCEDURE, U.S. DEP'T OF JUSTICE, MONOGRAPH NO. 16, SOCIAL SECURITY BOARD 54 (1940).

The *Final Report*'s description makes it clear that legislative rules can be the product of a broad, general rulemaking grant, such as a grant to make "such rules and regulations as the Secretary of the Treasury may prescribe."[289] The key, according to the *Final Report*, is not the general or specific nature of the rulemaking grant, but rather whether Congress attached sanctions in the statute to compel observance of the regulations.

In addition to the *Final Report*, at least two of the monographs prepared by the Attorney General's Committee recognize that facially ambiguous rulemaking grants sometimes confer authority to make only interpretive rules.[290] For example, the monograph on the Walsh-Healey Act explains that rules issued by the Secretary of Labor under the Act's general rulemaking grant to "make, amend, and rescind such rules and regulations as may be necessary" are not binding because "no sanction is provided."[291]

Insofar as the text of the APA itself is concerned, the convention is less easy to discern. We would submit, however, that the influence of the convention appears in the seldom noticed section 558(b), which provides: "A sanction may not be imposed or a substantive rule or order issued except within jurisdiction delegated to the agency and as authorized by law."[292] Note the close association between "sanction" and "substantive rule," and the clear command that neither can be imposed by an agency unless Congress has authorized it to do so by law. Although section 558(b) does not expressly codify the convention — that an agency may not issue legislative rules unless Congress has provided sanctions for rule violations — the effect of the provision is the same. Legislative rules were and are widely understood to be those that, when violated, give rise to adverse legal consequences — in other words, "sanctions" as that term is broadly defined by the APA.[293]

---

289 FINAL REPORT, *supra* note 29, at 27 (internal quotation marks omitted).

290 *See* ATT'Y GEN.'S COMM. ON ADMIN. PROCEDURE, *supra* note 233, at 68; ATT'Y GEN.'S COMM. ON ADMIN. PROCEDURE, *supra* note 196, at 66–67. In preparing the monographs, the Committee conducted extensive interviews, attended hearings and other administrative proceedings, examined agency files, and received comments and input from agencies' staffs on preliminary drafts.

291 ATT'Y GEN.'S COMM. ON ADMIN. PROCEDURE, *supra* note 233, at 66–67. Other monographs, however, make no mention of the convention when they discuss the meaning of general rulemaking grants. *See, e.g.*, 1 ATT'Y GEN.'S COMM. ON ADMIN. PROCEDURE, U.S. DEP'T OF JUSTICE, MONOGRAPH NO. 22, ADMINISTRATION OF INTERNAL REVENUE LAWS: BUREAU OF INTERNAL REVENUE, BOARD OF TAX APPEALS, PROCESSING TAX BOARD OF REVIEW 143 (1940) ("The word 'enforcement' has been broadly construed to permit substantive or interpretive, as well as procedural regulations.").

292 5 U.S.C. § 558(b) (2000).

293 The APA's broad definition of "sanction" includes not only the imposition of a penalty or fine, the forfeiture of property, the assessment of damages, or the loss of a license, but also any other "compulsory or restrictive action" by an agency. 5 U.S.C. § 551(10) (quoted in full *supra* note 120).

Thus, what section 558(b) means, in the words of the Senate Report, is that "agencies may not impose sanctions which have not been specifically or generally provided for them to impose."[294] Once we understand the convention, we can read the APA in a new light and understand that it, too, presupposes that agencies can make rules with the force of law only if Congress has legislated statutory sanctions for rule violations.

F. Why a Convention?

Only rarely in the Progressive and New Deal years did Congress state expressly that agencies were authorized to issue rules with the force of law or were limited to issuing advisory interpretations and procedural rules. Instead, Congress repeatedly enacted legislation ambiguously authorizing agencies to issue "rules and regulations" and relied on a signaling device for indicating whether a grant was legislative: grants to make rules backed by sanctions authorized legislative rulemaking, whereas grants to make rules not backed by sanctions authorized only procedural or interpretive rulemaking.

As best we can tell, agencies consistently respected the convention during these years. Of course, adjudication dominated administrative law for the first six decades of the twentieth century, with rulemaking assuming central importance only in the 1970s and afterward.[295] Nevertheless, it is no accident that agencies operating under broadly worded rulemaking grants that, under the convention, conferred only nonlegislative rulemaking authority — including the FDA, NLRB, FTC, and United States Employees' Compensation Commission — made no attempt during these years to adopt legislative rules.[296] In contrast, the FCC, SEC, Federal Power Commission, and ICC (with respect to specific rulemaking grants added to the ICA by amend-

NO. 79-248, at 235, 274 (1946); *see also* U.S. DEP'T OF JUSTICE, *supra* note 30, at 88 (explaining that the purpose of § 558(b) is to "assure that agencies will not appropriate to themselves powers Congress has not intended them to exercise").

[295] *See* CORNELIUS M. KERWIN, RULEMAKING: HOW GOVERNMENT AGENCIES WRITE LAW AND MAKE POLICY 11–15 (2d ed. 1999) (describing extensive rulemaking prior to the 1970s, but attributing to the 1970s a "fundamental change" in the ascendancy of rulemaking); Antonin Scalia, *Back to the Basics: Making Law Without Making Rules*, REGULATION, July/Aug. 1981, at 25.

[296] *See* David L. Shapiro, *The Choice of Rulemaking or Adjudication in the Development of Administrative Policy*, 78 HARV. L. REV. 921, 943, 960–61 (1965) (noting that agencies such as the NLRB and FTC do not engage in legislative rulemaking, perhaps because their authorizing statutes are ambiguous); *see also supra* notes 175–196 and accompanying text (discussing the FTC); *supra* notes 218–222 and accompanying text (discussing the NLRB).

ments) all had occasion to issue legislative rules.[297] Each agency in this latter group operated under broadly worded rulemaking grants that, under the convention, conferred legislative rulemaking authority.

Why did Congress use this convention to signal that it was conferring legislative rulemaking authority, rather than straightforwardly announcing that it was authorizing the agency to make "legislative" rules or rules with the "force of law"? We can only speculate about the answer. One possibility is economy in drafting. If Congress had explicitly authorized an agency to promulgate legislative rules, then the question immediately would have arisen: what sort of sanction attaches to persons who violate these rules? *Eaton* and *Grimaud* (and later the APA) could be read to say that Congress also must specify the sanctions.[298] So perhaps Congress thought it more economical to proceed immediately to the specification of the sanctions, which would by implication also convey the information that the rules would be legislative.

Another, more plausible possibility is that use of the convention would have been less likely to trigger political opposition than an explicit statement of authority to adopt rules with the force of law. An express delegation of legislative authority would in effect wave a red flag and alert opponents of the legislation. They could tap into deep-seated unease over the idea of delegating legislative rulemaking powers to a body of unelected administrators and could use this unease to rally opposition to the measure. We have already seen examples of this phenomenon in the legislative histories of the Packers and Stockyards Act[299] and the FDCA.[300] Later, we will see another example in the history of the Internal Revenue statutes.[301] So we know the potential existed for opponents of particular bills to use the delegation of legislative rulemaking authority as a focal point of opposition.

Use of the convention obviously could not eliminate all such controversy about the delegation of legislative rulemaking authority. But at least it allowed regulatory statutes to confer legislative powers without using the inflammatory words "legislative" or "force of law," and hence it reduced somewhat the opportunities for opponents to raise this issue. This was especially true if the bill placed the sanctions at some distance from the grant of authority to adopt "rules and regulations." Such "acoustical separation" would further reduce the chances

[301] *See infra* notes 588–596 and accompanying text.

that a casual reader of the bill would notice that Congress was endowing the agency with legislative rulemaking power, even though knowledgeable insiders reading through the bill would grasp this implication immediately.[302]

IV. THE CONVENTION IGNORED

Given the secondary importance of rulemaking during the first six decades of the twentieth century, it is perhaps not surprising that more than thirty years passed after *United States v. Grimaud*[303] before the Supreme Court heard a case that potentially presented the question whether Congress had authorized an agency to make rules having the force of law under a facially ambiguous rulemaking grant.[304] Nor is it surprising that another ten years passed before the Court confronted a similar case again.[305] All in all, we have identified eight principal cases decided between 1943 and 1979 that potentially presented the Court with a question about an agency's authority to make legislative rules.[306] These cases involved disparate issues under disparate statutes and were rendered too infrequently to generate anything that could be described as a jurisprudence of rulemaking. In fact, the most striking aspect of the eight decisions, taken as a whole, is the absence of any recognizable theory regarding when grants of rulemaking authority confer lawmaking power and when they do not.

---

302 We postpone to Part VII the normative issues associated with whether Congress should be required to delegate legislative rulemaking powers through an express statement, as opposed to using a convention that signals its clear intent to do so.

303 220 U.S. 506 (1911), discussed *supra* pp. 501–03.

304 The first major case after *Grimaud* to address this issue was *National Broadcasting Co. v. United States*, 319 U.S. 190 (1943).

305 The next major case to address this issue was *American Trucking Ass'ns v. United States*, 344 U.S. 298 (1953).

306 The eight cases are *National Broadcasting*, 319 U.S. 190 (1943); *American Trucking*, 344 U.S. 298 (1953); *United States v. Storer Broadcasting Co.*, 351 U.S. 192 (1956); *Federal Power Commission v. Texaco Inc.*, 377 U.S. 33 (1964); *Thorpe v. Housing Authority*, 393 U.S. 268 (1969); *Mourning v. Family Publications Service, Inc.*, 411 U.S. 356 (1973); *General Electric Co. v. Gilbert*, 429 U.S. 125 (1976); and *Chrysler Corp. v. Brown*, 441 U.S. 281 (1979). In addition to these eight cases, the Supreme Court heard other cases in which the same or similar issues lurked in the background. *See, e.g.*, United States v. S.W. Cable Co., 392 U.S. 157, 178 (1968) (upholding the FCC's authority to regulate cable television systems based in part on the general rulemaking grant in section 303(r) of the Communications Act); E.I. du Pont de Nemours & Co. v. Train, 430 U.S. 112, 132, 136 (1977) (upholding the EPA's authority to issue industrywide regulations limiting discharges by existing plants and citing section 501(a) of the Federal Water Pollution Control Act, which gives the EPA power to make "such regulations as are necessary to carry out" its functions); FCC v. Nat'l Citizens Comm. for Broad., 436 U.S. 775, 793 (1978) (holding that the general rulemaking grant found in section 303(r) of the Communications Act of 1934 "supplies a statutory basis for the Commission to issue regulations codifying its view of the public-interest licensing standard").

In retrospect, only one of the eight decisions generated an outcome inconsistent with the convention,[307] and in that case, the party challenging the rule did not raise the question whether the agency had been delegated the power to act with the force of law.[308] But any congruity between the convention and judicial outcomes during these years owes nothing to the Court's deliberative processes. Not one of the cases discussed or even acknowledged the convention introduced in Part III. Cumulatively, the only conclusion one can draw from reading the opinions is that the Justices — and the lawyers appearing before them — had no knowledge of the convention. This ignorance was to have fateful consequences. The Court's failure to offer any coherent basis for distinguishing between legislative and nonlegislative rulemaking grants created the opportunity for later courts and commentators to read the Court's opinions selectively to support the proposition that facially ambiguous rulemaking grants always confer legislative powers.

A. *Rulemaking Grants in the Supreme Court, 1943–1979*

In an effort to compress our presentation, we divide the eight cases into four groups of two cases each. Within each group, the cases relate chronologically, present similar underlying issues, and reflect similar styles of reasoning in the way those issues are resolved.

1. National Broadcasting *(1943) and* American Trucking *(1953).* — The first two cases, *National Broadcasting Co. v. United States*[309] and *American Trucking Ass'ns v. United States*,[310] are separated by a full decade but present similar issues. *National Broadcasting* arose under the Communications Act of 1934[311] and *American Trucking* under the Motor Carrier Act.[312] Broadly speaking, the issue in each case was whether the agency had authority to promulgate a legislative rule on a subject regarding which Congress had not delegated specific regulatory authority. *National Broadcasting* asked whether the FCC could adopt "chain broadcasting" rules regulating contractual relationships between networks and affiliated broadcasting stations.[313] The granting of a broadcasting license was conditioned upon a station's following these rules.[314] *American Trucking* asked whether the ICC could adopt regulations governing the practices of companies that leased

[314] *See id.* at 196.

trucks to licensed motor carriers.[315] The granting of operating licenses was conditioned upon a carrier's following these rules.[316]

In both cases, the Court upheld the challenged regulations, citing multiple congressional rulemaking grants, including both specific and generic grants. In *National Broadcasting*, the Court relied on three rulemaking grants found in Title III of the Communications Act, one general and two relatively specific, each of which was facially ambiguous concerning whether it authorized rules with the force of law.[317] In *American Trucking*, the Court relied on two grants, one general and one specific, both of which were facially ambiguous in the same sense.[318]

The Court upheld the regulations in both cases without specifying which rulemaking grants endowed the regulations with the force of law. It is not surprising that the Court proceeded in this manner. The challenger in each case claimed that the agency was acting beyond the scope of its regulatory jurisdiction.[319] In neither case did the challenger maintain that the agency lacked the power to adopt regulations having the force of law. Thus the Court probably felt no compulsion to discuss which statutory provisions supported legislative rulemaking.

Had the parties raised the question of the agencies' power to adopt legislative rules, and had the Court resolved the question in light of the drafting convention, the agencies' authority would have been sustained in both cases. With respect to the FCC's regulation of chain broadcasting, section 312(a) of the Communications Act provided for the revocation of licenses based on violations of the FCC's regulations,[320]

---

[315] *See American Trucking*, 344 U.S. at 300–02.

[316] *See id.* at 302.

[317] These were section 303(g), which provided that the FCC shall "generally encourage the larger and more effective use of radio in the public interest"; section 303(i), which gave the FCC "authority to make special regulations applicable to radio stations engaged in chain broadcasting"; and section 303(r) (added by section 6(b) of the 1937 amendments to the Communications Act), which empowered the FCC to adopt "such rules and regulations and prescribe such restrictions and conditions, not inconsistent with law, as may be necessary to carry out the provisions of this Act." Communications Act of 1934, ch. 652, § 303(g), (i), 48 Stat. 1064, 1082 (codified as amended at 47 U.S.C. § 303(g), (i) (2000)); Amendments to the Communications Act of 1934, ch. 229, § 6(b), 50 Stat. 189, 191 (1937), *quoted in National Broadcasting*, 319 U.S. at 217.

[318] These were section 212(b), which permitted transfers of motor carrier certificates and permits "pursuant to such rules and regulations as the Commission may prescribe," and section 204(a)(6), which gave the ICC the power "[t]o administer, execute, and enforce all provisions of this part, to make all necessary orders in connection therewith, and to prescribe rules, regulations, and procedure for such administration." *American Trucking*, 344 U.S. at 311 (alteration in original) (quoting Motor Carrier Act, 1935, ch. 498, §§ 204(b)(6), 212(b), 49 Stat. 543, 546, 555) (repealed 1983) (internal quotation marks omitted).

[319] *See National Broadcasting*, 319 U.S. at 209; *American Trucking*, 344 U.S. at 309.

[320] Communications Act, § 312(a), 48 Stat. at 1086–87 (codified as amended at 47 U.S.C. § 312(a)). For a discussion of this rulemaking grant, see *supra* note 257.

and section 502 made the violation of "any rule, regulation, restriction, or condition" imposed by the agency under authority of Title III of the Act a criminal offense.[321] Thus, both the specific and the general rulemaking grants cited in *National Broadcasting* as authority for the FCC rule enabled legislative rulemaking, according to the convention. With respect to the ICC's leasing regulation, section 222(a) of the Motor Carrier Act provided for statutory fines for violations of the ICC's regulations, and section 222(b) gave the ICC the power to bring suit when any regulations were violated.[322] Under the convention, these provisions signaled Congress's intent to give legislative effect to rules and regulations that the ICC promulgated under the Act.

The significance of *National Broadcasting* and *American Trucking* for the future lay not in what the Court said, but in what it did not say: the opinions demonstrated an apparent indifference to the question of the sources of the agencies' authority as legislative rulemakers.[323] Nowhere in his opinion for the Court in *National Broadcasting* did Justice Frankfurter attend to the distinction between grants of legislative and nonlegislative rulemaking powers.[324] Instead, the Court implicitly assumed that the Communications Act's rulemaking grants conferred the power to make legislative rules. Justice Reed's majority opinion in *American Trucking* quickly rejected the contention that the general rulemaking grant in the Motor Carrier Act "merely concerns agency procedures and is solely administrative."[325] He stated that the reference to "enforcement" in the general grant refuted this conten-

[321] *Id.* § 502, 48 Stat. at 1100–01 (codified as amended at 47 U.S.C. § 502). For a further discussion of this statutory provision, see *supra* note 258 and accompanying text.

[322] *See* Motor Carrier Act, 1935, § 222(a)–(b), 49 Stat. at 564.

[323] The failure of the Supreme Court to address the source of legislative rulemaking authority enabled future courts and commentators to fill the gap with new theories about the meaning of statutory grants. For example, in his influential treatise, Kenneth Culp Davis read *National Broadcasting* to mean that a legislative rule "may rest upon an implied or an unclear grant of power" because the Court had sustained the FCC's rules even though the power to issue regulations governing the contractual relationships between networks and affiliates was not *specifically* conferred by the Communications Act. 1 KENNETH CULP DAVIS, ADMINISTRATIVE LAW TREATISE § 5.03, at 299 n.2 (1st ed. 1958). Davis thus saw *National Broadcasting* as running contrary to the older view, associated with *Eaton* and *Grimaud*, that the authority to issue binding rules must be specifically or explicitly delegated. *Id.*

[324] *See National Broadcasting*, 319 U.S. at 209–26 (reasoning that the FCC's regulations were within its authority under the Communications Act). As will be discussed *infra* section V.B.2.(b), this silence proved to be significant when Judge Friendly later asserted that *National Broadcasting* supported the view that general grants of rulemaking authority confer the power to make legislative rules. *See* Nat'l Ass'n of Pharm. Mfrs. v. FDA, 637 F.2d 877, 880 (2d Cir. 1981) ("The Supreme Court's decision in *National Broadcasting Co. v. United States*, which in retrospect seems to have inaugurated the modern approach, was not universally so recognized at the time, since the Court there relied in part on more specific grants of rulemaking power and the regulations at issue in that case, although legislative in effect, were clothed in the garb of procedural rules." (citations omitted)).

[325] Am. Trucking Ass'ns v. United States, 344 U.S. 298, 311 (1953).

tion.[326] In any event, he ultimately declined to identify the precise source of authority for the rule, suggesting that it was sufficient to show that the agency was pursuing a problem within the general area that Congress had charged it with regulating.[327]

2. Storer Broadcasting *(1956) and* Texaco *(1964).* — The next two cases, *United States v. Storer Broadcasting Co.*[328] and *Federal Power Commission v. Texaco Inc.*,[329] presented a different issue. *Storer Broadcasting* also arose under the Communications Act; *Texaco* arose under the Natural Gas Act.[330] Both cases presented the question whether an agency could promulgate rules concerning issues that normally require adjudicatory hearings. *Storer Broadcasting* posed the question whether the FCC could provide by rule that it would deny future applications for television broadcasting licenses if the applicant already had an interest in five or more stations.[331] *Texaco* posed the question whether the Federal Power Commission could by rule adopt pricing provisions for natural gas supply contracts and provide that it would automatically reject any contract containing inconsistent provisions.[332]

In *Storer Broadcasting*, as in *National Broadcasting*, the FCC cited multiple grants of rulemaking authority to support its rules restricting multiple ownership, each of which was facially ambiguous.[333] In *Texaco*, only one rulemaking grant supported the Federal Power Commission: section 16 of the Natural Gas Act, which gave the Commission authority to prescribe such regulations "as it may find necessary or appropriate to carry out the provisions of this Act."[334] This provision was facially ambiguous in the same sense.

The thrust of the challenge in each case was not that the agency lacked power to make rules with the force of law, but that the structure of each act required that the issue in question be resolved through

328 351 U.S. 192 (1956).

329 377 U.S. 33 (1964).

330 Ch. 556, 52 Stat. 821 (1938).

331 *See Storer Broadcasting*, 351 U.S. at 193–94 & n.1.

332 *See Texaco*, 377 U.S. at 34–35.

333 Sections 303(f) and (r) of the Communications Act potentially supported the rules. Communications Act of 1934, ch. 652, § 303(f), 48 Stat. 1064, 1082 (codified as amended at 47 U.S.C. § 303(f) (2000)) (authorizing the FCC to make "regulations not inconsistent with law as it may deem necessary to prevent interference between stations and to carry out the provisions" of the Act); Amendments to the Communications Act of 1934, ch. 229, § 6(b), 50 Stat. 189, 191 (1937) (adding section 303(r) to the Act and giving the FCC the power to make "rules and regulations and prescribe such restrictions and conditions, not inconsistent with law, as may be necessary to carry out" the chapter); *see Storer Broadcasting*, 351 U.S. at 201 & n.9 (quoting 47 U.S.C. § 303, the codification of the provisions).

334 *See Texaco*, 377 U.S. at 41 (quoting Natural Gas Act, ch. 556, § 16, 52 Stat. 821, 830 (1938)).

case-by-case adjudication.[335] The Supreme Court rejected the argument in both cases, holding that the statutory requirement of a hearing did not preclude the agencies from "particularizing statutory standards through the rulemaking process" and from rejecting without a hearing those who failed either to meet the regulation or to show why they were entitled to a waiver of the rule.[336]

Given that the challengers in both cases objected to the rules as interfering with individual hearing rights, it is not surprising that the Court spent little time considering whether the agency had authority to promulgate rules having the force of law. The Court concerned itself only with the question whether the rules were within the scope of the agencies' authority, not with whether the rules were legislative. In *Storer Broadcasting*, Justice Reed's opinion for the Court concluded that the FCC's multiple ownership rules, although not specifically authorized by statute, were sufficiently related to the purpose of the Communications Act and therefore within the scope of sections 4(i) and 303(r), which authorized rules "not inconsistent with the Act or law."[337] In *Texaco*, Justice Douglas's majority opinion similarly concluded that the Federal Power Commission's general rulemaking grant provided "ample" authority for rules that imposed conditions on individual applications because the rules were within the substantive bounds of the Natural Gas Act.[338]

Had the Court addressed the question whether the agencies had authority to adopt legislative rules, and had it resolved the question in light of the drafting convention, then once again the Court would have upheld the agencies' authority in both cases. In the Communications Act, addressed in *Storer Broadcasting*, section 4(i) probably does not support legislative rulemaking authority.[339] But section 303(r) appears to carry legislative effect under the convention for the same reasons discussed in connection with *National Broadcasting* — rules promulgated under this grant are enforced by license revocations and criminal sanctions.[340] The Federal Power Commission's general rulemaking grant in *Texaco* would have been construed as conferring legislative rulemaking authority under the convention, because the Natural Gas

336 *Texaco*, 377 U.S. at 39; *see also Storer Broadcasting*, 351 U.S. at 202–03.

337 *Storer Broadcasting*, 351 U.S. at 203–04.

338 *Texaco*, 377 U.S. at 41.

339 *See supra* notes 255–264 and accompanying text (discussing how section 4(i) should probably be viewed as merely a housekeeping grant).

340 *See supra* pp. 530–31 (describing the legal sanctions attached to rule violations); *supra* note 257 (describing various rulemaking provisions of the Act, including section 303(r), and their effects under the convention).

Act authorized the Commission to bring suit against those who violate its regulations and to subject them to a fine.[341]

The significance of *Storer Broadcasting* and *Texaco* does not lie in any holding by the Court about the meaning of facially ambiguous rulemaking grants. Rather, the cases are important largely because they encouraged the use of rulemaking by agencies in an effort to streamline the regulatory process and, more subtly, because they compounded the impression, inaugurated by *National Broadcasting* and *American Trucking*, that the question whether Congress has delegated to an agency the authority to make rules with the force of law is of little interest or significance to courts.

3. Thorpe *(1969) and* Mourning *(1973).* — The next two cases mark a departure from the Court's prior decisions in that, for the first time, the Court expressly considered whether particular rules adopted by agencies had the force of law. In *Thorpe v. Housing Authority*,[342] a tenant in a federally assisted housing project argued that a circular issued by the Department of Housing and Urban Development (HUD) entitled her to notice and an opportunity to respond prior to eviction by a local housing authority.[343] In *Mourning v. Family Publication Services, Inc.*,[344] a company selling magazine subscriptions challenged a Federal Reserve Board regulation, promulgated under the Truth in Lending Act, that broadly defined consumer credit transactions to include any transaction payable in four or more installments.[345]

The disposition of the two cases abounds with irony from the perspective of the drafting convention. In *Thorpe*, the local housing authority did not argue that HUD lacked the authority to issue legally binding regulations on the subject of eviction procedures.[346] Instead, it argued that HUD had intended the circular to be only advisory; the

---

[341] *See* Natural Gas Act, ch. 556, § 20(a), 52 Stat. 821, 832 (1938) (codified as amended at 15 U.S.C. § 717s (2000)) (empowering the Commission to bring suit); *id.* § 21(b), 52 Stat. at 833 (codified as amended at 15 U.S.C. § 717t) (setting statutory fines for rule violations).

[342] 393 U.S. 268 (1969).

[343] *See id.* at 269–70. When the case first came before the Court, the tenant challenged the state procedures authorizing eviction without notice on constitutional grounds. *See* Thorpe v. Hous. Auth., 386 U.S. 670, 671 (1967). After HUD issued the circular, and before the Court resolved the merits of the claim, the Court vacated and remanded for reconsideration in light of the circular. *See id.* at 673–74. The North Carolina Supreme Court then held that the circular did not apply retroactively to evictions instituted before it was promulgated. *See Thorpe*, 393 U.S. at 273–74. The Court probably viewed the second *Thorpe* decision, relying on the HUD circular rather than on due process, *see id.* at 283–84, as an exercise in avoiding a difficult constitutional question. Years later, the Court held that the eviction of a public housing tenant without notice violated due process. *See* Greene v. Lindsey, 456 U.S. 444, 456 (1982).

[344] 411 U.S. 356 (1973).

[345] *See id.* at 358, 361–62.

[346] *See* Brief for Respondent at 26, *Thorpe*, 393 U.S. 268 (1969) (No. 1003) (acknowledging that HUD had general rulemaking powers and arguing only that HUD could not adopt rules inconsistent with the statute).

authority alternatively argued that if the Court ruled that the circular was intended to be mandatory, it could not be applied retroactively to pending eviction proceedings.[347] In an opinion by Chief Justice Warren, the Court held that the circular was mandatory[348] and thus was a legislative rule. The Court did not explain why the facially ambiguous grant of rulemaking authority found in section 8 of the Housing Act of 1937[349] was a grant of legislative authority, other than to observe in a footnote that "[s]uch broad rule-making powers have been granted to numerous other federal administrative bodies in substantially the same language."[350] The passage that immediately follows, and a passage later in the opinion, intimated that the only constraint on the agency was whether the rules were consistent with the general purposes of the Act.[351] Having established that the circular had the force of law, the Court then rejected the housing authority's argument that applying the circular to evictions already in process would constitute impermissible retroactive rulemaking.[352]

Had the local housing authority challenged HUD's authority to issue rules with the force of law, and had the Court resolved that challenge in accordance with the convention, the housing authority would have prevailed. No statutory sanctions attached to the general rulemaking grant under the Housing Act, and consequently under the convention Congress had not intended to give HUD authority to make

---

347 *See Thorpe*, 393 U.S. at 275, 281; *see also id.* at 278–79 (noting that the housing authority made a constitutional argument as a third alternative).

348 *See id.* at 275–76.

349 Ch. 896, § 8, 50 Stat. 888, 891 (allowing HUD to "make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this Act").

350 *Thorpe*, 393 U.S. at 277 n.28. The Court cited three other rulemaking grants in support of this observation. *See id.* It cited a grant to the now-defunct Civil Aeronautics Board, which probably was not a legislative grant under the convention, *see* 49 U.S.C. § 1324(a) (1964) (endowing the Board with the power to make regulations but specifying no sanctions for violations of those regulations); the general grant contained in the Social Security Act, *see* Social Security Amendments of 1939, ch. 666, § 205(a), 53 Stat. 1360, 1368 (which was a legislative grant under the convention, *see supra* note 124 and pp. 493–94); and the grant in section 16 of the Natural Gas Act, *see* Natural Gas Act, ch. 556, §§ 16, 21(b), 52 Stat. 821, 830 (1938) (codified as amended at 15 U.S.C. § 717t (2000)) (which was also a legislative grant under the convention, *see supra* pp. 530–32). The author of the footnote was obviously unaware of the signaling device that we argue Congress had used in indicating which grants were legislative and which were nonlegislative.

351 In the passage immediately following, the Court addressed and rejected the local housing authority's contention that the circular, if understood to be a mandatory rule, was inconsistent with the statutory purpose of vesting in local housing authorities maximum responsibility for administering public housing programs. *See Thorpe*, 393 U.S. at 277–78. Later in the opinion, the Court observed that the circular was "reasonably related to the purposes of the enabling legislation under which it was promulgated," *id.* at 280–81, which the Court said included providing "a decent home and suitable living environment to every American family," *id.* at 281 (quoting Housing Act of 1949, ch. 338, § 2, 63 Stat. 413, 413) (internal quotation marks omitted).

352 *See id.* at 281–83.

rules with legislative effect.[353] *Thorpe* thus represented the first Supreme Court case to reach a result contrary to what would have been required by the convention, although whether the Court's decision can be characterized as a holding on this issue is doubtful, since the parties did not brief the precise issue, and the Court gave only a vague, perfunctory explanation for the outcome in a footnote.[354]

In contrast, the parties' briefs in *Mourning* did raise the question whether the facially ambiguous grant of rulemaking under the Truth in Lending Act[355] authorized the Federal Reserve Board to make rules having the force of law.[356] In doing so, however, the parties did not discuss the convention. Following *Thorpe*, the Court ignored this threshold issue, focusing instead on the scope of the agency's rulemaking authority. As the Court framed the issue:

> Where the empowering provision of a statute states simply that the agency may "make . . . such rules and regulations as may be necessary to carry out the provisions of this Act," we have held that the validity of a regulation promulgated thereunder will be sustained so long as it is "reasonably related to the purposes of the enabling legislation."[357]

The Court held that the Federal Reserve Board's four-installment rule fell within the scope of the agency's authority and was reasonably related to the statute's purpose.[358]

Had the Court sought to resolve the question whether the Federal Reserve Board's rules had the force of law under the convention, it would have concluded that they did. Section 112 of the Truth in Lending Act provided for fines up to $5000 and imprisonment for per-

---

353 *See* United States Housing Act of 1937, ch. 896, § 8, 50 Stat. 888, 891. Even if Congress had given HUD the authority to render legislative rules, there is no indication the agency intended that the circular would function as a legislative rule. Unlike most legislative rules, it was not promulgated in accordance with notice-and-comment procedures. *See* 5 U.S.C. § 553(b) (2000). *But see id.* § 553(a) (exempting rules related to "grants" — including perhaps HUD grants to local housing authorities — from notice-and-comment requirements). Also, the agency did not publish the circular in the Federal Register. *See* Am. Mining Cong. v. Mine Safety & Health Admin., 995 F.2d 1106, 1109 (D.C. Cir. 1993) (noting that legislative rules are usually published in the Federal Register).

354 *See, e.g.*, Brecht v. Abrahamson, 507 U.S. 619, 631 (1993) (noting that if a prior precedent does not "squarely" address an issue, the Court is "free to address [it] on the merits" at a later date); United States v. L.A. Tucker Truck Lines, Inc., 344 U.S. 33, 38 (1952) (stating that an issue not "raised in briefs or argument or discussed in the opinion of the Court" cannot be taken as "a binding precedent on [the] point"); Webster v. Fall, 266 U.S. 507, 511 (1925) (stating that issues that merely "lurk in the record" and are not brought to the Court's attention should not "be considered as having been so decided as to constitute precedents").

355 Pub. L. No. 90-321, § 105, 82 Stat. 146, 148 (1968) (codified at 15 U.S.C. § 1604 (2000)) ("The Board shall prescribe regulations to carry out the purposes of this title.").

356 *See, e.g.*, Brief for Petitioner at 20–31, Mourning v. Family Publ'ns Serv., Inc., 411 U.S. 356 (1973) (No. 71-829).

357 *Mourning*, 411 U.S. at 369 (alteration in original) (footnote omitted) (quoting *Thorpe*, 393 U.S. at 280–81).

358 *See id.* at 376–77.

sons who failed to disclose information required by any regulation issued under the Act.[359] In addition, the Act expressly gave the Board's regulations the force of law by providing that "[a]ny reference to any requirement imposed under this title or any provision thereof includes reference to the regulations of the Board under this title or the provision thereof in question."[360] Because of these statutory provisions, the regulation at issue in *Mourning* — unlike the circular in *Thorpe* — was legislative according to the convention.

In Supreme Court litigation, *Thorpe* and *Mourning* represent the low-water mark in terms of attention to congressional delegations of power to agencies to act with the force of law. Neither the housing authority in *Thorpe* nor the consumer in *Mourning* referred to the convention, even though it would have been in their interests to do so. For its part, the Court focused solely on whether an agency's regulations fell within the general scope of its jurisdiction, as conferred by the act, ignoring entirely the question whether Congress has delegated authority to the agency to act with the force of law.

4. Gilbert *(1976) and* Chrysler *(1979).* — In the latter half of the 1970s, a reaction set in. In both *General Electric Co. v. Gilbert*[361] and *Chrysler Corp. v. Brown*,[362] the Supreme Court held that particular agency pronouncements did *not* have the force of law, and for that reason were not valid legislative regulations.[363] In other words, the very issue ignored in *Thorpe* and *Mourning* suddenly returned to the fore. In neither case, however, did the Court point to the absence of congressionally mandated sanctions as the reason for denying these pronouncements the force of law. Thus, although the Court affirmed the importance of delegated authority to act with the force of law, it did not acknowledge the device Congress had employed for signaling an intention to delegate such authority.

Gilbert involved the claim that General Electric's employee disability plan violated Title VII of the Civil Rights Act of 1964 by excluding disability based on pregnancy.[364] One issue concerned the weight to be given to guidelines issued by the Equal Employment Opportunity Commission (EEOC) declaring that employers should apply disability benefits to pregnancy on the same terms and conditions as benefits applied to other temporary disabilities.[365] The Court noted that "Congress, in enacting Title VII, did not confer upon the EEOC authority

364 *Gilbert*, 429 U.S. at 127–28.
365 *Id.* at 140–41.

to promulgate rules or regulations pursuant to that Title."[366] The Court specifically contrasted EEOC guidelines with "regulations which Congress has declared shall have the force of law" or "regulations which under the enabling statute may themselves supply the basis for imposition of liability."[367] Because the EEOC guidelines did not have the force of law, the Court concluded that it would follow them only to the extent that their reasoning was persuasive.[368]

The words the Court used to distinguish the guidelines from a legislative regulation — "Congress has declared," "force of law," "themselves supply the basis for imposition of liability" — suggest that the Court was on the cusp of uncovering the logic of the convention. But the Court betrayed no awareness of the device Congress had used in signaling that agency regulations have the force of law. To be sure, such knowledge was unnecessary in *Gilbert*, because the rulemaking grant to the EEOC empowered the agency only to issue "suitable *procedural* regulations to carry out the provisions" of this subsection.[369] Thus, the Court easily reached the right result — that Congress had not delegated to the EEOC the power to act with the force of law — without the need for recourse to the convention to unlock the meaning of a facially ambiguous rulemaking grant.

In *Chrysler*, a complicated "reverse-Freedom of Information Act" case, the Court considered whether regulations promulgated by the Department of Labor's Office of Federal Contract Compliance Programs (OFCCP), which required government contractors to furnish reports about their affirmative action programs, had the force of law.[370] The Court held that the OFCCP's regulations were not reasonably related to a grant of power given by Congress and therefore could not be treated as legislative.[371]

366 *Id.* at 141.

367 *Id.*

368 In other words, the guideline was entitled to *Skidmore* deference, not *Chevron* deference. *See id.* at 141–42; *see also* United States v. Mead Corp., 533 U.S. 218, 234–35 (2001) (noting that *Chevron* did not eliminate *Skidmore* deference, under which an administrative ruling is afforded "respect proportional to its 'power to persuade'" (quoting *Skidmore v. Swift & Co.*, 323 U.S. 134, 140 (1944))).

369 42 U.S.C. § 2000e-12(a) (2000) (emphasis added). In contrast, the EEOC does have legislative rulemaking authority under the Americans with Disabilities Act. *See* 42 U.S.C. §§ 12,116–12,117 (2000).

370 *See* Chrysler Corp. v. Brown, 441 U.S. 281, 286–87 (1979). A reverse-Freedom of Information Act (FOIA) suit is an action to enjoin the government from disclosing information — under FOIA — that a party has submitted to the government. The Court in *Chrysler* held that FOIA did not authorize such suits, but discussed whether such an action might be permitted under 18 U.S.C. § 1905, a criminal statute that prohibits agencies from disclosing information "not authorized by law." 18 U.S.C. § 1905 (2000); *see Chrysler*, 441 U.S. at 294–95. This in turn presented the question whether the OFCCP regulations, which required disclosure of contractor reports about affirmative action compliance, were binding legislative regulations. *Id.* at 295.

371 *See Chrysler*, 441 U.S. at 303–09.

One possible source of legal authority for the OFCCP regulations considered by the Court was 5 U.S.C. § 301, the "Housekeeping Act."[372] This act gives each head of an executive department general power to "prescribe regulations for the government of his department, the conduct of its employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property."[373] The grant is facially ambiguous, because it does not specify whether the "regulations" to which it refers include legislative rules, or merely procedural and interpretive rules. The Court resolved the ambiguity by analyzing the language and history of § 301, concluding that it authorized only "rules of agency organization, procedure or practice," as opposed to legislative rules.[374] Application of the framework of the convention would have yielded the same conclusion with less effort, because § 301 does not contain any sanction for violating the rules promulgated under its authority. But the Court did not mention the convention.

Gilbert and *Chrysler* are especially revealing because then-Justice William Rehnquist wrote both opinions. In contrast to the authors of the other decisions we have considered, Justice Rehnquist was, at least at this time, highly sympathetic to the nondelegation doctrine.[375] This explains his endorsement of the proposition, as stated in *Chrysler*, that "[t]he legislative power of the United States is vested in the Congress, and the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes."[376] Yet even Justice Rehnquist, with his sensitivity to the nondelegation doctrine, was unable to discern the convention. By 1979, as far as Supreme Court Justices and Supreme Court litigants were concerned, the convention had disappeared.

---

[372] *See id.* at 308–12.

[373] 5 U.S.C. § 301 (2000).

[374] *Chrysler*, 441 U.S. at 310. For a discussion of the history of the Housekeeping Act, see *supra* pp. 485–86.

[375] Shortly after *Gilbert* and *Chrysler*, then-Justice Rehnquist authored two widely discussed minority opinions suggesting that aspects of the Occupational Health and Safety Act were unconstitutional on nondelegation grounds. *See* Am. Textile Mfrs. Inst., Inc. v. Donovan, 452 U.S. 490, 543–44 (1981) (Rehnquist, J., dissenting); Indus. Union Dep't, AFL-CIO v. Am. Petroleum Inst., 448 U.S. 607, 675–76 (1980) (Rehnquist, J., concurring). More recently, as Chief Justice, he appears to have lost interest in the issue. For example, he joined the Court's opinions rejecting nondelegation challenges in *Whitman v. American Trucking Ass'ns*, 531 U.S. 457 (2001); and *Mistretta v. United States*, 488 U.S. 361 (1989).

[376] *Chrysler*, 441 U.S. at 302.

B. *Why the Convention Was Ignored*

After a half-century of legislation in which Congress employed the convention to signal whether rulemaking grants authorized legislative rules or housekeeping rules, why did the convention never surface in Supreme Court litigation? The most obvious explanation — and in the end the only satisfactory one — is that no party in any of these cases ever described the convention in its briefs.[377] The Court is not omniscient and largely depends on the parties for information about the relevant law that applies to the many controversies it must resolve. If the parties fail to mention a source of law, the Court cannot be expected to discover it on its own.

It is possible, of course, that one or more Justices might have known about the convention from their own legal experiences. Many Justices of this period had congressional and executive experience. Justices Black, Vinson, Burton, and Minton had served in the Senate; Justices Reed, Jackson, and Clark had served in high level positions in the Department of Justice, and Justice Douglas had been Chairman of the SEC. But the convention functioned at a level of detail below that with which these individuals ordinarily would have been involved in their legislative and administrative capacities. Thus, it is not surprising that they would not have known about the convention, or if they once had known about it, that they would forget about it years later when presented with briefs in which it was not mentioned.

Justice Felix Frankfurter is the most difficult to account for, since he taught administrative law at Harvard before being appointed to the Court and was familiar with *Eaton* and *Grimaud*.[378] But Frankfurter was more an intellectual mentor to other administrative law scholars

---

[377] If any party in these cases had intended to describe the convention, one would expect at a minimum to find some reference to *United States v. Grimaud*, 220 U.S. 506 (1911). In only one of the eight cases, however, did the parties make any reference to *Grimaud* in their briefs, and they did not do so to make the point that congressional sanctions for rule violations mark a grant of rulemaking as legislative. *Compare* Brief for Intervenor-Appellee Teamsters Union at 50, Am. Trucking Ass'ns v. United States, 344 U.S. 298 (1953) (No. 26) ("The grant of a broad scope of rule-making authority, to fill the gaps of regulation, is a customary technique well established since *United States v. Grimaud*."), *with* Brief of Appellants at 31–32, *American Trucking*, 344 U.S. 298 (1953) (No. 26) (distinguishing *Grimaud* on the ground that the statute in that case expressly delegated to the Secretary the power to control public lands, whereas the Motor Carrier Act did not expressly give the ICC the power to regulate motor carrier leasing practices).

[378] *See* Singer v. United States, 323 U.S. 338, 351 (1945) (Frankfurter, J., dissenting) ("It is only when Congress in advance prescribes criminal sanctions for violations of authorized rules that violations of such rules can be punished as crimes. It is this far-reaching distinction which, it was pointed out in the *Grimaud* case, put on one side the doctrine of the *Eaton* case, where violation of rules and regulations was not made criminal, and on the other side legislation such as that enforced in the *Grimaud* case where Congress specifically provided that '*any violation of the provisions of this act or such rules and regulations* [of the Secretary of Agriculture] *shall be punished*.'" (alteration in original) (quoting *United States v. Grimaud*, 220 U.S. at 515)).

and practitioners than a serious scholar of the subject himself.[379] His casebook on administrative law, a jumble of material with little commentary, makes no mention of the convention.[380] Nor does he allude to it in his other administrative law writings, most of which take the form of essays or introductions to other scholars' work.[381]

That the Justices were unfamiliar with the convention, however, only pushes the inquiry back one step: why did the parties fail to discuss it in their briefs? With respect to the first four cases in our survey, it is clear why the industry lawyers did not allude to the convention: the convention represented a losing argument for them. Their clients were anxious to secure a ruling holding particular regulations invalid, but in each case the convention indicated that the relevant agencies (the FCC, ICC, and Federal Power Commission) *did* have the authority to issue regulations having the force of law. Consequently, the industry lawyers concentrated on other arguments.

It is less clear why the government lawyers representing the agencies in these cases did not discuss the convention. Of course, their primary task was to defend the regulations against the attacks leveled by the industry lawyers, and achieving this goal did not require any reliance on the convention. But the government would have gained at least a psychological advantage by demonstrating that Congress clearly intended to delegate legislative rulemaking authority to the agencies in question. Perhaps the omission stems in part from the fact that the agencies are represented in the Supreme Court by lawyers in the Solicitor General's office. These lawyers specialize in appellate advocacy and derive most of their knowledge from studying Supreme Court opinions. Generally, they do not have a deep understanding of the law that surrounds the agencies they represent. Because the convention had never appeared in an appellate opinion and existed only in the "common law" of agency authority as understood by lawyers in Congress and the agencies, the Solicitor General's lawyers perhaps were not aware of it.

With respect to the lawyers who came of age after World War II, there is a more basic explanation for the lack of awareness of the convention. Administrative law scholarship in this period was dominated by scholars who were veterans of government service during the New Deal era. As a general rule, these scholars downplayed the importance of limits on agency powers, instead emphasizing the pragmatic case for

379 *See* WILLIAM C. CHASE, THE AMERICAN LAW SCHOOL AND THE RISE OF ADMINISTRATIVE GOVERNMENT 137–39 (1982).

380 *See* FELIX FRANKFURTER & J. FORRESTER DAVISON, CASES AND OTHER MATERIALS ON ADMINISTRATIVE LAW (1st ed. 1932).

381 *See, e.g.*, Felix Frankfurter, *Introduction*, 18 IOWA L. REV. 129 (1933); Felix Frankfurter, *The Task of Administrative Law*, 75 U. PA. L. REV. 614 (1927).

broad delegation of powers to administrative agencies and the importance of adapting administrative procedure to a judicial model of decisionmaking.[382] It is thus no coincidence that the early writings of these scholars contain little discussion of rulemaking (in contrast to adjudication) and no discussion of how to determine whether an agency has been granted legislative rulemaking authority.[383] Nor is it a coincidence that the instructional materials produced by members of this group after the New Deal devoted little coverage to rulemaking, and none at all to the interpretation of facially ambiguous delegations of rulemaking authority.[384] For this generation of scholars, the question of how agencies obtain the power to issue rules that have the force and effect of statutes was an awkward and potentially destabilizing one for the federal administrative state. Since no prominent appellate opinion dealt with the issue, these scholars evidently felt no obligation to explore the question in their instructional materials.[385] As best we can tell, no lawyer who attended law school after World War II would have learned about the convention from even the most assiduous study of the classroom materials in use during this period.

In any event, by the time we get to *Thorpe* and *Mourning*, considerations of legal relevance and litigational advantage cannot explain the failure of the parties to alert the Court to the convention. The only plausible explanation is collective ignorance. In *Thorpe*, the convention provided a winning argument for the housing authority, but the authority did not mention it. It is possible that the lawyers for the

[383] *See, e.g.*, WALTER GELLHORN, FEDERAL ADMINISTRATIVE PROCEEDINGS (1941) (containing no index entries to regulations, rules, or rulemaking despite the author's experience as research director of the Attorney General's Committee on Administrative Procedure); JAMES M. LANDIS, THE ADMINISTRATIVE PROCESS (1938) (attempting to justify agencies on the ground of their neutral expertise but containing no index entries to regulations, rules, or rulemaking); *see also* JOHN DICKINSON, ADMINISTRATIVE JUSTICE AND THE SUPREMACY OF LAW IN THE UNITED STATES 15 n.25 (1927) (noting that "[t]he subject of administrative regulations lies outside the scope of this book").

[384] *See* WALTER GELLHORN, ADMINISTRATIVE LAW: CASES AND COMMENTS (1st ed. 1940; 2d ed. 1947); WALTER GELLHORN & CLARK BYSE, ADMINISTRATIVE LAW: CASES AND COMMENTS (1954); LOUIS L. JAFFE, ADMINISTRATIVE LAW: CASES AND MATERIALS (1953); KENNETH C. SEARS, CASES AND MATERIALS ON ADMINISTRATIVE LAW (1938). Professor Davis, whom we have previously cited, devoted much more attention in his early work to rulemaking and to the distinction between legislative and interpretive rules. *See* KENNETH CULP DAVIS, ADMINISTRATIVE LAW §§ 54–55 (1951); 1 DAVIS, *supra* note 323, § 5.03; Davis, *supra* note 79, at 928–34. Although he cited some of the materials we discuss in this Article that recognize the convention, he did not explicitly describe the convention in any of his work; indeed, he did not seriously consider the possibility that the scope of an agency's power could be determined from examining the terms of its organic legislation.

[385] In administrative law, as elsewhere in the law school curriculum, instructional materials tend to emphasize appellate opinions to the exclusion of virtually everything else. *See* CHASE, *supra* note 379, at 117–24.

housing authority made a deliberate decision to concentrate solely on other arguments such as retroactivity. We learn from the Court's opinion that the authority had already begun complying with the circular,[386] and thus perhaps its only interest in continuing the litigation was to avoid an award of attorneys' fees. Still, it is unlikely that the authority's lawyers would have waived a winning argument had they been aware of its existence.

Mourning is even more revealing. The petitioner in *Mourning* — who supported the Federal Reserve Board's four-installment rule — devoted several pages of her brief to the issue of the Board's authority to promulgate legislative rules under the Truth in Lending Act's facially ambiguous rulemaking grant.[387] The petitioner set forth numerous arguments explaining why the grant authorized legislative rules. This presentation was thoroughly researched, but it included no mention of Congress's convention.[388] Given the petitioner's detailed analysis of the Board's general rulemaking grant, it is fair to assume that she would have relied upon the convention if she had been aware of it. Petitioner's failure to raise the convention thus suggests that the convention had disappeared from the consciousness of Supreme Court litigators by the time *Mourning* was argued and decided in 1973.

The final two cases confirm that knowledge of the convention was lost to the circle of lawyers who argue cases before the Supreme Court. In *Gilbert*, petitioner General Electric and supporting amici had every incentive to show that the EEOC's guidelines did not have the force of law. Granted, the express language of the general rulemaking grant made it possible to do so without resort to the convention. Still, had the lawyers known of the convention, one would expect some mention

---

386 Thorpe v. Hous. Auth., 393 U.S. 268, 283 (1969).

387 *See* Brief for Petitioner at 21–27, Mourning v. Family Publ'ns Serv., Inc., 411 U.S. 356 (1973) (No. 71-829).

388 The petitioner argued that Supreme Court precedent established that general rulemaking grants arguably confer legislative powers even where several specific rulemaking grants are also included in the Act. *Id.* at 22–23. Relying on *Thorpe*, the petitioner claimed that "[t]he fact that the Act contains substantive provisions and authorizes the Board to issue interpretive regulations does not necessarily negate the grant of legislative rule making power to carry out the Act's more broadly phrased statement of purpose." *Id.* at 22. The petitioner acknowledged that the general rulemaking grant given to the Secretary of the Treasury under the Internal Revenue Code (IRC) was understood to authorize only interpretive rules. *Id.* at 23–24. However, the petitioner distinguished the Board's general rulemaking grant under the Truth in Lending Act from the grant included in the IRC on the ground that the Truth in Lending grant authorizes rules "to carry out *the purposes*" of the Act. *Id.* at 23 (emphasis added) (quoting 15 U.S.C. § 1604 (2000)) (internal quotation marks omitted). This language, the petitioner argued, was broader than the statutory language used in the IRC, which merely gives the power to issue rules "for the enforcement of this title." *Id.* (quoting 26 U.S.C. § 7805(a) (2000)) (internal quotation marks omitted). Finally, the petitioner supported her contention that the Board's general rulemaking grant authorizes legislative rules by pointing to section 1602(g) of the Truth in Lending Act, which gives Board regulations the same legal force as statutory provisions. *Id.* at 24 (citing 15 U.S.C. § 1602(g)).

of it. Yet the briefs' arguments only focus on the language of the rulemaking grant, never once referring to the convention.[389] Similarly, in *Chrysler*, the petitioner was anxious to demonstrate that 5 U.S.C. § 301 authorized only procedural and not legislative rules. Although the history of the rulemaking grant suggests it was, as its colloquial name indicates, only a housekeeping grant, one would expect some reference to the convention to confirm the point. The briefs, however, contained an exposition of the history of the particular grant but did not mention the convention.[390]

It is tempting to attribute this collective silence about the convention to changes in legal beliefs and values, such as a decline in belief in the Austinian conception of law as commands backed by sanctions[391] or a diminished allegiance to the nondelegation doctrine. But it is not clear that any such explanation holds water. The decision in *Thorpe* is as "Austinian" in its understanding of law as anything found in the opinions of the late nineteenth century. Once the Court deemed the HUD circular to have the force of law, it regarded the circular as having a direct preemptive effect on the state law of eviction and on the leases between housing authorities and their tenants. And although the early decisions in our series authored by New Dealers like Justices Frankfurter, Reed, and Douglas may conceivably reflect a latent hostility toward the nondelegation doctrine, this cannot be said of the last two decisions in our series, authored by then-Justice Rehnquist. *Gilbert* and *Chrysler*, in fact, reflect the first steps in a short-lived effort by Justice Rehnquist to *revive* the nondelegation doctrine.[392] Even Judge J. Skelly Wright, author of the leading appellate opinion that conferred legislative rulemaking power in the absence of conventional sanctions, purported to be an enthusiast of the nondelegation doctrine, going so far as to publish an article urging its re-

[392] *See supra* note 375 and accompanying text.

vival.[393] Thus, there would appear to be no correlation between support for the nondelegation doctrine and receptivity to, or even acknowledgement of, the convention.

In the end, the most parsimonious explanation for the fact that the Supreme Court ignored the convention is simple ignorance. The proximate cause of the Court's ignorance was the ignorance of the lawyers who appeared before it. The lawyers remained ignorant because, due to accidents of timing, no case presenting an opportunity for the Court to recognize the convention arose when the convention was most familiar to lawyers serving in Congress and the agencies. Suppose that the FTC or the NLRB had sought to engage in legislative rulemaking in the 1940s, and these actions had been challenged in litigation reaching the Supreme Court or even the courts of appeals. The upshot almost certainly would have been an appellate opinion explaining why the facially ambiguous rulemaking grants that Congress gave to these agencies did not include the power to make rules with the force of law. But this did not happen. And it did not happen, ironically enough, primarily because it was *so clear* to the staff attorneys at the FTC and the NLRB that their agencies lacked statutory authority to make such rules. Because lawyers tend to learn the law from reading appellate opinions,[394] and the convention never appeared in the Supreme Court opinions about rulemaking that accumulated in the years after the New Deal, the possibility of recovering knowledge of the convention slipped away.

V. THE CONVENTION ERASED

The Supreme Court's failure to attend to the distinction between grants of legislative and housekeeping rulemaking — and the American practice of distilling knowledge of public law from Supreme Court opinions — set the stage for the de facto erasure of the convention by the courts of appeals. As agencies and commentators began to perceive the advantages of rulemaking over adjudication, they began to rely on the language in several of the Court's opinions (including *National Broadcasting*, *American Trucking*, *Storer Broadcasting*, *Texaco*, *Thorpe*, and *Mourning*) as support for the proposition that agencies previously thought not to have legislative rulemaking authority in fact had enjoyed such power from their inception. The understanding that eventually emerged was exactly the opposite of the *Queen and Cres-*

[393] *See* J. Skelly Wright, *Beyond Discretionary Justice*, 81 YALE L.J. 575, 582 (1972) (arguing that Congress should not be able "to vote itself out of business. There must be some limit on the extent to which Congress can transfer its own powers to other bodies without guidance as to how these powers should be exercised.").

[394] *See supra* note 385.

cent Case express-statement canon: ambiguous grants of rulemaking authority are presumed to confer legislative rulemaking power unless Congress expressly indicates that the grant is limited to procedural or interpretive rules.

A. *Commentators Advocate Expanded Use of Rulemaking*

Beginning in the late 1950s and early 1960s, administrative law commentators began to call for increased use of rulemaking. The case for rulemaking rested on two somewhat disparate sets of concerns — fairness and efficacy. Some commentators emphasized the greater fairness of rules relative to adjudication. Making policy through adjudication can lead to inconsistent outcomes and frustrates expectations when policy changes retroactively.[395] Making policy through rulemaking is much more likely to result in standards that apply prospectively, providing clear notice of the law's requirements to all concerned.[396] Other commentators championed rulemaking as a means of making agencies more effective regulators.[397] For example, some argued that rulemaking allows agencies to promulgate blanket prohibitions against certain industrywide practices.[398]

These somewhat conflicting aspirations — constraining agency discretion and expanding agency power — convinced numerous scholars and lawyers to join the call for more rulemaking. Warren E. Baker, the general counsel of the FCC, wrote a pioneering article in 1957 that embraced both themes. He argued that "rule-making is a sounder way of proceeding than the case-by-case method or general declarations of policy."[399] He pointed to *Storer Broadcasting* as "a perfect example" of how agencies could set policy through rulemaking.[400] He contended

---

[395] *See, e.g.*, KENNETH CULP DAVIS, DISCRETIONARY JUSTICE 66 (Illini Books ed. 1971) (1969) (arguing that the retroactive feature of adjudication may "be sufficiently unfair that good administrators ought to try to avoid it").

[396] *See generally* Shapiro, *supra* note 296, at 929–42 ("[A] rule declared in a regulation is more likely than a rule declared in adjudication to be limited in application to determining the legal status of future conduct . . . ."); *see also* DAVIS, *supra* note 395, at 66 ("[P]rospective rules often should be preferred to retroactive law-making through adjudication.").

[397] *See, e.g.*, Peter Barton Hutt, *Philosophy of Regulation Under the Federal Food, Drug and Cosmetic Act*, 28 FOOD DRUG COSM. L.J. 177, 183 (1973) (arguing that rulemaking allows the FDA to "induce widespread compliance" more effectively); Richard A. Wegman, *Cigarettes and Health: A Legal Analysis*, 51 CORNELL L.Q. 678, 749–51 (1966) (arguing that FTC rulemaking could effectively address the dangers of smoking because the "rulemaking approach assures that the entire industry will feel the weight of the FTC sanction at the same time").

[398] *See* Shapiro, *supra* note 296, at 935 (noting the FTC's view that "when a practice is widespread in an industry, a rulemaking proceeding operates evenhandedly to bar that practice on the part of all, while an order directed only to one permits his competitors to gain an unfair advantage").

[399] Warren E. Baker, *Policy by Rule or Ad Hoc Approach — Which Should It Be?*, 22 LAW & CONTEMP. PROBS. 658, 671 (1957).

[400] *See id.* at 670.

that rulemaking, by setting clear, across-the-board standards, serves as a more effective means of establishing policy than the manifold, time-consuming suits required by adjudication.[401] In addition, he noted that rulemaking avoids the harsh consequences inherent in the retroactive application of agency policy set case-by-case through adjudication.[402]

Two prominent public figures, James Landis and Judge Henry Friendly, soon added their voices to the call for increased agency rulemaking. In 1960, Landis wrote his influential *Report on Regulatory Agencies to the President-Elect*, in which he contended, "A prime criticism of the regulatory agencies is their failure to develop broad policies in the areas subject to their jurisdiction."[403] Landis suggested that, rather than rely solely on adjudication, agencies should use rulemaking to set forward-looking policy.[404] Similarly, in a book published in 1962, Judge Friendly explained that a major source of dissatisfaction with the federal administrative agencies stemmed from their "failure to develop standards sufficiently definite to permit decisions to be fairly predictable and the reasons for them to be understood."[405] Although Judge Friendly devoted most of his book to the contention that agencies should develop more detailed adjudicative standards, he also urged that the case-by-case adjudication method "should be supplemented by much greater use of two other devices — policy statements and rulemaking."[406]

Professor Kenneth Culp Davis soon threw his formidable energies into promoting greater use of rulemaking. In his 1969 book *Discretionary Justice*, Davis proclaimed rulemaking to be "one of the greatest inventions of modern government."[407] He concluded that rulemaking is generally superior to adjudication because of its prospective nature and because it allows interested parties to participate in the development of the rule.[408] Davis urged all policymakers to "push administra-

tors toward earlier and more diligent use of the rule-making power,"[409] and asserted that "[t]he typical failure in our system that is correctible is not legislative delegation of broad discretionary power with vague standards; it is the procrastination of administrators in resorting to the rule-making power to replace vagueness with clarity."[410]

Davis acknowledged that some agencies may lack statutory power to issue legislative rules with the force of law.[411] He argued, however, that this was not a justification for failure to issue rules, because even agencies lacking legislative rulemaking powers could issue interpretive rules.[412] Davis approvingly pointed to the FTC as an example of an agency that lacked legislative rulemaking powers but that had nevertheless engaged in valuable interpretive rulemaking.[413]

Soon, numerous scholars joined Davis, Landis, and Judge Friendly in cheerleading for rulemaking.[414] *Storer Broadcasting*, *Texaco*, *Mourning*, and *Thorpe* were all cited in support of this advocacy.[415] For example, one scholar writing in 1965 relied on *Texaco* to argue in support of legislative rulemaking by the FTC.[416] Similarly, Professor Ralph F. Fuchs noted that *Texaco* and *Storer Broadcasting* were "likely to provide a new impetus" to rulemaking.[417] Fuchs predicted in

1965 that, given the momentum these decisions provided, battles over agency powers to issue legislative rules based solely on general rulemaking grants had "probably just begun."[418]

B. The FTC, FDA, and NLRB Exercise Legislative Rulemaking Powers

Professor Fuchs's prediction soon proved correct. As the advocacy of rulemaking mounted in the 1960s, a number of agencies decided to test the limits of their rulemaking powers. The payoff was substantial. When the dust settled, three major agencies — the FTC, FDA, and NLRB — had acquired legislative rulemaking powers that Congress had not originally granted to them.

1. The FTC. — Consistent with the understanding that the FTCA did not confer any legislative rulemaking powers on the FTC, the agency made no attempt to promulgate rules with the force of law during the early decades of its existence.[419] Later amendments to the Act, if anything, only underscored the limited nature of the agency's rulemaking powers.[420] Congress expressly conferred legislative rulemaking authority on the FTC under several amendatory statutes, including the Wool Products Labeling Act[421] and the Fur Products Labeling Act.[422] If Congress had granted general legislative rulemaking author-

---

418 *Id.* at 806.

419 *See* Shapiro, *supra* note 296, at 925 (noting that in the first half of this century, the FTC relied on adjudicatory proceedings rather than regulations to control unfair practices).

420 A House Report issued in 1957 highlighted the limited nature of the FTC's rulemaking powers:

> The Federal Trade Commission, through its trade practice conference procedure, has promulgated rules with respect to the labeling and advertising of rayon, acetate, linen, and silk which move in interstate commerce. *These rules, as such, do not have the force and effect of law but are rather advisory interpretations* as to what may constitute unfair methods of competition and unfair and deceptive acts or practices in commerce, under the Federal Trade Commission Act. These rules, insofar as they go, have worked reasonably well, but their chief handicap is the limited jurisdiction of the Commission under its organic statute.

H.R. REP. NO. 85-986, at 2 n.1 (1957) (emphasis added).

421 Ch. 871, § 6(a), 54 Stat. 1128, 1131 (1940) (codified as amended at 15 U.S.C. § 68d(a) (2000)) (authorizing the FTC to make rules and regulations "as may be necessary and proper for administration and enforcement"). Congress gave the rules promulgated under this general rulemaking grant legislative effect through various statutory provisions. For example, section 3 provided that the introduction into commerce of any wool product that was misbranded within the meaning of the Act or of the *rules or regulations* promulgated by the FTC was unlawful, *id.* § 3, 54 Stat. at 1129 (codified at 15 U.S.C. § 68h), and section 10 then subjected any person who willfully violated section 3 to criminal penalties, *id.* § 10, 54 Stat. at 1133 (codified at 15 U.S.C. § 69f(b)).

422 Ch. 298, § 8(b), 65 Stat. 175, 180 (1951) (codified at 15 U.S.C. § 69f(b)) (authorizing the FTC to promulgate rules and regulations "as may be necessary and proper for purposes of administration and enforcement of this Act"). Various statutory provisions gave legislative effect to the rules and regulations promulgated under this general grant. For example, section 3(a) made it unlawful to introduce into commerce any fur product that is misbranded within the meaning of the Act or of "the rules and regulations prescribed under Section 8(b)," *id.* § 3(a), 65 Stat. at 176 (codified at

ity to the FTC in 1914 when it created the Commission, these subsequent grants of legislative rulemaking powers would have been superfluous.[423]

The history of the Flammable Fabrics Act of 1953[424] confirms most strikingly that Congress did not grant the FTC legislative rulemaking powers under the original FTCA. The Flammable Fabrics Act included a general rulemaking grant that authorized the FTC to "prescribe such rules and regulations as may be necessary and proper for purposes of administration and enforcement of this Act."[425] Congress wrote this grant in language similar to the general grant included in section 6(g) of the FTCA. Both stood alone, lacking any statutory sanctions to put teeth into the regulations. In 1967, however, Congress amended the Flammable Fabrics Act[426] by adding the following language to the rulemaking provision: "The violation of such rules and regulations shall be unlawful and shall be an unfair method of competition . . . under the Federal Trade Commission Act."[427] Congress also gave the FTC the authority to enjoin any violations of the rules and regulations promulgated under the Act.[428] These amendments confirm that the rulemaking grant in the 1953 Act (which was identical to the grant in section 6(g)) did not confer legislative rulemaking powers. More important, they also show that, as late as 1967, when Congress wanted to signal that a particular rulemaking grant conferred legislative rulemaking authority, it added a provision imposing legal sanctions for rule violations.

---

15 U.S.C. § 69a), and section 11(a) subjected any person who violated section 3 to criminal penalties, *id.* § 11(a), 65 Stat. at 181 (codified at 15 U.S.C. § 69i).

[423] *See* Burrus & Teter, *supra* note 14, at 1124–25; *see also* Carl A. Auerbach, *The Federal Trade Commission: Internal Organization and Procedure*, 48 MINN. L. REV. 383, 458 (1964) (noting that criminal penalties attach to the violation of regulations that the FTC promulgated under the Wool Products Labeling Act and the Fur Products Labeling Act and arguing that Congress should amend the FTCA "to give the Commission the power to issue substantive rules and regulations for the violation of which criminal and civil penalties should attach").

[424] Ch. 164, 67 Stat. 111 (1953).

[425] *Id.* § 5(c), 67 Stat. at 113 (codified as amended at 15 U.S.C. § 1194(c) (2000)).

[426] Flammable Fabrics Act, amendment, Pub. L. No. 90-189, § 4(a), 81 Stat. 568, 571 (1967) (codified as amended at 15 U.S.C. § 1194(c)) (amending section 5(c) of the Act). The House Report explained that one purpose of the amendment was to "make the Flammable Fabrics Act more flexible by permitting flammability standards and other regulations to be issued under rulemaking procedures rather than having them fixed by law as is now the case." H.R. REP. NO. 90-972, at 6 (1967). This comment explicitly suggests that the House in 1967 did not believe that the general grant included in the original Act authorized the FTC to promulgate legislative regulations.

[427] Flammable Fabrics Act, amendment, § 4(a), 81 Stat. at 571.

[428] *Id.* § 5(a), 81 Stat. at 571 (codified at 15 U.S.C. § 1195(a)) (amending section 6(a) of the 1953 Act by inserting "or rule or regulation prescribed under section 5(c)" immediately after "section 3").

(a) The FTC's Regulatory Practices from 1914 to 1962. — Because Congress chose not to grant the FTC legislative rulemaking powers, for the first half-century of its existence the agency relied mainly on three methods of making policy. Case-by-case adjudication served as the primary enforcement tool.[429] Under the FTCA, the FTC possessed the power to issue a complaint, set a hearing, and decide whether to issue a cease and desist order requiring the respondent to stop any activities found to be unfair commercial practices or unfair methods of competition.[430] However, the shortcomings of adjudication as a method of setting policy soon became apparent. Adjudication failed to achieve widespread compliance, reaching only individual violators and specific acts rather than industrywide practices.[431]

Soon after Congress established the FTC, the agency developed Trade Practice Conferences to help overcome the shortcomings of adjudication[432] and to identify practices that violated the laws administered by the FTC.[433] The procedure worked as follows: a specific industry, a consumer group, or the FTC would initiate a conference about a certain industry; proposed rules would be developed at the conference; the FTC would hold a public hearing on the proposed rules and then issue a Trade Practice Conference Rule (TPCR).[434] TPCRs were not regarded as legally binding.[435] Rather, the FTC relied on voluntary compliance by industry members.[436] If the FTC initiated suit based on a violation, the complaint would "charge [the

---

[429] *See* Wegman, *supra* note 397, at 730 (noting that "[t]he cease and desist procedure is the usual route by which the FTC takes action against unfair commercial practices").

[430] *See* Forte, *supra* note 416, at 887–88.

[431] *See* Wegman, *supra* note 397, at 740 (concluding that adjudication "was not adequate to deal with certain industry-wide practices, since repeated adjudications involving identical facts not only were extremely cumbersome, but resulted in considerable unfairness to all parties concerned").

[432] *See* Weston, *supra* note 181, at 566–67 (noting that the FTC had used Trade Practice Conference Rules since about 1919).

[433] The FTC explained the purpose of the Trade Practice Conference procedure as follows:

> [T]o encourage widespread observance of the law by enlisting the cooperation of members of industries and informing them more fully of the requirements of the law, so that wherever consistently possible the Commission may avoid the need for adversary proceedings against persons who, through misunderstanding or carelessness, may violate the law unintentionally.

Federal Trade Commission — Policies, 12 Fed. Reg. 5811 (Aug. 29, 1947).

[434] Forte, *supra* note 416, at 880.

[435] *See* Auerbach, *supra* note 423, at 452 (explaining that trade practice rules "do not, themselves, have the force of law").

[436] *See* Note, *Voluntary Compliance: An Adjunct to the Mandatory Processes*, 38 IND. L.J. 377, 386 (1962) (noting that TPC is a voluntary procedure whose purpose is "to eliminate and prevent, on a voluntary and industrywide basis . . . illegal practices and acts . . . violative of laws administered by the FTC").

party with] violation of the statutory provision on which the rules are premised, and . . . not . . . violation of the trade practice rule."[437]

In 1955, the FTC added a third form of policymaking to its tool bag: Guides.[438] Like TPCRs, Guides did not have the force of law.[439] The Guides program consisted essentially of interpretive rules spelling out the FTC's understanding of the requirements of the FTCA.[440] For example, the FTC issued Cigarette Advertising Guides in 1955 to summarize its view that it was unlawful to represent that cigarette smoking presents no health risks or to make references to that effect.[441]

(b) The FTC Turns to Legislative Rulemaking. — After nearly a half-century of setting policy through adjudication, TPCRs, and Guides, in 1962 the FTC decided to institute a new procedure — Trade Regulation Rules (TRRs). Although the legal impact of TRRs was initially unclear,[442] it soon became apparent that the FTC did, in fact, intend to treat TRRs as legislative regulations.

The FTC cautiously tested political support for its new legislative rulemaking experiment by issuing several TRRs that dealt with fairly trivial matters.[443] None of these early rules stirred much contro-

437 FTC Trade Practice Conference Rules, 20 Fed. Reg. 3061 (May 6, 1955).

438 *See generally* Auerbach, *supra* note 423, at 452–53 (explaining that the Guides program began in 1955 and that by October 31, 1962, the FTC had issued nine Guides).

439 *See* Note, *supra* note 436, at 394.

440 *See* Weston, *supra* note 181, at 567; *see also* Note, *supra* note 436, at 397 (noting that the "primary compliance tool in connection with the guides program has been education").

441 *See* Note, *supra* note 436, at 396.

442 *See* Burrus and Teter, *supra* note 14, at 1119–20 (noting that the question still remained in 1966 concerning "whether the rules possess[ed] the force and effect of law or simply present[ed] a prima facie case which may be rebutted"); *see also* Auerbach, *supra* note 423, at 455, 457 (arguing that "[a] trade regulation rule will not have the force and effect of law, in the sense that a violator of the rule will become subject to a penalty for its violation" but also noting that Commissioner MacIntyre contemplated the use of "substantive rule making power"). Auerbach's article was an outgrowth of his report to the Committee on Internal Organization and Procedure of the Administrative Conference. He argued in favor of a legislative amendment to give the FTC the power to issue legislative rules and regulations for the violation of which criminal penalties would attach. *Id.* at 458. He noted that the Commission staff was at that time divided on the desirability of legislation. The Director of the FTC's Bureau of Industry Guidance opposed legislation imposing penalties, but the Bureau of Deceptive Practices supported legislation authorizing rules enforceable by penalties. *Id.*

443 *See* Note, *FTC Substantive Rulemaking: An Evaluation of Past Practice and Proposed Legislation*, 48 N.Y.U. L. REV. 135, 143 (1973) (stating that "[t]he FTC's initial ventures into the area of rulemaking were marked by caution, reflecting not only the problems of adjustment to a new form of regulation, but also, perhaps, concern over its power to proceed and sensitivity to possible political ramifications. The Commission began with minor regulation of advertising and labeling in small businesses . . . ."). For example, in 1963 the agency promulgated a rule requiring that sleeping bags be marked with the size of the finished product rather than the dimensions of the material used in making the bags. 16 C.F.R. § 400 (1964). Similarly, a 1965 TRR declared that the practice of describing household electric sewing machines as "automatic," "fully automatic," or

versy.[444] The actual effect of the rules was unclear because the FTC did not immediately attempt to bring any enforcement actions based on them.[445]

However, in 1964, the FTC adopted its first major, controversial TRR, which dealt with unfair and deceptive practices in advertising and labeling cigarettes.[446] Perhaps anticipating opposition, the FTC included a lengthy discussion in the rule's statement of basis and purpose justifying the agency's use of legislative rulemaking.[447] The FTC cited Judge Friendly and other critics of the administrative process who had urged agencies to engage in more rulemaking.[448] It relied on *National Broadcasting*, *Storer Broadcasting*, and *Texaco* to support its claim that it possessed the power to promulgate the cigarette rule.[449] The agency also pointed to the general rulemaking grant in section 6(g) of the FTCA as a source of authority to issue binding rules. Finally, it argued that even if section 6(g) were not in the Act, the TRRs would not be ultra vires: "It is implicit in the basic purpose and design of the Trade Commission Act as a whole, to establish an administrative agency for the prevention of unfair trade practices, that the Commission should not be confined to quasijudicial proceedings."[450]

The FTC was correct in anticipating an adverse reaction to the cigarette rule and a challenge to its authority to promulgate it. The tobacco industry mounted a full-scale offensive against the TRR[451] and persuaded Congress to enact a weak labeling bill as a substitute for the strong restrictions contained in the FTC cigarette rule.[452] The

"automatic zig-zag sewing machine[s]" violated section 5 of the FTCA. *See* 16 C.F.R. § 401 (1966).

444 *See* Note, *supra* note 443, at 143 (stating that the FTC's earliest legislative "rules were relatively trivial, dealing with uncomplicated facts and business practices that were easy to isolate and rectify").

445 *See* Burrus and Teter, *supra* note 14, at 1120 n.69.

446 16 C.F.R. pt. 408 (1966).

447 FTC Rules and Regulations: Commercial Practices, 29 Fed. Reg. 8324 (July 2, 1964). The FTC tried to claim that the Cigarette Rule was not "legislative in the sense of adding new substantive rights or obligations." *Id.* Some scholars believed that the FTC's characterization of the rule as nonlegislative was correct. For example, Kenneth Culp Davis argued in his book *Discretionary Justice* that the FTC's Cigarette Rule was merely interpretive. *See* DAVIS, *supra* note 395, at 74–75. Davis cited the Cigarette Rule as a good example of a valuable interpretive rule, and he noted that "Congress had not delegated to [the FTC] a separate power to make substantive rules." *Id.* at 74.

448 29 Fed. Reg. 8324, 8368 n.139 (1964).

449 *Id.* at 8373 n.157.

450 *Id.* at 8369.

451 *See* Wegman, *supra* note 397, at 725 (stating that the promulgation of the TRR "jolted the tobacco industry"). *See generally* A. LEE FRITSCHLER, SMOKING AND POLITICS 74 (3d ed. 1983) (noting that the cigarette industry was "determined to prove that the FTC had no authority to write such rules").

452 Wegman, *supra* note 397, at 726.

resulting Federal Cigarette Labeling and Advertising Act[453] required all cigarette packages to be accompanied by a statement that said: "Cigarette Smoking May Be Hazardous To Your Health."[454] When signed into law in 1965, it overrode the FTC's rule, thereby nullifying the FTC's first major TRR.[455]

After its ill-fated attempt to regulate the cigarette industry, the FTC again resorted to promulgating fairly minor, uncontroversial TRRs.[456] Late in the 1960s, however, criticism of the FTC for failing to act more aggressively in enforcing the FTCA rose to a new pitch.[457] Especially significant in this regard was *The Nader Report on the Federal Trade Commission*,[458] which pointed to the cigarette-advertising rule as an example of how the FTC could act to protect consumers, "if properly directed and motivated."[459]

(c) National Petroleum Refiners Association. — Prompted by these criticisms, the FTC once again aggressively tested the limits of its TRR procedure in the late 1960s and early 1970s.[460] The agency's pursuit of legislative rulemaking, in turn, led to closer scrutiny concerning whether the FTC in fact possessed legislative authority to is-

---

453 Pub. L. No. 89-92, 79 Stat. 282 (1965).

454 *Id.* § 4, 79 Stat. at 283.

455 Congress also overrode other early TRRs by legislation. A TRR relating to the shipment of unordered merchandise was superseded by provisions in the Postal Reorganization Act. *See* Unordered Merchandise, 35 Fed. Reg. 10,116 (June 18, 1970) (setting forth 16 C.F.R. § 427, which was superseded by 39 U.S.C. § 3009 (2000)). In addition, the Truth in Lending Act overrode a TRR relating to the unsolicited mailing of credit cards. *See* Unsolicited Mailing of Credit Cards, 35 Fed. Reg. 4614 (Mar. 16, 1970) (adopting the credit card regulation that was superseded by 15 U.S.C. §§ 1642–1644 (2000)). Congress's willingness to override the FTC's first attempts at legislative rulemaking may suggest that Congress rejected the validity of the FTC's use of TRRs.

456 *See* Note, *supra* note 443, at 144 (noting that after its experience with the cigarette rule, the FTC "reverted to earlier policies of caution, and several years of relatively minor rulemaking"); *see, e.g.*, Incandescent Lamp (Light Bulb) Industry, 16 C.F.R. § 409 (1971) (providing that failure to disclose certain information about light bulbs, including the average laboratory life expressed in hours and the light output expressed in average initial lumens, is a violation of the FTCA); Discriminatory Practices in Men's and Boys' Tailored Clothing Industry, 16 C.F.R. § 412 (1968) (declaring that certain advertising practices relating to men's and boys' tailored clothing constitute violations of the FTCA).

457 *See* FRITSCHLER, *supra* note 451, at 75 (reporting that two very critical studies of the FTC appeared in the late 1960s, one written for the American Bar Association and the other by a group of law students working for Ralph Nader).

458 EDWARD F. COX, ROBERT C. FELLMETH & JOHN E. SCHULZ, THE NADER REPORT ON THE FEDERAL TRADE COMMISSION (1969).

459 *Id.* at 77. The period from the late 1960s to the early 1980s was the high-water mark of "capture theory," which depicted administrative agencies as the captives of big business; commentators promoted a variety of procedural innovations as cures. *See generally* Thomas W. Merrill, *Capture Theory and the Courts: 1967–1983*, 72 CHI.-KENT L. REV. 1039 (1997).

460 *See generally* WILLIAM F. WEST, ADMINISTRATIVE RULEMAKING: POLITICS AND PROCESSES 120 (1985) (noting that the Nader Report was instrumental in pushing the FTC to rely more heavily on its rulemaking powers).

sue such rules.[461] It also resulted in court challenges. The first case, decided in 1968, challenged a TRR based in part on the theory that the FTC lacked the statutory authority to promulgate legislative rules.[462] However, the U.S. District Court for the District of Columbia ducked the issue on ripeness grounds.[463]

The National Petroleum Refiners Association brought the next challenge, asserting that the FTC lacked the authority to promulgate a TRR requiring the posting of octane ratings on gasoline pumps.[464] This time the U.S. District Court for the District of Columbia addressed the issue of the FTC's rulemaking authority head on. After thoroughly canvassing the history of the FTCA and its amendments, the court held that the FTC lacked any general authority to issue rules with the force of law.[465]

The district court's decision created an uproar[466] and nearly brought the FTC's legislative rulemaking to a halt.[467] In response, Congress began debating legislation that would confer legislative rulemaking authority on the FTC. Meanwhile, the government appealed the district court's decision to the U.S. Court of Appeals for the D.C. Circuit. This appeal placed the FTC in the awkward position of having to argue to the D.C. Circuit that it was *clear* that the agency possessed legislative powers while simultaneously arguing to Congress that the FTC's rulemaking powers were sufficiently *ambiguous* to warrant congressional clarification.[468]

Before Congress could act, the D.C. Circuit weighed in, holding that section 6(g) conferred full legislative rulemaking authority on the FTC.[469] Judge J. Skelly Wright's opinion for the unanimous panel,

---

461 *Compare* Wegman, *supra* note 397, at 749 (concluding that the FTC did have the power to control conduct prospectively through legislative rulemaking of general applicability), *with* Auerbach, *supra* note 423, at 457–58 (concluding that the FTC did not have legislative rulemaking authority).

462 *See* Bristol-Myers Co. v. FTC, 284 F. Supp. 745 (D.D.C. 1968).

463 *Id.* at 748.

464 *See* Nat'l Petroleum Refiners Ass'n v. FTC, 340 F. Supp. 1343, 1346–47 (D.D.C. 1972) (holding that the general rulemaking grant in the FTCA gave the FTC authority to make rules in connection with its housekeeping chores and investigative responsibilities but did not authorize legislative rulemaking).

465 *See id.* at 1350.

466 *See* Note, *supra* note 443, at 142 (criticizing the district court's decision and arguing that there were "serious weaknesses" in the court's analysis).

467 *See* WEST, *supra* note 460, at 121.

468 One lawyer, who served as General Counsel to the FTC during this time, recalled that he was busy "either arguing that the Commission had the power to promulgate rules or taking alternative steps, but, of course, maintaining the consistent argument that Congress should clarify the matter once and for all and set down the manner in which the Commission could promulgate Trade Regulation Rules." Ronald M. Dietrich, *Business and Trade Practices*, 28 FOOD DRUG COSM. L.J. 700, 701 (1973).

469 Nat'l Petroleum Refiners Ass'n v. FTC, 482 F.2d 672, 674 (D.C. Cir. 1973).

joined by Chief Judge David Bazelon and Judge Spottswood Robinson, is a remarkable legal document. Judge Wright commenced with the usual disclaimers, observing that the FTC "is a creation of Congress, not a creation of judges' contemporary notions of what is wise policy. The extent of its powers can be decided only by considering the powers Congress specifically granted it in the light of the statutory language and background."[470] "As always," he continued, "we must begin with the words of the statute creating the Commission and delineating its powers."[471]

There followed a discussion of section 5 of the FTCA, which authorizes the FTC to adjudicate complaints and issue cease and desist orders. Judge Wright rejected the industry's claim that this section was the exclusive source of the FTC's authority to act with the force of law.[472] There was no language in section 5 indicating that it was exclusive, Judge Wright observed.[473] And of course there was section 6(g), which expressly gave the FTC general authority to "make rules and regulations for the purpose of carrying out" various provisions of the Act, including section 5.[474] Read together, Judge Wright explained, the two provisions suggest that the FTC could issue legislative rules that would then be applied and enforced in adjudications brought pursuant to section 5.[475]

Judge Wright then shifted gears, noting that this reading "is reinforced by the construction courts have given similar provisions in the authorizing statutes of other administrative agencies."[476] There followed a skillful exposition and selective quotation from *National Broadcasting*, *Storer Broadcasting*, *Texaco*, *American Trucking*, and *Mourning*, which he read as supporting his claim that the FTC should be allowed to promulgate binding legislative rules.[477] Not surprisingly, Judge Wright's opinion reflected no recognition of a central difference between the rulemaking grants given to the agencies in these cases and the FTC's general rulemaking grant: namely, that the rulemaking grants in those cases, unlike Section 6(g), were coupled with statutory provisions imposing sanctions for rule violations.

The legislative history of the FTCA, as we have seen, provides significant evidence that Congress did not intend to grant legislative rulemaking authority to the FTC.[478] Judge Wright nevertheless pro-

nounced this history to be "ambiguous" regarding the meaning of Section 6(g),[479] and then relegated the details to an appendix for the especially diligent reader to consult.[480] Such ambiguity, he said, was not enough to overcome "the plain language of Section 6(g)," which, "read in light of the broad, clearly agreed-upon concerns that motivated passage of the Trade Commission Act, confirms the framers' intent to allow exercise of the power claimed here."[481] In the end, Judge Wright adopted what amounted to a new canon: unless the legislative history reveals a clear intent to the contrary, courts should resolve any uncertainty about the scope of an agency's rulemaking authority in favor of finding a delegation of the full measure of power to the agency.

The immediate significance of *Petroleum Refiners* was short-lived. Congress soon mooted the issue by adopting the Federal Trade Improvement Act of 1975,[482] which expressly conferred legislative rulemaking powers on the FTC, subject to certain legislative and procedural limitations.[483] But the importance of Judge Wright's opinion went far beyond its impact on the FTC's rulemaking powers. His self-confident tone and masterful blending of Supreme Court precedents provided the roadmap for a more general erasure of the convention and invited other agencies, including the FDA, to assert generalized legislative rulemaking powers that Congress had not expressly granted.[484]

2. *The FDA.* — The FDA's rulemaking story is both similar to and different from that of the FTC. Much like the FTCA, the FDCA[485] included a facially ambiguous rulemaking grant that did not confer legislative rulemaking authority under the convention.[486] Unlike the FTCA, however, the FDCA also included several *specific* rulemaking grants that did authorize legislative rulemaking under the convention.[487] The drawback to these specific rulemaking grants, from the

484 Although *Petroleum Refiners* is the best-known decision of the D.C. Circuit broadly proclaiming that courts should presume congressional grants of general rulemaking powers to confer legislative rulemaking authority, it was followed by other, lesser-known decisions to the same effect. *See, e.g.*, *In re* Permanent Surface Mining Regulation Litig., 653 F.2d 514, 523–25 (D.C. Cir. 1981) (en banc) (relying in part on *Mourning* and *Petroleum Refiners* to conclude that the general rulemaking grant in the Surface Mining Control and Reclamation Act confers legislative rulemaking powers); Citizens to Save Spencer County v. EPA, 600 F.2d 844, 873–74 (D.C. Cir. 1979) (holding that section 301(a)(1) of the Clean Air Act, which gives the EPA general rulemaking authority, authorizes the agency to adopt legislative rules imposing preconstruction review requirements).

485 Ch. 675, 52 Stat. 1040 (1938).

486 For a discussion of the FDA's general rulemaking grant and evidence that Congress intended it to be merely nonlegislative in nature, see *supra* section III.C.2, pp. 509–19.

487 *See supra* note 244.

perspective of the agency, was that they required the agency to use formal rulemaking procedures when promulgating rules. Consistent with this understanding, for thirty years after the adoption of the FDCA the agency made no effort to use section 701(a) to promulgate legislative rules. Rather, it set policy through case-by-case adjudication, interpretive rulemaking, and legislative rulemaking under its specific rulemaking grants. Beginning in the 1960s and 1970s, however, the FDA — primarily in an effort to free itself from the formal procedural constraints that attached to the FDCA's specific rulemaking grants under section 701(e) — began to assert that section 701(a) authorized it to issue legislative rules using only informal notice-and-comment rulemaking procedures.[488]

(a) The Debate over the FDA's Rulemaking Powers Under Section 701(a). — The FDA's "belated discovery" of general rulemaking powers in section 701(a) stemmed largely from the entrepreneurial efforts of Peter Barton Hutt during his tenure as the FDA's chief counsel.[489] In a paper presented to the Food and Drug Law Institute in 1972, Hutt expounded the theory that the FDCA should be viewed as a "constitution" that gave the FDA broad authority to implement "a set of fundamental objectives."[490] Specifically, he argued that the Act gave the FDA power to do anything not excepted or withheld by the Act,[491] and he cited the general rulemaking clause in section 701(a) to support his conclusion that the Act "provide[d] ample legal authority" for the FDA to adopt procedures for the enforcement of FDCA requirements.[492]

Hutt's theory sparked a debate over the FDA's rulemaking authority[493] and drew strong criticism from industry attorneys.[494] For example, one attorney argued that "[i]t is for some a weird and dissonant note to hear that in the sensitive area of congressionally delegated authority, a well-motivated administrative agency can legally do what it alone deems desirable unless Congress has *in advance* specifically *prohibited* it."[495] Similarly, in a paper delivered at an FDA-sponsored

488 *See* 1 JAMES T. O'REILLY, FOOD AND DRUG ADMINISTRATION § 4:02 (1979) ("The Food and Drug Administration grew during the late 1960s and the 1970s from a law enforcement agency which brought deterrent actions against violators, into a more paper-bound generator of rules and regulations.").

495 Austern, *supra* note 494, at 190–91.

conference on food labeling in 1973, another attorney criticized Hutt's view that the FDA could use section 701(a) to evade the procedural restrictions imposed by section 701(e) rulemaking proceedings.[496]

The debate surrounding the FDA's decision to use section 701(a) to expand its rulemaking powers reached the courts in the early 1970s.[497] The first major cases to touch on the issue were four related 1973 Supreme Court decisions usually referred to as the *Hynson Quartet*.[498] These cases assumed without discussion that the FDA had authority to issue legislative regulations under section 701(a). For example, in *Weinberger v. Hynson, Westcott & Dunning, Inc.*,[499] the Court upheld certain FDA regulations issued under section 701(a) — regulations setting forth standards and procedures pertaining to drug approval[500] — without considering the antecedent question whether section 701(a) granted the agency authority to issue the regulations.[501] None of Justice Douglas's opinions for the Court in the four cases squarely addressed the meaning of section 701(a), nor did they advert to the distinction among legislative and other types of rules. The Court's inattention to this issue is unsurprising in light of the parties' briefs, which addressed section 701(a) and the distinction between legislative and nonlegislative rules only in passing.[502]

Lawyers and scholars immediately began debating the significance of the *Hynson Quartet*, especially in conjunction with Judge Wright's opinion in *Petroleum Refiners*, decided the same year.[503] Some scholars, including Professor Kenneth Culp Davis, argued that the *Hynson Quartet* did not definitively resolve the scope of section 701(a), because

496 *See* Thompson, *supra* note 249, at 207–12 (suggesting that this FDA action was "designed to circumvent and emasculate 701(e) and thereby to substitute the agency's judgment for the will of Congress").

497 An earlier case, *Abbott Laboratories v. Gardner*, 387 U.S. 136, 138, 147 (1967), arguably addressed the issue in dicta, describing FDA rules issued under the authority of section 701(a) as "self-operative" rules "that must be followed by an entire industry."

501 *Id.* at 617–18 (asserting without discussion that the Commissioner was acting pursuant to his section 701(a) authority in issuing the regulations).

502 *See* Nat'l Ass'n of Pharm. Mfrs. v. FDA, 637 F.2d 877, 881 (2d Cir. 1981) (noting that the parties' discussion of section 701(a) and the legislative-interpretive distinction in the briefs of the *Hynson Quartet* was "meagre").

503 *See, e.g.*, Becker, *supra* note 242, at 685 (concluding that the language in *Petroleum Refiners* indicates that a case involving section 701(a) of the FDCA might be decided the same way); *see also* Hutt, *Impact of Recent Court Decisions*, *supra* note 415, at 711–12 (contending that the Court "by its actions . . . made it quite clear as to its views on Section 701(a)"); Peter Barton Hutt, *Views on Supreme Court/FDA Decisions*, 28 FOOD DRUG COSM. L.J. 662, 663–66 (1973) [hereinafter Hutt, *Views on Supreme Court*] (explaining the decisions of the *Hynson Quartet* and their impact on the scope of the FDA's administrative authority).

the rules at issue "rested only in part on Section 701(a) and because the Court did not address itself to the question whether Section 701(a) was sufficient support for the rules."[504] Others argued that the *Hynson Quartet* had definitively resolved the questions surrounding the meaning of section 701(a).[505] In particular, Hutt contended that the *Hynson Quartet* invited the FDA to promulgate legislative rules under section 701(a).[506] Hutt also pointed to *Petroleum Refiners* as a sign that the FDA would prevail in court if it attempted to use section 701(a) as a source of legislative rulemaking power.[507]

Hutt's prediction came true in *National Nutritional Foods Ass'n v. Weinberger*,[508] a Second Circuit case decided in 1975 by a panel composed of Judges Mansfield, Waterman, and Lumbard.[509] The case involved an action brought by manufacturers and distributors of vitamins challenging FDA regulations promulgated under the authority of section 701(a); the regulations declared vitamins A and D in high doses to be "prescription drugs" within the meaning of section 503(b)(1) of the FDCA.[510] The vitamin manufacturers and distributors alleged, inter alia, that the FDA had no authority to issue regulations having the force of law other than those promulgated under the formal rulemaking procedures of section 701(e).[511] Writing for the court, Judge Mansfield concluded that section 701(a) did in fact authorize the FDA to

505 *See, e.g.*, 1 O'REILLY, *supra* note 488, § 4:02 ("From the standpoint of administrative powers, the 1973 Supreme Court cases resolved long-standing questions about the scope of § 701(a) and about the FDA's inherent authority to impose legislative rules on the drug industry."); *see also* Pharm. Mfrs. Ass'n v. FDA, 484 F. Supp. 1179, 1182 (D. Del. 1980) (citing cases from the *Hynson Quartet* for the proposition that section 701(a) "authorizes the Secretary to promulgate binding, substantive regulations").

506 *See* Hutt, *Views on Supreme Court*, *supra* note 503, at 664 (noting that the Court's decisions permit the FDA to "issue regulations for the efficient and effective enforcement of the Food, Drug and Cosmetic Act [that] have *substantive* effect").

507 *See* Hutt, *Impact of Recent Court Decisions*, *supra* note 415, at 717. Should a court strike down the FDA's legislative rulemaking powers under section 701(a), Hutt suggested (no doubt facetiously): "We will take all of our new regulations and deposit them with the Federal Trade Commission. Since they have jurisdiction over labeling as well as advertising, we will simply ask the FTC to repromulgate them." *Id.*

508 512 F.2d 688 (2d Cir. 1975).

509 Although all three judges agreed that the FDA had legislative rulemaking authority under section 701(a), *see id.* at 695–98, Judge Lumbard wrote a concurring opinion arguing that in cases in which an agency engages in legislative rulemaking under a general rulemaking authorization, the courts should interpret the phrase "arbitrary, capricious, [or] an abuse of discretion" in the APA in such a way as to ensure that especially rigorous judicial review of agency action is provided, *id.* at 705 (Lumbard, J., concurring) (quoting 5 U.S.C. § 706(2)(A) (2000)) (alteration in original).

510 *See Weinberger*, 512 F.2d at 691.

511 *See id.* at 694.

promulgate binding regulations without complying with the procedural safeguards set forth in section 701(e).[512]

In reaching this conclusion, Judge Mansfield relied on three factors. First, he noted that while courts had once demanded proof of a specific delegation of legislative authority to an agency purporting to issue legislative rules, modern courts "have learned from experience to accept a general delegation as sufficient in certain areas of expertise."[513] Second, he observed that "over the last decade rule-making has been increasingly substituted for adjudication as a regulatory technique, with the support and encouragement of courts" in cases such as *Petroleum Refiners*.[514] Third, he concluded that any "doubts . . . regarding the FDA's power under § 701(a) to promulgate binding regulations were dispelled" by the Supreme Court's decisions in the *Hynson Quartet*.[515]

One factor that did not significantly influence the Second Circuit's holding in *Nutritional Foods* was the legislative history of the FDCA, which, as we have seen, provides strong evidence that Congress intended to grant legislative rulemaking authority to the FDA *only* pursuant to specific rulemaking grants.[516] Judge Mansfield made just one brief reference to the legislative history in his opinion, observing that the court's attention had not been directed to anything in the legislative history of sections 701(a) or (e) that militated against the court's decision.[517]

After *Nutritional Foods*, many courts treated the issue of the FDA's legislative rulemaking authority under section 701(a) as settled.[518] But, perhaps because of the court's failure to address the crucial legislative history — and because of the possibility of Supreme Court review in some future case — other interested observers, including both scholars and FDA officials, did not view the issue as completely re-

517 *Weinberger*, 512 F.2d at 698. Although the discussion of section 701(a)'s legislative history was cursory in the parties' briefs, the appellant did in fact devote a few pages of its brief to the issue of section 701(a) and its legislative history. *See* Brief for Plaintiffs-Appellants at 39–43, *Weinberger*, 512 F.2d 688 (2d Cir. 1975) (No. 74-1738).

518 *See, e.g.*, Nat'l Nutritional Foods v. Califano, 603 F.2d 327, 333 (2d Cir. 1979) ("Appellants do not, indeed cannot, challenge that the FDA has power under § 701(a) to issue legislative rules to implement § 403(a)."); Nat'l Confectioners Ass'n v. Califano, 569 F.2d 690, 695 (D.C. Cir. 1978) (acknowledging the authority of the FDA under section 701(a) to impose mandatory source coding and recordkeeping requirements on confectioners); United States v. Nova Scotia Food Prods. Corp., 568 F.2d 240, 246–48 (2d Cir. 1977) (reading section 701(a) as authorizing binding regulations); Cosmetic, Toiletry & Fragrance Ass'n v. Minnesota, 440 F. Supp. 1216, 1221 (D. Minn. 1977) (recognizing the FDA's authority to promulgate "substantive regulations" that are "reviewable only under the arbitrary and capricious standard").

solved. Dialogue continued into the early 1980s about the FDA's rulemaking powers and the courts' apparent transformation of section 701(a).[519]

(b) Pharmaceutical Manufacturers. — The debate over section 701(a) culminated in 1981 when the Second Circuit decided yet another case involving the FDA's powers. Congress had passed various amendments to the FDCA in 1962, including an amendment that deemed a drug adulterated if its packaging, processing, holding, or manufacturing failed to conform to "current good manufacturing practice" (CGMP).[520] The amendment did not give the FDA the power to promulgate CGMPs through rulemaking. Rather, the legislative history indicates that Congress expected the FDA to rely on its existing powers under section 701(a) when implementing the statutory provisions dealing with CGMPs.[521]

This legislative history does not necessarily demonstrate, however, that Congress thought section 701(a) authorized *legislative* rules. The original Senate bill would have allowed the FDA to adopt CGMPs only as interpretive rules.[522] The Kennedy Administration objected, arguing that this proposal would invite "endless de novo litigation on the question what constitutes good manufacturing practice each time there is an enforcement action under the new quality control mechanism."[523] The administration proposed that CGMP rules be issued as binding regulations under the formal rulemaking procedures of section 701(e), and the House bill reflected this approach.[524] But the Senate committee balked at the prospect of requiring formal rulemaking and proposed a third approach: that the FDA be authorized to adopt regulations under the authority of section 701(a). Significantly, however, in accepting the section 701(a) approach, neither the Senate committee report nor the floor debate in either chamber characterized section 701(a) as authorizing legislative regulations. Instead, the effect of such regulations was deliberately left ambiguous. As Representative Schenk stated in the House:

> I favor the approach adopted by the Senate under which this determination is made pursuant to section 701(a) of the act. This procedure permits

> the Secretary to issue such regulations as he desires and their scope and effect will be the same as that of other regulations issued under such general authority. This procedure is more flexible. Numerous regulations have been issued under this section and they have been the subject of consideration and application in the courts in actions arising under the various provisions of the act not now subject to formal rulemaking procedures.[525]

In other words, Congress effectively punted on the legal status of CGMP rules, leaving the issue to be resolved by the courts.

The Second Circuit obliged in *National Association of Pharmaceutical Manufacturers v. FDA*.[526] The plaintiffs challenged various CGMPs adopted by notice-and-comment rulemaking conducted under section 701(a), on the ground that this provision authorized only interpretive, not legislative, rules.[527] In support, they mustered an exhaustive review of the legislative history of the 1938 Act and the FDA's historical interpretation of this grant as encompassing only interpretive and procedural rules.[528]

In a lengthy opinion by Judge Friendly, the Second Circuit again upheld the power of the FDA to issue legislative rules pursuant to section 701(a). Judge Friendly admitted at the outset that "[i]n the interest of historical accuracy, it should be noted that at one time it was widely understood that generalized grants of rulemaking authority conferred power only to make rules of a procedural or an interpretative nature, and not binding substantive regulations, for which a specific delegation was thought necessary."[529] However, reading the language of section 701(a) "with the eyes of 1980," Judge Friendly concluded that this section did in fact give the FDA the power to issue both "substantive as well as procedural" regulations.[530]

Judge Friendly based this conclusion primarily on arguments drawn from precedent. He began by reviewing numerous non-FDA cases involving facially ambiguous rulemaking grants, including *National Broadcasting*, *American Trucking*, and *Petroleum Refiners*.[531] He read these decisions to stand for the proposition that general rulemaking provisions are ordinarily understood "to endow agencies with power to issue binding rules and regulations."[532] Notably, Judge

Friendly discussed these cases at length even though the parties had cited only one, *American Trucking*, in their briefs.[533] Judge Friendly's invocation of non-FDA cases not briefed by the parties suggests that he aspired to build on Judge Wright's *Petroleum Refiners* opinion and develop a canon of interpretation regarding general rulemaking grants with applications beyond FDA cases. Judge Friendly also relied on the Supreme Court's decisions in *Abbott Laboratories* and the *Hynson Quartet* as well as the Second Circuit's earlier decision in *Nutritional Foods*,[534] describing these FDA cases as "formidable authority to the effect that § 701(a) itself is a grant of power to issue binding regulations."[535]

Only after considering these precedents did Judge Friendly turn to the legislative history of the FDCA. He acknowledged that "if the 1962 Congress had made the detailed examination of the legislative history and contemporary understanding of the 1938 Act, which plaintiffs' counsel have now made at long last, it might well have concluded that § 701(a) in fact very likely was not intended to confer power to issue binding substantive rules."[536] But it was not clear, he continued, whether the Congress that passed the CGMP amendments in 1962 was familiar with the 1938 history.[537] In any event, the belated excavation of the legislative history, Judge Friendly asserted, was insufficient to overcome the force of stare decisis created by the Supreme Court's decisions construing ambiguous rulemaking grants to confer legislative powers; nor should that history invalidate more specific rulings such as *Nutritional Foods*.[538]

Given Judge Friendly's acknowledgement that the ruling conflicted with the original understanding of section 701(a), his decision constituted an even more dramatic reversal of the *Queen and Crescent Case* canon than did Judge Wright's opinion in *Petroleum Refiners*. Judge Wright had suggested that facially ambiguous rulemaking grants should be presumed to confer legislative rulemaking power unless clear evidence to the contrary existed in the legislative history.[539] Judge Friendly appeared to say that facially ambiguous rulemaking grants should be construed to confer legislative rulemaking power,

even in the face of clear evidence to the contrary in the legislative history. In effect, *Pharmaceutical Manufacturers* adopted what we have called the *Petroleum Refiners* canon in full-blown form as an express statement rule: all rulemaking grants are conclusively presumed to confer legislative rulemaking authority unless Congress expressly indicates in the text of the statute that the grant is limited to procedural and interpretive rules.

3. The NLRB. — Much like the FDA and the FTC, the NLRB claimed no general rulemaking powers in its early years, in keeping with the understanding that the NLRA did not grant the NLRB legislative rulemaking powers.[540] From its creation in 1935 through the early 1970s, the NLRB formulated policy exclusively through adjudication.

Beginning in the 1960s and continuing through the 1980s, numerous scholars urged the NLRB to turn to rulemaking to formulate its policy.[541] Most of the arguments advanced by these proponents focused on the utility of rulemaking, which assertedly yielded greater precision, certainty, uniformity, and longevity than did adjudication.[542]

Only a few scholars attended to the threshold issue of whether the NLRB in fact had legislative rulemaking power.[543] In the face of the legislative history indicating that Congress had not given the NLRB such authority when creating it in 1935, these scholars pointed to an amendment to section 6(a) of the NLRA added by the Taft-Hartley Act in 1947.[544] As amended, the rulemaking grant read: "The Board shall have authority from time to time to make, amend, and rescind, *in the manner prescribed by the Administrative Procedure Act*, such rules and regulations as may be necessary to carry out the provisions of this

[540] For a discussion of why the NLRB's general rulemaking grant is nonlegislative, see *supra* section III.C.2, p. 511.

[541] *See, e.g.*, Bernstein, *supra* note 414, at 620–22; Samuel Estreicher, *Policy Oscillation at the Labor Board: A Plea for Rulemaking*, 37 ADMIN. L. REV. 163 (1985); Cornelius J. Peck, *A Critique of the National Labor Relations Board's Performance in Policy Formulation: Adjudication and Rule-Making*, 117 U. PA. L. REV. 254 (1968) [hereinafter Peck, *Critique*]; Cornelius J. Peck, *The Atrophied Rule-Making Powers of the National Labor Relations Board*, 70 YALE L.J. 729 (1961) [hereinafter Peck, *Atrophied Rule-Making*]; Silverman, *supra* note 414, at 607; *cf.* Note, *NLRB Rulemaking: Political Reality Versus Procedural Fairness*, 89 YALE L.J. 982 (1980) (summarizing the controversy and arguing that congressional consideration of mandatory NLRB rulemaking must balance procedural fairness against the NLRB's desire to minimize congressional and judicial intervention in its policies).

[542] *See, e.g.*, Charles J. Morris, *The NLRB in the Dog House — Can an Old Board Learn New Tricks?*, 24 SAN DIEGO L. REV. 9, 27–42 (1987) (describing eleven benefits of rulemaking); Peck, *Critique*, *supra* note 541, at 272–75.

[543] *See, e.g.*, Fuchs, *supra* note 415, at 798; Peck, *Critique*, *supra* note 541, at 260–61; *see also* Peck, *Atrophied Rule-Making*, *supra* note 541, at 732–33.

[544] Labor Management Relations Act, 1947, ch. 120, 61 Stat. 136.

Act."[545] These scholars argued that the addition of the reference to the APA, which prescribed the manner of adopting only legislative rules, would be meaningless unless it also referred to the adoption of legislative rules.[546] Thus, the 1947 amendment was said to embody Congress's understanding that section 6(a) conferred legislative rulemaking authority on the NLRB.[547]

This argument fails, however, for two reasons. First, it ignores the fact that the APA *does* impose certain procedural requirements on the manner of adopting procedural and interpretive rules. Section 3(a)(2) of the APA requires that "the nature and requirements of all formal or informal procedures" be published in the Federal Register; section 3(a)(3) requires the same for "statements of general policy or interpretations formulated and adopted by the agency for the guidance of the public."[548] Thus, the added reference to the APA would *not* be meaningless when applied to procedural and interpretive rules adopted under the authority of section 6(a).[549] Second, the argument ignores that an anti-labor, Republican-led Congress passed the Taft-Hartley Act in order to address "what many viewed as a tendency by the NLRB toward overzealous regulation of employer conduct through its unfair labor practice jurisdiction."[550] It is implausible that Congress would have chosen to grant the NLRB expanded rulemaking powers in 1947 given that the primary objective of the Taft-Hartley Act was to rein in the NLRB.

---

[545] *Id.* sec. 101, § 6, 61 Stat. at 140 (emphasis added to show language added by the 1947 amendment to the original section, National Labor Relations Act, ch. 372, § 6, 49 Stat. 449, 452 (1935) (codified as amended at 29 U.S.C. § 156 (2000))).

[546] Section 4(a) of the APA exempts "interpretative rules, general statements of policy, rules of agency organization, procedure, or practice" from notice-and-comment requirements; section 4(c) requires advance publication of "substantive" rules only. Administrative Procedure Act, ch. 324, § 4, 60 Stat. 237, 239 (1946) (codified as amended at 5 U.S.C. § 552(a) (2000)).

[547] *See* Fuchs, *supra* note 415, at 798; Peck, *Atrophied Rule-Making*, *supra* note 541, at 732–33.

[548] Administrative Procedure Act, § 3, 60 Stat. at 238 (codified as amended at 5 U.S.C. § 552(a)).

[549] Title VII of the Civil Rights Act of 1964 contains a rulemaking grant that is *expressly* limited to procedural rules; this grant also provides that "[r]egulations issued under this section shall be in conformity with the standards and limitations of" the APA. 42 U.S.C. § 2000e-12(a) (2000). Thus, Congress in 1964 evidently saw no incongruity in authorizing an agency to make rules exempt from notice-and-comment requirements under, but in conformity with, the APA. *See* Edelman v. Lynchburg College, 122 S. Ct. 1145, 1150 n.7 (2002) (noting both the conformity requirement and the exemption).

[550] ROBERT A. GORMAN, BASIC TEXT ON LABOR LAW 5 (1976). Gorman explains:

> The years after 1935 witnessed a dramatic increase in union membership, greater use of the strike, and a post-war proliferation of work-assignment disputes between unions, secondary boycotts, mass picketing, and some corruption and undemocratic practices in internal union affairs . . . . Congressional reaction become manifest in a number of post-war labor bills and finally in the enactment of the Taft-Hartley Act in 1947, reaffirmed over a veto by President Truman.

Id.

Later, Congress joined scholars in pressuring the NLRB to resort to rulemaking. In 1977, the House adopted a bill called the Labor Reform Act,[551] which would have required the NLRB to promulgate rules with specified purposes, such as defining appropriate bargaining units and expediting elections. The Act did not clarify or seek to change the language of the NLRB's general grant of rulemaking powers found in section 6(a); rather, it sought to encourage the agency to use its preexisting section 6(a) rulemaking powers, which the drafters implicitly assumed to include legislative rulemaking. For example, the bill provided that the NLRB "shall, to the fullest extent practicable, exercise its authority under [its general rulemaking grant in section 6(a)] to promulgate rules declaring certain units to be appropriate for the purposes of collective bargaining."[552] Although the Senate defeated the bill after six cloture attempts,[553] the effort served as an important barometer of the pressure exerted at the time to force the NLRB to resort to rulemaking.[554]

The judiciary represented a final source of pressure on the NLRB to resort to rulemaking. Most prominently, Judge Friendly authored numerous opinions urging the NLRB to use its rulemaking powers to issue legislative rules.[555] Perhaps the most influential judicial stimulus to use legislative rulemaking, however, came in 1969 when the Supreme Court decided *NLRB v. Wyman-Gordon Co.*[556] *Wyman-Gordon* began as an NLRB adjudication in which the NLRB enforced its so-called *Excelsior Underwear* rule, which required employers to furnish unions with the names and addresses of employees eligible to vote in bargaining elections.[557] The rule originated in *Excelsior Underwear*,[558] a prior adjudication in which the NLRB had announced the rule but limited its operation to future cases.[559]

The employer in *Wyman-Gordon* challenged the *Excelsior Underwear* rule on the ground that the NLRB had in effect engaged in rulemaking without complying with the procedures required by the

559 *Id.* at 1240 n.5.

APA.[560] This challenge produced a deeply split Supreme Court decision.[561] Ultimately, seven members of the Court upheld the application of the *Excelsior Underwear* requirement in *Wyman-Gordon*.[562] However, six Justices strongly criticized the NLRB for not adopting its *Excelsior Underwear* rule by notice-and-comment rulemaking.[563] Not surprisingly, some commentators heralded *Wyman-Gordon* as recognizing that the NLRB possessed legislative rulemaking powers.[564]

Immediately after *Wyman-Gordon*, the NLRB gave in to the pleas for rulemaking and promulgated a minor jurisdictional rule declaring that it would assert jurisdiction in proceedings involving private, nonprofit colleges and universities with gross annual revenues of one million dollars or more.[565] Two additional narrow jurisdictional rules soon followed.[566] Although each of these rules was couched in procedural terms, they carried legislative effect in that they announced how the NLRB would exercise its enforcement authority in the future.

Then the Supreme Court decided *NLRB v. Bell Aerospace Co.*[567] Reversing a Second Circuit decision authored by Judge Friendly that had directed the NLRB to engage in rulemaking,[568] the Court reaffirmed in strong terms the NLRB's discretion to announce new principles through adjudication.[569] The agency happily reverted to its old

---

560 *See Wyman-Gordon*, 394 U.S. at 762. The NLRB explained that it decided to use adjudication rather than rulemaking because it viewed rulemaking as "too rigid and inflexible for most of the problems with which it is concerned." Brief for the National Labor Relations Board 14–15, *Wyman-Gordon*, 394 U.S. 759 (1969) (No. 463).

561 Justice Fortas wrote a plurality opinion in which Chief Justice Warren and Justices Stewart and White joined. Justice Black wrote an opinion concurring in the result, in which Justices Brennan and Marshall joined, and Justices Douglas and Harlan each wrote a dissenting opinion. *Wyman-Gordon*, 394 U.S. 759 (1969).

562 The seven votes derived from Justice Fortas's plurality opinion plus Justice Black's concurring opinion. *See id.* at 766; *id.* at 769 (Black, J., concurring).

563 The six votes derived from Justice Fortas's plurality opinion plus Justice Douglas's and Justice Harlan's separate dissenting opinions. *See id.* at 764–65; *id.* 775–76; *id.* 780–81. The NLRB argued that even if its *Excelsior* requirement did represent a rule rather than an order, this was at most a *procedural* rule — not a legislative one — and thus was exempt from the notice-and-comment requirements of the APA. *See* Brief for the National Labor Relations Board, *supra* note 560, at 30–31.

564 *See, e.g.*, Bernstein, *supra* note 414, at 604 ("*Wyman-Gordon* suggests that rule making — instead of adjudication — may be required in some circumstances.").

practice of using adjudication to announce new principles and standards.[570]

In 1987, however, the NLRB decided once again to test the scope of its rulemaking powers. The result was the NLRB's first broad-scale legislative rule, which specified the employee bargaining units it would find appropriate in various kinds of health care facilities and hospitals.[571] In the Notice of Proposed Rulemaking, the NLRB explained that its authority to promulgate the rule derived from the general rulemaking grant in section 6 of the NLRA.[572] The agency also noted that for years members of Congress, the courts, and scholars had urged it to engage in rulemaking.[573]

The American Hospital Association challenged the validity of the NLRB's rule on three grounds: that section 9(b) of the NLRA requires the NLRB to make bargaining unit determinations "in each case" and therefore precludes the board from using rules to define bargaining units; that the rule violated a congressional admonition to the NLRB to avoid the undue proliferation of bargaining units in the health care industry; and that the rule was arbitrary and capricious.[574] The Association did not raise the more fundamental question whether the NLRB possessed legislative rulemaking authority in the first place. Rather, the parties, the Seventh Circuit, and the Supreme Court all assumed that Congress had given the NLRB the power to promulgate legislative rules.[575] Writing for the Seventh Circuit, Judge Posner remarked that "there is broad although not unanimous agreement in the legal community, which we and other courts have remarked approvingly, that the exercise of the Board's dormant substantive rulemaking power is long overdue."[576] Similarly, Justice Stevens, writing for the Supreme Court, noted in one perfunctory sentence that the general rulemaking grant given to the NLRB "was unquestionably sufficient to authorize the rule at issue in this case unless limited by some other provision in the Act," which limitation the Court did not find.[577]

574 Am. Hosp. Ass'n v. NLRB, 499 U.S. 606, 608–09 (1991). The court rejected all three arguments and upheld the validity of the rule. *Id.*

575 *See* Am. Hosp. Ass'n v. NLRB, 899 F.2d 651, 655 (7th Cir. 1990) ("The industry does not argue that the [general rulemaking] power is confined to nonsubstantive matters or has atrophied from disuse . . . ."); *see also American Hospital*, 499 U.S. at 609–10; Grunewald, *supra* note 16, at 294–95 (noting that the authority of the NLRB to engage in rulemaking is "not in doubt" because of section 6 of the NLRA).

576 *American Hospital*, 899 F.2d at 655.

577 *American Hospital*, 499 U.S. at 610.

The willingness of the parties in *American Hospital* to accept that the NLRB had been delegated legislative rulemaking powers most likely stemmed from two sources. First, the pathbreaking opinions of Judges Wright and Friendly that had treated ambiguous rulemaking grants as presumptively authorizing legislative rules had by then been on the books for a decade or more.[578] Second, although *Wyman-Gordon* did not expressly consider the NLRB's rulemaking powers under section 6(a), the opinions in that case, as well as the Court's treatment of the rulemaking versus adjudication issue in *Bell Aerospace*, implicitly suggested that the NLRB possessed legislative rulemaking powers. Thus, by the time the Court decided *American Hospital* in 1991, counsel for the Association no doubt concluded it was not worth the effort to challenge the NLRB's exercise of legislative rulemaking powers. As a consequence, the courts, guided as usual by the submissions of the parties, apparently did not perceive any issue of authority either.

VI. TAX EXCEPTIONALISM

Although the successful assumption of legislative rulemaking powers by the FTC, FDA, and NLRB would appear to reflect a complete triumph of the view that facially ambiguous rulemaking grants confer legislative power, at least one important vestige of the earlier understanding remains. The tax world continues to adhere to the notion that the facially ambiguous general rulemaking grant in section 7805(a) of the Internal Revenue Code (IRC) confers only interpretive, not legislative, rulemaking authority.[579]

---

[578] *See supra* pp. 554–57, 562–65.

SALTZMAN, IRS PRACTICE AND PROCEDURE ¶ 3.02[4][a]–[b] (2d ed. 1991) (explaining that regulations issued pursuant to a specific authorization in particular sections of the IRC are "legislative or substantive" and that those issued under the IRC's general grant of rulemaking authority are "interpretative"); Ellen P. Aprill, *Muffled* Chevron: *Judicial Review of Tax Regulations*, 3 FLA. TAX REV. 51, 56–57 (1996) ("Regulations promulgated under the general authority of section 7805(a) are considered interpretive, and regulations promulgated pursuant to a grant of authority under a particular code section are considered legislative." (footnote omitted)); Linda Galler, *Emerging Standards for Judicial Review of IRS Revenue Rulings*, 72 B.U. L. REV. 841, 849 n.53 (1992) ("It has generally been assumed that Treasury regulations adopted pursuant to I.R.C. § 7805(a) are interpretive, while Treasury regulations adopted pursuant to specific delegations of rulemaking authority are legislative."); *see also* John F. Coverdale, *Court Review of Tax Regulations and Revenue Rulings in the* Chevron *Era*, 64 GEO. WASH. L. REV. 35, 69–70 (1995) (citing and summarizing authorities in support of the distinction between general authority regulations and specific authority regulations and the deference given to each type).

A. *Section 7805(a) of the Internal Revenue Code*

Section 7805(a) of the IRC grants the Secretary of the Treasury the power to "prescribe all needful rules and regulations for the enforcement" of the tax laws.[580] This general grant of rulemaking authority appears to have originated in section 1005 of the Revenue Act of 1917,[581] which gave the Commissioner of Revenue the power to promulgate, with the approval of the Secretary of the Treasury, "all needful rules and regulations for the enforcement of the provisions of this Act."[582] Congress did not attach any statutory sanctions to violations of the regulations promulgated under this general grant. In contrast, sections 1001 and 1002 of the 1917 Act included specific grants of authority for the Commissioner to regulate returns,[583] and section 1004 attached penalties to the failure to make any returns required by regulation.[584] Under the convention described in Part III of this Article, therefore, the general grant conferred only interpretive power upon the Commissioner, while the specific grants conferred legislative power. The Revenue Act of 1918[585] and the Revenue Act of 1921[586] included the same combination of general and specific rulemaking grants, using similar language.[587]

When Congress sought to include the usual mixture of rulemaking grants in the Revenue Act of 1924, debate and confusion arose over whether a general grant of rulemaking authority would give the Commissioner the power to promulgate binding regulations. In particular, Representative Deal expressed concern that the general rulemaking grant would give the Commissioner too much power.[588] During debates on the House floor, Representative Deal argued:

> These regulations of the Internal Revenue Department have the force of law and subject the taxpayer to a prison penalty if he violates them. It is nothing more or less than law. I believe Congress should write the law and not leave it to the Internal Revenue Department. . . . These regulations are binding on the taxpayer and not upon the revenue department. It can change the rules from year to year, month to month, week to week,

585 Ch. 18, 40 Stat. 1057 (1919).

586 Ch. 136, 42 Stat. 227, 309.

587 *See* Revenue Act of 1918, § 1308, 40 Stat. at 1143; Revenue Act of 1921, §§ 1302–1303, 42 Stat. at 309. Like the Revenue Act of 1917, the 1918 Act did not attach any statutory sanctions to violations of the rules and regulations promulgated under the general rulemaking grant. Yet penalties were provided in the 1918 Act for violations of rules and regulations promulgated under specific rulemaking grants. Like the 1917 and 1918 Revenue Acts, the 1921 Act attached statutory sanctions only to rules and regulations promulgated under certain specific rulemaking grants.

588 65 CONG. REC. 3333–34 (1924).

and every morning before breakfast if they feel like doing it. The taxpayer has no redress and they never know what the law is.[589]

To remedy this perceived threat to the taxpayer, Deal proposed an amendment providing that regulations issued under the general grant "shall not enlarge or modify any of the provisions of this act and of any other law, and all such rules and regulations and all amendments thereto shall be annually reported to Congress."[590] The House ultimately agreed to Deal's proposed amendment, but the Senate declined to modify the general rulemaking grant.[591] Senator Smoot noted during floor debate that the modification was unnecessary because "[n]o officer of the Government can make any rule or any regulation in violation of the law itself with any binding force."[592]

When the Conference Committee reconciled the differences between the House and Senate versions of the general grant, the Senate version won out, and Deal's proposed amendment was rejected.[593] But Deal did not give up. In 1925 and again in 1927, he persisted with his arguments against the general rulemaking grant.[594] In particular, he continued to advance his contention that citizens could potentially face criminal punishment for violating any of the Treasury Department's rules or regulations.[595] Yet each year, Deal failed to persuade a congressional majority that the general rulemaking grant given to the Commissioner was problematic. Although we can only speculate about why Deal's arguments lacked majority support, the

595 Mr. Deal's arguments consumed several pages of the Congressional Record. One of his more forceful arguments was the following:

> Twenty thousand three hundred and eleven laws enacted by four separate units in the Internal Revenue Department, without concert of action, coordination of effort, or responsibility, these appointees of the Executive, who can not be reached by the votes of the people, are secretly making laws at will, laws not to be published, laws that can be changed in an hour. Under this condition or plan or system, this department has assumed to increase taxes, exempt from taxes, write law, unwrite law, apply the laws of Congress, or ignore the laws of Congress accordingly to the whims, fancies, enmities, or favoritisms of somebody in the Internal Revenue Department, unknown to and unreachable by the voters of the United States. Do not understand me, Mr. Chairman, to reflect, or intend to reflect, upon the Secretary of the Treasury, or the efficient honest employees in this service. I am not. It is the system that I criticize, a system that invites corruption, injustice, oppression, destruction. A vicious system unworthy of any civilized nation. It is the duty of Congress to wipe out the system, and *this may be done in part by withholding the blanket grant of power to the Commissioner of Internal Revenue to make rules and regulations*.

69 CONG. REC. 440 (1927) (emphasis added).

answer may be that many of the key players understood that the general grant conferred only interpretive authority.[596]

When the IRC was enacted in 1939 and subsequently amended in 1954, Congress continued to attach statutory sanctions solely to rules and regulations promulgated under specific rulemaking grants. Under the convention's framework, this absence of sanctions leads to the conclusion that the rules and regulations promulgated under section 7805(a)'s general rulemaking grant are interpretive, which is in fact the common understanding today among tax lawyers.

B. *The Supreme Court Confirms That Section 7805(a) Is Interpretive*

Notwithstanding the gradual repudiation of the convention outside the tax world, the revisionism of Judges Wright and Friendly is unlikely to spread to the IRC. One reason for this resistance is that, in contrast to what happened in the regulatory context, the Supreme Court has endorsed the outcome dictated by the convention in decisions explicating the meaning of section 7805(a) of the IRC. For example, in *Rowan Cos. v. United States*,[597] the Court noted that "the Commissioner interpreted Congress' definition [of the word 'wages'] only under his general authority to 'prescribe all needful rules.' 26 U.S.C. § 7805(a)."[598] Because the regulation was merely interpretive, the Court held that it deserved "less deference than a regulation issued under a specific grant of authority."[599] Similarly, in *United States v. Vogel Fertilizer Co.*,[600] the Court considered a regulation, issued by the Commissioner under section 7805(a), which interpreted the statutory term "brother-sister controlled group."[601] The Court again observed that because the Commissioner had issued the regulation under his general rulemaking grant, the interpretation was entitled to "less deference than a regulation issued under a specific grant of authority to define a statutory term or prescribe a method of executing a statutory provision."[602]

Vogel Fertilizer and *Rowan* confirm that in the tax world — in contrast to other administrative realms — a facially ambiguous general

---

[596] The House and Senate Offices of Legislative Counsel, which were fully institutionalized by this time, were especially active in consulting with the leadership on revenue bills. *See* KOFMEHL, *supra* note 265, at 183. If, as we have speculated, *see supra* pp. 520–23, the attorneys in these offices played a critical role in implementing the convention, then this may explain why the leadership saw no merit in Deal's amendments.

rulemaking grant authorizes only interpretive, not legislative, rules.[603] Because the Supreme Court has endorsed that view, it will probably remain secure, unless and until Congress amends the Code.

C. *Why the Tax World Thinks Section 7805(a) Is Interpretive*

When we trace the history of the understanding that section 7805(a) authorizes only interpretive rules, we uncover an anomaly that seems, at first, to cut against the convention. This anomaly made its first appearance in a series of articles written in the 1940s by several eminent tax scholars.[604] They include Erwin Griswold, who later became Dean of Harvard Law School and Solicitor General of the United States, and Stanley Surrey, who has been called "the most influential tax theorist of his generation."[605] These authors did not focus on the absence of sanctions for violations of section 7805(a) as the reason for construing the grant to authorize only interpretive rules.[606] Instead, they argued that the relevant distinction was between general and specific grants of rulemaking authority. General grants were said to authorize only interpretive rules, whereas specific grants authorized legislative rules.[607] Surrey buttressed this contention with two arguments: first, the specific rulemaking grants in the IRC would be redundant if the general grant were construed to give the agency general legislative rulemaking authority;[608] and second, the delegation of a general grant

[603] *See* Lomont v. O'Neill, 285 F.3d 9, 16 (D.C. Cir. 2002) (stating that section 7805(a) "is nothing more than a general grant of interpretative rulemaking power"); *see also* Michael Asimow, *Public Participation in the Adoption of Temporary Tax Regulations*, 44 TAX LAW. 343, 358 & nn.75–76 (1991) (citing *Rowan* and *Vogel Fertilizer* for the proposition that the tax world continues to adhere to the view that rules adopted pursuant to the Treasury's general rulemaking grant are interpretive in nature).

[604] *See* Surrey, *supra* note 78, at 558 (arguing that revenue acts do not "support a delegation of legislative power"); *see also* Alvord, *supra* note 78, at 256–61 (stating that for the great majority of Treasury regulations, the Commissioner has no legislative authority); Erwin N. Griswold, *A Summary of the Regulations Problem*, 54 HARV. L. REV. 398, 400–01 (1941) (explaining that interpretive regulations differ from legislative regulations, but only as a matter of degree); *cf.* Coverdale, *supra* note 579, at 69 (reporting that Surrey noted as early as 1940 that the general rulemaking grant given to the Treasury was not sufficient to delegate legislative powers).

[605] Coverdale, *supra* note 579, at 69.

[606] The distinction between interpretive and legislative rules caught Surrey's and other tax scholars' attention due to debate over the "reenactment doctrine," which was well entrenched by the 1940s. This doctrine provided that when an agency interprets a statutory provision, the administrative construction is automatically given the force of law when Congress later reenacts the legislative language that the administrative rule construes. In arguing against the reenactment doctrine, Surrey pointed to the fact that most Treasury regulations were merely interpretive because they were promulgated under the IRC's general rulemaking grant. *See* Surrey, *supra* note 78, at 557–58.

[607] *Id.* For a discussion of the distinction between general and specific grants, as compared with the conventional "sanctions" test, see *supra* section II.A, pp. 482–83.

[608] *See* Surrey, *supra* note 78, at 558 (contending that rules issued under specific rulemaking grants should be taken to possess different attributes than rules issued under the general rulemak-

of legislative rulemaking authority would raise serious constitutional questions under the nondelegation doctrine, because the general grant lacks an intelligible principle to guide agencies in making rules.[609]

As we have seen, the distinction between general and specific grants of authority was not the basis for distinguishing between legislative and nonlegislative rulemaking grants under the drafting convention. Indeed, many New Deal-era statutes, including the Natural Gas Act, the Securities Acts, the Communications Act, and the Taylor Grazing Act,[610] contain very broad rulemaking grants that nevertheless have always been understood to authorize legislative rules. We have also seen that the reasons that tax scholars cite in support of the general/specific distinction — the structural argument about redundancy and the invocation of the intelligible principle canon — remain open to question.[611]

We can only conjecture about how Surrey and other tax scholars came to adopt an explanation for the interpretive nature of section 7805(a) that is inconsistent with the logic of the convention. Part of the explanation may be that no appellate opinion or other written source has described the convention. Surrey had worked in the Treasury Department and was undoubtedly familiar with the received understanding that section 7805(a) authorizes only interpretive rules. He sought an explanation for this assumption that fit the facts of the tax world, and came up with the general/specific distinction. Since there was no judicial opinion or other written source that contradicted this explanation, and Surrey's arguments were at least superficially plausible, his explanation became the conventional wisdom of the tax world.[612]

---

ing grants because "otherwise the careful particularization of Congress in these other sections would be without meaning"); *see also* Alvord, *supra* note 78, at 257 (arguing that "some difference was intended by Congress," or it would not have granted the Treasury both specific and general rulemaking power).

609 *See* Surrey, *supra* note 78, at 557–58 ("The standard of 'needful . . . for the enforcement' of a revenue act would hardly seem adequate . . . to support a delegation of legislative power." (quoting I.R.C. § 62 (Cur. Serv. 1939))).

610 See *supra* note 252 for a discussion of the Taylor Grazing Act.

611 *See supra* section II.C pp. 487–93.

612 1 DAVIS, *supra* note 323, § 5.03, at 300, 313 (citing Surrey, *supra* note 78, and noting that section 7805(a) of the IRC constituted "something less than a delegation of power to issue rules which would be binding upon the courts"); KENNETH CULP DAVIS, ADMINISTRATIVE LAW OF THE SEVENTIES § 5.03-3, at 157 (1976) (citing Griswold, *supra* note 604, and noting that "[t]he dominant understanding among tax lawyers was once that tax regulations were legislative when made pursuant to a specific statutory provision authorizing regulations, but interpretative when made under the broad words of 26 USCS § 7805(a)"). Because of the influential role that Davis's treatises played in the administrative law world, his attention to the tax scholars' writings and to the interpretive nature of the Treasury's general rulemaking grant may have ensured the perpetuation of that understanding in the tax world.

VII. WHAT THE CONVENTION MEANS TODAY

Our purpose in looking backward to uncover the historical understanding of facially ambiguous rulemaking grants is, ultimately, to advance understanding of administrative authority in ways that are relevant to ongoing controversies. As recounted in Part I, there are two contexts today in which it is critical to determine whether Congress has delegated power to an agency to make rules with the force of law. One of these contexts is when courts consider whether agencies must comply with the procedural requirements for promulgating legislative rules under the APA. The other is when courts decide whether to apply *Chevron*'s strong deference doctrine. This latter issue, in particular, is a matter of continuing debate within the Supreme Court. Eight Justices agreed in *United States v. Mead Corp.*[613] that *Chevron* rests on congressional intent, and that the requisite intent is to delegate authority to an agency to make rules that have the force of law. But the Court was much more divided the previous Term in *Christensen v. Harris County*.[614] Recent post-*Mead* decisions suggest that the division in *Christensen* may be more indicative of the lack of consensus among the Justices than what the united front in *Mead* might imply.[615]

---

613 533 U.S. 218 (2001). The lone dissenter was Justice Scalia. *Id.* at 239 (Scalia, J., dissenting).

614 529 U.S. 576 (2000).

615 In *Barnhart v. Walton*, 122 S. Ct. 1265 (2002), Justice Breyer's opinion for the Court recited factors similar to those mentioned in *Skidmore* in support of the proposition "that *Chevron* provides the appropriate legal lens through which to view the legality of the Agency interpretation here at issue." *Id.* at 1272; *see also id.* at 1269–72. This echoing of *Skidmore* suggests that Justice Breyer may continue to adhere to his view, set forth in *Christensen*, 529 U.S. at 596–97 (Breyer, J., dissenting), that *Chevron* is simply a special case of *Skidmore* deference. *But see Barnhart*, 122 S. Ct. at 1274 (Scalia, J., concurring in part and concurring in the judgment) (noting that one of the factor relied upon by Justice Breyer — whether the agency interpretation is "longstanding" — is an "anachronism" after *Chevron*, and criticizing the majority for failing to explain why certain agency interpretations were sufficiently authoritative under *Mead* to qualify for *Chevron* deference). In *Edelman v. Lynchburg College*, 122 S. Ct. 1145, 1150 (2002), the Court declined to resolve whether an interpretation set forth in an EEOC procedural rule warranted *Chevron* deference. The reason that Justice Souter's majority opinion gave for avoiding the question was that the agency interpretation was "the position we would adopt even if there were no formal rule and we were interpreting the statute from scratch." *Id.* This language seems disturbingly inconsistent with the delegated lawmaking rationale of *Chevron*, which directs courts to uphold reasonable agency interpretations even if they conflict with the interpretation the court would adopt on its own. Chevron U.S.A. Inc. v. Nat'l Res. Def. Council, 467 U.S. 837, 843 n.11 (1984). As other Justices suggested in concurring opinions, *Edelman* also calls into question the Court's apparent reaffirmation of the delegated lawmaking rationale in *Mead*. *See Edelman*, 122 S. Ct. at 1153 (Thomas, J., concurring) (urging acceptance of the agency interpretation because "the EEOC possessed the authority to promulgate this procedural regulation, and . . . the regulation is reasonable, not proscribed by the statute, and issued in conformity with the APA"); *id.* at 1154–55 (O'Connor, J., joined by Scalia, J., concurring in the judgment) (arguing that the EEOC regulation was entitled to *Chevron* deference because the agency had been delegated authority to adopt procedural regulations, and the regulation had been re-promulgated using formal notice-and-comment procedures).

A. *The Role of the Convention in Statute-Specific Determinations of Legislative Intent*

Mead appears to contemplate that courts will seek to determine on a statute-by-statute basis whether Congress has delegated power to agencies to make rules with the force of law.[616] The convention we have described would seem at a minimum to be an important datum in undertaking this kind of ad hoc inquiry into congressional intent. The fact that during the formative years of the administrative state Congress followed a convention in signaling whether it was giving agencies the authority to make rules having the force of law is important contextual information in understanding the meaning of facially ambiguous rulemaking grants adopted both during the New Deal and afterwards.

With respect to rulemaking grants that predate the 1960s, we would go further. We are aware of no Supreme Court decision, prior to *Thorpe* in 1968, that is inconsistent with the convention; nor are we aware of any evidence that Congress had stopped following the convention. To be sure, there is little evidence that the typical member of Congress was aware of the convention, and some members — such as Representative Deal — clearly were not. Thus, we are not suggesting that Congress in any sense collectively intended that courts follow the convention. But there is substantial circumstantial evidence that staff attorneys, in drafting individual statutes, used the convention as a signaling mechanism to agencies and other informed observers. Consequently, even if the convention was unknown to most legislators themselves, it may nonetheless provide a reliable guide to the type of rulemaking authority that Congress had in fact agreed was appropriate under each particular statute. Even if courts consider other evidence of congressional intent, such as the structure of a statute or canons of interpretation, the convention is a sufficiently reliable indicator of congressional intent that it should ordinarily outweigh these other factors.

After the Wright and Friendly decisions of the 1970s and 1980s, matters became more complicated. The convention by that time was completely unknown to administrative lawyers, and Judges Wright and Friendly arguably succeeded in transforming the background understanding against which Congress legislated. After Judge Friendly's 1981 decision conferring general legislative rulemaking authority on

---

[616] *See* Barron & Kagan, *supra* note 53, at 225–34 (discussing *Mead*'s statute-specific approach, but arguing that under a proper reading *Mead* imposes more structure on a court's deference inquiry than critics suggest). *But see* Merrill, *supra* note 52, at 813–19 (characterizing *Mead* as adopting an open-ended standard of uncertain content).

the FDA,[617] an attorney from the Office of Legislative Counsel would likely have told a member of Congress that the courts would treat a similarly worded grant as authorizing rules having the force of law.[618] Still, we are aware of no evidence suggesting that Congress ever repudiated the convention or acquiesced in the Wright-Friendly view. Even today, when Congress includes a rulemaking grant in a statute, the legislation frequently specifies whether or not sanctions attach to violations of an agency's rules and regulations.[619] In a statute-by-statute assessment of the legislative intent of statutes enacted after 1980, however, the convention undoubtedly becomes a more problematic guide.

B. The Case for a Canon

An alternative to *Mead*'s statute-by-statute approach to ascertaining legislative intent would be the adoption of a canon that would serve as an aid to identifying congressional intent.[620] We assume that

---

617 *See* Nat'l Ass'n of Pharm. Mfrs. v. FDA, 637 F.2d 877, 889 (2d Cir. 1981).

618 As confirmation of this, consider the views published by the Administrative Conference of the United States on the subject in the early 1980s:

> Though only a minority of statutes contain . . . forthright instructions to make rules, most regulatory agencies have no difficulty in pointing to statutory language authorizing them to make "such rules and regulations as may be necessary to carry out the provisions of the Act." Such an authorization clearly enables an agency to promulgate procedural, organizational or other "housekeeping" rules, and it also clearly enables an agency to issue non-binding guidelines or interpretations of its statutory authority. These powers are now quite accepted and may even be deemed within an agency's "inherent" authority. *Whether such language permits an agency to issue binding regulatory prescriptions is less clear, but recent decisions of the U.S. Supreme Court and the Court of Appeals for the D.C. Circuit indicate judicial willingness to find legislative authority in such language.*

OFFICE OF THE CHAIRMAN, ADMIN. CONFERENCE OF THE U.S., A GUIDE TO FEDERAL AGENCY RULEMAKING 74–75 (1983) (emphasis added); *see also* Asimow, *supra* note 27, at 395 (citing *Nutritional Foods* and *Petroleum Refiners* to support the proposition that "under the prevailing view, at least in the federal courts, general rulemaking provisions empower an agency to make either interpretative or legislative rules").

619 *See, e.g.*, Americans with Disabilities Act of 1990, Pub. L. No. 101-336, §§ 106–107, 104 Stat. 327, 336–37 (codified at 42 U.S.C. §§ 12,116–12,117 (2000)) (declaring that the remedies set forth in specific sections of the Civil Rights Act of 1976 shall apply to violations of regulations promulgated under the general rulemaking grant included in Title I of the ADA); Petroleum Marketing Practices Act, Pub. L. No. 95-297, § 203(e), 92 Stat. 322, 337 (1978) (codified at 15 U.S.C. § 2823 (2000)) (making it unlawful for any person to violate a rule prescribed under section 202(d) of the Act); Occupational Safety and Health Act of 1970, Pub. L. No. 91-596, § 17, 84 Stat. 1590, 1606 (codified at 29 U.S.C. § 666 (2000)) (setting forth penalties for an employer's violation of the rules or regulations prescribed under the Act).

620 Barron and Kagan, *supra* note 53, also recognize the need for a canon or "background rule" that would serve as a presumptive guide to congressional intent. The canon they suggest is based on whether "the official Congress named in the relevant delegation" has "personally assumed responsibility for the decision prior to issuance." *Id.* at 235. One of the problems with this proposal is that most agencies have legal authority to subdelegate functions to subordinate officials. Most prominently, in the Reorganization Act of 1949, Congress delegated standing authority to the

such a canon would serve only as a presumption and would be rebuttable based on other evidence from the text, structure, and history of the statute in question. But structuring the inquiry under such a canon would offer several advantages over an ad hoc consideration of legislative intent.[621]

The first and most important reason for adopting a general canon would be to facilitate communication between Congress and the courts.[622] *Christensen* and *Mead* make clear that Congress has the ultimate authority to turn *Chevron* deference on and off. Congress can do this either by delegating power to an agency to act with the force of law with respect to a particular issue (*Chevron* on) or by not delegating such power to the agency (*Chevron* off). But Congress can exercise this authority only if it knows what to say in a statute to delegate such power.[623] If a canon provides a general presumption, then Congress will generally know what it must do to confer primary interpretive authority on an agency. Conversely, if acting with the force of law is identified under an ad hoc inquiry, as *Mead* suggests, then Congress will not know if it has succeeded in designating an agency (or the courts) as the primary interpreter until after the issue is litigated. Adopting a canon thus could help to preserve and protect the role of Congress, which the Court has identified as the very foundation of the *Chevron* doctrine.

A possible objection to this argument is that Congress could, in the future, specify whether it has given agencies the authority to make interpretations that have the force of law. Congress could simply include — or not include — language in a given statute that agency rules will have "the force and effect of law." This suggestion, however, overlooks the problem of what happens under thousands of existing rulemaking grants. Congress has neither the time nor the institutional capacity to

---

President to issue reorganization plans that provide for "the authorization of any officer to delegate any of his functions." Reorganization Act of 1949, ch. 226, § 3, 63 Stat. 203, 203. Thus, Congress's naming of an official as the decision maker in an agency's organic act is only a default rule, making it a problematic guide to congressional intent if the default has been changed. Also, the Barron and Kagan proposal only provides an answer to the question whether *Chevron* deference applies to any particular agency interpretation; it does not address the broader issue of how to interpret facially ambiguous rulemaking grants.

621 The following discussion draws on Merrill, *supra* note 52.

622 *See* William N. Eskridge, Jr. & Philip P. Frickey, *The Supreme Court, 1993 Term—Foreword: Law as Equilibrium*, 108 HARV. L. REV. 26, 66 (1994).

623 *Cf.* Finley v. United States, 490 U.S. 545, 556 (1989) ("What is of paramount importance is that Congress be able to legislate against a background of clear interpretative rules, so that it may know the effect of the language it adopts."). For recognition of this point in the context of *Chevron*, see Bernard W. Bell, *Using Statutory Interpretation To Improve the Legislative Process: Can It Be Done in the Post-*Chevron *Era?*, 13 J.L. & POL. 105 (1997); and Jonathan T. Molot, *The Judicial Perspective in the Administrative State: Reconciling Modern Doctrines of Deference with the Judiciary's Structural Role*, 53 STAN. L. REV. 1 (2000).

review and amend existing legislation to ensure that it has allocated interpretive authority properly. If the Court were to adopt a general canon about which kinds of delegations should sustain *Chevron* deference, Congress and affected agencies and interest groups would be better able to predict how courts will interpret existing delegations. In this way, the relevant parties would be in a better position to know which statutes should be targeted for revision.

A second reason to adopt a general canon is to facilitate agency planning. Agencies regard *Chevron* deference as a good thing, and they understandably want courts to accept their legal interpretations so that they can fulfill their statutory obligations as they see fit. Yet agencies must make a significant investment in administrative procedures to obtain the *Chevron* payoff. In the vocabulary of *Christensen* and *Mead*, agencies must take whatever procedural steps are necessary to demonstrate that they intend to exercise authority to make rules with the force of law. In the context of rulemaking, this ordinarily means committing considerable time and resources to notice-and-comment procedures.[624] The ability to know, in advance, whether such an investment will pay off would be tremendously helpful to agencies.

A third reason to adopt such a canon is to facilitate control of the lower federal courts by the Supreme Court. A canon would function like a presumptive rule, and rules are generally better than broad standards for exercising control over subordinate actors in a hierarchy.[625] In the federal judicial system, the problem of control is exacerbated by the fact that the Supreme Court can review only a limited number of cases each year.[626] If the Court had the capacity to review every court of appeals decision, it could define the scope of the *Chevron* doctrine by engaging in a statute-by-statue analysis. But given its limited resources, the Court might better control the behavior of lower courts by adopting a presumptive rule.

Finally, a general canon would allow lawyers to provide more accurate advice to clients about the probable outcome of litigation than

---

[624] For a discussion of the heavy administrative costs of what used to be called "informal" rulemaking, see Harold J. Krent, *Reviewing Agency Action for Inconsistency with Prior Rules and Regulations*, 72 CHI.-KENT L. REV. 1187 (1997); Thomas O. McGarity, *Some Thoughts on "Deossifying" the Rulemaking Process*, 41 DUKE L.J. 1385 (1992); and Richard J. Pierce, Jr., *Seven Ways To Deossify Agency Rulemaking*, 47 ADMIN. L. REV. 59 (1995).

[625] *See* Russell B. Korobkin, *Behavioral Analysis and Legal Form: Rules vs. Standards Revisited*, 79 OR. L. REV. 23, 37–38 (2000).

[626] *See* Peter L. Strauss, *One Hundred Fifty Cases Per Year: Some Implications of the Supreme Court's Limited Resources for Judicial Review of Agency Action*, 87 COLUM. L. REV. 1093, 1118–29 (1987).

would a more flexible standard.[627] Similarly, when such litigation occurs, arguments about the proper application of a rule will generally require less effort to develop than arguments about the proper application of a standard. Adopting a general canon would therefore reduce legal costs.

C. *Choosing a Canon*

The discussion in Parts II and III suggests three candidates for a canon that could be used to interpret facially ambiguous rulemaking grants. First, the canon implicit in the *Queen and Crescent Case* would provide that rulemaking grants are presumed to authorize only procedural and interpretive rules unless Congress expressly states otherwise. Second, the convention we describe in Part III would provide that rulemaking grants are presumed to authorize the imposition of rules with the force of law either when Congress states so expressly or when it provides for sanctions for rule violations. Third, the *Petroleum Refiners* canon — the approach endorsed by Judges Wright and Friendly — would provide that rulemaking grants are always presumed to authorize legislative rules unless Congress clearly intends (or, in the Friendly version, expressly states) otherwise. We assess these three candidates against three criteria: how well they respect the constitutional principle that only Congress can delegate authority to agencies to act with the force of law; how well they track probable congressional intent concerning the powers that agencies can exercise; and the disruption to reliance interests entailed by the transition from the current regime to the proposed canon.

1. The Queen and Crescent Case *Canon.* — The *Queen and Crescent Case* express-statement canon has one great virtue: it would robustly enforce the principle that agencies have no inherent authority to act with the force of law unless Congress delegates that authority to them. Under this canon, agencies could engage in legislative rulemaking if and only if Congress has expressly authorized them to make rules with "the force and effect of law" or the equivalent. With the benefit of hindsight, the Court might have been well advised to generalize such an express-statement rule from the *Queen and Crescent Case*. The nondelegation principle would have been secured; Congress, agencies, and the courts would have had a very clear signaling device for determining when authority to make legislative rules had been conferred; and no major reliance interests would have been frus-

[627] *See* FREDERICK SCHAUER, PLAYING BY THE RULES 145–49 (1991); *cf.* Louis Kaplow, *Rules Versus Standards: An Economic Analysis*, 42 DUKE L.J. 557, 579–84 (1992) (arguing that rules are more efficient than standards if fewer resources can be expended in determining the content of the law ex ante rather than ex post).

trated, since nearly all major delegations of such authority occurred after the *Queen and Crescent Case*.

But the Court did not generalize such an express-statement rule from the *Queen and Crescent Case*. Instead, it held in *Grimaud* that Congress could make it a criminal offense to violate an administrative regulation, as long as Congress itself legislated the sanction.[628] This decision presupposed that Congress was not required to confer legislative rulemaking authority through an express statement, but it could do so by clear implication. Relying on this ruling, Congress proceeded over the next half-century to enact thousands of rulemaking grants in which it conferred authority to make legislative rules by clear implication; that is, by prescribing sanctions for violations of "rules and regulations." To adopt an express-statement rule now would massively frustrate congressional intent, as manifested in these many enactments. It would be paradoxical to vindicate the principle of legislative supremacy with a rule that would undermine congressional intent on such a vast scale. Effectively, an express-statement rule would be the undoing of the administrative state. These costs are surely too great for the *Queen and Crescent Case* express-statement canon to tempt the Supreme Court today.

2. *The Convention as Canon.* — The convention we describe in Part III has a much stronger claim to being a viable canon for ascertaining presumptive delegatory intent. The convention would not vindicate the nondelegation principle with the same vigor as the *Queen and Crescent Case* canon, but Congress would still be required to confer the necessary authority by clear implication, most commonly by legislating sanctions for rule violations. In other words, some affirmative legislative act would be required — either the express conferral of legislative power or the express adoption of sanctions for rule violations — before the transfer of authority would be deemed to have occurred.

The convention would also harmonize much better with actual congressional intent. As we have shown, Congress followed the convention quite faithfully until about 1960, while it was adopting most of the regulatory statutes that serve as the foundation for the modern administrative state. We are less sure about what has happened since then, and in particular what has happened since 1981, when Judge Friendly's opinion in *Pharmaceutical Manufacturers* endorsed the *Petroleum Refiners* canon.[629] However, we are unaware of any evidence showing that Congress has relied on the *Petroleum Refiners* canon in drafting modern regulatory statutes.

---

[628] United States v. Grimaud, 220 U.S. 506 (1911); *see supra* pp. 501–02.
[629] *See supra* pp. 563–64.

The big question is how disruptive it would be to existing reliance interests to adopt the convention as a canon at this late date. For the past twenty years, any administrative agency that obtained a legal opinion on the subject would have been advised that a facially ambiguous rulemaking grant would likely be held to confer legislative rulemaking authority. It is unclear how many legislative regulations have been promulgated on this understanding, under statutes that the convention would deem not to authorize such regulations. We cannot even begin to provide a complete accounting, given the thousands of federal statutes containing tens of thousands of rulemaking grants, large and small. A systematic review of these rulemaking grants would pose a Herculean task. All we can offer are some observations drawn from the more historically significant examples of facially ambiguous rulemaking grants and from the controversies we have surveyed in this Article.

First, it appears that the vast majority of administrative agencies that need legislative rulemaking authority do in fact have such authority under the convention. Among the agencies we have reviewed, this includes the FCC, the SEC, the Federal Power Commission (now the Federal Energy Regulatory Commission), the Social Security Administration, the EPA (as to most functions), the IRS (through multiple individual grants), and the Federal Reserve Board (under the Truth in Lending Act). Other agencies that did not originally have legislative rulemaking authority have acquired it through statutory amendments; these include the FTC, the ICC (now the Surface Transportation Board), and the Department of Labor (under the Longshoremen's and Harbor Workers' Compensation Act).

Second, those agencies that lack legislative rulemaking authority under the convention have often been reluctant to engage in legislative rulemaking even when told that they could do so. This describes the NLRB, which, notwithstanding repeated prodding to engage in legislative rulemaking, has continually reverted to a system that relies exclusively on adjudication. It also describes the IRS, insofar as the general rulemaking grant in section 7805(a) is concerned.

Beyond these two categories of agencies are those agencies that lack general legislative rulemaking power under the convention but that have relied on decisions by the courts of appeals authorizing them to use nonlegislative rulemaking grants as sources of legislative rulemaking. The FDA is the most prominent agency in this category and is likely the agency that would be most severely affected by the adoption of the convention as a canon. Yet even here the convention would not necessarily result in the invalidation of all existing FDA regulations issued under the authority of section 701(a). We assume that some of these rules could have been adopted under specific rulemaking grants covered by section 701(e), which requires the use of formal rulemaking procedures. Any challenge to these rules for failure to comply with the procedural requirements of section 701(e) would likely now be barred as untimely. Thus, with respect to these rules, the primary consequence of adopting the convention would be to deny the FDA *Chevron* deference for interpretations embodied in these rules.[630] Courts, however, would likely regard other FDA rules, such as the Current Good Manufacturing Practice rules, as interpretive rather than legislative.[631] These rules would not only lose *Chevron* deference, but they would also be open to challenge in individual enforcement proceedings.

Other agencies undoubtedly also lack general legislative rulemaking authority, although they may benefit from a greater number of specific grants of authority than does the FDA. The Clean Water Act (CWA), for example, grants general rulemaking authority to the EPA in section 501(a).[632] The CWA nowhere prescribes any sanctions for violations of rules issued under the authority of this grant. As a result, under the convention this provision is not a source of legislative rulemaking authority. However, the CWA also contains numerous specific rulemaking grants permitting the EPA to establish a variety of particular practices and standards.[633] Violations of these regulations are punishable by a variety of civil and criminal penalties and are enforced by other sanctions such as permit denials; thus the regulations authorize legislative rules under the convention. Still, these specific rulemaking grants are not exhaustive, and occasionally circumstances arise in which the EPA's authority to promulgate legislative rules under one of these specific provisions is unclear.[634] Lower courts have occasionally invoked section 501(a) as a source of legislative rulemaking authority in such cases,[635] but this avenue would be foreclosed under the convention.

---

630 This is because the rules would violate the second step in the *Mead* test: whether the rules were adopted pursuant to a grant of authority to act with the force of law. *See* United States v. Mead Corp., 533 U.S. 218, 227 (2001). The rules *could* have been adopted pursuant to such a grant, but in fact were adopted pursuant to section 701(a), which authorizes only interpretive rules.

631 *See supra* p. 562.

632 33 U.S.C. § 1361(a) (2000).

633 *See id.* § 1314(e) (addressing best management practices for point sources of pollution); *id.* § 1316 (addressing standards of performance for new sources of pollution); *id.* § 1317(a) (addressing effluent standards for toxic pollutants); *id.* § 1317(b) (addressing pretreatment standards for waste discharged into public sewer systems).

634 The most prominent of these issues has been whether the EPA has the authority to issue legislative regulations establishing effluent limitations for categories of pollution sources under section 301 of the Clean Water Act. Resolving a circuit split, the Supreme Court held in *E.I. du Pont de Nemours & Co. v. Train*, 430 U.S. 112 (1977), that section 301 authorized such rules (although the Court, in support of this construction of section 301, also made passing reference to section 501(a)), *id.* at 126–36.

635 *See, e.g.*, Pronsolino v. Nastri, 291 F.3d 1123, 1131 (9th Cir. 2002) (relying on section 501(a) as a source of the EPA's authority to make rules with the force of law imposing total maximum

Similarly, HUD lacks general legislative rulemaking power under the convention (at least as far as the United States Housing Act of 1937[636] and Fair Housing Act of 1968[637] are concerned). Congress gave HUD a generalized rulemaking grant in the chapter of the United States Code that establishes HUD and describes its administrative powers.[638] However, no sanctions are attached to give any teeth to the rules HUD might make under this grant. Similarly, the Fair Housing Act includes a general rulemaking grant, giving the Secretary of HUD the power to "make rules (including rules for the collection, maintenance, and analysis of appropriate data) to carry out this subchapter."[639] Again, no sanctions back these rules. Nevertheless, HUD also enjoys numerous narrower rulemaking grants tied to particular sections of the acts it administers, many of which confer power to make legislative rules.[640] Still, there may be circumstances, analogous to the eviction procedures considered in *Thorpe*, in which none of the specific legislative rulemaking grants applies, and it would therefore be convenient to issue legislative rules under one of the agency's general rulemaking grants.[641] Application of the convention would prohibit the agency from invoking its general rulemaking grants in this way.

daily load limits on a river not polluted by any point sources, and hence finding that the agency interpretation merited *Chevron* deference under *Mead*); E.I. du Pont de Nemours & Co. v. Train, 541 F.2d 1018, 1027 (4th Cir. 1976), *aff'd on other grounds*, 430 U.S. at 126–36 (relying on section 501(a) as source of agency authority to issue legislative regulations establishing effluent limitations for categories of sources under section 301 of the Act); *cf.* Am. Iron & Steel Inst. v. EPA, 115 F.3d 979, 988 (D.C. Cir. 1997) (holding that the EPA had authority to issue a binding Guidance document under section 118 of the Clean Water Act, and hence that it was not necessary to consider whether such a Guidance could be issued under the authority of section 501(a)).

636 Ch. 896, 50 Stat. 888 (codified as amended in scattered sections of 42 U.S.C.).

637 42 U.S.C. §§ 3601–3631 (2000).

638 *See id.* § 3535(d) (giving the Secretary of HUD the power to "make such rules and regulations as may be necessary to carry out his functions, powers, and duties").

639 *Id.* § 3614a. The Act also gives the Secretary the authority to prescribe the rights of appeal from the decisions of administrative law judges, *see id.* § 3608(c), and the power to issue "such regulations as may be necessary to carry out the provisions" of the section dealing with fair housing initiative programs, *see id.* § 3616a(f).

640 *See, e.g.*, *id.* § 1437c(b) (giving the Secretary the power to prescribe regulations that fix the maximum contribution available for low-income housing); *id.* § 1437s(e) (giving the Secretary the power to prescribe, through regulations, terms and conditions for homeownership or resident management).

641 The general rulemaking grant included in section 8 of the Housing Act of 1937 — upon which the Supreme Court relied in *Thorpe* to conclude that HUD possessed legislative rulemaking powers, *see* Thorpe v. Hous. Auth., 393 U.S. 268, 277 (1969) — was omitted from the general revision of the Act in 1974. *See* 42 U.S.C. §§ 1406c to 1411a, Codification Note (2000) ("Section 1408, act Sept. 1, 1937, ch. 896, § 8, 50 Stat. 891, authorized promulgation of rules and regulations by the Authority, prior to the general revision of the United States Housing Act of 1937 by Pub. L. 93-383, Title II, § 201(a), Aug. 22, 1974, 88 Stat. 653."). Despite this omission, some courts continued to cite *Thorpe* for the proposition that HUD has broad powers to issue binding rules. *See, e.g.*, Hess v. Ward, 497 F. Supp. 786, 798 (E.D. Pa. 1980).

Whatever the merits of adopting the convention as a presumptive guide to congressional intent, no significant precedential barrier prevents the Supreme Court from adopting such a canon. Nearly all of the Court's decisions that recognized specific rules to be legislative are consistent with the convention. The principal exceptions — *Thorpe*, the *Hynson* Quartet, and *American Hospital* — are cases in which the parties did not brief the question whether the agency had authority to act with the force of law. These decisions cannot, therefore, be characterized as holdings binding on the Court as a matter of stare decisis.[642] Perhaps more importantly, none of the reasoning in the Court's cases is inconsistent with the convention. The statements in *National Broadcasting*, *American Trucking*, *Storer Broadcasting*, *Texaco*, and *Mourning* regarding the importance of liberally construing grants of rulemaking authority are all unexceptional, because the rulemaking grants in those cases did in fact authorize legislative rules under the convention. And the holdings in *Petroleum Refiners* and *Pharmaceutical Manufacturers* — no matter how important to the formation of general legal attitudes since 1980 — are decisions of inferior courts not binding on the Supreme Court.

3. The Petroleum Refiners *Canon.* — The third possible canon presents the mirror image of the virtues and vices of the *Queen and Crescent Case* as a canon. The *Petroleum Refiners* canon does the least to further the nondelegation principle that agencies may act with the force of law only pursuant to a specific delegation from Congress. This canon requires no unambiguous affirmative step to effectuate a delegation of legislative rulemaking authority. Courts would construe ambiguous references to rulemaking as transferring legislative authority, placing the burden on Congress to achieve a different outcome. Congress would still be able to restrict the agencies' ability to make rules with the force of law, but only by denying the agency all rulemaking authority or by clearly limiting rulemaking grants to procedural and interpretive rules. Such a strong presumption in favor of delegation seems like an inadequate level of protection for a principle that serves as a cornerstone of our system of separation of powers.

Use of the *Petroleum Refiners* canon would also do considerable violence to actual congressional intent. Not only would the FTC, the FDA, and the NLRB receive legislative rulemaking authority under grants not intended to confer such powers, but so would the IRS and the Labor Department under statutes like the Longshoremen's and Harbor Workers' Protection Act.

The affirmative case for the *Petroleum Refiners* canon is that it would not disturb any reliance interests grounded in existing legisla-

---

[642] *See* cases cited *supra* note 354.

tive rules, since the canon would legitimate all known legislative rules. In particular, we would not have to worry about the fate of the FDA's Current Good Manufacturing Practice rules and other rules adopted pursuant to section 701(a) and intended by the agency to be legislative rules.

Whether the plight of the FDA and other possible reliance issues are sufficiently troubling to warrant embracing the *Petroleum Refiners* canon in light of its other shortcomings is a matter of opinion. Our judgment is that the advantages of the convention in terms of respecting nondelegation values and achieving fidelity to congressional intent are sufficiently great, and the systemic costs of adopting the convention as a canon sufficiently confined, that the convention represents the best candidate for a general canon of presumptive delegatory intent.

D. The Chevron *Paradox*

There is one final wrinkle that may prove to be an insuperable barrier to resurrecting the convention as a guide to the meaning of facially ambiguous rulemaking grants. The Court has, not surprisingly, treated *Chevron* as the lodestar situation in which *Chevron* deference is warranted.[643] However, it turns out that the rule at issue in *Chevron* did not have the force of law under the convention, and hence under *Mead* should not have been afforded *Chevron* deference. This outcome is likely to give the Court significant pause before endorsing the convention as a presumptive guide to congressional intent.

Chevron involved an EPA interpretation of the term "stationary source" as used in the 1977 Clean Air Act Amendments, applicable to states out of compliance with national ambient air quality standards.[644] The EPA adopted this interpretation in a rulemaking proceeding conducted under the authority of the general rulemaking grant in the Clean Air Act, which was facially ambiguous regarding whether it authorized rules with the force of law.[645] The agency used notice-and-comment procedures in adopting the rule.[646] However, the state-

643 *See, e.g.*, United States v. Mead Corp., 533 U.S. 218, 237 n.18 (2001) (observing that "*Chevron* itself is a good example showing when *Chevron* deference is warranted").

644 *See* Chevron U.S.A. Inc. v. Natural Res. Def. Council, Inc., 467 U.S. 837, 840 (1984).

645 *See* 42 U.S.C. § 7601(a) (2000).

646 *See* Requirements for Preparation, Adoption and Submittal of Implementation Plans and Approval and Promulgation of Implementation Plans, 46 Fed. Reg. 50,766 (Oct. 14, 1981). The fact that the agency employed notice-and-comment procedures is not, in itself, a sufficient basis to conclude that the rules were legislative. *Mead* indicates that "[i]t is fair to assume generally that Congress contemplates administrative action with the effect of law when it provides for a relatively formal administrative procedure" such as notice and comment. *Mead*, 533 U.S. at 230. But Congress did not direct the EPA to use notice-and-comment procedures under its general rulemaking grant. The decision to do so was the EPA's alone, and unilateral action by an agency

ment of basis and purposes did not clearly indicate whether the agency regarded the rule as legislative or interpretive.[647]

The general rulemaking grant upon which the EPA relied in issuing the stationary-source rule was enacted as part of the 1963 amendments to the Clean Air Act.[648] The original Clean Air Act, adopted in 1955, was little more than a grant-in-aid program designed to stimulate cooperative federalism.[649] In 1963, as part of a general revision of the Act, Congress added a rulemaking grant authorizing the Secretary of HEW (later the Administrator of the EPA) to "prescribe such regulations as are necessary to carry out his functions under this Act."[650] Congress did not prescribe statutory sanctions for violations of the regulations issued under this grant. Under the convention, the absence of sanctions meant that Congress did not intend to allow the regulations issued under the Act to bind persons outside of the agency with the force of law.

The legislative history of the 1963 amendments also lacks any clear expression of congressional understanding that regulations issued under the general rulemaking grant would be legally binding. During debates on the 1963 amendments, a proposal was advanced in the House to add the word "procedural" to the general rulemaking provision, so that the amendments would only authorize the power to "prescribe such procedural regulations."[651] Representative Taft, who offered the amendment, explained that he did not believe it was the intention of the House to authorize regulations that would have the force of law, and he argued that it should be made clear that the general rulemaking provision was intended to refer only to procedural regulations.[652] The amendment passed the House; however, the Conference Committee did not agree to insert the word "procedural" into the grant. Although the Conference Report stated that the word "procedural" was eliminated "as being too restrictive upon the authority

cannot establish the required delegation of power *from Congress*. For further discussion of this aspect of *Mead*, see Merrill, *supra* note 52, at 814–15.

647 Requirements for Preparation, Adoption and Submittal of Implementation Plans and Approval and Promulgation of Implementation Plans, 46 Fed. Reg. 50,766, 50,770 (Oct. 14, 1981). Some aspects of the EPA's discussion suggest that the rule was interpretive. For example, the agency said that it would not require states to follow the definition in their implementation plans, but only that it would not disapprove plans that followed the definition. *Id.* at 50,769. Other aspects suggest that the agency intended the rule to be legislative. For instance, the EPA construed the rule as being subject to pre-enforcement review in the D.C. Circuit, *id.* at 50,770, which is generally a characteristic of legislative rules, *see supra* note 34.

648 *See* Pub. L. No. 88-206, 77 Stat. 392 (1963).

649 *See* ch. 360, 69 Stat. 322 (1955).

652 *See id.*

which the Secretary needs to carry out the act,"[653] it did not explain whether the Conference Committee understood the general grant to authorize legislative rulemaking.

Representative Taft raised concerns on the House floor about the deletion of the word "procedural" from the Conference Committee bill.[654] However, other House members assured him that the general rulemaking provision included in the Act was a limited one. Representative Roberts explained that despite the elimination of the word "procedural," he felt the Conference bill sufficiently addressed Representative Taft's concerns because "the power of the Secretary is very adequately tied down in this bill as to what he can do and as to what kind of information he must act upon, and the extent of the data upon which he may proceed."[655] Representative Rogers similarly assured Representative Taft that the rulemaking grant was narrow, stating that there was "no rulemaking power for abatement" included in the bill.[656]

In the end, when Congress passed the bill without Representative Taft's proposed qualification on the general rulemaking grant, the House understood the rulemaking grant to be fairly limited. But it was not clear just how limited the rulemaking grant really was.[657] Given that the legislative history is at best ambiguous, the general rulemaking grant would not be viewed as legislative under a canon adopting the presumption that only rulemaking grants providing sanctions for violations reflect a congressional delegation of authority to make rules with the force of law.

In 1990, Congress thoroughly overhauled the Clean Air Act and amended the statute to include sanctions for violations of rules issued under the general rulemaking grant.[658] Post-1990, therefore, the Act's general rulemaking grant clearly qualifies as a source of legislative rulemaking authority under the convention.[659] But the EPA adopted

---

653 CONF. REP. NO. 88-1003 (1963), *reprinted in* 1963 U.S.C.C.A.N. 1260, 1285.

654 *See* 109 CONG. REC. 23,962–63 (Dec. 10, 1963) (statement of Rep. Taft).

655 *Id.* at 23,963 (statement of Rep. Roberts).

656 *Id.* (statement of Rep. Rogers).

657 Representative Taft asked the House members whether they understood the general rulemaking grant to authorize only procedural as opposed to substantive rules, but he never received a clear answer to this question. *See id.* (statement of Rep. Taft).

658 *See* An Act to Amend the Clean Air Act, Pub. L. No. 101-549, 104 Stat. 2399, 2676–77 (1990) (codified as amended at 42 U.S.C. § 7413(b)(2)–(d)(1)(B) (2000)). As amended, the Clean Air Act authorizes the EPA to commence a civil action or assess a civil or administrative penalty of up to $25,000 per day of violation against any person who violates "a requirement or prohibition of any rule . . . issued . . . under this chapter." *Id.* (similar language in both provisions). In contrast, the law in effect in 1981, when the EPA adopted the stationary-source rule reviewed in *Chevron*, authorized the EPA to commence a civil action or assess a civil administrative penalty only for violation of select provisions of the Act or state implementation plans. *See* 42 U.S.C. § 7413(a)(1), (a)(3), (a)(5), (c)(1) (1982).

659 The sanctions added to the Act, however, apply only to violations of "rules," and do not mention "regulations." *See* 42 U.S.C. § 7413 (b)(2)–(d)(1)(B). This word choice is potentially sig-

the rule at issue in *Chevron* under the 1977 version of the Act — well before Congress amended the general rulemaking grant to give the EPA general authority to issue legislative rules implementing the Clean Air Act. This situation presents the ultimate paradox: *Christensen* and *Mead* hold that *Chevron*'s strong doctrine of deference applies only where agencies have been delegated authority to make rules with the force of law. Yet the agency that *Chevron* held to be entitled to this strong deference did not, according to the convention, have authority to make rules having the force of law until many years after *Chevron* was decided — at least not with respect to the particular rule considered in *Chevron*.

In principle, this paradox should not really matter. The important propositions for which *Chevron* stands — that Congress often impliedly intends that an agency rather than the courts be the primary interpreter of gaps and ambiguities in a statute, and that in such cases, courts are to accept reasonable agency interpretations of the statute — remain unaffected even if *Chevron* incorrectly determined that Congress had implied such a delegation in the particular provision at issue. Only much later, in *Mead*, did the Court specify that the key question is whether Congress has delegated to the agency the authority to make rules with the force of law. *Chevron* did not fully anticipate this development, and it contains no holding concerning whether Congress had given the EPA authority to make rules with the force of law. Indeed, the Court in *Chevron* did not even cite the rulemaking grant under which the EPA issued its interpretation. Still, whether the Court would ever be willing to endorse the convention as the key to ascertaining the meaning of facially ambiguous rulemaking grants, when the convention generates this kind of internal dissonance in the Court's case law, remains very much to be seen.

CONCLUSION

Our story is about legislative supremacy and the signals Congress uses in its exercise. In the abstract, all agree that agencies have no inherent authority to act with the force of law.[660] Agencies can issue edicts that have the effect of statutes only if Congress delegates to them the authority to do so. But what happens if Congress speaks ambiguously in delegating authority to an agency, referring to "rules and regulations" without specifying whether this means rules and

---

nificant because the general rulemaking grant authorizes "regulations," not "rules." If Congress had intended regulations issued under the general rulemaking grant to be enforced via the added sanctions in § 7413, one would think that it would have applied the sanctions to "regulations" as well as "rules."

[660] *See* authorities cited *supra* notes 95 and 97.

regulations with the force of law, or merely procedural and interpretive rules and regulations?

For a long time, Congress used one set of signals to indicate the meaning of such facially ambiguous grants. Most members of Congress were probably blissfully unaware of these signals. But the signals functioned well enough that the attorneys drafting the legislation and advising agency officials about the scope of their authority could do their jobs.

The signals were not, however, made sufficiently explicit that appellate lawyers or courts had easy access to them. Because of the vagaries of litigation, no Supreme Court decision enshrined the signals in an authoritative opinion. When times changed, other actors — agency critics, a new generation of agency lawyers, and judges and their law clerks — interpreted the signals differently. Because there was no controlling legal authority to stop them, these actors in effect engineered a major transfer of delegated power beyond anything that Congress contemplated. While courts continue to incant the principle that agencies have no inherent authority to act with the force of law, in practice courts have enabled every agency with a general grant of rulemaking authority to decide in its discretion whether to act with the force of law.

Another debate has recently emerged concerning which institution in the administrative state is to exercise primary authority in the interpretation of law. The Supreme Court has decided that this question is also a matter of legislative supremacy and that Congress is entitled to signal whether an agency can exercise primary interpretive authority in a given instance.[661] In an effort to describe in general terms which signal will be examined to answer this question, the Court has said that the threshold question is whether Congress has delegated authority to the agency to make rules with the force of law.[662] Thus, by a quirk of fate, the Supreme Court has come around to the question it never answered during the formative years of the administrative state: what language must Congress use to indicate that an agency has been given power to make rules with the force of law?

The Court will soon have to decide whether ambiguous rulemaking grants should be interpreted in accordance with the original set of signals or in accordance with the revisionist understanding that such grants always confer authority to act with the force of law unless Congress specifically limits the grant. We have argued that it is important that the question of delegatory intent be resolved by a presumptive rule, rather than ad hoc. Regarding the choice of a presumptive rule,

662 *See id.* at 231–32.

the forces of inertia favor the revisionist understanding. We believe, however, that the original convention for deciphering the meaning of facially ambiguous rulemaking grants, if adopted now as a canon of interpretation, would achieve a better integration of constitutional values and practical realities, of our present and our past.

Noncompete Agreements in the US Labor Force

Evan P. Starr *University of Maryland*
J.J. Prescott *University of Michigan*
Norman D. Bishara *University of Michigan*

Abstract

Using nationally representative survey data on 11,505 labor force participants, we examine the use and implementation of noncompete agreements and the employee outcomes associated with these provisions. Approximately 18 percent of labor force participants are bound by noncompetes, with 38 percent having agreed to at least one in the past. Noncompetes are more likely to be found in high-skill, high-paying jobs, but they are also common in low-skill, low-paying jobs and in states where noncompetes are unenforceable. Only 10 percent of employees negotiate over their noncompetes, and about one-third of employees are presented with noncompetes after having already accepted job offers. Early-notice noncompetes are associated with better employee outcomes, while employees who agree to late-notice noncompetes are comparatively worse off. Regardless of noncompete timing, however, wages are relatively lower where noncompetes are easier to enforce. We discuss these findings in light of competing theories of the economic value of noncompetes.

1. Introduction

Noncompete agreements (often referred to as noncompetes) are postemployment restrictions that prohibit departing employees from joining or starting a competing enterprise, typically within time and geographic boundaries (for examples, see Figures OE1, OE2, and OE3 in the Online Appendix). Noncompetes have long faced significant legal hostility because of their often blunt prohibition

Results from early versions of this paper are discussed in the US Treasury report on noncompete agreements (US Department of the Treasury 2016) and the subsequent White House report (White House 2016). We thank various units at the University of Michigan for supporting our data collection efforts, including the Law School, the Ross School of Business, Rackham School of Graduate Studies, the Department of Economics, and the Michigan Institute for Teaching and Research in Economics. We are also grateful for financial support from Ewing Marion Kauffman Foundation grant 20151449. Alex Aggen, Russell Beck, Zev Eigen, Alan Hyde, Pauline Kim, Kurt Lavetti, Orly Lobel, W. on employee mobility (Blake 1960), but they are nevertheless regularly enforced in the United States.[1] Spurred by anecdotes of unpaid interns and minimum-wage sandwich makers signing noncompetes, policy makers in recent years have proposed dozens of legal reforms, including banning noncompetes for some or all employees and regulating the noncompete-contracting process.[2] Yet relatively little is known about the use of noncompete agreements by employers because employee-level noncompete data are scarce (see generally Bishara and Starr 2016).[3] In this study, we use nationally representative data from a survey of 11,505 labor force participants to answer three empirical questions: What fraction and which types of employees enter into noncompetes? What is the nature of the noncompete contracting process? And how are noncompetes related to labor market outcomes, like training, wages, and job satisfaction?

Our empirical analysis is motivated by theoretical work in law and economics that considers the costs and benefits of employment contracts that limit an employee's future mobility. The traditional economics perspective has two key tenets. First, because of the inalienability of human capital (Hart and Moore 1994), employers will be reluctant to invest in developing valuable information or specialized training—given that employees may be unable to compensate employers in advance for access to such information and training (Barron, Berger, and Black 1999; Acemoglu and Pischke 1999)—if employees can easily convey the value of any such investments to a competitor simply by taking a new job. Enforceable noncompetes solve this holdup problem by prohibiting departures to competitors, which encourages employers to make these fragile but important productivity-enhancing investments (Rubin and Shedd 1981; Posner, Triantis, and Triantis 2004; Meccheri 2009). The second tenet is that employees will not agree to a noncompete unless an employer adequately compensates them (Calla-

Isaac Sorkin, Kelsey Starr, and Matt Wiswall made helpful contributions to our survey project. We are particularly grateful to Charlie Brown and Rachel Arnow-Richman for valuable comments on early versions of the survey. We also thank our excellent research assistants (Justin Frake, Benjamin King, Daniel Halim, Xiaoying Xie, Linfeng Li, Mehdi Shakiba, and Emily Bowersox) and Olav Sorenson, Jim Hines, William Hubbard, Ted Sichelman, Scott Stern, Ben Klemens, Alison Morantz, and numerous seminar and conference participants for useful suggestions on previous drafts. All mistakes are our own.

[1] All but a few US states enforce noncompetes (though to varying degrees) as long as they are protecting legitimate business interests—such as trade secrets, client lists, or specialized training (Malsberger, Brock, and Pedowitz 2012)—without unduly harming the employee or the public. See Online Appendix OC for more on the enforceability of noncompetes.

[2] For a recent summary of noncompete policy proposals, see Fair Competition Law, The Changing Landscape of Trade Secrets Laws and Noncompete Laws around the Country (https://www.faircompetitionlaw.com/changing-landscape-of-trade-secrets-laws-and-noncompete-laws/).

[3] Available noncompete data cover executives (Bishara, Martin, and Thomas 2012) and engineers (Marx 2011). There are also two recent papers about the use of noncompetes among physicians (Lavetti, Simon, and White 2020) and hair salon employees (Johnson and Lipsitz, forthcoming). A large literature studies the enforceability of noncompetes but does not use data on noncompete use. See, for example, Balasubramanian et al. (2020), Marx, Strumsky, and Fleming (2009), Stuart and Sorenson (2003), Samila and Sorenson (2011), Starr (2019), Starr, Balasubramanian, and Sakakibara (2018), Conti (2014), Marx, Singh, and Fleming (2015), and Younge, Tong, and Fleming (2015).

han 1985; Friedman 1991), either up front or through higher future wage growth representing part of the return on the employer's marginal investment.[4]

In contrast, a more critical perspective recognizes that while noncompetes might solve certain incentive problems, they can also serve anticompetitive ends, including limiting wage growth by restraining labor market competition from product market competitors, retarding product market competition by reducing information flows to competitors, and preempting future competition from departing employees (Krueger and Posner 2018; Marx 2018). Employers might even deploy noncompetes when they are entirely unenforceable (because they are not relying on enforceability to align incentives), hoping instead that the *in terrorem* effects of the contract will hold employees to their (unenforceable) promises (Sullivan 2009; Starr, Prescott, and Bishara 2020; Blake 1960). This view also challenges the notion that employees will be adequately compensated for entering into a noncompete: for example, employers may impose a noncompete requirement only after an applicant has accepted an employment offer, which they often do on the first day of the job, when the employee's bargaining power is much diminished (Arnow-Richman 2006).

These contrasting views deliver different predictions about the incidence of noncompetes, the noncompete contracting process, and how noncompetes relate to labor market outcomes. (Table 1 summarizes the predictions and findings.) The more benign view tells us that noncompetes should be confined to occupations and industries that require specialized training or access to valuable information, should exist only in states that enforce noncompetes (because enforceability addresses the holdup problem), should involve negotiation, and should correlate with better outcomes for employees (for example, more training and higher wages), especially in enforcing states. The critical view contends that noncompetes should be common even among employees without access to trade secrets and in nonenforcing states, should follow a contracting process that involves little negotiation or transparency, and should be associated with worse labor market outcomes. In what follows, we describe our data and examine these competing predictions.

2. Data

Our data come from a large-scale survey that we developed and administered in 2014 to a panel of verified respondents.[5] The sample population is labor force participants ages 18 to 75 who are employed in the private sector or in a public health-care system or who are unemployed. The final sample contains 11,505 re-

[4] There is also the view that noncompetes—a species of within-industry mobility friction—will not matter as long as skills and information are fungible across industries and moving costs are low (Sykuta 2014).

[5] We provide a focused discussion of our survey data here with more details in Online Appendix OF. An even more extensive account of our data can be found in Prescott, Bishara, and Starr (2016), which describes our investigation into sample selection issues, hand coding of occupations and industries, weighting methods, and imputation procedures.

Table 1
Perspectives on Noncompetes, Predictions, and Findings

	Main Arguments	Use	Contracting Process	Labor Market Outcomes
Traditional economic perspective	Employers use noncompetes to solve a holdup problem and protect employer interests, including trade secrets and client information, which creates incentives for efficient investment; employees agree not to compete only when doing so makes them better off, either through an up-front compensating differential or through increased growth in wages over time	Noncompetes should be confined to employees in occupations and industries that involve trade secrets, access to client lists, or other valuable information or that require specialized industry-specific training; noncompetes should also be confined to states that enforce them	Noncompetes should be negotiated agreements that maximize joint employee-employer surplus and make both parties better off; alternatively, a compensating differential should be a part of the initial job offer, which would render costly negotiation unnecessary	Conditional on an employee's job duties, employees who agree to noncompetes should receive more training or valuable information relevant to their employment; employees should earn higher wages as they capture some of the joint surplus created by noncompetes; because they capture some of the surplus on average, employees with noncompetes should be more satisfied with their jobs
Critical perspective	Noncompetes reduce labor market competition from product market competitors and future product market competition from departing employees; employers can also deploy noncompetes at inopportune times to reduce an applicant's or employee's bargaining power	Noncompetes should be common for all sorts of employees, regardless of access to confidential information, whenever employers can use noncompetes to limit competition in labor or product markets; noncompetes should be found where they are unenforceable if an employee's behavior is affected by noncompetes without regard to the prospect of enforcement	If employers are in a position to impose noncompetes on applicants and employees, noncompetes should rarely be negotiated, and employees should rarely seek outside advice since their options are few; employers may opt for late notice for noncompetes, which reduces employee bargaining power	Employees may not necessarily see any increase in training or information access since noncompetes may not be deployed to resolve incentive or holdup issues; employees may also suffer in terms of lower wages and reduced job satisfaction if noncompetes are able to limit competition in labor markets

Findings	Noncompetes are more common for employees in technical jobs and industries and employees who have access to valuable, confidential information; however, noncompetes are relatively common in all occupations and industries and bind many employees without access to trade secrets or client information; noncompetes are also common in states that do not enforce them	Employees rarely negotiate over noncompetes and are rarely promised anything in exchange for agreeing to one; about one-third of noncompetes are requested by employers after an employee has accepted a job offer (without a change in job title or responsibilities); few individuals receive outside advice during the contracting process	Noncompetes are associated with more training, greater access to information, and higher wages and job satisfaction when the noncompete is presented along with the job offer; if a noncompete is presented after the acceptance of a job offer, employees experience no wage or training benefits on average, and they report being less satisfied in their jobs; higher wages appear to be largest in early tenure for employees receiving early notice, while lower job satisfaction appears early in tenure for employees bound by late-notice noncompetes; training associated with noncompetes increases with the enforceability of the noncompete, but wages fall

spondents drawn from all states, industries, occupations, and other demographic categories. We use an online survey instrument to collect the data, which offers several compelling research-related benefits, such as the ability to ask technical questions in intuitive ways, easy access to millions of Americans who are comfortable responding to Internet surveys, and significantly lower costs (and thus larger sample sizes). Yet surveying people online also comes with several important challenges, such as ensuring respondents' reliability and representativeness, addressing item nonresponse, and even calculating the response rate.[6]

With regard to respondent representativeness, we built quotas into the surveying procedure to ensure our unweighted sample would be representative on key demographics. We also created ex post weights using iterative proportional fitting ("raking") to match the marginal distributions of many important variables in the 2014 American Community Survey (ACS).[7] Table 2 presents unweighted and weighted comparisons of our sample and data from the ACS. Our unweighted sample is higher earning, better educated, and more female than the population, but weighting appropriately virtually eliminates these differences. Unfortunately, weighting does not account for any nonrandom selection into our sample on the basis of unobservables.[8] With respect to data quality, we verify the reliability of respondents' answers in several ways. In addition to examining long-answer and free-form survey responses directly,[9] we also carefully cleaned our raw data, identifying and removing repeat survey takers and excluding observations with intentionally noncompliant answers, among many other exhaustive measures that we took to address inconsistent and low-quality survey submissions (see Online Appendix OF).[10]

[6] We vetted online panel providers by signing up as survey takers with many of these survey firms ourselves. Typically, after we completed an intake questionnaire, a representative called us a few days later and asked us questions to confirm the information we had submitted. In later discussions with various online panel providers, we learned that these companies drop applicants who give invalid phone numbers or who are not able to confirm their intake information.

[7] We considered a number of weighting schemes. See Prescott, Bishara, and Starr (2016, tables 16–17) for more details.

[8] As for item nonresponse, if only respondents with an ax to grind about noncompetes finish the survey, we may find that noncompetes are associated with negative outcomes. To address this concern, we asked respondents at the end of the survey to indicate why they participated in the exercise with an option that read "I wanted to share my experiences with noncompetes." In our robustness checks, we drop these individuals and confirm that our results are robust to their exclusion.

[9] In Table OF1, we reproduce the self-reported job titles, occupational duties, and industries from 15 randomly selected respondents. The entries illustrate how seriously respondents took the survey. The respondent-provided job descriptions are quite detailed, as are the industry descriptions. We examined all of the survey data comprehensively by reviewing every one of the 11,505 free-form job titles, job duties, and industries by hand in the process of creating occupation and industry codes. It is clear to us that the vast majority of these respondents took care to write thoughtful responses to the survey questions.

[10] The final step of our cleaning process was the design and use of a flagging algorithm, which analyzes within-survey responses for internal inconsistencies. The flagging algorithm flags up to 21 possible inconsistencies, including, for example, whether the respondent reports that the particular establishment or office at which he or she works is larger in terms of employee numbers than the employer's entire organization, whether there were missing responses, and others (for the full list, see Prescott, Bishara, and Starr 2016, table 7). Only 1.8 percent of the final sample was flagged two or more times, and 82.2 percent received no flags.

Table 2

Comparison of Surveys' Demographic Characteristics: Weighted and Unweighted Samples

	Our Survey		American Community Survey	Difference	
	Unweighted	Weighted		Unweighted	Weighted
Age (years)	41.98	40.33	40.55	1.43**	−.22
	(13.23)	(13.63)	(13.64)	(.16)	(.27)
Annual income ($1,000s)	49.06	44.00	46.68	2.38**	−2.68
	(42.03)	(47.38)	(55.62)	(.77)	(1.75)
Work > 40 hours/week	.70	.71	.72	−.02**	−.01
	(.46)	(.45)	(.45)	(.00)	(.01)
Highest degree < bachelor's	.48	.69	.70	−.22**	−.01
	(.50)	(.46)	(.46)	(.01)	(.02)
Highest degree = bachelor's	.37	.21	.20	.16**	.01
	(.48)	(.41)	(.40)	(.01)	(.01)
Highest degree > bachelor's	.16	.10	.10	.06**	.00
	(.36)	(.30)	(.30)	(.00)	(.01)
Male	.47	.53	.53	−.07**	−.00
	(.50)	(.50)	(.50)	(.01)	(.01)

Note. The weighted data use raking weights, as described in Section 2 and in Prescott, Bishara, and Starr (2016). Standard deviations (survey data) and robust standard errors (differences) clustered at the state level are in parentheses.

** $p < .01$.

Respondents' willingness to take and complete our survey is comparable to other surveys in the noncompete literature, although response rates are difficult to define and calculate in this setting because panel providers continuously send invitations to a superset of potential respondents—not all of whom are in our population of interest—until they receive a prespecified number of complete surveys. We can drop those who are not in our population of interest if they begin the survey (about 40 percent; see Prescott, Bishara, and Starr 2016, table 2), but we do not know and cannot determine whether those who receive an invitation but never start the survey are in our population of interest.[11] Given this limitation, the true response rate lies between two extremes: the final sample size over the number who started the survey in our population of interest (23 percent) and the final sample size over the total number of survey invitations (2 percent).[12]

[11] The quotas we used to ensure representativeness exacerbate this problem because as the survey stays in the field and quotas begin to bind, respondents who would otherwise qualify for the survey become newly ineligible. Toward the end of the surveying period, when most quotas are full, the online survey company might send out thousands of e-mail invitations when only a handful of respondents satisfy the remaining criteria. In addition, our survey was marketed as a work experiences survey, and online survey respondents skew toward being out of the labor force (see Prescott, Bishara, and Starr 2016, table 12), so it is likely that many who did not respond to the survey invitation were not in our population of interest.

[12] These numbers, while seemingly on the low side, are in line with and likely better than response rates to random-digit-dialing surveys, which were around 6 percent in 2018 (Kennedy and Hartig 2019). To compare the rates, we calculate response rates for other surveys in this literature; see Table OB1. Moreover, in light of our arguably low response rate, it is important to recall that a low response rate is not problematic per se. Rather, bias results only when the reasons for nonparticipation are correlated with unobservables and outcomes of interest.

3. The Use of Noncompetes

To identify employees bound by noncompetes, our survey instrument first defines a noncompete agreement (explicitly distinguishing it from a nondisclosure agreement, a common confusion) and asks respondents whether they have ever heard of such provisions (75.2 percent report yes). Our survey then asks those who indicate some familiarity with noncompetes whether they have ever agreed to one at some point in their career (25 percent overall, 42 percent of those who are aware of them) and, if they answer yes, whether they are currently bound by one. For our 11,505 respondents, the unweighted distribution of those with a noncompete is 15.2 percent yes, 55.1 percent no, and 29.7 percent maybe, where the maybe category includes those who have never heard of a noncompete (24.8 percent), do not know if they have one (2.2 percent), do not want to say (.23 percent), and cannot remember (2.5 percent).[13]

A key challenge in calculating the incidence of noncompetes is that many in the maybe category may be bound by a noncompete. In fact, of those in our data who report having ever entered into a noncompete agreement, 8.8 percent also acknowledge having unknowingly signed at least one such provision that they discovered only at some later date. We address this uncertainty in two ways. First, we treat the maybes as their own category, which allows us to interpret the proportion of respondents answering yes as a lower bound on the incidence of noncompetes and the proportion of respondents answering either yes or maybe as an upper bound. Second, because the overall effect of a noncompete is averaged across those who are and who are not aware of their noncompete status, we use multiple-imputation methods (King et al. 2001) to predict which respondents in the maybe category have a noncompete.[14]

Overall, our weighted estimates indicate that 38.1 percent of US labor force participants have agreed to a noncompete at some point in their lives and that 18.1 percent, or roughly 28 million individuals,[15] currently work under one.[16] Table 3 shows the distribution of temporal and geographic restrictions of non-

[13] The unweighted distribution for whether an individual has entered into a noncompete at some point in the past in our full sample is 31.5 percent yes, 41.5 percent no, and 27 percent maybe. Among individuals who answer yes or no to the question about whether they have ever entered into a noncompete, almost all report being confident in their answer, that is, either completely (74.2 percent) or fairly (23 percent) sure.

[14] We provide a more in-depth discussion in Prescott, Bishara, and Starr (2016, sec. 2F). To calculate our standard errors properly, we impute noncompete status among the maybe category 25 times. We then estimate our statistical models on each of the 25 different but complete data sets and use Rubin's rules to combine the resulting point estimates and correct the standard errors to reflect the variation in the imputed values (see Section OF5 in the Online Appendix for details). The benefits of multiple-imputation methods are that they allow us to create an overall estimate of the use of noncompetes that accounts for the uncertainty surrounding the maybe group.

[15] The Bureau of Labor Statistics puts the US labor force at 156 million in July 2014 (US Department of Labor 2014, p. 4).

[16] The unweighted multiple-imputation estimates signal that relatively few maybes are likely to have noncompetes in fact. We calculate that 19.9 percent of individuals (including 16 percent of the maybe respondents) are bound by a noncompete in 2014. These numbers are similar to estimates from smaller but more recent surveys: Krueger and Posner (2018), using a similar online survey methodology of 795 respondents in 2017, find a 15.5 percent incidence rate, while a 2017 survey in Utah of 2,000 employees reports an 18 percent incidence rate (Cicero 2017).

Table 3
Temporal and Geographic Scope of Noncompetes

Scope	Percentage
Term duration:	
$\leq$1 Year	30.9
>1 Year to $\leq$2 years	15.0
>2 Years	33.8
Do not know	20.3

Note. The sample includes the 1,747 individuals bound by noncompetes and uses sample weights.

competes in the United States: most noncompetes have a duration of 2 years or less, while the geographic scope is frequently the state or the entire country (or there is no geographic limitation), though about 20 percent of individuals with noncompetes are uncertain as to the precise terms. Table 4 provides means—overall and by noncompete status—of important variables in our sample. Table 5 and our figures document variation in noncompete use by a range of employee and employer characteristics, with additional calculations available in Figures OA1–OA5 in the Online Appendix. The figures report the results of both our bounding approach and our multiple-imputation strategy.[17] We also examine multinomial logit and linear probability models of employee noncompete status. We briefly describe variation in noncompete use by demographic characteristics before focusing our discussion on the empirical findings that are most relevant to the theoretical and policy debates over noncompetes.

The incidence of noncompetes differs widely across types of employees and employers. Table 5 shows that noncompetes are more than twice as common among employees of for-profit employers than they are among those working for private nonprofits. Men are slightly more likely than women to have entered into a noncompete at some point and to be currently bound by one. Noncompetes are also a bit more frequent among the young (see also Figure 1) and in areas with greater product market competition (Figure 2). Finally, while noncompetes are more routine among those with higher levels of education (Figure 3) and among those with greater annual earnings (Figure 4) or receiving a salary (Table 5),

[17] The size of the bars in Figures 1–8 and OA1–OA5 indicates the size of the maybe category. The lower end of the bar represents the lower bound on the incidence of noncompetes, the upper end represents the upper bound on incidence, and the dot marks the multiple-imputation estimate.

Table 4
Weighted Sample Means by Noncompete Status

Variable	Full Sample	Bound by Noncompete: No	Maybe	Yes	Change Relative to No Group: Maybe	Yes
Labor market outcomes:						
Log hourly wage	2.88	2.92	2.70	3.24	−.23**	.31**

1,001–2,500 Employees	21.2	42.3
2,501–5,000 Employees	21.0	44.2
>5,000 Employees	21.5	38.3
Overall	18.1	38.1

Note. Statistics are percentages from the multiple-imputation approach. All estimates are weighted.

they are still prevalent among less educated and lower-earning employees. For example, among those without a bachelor's degree, 34.7 percent of our respondents report having entered into a noncompete at some point in their lives, while 14.3 percent report currently working under one. Similarly, of those earning less than $40,000 per year, 13.3 percent are currently subject to a noncompete, with 33 percent reporting that they have acquiesced to one at some point. Table 6 confirms that these patterns hold in a multivariate framework. Importantly, Figures 1–4 and Table 4 also demonstrate that a disproportionate share of the maybe category are low earning with lower levels of education.[18]

Consistent with the traditional case for noncompetes, the provisions are more frequent in certain high-skilled occupations and industries, though they are still common in most other occupations (Figure 5) and industries (Figure 6).[19] Per Figure 5, the occupations in which noncompetes are found most frequently are architecture and engineering and computer and mathematical vocations. Farm, fishing, and forestry positions have the lowest incidence of noncompetes.[20] With respect to industries, Figure 6 shows that noncompetes are most common in information, mining and extraction, and professional and scientific services. Noncompetes are found least frequently in agriculture and hunting and the accommodation and food services industries.[21] Relatedly, the incidence of noncompetes is much higher among those who report possessing some type of trade secret or valuable information. Figure 7 breaks down noncompete incidence by type of legitimate business interest.[22] Those who work with trade secrets are most likely to be bound by a noncompete (33–36 percent), while those who only work with clients or who have client-specific information are roughly half as likely to have a noncompete (15–16 percent).

[18] For example, among those who report having less than a bachelor's degree, nearly 45 percent indicate that they do not know whether they have agreed to noncompete in the past, compared with approximately 20 percent of respondents with at least a bachelor's degree.

[19] We use two methods to identify the use of noncompetes across occupations and industries: First, we calculate the proportion of respondents who report being subject to a noncompete in a given occupation or industry. Second, we ask individuals to project how common noncompetes are in their occupation and industry, and then we aggregate those estimates into a single occupation- or industry-specific number. The idea behind using projected estimates as a way of estimating the incidence of noncompetes is that employees' knowledge of their occupation and industry as a whole captures more information than their personal situation. See Rothschild and Wolfers (2013) for an example of this method in a voting context.

[20] Two indicia of the quality of our survey data are that legal occupations have the second-lowest incidence level (10 percent) and that employees in these occupations are most likely to know whether they are bound by a noncompete. These facts are reassuring because one would expect that lawyers and legal support staff would be among the most careful readers of contracts and because the practice of law is the only occupation in which noncompetes are unenforceable in all states (Starr, Balasubramanian, and Sakakibara 2018).

[21] With respect to the joint occupation-industry incidence distribution, Figure OA5 shows that the use of noncompetes is highest for technical occupations (computer, mathematical, engineering, architecture) in the manufacturing and information industries. Note that in Figure OA5 we analyze only occupation-industry cells for which there are at least 15 individuals in the sample in order to ensure that the results are representative.

[22] We define legitimate business interests as trade secrets, relationships with clients, and client information, such as contacts or marketing databases.

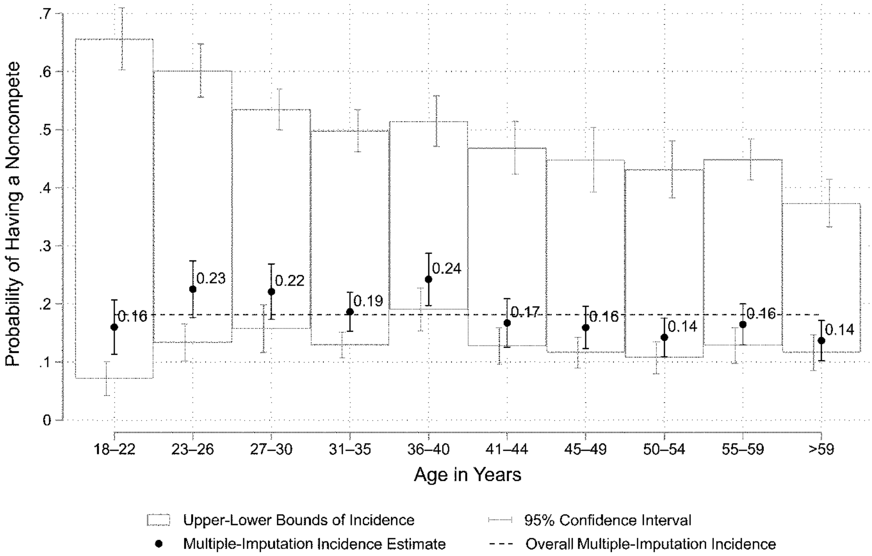

Figure 1. Incidence of noncompetes by age

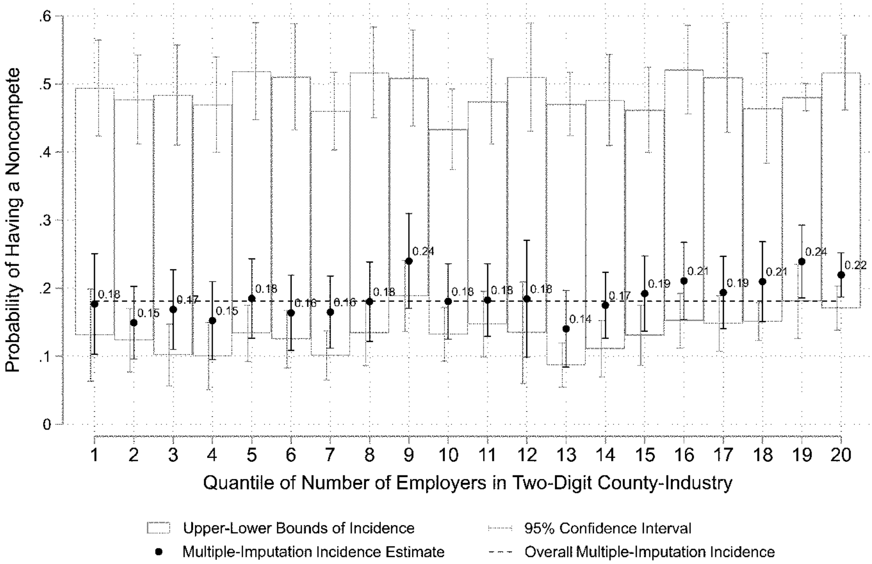

Figure 2. Incidence of noncompetes by number of employers in county-industry

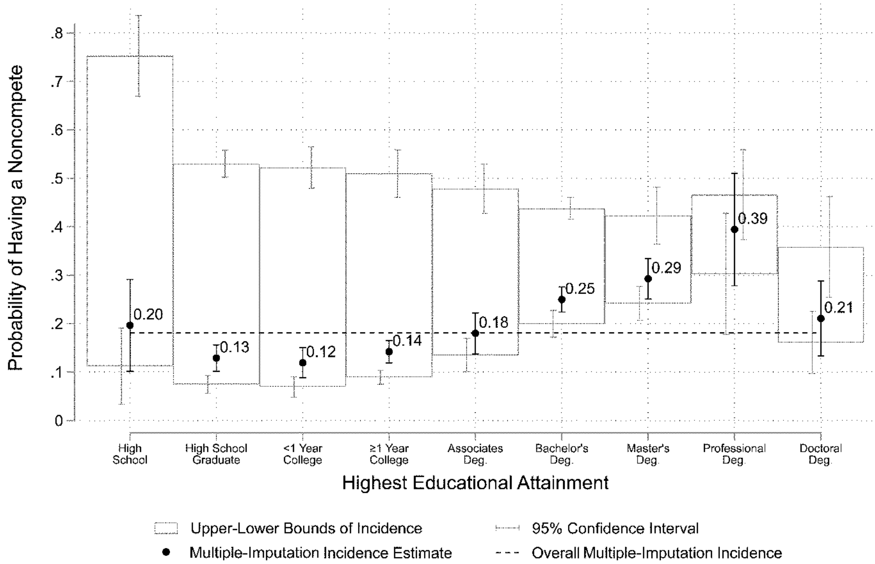

Figure 3. Incidence of noncompetes by education level

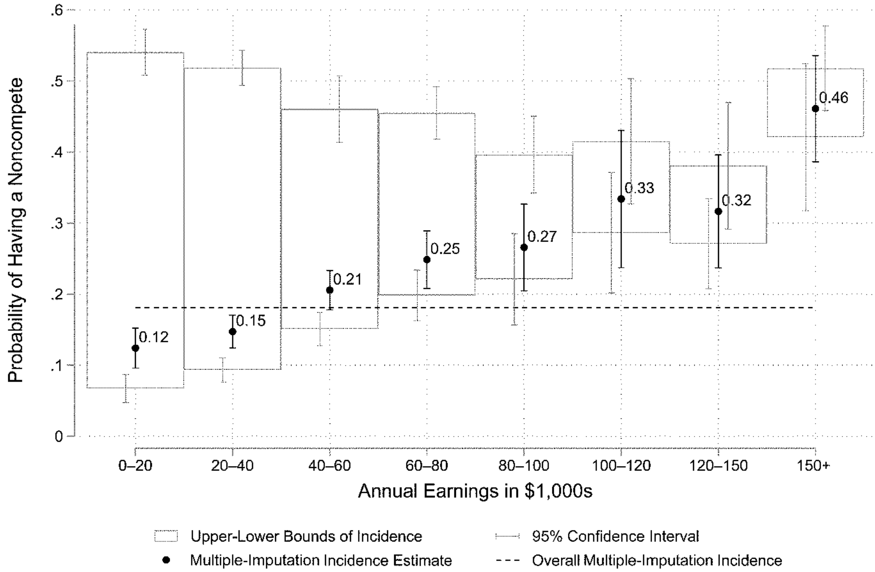

Figure 4. Incidence of noncompetes by employee annual earnings

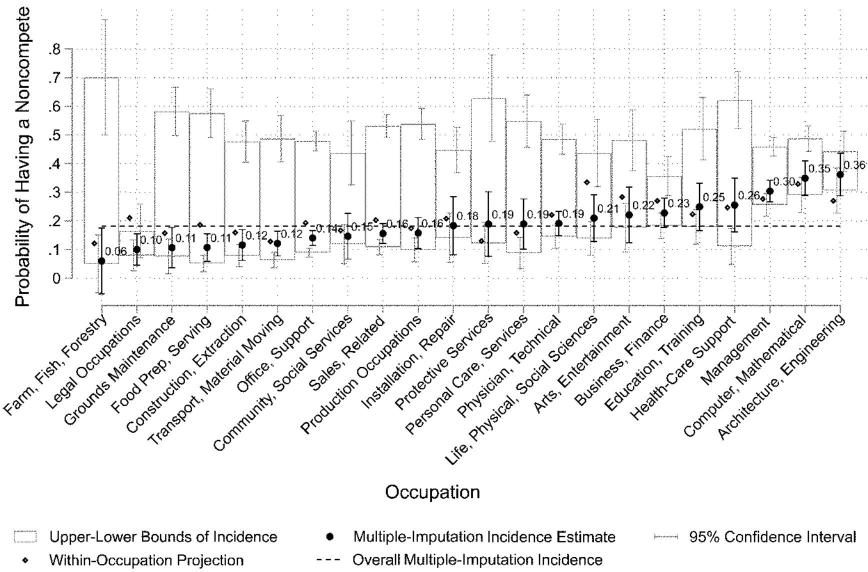

Figure 5. Incidence of noncompetes by occupation

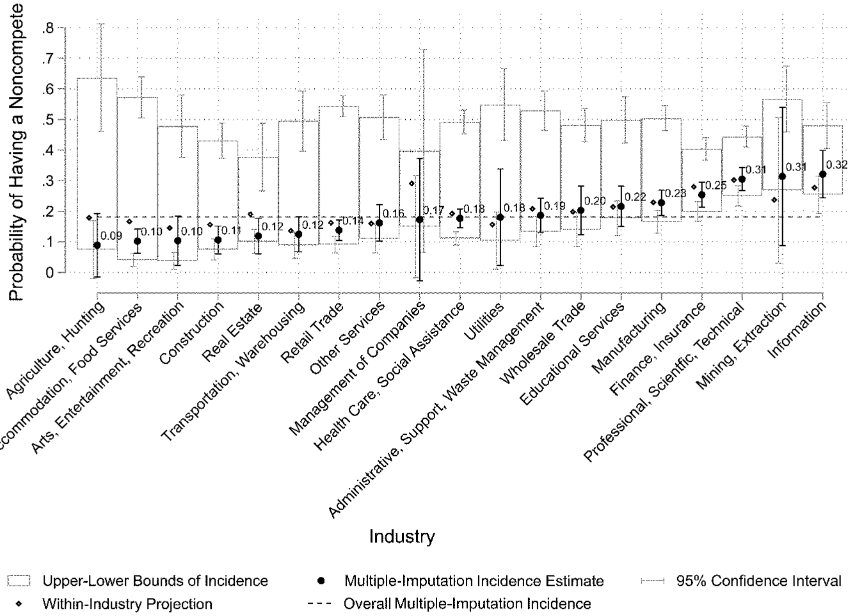

Figure 6. Incidence of noncompetes by industry

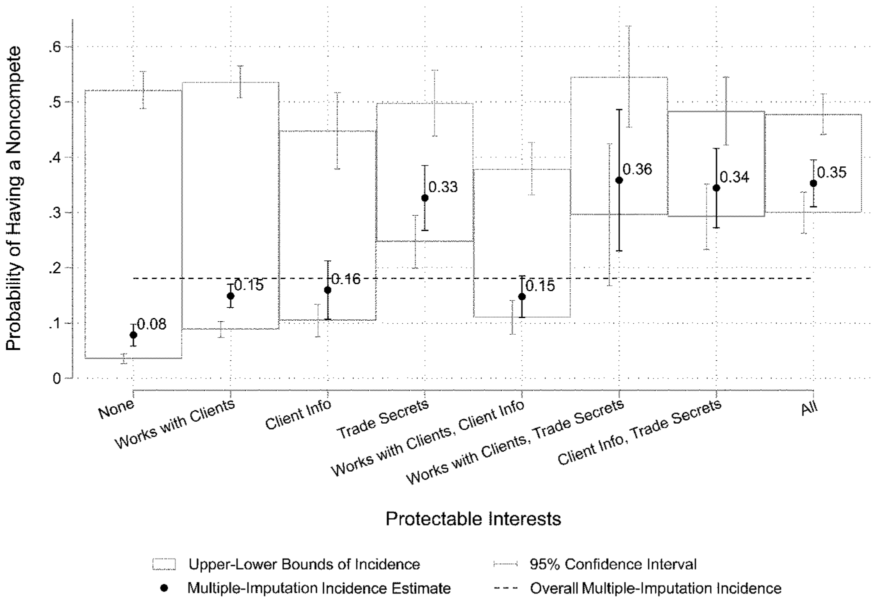

Figure 7. Incidence of noncompetes by legitimate business interest

Finally, we find very little difference in the (unconditional) incidence of noncompetes between states that will and will not enforce these provisions (Figure 8). This is true even among single-location employers, where we find that the unconditional use of noncompetes in nonenforcing states is only slightly lower than in states that enforce noncompete agreements most zealously (14 percent versus 16.5 percent). By comparison, multivariate results in Table 6 indicate that, when comparing two observationally equivalent employees, noncompetes appear to be somewhat more common (4–5 percentage points) in the most vigorous enforcing states relative to nonenforcing states. The difference between the unconditional and conditional models suggests some geographic selection into the use of noncompetes based on employees' and employers' observable characteristics.

To provide some aggregate understanding across all of these employee and employer characteristics, our simple multivariate model predicts that a salaried employee with a college degree earning $100,000 per year with access to the employer's trade secrets in a private for-profit firm has a 44 percent likelihood of being a party to a noncompete. As a point of comparison, an employee paid by the hour without a bachelor's degree in a private for-profit firm earning $50,000 per year and without access to the employer's trade secrets has a 13 percent chance of being bound by a noncompete.

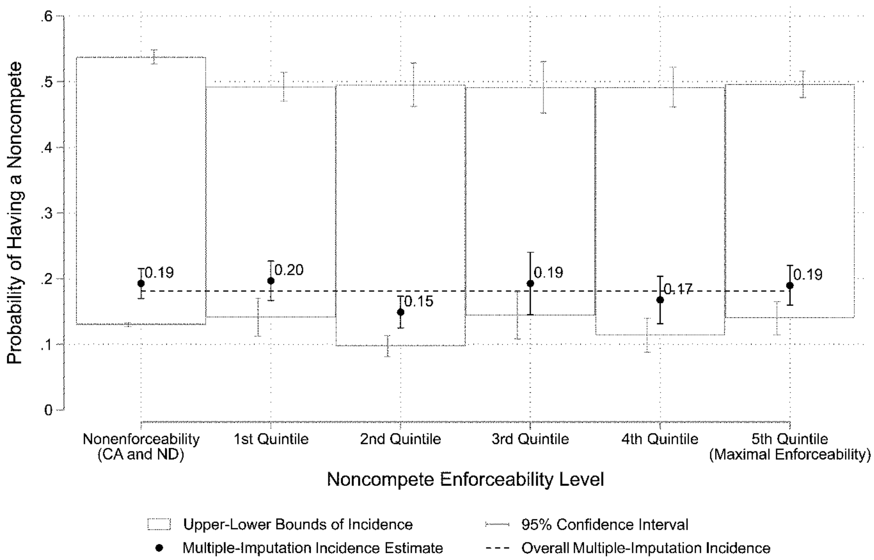

Figure 8. Incidence of noncompetes by enforceability

4. Negotiation and the Contracting Process

Table 7 presents descriptive statistics regarding the noncompete contracting process, including the extent of negotiation over noncompetes, when employers initially present noncompetes to applicants or employees, and whether employees consult with others before assenting to such a provision. A total of 61 percent of individuals with a noncompete first learn they will be asked to agree not to compete before accepting their job offers, while approximately 30 percent first learn they will be asked to agree only after they have already accepted their offers (not including those offered a promotion or change in responsibilities). This late notice appears to matter to employees. In a follow-up question to those who received late notice, 26 percent report that if they had known about their employer's noncompete plans earlier, they would have reconsidered accepting the offer.

Table 7 also shows that only 10 percent of employees report attempting to negotiate over the terms of their noncompete or asking for additional compensation or benefits in exchange for agreeing to such an employment condition. However, we find that the timing of noncompete notice is correlated with whether an individual makes an effort to bargain: employees with early-notice noncompetes are nearly twice as likely to negotiate over their noncompete as employees with late-notice noncompetes (11.6 percent versus 6 percent).[23] When presented with a noncompete, most respondents report just reading and signing it,

[23] By contrast, 31 percent of those asked to agree to a noncompete before a promotion or raise report negotiating over the noncompete, which suggests that such circumstances allow employees a more favorable bargaining position.

Table 6

Determinants of Noncompete Status

	Multinomial Logit			OLS: Noncompete
	Maybe	No	Yes	
Log hourly wage	−.037*	.006	.031**	.029**

Note. The multinomial logit results indicate the marginal increase in the probability of being in the maybe, no, or yes categories from a unit increase in the variable; the values in each row add to 0 because increases in the probability of being in one category are offset by lower chances of being in another. The ordinary least squares (OLS) results are from a linear probability model in which the dependent variable is an indicator for having agreed to a noncompete versus answering maybe or no to the noncompete-status survey question. The omitted enforceability group is the set of nonenforcing states (North Dakota and California), and the measure of enforceability is from Starr (2019). All regressions include occupation and industry fixed effects. Robust standard errors clustered at the state level are in parentheses. $N = 11{,}462$.

Table 7
The Noncompete Contracting Process

	Distribution (%)	Negotiate (%)
When did you first learn you would be asked to sign a noncompete?		
Before accepting job offer	60.8	11.6
After accepting job offer	29.3	6.3
Before promotion or raise	2.2	30.8
Other or cannot remember	7.7	6.5
What did you do when asked to sign? [a]		
Signed without reading	6.7	7.9
Read quickly and signed	31.2	7.1
Read slowly and signed	56.4	11.6
Consulted with friends and/or family	10.4	30.8
Consulted a lawyer	7.9	48.6
Overall		10.1

[a] Respondents could select multiple responses.

with a nontrivial fraction not even reading it. According to our data, consultation with friends, family, or a lawyer is relatively uncommon, but obtaining advice is strongly associated with attempting to negotiate.[24]

In Table OB2, we report the reasons individuals cite for not attempting to negotiate over the terms of their noncompetes (by the timing of notice). The top reasons for forgoing the opportunity to negotiate include that the terms were reasonable (52 percent) and the assumption that noncompetes were not negotiable (41 percent). Roughly 20 percent of employees fear creating tension with their employers or simply being fired if they try to negotiate.[25] In terms of heterogeneity by timing, those asked to agree not to compete after they have already accepted their offer are 9 percentage points less likely to report that they felt the terms were reasonable (46 percent versus 55 percent) and are also 10 percentage points more likely to assume they could not negotiate (48 percent versus 38 percent). In unreported tabulations, we also explore respondents' beliefs about the consequences of refusing to agree to a noncompete. We asked respondents with noncompetes, "Would you still have been hired if you refused to sign the noncompete?" Only 11.4 percent answered affirmatively, 61.6 percent believed they would not, and 27 percent did not know. Taken together, the evidence in this section indicates that employers present (or employees receive) noncompete proposals as take-it-or-leave-it propositions.

[24] In unreported results, we also find that negotiation is twice as likely for those with a bachelor's degree relative to those without (13 percent versus 6.2 percent) and that men are more likely to report negotiating than women (13 percent versus 4.5 percent). In addition, negotiation appears to be uncorrelated with enforceability—even after controlling for a host of characteristics such as employer size and employee age, gender, industry, occupation, and education.

[25] For example, in an open answer to a survey question, one respondent wrote, "i needed the job [expletive], i wasn't trying to make any waves on the first day."

5. Labor Market Outcomes

The traditional and critical perspectives on noncompetes offer different predictions about the extent to which employees with noncompetes should receive training and valuable information in their employment as well as whether employees who agree not to compete will be better off on the whole. In this section, we examine the conditional relationships between noncompetes and labor market outcomes. Given that contrasting views on noncompetes also highlight the role of late notice (as possibly eroding employee bargaining power),[26] the enforceability of noncompetes (as key to resolving the holdup problem), and effects over tenure (as perhaps reflecting an up-front compensating differential), we also explore heterogeneity along these dimensions.

5.1. *Empirical Approach*

We begin by acknowledging that our analysis of the relationships between noncompete use and labor market outcomes (and the heterogeneity of those relationships across various contracting and legal dimensions) is best taken as descriptive and should not be interpreted causally. Use of noncompetes and the moderator variables we examine are endogenous.[27] Accordingly, any associations we observe may be at least partially due to reverse causation or selection on unobservables. To ease some concerns about this important limitation, we use several approaches to assess the sensitivity of our empirical results, including inspecting the robustness of our findings to the inclusion of a rich set of controls in our regression analysis, testing for selection on unobservables,[28] and asking respondents directly about their experiences with noncompetes.

Our investigation focuses on four critical employee outcomes: wages, training,

[26] We provide summary statistics by early and late notice in Table OB3.

[27] We considered two possibilities for suitable instruments for noncompete status: differences in the enforcement regime and the projected incidence of noncompetes by others in the same occupation and industry. Both approaches yield implausible estimates (see Online Appendix OD).

[28] Oster (2019) describes the key aspects of the test: If the R^2-statistic rises substantially as additional control variables are added and the estimate of the coefficient of interest remains stable, then there is less residual variation available to explain away a statistically significant estimate. If, however, the R^2-value changes very little or the coefficient falls dramatically as controls are added to the model, then we should be less confident in the magnitude and direction of the estimate under review. The test for selection bias in Oster (2019) delivers one parameter, δ, which indicates how powerful selection on unobservables would have to be, relative to the selection that occurs with respect to observables, to push the point estimate in question to 0. A value of $\delta = 1$ implies that selection on unobservables would have to be as important as selection on observables to fully account for an estimated nonzero coefficient, while a value of $\delta > 1$ indicates that selection on unobservables would need to be even greater than selection on observables. To carry out the selection-bias test, we set the maximum R^2-value 30 percent higher than the R^2-value in our fully saturated model, as Oster recommends. We also examine the reported δ terms by making comparisons between a model with no controls and one with advanced controls and between a model with basic controls (including state and occupation-industry fixed effects) and the advanced-controls model. We set the test's δ-statistic equal to 1 as a natural cutoff to assess the stability of our results.

access to valuable employer information, and job satisfaction. Our main empirical specification takes the form

$$Y_{iojs} = \beta_0 + \beta_1 \text{Noncompete}_i + \gamma \boldsymbol{X}_{ij} + \omega_{o,j} + \alpha_s + \varepsilon_{iojs}. \quad (1)$$

The variable Noncompete$_i$ indicates whether the individual is bound by a noncompete. We study those who affirmatively report a current noncompete (yes), grouping maybe respondents with no respondents (and revisiting the robustness of our findings to this choice in our sensitivity analysis). The term Y_{iojs} refers variously to employment-related outcomes as reported by employee i in occupation o, industry j, and state s. We represent industry-occupation (using North American Industry Classification System [NAICS] two-digit codes and Standard Occupational Classification [SOC] two-digit codes) fixed effects and state fixed effects with $\omega_{o,j}$ and α_s, respectively. In later models, we disaggregate our noncompete indicator to account for when the employee first learns about the employer's noncompete requirement (early and late notice), with individuals who do not have noncompetes serving as the comparison group; we also examine models in which we interact Noncompete$_i$ with a state-level noncompete enforceability measure and with length of tenure.[29]

Controls are given by $\boldsymbol{X}_{ij}$, which we divide into basic and advanced groups in our analysis to gauge the sensitivity of our results to potentially confounding variables. Basic controls include demographic characteristics,[30] while the advanced controls address more noncompete-specific concerns.[31] These advanced controls likely include some that are endogenous, which potentially obscures any causal mechanisms linking the use of noncompetes and employee outcomes. Neverthe-

[29] We cluster our standard errors by state, tracking the level at which noncompetes are enforced (Moulton 1990).

[30] The controls are indicators for employee type (hourly, salaried, commission), gender, and education; employer size; employer's multiunit status; linear measures of an employee's hours worked per week, weeks worked per year, and their interaction; a third-degree polynomial in employee age; the logged number of employers in the county-industry cell; and the logged unemployment rate and labor force size in the state and year in which the employer hired the respondent (Beaudry and DiNardo 1991). When necessary, logged variables take a log of the value plus 1.

[31] Because noncompetes and other postemployment restrictive covenants (nondisclosure agreements, nonsolicitation provisions, and similar devices) frequently occur together (see Table 4), we disentangle and isolate any relationship between noncompetes and outcomes by controlling for these related provisions. If the use of postemployment provisions generally correlates with employer or employee quality or sophistication, controlling for them also accounts for any residual determinant not addressed by our other controls. In addition, we include controls for poaching rates to and from the employer and in the industry generally to address employer heterogeneity in quality and employee mobility patterns (for example, some employers are more likely to have their employees poached by competitors and so may be more likely to use noncompetes and may also pay different wages). We also control for other human resources (HR) benefits, such as whether the employer offers a retirement plan, health insurance, paid vacation days, sick leave, and life insurance. The inclusion of these HR-type benefits reduces the sample size from 11,462 to 11,010. Excluding these variables produces results that are nearly identical to our reported coefficients in terms of statistical significance and magnitude. See Tables OB4–OB7. Individuals with special access to sensitive information or who are predictable flight risks may also be more likely to have both noncompetes and higher earnings, so we control for the number of employers the employee has had in the last 5 years (a baseline measure of mobility) and the types of confidential information the employee possesses (for example, access to trade secrets or client information).

less, because we do not have reliably exogenous variation in the use of noncompetes to examine, it is informative to explore whether any noncompete-related patterns we observe survive when we condition on these potentially associated employment terms and conditions.[32]

5.2. Results

Table 8 reports the relationships we find between noncompete status and our four employment outcomes: logged hourly wages and separate indicators for whether the respondent agrees or strongly agrees that their employer shares all job-related information with them, whether they received training in the last year, and whether they agree or strongly agree that they are satisfied with their employment. Our baseline results with our basic controls show that noncompete agreements are associated with positive differentials in wages and training. However, including our advanced controls reduces the training differential to near 0 and causes the wages differential to fall from nearly 11 percent to 6.6 percent.[33] These results imply that certain advanced controls are strongly correlated with the use of noncompetes and these outcomes.

Table 8 also demonstrates that our mainly insignificant baseline results are driven by heterogeneous associations that run in opposite directions, depending on when an employee receives notice of the noncompete. With regard to those who learn of their noncompete before they accept their job offers, our most saturated model indicates that these employees have 9.7 percent ($e^{.093}$) higher earnings, are 4.3 percentage points more likely to have information shared with them (a 7.8 percent increase relative to the sample average), are 5.5 percentage points more likely to have received training in the last year (an 11 percent increase), and are 4.5 percentage points more likely to be satisfied in their jobs (a 6.6 percent increase) relative to employees without a noncompete. In contrast, those presented with a noncompete after they accept an offer (excluding those furnished with a noncompete following a promotion or a change in responsibilities) appear to receive no observable boost in wages or training, are 13.4 percentage points less likely to have had information shared with them (a 24 percent reduction), and are 8.5 percentage points less likely to be satisfied in their employment (a 12.5 percent reduction). In all specifications but one,[34] within-model tests confirm

[32] In Tables OB4–OB7, we add our advanced controls sequentially so we can more precisely understand which, if any, shift our estimated noncompete coefficients.

[33] As expected, given the large coefficient swings across these two models, the selection tests for the model with advanced controls confirm that we ought to be worried about selection on unobservables explaining our results. For example, when our model of logged hourly wages with advanced controls is compared with an otherwise equivalent model with no controls, the δ term is .497, which implies that selection on unobservables would need to be only half as important as selection on observables to explain away our estimated coefficient on noncompete status.

[34] As we show in Table OB4, the lack of statistical significance on the before-after difference in the association between noncompete status and logged hourly wages occurs only when we control for HR benefits.

R^2	.503	.541	.104	.150	.162	.201	.102	.151
N	11,462	11,010	11,462	11,010	11,462	11,010	11,462	11,010
Advanced controls	No	Yes	No	Yes	No	Yes	No	Yes

Note. The baseline specification examines the aggregate association of having a noncompete with employee outcomes; respondents who are coded as answering no include those who have never heard of a noncompete or are unaware if they signed one. Results for does not remember are not reported. Results by the timing of notice allow the direction and magnitude of any association to vary; respondents not bound by a noncompete are the omitted category. Results of selection tests relative to a model with no controls are in square brackets, and results of selection tests between the models with basic and advanced controls are in curly braces. Selection test statistics are calculated with the Stata command psacalc, using as the maximum R^2-value 30 percent more than the R^2-value from the model that includes both basic and advanced controls. All regressions include basic controls. Standard errors clustered at the state level are in parentheses.

+ $p < .1$.

* $p < .05$.

** $p < .01$.

that those who learn of their noncompete from their prospective employer before they accept an offer do statistically significantly better (in terms of compensation, training, access to information, and satisfaction) than those who learn of and acquiesce to their noncompete only after they accept an employment offer.[35]

Given the limitations implicit in the cross-sectional nature of our data, we also study employees' beliefs about what they were promised by and what they received from their employers for agreeing to their noncompete, as a way to independently—although only tentatively—corroborate the notice-timing differentials that we present in Table 8. The results, which we record in Table OB8, document that employees are rarely promised anything by their employers for agreeing to a noncompete, and, in fact, most of our survey respondents report having received nothing in exchange for their willingness to be bound by one. Moreover, as in Table 8, our findings indicate that employees who enter into late-notice noncompetes are relatively less likely to be promised and less likely to receive anything in exchange for their commitment not to compete.[36]

5.3. *Sensitivity Analyses*

To probe the robustness of the relationships we observe between noncompete status and employee outcomes, we investigate the consequences for our findings of treating the maybe scenarios as a separate contracting category and using multiple imputation to reassign members of the maybe group. Both approaches yield very similar results with respect to our notice-timing analysis, though the generally positive association that we estimate in our baseline regression in Table 8 between noncompetes and wages largely disappears when we use multiple imputation (see Tables OB9 and OB10). We also rerun our analysis without incorporating sample weights and find that none of our results are sensitive to weighting (see Table OB11). In Table OB12, we drop respondents who indicate that they took the survey to discuss their experiences with noncompetes. Our timing results remain robust to this exclusion, though again the average main effect of having a noncompete on wages mostly evaporates (as in the multiple-imputation analysis). Finally, in Table OB13, we examine a related set of subjective employee outcomes, including perceived job security, the employer's commitment to upgrading the employee's skills, and whether the employee would consider return-

[35] The selection tests for the statistically significant results for the late-notice category all indicate $\delta > 1$, while the results in the early-notice category are somewhat less robust (except in the satisfaction specification). For example, our results regarding hourly wages for the early-notice group do appear rather sensitive to our advanced controls ($\delta = .275$), which signifies that unobservables may more plausibly account for these estimates.

[36] The precise questions are "Which of the following benefits did your employer promise you [beyond employment alone], either explicitly or implicitly, in exchange for signing the noncompete?" and "Regardless of what your employer did or did not promise, which of the following tangible benefits do you believe you have received because you signed a noncompete?" The survey instrument captures objective outcome measures before it asks these more subjective questions so as not to contaminate the objective measures.

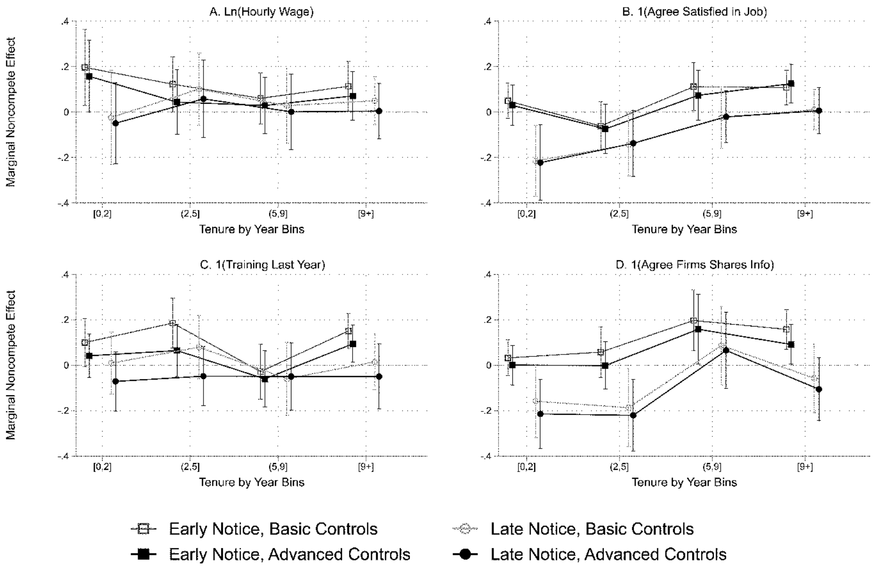

Figure 9. Marginal effect of noncompetes over tenure

ing to the employer if he or she were ever to leave. The results of this analysis are broadly consistent with our earlier findings.[37]

5.4. Heterogeneity by Tenure and Noncompete Enforceability

In Figure 9, we study whether notice-timing differentials vary by tenure, cognizant that interpreting results later in tenure is troublesome given that tenure is endogenous to noncompete status (Starr, Prescott, and Bishara 2020). Within each tenure bin, we rerun our timing specification and report the coefficient and the 90 percent confidence intervals on our early- and late-notice coefficients relative to the baseline outcome for individuals without a noncompete. Early notice is associated with positive compensating earnings differentials early in tenure (Figure 9*A*) and with higher (but imprecisely estimated) probabilities of receiving training. We also observe negative job satisfaction and information access differentials within the first 5 years for those who agree to their noncompete after accepting an offer of employment (relative to those without noncompetes).

Given the importance of enforceability for theories justifying noncompetes as a solution to the employer's investment holdup problem, and given that previous

[37] Individuals who become aware of their noncompete up front are more likely to report that their employer is committed to upgrading their skills relative to those who receive late notice. We also find that those who receive late notice are less likely (than someone without a noncompete) to consider returning to their employer. Late notice is always associated with statistically significantly worse outcomes relative to early notice.

Table 9

Labor Market Outcomes: Heterogeneity by Noncompete Enforceability

State fixed effects	No	Yes	No	Yes	No	Yes	No	Yes
Advanced controls	No	Yes	No	Yes	No	Yes	No	Yes

Note. The baseline specification examines the main association of having a noncompete with employee outcomes and the moderating role of enforceability; respondents who are coded as answering no include those who have never heard of a noncompete or are otherwise unaware if they have signed one. Results by the timing of notice allow the association of having a noncompete and enforceability to vary; respondents not bound by a noncompete are the omitted category. The enforceability measure is from Starr (2019), modifying the initial measure of Bishara (2011). All regressions include basic controls. Standard errors clustered at the state level are in parentheses.

+ $p < .1$.
* $p < .05$.
** $p < .01$.

empirical work on noncompetes has relied heavily on state-level enforceability,[38] we also estimate models examining the differential relationship of noncompetes in states where such provisions are relatively more or less enforceable.[39] In Table 9, we report estimates with and without state fixed effects (which, when included, subsume the main effect of enforceability). Consistent with prior research examining enforceability and wages but inconsistent with our main effect of noncompetes, we find that noncompetes in higher-enforceability regimes are associated with relatively lower earnings (Balasubramanian et al. 2020; Garmaise 2011). We also discover that noncompetes in states that are more likely to enforce them are associated with more training, as in Starr (2019). The negative effects on wages appear invariant to the timing of noncompete notice. By contrast, the relative training benefits we observe in column 6 accrue primarily to those who receive early notice of a noncompete.

6. Discussion and Conclusion

Motivated by renewed and widespread legislative interest in noncompetes and the longstanding debate over their value, our study brings new data and several new findings to the academic and policy conversations about noncompetes and related provisions that regulate employee behavior after termination: How common is such contracting? What does it look like in practice, and what types of employees are bound to what kinds of employers? How does it relate to employee outcomes? In this section, we consider how the evidence we uncover with respect to the incidence of noncompetes, contracting, and associated labor market success comports with predictions from the traditional and more critical perspectives on noncompetes.

Several of the facts we document are consistent with the traditional economic perspective, which views the noncompete as an efficient contracting device. For instance, our findings that noncompetes are more common in relatively technical jobs and among employees with access to trade secrets aligns with the hypothesis that noncompetes can be effective at protecting valuable information and training, thereby encouraging efficient investments by employers. Moreover, our evidence that employees with early notice of a noncompete are compensated—with higher wages, more training, more information, and greater job satisfaction—is compatible with theories that identify noncompetes as a solution to a holdup problem (Rubin and Shedd 1981; Acemoglu and Pischke 1999).[40] Our result that employees with early-notice noncompetes have higher wages earlier in tenure is also consistent with an up-front compensating differential (Callahan 1985).

[38] We discuss the enforceability of noncompetes and measures from a recent study in Online Appendix OC.

[39] We use the enforceability measure developed in Starr (2019), which is denominated in standard deviations from a mean enforcement score of 0, and we modify our main timing specification by adding enforceability and its interaction with noncompete status as regressors.

[40] The fact that this noncompete-associated boost in training appears to come earlier in tenure implies that employers may use noncompetes to differentiate "stayers" from "leavers" (Loewenstein and Spletzer 1997).

But the frequency of noncompetes among low-wage employees without access to trade secrets and the lack of negotiation in the contracting process hint at more anticompetitive rationales for the use of noncompetes by employers. We observe, for instance, that late-notice noncompetes are not associated with any additional compensation or training but instead appear to be linked to lower job satisfaction. Heterogeneous associations by enforceability further challenge the traditional economic perspective. The ability to enforce noncompetes should encourage more frequent noncompete use, more investment, and higher wages, but employers use noncompetes virtually as often in states where such restrictions are clearly unenforceable. Furthermore, while greater enforceability is associated with more training for individuals with early-notice noncompetes, the wage premium for agreeing to a noncompete also diminishes with enforceability, regardless of timing. This pattern is consistent with enforceability creating incentives for employers to invest in their bound employees, but it is at odds with the idea that employees should likewise benefit from agreeing to such a provision.[41] Importantly, these enforceability-specific findings with respect to wages and training align with prior work studying the effects of the enforceability of noncompetes (Starr 2019; Balasubramanian et al. 2020).[42]

Our empirical work answers several questions about the use of noncompetes, the contracting process, and labor market associations, but unresolved endogeneity concerns related to noncompete status and timing raise significant questions about how best to interpret our results. For example, we are unable to rule out the possibility that some unobservable association explains our outcome results—such as unobservably "good" employers using early-notice noncompetes and unobservably "bad" employers using late-notice noncompetes. Some of our findings also beg important questions. For instance, if indeed employers can use late-notice noncompetes to avoid compensating employees for giving up their right to compete in the future (and somehow employees do not anticipate this tactic), then why do we not see every employer springing noncompetes on new employees? Potential explanations include the possibilities that late notice may produce low morale and lower productivity in some contexts and that, if suing to enforce a noncompete is a realistic possibility, judges may look down on any employer giving late notice. We search for determinants of noncompete timing in Table OB14 but find few predictive relationships.

There are several additional limitations to our work that we hope future research will address. First, given the lack of information on the use of noncompetes (and related provisions) across the labor force and the possibility that our online survey approach may not generate data truly representative of the pop-

[41] This training finding is also consistent with the idea that employers may use early-notice noncompetes when they may need to convince a judge of an agreement's reasonableness.

[42] While we designed our research to assess the discrepancies between the two main perspectives on noncompetes, we can also rule out the possibility that employers are using noncompetes as a way to sort between committed and uncommitted employees. Figure OA1 shows that employees are no more likely to accept a noncompete if they plan to stay indefinitely versus just a few years, and Figure OA2 similarly finds that noncompetes are only slightly more common when an individual has had many employers in the last 5 years.

ulation, efforts to collect longitudinal survey data on noncompete contracting, which could allow for the study of employees' and employers' outcomes over time, are sorely needed.[43] Relatedly, our finding that lower-earning employees are less likely to know whether they are bound by a noncompete raises some uncertainty about our incidence results, and employer-level survey data or a sample of contracts could help resolve this ambiguity.

These remaining questions notwithstanding, we make several important contributions to our collective understanding of postemployment contractual restrictions and to the related body of work on transparency (Card et al. 2012; Harris 2018) and labor market frictions (Naidu 2010). Most concretely, we build on several occupation-specific studies (Marx 2011; Schwab and Thomas 2006) to document that noncompetes extend to every corner of the labor market. We also empirically characterize the typically take-it-or-leave-it contracting process surrounding noncompetes and provide correlational evidence that noncompetes are not uniformly associated with better (or worse) employee outcomes—depending on the timing of notice in the contracting process and a noncompete's enforceability. Overall, the story about noncompetes that emerges from our data is complex and nuanced, reflecting both of the literature's dominant perspectives.

The Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, D.C. 20580

Dear Commissioners:

We are law professors, economists, and business school professors who have written extensively in the field of innovation and law. We would like to submit an important article regarding noncompetes by two of us, Jonathan Barnett & Ted Sichelman, *The Case for Noncompetes*, 86 THE UNIVERSITY OF CHICAGO LAW REVIEW 953 (2020), for review by the FTC.

This article, which presents the most comprehensive review to our knowledge of empirical evidence concerning the economic effects of noncompetes, addresses – and contradicts – many of the claims made by the FTC in support of its recent proposed rule to effectively ban noncompetes nationwide. In this regard, it offers a viewpoint quite different from the vast majority of academics invited to speak at the FTC's January 9, 2020 workshop on the issue, *Non-Competes in the Workplace: Examining Antitrust and Consumer Protection Issues*, as well as the academic research cited by the FTC in favor of its proposed rulemaking.

Specifically, the article contributes a new perspective to the current policy debate over non-competition covenants and other contractual restrictions on employee mobility in technology sectors. As the FTC is aware, scholars have widely argued that innovation thrives in jurisdictions that prohibit noncompetes. This argument focuses on the rise of Silicon Valley as a technology hub, where noncompetes were allegedly not enforced, and the ostensible decline of Boston's Route 128 area, where noncompetes were allegedly enforced. In related work, other scholars have conducted empirical studies purporting to show that noncompetes produce significant economic costs and dampen innovation and startup creation. Based on these scholarly views, several states have recently enacted, and more are seriously debating, statutes that limit or prohibit noncompetes. Similarly, several U.S. Senators proposed legislation that would essentially ban noncompetes nationwide. And now, the FTC seeks a nationwide ban via its proposed rulemaking.

This article makes three original and notable contributions that the FTC should seriously consider. First, it shows that neither theory nor empirics supports the economic arguments commonly made in favor of prohibiting noncompetes. As a matter of theory, conventional wisdom emphasizes that noncompetes impede the circulation of intellectual capital and depress wages, but typically overlooking that noncompetes encourage firms to cultivate employees' human capital and invest in innovative activity. As a matter of empirics, the article contests the widely accepted view that Silicon Valley surpassed Boston because of supposed differences in noncompete enforcement, which tend to be exaggerated. A careful examination of the evidence shows that the Boston area has remained a significant innovation center and that technological and other economic factors explain Silicon Valley's exceptional trajectory. Second, the article identifies serious factual and methodological deficiencies in several widely-cited empirical studies, which cast substantial doubt on those studies' findings and policy implications. Notably, these studies misread and misunderstand state law and enforcement patterns related to noncompetes. Third, based an exhaustive review of the evidence, the article proposes an original error-cost framework to analyze noncompetes, which provides an economic rationale for the common law's centuries-old reasonableness standard in determining whether to enforce a non-compete.

Unfortunately, even though the FTC is well-aware of Prof. Barnett's and Sichelman's work, they have not been invited to the FTC's workshops on noncompetes, nor were they consulted for the recent round of rulemaking, nor was their research mentioned in the 216-page Notice of Proposed Rulemaking that sets forth the FTC's proposed Non-Compete Clause Rule. In the interests of making public policy on the basis of all available evidence and scholarship, we believe that the FTC's current consideration of noncompetes would be enriched by their research, and we hope the FTC will read their work carefully and contact them to discuss it.

In short, it is critical in our view that the FTC independently assess the validity of the studies it is relying upon so heavily for its proposed rulemaking before taking any actions based on those studies' claims.

Sincerely,

The Case for Noncompetes

Jonathan M. Barnett† & Ted Sichelman††

Scholars and other commentators widely assert that enforcement of contractual and other limitations on labor mobility deters innovation. Based on this view, federal and state legislators have taken, and continue to consider, actions to limit the enforcement of covenants not to compete in employment agreements. These actions would discard the centuries-old reasonableness standard that governs the enforcement of these provisions, often termed "noncompetes," in all but four states (notably, California). We argue that this zero-enforcement position lacks a sound basis in theory or empirics. As a matter of theory, it overlooks the complex effects of contractual limitations on labor mobility in innovation markets. While it is frequently asserted that noncompetes may impede knowledge spillovers that foster innovation, it is frequently overlooked that noncompetes may encourage firms to invest in cultivating intellectual and human capital. As a matter of empirics, we show that two commonly referenced bodies of evidence fail to support zero enforcement. First, we revisit the conventional account of the rise of Silicon Valley and the purported fall

of the Boston area as innovation centers, showing that this divergence cannot suitably be explained by differences in state law regarding noncompetes. Second, we show that widely cited empirical studies fail to support a causal relationship between noncompetes, reduced labor mobility, and reduced innovation. Given these theoretical and empirical complexities, we propose an error-cost approach that provides an economic rationale for the common law's reasonableness approach toward contractual constraints on the circulation of human capital.

INTRODUCTION

On February 23, 2017, two titans of Silicon Valley went to war in federal court: Google filed a lawsuit against Uber, accusing it of using intellectual property allegedly stolen by one of the lead engineers on Waymo, Google's self-driving automotive subsidiary.[1] Specifically, Google alleged that Anthony Levandowski had misappropriated Google's intellectual property before departing (along with other Google engineers) to found Otto, a self-driving car startup subsequently acquired by Uber for $680 million.[2] The legal basis for Google's lawsuit against Uber and Levandowski consisted of a medley of federal trade secret, patent infringement, and state trade secret and unfair competition claims.[3] Given the high economic stakes, commentators speculated that if Google prevailed, the ultimate damages could exceed a billion dollars.[4] While the litigation was pending, the trial judge ordered Levandowski to stop working on projects involving the technology that had been allegedly misappropriated.[5] Although Google and Uber settled the dispute shortly after trial proceedings commenced for a mere $245 million, an arbitration panel subsequently found against Levandowski (who was fired by Uber[6]) and, on an interim basis, awarded Google $127 million in damages, for which Uber may be financially responsible under indemnification obligations to its former employee.[7]

The Google-Uber litigation, and the rich suite of legal and economic instruments deployed to restrain the departure of a prized employee, is a notable counterexample to the now-standard account of unrestrained employee movement in Silicon Valley, the world's preeminent innovation cluster. That account emphasizes the ease with which technical and managerial talent, and the intellectual capital embodied in that talent, circulates among competitors, resulting in knowledge spillovers that redound to the collective benefit of the innovation ecosystem. This free-flowing movement of human capital is widely attributed to cultural norms, organizational practices, and, especially among legal scholars, California's refusal to enforce a contractual clause known as a "covenant not to compete" (or "noncompete").[8]

A noncompete typically limits a former employee's ability to work for competitors in a certain industry and a certain geographic area for a certain period of time. In contemporary scholarly and policy discussions of innovation policy, the noncompete has recently become a surprising focal point. Specifically, the literature has widely adopted the view initially espoused by Professor Ronald Gilson—albeit in a much more qualified form—that California's general refusal to enforce noncompetes in significant part explains the exceptional growth of Silicon Valley since the early 1980s while Massachusetts's willingness to enforce noncompetes spurred the purported decline of the Route 128 area around Boston.[9] Following this view, California has enjoyed a healthy

8 On cultural norms and organizational practices, see AnnaLee Saxenian, *Regional Advantage: Culture and Competition in Silicon Valley and Route 128* 1–9, 32–34, 44–45, 50–56 (Harvard 1996) (arguing that Silicon Valley's comparative advantage compared to Route 128 derived from its "network-based" system that promotes collective learning through informal collaboration within and between firms, as compared to Route 128's hierarchical system based on centralized and vertically integrated corporate entities). On noncompetes, see Ronald J. Gilson, *The Legal Infrastructure of High Technology Industrial Districts: Silicon Valley, Route 128, and Covenants Not to Compete*, 74 NYU L Rev 575, 602–09 (1999) (arguing that differences in the enforceability of noncompetes contributed significantly to the ascendance of Silicon Valley over Route 128 by promoting the circulation of human and intellectual capital among competing firms).

9 For the original statement of this view, see Gilson, 74 NYU L Rev at 602–09 (cited in note 8). In the legal literature, representative contributions that have adopted and expanded upon Gilson's insight include: Orly Lobel, *Talent Wants to Be Free: Why We Should Learn to Love Leaks, Raids and Free Riding* 67–70 (Yale 2013) (arguing that California's refusal to enforce noncompetes at least partly accounts for its ascendance over Route 128 and attributing this hypothesis to Ronald Gilson); Orly Lobel, *The New Cognitive Property: Human Capital Law and the Reach of Intellectual Property*, 93 Tex L Rev 789, 825–26 (2015) (likening noncompetes to "a thick cluster of property rights that rigidifies the market and reduces the ability to move forward"); Viva R. Moffat, *Making Non-Competes Unenforceable*, 54 Ariz L Rev 939, 979–80 (2013) (arguing for a uniform rule of nonenforceability on the ground that noncompetes skew the balance in intellectual property policy

circulation of human capital, while Massachusetts has been deprived of the "agglomeration economies" that promote robust innovation clusters.[10] The result in California is a virtuous circle of accelerated innovation that led to the rise of Silicon Valley; the result in Massachusetts is a sad story of a Silicon Valley that could have been but wasn't.

The recent surge of interest in noncompetes is a welcome extension of innovation policy analysis. Noncompetes, and the broader universe of contractual and economic restraints on labor mobility, are a critical but overlooked tool in promoting robust innovation ecosystems. Scholarly discussions of innovation policy typically focus on the extent to which intellectual property rights such as patents or copyrights regulate the flow of informational assets. But this misses a key component of any innovation environment—namely, the flow of intellectual capital embedded in the human beings that innovate and commercialize new products and services. In the business world, firms are keenly aware of the value of human capital and use contractual and economic instruments to avoid losing their most valuable personnel to competitors. Based on a survey of 11,500 participants, a recent study found that an estimated 18 percent of all US workers (roughly, 30 million people), and approximately one-third of workers in professional, scientific, and technical occupations, are subject to noncompetes.[11] The extent to which the law should enforce these contractual instruments is a matter of fundamental importance.

between protecting R&D incentives and the public domain); Viva R. Moffat, *The Wrong Tool for the Job: The IP Problem with Non-Competition Agreements*, 52 Wm & Mary L Rev 873, 911–20 (2010) (arguing that noncompetes are a poor tool for protecting IP rights). In the economics literature, see Sampsa Samila and Olav Sorenson, *Noncompete Covenants: Incentives to Innovate or Impediments to Growth*, 57 Mgmt Sci 425, 436 (2011) (arguing that empirical evidence supports relaxing enforcement of noncompetes to accelerate labor mobility and stimulate entrepreneurship). In an important variant on this line of argument, Professor Alan Hyde agrees that labor mobility lies behind the success of Silicon Valley but attributes this difference principally to California firms' reluctance to bring trade secret claims against former employees and California courts' resistance to grant such claims, rather than differences in the treatment of noncompetes. See Alan Hyde, *Working in Silicon Valley: Economic and Legal Analysis of a High-Velocity Labor Market* 32–40 (M.E. Sharpe 2003).

Prescott, and Norman Bishara, *Noncompetes in the U.S. Labor Force* *16–19 (University of Michigan Law and Economics Research Paper, Aug 2019), archived at https://perma.cc/ZXU6-NAGU.

In recent years, a growing number of scholars and policymakers have adopted a simple answer to this question: *never*.[12] Following this view—popularized by the slogan, "talent wants to be free"—the free circulation of human capital always, or usually, promotes innovation. As such, any constraints "imposed" by employers reflect either overreaching or economic irrationality.[13] As a matter of policy, this view recommends that all states adopt California's purported zero-tolerance regime—a change that would undo the common-law "reasonableness" standard currently used by forty-six states to adjudge the enforceability of noncompetes.[14] (The current exceptions are California, North Dakota, and Oklahoma, which bar noncompete enforcement against individuals in most circumstances;[15] recently, Hawaii barred noncompetes for "technology business[es]."[16]) To be clear, even under the long-standing common law doctrine (dating from an English precedent in 1711[17]), noncompete clauses are enforceable only if they set forth "reasonable" temporal, geographic, and scope-of-industry limitations.[18] For the "talent wants to be free" school of

---

12 See note 13 (noting scholars and policymakers adopting this view); Part I.C (same).

13 For representative sources that express this view, see Lobel, *Talent Wants to Be Free* at 27–41, 201 (cited in note 9) (arguing that legal constraints, such as noncompetes, that impede labor mobility discourage innovation by hindering employee creativity and blocking interfirm flows of intellectual capital); Yochai Benkler, *Law, Innovation and Collaboration in Networked Economy and Society*, 13 Ann Rev L & Soc Sci 231, 235 (2017) (arguing that noncompetes are incompatible with a "network view," rather than an "atomistic view," of innovation, and citing empirical evidence that innovation thrives in network relationships with high rates of knowledge flow); Lobel, *Talent Wants to Be Free* at 64 (cited in note 9) (arguing that firms that advocate for noncompete enforcement "would likely benefit from the very movement they are attempting to limit"); Moffat, 52 Wm & Mary L Rev at 893–97 (cited in note 9) ("[N]oncompetes are at odds with both the fair bargaining process and efficiency underpinnings of the freedom of contract rationale."); id at 898–99 (arguing that the "IP justification" for noncompetes is insufficient and advocating a policy of zero enforcement); Alan Hyde, *Should Noncompetes Be Enforced?*, 33 Regulation 6, 9 (Winter 2010–11) (stating that losing an employee means gaining access to a new information network, rather than losing an information asset). Ronald Gilson expresses a similar view, although he clarifies that the positive welfare effects he attributes to California's refusal to enforce noncompetes may be limited to that particular state at a particular point in time in its economic trajectory. See Gilson, 74 NYU L Rev at 619–20, 627–29 (cited in note 8).

17 *Mitchel v Reynolds*, 24 Eng Rep 347, 347 (KB 1711) (stating that a "bond or promise to restrain oneself from trading in a particular place, if made upon a reasonable consideration, is good").

18 See id at 348 (drawing distinction between restraints "not to exercise a trade throughout the kingdom," which are deemed to be void, and restraints that are "limited to

thought, it seems that no limitation on the movement of talent can ever be deemed reasonable.

These academic views now play a prominent part in ongoing policy debates and press coverage concerning proposed laws that would limit, or bar, the enforcement of noncompetes.[19] On March 7, 2019, a bipartisan group of six Democratic and Republican US senators sent a joint letter to the Government Accountability Office requesting that it investigate the impact of noncompetes "on workers and on the economy as a whole."[20] Citing academic research that "California's ban on non-compete agreements has been a prime factor in the state's growing economy," three Democratic US senators introduced legislation in April 2018 to impose a ban on noncompetes nationwide, which was re-introduced by

---

a particular place," which may be deemed reasonable). For more detailed discussion of the reasonableness standard, see Part II.A.3.b.

19 Reflecting unusual interest in the intricacies of employment contracts, *The New York Times*, *The Wall Street Journal*, *Forbes*, *Fortune*, *The Boston Globe*, and other media outlets have run stories and op-eds on the use of noncompete clauses and legislative proposals to ban these clauses. See, for example, Orly Lobel, *Companies Compete but Won't Let Their Workers Do the Same* (NY Times, May 4, 2017), archived at https://perma.cc/LG33-EUTV (discussing states' differences in enforcing noncompetes, federal proposals to limit noncompetes, and the harmful effects of noncompetes on employees); Steven Greenhouse, *Noncompete Clauses Increasingly Pop Up in Array of Jobs* (NY Times, June 8, 2014), archived at https://perma.cc/P575-QQCX (discussing proposed legislation in Massachusetts limiting enforcement of noncompetes); Neil Irwin, *When the Guy Making Your Sandwich Has a Noncompete Clause* (NY Times, Oct 14, 2014), archived at https://perma.cc/FQ4X-FNKB (discussing the economic, legal, and moral issues raised by noncompetes); Ruth Simon and Angus Loten, *Litigation over Noncompete Clauses Is Rising* (Wall St J, Aug 14, 2013), online at https://www.wsj.com/articles/litigation-over-noncompete-clauses-is-rising-does-entrepreneurship-suffer-1376520622 (visited Feb 17, 2020) (Perma archive unavailable) (discussing increasing litigation over, and prevalence of, noncompete agreements); Joann S. Lublin, *Companies Loosen the Handcuffs on Non-Competes* (Wall St J, Aug 12, 2013), online at https://www.wsj.com/articles/companies-loosen-the-handcuffs-on-noncompetes-1376320350 (visited Feb 11, 2020) (Perma archive unavailable) (discussing cases in which employers declined to strictly enforce noncompetes when executives departed for other large corporations); Eric Goldman, *Why Congress Should Restrict Employee Non-Compete Clauses* (Forbes, June 30, 2015), archived at https://perma.cc/52G4-KTLD (supporting federal legislation to limit enforcement of noncompetes); Claire Zillman, *Are Noncompete Agreements Hurting Tech Innovation?* (Fortune, July 1, 2015), archived at https://perma.cc/2YRK-95G4 (discussing differing views on enforceability of noncompetes, their impact on innovation, and proposed state legislation to limit enforceability); John McEleney, *Noncompetes Hurt Workers and Their Employers* (Boston Globe, June 28, 2015), online at https://www.bostonglobe.com/opinion/2015/06/27/onshape-ceo-john-mceleney-noncompetes-hurt-workers-and-their-employers/6NbXbI5jhZpl5wyvc28FSI/story.html (visited Feb 3, 2020) (Perma archive unavailable) (CEO of Massachusetts-based company arguing that noncompetes should "go away altogether").

20 Senator Christopher Murphy, et al, Letter to the Honorable Gene Dodaro, Comptroller General, US Government Accountability Office *1 (Mar 7, 2019), archived at https://perma.cc/W38U-2YRR.

two Democratic and Republican US senators in October 2019.[21] Like these US senators, advocates for strict limitations on, or outright bans of, noncompetes explicitly refer to selected empirical studies in arguing that these reforms would facilitate labor mobility and promote innovation.[22] A leading academic opponent of noncompetes has written: "[T]he research suggests that noncompetes should be banned for all employees, regardless of skill, industry or wage; they simply do more harm than good."[23] In 2018, the influential *Economist* magazine endorsed an only slightly more qualified position, arguing that noncompetes should be enforced only in narrow circumstances and similarly referring to academic research to support this position.[24]

A sizeable number of state legislatures have derived similar conclusions. Since 2014, the legislatures of thirty-seven states have formally considered laws that would affect the enforceability of noncompetes in employment agreements.[25] Of those proposed

---

21 On the April 2018 proposed legislation, see Office of Senator Ron Wyden, Press Release, *Wyden, Murphy, Warren Introduce Bill to Ban Unnecessary and Harmful Non-Compete Agreements* (Apr 26, 2018), archived at https://perma.cc/6N2T-V6N2 ("The new legislation would prohibit the use of non-compete agreements. . . . Many believe that California's ban on non-compete agreements has been a prime factor in the state's growing economy."); Workforce Mobility Act of 2018, S 2782, 115th Cong, 2d Sess (Apr 26, 2018). On the October 2019 proposed legislation, see Office of Senator Todd Young, Press Release, *Young and Murphy Introduce Bill to Limit Non-Compete Agreements, Protect Workers* (Oct 17, 2019), archived at https://perma.cc/PFU9-6GWW ("Research indicates that workers trapped by non-competes are less mobile, which results in firms having difficulty hiring workers with the right set of skills."); Workforce Mobility Act of 2019, S 2614, 116th Cong, 1st Sess (Oct 27, 2019).

22 See, for example, Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19). Lori Ehrlich, a Massachusetts representative who introduced a bill to preclude most noncompete enforcement, believes noncompetes have an "overall impact of stifling innovation" and cites academic studies on her website. Lori A. Ehrlich, *Fact Sheet: H. 2366* (2018), archived at https://perma.cc/6XJR-9ZY8 (discussing a "recent peer-reviewed academic paper" which shows that nearly one in five employees are bound by a noncompete). See also Zillman, *Are Noncompete Agreements Hurting Tech Innovation?* (cited in note 19).

23 Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19).

24 *Restrain the Restraints: The Case Against Non-compete Clauses* (The Economist, May 19, 2018), online at https://www.economist.com/leaders/2018/05/19/the-case-against-non-compete-clauses (visited Feb 11, 2020) (Perma archive unavailable) (supporting a requirement for employers to demonstrate genuine harm in noncompete litigation, as well as arguing that noncompetes should be enforced only if they apply for a short time and they are negotiated before an employee accepts a job offer).

25 These states are Alabama, Arkansas, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New York, Ohio, Pennsylvania, New Jersey, North Dakota, Oregon, Rhode Island, South Dakota, Texas, Utah, Vermont, Washington, and West Virginia. This includes all legislatures in which a member has formally proposed a law affecting noncompetes, whether generally or in specific industries, since 2014, based on a search of legislative proposals in the Westlaw and LexisNexis databases. See also Appendix.

bills, all but six proposed to limit enforceability (up to and including outright bans). In twenty-one states, these debates have translated into action. This includes Massachusetts, which in 2018 enacted a statute prohibiting noncompetes for certain categories of employees[26] and, in most other cases, imposes notice obligations on employers.[27] The Appendix shows all statutory changes to state noncompete laws during 2014–2019. Nineteen changes reduced enforceability and six enhanced it (although one was repealed two years later and the other was offset by other provisions that limited enforceability). In enacting its ban on noncompetes in the technology industry, Hawaii specifically referenced academic studies that purportedly supported this policy action as being conducive to innovation.[28] Additionally, in California, some courts have recently adopted expansive understandings of the state's statutory limitation on enforcing noncompetes against individuals, applying it to other contractual obligations that have long been thought to lie outside the purview of the statute.[29] In

[26] The statute primarily captures workers who are "nonexempt under the Fair Labor Standards Act," Mass Gen Laws Ann, ch 149, § 24L, which generally targets salaried workers employed on a fixed hourly basis and most likely would not target managerial and other professional employees. See US Department of Labor Wage and Hour Division, *Fact Sheet #17A: Exemption for Executive, Administrative, Professional, Computer & Outside Sales Employees Under the Fair Labor Standards Act (FLSA)* (July 2008), archived at https://perma.cc/7VDP-MURT. However, there may be ambiguities in certain cases. For further discussion, see Stephen T. Melnick, Chris Kaczmarek, and Melissa L. McDonagh, *Frequently Asked Questions About the New Massachusetts Noncompetition Agreement Act* (Littler, Sept 5, 2018), archived at https://perma.cc/ER4R-PMZZ.

[27] Mass Gen Laws Ann, ch 149, § 24L. The statute also requires that a noncompete "must be no broader than necessary to protect . . . legitimate business interests of the employer" and must have a reasonable geographic, temporal, and industry scope, see id; however, this language simply restates Massachusetts courts' holdings on this point. For further discussion, see notes 150–51 and accompanying text. Note further that the effect of the Massachusetts statute is qualified in two respects: (i) the law does not apply to a noncompete provision in an employer-employee separation agreement (if there is a seven-day period during which the employee can rescind acceptance), and (ii) Massachusetts simultaneously codified the "inevitable disclosure" doctrine, which entitles employers to seek injunctions against departing employees in the case of "threatened misappropriation," Massachusetts Trade Secrets Act, Mass HR 4868, § 19, 190th Sess (July 31, 2018). For further discussion, see note 130 and accompanying text.

[28] The legislature stated: "[A]cademic studies have concluded that embracing employee mobility is a superior strategy for nurturing an innovation-based economy." Robert B. Milligan, *Hawaii Bans Non-Compete and Non-Solicit Agreements with Technology Workers* (Seyfarth Shaw, July 6, 2015), archived at https://perma.cc/TTQ3-Y9G9.

[29] These decisions purport to apply the California Supreme Court's 2008 decision in *Edwards v Arthur Andersen LLP*, 189 P3d 285 (Cal 2008). See, for example, *Barker v Insight Global LLC*, 2019 WL 176260, *3 (ND Cal) (allowing claim that a nonsolicitation clause was illegal under California's noncompete ban to go forward); *AMN Healthcare, Inc v Aya Healthcare Services, Inc*, 28 Cal App 5th 923, 935–37 (2018) (holding that a firm could not enforce a nonsolicitation clause against a former recruiter employed by the firm, on the grounds that doing so would violate California's ban on noncompetes); *Golden v*

2018, a California lower court even applied the statutory limitation to prevent businesses from entering into exclusivity agreements between themselves, which had been traditionally the purview of California's antitrust provisions, not its statutory prohibition against noncompetes.[30] While the appellate court reversed this ruling, it is nonetheless indicative of an increasingly dogmatic approach against the enforcement of noncompetes or other contractual provisions deemed to have a comparable effect.[31]

The vigorous political debate and ongoing legislative activity relating to noncompetes encompasses a variety of policy concerns, including efficiency-related economic concerns as well as noneconomic concerns involving personal autonomy and distributive justice.[32] In markets for highly skilled technical and managerial labor (as distinguished from lower-income and lower-skilled occupations, which has been the focus of some of the proposed legislative bans[33]), the debate on both sides has principally relied on economic arguments. The toolkit of law-and-economics analysis is well suited to provide a balanced analysis of efficiency-related arguments for and against proposed policy shifts with respect to

California Emergency Physicians Medical Group, 896 F3d 1018, 1024–26 (9th Cir 2018) (refusing to uphold a litigation settlement agreement in which a physician-plaintiff agreed not to work at any facility that is owned, managed, or contracted by the medical group that had formerly employed the physician, but without imposing any other restrictions on the physician's pursuit of other employment opportunities). Note that the *Barker* and *AMN Healthcare* decisions depart from long-standing California precedent upholding the enforceability of postemployment nonsolicitation covenants subject to a reasonableness standard, see *Loral Corp v Moyes*, 174 Cal App 3d 268, 278–79 (1985).

30 See *Beckman Coulter, Inc v Quidel Corp*, 2018 WL 9943513, *1–2 (Cal Super).

31 See *Quidel Corp v Superior Court of San Diego County*, 39 Cal App 5th 530, 533, 535–36, 544–45 (2019) (reversing lower court's ruling based on *Edwards* invalidating the exclusivity agreement, and holding that *Edwards* does not extend beyond the employment context).

32 For a critique of noncompetes on distributional grounds, with an emphasis on the lack of meaningful negotiation on the part of the employee, see Rachel S. Arnow-Richman, *Bargaining for Loyalty in the Information Age: A Reconsideration of the Role of Substantive Fairness in Enforcing Employee Noncompetes*, 80 Or L Rev 1163, 1214–15 (2001). See also Christopher T. Wonnell, *The Contractual Disempowerment of Employees*, 46 Stan L Rev 87, 106 (1993). Because our Article focuses on the effects of noncompetes on technological innovation, we generally ignore the distributional (and autonomy-related) effects of noncompetes, though our intention is not to diminish their importance in the overall policymaking calculus.

33 See, for example, Office of Senator Marco Rubio, Press Release, *Rubio Introduces Bill to Protect Low-Wage Workers from Non-Compete Agreements* (Jan 15, 2019), archived at https://perma.cc/JM6P-QPS3 (describing a bill proposed by US Senator Marco Rubio to ban noncompetes nationwide for employees who are eligible for protection under federal overtime eligibility laws).

noncompetes that apply to technical and managerial personnel in technology markets.

In this Article, we undertake that task. Specifically, we look closely and broadly at the economic arguments, both theoretical and empirical, that have been advanced in support of the "talent wants to be free" view. While the details are complex and nuanced, our conclusion is simple and modest. Neither economic theory nor empirical evidence provides compelling support to abandon the common law's centuries-old reasonableness standard. Contractual restraints on labor mobility in technology markets raise complex trade-offs between employers' training and R&D incentives (generally favored by noncompetes) and employee mobility (generally disfavored by noncompetes).[34] While the latter is important for innovation, so is the former, and case-specific application of the reasonableness standard arguably offers the best, albeit imperfect, mechanism for balancing those competing considerations.

The now-popular view that innovation always or usually does best when human capital circulates freely relies heavily on a single historical example: the divergence in economic fortunes of Silicon Valley in California and Route 128 in Massachusetts and the different cultural norms and noncompete enforcement policies attributed to each innovation cluster. The results are surprising. Contrary to the standard account, we show that there is little compelling ground to attribute Silicon Valley's ascendance over Route 128 in the late 1980s and early 1990s to differences in the enforceability of noncompetes.[35]

There are multiple reasons. First, during Silicon Valley's ascendance, California's policy against noncompetes was clouded by several important exceptions. Second, California firms could significantly mimic noncompetes through trade secret and patent infringement litigation, long-term contracts, deferred compensation, and other mechanisms. Third, it is not clear that Massachusetts law substantially restrained employee turnover as an *effective* matter. Contemporary accounts of Route 128 in the heyday of the minicomputer industry in the 1970s and 1980s describe the same type of job hopping and spin-off formation associated with Silicon Valley. Fourth, Silicon Valley's rise over Route 128 most likely stemmed far more from technological and

[34] A potential negative secondary effect of noncompetes is to depress employee creativity and effort. We address this concern below in Part I.B.3.

[35] See Part II.A.

economic fundamentals associated with the "PC revolution," rather than fine distinctions in noncompete enforcement. Lastly, Route 128's decline was relatively short lived, and it has remained a significant innovation center, especially in the life sciences and certain information technology markets.

Our original and comprehensive reexamination of the Silicon Valley / Route 128 narrative raises doubts concerning the widely accepted causal sequence running from prohibiting noncompetes to increased employee mobility to increased innovation. These doubts are intensified by a close analysis of recent empirical studies that are regularly cited as evidence that noncompetes impede innovation. Contrary to the characterization of these studies in much of the policy commentary by academics and governmental agencies,[36] these studies suffer from significant methodological limitations, deliver statistically weak results, and do not provide compelling support for the view that banning noncompetes promotes innovation.

A fully informed policy position concerning noncompetes must reflect the uncertain state of our empirical understanding of the effects of these agreements in innovation markets. That is, it must reflect the fact that available evidence can neither support nor rebut any systematically adverse relationship between noncompetes and innovation outcomes in general. Only this measured conclusion, rather than the strongly "abolitionist" position that scholars and policymakers have increasingly advanced, is consistent with theoretical analysis that identifies the countervailing efficiency effects of noncompetes and other constraints on employee mobility. The free movement of talent implies efficiency

---

[36] See, for example, Lobel, *Talent Wants to Be Free* at 67–72 (cited in note 9) (describing empirical studies that purportedly have confirmed Gilson's hypothesis attributing the rise of Silicon Valley in part to California's refusal to enforce noncompetes); The White House, *Non-Compete Agreements: Analysis of the Usage, Potential Issues, and State Responses* *2, 5–7 (May 2016), archived at https://perma.cc/CR5Y-V8JX (discussing empirical studies measuring the prevalence and economic effects of noncompetes on employee mobility and start-up formation); US Department of the Treasury, Office of Economic Policy, *Non-compete Contracts: Economic Effects and Policy Implications* *11–13, 18–23, 26 (Mar 2016), archived at https://perma.cc/V383-QXM7 (reviewing research on use and effects of noncompetes and concluding that economic justifications for noncompetes have weak support); Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19) (same); Lobel, 93 Tex L Rev at 827, 839–42 (cited in note 9) (describing empirical studies suggesting that noncompetes reduce employee mobility, depress employee effort, and reduce innovation); Benkler, 13 Ann Rev L & Soc Sci at 235 (cited in note 13) (describing empirical research purporting to show that enforcing noncompetes depresses employee mobility, reduces knowledge spillovers, and undermines innovation); Hyde, 33 Regulation at 9 (cited in note 13) ("Study after study shows how much more productive firms will be if they can hire, free of lawsuits, someone who worked at a rival.").

gains from knowledge sharing and accelerated "*n*-mover" innovation. However, a blanket prohibition of noncompetes implies efficiency losses from uncompensated transfers of intellectual capital to competitors—which, far from being mere efficiency-neutral transfers, may discourage *first*-mover innovation and employee training, which may depress the development of human intellectual capital in the first instance.

Complex problems deserve complex solutions. Contrary to what is hastily becoming conventional wisdom, which is in turn being converted into concrete policy actions, there is no one-size-fits-all solution to this trade-off as a matter of economic analysis. Based on available evidence, there is no reason to believe that the efficiency gains from freely circulating human capital systematically outweigh the efficiency losses from uncompensated uses of intellectual capital. Rather, the net efficiency effect of noncompetes in any particular market depends on the interaction between multiple factors that vary across industries, firms, and types of employees. Even if California's zero-enforcement policy has been *locally* optimal (or at least, sufficiently workable) from an efficiency perspective, it may be suited to a particular type of innovation economy at a particular time—an important but neglected qualification that Gilson made when he originally attributed Silicon Valley's success to California's refusal to enforce noncompetes.[37] At the same time, we emphasize that neither theory nor empirics support an unqualified freedom-of-contract approach that enforces noncompetes in all circumstances absent evidence of fraud or coercion. Rather, we explicitly recognize the uncertainty involved in assessing the net efficiency effects of noncompetes. Using the error-cost approach developed in antitrust analysis and jurisprudence,[38] we embed that uncertainty in our policy analysis, concluding that the common law's reasonableness standard remains the best available instrument to reflect, albeit imperfectly, the trade-off between efficiency gains and losses inherent to limitations on employee mobility in innovation markets.

---

37 See Gilson, 74 NYU L Rev at 627–29 (cited in note 8).

38 For the leading sources, see Frank H. Easterbrook, *Workable Antitrust Policy*, 84 Mich L Rev 1696, 1711 (1986) ("We want to hold to a minimum the sum of the costs of harmful activity wrongly condoned and useful activity wrongly condemned (or discouraged)."); Frank H. Easterbrook, *The Limits of Antitrust*, 63 Tex L Rev 1, 16 (1984) ("[W]e should prefer the error of tolerating questionable conduct, which imposes losses over a part of the range of output, to the error of condemning beneficial conduct, which imposes losses over the whole range of output.").

In sum, our Article makes three important contributions to the literature. First, it exhaustively reviews the widespread contention that noncompetes thwart innovation.[39] Our detailed analysis shows that neither theory nor empirics supports the economic arguments commonly wielded in favor of prohibiting noncompetes.[40] As a matter of theory, conventional wisdom emphasizes that noncompetes impede the circulation of intellectual capital while overlooking that noncompetes may encourage firms to cultivate employees' human capital.[41] As a matter of empirics, we contest the widely accepted view that Silicon Valley surpassed Boston because of supposed differences in noncompete enforcement, which tend to be exaggerated.[42] A careful examination of the evidence shows that the Boston area has remained a significant innovation center and that technological and economic factors better explain Silicon Valley's exceptional trajectory.[43] Second, we uncover serious factual and other deficiencies in several widely cited empirical studies, which cast substantial doubt on those studies' findings and policy implications.[44] Third, based on our exhaustive review of the available evidence, we propose an original error-cost framework to analyze noncompetes, which provides a robust economic rationale for the common law's reasonableness standard.[45]

The Article proceeds as follows. Part I describes the noncompete debate and, in particular, contrasts newly ascendant views favoring the free circulation of human capital with older views that recognize that reasonable contractual limitations on employee mobility may promote social welfare. Part II reexamines the standard narrative of the rise of Silicon Valley and the decline of Route 128, looking closely at multiple factors that may account for Silicon Valley's exceptional success as an innovation center. Additionally, we review more recent empirical studies on the relationship between noncompetes, employee movement, and innovation. Part III revisits the range of policy options with respect to noncompetes, using an error-cost approach that has not been previously applied to the enforcement of noncompetes. We briefly conclude.

I. OLD AND NEW VIEWS: FROM AGNOSTICISM TO ABOLITIONISM

In this Part, we review two key stages in the intellectual history of the current debate over noncompetes and other restraints on employee mobility, and situate that debate within a larger body of economic thought relating to the economics of human capital. First, we review an earlier generation of law-and-economics scholarship, which identified the social costs and gains attributable to noncompetes and generally adopted an agnostic position concerning these restraints as a general matter. These scholars were therefore sympathetic to the common law's reasonableness standard, which upholds or invalidates noncompetes on a case-specific basis. Second, we review a more recent school of thought that takes the strong view that the social costs associated with noncompetes typically or almost always outweigh the social gains, and therefore supports ending noncompete enforcement following California's example.

A. Foundations: Becker and Marshall

Economically informed analysis of noncompetes and other restraints on labor mobility in innovation markets stands at the intersection of two foundational bodies of economic thought: Gary Becker's breakthrough work on the economics of human capital and Alfred Marshall's classic writings on the agglomeration economies that derive from the interchange of intellectual capital. Contemporary discussions of the legal treatment of noncompetes has relied (sometimes implicitly) almost entirely on the work of Marshall, which is a key reference point in the literature on innovation policy, while devoting little attention to the insights of Becker, widely recognized as *the* foundational work in the modern field of labor economics.[46] We review both contributions briefly below and will then integrate these classic insights from innovation policy and labor policy scholarship throughout our analysis of noncompetes and other constraints on the mobility of human capital.

[46] On the importance of Becker's work, see generally Yoram Weiss, *Gary Becker on Human Capital*, 81 J Demographic Econ 27 (2015).

1. Becker: Human capital as an economic asset.

Nobel Prize–winning economist Gary Becker effectively founded the economic analysis of human capital with the publication of his landmark work, *Human Capital*, in 1962.[47] Becker showed that economic analysis could be applied to the acquisition and cultivation of human capital, whether through education, training, or other mechanisms. From an economic point of view, human capital acquisition involves the use of scarce resources to maximize net expected value, as with any other costly activity. In implementing this analysis, Becker drew a key distinction between *general* and *firm-specific* human capital assets.[48] General human capital refers to technical, managerial, and other skills and knowledge that have value across a broad pool of firms or industries.[49] Firm-specific human capital refers to the narrower set of technical, managerial, and other skills and knowledge that have value (or have greater value) only at a particular firm.[50] The scholarly literature that has followed Becker's work has identified an intermediate form of human capital that is specific to an industry—namely, skills and knowledge that have value within an industry but not more generally.[51] As discussed below, these different types of human capital give rise to different implications when analyzing the efficiency effects of noncompetes and other limitations on employee mobility.

2. Marshall: Industrial districts and agglomeration economies.

In the innovation context, economic analysis of noncompetes and other limitations on employee mobility often makes reference to the concept of "industrial districts," originated by Alfred Marshall in his landmark treatise, *Principles of Economics*, first

47 See generally Gary S. Becker, *Human Capital: A Theoretical and Empirical Analysis, with Special Reference to Education* (Chicago 3d ed 1993). Subsequent notes refer to this edition, unless otherwise indicated. This is an updated edition of Gary S. Becker, *Human Capital: A Theoretical and Empirical Analysis, with Special Reference to Education* (National Bureau of Economic Research 1964). Some of the ideas were initially set forth in Gary S. Becker, *Investment in Human Capital: A Theoretical Analysis*, 70 J Pol Econ 9 (1962).

48 See Becker, *Human Capital* at 33–51 (cited in note 47).

49 See id at 33–34.

50 See id at 40.

51 See, for example, Derek Neal, *Industry-Specific Human Capital: Evidence from Displaced Workers*, 13 J Labor Econ 653, 653 (1995) (identifying categories of skills that are "specific to firms in a given industry or sector of the economy" and therefore do not fall into the existing categories of firm-specific or general human capital).

published in 1890.[52] In a short passage in that work, Marshall proposed that certain industries benefit collectively from a free-flowing exchange of ideas, even if an individual firm may periodically suffer the loss of some portion of its investment in developing an innovation.[53] In Marshall's famous words: "The mysteries of the trade become no mysteries; but are as it were in the air."[54] The movement of R&D personnel among firms is one of the key mechanisms by which the "mysteries of the trade" are disseminated and, according to Marshall, promote the general long-term welfare of all members of that innovation community. This line of reasoning is the basis for an extensive literature on the "agglomeration economies" that arise in innovation clusters in which geographically proximate firms and other entities draw from a free-flowing pool of human and intellectual capital assets to mutual advantage.[55]

B. The Old View: Restricting Labor Mobility Is Good and Bad for Innovation

The recent wave of academic interest in noncompetes is predated by scholars who had examined the efficiency of noncompete clauses and, explicitly or by implication, other restraints on employee mobility. Generally speaking, that view identifies both efficiency gains and losses that in general could arise from the use of noncompetes in innovation markets. Without an empirical methodology by which to quantify those potentially offsetting effects, that literature largely concluded that the net efficiency of noncompetes is indeterminate as a general matter.

1. The credible commitment problem.

Earlier scholars observed that human capital markets suffer from what economists call a credible commitment problem. Specifically, potential employees cannot provide adequate assurance to employers who are reluctant to invest in cultivating the human capital of employees who can simply move to another employer,

thereby conferring an advantage on a competitor.[56] When an employee leaves, the employer potentially suffers three costs: (i) it loses its training investment, which may involve a combination of firm-specific and general human capital; (ii) the employee may transmit proprietary information to a competitor; and (iii) the firm must incur costs to recruit and train a substitute employee, which again involves the transmission of firm-specific and general human capital.[57]

Without the ability to block employees from moving to a competitor, and without a sufficient up-front payment from employee to employer to cover the employer's expected costs in the event of the employee's departure, an employer faces two choices. Setting aside the possibility of various substitutes for deterring employee movement (most notably, deferred compensation arrangements and long-term employment contracts), the employer can (i) decline to hire the employee or (ii) hire the employee but underinvest in training (especially training that involves the cultivation of general human capital that has positive postemployment value) and the development and transmission of proprietary, often innovative, information.[58] These concerns account for apprenticeship systems that predate modern intellectual property regimes: limiting the apprentice's ability to switch employers enabled the master to internalize the gains from the intellectual capital transferred to the apprentice.[59] Or, put differently, limiting the apprentice's ability to switch employers enabled the apprentice to credibly commit against expropriating the employer's investment in the apprentice's human capital.

[56] See Paul H. Rubin and Peter Shedd, *Human Capital and Covenants Not to Compete*, 10 J Legal Stud 93, 99–102 (1981) (arguing that employers will reduce investment in employee training absent noncompetes); Edmund W. Kitch, *The Law and Economics of Rights in Valuable Information*, 9 J Legal Stud 683, 685 (1980) (asserting that, absent noncompetes, poaching employers will free ride on training investments by existing employers, who will in turn decline to make those investments); Harlan M. Blake, *Employee Agreements Not to Compete*, 73 Harv L Rev 625, 647 (1960) (contending that the objective of postemployment restraints is "to prevent competitive use, for a time, of information or relationships which pertain peculiarly to the employer and which the employee acquired in the course of the employment").

[57] See note 56 and accompanying text.

[58] See Kitch, 9 J Legal Stud at 685 (cited in note 56).

[59] See Rubin and Shedd, 10 J Legal Stud at 93–99 (cited in note 56) (arguing that covenants not to compete do not, as earlier scholars assumed, necessarily reflect an exercise of monopoly power by employers).

2. The noncompete solution.

Just like the apprentice contract, the noncompete clause can result in joint efficiency gains by enabling employment transactions (and associated knowledge transfers) that otherwise would not take place. This is beneficial not only for the employer but the employee and the industry as a whole. This point is overlooked in recent discussions of noncompetes that tend to emphasize how these clauses block employment opportunities and suppress innovation.[60] However, it is important not to overlook the possibility that the *absence* of noncompetes can block certain *other* employment opportunities. Assuming the prospective employee is financially constrained and cannot post a sufficient "bond" against expropriating the employer's training investment or R&D assets, an otherwise efficient employment transaction—and the associated cultivation of human capital—may not move forward. In that case, both employer and prospective employee are made worse off.

Even if the absence of noncompetes does not entirely block the employment relationship, it may distort the employer's behavior during the term of employment and, as a result, sometimes disadvantage both the firm and the employee. At least three distortions are possible. First, the inability to enforce noncompetes may induce an employer to modify the internal allocation of team personnel so as to mitigate informational leakage from employee departures. For instance, Apple is famous for its secrecy practices and separate teams that work on different projects so as to minimize information transfer between them.[61] Second, the firm may skew the allocation of training resources toward the cultivation of firm-specific human capital so as to maximize the employee's value in the internal labor market but minimize the employee's value in the external labor market.[62] Third, the firm may underinvest in R&D by reallocating resources to activities in which it is not generating informational assets that an employee can transmit to another employer. In a world in which noncompetes are enforceable at some reasonable cost and high probability, these distortions are mitigated and the firm can allocate resources more efficiently among the available set of innovation and non innovation activities.

---

60 See note 9 and accompanying text.

61 See Adam Lashinsky, *This Is How Apple Keeps the Secrets* (Fortune, Jan 18, 2012), online at https://fortune.com/2012/01/18/the-secrets-apple-keeps (visited Feb 3, 2020) (Perma archive unavailable).

62 See Nicola Meccheri, *A Note on Non-competes, Bargaining and Training by Firms,* 102 Econ Letters 198, 200 (2009).

3. A weak objection to noncompetes.

Some commentators argue that noncompetes may discourage employees from cultivating their human capital (or, specifically, general or industry-specific human capital)—which in turn may depress employees' effort or creative output—due to the limited ability to access postemployment opportunities.[63] This objection is not especially persuasive. Discouraging employees from acquiring human capital would appear to be inconsistent with rational profit maximization. Put affirmatively, any employer has an incentive to reward employees who enhance their firm-specific human capital (or some value-maximizing combination of firm-specific, industry-specific, and general human capital) and can therefore make a greater contribution to firm value. While there are inherent measurement and verification difficulties in assessing employees' relative contributions in a team environment,[64] firms clearly use a variety of compensation systems to at least approximately reward employee performance, including promotion, monetary bonuses, and more tailored compensation mechanisms.[65] This is unsurprising: in a competitive market, any firm that includes noncompete clauses in its employment package has a rational self-interest in adopting incentive structures that correct for any underperformance effects that could arise as a result.[66] Market forces reward firms who do so successfully and discipline those who do not.

63 See On Amir and Orly Lobel, *Driving Performance: A Growth Theory of Noncompete Law*, 16 Stan Tech L Rev 833, 846 (2013) ("An employee who knows their market opportunities are significantly reduced due to an enforceable noncompete restriction will be less driven to perform well and to invest in his own human capital."); Mark Garmaise, *Ties That Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J L Econ & Org 376, 413–14 (2011) (setting forth model in which noncompete enforcement can induce employers to invest in managers' human capital but reduce managers' incentives to do so, in which case the manager's human capital may be lower relative to a zero-enforcement regime).

64 For the classic treatment, see Armen A. Alchian and Harold Demsetz, *Production, Information Costs, and Economic Organization*, 62 Am Econ Rev 777, 779 (1972) (discussing the difficulties of determining each individual's contribution when observing a team's output).

65 See Robert P. Merges, *The Law and Economics of Employee Inventions*, 13 Harv J L & Tech 1, 38–41 (1999) (discussing the "intra-firm appropriability environment" fostered by employee reward mechanisms).

66 Below, we criticize experimental studies that purport to confirm the depressing effects of noncompetes on the cultivation of human capital by noting that they fail to adequately account for the large menu of employee incentive mechanisms used in the actual market. See note 305 and accompanying text.

4. A better objection to noncompetes.

It is certainly the case that enforcing noncompetes limits to some extent the mobility of R&D personnel, which may impede the agglomeration economies that arise from the regular dissemination of knowledge within an industry. To be clear, however, it is not precise to say (as is often said) that a noncompete "binds" an employee to a firm; rather, a noncompete requires that the employee or (more typically) a third party pay a fee demanded by the employer to obtain a waiver of the noncompete.[67] Payments exchanged for waiver of a noncompete are mere wealth transfers without efficiency consequences from a short-term static perspective. Precisely understood, a noncompete is simply a mechanism by which resource-constrained employees can credibly commit to indirectly compensate their employer for training and knowledge leakage costs in the event employees depart for a competitor.[68] The employee's commitment is made credible by providing the employer with a contractual right that can be "sold" to the employee's next employer.

This is not to say that there is no circumstance in which noncompetes can frustrate the efficiency gains associated with the circulation of human capital from one firm to another. First, even when an employer permits an employee otherwise under a noncompete to move to a new firm, the transaction costs of negotiating and executing a waiver of the noncompete generate static costs that would not be incurred if noncompetes were wholly unenforceable. Of course, like all contracting costs, such costs are tolerable when the social gains from contracting (here, for a noncompete) outweigh these costs.

---

67 For example, in 2005, Nortel paid Motorola $11.5 million to release its chief operating officer from a noncompete agreement. See Robert McMillan, *Nortel Appoints Ex-Motorola Exec as Operations Chief* (Network World, Jan 19, 2006), archived at https://perma.cc/B4MJ-YTFC.

68 Noncompetes may also relieve an employer from having to increase existing employees' compensation to match alternative employment opportunities, given the departure costs imposed by the noncompete. For a theoretical model reaching this result, see Natarajan Balasubramanian, et al, *Locked In? The Enforceability of Covenants Not to Compete and the Careers of High-Tech Workers* *9–11 (Ross School of Business Working Paper No 1339, Jan 2017), archived at https://perma.cc/3SBZ-UJD8. It should be noted, however, that available evidence is generally inconsistent with this model. The most comprehensive empirical study finds that employees who sign noncompetes earn 6.6 percent *more* on average than employees who do not sign noncompetes (controlling for various other factors), although this wage differential is limited to employees who are presented with a noncompete prior to accepting a job offer. See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *28 (cited in note 11).

Second, when the costs of negotiating and executing the waiver of a noncompete are sufficiently great so as to impede employee turnover, this may generate long-term dynamic efficiency losses to the extent that slowing down employee turnover impedes the transmission of intellectual capital that benefits the industry as a whole. These dynamic efficiency costs present a potential collective action problem because these costs may not be fully internalized by an individual firm in a given industry when that firm makes a decision whether to adopt and enforce a noncompete for a particular employee.

5. Evaluation.

The welfare effects of noncompete agreements can now be summarized. On the one hand, noncompetes support employers' incentives to invest in employees' human capital and R&D projects that would otherwise be subject to expropriation by departing employees. On the other hand, noncompetes raise the transaction costs involved in the circulation of human capital, which may impede the innovation process in the industry as a whole. Given these offsetting effects, earlier scholars generally concluded that economic analysis does not support a definitive position against or in favor of enforcing noncompetes in all circumstances.[69] If noncompetes enable firms to secure gains from training and R&D investments, then barring noncompetes may reduce the common pool of technological knowledge that is available for circulation through employee movement. A ban on noncompetes would yield a net social gain over time only if the disincentive effects arising from uncompensated human capital transfers were exceeded by the agglomeration economies and other benefits associated with the unimpeded circulation of human capital. Without empirical evidence in any particular case, this analytical framework is agnostic in general with respect to the net long-term efficiency of those restraints. However, it does recognize a meaningful range of circumstances in which enforcing noncompetes could make firms and employees better off by resolving the credible commitment problem that might preclude or distort employment relationships.

---

[69] See note 56 and accompanying text.

C. The New View: Restricting Labor Mobility is Bad for Innovation

The traditional approach is intellectually modest in taking the view that enforcing noncompetes *may* have a net positive effect on innovation. By contrast, the new view on noncompetes tends to take the bolder view that enforcing noncompetes usually, if not always, discourages innovation by slowing down the flow of intellectual capital and impeding the agglomeration economies and similar benefits that fuel the innovation process. This new view consists of a two-part logical sequence. In step one, it claims that barring noncompetes accelerates employee movement. Stated precisely, this assertion reflects the assumption that noncompetes increase the transaction costs of human capital movements. In step two, the new view makes the stronger assertion that increased circulation of R&D personnel promotes innovation by facilitating knowledge spillovers that benefit the industry as a whole. The normative implication is simple and clear: the law should decline to enforce noncompetes in all circumstances.

1. Background: Saxenian and Gilson.

The new view relies on the work of AnnaLee Saxenian, a sociologist, and Ronald Gilson, a law professor, both of whom apply the Marshallian concept of agglomeration economies to interpret a key episode in the history of US technology markets. Both Saxenian and Gilson contrasted Silicon Valley with Boston's Route 128 area to argue that institutional mechanisms—cultural norms and organizational forms in Saxenian's analysis[70] and a legal ban on noncompetes in Gilson's analysis[71]—that promote employee mobility can promote innovation by facilitating the flow of intellectual capital among competitors. Both authors identify these institutional differences as key factors in accounting for Silicon Valley's rise over Route 128 as the country's leading innovation center starting in the late 1980s.

More specifically, Gilson argued that California's ban on noncompetes represented a solution to a collective-action problem. While no firm individually would agree *not* to adopt a noncompete and thereby expose its human and intellectual capital to competitors, it may be in *all* firms' collective long-term interest to refrain from adopting noncompetes and thereby enjoy the resulting flow

70 See Saxenian, *Regional Advantage* at 1–9, 29–30, 59–60 (cited in note 8).
71 See Gilson, 74 NYU L Rev at 578–79, 602–09 (cited in note 8).

of knowledge spillovers.[72] By implication, Massachusetts firms were caught in a collectively irrational equilibrium in which all firms imposed noncompetes and could not enjoy the collective gains that would result from a more fluid circulation of human capital. Gilson cautioned that this explanation may be specific to Silicon Valley and would not necessarily generalize to other contexts.[73] Nonetheless, a significant body of commentary by legal scholars and economists has endorsed this proposition in stronger formulations and has made largely unqualified policy assertions that enforcing noncompetes and other restraints on employee mobility depresses innovation.[74] For these scholars, California's approach should be the rule, not the exception.

2. An initial critique.

The new view on noncompetes reflects a coherent and straightforward application of the standard collective-action problem in economic analysis. However, it is incomplete in significant respects. Specifically, the new view makes little effort to address the efficiency losses inherent to a legal regime in which a voluntary restraint on the mobility of talent is removed from the table of contracting options. Earlier analysis of noncompetes had recognized that an efficiency loss would arise in any circumstance in which an employee could not credibly commit against expropriating the employer's human capital investment and R&D assets. The employer would respond by distorting the terms of employment to limit its training investments or the employees' exposure to R&D assets or by declining to enter into an employment relationship at all.

72 See id at 596.

73 See id at 629.

74 See Lobel, *Talent Wants to Be Free* at 67–72 (cited in note 9) (arguing that empirical evidence supports California's "zero tolerance" policy for noncompetes); Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19) (same); Benkler, 13 Ann Rev L & Soc Sci at 235 (cited in note 13) (arguing that empirical evidence suggests that contractual and other legal constraints on employee mobility undermine innovation); Hyde, 33 Regulation at 10–11 (cited in note 13) (arguing that balance of evidence supports adopting California's policy of zero enforcement toward noncompetes); Moffat, 54 Ariz L Rev at 965 (cited in note 9) (advocating for a zero-enforcement policy toward noncompetes); Moffat, 52 Wm & Mary L Rev at 918–21 (cited in note 9) (same).

A recent economic model formulated by Professor James Rauch shows that this loss can extend well beyond just one employment transaction.[75] Consider a sequence of transactions consisting of (i) an initial employment transaction involving a parent firm and an individual employee, followed by (ii) a series of spin-off transactions involving employees who depart from the parent firm to form or join a spin-off firm, and then depart from the spin-off to form a new entity, and so forth. Noncompetes may raise the transaction costs relating to, and even frustrate, some portion, or even all, of the potential spin-off transactions. That is the focus of the "talent wants to be free" literature. However, it is important not to ignore the possibility that the inability to enforce a noncompete may preclude the initial hire by restoring the credible commitment problem, in which case the subsequent stream of spin-off transactions could be stunted or blocked entirely.[76] Moreover, if noncompetes are not enforceable, even a certain portion of the set of spin-offs may face the same credible commitment dilemma and may be wholly precluded or move forward under distorted terms.[77] If that is the case, then compared to a regime in which noncompetes are enforced, talent may be freer but it could well be worse off.

3. The empirical challenge.

As a theoretical matter, the new view on noncompetes, and the accompanying policy arguments in favor of a total or near-total ban, provide no reason to arbitrarily value the social costs attributable to noncompetes—primarily, potentially reduced circulation of intellectual capital (the focus of Marshall's analysis)—more heavily than the social gains—primarily, potentially increased investment in employee training and R&D (the focus of Becker's analysis). Given this uncertainty, we can only make progress toward assessing the relative intellectual strength of the new view based on empirical inquiry. Commentary by scholars and policymakers in favor of a ban on noncompetes often asserts that empirical data shows that noncompetes depress innovation.[78]

75 See James Rauch, *Dynastic Entrepreneurship, Entry, and Non-Compete Enforcement* *1–2, 19 (National Bureau of Economic Research Working Paper No 21067, Apr 2015), archived at https://perma.cc/TP8G-3372.

76 See id at *1–2, 9–11 (showing formally that the efficiency of noncompetes depends in part on a trade-off between these two countervailing effects on the parent firm and spin-off firms).

77 See id at *10.

78 See note 36.

In the next Part, we look closely at that body of evidence, finding that nearly all of these studies are badly flawed and, even so, common characterizations of their findings often dramatically overstate the policy conclusions that the data can reasonably support.

II. THE EVIDENCE AGAINST NONCOMPETES: A CLOSE LOOK

In this Part, we undertake the most comprehensive examination to date of the two principal bodies of empirical evidence that are commonly referenced in support of the "talent wants to be free" school of thought. First, we review in detail the explanation provided by Saxenian and in particular, Gilson, to account for Silicon Valley's dramatic rise over Route 128 as the world's leading innovation center. We find significant reason to doubt that this fundamental shift in economic trajectories can be traced back to relatively fine differences in the enforceability of noncompetes between California and Massachusetts. Second, we review some of the most highly cited empirical studies that purport to show a three-step causal link between bans on noncompetes, increased employee turnover, and increased innovation. This exercise identifies important methodological and other limitations that cast serious doubt on the policy positions for which those studies have been cited.

A. Reasons to Doubt the Standard Account of the Rise of Silicon Valley

As of the mid-1970s, Silicon Valley and Route 128 were both viewed as key centers for innovation in the electronics industry, but with different strengths.[79] Silicon Valley excelled in semiconductor chips while Route 128 excelled in minicomputers, a category situated between the supercomputer (or mainframe) segment dominated by IBM and the nascent "microcomputer" (in today's terms, PC) segment pioneered by Apple.[80] Starting in the

[79] See Willem Hulsink, Dick Manuel, and Harry Bouwman, *Clustering in ICT*, in Willem Hulsink and Hans Dons, eds, *Pathways to High-Tech Valleys and Research Triangles: Innovative Entrepreneurship, Knowledge Transfer and Cluster Formation in Europe and the United States* 53, 53–55 (Springer 2008) (stating that Route 128 predated the Silicon Valley technology cluster, which started growing in the 1950s and 1960s and overtook Route 128 in the 1970s); Nancy S. Dorfman, *Route 128: The Development of a Regional High Technology Economy*, 12 Rsrch Pol 299, 300, 313 (1983) (observing that, as of the late 1970s, the Boston area and Silicon Valley had the same number of high-tech employees while the greater San Francisco Bay Area had "about 30 percent more").

[80] See Hulsink, Manuel, and Bouwman, *Clustering in ICT* at 59 (cited in note 79) (describing how the "minicomputer manufacturers of Route 128 quickly lost ground to the manufacturers of the fast-emerging PCs and workstations in Silicon Valley").

early 1980s, Silicon Valley overtook Route 128 and secured its place as the world's preeminent information technology center. Saxenian attributes the ascendance of Silicon Valley, and the decline of Route 128, to differences in industrial organization and cultural norms.[81] The West Coast environment was characterized by a constant flow of technical personnel among a network of loosely connected firms, which spawned spin-offs that accelerated the innovation process. This structure was supported by industry norms that promoted information sharing and employee mobility.

By contrast, the East Coast environment was characterized by a small number of vertically integrated firms and exhibited little employee turnover. This structure was purportedly supported by industry norms that promoted loyalty to a single employer and discouraged information sharing. Building on Saxenian's narrative, Gilson argued that the free flow of human capital could be attributed in part to California's refusal to enforce noncompetes, while Massachusetts's insistence on enforcing noncompetes may have stagnated the flow of human capital, resulting in a slowdown in innovation.[82] Put together, Saxenian and Gilson's work identifies certain informal and formal institutional characteristics that purportedly set Route 128 on a path to decline, while sending Silicon Valley on an upward trajectory.

Both Saxenian's and Gilson's accounts of the rise of Silicon Valley and decline of Route 128 have been widely adopted in the academic literature.[83] In the discussion below, we identify several considerations that cast doubt on this now-standard account. These include: (i) there were several exceptions (and other legal causes of action) that substantially qualified California's "ban" on noncompetes during this period; (ii) firms could substantially mimic the effect of a noncompete through compensation and other mechanisms; (iii) it is not clear that differences in Massachusetts law on noncompetes and trade secrets resulted in substantial differences in employee mobility as a practical matter; (iv) there are fundamental technological and economic factors that more plausibly account for Silicon Valley's ascendance; and (v) Route 128 has continued to exhibit robust innovative performance.

---

81 See Saxenian, *Regional Advantage* at 1–9 (cited in note 8).

82 See Gilson, 74 NYU L Rev at 602–09 (cited in note 8).

83 As of February 19, 2020, Google Scholar estimates that Saxenian's leading contribution in the area, the book-length *Regional Advantage*, has been cited more than 13,200 times and Gilson's 1999 NYU article on Silicon Valley and Route 128 has been cited more than 900 times. See also note 9 (listing several scholarly publications that refer to and rely on Saxenian's or Gilson's work).

1. Did California courts really never enforce noncompetes?

Scholars have not adequately questioned whether California courts in actuality declined to enforce noncompetes during the period in which Silicon Valley overtook Route 128. That seems to be the case based on the California statute, which declares void "every contract by which anyone is restrained from engaging in a lawful profession, trade, or business of any kind."[84] Given that blanket prohibition, however, it is curious that California firms often insert noncompete clauses in executive employment agreements. Two studies that focus on adoption rates of noncompetes in executive employment agreements at large publicly traded firms find these clauses in 58–62 percent of agreements with firms headquartered in California, as compared to rates of 70–84 percent at the same types of firms headquartered in other states (which generally enforce noncompetes subject to the reasonableness standard).[85] Even more surprisingly, a broader study involving all types of employees finds that the incidence of noncompetes in California (19 percent) is approximately the same as observed in states that enforce noncompetes.[86]

This discrepancy between law and practice might be attributed to the possibility that technical personnel are unaware

84 Cal Bus & Prof Code § 16600.

85 Specifically, from a sample of 874 CEO employment contracts at S&P 1500 firms executed during 1996–2010, Norman Bishara, Kenneth Martin, and Randall Thomas found that California firms include noncompetes at a rate of 62 percent (compared to 84 percent for firms in other states). See Norman D. Bishara, Kenneth J. Martin, and Randall S. Thomas, *An Empirical Analysis of Noncompetition Clauses and Other Restrictive Postemployment Covenants*, 68 Vand L Rev 1, 34 (2015). Garmaise finds that, in a sample of large, publicly traded firms, approximately 70 percent of firms used noncompetes, including 58 percent of California-based firms. Garmaise, 27 J L Econ & Org at 396 (cited in note 63). Garmaise does not specifically identify the rate of noncompete adoption among firms located in the forty-eight enforcing states, although it would be expected that that rate would be somewhat higher than the 70 percent rate reported for the full sample of all firms in all states. See id.

86 See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *19 (cited in note 11). We note two additional points concerning the methodology and findings of the Starr, Prescott, and Bishara study. On methodology, we note that the paper carefully distinguishes in its survey methodology between noncompetes and other related provisions such as nondisclosure or nonsolicitation covenants. This is important because it provides confidence that the findings relate specifically to noncompetes rather than other related provisions in employment agreements. See id at *3–4. On substance, we note that the authors do not find any meaningful change in the incidence of noncompetes in comparing "multi-unit" firms, which have operations in California and other states, and "single-unit" firms, which operate only in California. See id at *19. This is a noteworthy result because it might have been expected that large national firms in particular might include noncompete clauses as a "default" provision in their employment agreements since they mostly operate in states that uphold noncompetes under the common-law reasonableness standard.

of California law and firms include a noncompete clause as an *in terrorem* device to be used against departing employees. That explanation assumes that these personnel do not consult legal advisors, particularly a potential new employer's legal counsel, or review publicly available information about a basic point of law. Alternatively, one might argue that, because knowledgeable employees understand that noncompetes are generally *not* enforceable in California, it is not worth the transaction costs of negotiating with an employer to remove these clauses. At a minimum, it is worth inquiring whether the standard understanding of California law is entirely precise during the period in which Silicon Valley overtook Route 128.

In fact, it is not. Writing in 1989, a treatise on trade secrets law observed: "Despite the clear language of" California's statute, "the California courts do not regard all covenants not to compete . . . invalid *per se*."[87] Specifically, there were at least five important circumstances in which California employers could have had some expectation of being able to enforce a noncompete during the period in which Silicon Valley overtook Route 128. While it remains the case that California courts did not *generally* enforce noncompetes against individuals during this period, it is incorrect to assume that a sufficiently motivated employer would *never* rationally invest resources in enforcing (and therefore could never credibly threaten to seek) enforcement of a noncompete against a departing employee.

a) Narrow restraints. In 1987, the Ninth Circuit held that noncompetes were enforceable under California law if the noncompete narrowly restrained postemployment opportunities, as distinguished from a general restraint that barred entry into an entire profession.[88] From the 1970s through the 2000s, litigants that pursued variants of the narrow restraint exception achieved

87 See Melvin F. Jager, *Trade Secrets Law* § 13.01[2] (1989).

88 *Campbell v Board of Trustees of Leland Stanford Junior University*, 817 F2d 499, 502 (9th Cir 1987) (citing California law for the proposition that the statutory ban on noncompetes precludes only contractual restraints on entering an "entire business, trade or profession," as distinguished from "only a small or limited part of the business, trade or profession"), quoting *Boughton v Socony Mobil Oil Co*, 231 Cal App 2d 188, 192 (1964). The court purported to apply state law precedent, as set forth in *Boughton*, 231 Cal App 2d at 192, which in turn relied on *King v Gerold*, 240 P2d 710 (Cal App 1952). An earlier Ninth Circuit decision had upheld a clause in a collective bargaining agreement involving the partial forfeiture of certain pension and profit-sharing benefits in the event a retired employee took employment with another firm in the same industry. The court's decision relied on the view that California law does not prohibit an alleged restraint on employee mobility that is "limited in nature and furthers sound public policies." See *Smith v CMTA-IAM Pension Trust*, 654 F2d 650, 660 (9th Cir 1981).

mixed results, sometimes achieving success in (mostly) federal courts but usually not faring well in California state courts.[89] In 1997 and 1999, the Ninth Circuit again applied the exception to uphold a noncompete covenant.[90] Only in 2008, well after Silicon Valley had established its place as the world's technology center, did the California Supreme Court resolve this uncertainty by rejecting the narrow restraint exception.[91]

b) Sale of a business. Based on a statutory exception,[92] both federal and state courts typically enforced (and continue to enforce) noncompetes executed in connection with the sale of a business. The exception applies to noncompetes entered into by majority target shareholders and possibly other target employees with smaller equity interests.[93] This exception provides some of the legal logic behind the now-popular "acqui-hire" transactional structure, in which a large firm acquires a start-up firm primarily for purposes of retaining the services of its founders and senior managerial and technical personnel. Without a commitment from key personnel that they will remain with or at least not compete with the acquirer for some reasonable period of time, the transaction is not viable. This partially explains why exempting business

89 For cases recognizing the exception, see *Centeno v Roseville Community Hospital*, 107 Cal App 3d 62, 68–71 (1979); *Latona v Aetna US Healthcare Inc*, 82 F Supp 2d 1089, 1094 (CD Cal 1999); *Cin-Med Associates, Inc v Hemocue, Inc*, 2001 WL 1117562, *3–4 (CD Cal). In *Scott v Snelling & Snelling, Inc*, 732 F Supp 1034, 1042–43 (ND Cal 1990), the court recognized that "California courts may, in some circumstances apply a 'rule of reason' to only partial restrictions on competition" but declined to apply it in the case of a noncompete that imposed postemployment geographic and temporal restrictions. For cases rejecting the exception, see *Golden State Linen Service, Inc v Vidalin*, 69 Cal App 3d 1, 13 (1977); *Liberty Mutual Insurance Co v Arthur J. Gallagher & Co*, 1994 WL 715613, *3 (ND Cal); *Arrowhead Financial Group, Inc v Welty*, 2002 WL 31661269, *6–7 (Cal App); *Jan Marini Skin Research, Inc v Allure Cosmetic USA, Inc*, 2007 WL 1508686, *16 (Cal App); *Thompson v Impaxx, Inc*, 113 Cal App 4th 1425, 1430–31 (2003).

90 *General Commercial Packaging, Inc v TPS Package Engineering, Inc*, 126 F3d 1131, 1132–33 (9th Cir 1997) (enforcing a one-year noncompete between a contractor and subcontractor with respect to the contractor's clients); *International Business Machines Corp v Bajorek*, 191 F3d 1033, 1040–41 (9th Cir 1999) (holding that noncompete obligation in stock option agreement did not violate the California statutory ban on noncompetes).

91 *Edwards v Arthur Andersen LLP*, 189 P3d 285, 293 (Cal 2008).

92 Cal Bus & Prof Code § 16601.

93 It is not clear how large that equity interest must be. Rulings have been mixed. See *Hilb, Rogal & Hamilton Insurance Services of Orange County, Inc v Robb*, 33 Cal App 4th 1812, 1816, 1822–25 (1995) (in connection with the merger of an insurance company, upholding a noncompete with an employee of the merged company, who had held a 35 percent ownership interest in the merged company, on ground that a sufficient transfer of goodwill had taken place); *Vacco Industries, Inc v Van Den Berg*, 5 Cal App 4th 34, 48–49 (1992) (finding that a 3 percent interest, which was the ninth largest shareholder interest, in conjunction with an officer position, constituted a substantial shareholder).

acquisitions from noncompete enforcement limitations, which is the rule even in California, is likely to be, and is widely viewed as, efficient.

c) Protection of trade secrets. Since a California Supreme Court decision in 1958,[94] California law has recognized that the statutory bar against noncompetes does not extend to certain postemployment restrictions—most typically, nondisclosure and nonsolicitation covenants—that are enforced for the purpose of protecting an employer's trade secrets or confidential information.[95] Since the 1980s, California courts have periodically applied the trade secret exception to enforce nonsolicitation and nondisclosure obligations (and, in one recent case, even a noncompete clause "construed to bar only the use of confidential source code, software, or techniques"[96]) that were found to be narrowly tailored to protect a trade secret.[97]

[94] *Gordon v Landau*, 321 P2d 456, 459 (Cal 1958) (upholding a nonsolicitation clause because "it did not prevent defendant from" engaging in the same or similar business as his former employer).

[95] See Jager, *Trade Secrets Law* § 13:4 at 13-13 (cited in note 87) (observing that California courts sometimes enforce noncompetes to protect trade secrets or other confidential information). For cases stating this principle, see *Muggill v Reuben H. Donnelley Corp*, 398 P2d 147, 149 (Cal 1965) (stating that § 16600 invalidates noncompete provisions "unless they are necessary to protect the employer's trade secrets"); *Gordon Termite Control v Terrones*, 84 Cal App 3d 176, 178 (1978) (stating that § 16600 "has been construed by the Supreme Court as invalidating contracts not to compete, except where their enforcement is necessary to protect the trade secrets of an employer"); *Loral Corp v Moyes*, 174 Cal App 3d 268, 276 (1985) (stating that § 16600 "does not invalidate an employee's agreement not to disclose his former employer's . . . trade secrets"); *Moss Adams Co v Shilling*, 179 Cal App 3d 124, 130 (1986); *American Paper & Packaging Products, Inc v Kirgan*, 183 Cal App 3d 1318, 1322 (1986) (Section 16600 invalidates noncompetes "unless their enforcement is necessary to protect an employer's confidential information or trade secrets"); *Scott*, 732 F Supp at 1043 (recognizing a judicially created exception to § 16600 to the extent necessary to protect trade secrets).

[96] *Richmond Technologies, Inc v Aumtech Business Solutions*, 2011 WL 2607158, *18–19 (ND Cal) (finding the nonsolicitation clause and noninterference clauses "are likely to be found unenforceable" because they "are more broadly drafted than necessary to protect . . . trade secrets," but a noncompete clause and related clause barring the use of confidential information are "likely enforceable as necessary to protect . . . trade secrets").

[97] See *Hollingsworth Solderless Terminal Co v Turley*, 622 F2d 1324, 1338 (9th Cir 1980) (vacating and remanding the lower court's invalidation of a postemployment covenants involving nondisclosure of customer lists and nonsolicitation of a former employer's customers); *John F. Matull & Associates, Inc v Cloutier*, 194 Cal App 3d 1049, 1054–55 (1987) (upholding a nonsolicitation obligation); *Morlife, Inc v Perry*, 56 Cal App 4th 1514 (1997) (affirming a nonsolicitation covenant against former employees); *Asset Marketing Systems, Inc v Gagnon*, 542 F3d 748, 758 (9th Cir 2008) (observing that "non-competition agreements are unenforceable [under California law] unless necessary to protect an employer's trade secret"); *Lindzy v Q-Railing USA Co*, 2013 WL 4437164, *6 (Cal App) (finding a nondisclosure clause and a nonsolicitation clause valid).

In 2008, the Supreme Court of California specifically declined to affirm or reject the trade secret exception.[98] A recent federal court opinion summarizes the current state of California law on this point: "Although California courts have consistently 'condemned' agreements that place restraints on the pursuit of a business or profession . . . 'an equally lengthy line of cases has consistently held former employees may not misappropriate the former employer's trade secrets to unfairly compete with the former employer.'"[99] Simply put: Section 16600 does not preclude an employer from preventing a departing employee via injunctive relief from joining a new employer by enforcing nondisclosure, nonsolicitation, or other similar postemployment obligations when doing so promotes the employer's interest in protecting its trade secrets.

d) ERISA. A California employer can avoid the statutory ban on noncompetes by embedding the noncompete in a deferred compensation or severance pay arrangement governed by the Employee Retirement Income Security Act of 1974[100] (ERISA). These clauses operate as a forfeiture mechanism that conditions entitlement to certain benefits under the plan upon compliance with the noncompete obligation. As observed in practitioner commentary, this exception typically arises in litigation concerning deferred benefit plans for highly compensated executives.[101] In 1981 and 1987, the Ninth Circuit held that ERISA preempts state law, specifically including noncompete restrictions.[102] California state courts have adopted the same position.[103] This enforcement strategy is limited only by the ERISA requirement that a noncompete

98 *Edwards*, 189 P3d at 289 n 4.

99 *Richmond Technologies*, 2011 WL 2607158 at *18 (internal brackets omitted), citing *Edwards*, 189 P3d at 290–91 and *Retirement Group v Galante*, 176 Cal App 4th 1226, 1237 (2009).

100 Pub L No 93-406, 88 Stat 829, codified as amended in various sections of Title 26 and Title 29.

101 See Amy L. Blaisdell and Wendy S. Menghini, *Pulling Tricks Out of a Top Hat: Preemption of Non-Compete Laws Applicable to "Top Hat" Plans* *1 (DRI: The Voice of the Defense Bar, Dec 29, 2010), archived at https://perma.cc/4SYD-PEAV.

102 See *Clark v Lauren Young Tire Center Profit Sharing Trust*, 816 F2d 480, 481 (9th Cir 1987) (involving a noncompete under Oregon law); *Lojek v Thomas*, 716 F2d 675, 678, 679–80 (9th Cir 1983) (involving a noncompete under Idaho law). Gilson cites a 1965 California Supreme Court decision that invalidated this type of forfeiture provision in a retirement plan. See Gilson, 74 NYU L Rev at 607 n 100 (cited in note 8), citing *Muggill*, 398 P2d at 149. However, *Muggill* would not appear to survive the Ninth Circuit's interpretation of ERISA, which was enacted in 1974.

103 See, for example, *Weinfurther v Source Services Corp Employees Profit Sharing Plan and Trust*, 759 F Supp 599, 602 (ND Cal 1991).

forfeiture clause cannot be applied to deprive the employee of benefits accrued after ten years of service.[104]

e) Choice-of-forum clauses. California courts will not enforce a noncompete entered into under the law of another state that generally enforces noncompetes. However, prior to 2017, if an employer and former employee were subject to the jurisdiction of an out-of-state court that enforces noncompetes, and the decision was final in that state before any decision in a parallel California action, then a noncompete agreement was typically enforceable within California. In general, the two key factors at issue in such situations were whether (1) the agreement selected another state's courts as the forum for disputes; and (2) whether the employee is now a California resident employed by a California employer. Although California courts will generally not enforce an out-of-state choice-of-law clause, especially if the defendant-employee is a California resident employed by a California firm,[105] prior to 2017, they often respected an out-of-state choice-of-forum clause, even if the other state potentially applied its own law.[106] In practice, this meant that California employees employed by a firm with corporate headquarters out of state—or out-of-state employees moving to California—could be subject to enforceable noncompete restrictions under a properly drafted agreement prior to 2017.[107]

---

[104] 29 USC § 1053(a)(2)(A).

[105] See *Application Group, Inc v Hunter Group, Inc*, 61 Cal App 4th 881, 894–905 (1998).

[106] Compare *Davis v Advanced Care Technologies, Inc*, 2007 WL 2288298, *4–9 (ED Cal) (finding California law applicable to the case despite a Connecticut choice-of-law provision because California had a materially greater interest; the employee was a California resident, the former employer was based in Connecticut, and the new employer was a California-based employer), with *Universal Operations Risk Management, LLC v Global Rescue LLC*, 2012 WL 2792444, *6–7 (ND Cal) (enforcing a forum selection clause despite the strong possibility that the forum state would uphold the covenant not to compete).

[107] See, for example, *Meyer v Howmedica Osteonics Corp*, 2015 WL 728631, *11–12 (SD Cal) (ordering a transfer of forum to New Jersey consistent with the forum selection clause, when there was also a choice of law provision for New Jersey law), citing *Swenson v T–Mobile USA, Inc*, 415 F Supp 2d 1101 (SD Cal 2006) (dismissing a California declaratory relief action in the presence of forum selection clause when the previous action was pending out-of-state); *Universal Operations Risk Management, LLC*, 2012 WL 2792444 at *6–7; *Advanced Bionics Corp v Medtronic, Inc*, 59 P3d 231, 232–34 (Cal 2002) (vacating a lower court's issuance of a temporary restraining order that had blocked the former employer from pursuing a noncompete action it had filed out of state); *Biosense Webster, Inc v Superior Court*, 135 Cal App 4th 827, 830 (2006) (extending the holding of *Advanced Bionics* to circumstances in which no previous action had been filed out of state); *Google, Inc v Microsoft Corp*, 415 F Supp 2d 1018, 1021–22, 1026 (ND Cal 2005) (staying noncompete proceedings pending those in Washington in order to prevent forum shopping). But see *Manchester v Arista Records, Inc*, 1981 US Dist LEXIS 18642, *13–17 (CD Cal) (upholding a choice-of-forum clause in a case involving Cal Labor Code § 2855, which limits

2. Substitutes for noncompetes.

In addition to the five exceptions described above, California firms could elect (and still can elect) from a large menu of substitute legal and economic instruments to deter employee mobility. To illustrate these alternatives concretely, we can return to the case involving the former Google engineer who took a new position with Uber. As noted previously, the employee had been involved in developing Google's autonomous driving technologies.[108] Under California law, Google would appear to be powerless to prevent the employee from working for Uber. Even assuming that Google cannot wield a noncompete covenant, however, Google has several other credible legal threats at its disposal. Given the existence of these additional legal instruments, any *marginal* preclusive effect that can be reasonably attributed to noncompetes appears to be significantly attenuated, and would need to at least be accounted for in any empirical analysis comparing the differential effects of noncompetes on innovation between California and out-of-state firms.

a) Patents. A firm may use patents to protect against knowledge leakage resulting from employee movement. Although a patent may not cover tacit knowledge per se, it may cover a product or method incorporating that tacit knowledge. Assuming the firm can bear the anticipated enforcement costs, the expropriation risk posed by a departing employee would then be limited to informational assets that fall outside the firm's patent portfolio. A patenting strategy makes any departing employee less attractive to competitors, which implies that the employee will receive fewer or lower offers from other firms and is less likely to leave the current employer. Hence, even in a jurisdiction that is hostile to noncompetes, there may be significant patent-based obstacles that discourage employee movement. Consistent with these expectations, a 2009 empirical study found a deterrent effect on labor mobility in the US semiconductor industry proportional to a firm's propensity to bring patent infringement suits.[109] Another study finds that, while the likelihood of an acquisition increases when a target's employees are subject to noncompetes, that effect weakens in the case of targets that hold strong patent

personal service employment contracts to a term of seven years, because the court determined that § 2855 did not apply to the contracts at issue).

[108] See notes 1 and 4.

[109] See Rajshree Agarwal, Martin Ganco, and Rosemarie H. Ziedonis, *Reputations for Toughness in Patent Enforcement: Implications for Knowledge Spillovers via Inventor Mobility*, 30 Strategic Mgmt J 1349, 1366–67 (2009).

portfolios, suggesting that patents substitute in part for noncompetes as a device for protecting against knowledge leakage after consummation of the acquisition.[110]

b) Breach of contract. If the employee had signed a nondisclosure agreement (NDA) and then took a position with a competing enterprise, Google could potentially bring (or threaten to bring) a breach of contract claim against the employee. As noted earlier, there is no plausible legal challenge under § 16600 to the enforcement of an NDA so long as it is sufficiently tailored to promote the employer's interest in protecting its trade secrets.[111] The credibility of Google's threat to sue to enforce an NDA would depend on the negotiated scope of the definition of "confidential information" in the NDA and the ease with which Google could demonstrate that the employee had actually breached the NDA's confidentiality provisions at his or her new position. In certain jurisdictions, courts are willing to enforce NDAs that encompass information that would not otherwise qualify as a trade secret;[112] in other jurisdictions (including California), Google may be required to show that enforcement of the NDA targets only nonpublic information that would be protected under trade secret law.[113]

Alternatively, Google could bring (or threaten to bring) a breach-of-contract claim if it had entered into a long-term employment contract or a shorter-term employment contract with periodic renewal at the employer's option. (The former option may be unattractive to both employers and employees because it locks each party into a potentially unwanted long-term commitment that is difficult to mitigate even through the most carefully

110 See Kenneth A. Younge, Tony W. Tong, and Lee Fleming, *How Anticipated Employee Mobility Affects Acquisition Likelihood: Evidence from a Natural Experiment*, 36 Strategic Mgmt J 686, 691–92 (2015).

111 See Part II.A.1.c.

112 See Richard F. Dole Jr, *The Contract Exception to the Uniform Trade Secrets Act and Its Implications for the Federal Defend Trade Secrets Act*, 34 Santa Clara High Tech L J 362, 377 n 80 (2018) (observing that courts in some jurisdictions will enforce NDAs that encompass information that would not qualify as a trade secret, subject to a reasonableness standard); Bishara, Martin, and Thomas, 68 Vand L Rev at 21–23 (cited in note 85) (stating that courts will sometimes enforce an NDA that applies to information that might not otherwise be protected under trade secret law, so long as the NDA is limited in time).

113 See, for example, *Richmond Technologies*, 2011 WL 2607158 at *19 (noting that a "clause prohibiting use of confidential information is likely enforceable to the extent that the claimed information is protectable as a trade secret"). On this point with respect to California law in particular, see Charles T. Graves, *Nonpublic Information and California Tort Law: A Proposal for Harmonizing California's Employee Mobility and Intellectual Property Regimes Under the Uniform Trade Secrets Act*, 2006 UCLA J L & Tech 1, 37–43.

crafted provisions for early separation under certain circumstances.) In yet another variation, Google could bring a tortious interference with contract claim against Uber, on the ground that Uber was aware of the long-term contract to which the departing engineer was then bound.[114]

c) Invention assignment agreements. In the technology industries, it is typical for employees to enter into invention assignment agreements, under which an employee agrees in advance that all "inventions" (as defined in the governing agreement) developed by the employee during the course of his or her employment are deemed to belong to the employer.[115] Under such an agreement, Google could bring a claim against the departing employee if the employee is using an "invention" that the employee made while employed by Google. As long as Google's claim could at least survive a motion to dismiss, it could credibly threaten to impose significant discovery and other litigation costs on the employee-defendant (or, more typically, the new employer who may have agreed to indemnify the employee-defendant). In a widely followed litigation over ownership of the "Bratz" line of dolls, involving Mattel (as plaintiff), Mattel's former employee (as codefendant), and a smaller toy manufacturer (as codefendant), an invention assignment agreement provided the basis for several years of protracted litigation that burdened the defendant with substantial legal fees.[116]

Alternatively, Google and its former employee may have entered into an invention assignment agreement with a "trailer" clause, which would grant Google ownership over any inventions that the former employee developed within a certain amount of time following termination.[117] That too may limit the employee's attractiveness to any potential outside employer. The doctrine of assignor estoppel can have a similar effect in a departing employee scenario. Under that doctrine, some courts have held that

---

[114] In the actual litigation between Google and Uber, this would not have been a feasible claim because Google and the departing employee were apparently not parties to a long-term contract.

[115] See Victoria Lee and Mark Lehberg, *Employee Proprietary Information and Inventions Assignment Agreements: What They Do, and What Could Happen Without Them* (DLA Piper, 2018), archived at https://perma.cc/J5QD-3FXX.

[116] See *Mattel, Inc v MGA Entertainment, Inc*, 616 F3d 904, 909 (9th Cir 2010) (observing that Mattel's ownership interest in the Bratz line of dolls "turns on the interpretation of Bryant's [the former employee's] 1999 employment agreement," which included an invention assignment clause). For a summary of the litigation, see *Barbie and Bratz: The Feud Continues* (WIPO Magazine, Aug 2011), archived at https://perma.cc/6RM2-W45Y.

[117] For discussion, see Merges, 13 Harv J L & Tech at 52–53 (cited in note 65).

not only is the employee precluded from arguing against the validity of a patent that the employee assigned to the former employer, but also any new employer of the employee is similarly precluded from doing so. The practical consequence: if the old employer brings a patent infringement suit against the new employer, the latter may be unable to argue in defense that the underlying patent is invalid. Like a trailer clause, this expansive understanding of the assignor estoppel doctrine may limit the attractiveness of an employee to any potential new employer.[118]

d) Trade secret misappropriation. Google could (and did) bring a trade secret misappropriation claim against the employee and Uber as the new employer, alleging that the employee or Uber had used or disclosed trade secrets belonging to Google.[119] In certain states (although not California today), even absent evidence of use or disclosure, Google could seek an injunction to prevent its former employee from joining Uber if the court found that the employee would *inevitably disclose* the employer's trade secrets in his new position.[120] Trade secret litigation in a departing employee scenario is not an uncommon occurrence in Silicon Valley. Intel, Broadcom, Cisco, Apple, and other Silicon Valley companies have been involved in prominent trade secret disputes involving former employees.[121] Depending on the credibility of any

118 See Mark A. Lemley, *Rethinking Assignor Estoppel*, 54 Houston L Rev 513, 537 (2016) ("[T]he doctrine of assignor estoppel serves effectively as a partial noncompete agreement, preventing inventors from starting new companies or moving to competitors in many circumstances and at least raising the costs of doing so.").

119 Waymo Complaint at *2–5 (cited in note 1).

120 Based on a survey of twenty-four states (current as of 2012), courts in only a handful of states explicitly reject the doctrine while the remainder either explicitly recognize the doctrine or, more commonly, apply it occasionally. See Ryan M. Wiesner, *A State-by-State Analysis of Inevitable Disclosure: A Need for Uniformity and a Workable Standard*, 16 Marq Intell Prop L Rev 211, 217–28 (2012). See also M. Claire Flowers, *Facing the Inevitable: The Inevitable Disclosure Doctrine and the Defend Trade Secrets Act of 2016*, 75 Wash & Lee L Rev 2207, 2223 (2018) (finding that not all states bar application of inevitable disclosure doctrine entirely; only those in the Eighth Circuit, California, Kentucky, Louisiana, Maryland, and Massachusetts expressly refused to adopt the doctrine). During the period in which Silicon Valley overtook Route 128 as a technology center, it was uncertain whether a California court could issue injunctive relief under the inevitable disclosure doctrine. See Part II.A.3.

121 These headline disputes include: Cisco's lawsuit against Arista, a company founded by departing Cisco employees, see Rachael King, *Cisco's Feud with Former Star Executive Turns Personal—and Costly* (Wall St J, Aug 17, 2017), online at https://www.wsj.com/articles/ciscos-feud-with-former-star-executive-turns-personaland-costly-1502980362 (visited Feb 17, 2020) (Perma archive unavailable); Intel's suit against Broadcom involving the departure of former Intel employees, see Karen Alexander, *Intel, Broadcom Settle Suit over Trade Secrets* (LA Times, Nov 22, 2000), archived at https://perma.cc/MQ9J-KEZA; and Apple's suit against Steve Jobs and Next, see Andrew Pollack, *Steven Jobs Settles Suit Filed by Apple* (NY Times, Jan 18, 1986), archived at

such legal threat, and the potential injunction, damages, and litigation costs to which the employee and future employer could be exposed,[122] Google may be able to dissuade Uber from hiring its employee. This effectively occurred in the Google-Uber litigation: first, Levandowski was barred by court order from working on certain projects at Uber; and, second, Uber fired Levandowski in connection with Google's litigation and related allegations of trade-secret theft.[123] Effectively, this approaches the result that would have been achieved if Google had been able to enforce a noncompete covenant against a departing employee.

Aside from these clearly legal mechanisms, Google and Uber might enter into a mutual "no-hire" (also known as antipoaching) agreement. Beginning in 2005, Apple, Google, and other Silicon Valley–based companies reportedly entered into unwritten "no-hire" agreements to protect their trade secrets and to suppress wage competition among one another.[124] Although these arrangements were ultimately dissolved following a settlement with the Department of Justice for alleged antitrust violations,[125] they illustrate how firms that are precluded from using noncompetes

https://perma.cc/5LRN-VK4T. For discussion of other trade secret suits involving departing employees, see Everett M. Rogers and Judith K. Larsen, *Silicon Valley Fever: Growth of High-Technology Culture* 91–94 (Basic Books 1984).

122 Gilson argues that trade secrecy claims are difficult to win (outside of blatant misappropriation) and, as a result, are not typically effective substitutes for noncompetes. Gilson, 74 NYU L Rev at 597–601 (cited in note 8). We feel this understates certain practical and legal realities. Although trade secrecy claims are certainly not as strong as an absolute bar on postemployment opportunities at competitors, they have considerable legal and *in terrorem* force (as Gilson acknowledges to some extent, see id at 600), especially given that, at least during 1984–2002, California law enabled courts to award relief in trade secret cases even in cases of merely "threatened" (rather than actual) misappropriation. See notes 132–34 and accompanying text. For similar views on the potency of California trade secret suits in certain circumstances, see Michael Risch, *Comments on Trade Secret Sharing in High Velocity Labor Markets*, 12 Empl Rts & Empl Pol J 339, 340–42 (2009) (arguing that California trade secret law provides a potent remedy in cases involving the misappropriation of "core" informational assets).

125 US Department of Justice, Press Release, *Justice Department Requires Six High Tech Companies to Stop Entering into Anticompetitive Employee Solicitation Agreements: Settlement Preserves Competition for High-Tech Employees* (Sept 24, 2010), archived at https://perma.cc/RYG6-VEE5.

may have strong incentives to use other mechanisms to dampen labor mobility.

e) Economic alternatives to noncompetes. Even in the absence of any alternative legal instrument, employers have another potent mechanism by which to discourage employee movement: they can use deferred compensation mechanisms to encourage employees to remain with the firm.[126] There are multiple methods. Employers can set the vesting schedules of deferred equity compensation (often a substantial portion of an employee's compensation at high-tech firms) so that departing employees suffer an implicit financial penalty by departing prior to the date on which all their options to acquire stock in the company have been triggered. Cisco, a Silicon Valley incumbent and repeat acquirer of startups, typically requires that a target's employees waive vesting rights (in the target's stock) that accelerate upon an acquisition and adopt a new graduated vesting schedule (in Cisco's stock), precisely in order to deter departures by the target's key employees for a certain period of time following the acquisition.[127] Alternatively, an acquisition agreement can skew the division of deal consideration such that a small portion is allocated to the up-front purchase price and the remainder is allocated to a future postacquisition date, contingent on the founders and certain other employees remaining with the acquiror post-closing for a certain period of time.[128] In yet another variation, a recent empirical study shows that S&P 500 firms often pay severance to California-based executives in discretionary installments following separation (as contrasted with lump-sum amounts that the same firms usually pay to non-California-based executives immediately upon separation), subject to compliance

---

[126] See Richard A. Booth, *Give Me Equity or Give Me Death—the Role of Competition and Compensation in Building Silicon Valley*, 1 Entrepreneurial Bus L J 265, 271 (2006) (arguing that deferred equity compensation is used as a replacement for noncompete agreements for purposes of retaining employees). For empirical evidence that stock options promote employee retention, see Paul Oyer and Scott Schaefer, *Why Do Some Firms Give Stock Options to All Employees?: An Empirical Examination of Alternative Theories*, 76 J Fin Econ 99, 109–10, 131–32 (2005) (based on data on firms' stock option grants to middle managers, finding that this practice is primarily used for purposes of retaining employees and "sorting" between higher- and lower-quality employees).

Raymundo, *Acqui-Hires for Growth: Planning for Success* *35 (Lowenstein Sandler PC, 2012), archived at https://perma.cc/5XBD-2Q76 (noting that certain acquisitions allocate more than 40 percent of the deal consideration to "incentive pool payments" and "equity grant roll overs . . . contingent on key employees staying with the buyer post-closing").

with noncompete provisions in the executives' employment agreements that are not directly enforceable through breach-of-contract suits.[129]

3. Was Massachusetts's noncompete and trade secret law significantly different from California's?

The traditional narrative relies on a significant difference in legal treatment between Massachusetts and California with respect to the enforcement of noncompetes and related doctrines that impact employee mobility. Below we look more carefully at comparative differences between Massachusetts and California law in the enforcement of noncompetes and trade secret law. We do not discern any meaningful differences with respect to trade secret claims. Although we do not contest that there were material differences in the enforceability of noncompetes between the two states during the historical period in question, the comparison is more nuanced than commonly explained, especially taking into account the above-noted exceptions to California's oft-described "ban" on noncompetes.

a) Trade secrets; inevitable disclosure. In general, there are few substantial differences in the trade secret doctrines followed by California and Massachusetts courts.[130] Where there are fine differences, these do not necessarily support the conventional expectation that Massachusetts provides stronger trade secret protections. To illustrate these tendencies, we look more closely at the inevitable disclosure doctrine and its evolution in California and Massachusetts during the period in which Silicon Valley rose to preeminence. Under this doctrine, a court can enjoin an individual from working for a new employer on the ground that the individual will inevitably disclose trade secrets belonging to the former employer.[131] This represents a plaintiff-favorable extension of trade secret law, which typically requires that the plaintiff show that the defendant has actually used or disclosed the trade secret after having misappropriated it.

[129] See Sarath Sanga, *Incomplete Contracts: An Empirical Approach*, 34 J L Econ & Org 650, 654, 670–77 (2018) (using a data sample consisting of 852 executive contracts disclosed in SEC filings during 1996–2016 by 75 S&P 500 firms that had employees in California and at least one state other than California).

[130] See Gilson, 74 NYU L Rev at 602 (cited in note 8) (stating that "[t]he scope of protection provided by trade secret law in California and Massachusetts appears to be roughly the same"). See also Robert G. Bone, *A New Look at Trade Secret Law: Doctrine in Search of Justification*, 86 Cal L Rev 241, 247 (1998) ("Although trade secret doctrine varies from state to state, the general rules are substantially similar in all jurisdictions.").

[131] See Flowers, 75 Wash & Lee L Rev at 2217 (cited in note 120).

As of the late 1970s and early 1980s, we are not aware of any indication in California or Massachusetts case or statutory law that either jurisdiction had explicitly recognized or rejected the inevitable disclosure doctrine or any equivalent under trade secret law. In 1984, however, it was California—not Massachusetts—that signaled openness to the inevitable disclosure doctrine by adopting the Uniform Trade Secrets Act (UTSA), which became effective the following year. California's version of the UTSA, the California Uniform Trade Secrets Act (CUTSA), follows the language of the model statute and provides that a plaintiff can obtain injunctive relief under trade secret law if the court finds there is "threatened misappropriation."[132] Those two words mattered: in 1996, AMD, a leading California semiconductor manufacturer, successfully relied on the inevitable disclosure doctrine to secure a preliminary injunction preventing more than twelve of its former employees from taking certain positions at their new employer, Hyundai.[133] Given the language in the CUTSA, and the outcome in the AMD-Hyundai litigation, it can be understood why a Silicon Valley practitioner observed in 1997 that it was unclear whether the inevitable disclosure remedy was available under California law.[134]

In 1998, the author of a leading treatise on trade secret law observed that California law authorized courts generally to intervene to protect against "threatened harm" and concluded: "California has never rejected the fundamental idea that underlies the [inevitable disclosure] doctrine."[135] In 1999, a California intermediate appellate court even explicitly adopted the doctrine (although it ruled against the trade secret claimant and the court's opinion was subsequently "depublished" by the California Supreme Court).[136] Commentators observed that the court's opinion reflected the actual law on the ground in some California

136 See generally *Electro Optical Industries, Inc v White*, 90 Cal Rptr 2d 680 (Cal App 1999), ordered not to be officially published, 2000 Cal LEXIS 3536 (Cal). Specifically, the Court of Appeal stated: "Although no California court has yet adopted it, the inevitable disclosure rule is rooted in common sense and calls for a fact specific inquiry. We adopt the rule here." 90 Cal Rptr 2d at 684.

lower courts: "The . . . decision now makes explicit what many trade secret practitioners have known for years: California courts will grant narrowly tailored injunctions in appropriate circumstances to prevent a former employee from performing certain tasks for a new employer to minimize the threat to a former employer's trade secrets."[137]

In the immediately ensuing years, the case law shifted in a more defendant-friendly direction, as several federal district courts applying California law[138]—and, in 2002, a California intermediate appellate court—rejected the inevitable disclosure remedy,[139] specifically distinguishing in the latter case between "inevitable disclosure" and the "threatened misappropriation" language in the CUTSA.[140] Nonetheless, a contemporary observer wrote that it remained uncertain whether a California court might apply the inevitable disclosure doctrine, given that the 2002 case was a ruling by an intermediate appellate court.[141] Reflecting this lingering uncertainty, a California court in 2008 recognized the continuing possibility of bringing a trade secret claim based on the "threatened misappropriation" language in the CUTSA.[142] Although it is almost certain today that the inevitable disclosure doctrine is no longer viable in California in view of *Edwards v Arthur Andersen LLP*,[143] during the ascendance of Silicon Valley in the 1980s, 1990s, and early 2000s, this was not the case.

During approximately the same period, the development of the law in Massachusetts concerning the inevitable disclosure

142 See *Central Valley General Hospital v Smith*, 162 Cal App 4th 501, 524–26 (2008) (stating that the rejection of the inevitable disclosure doctrine in *Whyte* does not imply rejection of trade secret claims based on threatened misappropriation, given that the California code explicitly recognizes such claims).

143 189 P3d 285 (Cal 2008). Reflecting the post-*Edwards* approach toward noncompetes and employee mobility more generally, a California court in 2009 awarded attorneys' fees as sanctions against a party that sought an injunction based on the inevitable disclosure doctrine (together with other evidence of bad faith). See *FLIR Systems, Inc v Parrish*, 174 Cal App 4th 1270, 1273–74, 1277 (2009). For further discussion, see Charles T. Graves, *Is There an Empirical Basis for Predictions of Inevitable Disclosure?*, 18 Wake Forest J Bus & Intell Prop L 190, 194–96 (2018).

doctrine followed a remarkably similar trajectory, with the only potential difference being that Massachusetts common law provided an even weaker basis for asserting the inevitable disclosure doctrine. Given that Massachusetts (unlike California) had not adopted the UTSA and therefore required that a trade secret claimant show actual use or disclosure by the defendant, there was arguably no basis under Massachusetts common law to issue injunctive relief under a theory of inevitable disclosure. In 1995, a federal district court (applying Massachusetts law) found that it was "inevitable" that a software developer would use his former employer's information in his new position; however, the case involved a noncompete agreement and therefore it was not necessary for the court to address the inevitable disclosure doctrine.[144] In 2002, a federal district court did address the doctrine directly and rejected it, stating: "Massachusetts law provides no basis for an injunction without a showing of actual disclosure."[145] As of 2003, a commentator summed up the state of the law by observing that "no Massachusetts appellate court has ruled on the viability of the inevitable disclosure doctrine, and the few Massachusetts trial court decisions dealing with the doctrine have been decidedly lukewarm about it."[146]

Consistent with our general view stated at the outset of this discussion, with respect to the inevitable disclosure doctrine, it was actually California that was more protective of trade secret holders. Any current differences can be dated either to 2008, the year of the *Edwards v Arthur Andersen LLP* decision (insofar as it signaled California courts' likely rejection of any effort by plaintiffs to seek injunctive relief under the inevitable disclosure doctrine), or 2018, when the Massachusetts legislature adopted its version of the UTSA. This gave rise to the same uncertainty that arose following California's adoption of the UTSA in 1984. Following the model statute, the Massachusetts version refers to "threatened misappropriation,"[147] which could provide a basis for Massachusetts courts to adopt the inevitable disclosure doctrine, although they may adopt California courts' now-prevailing understanding that the "threatened misappropriation" language does

not imply endorsement of the inevitable disclosure doctrine.[148] While that particular point remains unresolved today, it is notable that practitioners have commented that acceptance by Massachusetts courts of the inevitable disclosure doctrine would run counter to those courts' historical tendency to reject or at least resist application of the doctrine.[149]

b) Noncompetes. During the time in which Silicon Valley overtook Route 128, and continuing through the present, it is certainly the case that Massachusetts law, as compared to California law, provided employers with a higher level of confidence in the enforceability of noncompetes. But the differences should not be exaggerated nor should it be assumed that Massachusetts employers have had unfettered ability to enforce noncompetes without constraint. Like almost all states, Massachusetts applies the common-law reasonableness standard. This standard limits the enforceable scope of a noncompete by duration, scope and geography, provided in all cases that the noncompete is deemed necessary to protect the employer's legitimate business interests.[150] For this purpose, Massachusetts courts have defined the employer's legitimate interest narrowly. In a trilogy of cases decided in 1974, the Massachusetts Supreme Court emphasized that noncompetes were enforceable only to the extent required to protect the employer's goodwill, trade secrets, or confidential information.[151] Massachusetts courts apparently took these constraints seriously: writing in 1991, a leading practitioner of trade secret law observed that "Massachusetts courts have often refused to enforce non-competition agreements on the ground that no trade secrets or confidential business information were involved" and that "[i]n

148 For discussion, see Yekaterina Reyzis, *One Step Away from Uniform: Taking a Closer Look at Massachusetts' New Trade Secrets Law* (JDSupra, Nov 21, 2018), archived at https://perma.cc/M472-MVPY.

151 See *All Stainless Inc v Colby*, 308 NE2d 481, 485–86 (Mass 1974); *Marine Contractors Co*, 310 NE2d at 920; *National Hearing Aid Centers, Inc v Avers*, 311 NE2d 573, 576–77 (Mass App 1974).

numerous cases, Massachusetts courts have cut back restrictions to make them reasonable."[152]

Other obstacles stood in the way of a Massachusetts employer who sought to enforce a noncompete. Since 1968, Massachusetts courts have recognized the material change doctrine, which bars enforcement of noncompetes if the employee's position and salary changed significantly since starting employment.[153] In 1979 and 1982, the Massachusetts courts extended the reasonableness standard to employment contracts that required employees to forfeit certain deferred compensation upon termination, on the ground that these provisions implicitly operated as noncompetes.[154] Additionally, Massachusetts courts have held that noncompete agreements are to be construed strictly in favor of the employee and, relatedly, have declined to enforce noncompetes if the contractual language has been deemed to be excessively ambiguous.[155] Contrary to the standard narrative, Massachusetts courts during the decline of Route 128 were far from enthusiastic about noncompetes and applied the common-law reasonableness standard to limit their enforceability.

4. Did weak enforcement of noncompetes really cause the Valley to rise?

The standard narrative correctly observes that Massachusetts was an early pioneer of technological innovation. Ironically, the Boston area essentially originated what is now viewed as the Silicon Valley model consisting of a strong academic research complex coupled with a robust venture capital community and substantial movement of human capital among academia, startups, and large firms. In 1946, a Boston firm (the American

[152] Laurence H. Reece III, *Employee Non-Competition Agreements and Related Restrictive Covenants: A Review and Analysis of Massachusetts Law*, 76 Mass L Rev 2, 11–12 (1991), citing *National Hearing Aid Centers*, 311 NE2d at 576–77 (denying injunctive relief on ground that employee had not used any confidential information belonging to the employer); *Richmond Brothers, Inc v Westinghouse Broadcasting Co, Inc*, 256 NE2d 304, 305–06 (Mass 1970) (declining to enforce noncompete on ground that employee's success was not attributable to employer's trade secrets or confidential information).

[154] *Kroeger v Stop & Shop Companies, Inc*, 432 NE2d 566, 568, 571–72 (Mass App 1982); *Cheney v Automatic Sprinkler Corp of America*, 385 NE2d 961, 965 & n 7 (Mass 1979).

[155] See, for example, *Lanier Services, Inc v Ricci*, 192 F3d 1, 4–5 (1st Cir 1999) (finding that the term, "facilities management services," was ambiguous as a matter of law, interpreting the phrase against the former employer as the drafting party, and declining to enforce the noncompete). For discussion of additional cases during 1999–2002, see Reece, 88 Mass L Rev at 26 (cited in note 146).

Research and Development Corporation, or ARD) established the first major successful venture capital enterprise.[156] Supported by federal defense funding and local VC investors, MIT and Harvard University labs spawned hundreds of spin-offs throughout the 1960s and 1970s.[157] Those spin-offs included firms that later pioneered the "minicomputer"[158] market such as Digital Equipment Corporation (DEC) (founded in 1957 as a MIT startup with funding from ARD), Wang (founded by a Harvard physicist in the 1950s), Data General (founded in 1968 by ex-DEC engineers), and Prime (founded in 1972 by engineers from Honeywell).[159]

Contrary to Saxenian's account of cultural norms, Paul Ceruzzi describes the most important Route 128 firm, DEC, as having been characterized by a nonhierarchical engineer-driven culture that dispensed with the formalities and bureaucracy of incumbents such as IBM.[160] Certainly, as DEC and other large Route 128 firms grew, they tended to adopt vertically integrated structures.[161] But it would be inaccurate to describe the Route 128 environment in its heyday as a monolithic industry consisting of

[156] Saxenian, *Regional Advantage* at 15 (cited in note 8).

[157] See id at 16–17; Martin Kenney and Urs von Burg, *Technology, Entrepreneurship and Path Dependence: Industrial Clustering in Silicon Valley and Route 128*, 8 Indust & Corp Change 67, 85–87 (1999); Edward B. Roberts, *A Basic Study of Innovators; How to Keep and Capitalize on Their Talents*, 11 Rsrch Mgmt 249, 254–55 (1968).

[158] The minicomputer refers to a class of computing devices that delivered computing power at a significantly reduced cost (and physical size) relative to the mainframe market (dominated by IBM). Advances in miniaturization and the development of the microprocessor yielded the "microcomputer" (equivalent to the modern PC), which delivered substantial computer power with a small physical "footprint," thereby rendering obsolete the minicomputer category. For discussion, see Paul E. Ceruzzi, *A History of Modern Computing* 124–26 (MIT 2d ed 2003).

[159] See id at 127 (noting that DEC was founded in 1957 by former MIT researchers with funding from ARD); id at 195 (stating that Data General was founded in 1968 by three former DEC engineers); Saxenian, *Regional Advantage* at 18–19 (cited in note 8) (noting that in 1951, An Wang, a scientist at Harvard, founded Wang Laboratories; in 1957, three scientists left Lincoln Labs to found DEC; in 1968, Edson DeCastro left DEC to found Data General; in 1972, William Poduska left Honeywell to found Prime); Kenney and von Burg, 8 Indust & Corp Change at 85–86 (cited in note 157) (noting that in 1957, Kenneth Olsen, a former MIT researcher, founded DEC with a capital investment from ARD); Lynn E. Browne and Steven Sass, *The Transition from a Mill-Based to a Knowledge-Based Economy: New England, 1940–2000*, in Peter Temin, ed, *Engines of Enterprise: An Economic History of New England* 211–12 (Harvard 2000).

[160] See Ceruzzi, *A History of Modern Computing* at 138 (cited in note 158) ("DEC represented everything that was liberating about computers, while IBM, with its dress code and above all its punched card, represented everything that had gone wrong.").

[161] See Kenney and von Burg, 8 Indust & Corp Change at 86–87 (cited in note 157) (stating that many minicomputer pioneers in the Route 128 area integrated vertically in order to reduce turnaround time and protect chip designs); Sarah Kuhn, *Computer Manufacturing in New England: Structure, Location and Labor in a Growing Industry* 29–33 (Joint Center for Urban Studies of MIT and Harvard University 1982).

a handful of vertically integrated incumbents. Although DEC and three other Route 128 firms (plus IBM) dominated the minicomputer segment in the late 1970s and early 1980s,[162] observers and studies systematically documented that those firms spawned a continuing flow of small-firm spin-offs.[163] An interview-based study of twenty-two Massachusetts-based computer firms between 1965 and 1975 found that half of the firms' products "were the result of direct technology transfer from previous employers and another quarter indirect transfer."[164] A study of patent coauthoring patterns found similarly that Boston innovators were regularly involved in information exchange networks that were comparable in robustness (but not size) to those in Silicon Valley.[165] In a manner akin to accounts of Silicon Valley, qualitative histories observe that Route 128 spin-offs could procure necessary inputs from a disaggregated network of small- to medium-size component producers and suppliers, assemblers, and distributors.[166] A history of the period concludes: "[C]ompanies spinning

off from other companies were at the very heart of the monumental growth that the Route 128 area experienced from the 1960s through the 1980s."[167]

On the West Coast, Silicon Valley pioneered innovations in the semiconductor field and, by the late 1970s, was the recognized leader.[168] Historical accounts of Silicon Valley's semiconductor industry typically attribute its origins to the departure in 1957 of leading engineers from Shockley Transistors to form Fairchild Semiconductor, which generated a sequence of leading semiconductor firms.[169] Semiconductor chips are a critical component in a wide array of computing and electronics products and operated as a launching pad for Silicon Valley to achieve dominance in information technology more generally.[170] Even after lower-cost Japanese producers in the 1980s undermined the local memory chip production industry, Silicon Valley adapted by shifting resources to the design and development of customized chips[171] and developing strengths in hardware and software markets. By contrast, the Massachusetts minicomputer industry did not recover as quickly from the entry of lower-cost workstations and personal computers.[172] Massachusetts had bet on the wrong horse and was unable to recover the lead.

Unlike the legal literature, the economic history and business management literature shows no consensus view as to the factors that best explain why Silicon Valley overtook Route 128 as an information technology center. Starting with Gilson, the legal literature has focused on the explanation advocated by Saxenian, who

start-ups that are developing prototypes and to manufacturers of customized equipment for small markets").

171 See AnnaLee Saxenian, *Regional Networks and the Resurgence of Silicon Valley*, 33 Cal Mgmt Rev 89, 89–95 (1990) (describing how firms that specialize in the design of customized chips and outsource production enabled Silicon Valley to recover after Japanese firms entered the general-purpose semiconductor markets).

172 See Ceruzzi, *A History of Modern Computing* at 304–06 (cited in note 158) (describing how minicomputer companies based in the Boston area failed to adapt to the PC revolution); Kenney and von Burg, 8 Indust & Corp Change at 87 (cited in note 157) (stating that the minicomputer industry could not compete with "workstations" that offered comparable computing power at a substantially lower price); Richard N. Langlois, *Organizing the Electronic Century*, in Giovanni Dosi and Louis Galambos, eds, *The Third Industrial Revolution in Global Business* 119, 155 (Cambridge 2013) (same).

attributed this development to cultural norms and vertically integrated structures that constrained the flow of intellectual capital.[173] However, the business management and economic history literature is far less monolithic and identifies other salient reasons why Silicon Valley may have overtaken Massachusetts. Most commonly, these scholars identify factors such as the draw of warm weather, luck (in particular, Shockley Transistors' choice to locate in the Bay Area, which then gave rise to the Fairchild spin-off),[174] and, most compellingly, the fact that Silicon Valley had achieved leadership in a general-purpose technology (namely, the microprocessor pioneered by Intel in the 1970s) that could be applied to a wide variety of industrial, business, and consumer markets.[175] By contrast, the leading Massachusetts firms in the late 1970s and early 1980s had focused on developing specialized minicomputer and other technologies targeted for technical and industrial users.[176] Hence, once-pioneering Massachusetts firms such as DEC tended to focus on technologies that would service existing markets for technical and industrial users, rather than developing innovations—such as the personal computer—that would open up new and much larger markets in the corporate, small business, and home segments.[177]

This is not to say that East Coast firms were innovation laggards as compared to their West Coast counterparts. After all, it was IBM, headquartered in New York State, that in 1981 launched the personal computer, which precipitated the movement from closed "end-to-end" hardware systems to modular

173 See note 8.

174 In the words of Intel's cofounder: "[L]uck played a role in nearly every component of this story of semiconductors and the birth of Silicon Valley." See Gordon Moore and Kevin Davis, *Learning the Silicon Valley Way*, in Timothy Bresnahan and Alfonso Gambardella, eds, *Building High-Tech Clusters: Silicon Valley and Beyond* 7, 36 (Cambridge 2004).

175 See Kenney and von Burg, 8 Indust & Corp Change at 80 (cited in note 157) (noting that "the semiconductor found a far greater variety of applications than did the minicomputer" and "the semiconductor was important because it made so many other products possible").

176 See id (noting that Route 128 specialized in the minicomputer, which was a finished product, rather than a component that could be used to assemble other products); Dorfman, *Massachusetts' High Technology Boom in Perspective* at 2–4 (cited in note 162).

177 See Kenney and von Burg, 8 Indust & Corp Change at 87 (cited in note 157) (noting the common observation that Route 128 firms such as DEC failed to appreciate the threat posed by workstations and microcomputers, the precursors to the desktop personal computer); Ceruzzi, *A History of Modern Computing* at 243–45 (cited in note 158) (noting DEC's choice to focus on high-performance and larger computers rather than smaller and less expensive personal computers).

"plug-and-play" hardware systems as the standard product architecture in the computing market.[178] That East Coast innovation in turn led to the aforementioned decline of DEC, Wang, and other leading Massachusetts minicomputer firms that operated under closed models in which customers purchased all components from a single firm.[179] IBM's success is attributable in part to its then-novel decision to outsource design and production of many of the PC's components—most notably, the operating system (to Microsoft) and the microprocessor (to Intel)—as well as its inadvertent commoditization of the PC's hardware.[180] But these were strategies that could have been taken by a firm like DEC, which had previously made pioneering contributions to computing technology. In fact, DEC attempted to do just that. In 1988, IBM and DEC collaborated to establish the Open Software Foundation, an effort to develop OS/2, a nonproprietary operating system intended to challenge Microsoft's Windows system.[181] Similarly, some of DEC's Route 128 peers responded (albeit, somewhat belatedly) to the decline of the minicomputer by adopting alternative organizational structures.[182] Moreover, two Route 128 firms launched the first commercially successful spreadsheet applications (Visicalc, released in 1979, and Lotus 1-2-3, released in 1984),[183] which are recognized as key factors in the widespread adoption of the Mac and PC, respectively.[184] Hence, there does not seem to be any compelling reason to attribute the decline of DEC and other leading Massachusetts firms substantially to cultural norms or vertically integrated forms of industrial organization.

A similar observation complicates Gilson's argument that Massachusetts's willingness to enforce noncompetes suppressed labor mobility, which hindered the region's innovative performance. Critically, this argument fails to contemplate that

178 See Langlois, *Organizing the Electronic Century* at 153–54 (cited in note 172).

179 See Best, *The New Competitive Advantage* at 122 (cited in note 163) (observing that dominant Route 128 firms such as DEC and Wang offered "closed architecture" systems). Route 128 firms could have chosen *not* to request or enforce noncompetes if competitive pressures in the labor market drove them to do so. Gilson argues that collective-action pressures precluded that possibility.[185] But there is compelling evidence that Route 128 firms sometimes, if not *typically*, elected to forgo adoption and enforcement of noncompetes. Contemporary accounts in the early 1980s observed that Route 128 was characterized by frequent spin-offs,[186] talented engineers often left their employees to form start-ups, and large incumbents were typically parents of multiple spin-off firms.[187] One observer records that Route 128 firms tolerated or even welcomed the movement of technical personnel because they "value[d] the knowledge they obtain[ed] by hiring employees from other firms more than they fear[ed] the loss of proprietary information,"[188] and that entrepreneurs often conceived of ideas "in the lab of an employer."[189] That same observer noted that "[n]ew and expanding firms hire[d] their 'know how' by bidding experienced employees away from competing firms."[190]

These accounts make no mention of the use of noncompetes to restrain employee turnover. Rather, firms attempted to retain valued employees by offering superior terms and more interesting work[191]—something that would have been unnecessary if noncompetes were legally potent. The lesson seems clear: when technical

185 See Gilson, 74 NYU L Rev at 596 (cited in note 8).

186 See David A. Garvin, *Spin-Offs and the New Firm Formation Process*, 25 Cal Mgmt Rev 3, 3 (1983) (observing that, as of the early 1980s, in both Silicon Valley and Route 128, new firms are continuously being formed through "spin-offs" founded by "individuals leaving an existing firm in the same industry").

187 See Rosegrant and Lampe, *Route 128* at 29, 153–57 (cited in note 163); Dorfman, *Massachusetts' High Technology Boom in Perspective* at 69 (cited in note 162). Professor Sarah Kuhn observes as follows: (i) "[s]ome firms prefer to hire away employees of other computer manufacturing firms," Kuhn, *Computer Manufacturing in New England* at 72 (cited in note 161); (ii) Route 128 has "an unusually high turnover rate among its technical employees, see id at 124–25, and (iii) Route 128 firms provided survey responses indicating heavy reliance on hiring employees from competitors, see id at 125. Similarly, Nancy Dorfman remarks that the Route 128 area is characterized by a start-up entrepreneurial culture in which firms bid away experienced employees from competitors. See Dorfman, 12 Rsrch Pol at 308 (cited in note 79). She further observed that "scientists repeatedly leave their employers to commercialize and market new products whose concepts they helped to develop in the laboratory of a former employer" and it is a "challenge to find new enterprises whose founders did not come from an academic laboratory or another high tech firm." See id at 310.

188 See Dorfman, *Massachusetts' High Technology Boom in Perspective* at 9 (cited in note 162).

189 See id at 69.

190 See Dorfman, 12 Rsrch Pol at 308 (cited in note 79).

191 See Kuhn, *Computer Manufacturing in New England* at 125 (cited in note 161).

talent is scarce and market demand for that talent is high, bargaining leverage shifts to employees and differences in the enforceability of noncompetes make little practical difference. Any employer who sought to enforce a noncompete would be punished in the labor market.[192]

To be certain, there is no comprehensive quantitative evidence on noncompete usage and enforcement during this historical period. However, in more recent times—notably, after California substantially ratcheted up its aversion to noncompetes in 2008 in *Edwards*—Massachusetts and California have exhibited similar rates of employee noncompete usage, even among wholly in-state firms, according to the most comprehensive survey conducted to date.[193] Thus, it seems unlikely that during the historical period in question—when Massachusetts and California noncompete law were more similar than today—that the rate of noncompete usage and enforcement between the two states substantially differed.

There may be an additional material factor behind Silicon Valley's ascendance, which existing scholarship has overlooked. In 1979, the Department of Labor modified the "prudence rule" to permit pension fund trustees to invest in venture capital.[194] Based on this signal from federal regulators, state pension fund trustees took the view that it would be consistent with their fiduciary obligations to invest an appropriate portion of a fund's assets in venture capital and other high-risk "alternative" investments.[195] This change triggered a dramatic inflow of capital into VC investments

[192] Of course, monopsonistic labor markets exist, and assuming the predicate conditions for firm coordination in this context are satisfied—small number of employers with large market share, comparable employment positions, observable compensation, and a credible mechanism to punish defections—employers can credibly impose and enforce noncompetes. For discussion, see *Todd v Exxon Corp*, 275 F3d 191, 201–02, 207–14 (2d Cir 2001). However, we have no reason to believe that these challenging conditions were satisfied in the labor markets for highly skilled technical workers in the Route 128 area during this historical period, especially given evidence that this area was characterized by frequent spin-offs during this period. See notes 163–67 and accompanying text.

[194] Department of Labor, Rules and Regulations for Fiduciary Responsibility; Investment of Plan Assets Under the "Prudence" Rule, 44 Fed Reg 37221–22 (1979), amending 29 CFR § 2550.404a-1.

[195] See Paul A. Gompers and Josh Lerner, *What Drives Venture Capital Fundraising?* 155 (Brookings Institution 1998).

and, by the late 1980s, the emergence of pension funds as the single largest investor class in VC funds.[196] Presumably, the same is true of California pension funds' increase in VC investment at approximately the same time, given that CalPERS, the principal California state pension fund, followed the lead of the Department of Labor and directed assets toward venture capital funds, formally establishing an Alternative Investment Management program for this purpose in 1990.[197] Like other state pension funds (including Massachusetts), California state pension funds exhibit a significant in-state bias in their investments in VC and private equity funds.[198] VC funds in turn exhibit an in-state bias in the selection of portfolio firms.[199] The much larger size of the California pension system, combined with the in-state biases of California state pension fund managers and California VC principals, implies that Silicon Valley startups likely had access to a much larger pool of capital than Boston-based startups.[200]

[196] See id at 155–56, 163–66 (observing that change in the Department of Labor's "prudent man rule" led to investment in venture capital funds by pension funds, which became the primary source of capital for these funds).

[197] See *CalPERS Private Equity Investments Infuse Billions into California Businesses; Portfolio Is Positioned to Capitalize on Buying Opportunities* (Business Wire, Oct 17, 2003), archived at https://perma.cc/4C74-L6R5 (noting the establishment by CalPERS of Alternative Investment Management Program in 1990 as a vehicle for investing in private equity).

[198] See Yael V. Hochberg and Joshua D. Rauh, *Local Overweighting and Underperformance: Evidence from Limited Partner Private Equity Investments*, 26 Rev Fin Stud 403, 414–25 (2013).

[199] See Adam Lichtenstein, *Home-State Investment Bias in Venture Capital Funds*, 62 Fin Analysts J 22, 23–24 (2006). For further evidence that venture capital funds favor investments in geographically proximate regions, see Claudia B. Schoonhoven and Kathleen M. Eisenhardt, *Regions as Industrial Incubators*, in Edwin S. Mills and John F. McDonald, eds, *Sources of Metropolitan Growth* 210, 244–45 (Transaction 2012).

[200] Although data is not available from the time period in question, to get a sense of the sums involved, consider that, during 2007–2014, CalPERS has held between 8.5 percent and 13.5 percent of its private equity investments in California-based firms. In 2014, it held $31.5 billion of private equity investments, of which 11.5 percent was invested in California-based firms. See CalPERS, *CALPERS Comprehensive Annual Financial Report* *52, 100 (FY 2014); CalPERS, *CALPERS Comprehensive Annual Financial Report* *92 (FY 2010); California State Controller's Office, *CALPERS Comprehensive Annual Financial Report* *83 (FY 2009); CalPERS, *CALPERS Comprehensive Annual Financial Report* *86, 89 (FY 2008). Private equity includes VC investments as well as other investments in firms that are not publicly traded. The Massachusetts Pension Reserves Investment Trust Fund, which manages private equity investments on behalf of the Massachusetts state pension system, reported that, as of June 2014, it held $6.9 billion in investments in private equity, of which $1.4 billion was invested in venture capital. See Massachusetts Pension Reserves Investment Trust Fund, *Comprehensive Annual Financial Report* *35 (2014). The report does not disclose what portion of those funds were allocated to Massachusetts-based investment funds, although it does indicate that 27 percent of its private equity investments were made outside the US. See id at *84. Hence, it is extremely

5. Did Massachusetts really decline?

The traditional narrative relies both on the rise of Silicon Valley as a center of innovation in the electronics industry and the decline of Route 128. While it is correct that Silicon Valley has achieved a uniquely preeminent position, this narrative overstates both Massachusetts's relative historical prominence as a technology center and its relative retreat from that position in more recent decades.

While Route 128 was an historical pioneer in the IT industry since World War II, the period during which it was clearly a dominant center was a short period limited to the height of the minicomputer market during the late 1970s and early 1980s.[201] Even during that time, there was no single, overwhelmingly dominant innovation center akin to Silicon Valley's place today. Relative to the Boston area's important, but less than preeminent, position as of the early 1980s, it does not appear to have suffered a permanent decline in innovative performance since the collapse of the minicomputer industry.[202] Rather, the Boston area has recovered its place as a leading regional innovation center, even if it no longer rivals Silicon Valley in the IT market. Multiple innovation metrics provide suggestive evidence in support of this view. During 1985–2013, the Bay Area held and expanded its lead in the volume of VC investments while the New England region consistently occupied the second- or third-place position.[203] From 1987 through 2011, Massachusetts maintained consistently high levels of business-funded R&D intensity (defined as R&D funded by businesses as a percentage of "gross state product") in a range of approximately 3–4 percent, outperforming California in all years but one.[204] From 1997 through 2016, California and Massachusetts

unlikely that Massachusetts pension fund managers invested more capital in Massachusetts-based VC firms, as compared to CalPERS's investments in California-based VC firms.

204 Authors' calculations, based on (i) data on state-level R&D expenditures extracted on an alternating year basis from the National Center for Science and Engineering Statistics, *Industrial Research and Development Information System* (National Science Foundation, July 2011), archived at https://perma.cc/82ZP-4YS2, and (ii) data on "gross state product" available from the Bureau of Economic Analysis, *Comprehensive Revision of Gross State Product, 1977–2002, and Accelerated GSP Estimates for 2003* (US Department of Commerce, Dec 15, 2004), archived at https://perma.cc/28C3-RCTV. With respect to item (i), we excluded federal R&D expenditures in order to avoid reflecting any federal subsidies that might understate regional markets' ability to sustain innovation.

have appeared every year among the top three states in terms of business-performed R&D intensity (defined as R&D performed by businesses as a percentage of "private-industry output").[205] After the San Francisco area, the Boston area is the second-most popular location in the US that companies select for their primary R&D center (selected by 230 firms as of 2011, compared to 380 firms for San Francisco).[206]

The Boston area has preserved or regained a significant presence in biotechnology and the life sciences, computer systems design, telecommunications equipment, data storage, technical instruments, and industry-oriented software tools.[207] In fact, the success of the Boston area as a technology cluster since the collapse of the minicomputer industry has now lasted longer than the period during which DEC and its peers were dominant.[208] Notwithstanding Massachusetts's formal tolerance of noncompetes, multiple leading firms in various information technology sectors have spawned a steady flow of new firms providing complementary products and services.[209] In the life sciences (including biotechnology) and medical devices sector in particular, the Boston area is especially prominent (in 2015, biotech firms based in New England raised approximately $10.6 billion from outside investors, while biotech firms based in the San Francisco Bay Area raised approximately $6.5 billion).[210] Trade and scholarly commentary typically situates the Boston area among a triplet of

[207] See Best, *The New Competitive Advantage* at 126, 127–48, 154, 157 (cited in note 163) (describing "resurgence" of Route 128 area as the local technology industry transitioned from vertically integrated to an "open system . . . model of industrial organization"); Michael Best, Albert Paquin, and Hao Xie, *Discovering Regional Competitive Advantage: Massachusetts High-Tech*, 2 Bus & Econ Hist On-Line 1, 2, 7–21 (2004), archived at https://perma.cc/C6X4-7HAN (describing "resurgence" of the Boston area as an innovation center in the 1990s and providing extensive data showing that the Boston area continues to excel in its historical strengths in complex systems software and engineering); Jason S. Wood, *A Comparison of the Enforceability of Covenants Not To Compete and Recent Economic Histories of Four High-Technology Regions*, 5 Va J L & Tech 14, ¶ 38 (2000) (noting that, contrary to "Gilson's dark portrait of Massachusetts' lack of knowledge spillover effects, the greater Boston area, including Route 128, has recovered nicely from the dark days of the 1980s and early 1990s, and has been a leader in the technology revolution of the mid and late-1990s").

[208] See Best, *The New Competitive Advantage* at 121 (cited in note 163).

[209] See id at 129–30.

[210] See *Beyond Borders 2016: Biotech Financing* *15 (Ernst & Young, 2016), archived at https://perma.cc/C3SS-4CZZ.

leading biotechnology clusters along with the Bay Area and San Diego,[211] in some cases ranking it as the leader among those three locations.[212] As of 2015, the Massachusetts Biotechnology Council stated that Massachusetts employed more personnel in biotechnology R&D than any other state and an MIT report found that, on a per capita basis, Massachusetts received significantly more funding ($351 per capita) from the National Institutes of Health than California ($88 per capita).[213] During 2012–2014, San Francisco firms received each quarter approximately 30–50 percent of funding in the national life sciences industry, while Boston firms received each quarter approximately 20–40 percent of funding.[214]

On a state-to-state level comparison, it may be surprising to learn that Massachusetts and California do not materially differ by multiple measures of innovative health. The State Technology and Science Index, which ranks states' innovation capacities by various objective measures, has ranked Massachusetts in first place since the index was inaugurated in 2002 and through its latest release in 2018.[215] In 2018, California ranked fourth, after having held fourth, third, and third places in 2016, 2014, and 2012, respectively.[216] According to the State New Economy Index, both California and Massachusetts are among the country's leading states on multiple innovation measures (reflecting data as of the years 2012 through 2016), including:

(i) industry-funded R&D as a percentage of total state GDP (CA: 2.5 percent (ranked third); MA: 2.1 percent (ranked fourth));

B. Empirical Studies: Noncompetes, Mobility, and Innovation

Even if the Silicon Valley / Route 128 narrative were more robust, it would be imprudent to base any policy conclusions on a single historical example. While Japan was once widely viewed as a model of a successful innovation economy, a regime characterized by lifetime job security and oligopolistic market structures would hardly be viewed today as an attractive innovation ecosystem.[218] Recently, empirical and experimental researchers have sought to move beyond the Silicon Valley example and, in doing so, have produced a sizeable body of studies concerning the effect of noncompetes on labor mobility and, in some cases, innovation. Unlike the literature that relies on the Silicon Valley / Route 128 narrative, these studies usefully apply formal methods to a broad sample of state jurisdictions, seeking to exploit interstate differences, or intrastate changes in, the legal treatment of noncompetes to identify the effects of such differences and changes on employee turnover and certain innovation indicators.

These studies fall into two categories. The larger category addresses only or principally whether noncompetes (or specifically, the enforceability of noncompetes) reduce labor mobility. In a companion paper, we review these studies comprehensively and provide a detailed discussion of the contributions and limitations of the most widely cited studies.[219] In that review, we describe significant methodological limitations and identify factual errors

[219] See Jonathan M. Barnett and Ted Sichelman, *Revisiting Labor Mobility in Innovation Markets* *12–29 (USC Gould School of Law Center for Law and Social Science Research Paper Series No CLASS16-13, May 26, 2016), archived at https://perma.cc/V2T9-6UGC.

concerning important points of state law. These shortcomings cast serious doubt on these studies' claims purporting to show a broad causal relationship between the enforcement of noncompetes and reduced labor mobility. For purposes of the review below, however, we will accept as given the findings of this first category of studies—that is, we will assume that the enforceability of noncompetes has some significant incremental effect on labor mobility. This assumption will enable us to focus our review below on a second and smaller group of studies that address the more fundamental question whether the enforceability of noncompetes has a detrimental effect on innovation.

1. Nonexperimental studies.

Several empirical studies have sought to test for a relationship between noncompetes, employee mobility, and innovation. Here, we address in detail four of the studies that scholars and policymakers have most heavily cited and relied upon. First, a 2003 study by Professors Toby Stuart and Olav Sorenson (the "Stuart and Sorenson study") examined biotechnology startups founded in the wake of an initial public offering (IPO) or acquisition of a previous company, finding a significant inverse relationship between in-state noncompete enforceability and overall startup formation. Specifically, in the absence of state-level fixed effects, the authors find that "states with weak non-compete regimes realize 217 percent higher founding rates than those that enforce non-compete covenants."[220] Additionally, taking account for state-fixed effects, Stuart and Sorenson find that the median IPO "occurring in . . . a weak enforcement state increases the founding rate [of new biotech firms] . . . by 26 percent."[221] Second, a 2011 study by Professor Mark Garmaise (the "Garmaise study") found that stronger noncompete enforceability, interacted with a measure of in-state competition, tends to suppress R&D spending and that increased enforceability reduces capital investment per

Our analysis in that paper focuses on the most widely cited studies, which include: Matt Marx, Jasjit Singh, and Lee Fleming, *Regional Disadvantage? Employee Non-compete Agreements and Brain Drain*, 44 Rsrch Pol 394 (2015); Garmaise, 27 J L Econ & Org 376 (cited in note 63); Matt Marx, Deborah Strumsky, and Lee Fleming, *Mobility, Skills, and the Michigan Non-compete Experiment*, 55 Mgmt Sci 875 (2009); Bruce Fallick, Charles A. Fleischman, and James B. Rebitzer, *Job-Hopping in Silicon Valley: Some Evidence Concerning the Microfoundations of a High-Technology Cluster*, 88 Rev Econ & Stat 472 (2006).

employee.[222] Third, a 2011 study by Professors Sampsa Samila and Olav Sorenson (the "Samila and Sorenson study") found that states that enforce noncompetes dampen the effects of venture capital investment on firm formation and patenting rates.[223] Based on these findings, Samila and Sorenson conclude that the enforceability of noncompetes "significantly impedes entrepreneurship and employment growth."[224] Fourth, a 2015 study by Professors Matt Marx, Jasjit Singh, and Lee Fleming (the "Marx et al. study") found a "brain drain" of inventors from Michigan to states that do not enforce noncompetes after 1985, the year in which Michigan law restored the enforceability of noncompetes.[225] Moreover, the Marx et al. study found that this effect was strongest for more highly skilled inventors.[226] We now address substantial limitations and, in some cases, outright flaws of these studies. Although we do not have space to address every study examining the relationship between noncompetes and innovation, our critique applies to the vast majority of lesser-cited studies on the issue.

a) Improper characterization of how strongly states enforce noncompetes. First, all four of these studies, as well as many other studies, oversimplify and largely misjudge the variation in the strength of state-by-state enforcement of noncompetes. Specifically, these studies classify strength of enforcement either (1) in a binary fashion as "enforcing" or "non-enforcing" states, developed from the study by Stuart and Sorenson; or (2) according to a twelve-factor scale developed by Garmaise.[227]

Specifically, Stuart and Sorenson classify each state as "nonenforcing" or "enforcing."[228] They identify six states that, during the period 1985–1996, purportedly "preclude[d] the enforcement of *all* noncompete agreements" and five states that "only enforce[d] non-compete covenants under very specific circumstances."[229] These eleven states are considered nonenforcing.[230] In

230 Id.

contrast, they identify twenty-six enforcing states that purportedly placed "*no* restrictions" on the enforcement of noncompetes, as well as thirteen other nonenforcing states that followed a "reasonable[ness]" approach or enforced noncompetes limited in time or space.[231] The Samila and Sorenson study as well as the Marx et al. study both rely on Stuart and Sorenson's classification system for their analyses.[232]

This binary approach is inherently inaccurate—all states enforce some noncompete provisions and no states enforce all noncompete provisions. Other than California, North Dakota, and Oklahoma (until 1989), all states during that time period essentially adopted a reasonableness approach to the enforcement of noncompetes, subject to variation in application.[233]

Even if one were to draw an arbitrary line between states, it would result in at most two nonenforcing states during this time period. Consistent with both Professor Norman Bishara's comprehensive state-by-state review[234] and our own independent review, we find that during the relevant time periods, other than California and North Dakota, none of the purported nonenforcing states in the Stuart and Sorenson study—namely, Alaska, Connecticut, Michigan, Minnesota, Montana, Nevada, Oklahoma, Washington, and West Virginia—can plausibly be classified in this manner.

It appears that Stuart and Sorenson primarily examined the language of specific state statutes as reproduced in the 1996 edition of the Malsberger treatise on state enforcement of covenants not to compete,[235] without carefully reviewing the descriptions of actual case law in the same treatise. Critically, any state's effective noncompete regime cannot be accurately described without taking into account *both* applicable statutes and judicial interpretation of those statutes. Montana is a case in point. Apparently on the basis of the Montana statute voiding "contracts in restraint

[235] See Stuart and Sorenson, 48 Admin Sci Q at 190 (cited in note 220).

of trade,"[236] which has common origins with California's statute, Stuart and Sorenson classify it as a state that "precludes the enforcement of *all* noncompete agreements."[237] Yet, the Malsberger treatise expressly states that "[d]espite subsection 703, Montana courts have upheld restrictive covenants in employment contracts" under a general reasonableness standard.[238]

For states without statutes, Stuart and Sorenson's summary of the Malsberger treatise is also inaccurate. Our detailed review of the treatise, including cases cited therein, shows that all of their study's supposed nonenforcing states lacking statutes—Alaska, Connecticut, Minnesota, and Washington—are misclassified.[239] Again, these states essentially enforce noncompetes under a reasonableness standard. Indeed, Bishara—completely contrary to Stuart and Sorenson—classifies Connecticut and Washington as the fourth and eighth *strongest* enforcing states in 1991, respectively.[240]

In response to an earlier draft of this Article, Sorenson ran robustness checks to the main estimates in the initial study with Stuart using the Bishara measure of enforceability as well as a separate binary coding scheme in which North Dakota and California are the only nonenforcing states.[241] In these revised models, the results are substantially similar to, and in some cases stronger than, Stuart and Sorenson's initial results.[242]

We are heartened by the fact that Sorenson—unlike Marx et al. or Garmaise—chose to revise his study's initial model to take into account our criticisms. However, even these new results are subject to substantial limitations. First, the major result—that the states with weak noncompete enforcement regimes experience higher absolute founding rates than states with strong regimes that abstract away from state fixed effects—is not determinative because other regional factors may correlate between

[242] See id.

the weak regime and the level of new firm foundings in the region.[243] Second, for the models that take into account state fixed effects by examining new firm foundings following IPOs and acquisitions, the effects with the greatest magnitude are centered in California.[244] This may reflect the fact that California operates in a unique environment not applicable to other states. Third, even though weak enforcement states other than California showed significant declines in new firm foundings following IPOs and interindustry acquisitions, this does not account for the quality of the new firms.[245] As we note below, a more recent study by Starr and others finds that firms founded in strong enforcement states are of higher quality than those in weak enforcement states.[246] Fourth, even the Bishara scale faces significant methodological limitations and has not been independently verified.[247]

The Garmaise study replaces the oversimplified binary approach of Stuart and Sorenson with a graduated twelve-point scale that assigns equal weight (one or zero) to the answers (yes or no) to twelve questions based on those in a later version of the Malsberger treatise[248] regarding the strength and scope of noncompete law in various states.[249] While this is an improvement, this scale is still problematic because there is no legitimate legal or other basis to *equally* weight each of the twelve factors. Comparing two of the factors as an example, it is arguably much more important how a plaintiff must prove the existence of an enforceable covenant not to compete than what counts as sufficient postemployment consideration in considering the strength of a state's noncompete regime.

There are other problems with the Garmaise scale.[250] Garmaise's initial factor—whether the state has a statute bearing on the enforceability of noncompetes (as opposed to mere common law)—does not strike us as indicative one way or the other as to whether the state more strongly enforces noncompete law.[251] Although some very strict states (for example, California and North Dakota)

243 See Stuart and Sorenson, 48 Admin Sci Q at 193–94 (cited in note 220) ("[A] number of omitted regional factors might correlate with both the weak non-compete enforcement dummy and the level of entrepreneurial activity in the region.").

have adopted statutes, so have some states following the flexible, common law reasonableness standard (for example, North Carolina and Ohio).

Next, arbitrary thresholds—such as whether a state has upheld a statewide three-year restriction versus only a two-year one—are not particularly meaningful in the overall scheme of noncompete enforcement. The Malsberger treatise does not of course catalog all the noncompete opinions in a given state—thus, Garmaise could not even answer correctly whether "3-year statewide restrictions have [ever] been upheld" in a particular state.[252] For instance, the applicable Malsberger treatise lists no cases in Wisconsin in which a three-year statewide noncompete was upheld;[253] rather, the treatise cites only a case in Wisconsin for which a three-year noncompete was found unreasonable.[254] But, contrary to Garmaise's scoring, Wisconsin courts in fact had upheld a six-year noncompete and suggested that a three-year noncompete would be reasonable.[255]

Last, for perhaps the most important question—"What is an employer's protectable interest and how is it defined?"—instead of examining the full range of protectable interests, Garmaise curiously focuses on whether an "employer can prevent the employee from future independent dealings with all the firm's customers, not merely with the customers with whom the employee had direct contact."[256] Besides omitting important protectable interests—such as trade secrets, training and development, and ordinary competition—customer relationships are not the type of interest that would typically be of great concern to the top executives at the large, publicly traded firms examined in Garmaise's study. Rather, customer relationships and list restrictions—at least at a large public firm—are more likely to apply to sales personnel, who have direct relationships with the firm's customers, but these personnel were not examined by Garmaise. Variation

[256] See Garmaise, 27 J L Econ & Org at 421 (cited in note 63).

among states in a factor not relevant to the examined class of employees may of course—like Stuart and Sorenson's scale—produce spurious results.

Ultimately, the ideal metric for evaluating a state's noncompete regime is the probability that a typical employee move that *would* be allowed in a hypothetical nonenforcing state *would not* be allowed in any given state. Although it is clearly impossible to achieve such accuracy, neither Stuart and Sorenson nor Garmaise provide sufficient verification for the legitimacy of their indices, such as an empirical analysis of actual cases. Such untested and rough assessments do not make for valid studies.[257]

This concern is confirmed by examining the correlations between the available enforcement scales. The correlation between the Stuart and Sorenson binary scale and the Garmaise twelve-point scale is only 0.43. Bishara constructs an alternate scale[258]—using seven of the twelve questions in the 1991 Richey and Malsberger treatise and the 2009 Malsberger treatise[259]—which, although it raises similar issues as the Garmaise scale, in our opinion is somewhat more likely to be accurate because it uses a graduated scale (unlike Stuart and Sorenson) and differentially weights different factors in the scale (unlike Garmaise). The correlation between the Bishara and Garmaise scales is 0.66, and the correlation between the Bishara and Stuart and Sorenson scales is 0.42.[260]

We recognize that some type of quantitative ranking is a necessary precondition to undertake systematic analysis of the economic effects of noncompete laws. However, given the clear errors in categorization and relatively low correlations among different scales, we are doubtful that the results of studies using the Stuart

[257] Garmaise additionally examines individual changes in law in three states by using time-series estimations, see Garmaise, 27 J L Econ & Org at 390–93 (cited in note 63), the limitations of which we address in Barnett and Sichelman, *Revisiting Labor Mobility in Innovation Markets* at *24, Part 3.2.7 (cited in note 219).

[258] See Bishara, 13 U Pa J Bus L at 771, 786–87 (cited in note 233). For an alternate scale modeled on the Bishara scale, see Evan Starr, Natarajan Balasubramanian, and Mariko Sakakibara, *Screening Spinouts? How Noncompete Enforceability Affects the Creation, Growth, and Survival of New Firms*, 64 Mgmt Sci 552, 558 (2018). The Starr and Bishara scales are correlated at 0.94; hence, we ignore the Starr scale.

[259] See Brian Malsberger, *Covenants Not to Compete: A State-by-State Survey* xvii–xviii (BNA Books 2009) ("Malsberger 2009"); P. Jerome Richey and Brian M. Malsberger, *Covenants Not to Compete: A State-by-State Survey* xvi–xvii (BNA 1991).

[260] We thank Norman Bishara for providing the data underlying his scale.

and Sorenson[261] or Garmaise[262] scales to measure the effects of noncompetes on labor mobility can be properly relied upon for empirical study.[263]

A better approach to construct an enforcement scale in our view would be to undertake a comprehensive assessment of the actual extent and conditions in which courts enforce (or not) noncompetes. A large number of actual cases should be randomly selected in each state across a time period of interest. The assessment would identify the outcome in the case along with key factors in each case, including occupation, at-will vs. contract employee, employer- vs. employee-driven termination, industry, term of the noncompete, geographic scope of the noncompete, and other key circumstances, such as whether trade secrets, sale of a business, dissolution of a partnership, choice of law or forum, and substantial employee training were present. Multivariate, logistic regressions could then be constructed to compare how different factors affect outcomes across states. These results could then be substituted, where appropriate, for factors like those in Bishara to construct more accurate scales.

b) Failure to properly reflect cross-border enforcement of noncompetes. Garmaise and Marx et al. include cross-state border job changes in their datasets.[264] The Marx et al. study focuses on the supposed "brain drain" from Michigan to "non-enforcing" states following its decision to enforce noncompetes.[265] Such cross-border moves are complex from a legal perspective, because, as

---

[261] Studies that rely on the Stuart and Sorenson scale include: Kenneth A. Younge and Matt Marx, *The Value of Employee Retention: Evidence from a Natural Experiment*, 25 J Econ & Mgmt Strategy 652, 658–70 (2016); Younge, Tong, and Fleming, 36 Strategic Mgmt J at 692 (cited in note 110).

[262] Studies that rely on the Garmaise scale include: I.P.L. Png and Sampsa Samila, *Trade Secrets Law and Mobility: Evidence from "Inevitable Disclosure"* *20 appx 2 (working paper, Feb 14, 2015), archived at https://perma.cc/MH8D-VWYS; Raffaele Conti, *Do Non-competition Agreements Lead Firms to Pursue Risky R&D Projects?*, 35 Strategic Mgmt J 1230, 1234–35 (2014); Bill Francis, et al, *When Finding a New Job Is Not Easy: The Influence of the State Law of Non-Competition Agreements on the Characteristics of M&As* *9 (working paper, Dec 2007), archived at https://perma.cc/U7JW-3V7A; Sharon Belenzon and Mark Schankerman, *Spreading the Word: Geography, Policy, and Knowledge Spillovers*, 95 Rev Econ & Stat 884, 895 (2013).

[263] Even Sorenson's revised results are subject to substantial qualifications. See notes 241–47 and accompanying text. Nor, as far we know, have these revised results been published in any form.

[264] See Marx, Singh, and Fleming, 44 Rsrch Pol at 394–95 (cited in note 219); Garmaise, 27 J L Econ & Org at 396–97 (cited in note 63).

[265] See Marx, Singh, and Fleming, 44 Rsrch Pol at 394 (cited in note 219).

Garmaise properly notes, the law of the state of the former employer will sometimes apply and, in other instances, the law of the state of the new employer will apply.[266]

Marx et al., however, overlook this complexity and erroneously assume that nonenforcing states *always* apply their own law so as to void a noncompete agreement that falls under the law of another state.[267] Even assuming that Marx et al.'s list of ten "nonenforcing" states is correct—which it is not, as we discussed above—the only nonenforcing states that generally refuse to enforce out-of-state noncompetes on public policy grounds are California and North Dakota.[268] Yet, even California does not always void out-of-state noncompete agreements. California courts sometimes transfer cases to another state or stay proceedings so those in another state can proceed, particularly when the employment agreement selects that other state's law and courts.[269]

Furthermore, and perhaps more importantly, all states—including California—will generally enforce a *prior* judgment of another state that afforded the parties a full and fair opportunity to litigate the matter. Thus, if an employee is subject to jurisdiction in the state of the former employer, which often will be the case, then the former employer can sue the employee in its home state. If the employee is not subject to an exclusive choice-of-forum clause, the employee may then sue for a declaratory judgment in

[266] The law of the state of the former employer may either be the state in which the employee was located or some other state, to the extent the employer uses a choice-of-law provision specifying the law of a different state (for example, its state of incorporation or headquarters). See Garmaise, 27 J L Econ & Org at 390 n 9 (cited in note 63); Gillian Lester and Elizabeth Ryan, *Choice of Law and Employee Restrictive Covenants: An American Perspective*, 31 Comp Labor L & Pol J 389, 396–97 (2009) (discussing the situation in which the choice-of-law clauses select the employer's place of incorporation).

[267] See Marx, Singh, and Fleming, 44 Rsrch Pol at 395, 403 (cited in note 219).

[268] We use the 1996 Malsberger treatise to make this determination, see Malsberger 1996 at 102, 136–37, 156–57, 201–02, 618, 684, 719, 857–58, 907, 1147, 1160 (cited in note 233) (citing various cases), as the 2015 Marx, Singh, and Fleming study relies on the same treatise to classify state enforcement regimes. See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 n 2 (cited in note 219), citing Stuart and Sorenson, 48 Admin Sci Q at 190 (cited in note 220) (relying on the 1996 Malsberger treatise for data on states that do not enforce noncompetes).

[269] California substantially restricted the situations in which it will enforce out-of-state noncompetes starting in 2017, but during the time periods in question of these studies, California courts were sometimes amenable to enforcing, directly or indirectly, out-of-state noncompetes. See notes 105–06 and accompanying text.

the state of the new employer. Although there are important nuances, essentially, whichever court enforces judgment first will typically bind the employee.[270]

The simplification of these doctrinal complexities in the Marx et al. study renders that study's key assumption—namely, that nonenforcing states always apply their own law—flawed, and thus confounds its causal identification strategy. As we explain below, given the small number of annual employee moves out of Michigan to nonenforcing states measured in the Marx et al. study, this flaw could lead to substantial overestimates of the measured effects of noncompetes.

The Garmaise study also suffers from difficulties relating to the treatment of out-of-state moves. Specifically, Garmaise includes within his analysis out-of-state moves, and, unlike the Marx et al. study, assumes for simplicity that these moves are always governed by the law of the state of the *former* employer.[271] Because Garmaise's dataset contains only a little over six hundred within-industry transfers (out-of-industry transfers would generally not be governed by noncompetes), it is essential to know what percentage of those transfers were out-of-state (and Garmaise does not disclose as much). If the percentage is large, then some results in the Garmaise study may not be accurate.

c) No data on actual usage of noncompete agreements by state. Even if one believes these studies accurately categorize strength of enforcement, no study—other than Garmaise's—provides any measure of the actual usage of noncompete agreements within their sample set or how often employers actually enforce noncompetes. Available evidence suggests widely varying use of noncompete agreements among various executive and technical employee groups,[272] and while there is new evidence regarding

[271] See Garmaise, 27 J L Econ & Org at 396 n 15 (cited in note 63).

[272] Based on a sample of top-level executives, Garmaise finds a roughly 70 percent usage rate, see Garmaise, 27 J L Econ & Org at 396 (cited in note 63). Based on a sample of CEOs at S&P 1500 companies, Bishara, Martin, and Thomas, 68 Vand L Rev at 2 (cited in note 85), find an 80 percent rate. Based on a sample of founders of VC-backed firms, Professors Steven Kaplan and Per Strömberg find a roughly 70 percent rate. Steven N. Kaplan and Per Strömberg, *Financial Contracting Theory Meets the Real World: An Empirical Analysis of Venture Capital Contracts*, 70 Rev Econ Stud 281, 289 (2003). An IEEE study of engineers reports a 47 percent rate. See Matt Marx, *The Firm Strikes Back: Noncompete Agreements and the Mobility of Technical Professionals*, 76 Am Sociological Rev 695, 702 (2011). A 2015 study finds lower usage rates, reporting about 30 percent for managers and about 35 percent in the engineering, computer, and mathematical fields, see

noncompete usage (which we discuss below),[273] there is no evidence to our knowledge of the rate of enforcement across states. This inability to differentiate firm-level usage and enforcement behavior among states introduces the possibility that the observed variation in mobility is not the result of differing state-level enforcement regimes but rather unobserved variation of firm-level usage and enforcement of noncompete agreements and substitutes for noncompetes, such as trade secret actions.[274] If firms in different states substantially vary in their propensity to use and enforce noncompetes and noncompete substitutes, and this variance is not highly correlated with enforcement strength, regressing on enforcement indices may yield spurious results.

Relatedly, none of these studies attempted to control for the variation in state-level enforceability, much less usage and enforcement of noncompete substitutes, such as patents, trade secrets, stock options, long-term contracts, invention assignments, and the like, which we described earlier.[275] This omission alone can substantially confound any possible causal link between results and noncompete enforceability, usage, and enforcement.[276]

d) Measurement errors are exacerbated by small data sets. The previous criticisms are especially salient for the Marx et al. study (as well as a previous study performed by Marx and others in 2009) given the relatively small incremental decrease in absolute terms in labor mobility in Michigan identified in the 2009 and 2015 Marx et al. studies. The 2009 Marx et al. study considers 98,468 inventors and 27,478 inventor moves within Michigan

Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *43 fig 4 (cited in note 11). These differences are arguably explained by the different datasets—the studies by Kaplan and Strömberg; Garmaise; and Bishara, Martin, and Thomas focus on the most sophisticated companies, while Starr, Prescott, and Bishara's findings are likely more reflective of firms as a whole. Additionally, Garmaise and Bishara, Martin, and Thomas focus on top-level executives.

273 See Part III.C.

274 See Robert W. Gomulkiewicz, *Leaky Covenants-Not-to-Compete as the Legal Infrastructure for Innovation*, 49 UC Davis L Rev 251, 256–57, 277–80 (2015) (arguing that Washington technology firms rarely enforce noncompetes); Risch, 12 Empl Rts & Empl Pol J at 346 (cited in note 122) (acknowledging Gilson's theory that trade secret actions might be substitutes for noncompete actions for firms).

275 See Part II.A.2. Although some of these instruments fall under federal law, there remains effective variation in state-level enforcement of these instruments due to differing applications of the law at a regional level. See, for example, Mark A. Lemley, *Where to File Your Patent Case*, 38 AIPLA Q J 1, 28–37 (2010).

276 See Part II.A.2 (noting that any empirical study examining the marginal effects of noncompetes would need to take into account these substitute mechanisms).

over the period 1963–2006.[277] Labor mobility actually increased following the enactment of the Michigan Antitrust Reform Act[278] (MARA) over the full time period from 7.18 percent to 8.98 percent, whereas in other nonenforcing states there was a larger increase, from 7.95 percent to 10.80 percent.[279]

While the Marx et al. studies never report these differences in absolute numbers, they are easy to calculate. Specifically, the difference of in-state mobility in Michigan versus nonenforcing states in absolute terms was roughly 1 percent, equating to an absolute difference of about 100–200 moves per year purportedly lost within Michigan due to the enforcement of noncompetes. For inventors moving out of Michigan, the numbers are much lower—the purported difference of inventors moving out of Michigan to nonenforcing states pre- and post-MARA is in the range of merely twenty to twenty-five inventor moves per year. Given the very small number of job changes upon which the results of these studies are premised, the potentially negating effects of the shortcomings identified above cannot be easily dismissed.[280]

e) Unique problems of the Michigan studies. The 2009 and 2015 Marx et al. studies[281] have attracted particular attention because they exploit an apparently exogenous change to the legal treatment of noncompetes in a particular jurisdiction, which therefore provides an opportunity to study the effect of noncompete enforceability on inventor mobility and, potentially, innovation. As noted earlier, the legal change was effected by enactment of MARA, which restored the enforceability of noncompetes under Michigan law.

[277] See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 880 (cited in note 219). The 2015 Marx, Singh, and Fleming study examines the period 1975–2005. See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 (cited in note 219).

[278] Michigan Antitrust Reform Act § 4a (1987), codified at Mich Comp Laws § 445.774a.

[279] See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 884 (cited in note 219).

[280] Moreover, the Marx et al. studies track the mobility of employees to any firm, rather than mobility to competing firms. No state enforces noncompetes that purport to proscribe employment at *non*competing firms. Thus, in order to isolate the effects of noncompetes, it is essential to track labor mobility solely among competing firms. In empirical terms, an employee who makes an out-of-industry move to a noncompeting firm is, contrary to the implicit assumption of the Marx et al. study, not effectively subject to a noncompete restriction, and hence should not be classified within a "treatment" group. Thus, the number of inventor "moves" of interest to these studies is even lower than the numbers we calculate in the text.

[281] Marx, Singh, and Fleming, 44 Rsrch Pol 394 (cited in note 219); Marx, Strumsky, and Fleming, 55 Mgmt Sci 875 (cited in note 219).

The striking results of the Marx studies—a state restores the enforceability of dormant noncompete provisions, inventor mobility slows down, and inventors flee the jurisdiction for states without enforceable noncompetes (essentially, California)—are commonly cited, including in federal government reports,[282] to support the view that noncompetes are unwise public policy for jurisdictions that seek to cultivate the next Silicon Valley.

However, beyond the serious shortcomings we have already described in these studies, the Marx et al. studies make an erroneous assumption that wholly undermines their identification methodology and hence, their results. Specifically, both the 2009 and 2015 studies assume that, following Michigan's regime change in 1985, preexisting noncompete provisions automatically became enforceable.[283] *This is not the case*. The study authors appear to overlook that MARA included a savings clause providing that the statute repealed by MARA would "remain in force for the purpose" of enforcing any liability under the repealed act.[284] Consistent with this saving clause, Michigan courts declined to enforce noncompetes that were entered into prior to MARA.[285]

In other words, *no* existing employee with noncompete clauses in employment agreements governed by Michigan law became bound by those clauses following MARA. Rather, any employer seeking to bind an existing employee would need to have that employee sign a new agreement or affirmatively assent to a prior agreement, which would generally result in employers incurring transaction costs and possibly providing additional compensation. As a result, one would expect that the number of employees in Michigan actually subject to enforceable noncompetes

---

[282] See, for example, Office of Economic Policy, *Non-compete Contracts* at *18 (cited in note 36); White House, *Non-Compete Agreements* at *7 (cited in note 36). While relying on the Marx et al. "Michigan" studies to support the view that noncompetes depress "labor market dynamism," the White House report did mention that "other authors dispute these findings." White House, *Non-Compete Agreements* at *7 (cited in note 36). This is most likely a somewhat oblique reference to our companion paper on noncompetes. See generally Barnett and Sichelman, *Revisiting Labor Mobility* (cited in note 219).

[283] For instance, the Marx et al. 2015 study states: "Given that the repeal of Public Act No. 05 merely removed the ban and did not stipulate any governing timeframe, all such contracts [i.e., preexisting noncompetes] would have become immediately enforceable." Marx, Singh, and Fleming, 44 Rsrch Pol at 396 (cited in note 219).

[284] Michigan Antitrust Reform Act § 18 (1985), codified at Mich Comp Laws § 445.788. For a detailed description of the history leading up to the passage of MARA, see *Bristol Window and Door, Inc v Hoogenstyn*, 650 NW2d 670, 673–79 (Mich App 2002).

[285] See, for example, *Compton v Joseph Lepak, DDS, PC*, 397 NW2d 311, 316 (Mich App 1986) ("When an agreement or contract is entered into in violation of the statute, repeal of that statute does not make the agreement valid because the Legislature cannot validate a contract which never had a legal existence.").

would be quite low for a considerable period following MARA's passage.

During this transition period, one cannot legitimately consider all Michigan inventors as being subject to enforceable noncompetes—a critical assumption in both papers. The true regime change (that is, taking into account both nominal and effective changes to noncompete enforceability) most likely took considerable time to impact contracting behavior in the market. As a result, the number of inventors who were immediately affected by MARA was small (which impacts the statistical force of the studies' results),[286] and a sizable portion of the studies' results are unlikely to be causally linked to the legal change effected by MARA.

Yet, the 2009 Marx et al. study finds the exact *opposite* of the effects one would expect from a gradual adoption of noncompetes after the enactment of the MARA statute, stating that "the effect of the policy reversal remained strong for several years and then weakened, both in terms of the magnitude and statistical significance of the coefficient on the interaction variable."[287] Thus, it is extremely likely in our view that factors unrelated to the change in noncompete law in Michigan explain the results, if they are at all correct, of the 2009 study. At a bare minimum, the factual misunderstanding of the *non*retroactive effect of the MARA change casts great doubt on the reliability of using the Marx et al. studies as a basis for substantive policy recommendations.

f) Correlation, not causality. Even if the results in these studies were somehow correct, none of these studies can show causation between noncompete enforcement and their findings of reduced innovation (as indicated by various proxy measures). Other than the Marx et al. study, they are all cross-sectional regressions and cannot rule out omitted variables to explain the observed variation. Additionally, Stuart and Sorenson's major finding (including, as noted earlier, Sorenson's revised major finding) abstracts away from state-level fixed effects, and they properly note that they "must interpret this result cautiously, as a number of omitted regional factors might correlate with both the weak non-compete enforcement dummy and the level of entrepreneurial activity in the region."[288] Stuart and Sorenson's models that take account of state-level fixed effects do not account for unique

[286] For further discussion, see Barnett and Sichelman, *Revisiting Labor Mobility* at *22 (cited in note 219).

[287] See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 883 (cited in note 219).

[288] See Stuart and Sorenson, 48 Admin Sci Q at 194 (cited in note 220).

within-state, regional omitted variables that may explain the observed patterns, plus are subject to a number of additional limitations.[289] The Samila and Sorenson study is subject to similar limitations, as well as another endogeneity concern. Specifically, this study uses the number of patents to measure innovative output, but patenting is in part a substitute for noncompete enforcement.[290] Thus, finding increased patenting in states with weak nonenforcement, such as California, is not necessarily meaningful. The Marx et al. study, despite the fact that it examines a seemingly exogenous shock to Michigan law, also suffers from causality concerns because—as explained in the previous Section—the regime change did not apply retroactively.

Aside from causality, some of the studies use rough proxies for innovative activity. Stuart and Sorenson merely examine the relationship of noncompetes to the absolute number of spin-offs following IPOs and acquisitions. Studies on patent value have indicated that a small number of high-quality innovations disproportionately account for the total value of all innovations; in other words, not all innovations—and, hence, not all innovative companies—are created equally.[291] Thus, it is not surprising that a more recent study finds that, while noncompetes may depress the absolute number of same-industry spin-offs, increased enforcement is associated with the founding of higher quality firms, particularly ones that began and continued with more employees and survived for longer periods.[292] Relatedly, another recent study finds that, while noncompetes reduce employee mobility and depress certain indicators of entrepreneurship, increased enforceability is associated with an increase in capital investment at existing "knowledge-intensive" firms,[293] suggesting that noncompetes sometimes support investment incentives consistent with theoretical expectations.

---

289 See notes 241–47 and accompanying text.

290 Samila and Sorenson, 57 Mgmt Sci at 430 (cited in note 9). As noted previously, Agarwal and coauthors found that aggressive patent litigation by US semiconductor firms discourages labor mobility (presumably, because potential new employers fear litigation and elect not to hire from those firms). See note 109 and accompanying text.

291 See John R. Allison, et al, *Valuable Patents*, 92 Georgetown L J 435, 448–65 (2004).

292 See Starr, Balasubramanian, and Sakakibara, 64 Mgmt Sci at 567 (cited in note 258). Although this Starr study does not compare the total innovative activity of the startups in nonenforcing and enforcing states, a smaller number of highly innovative startups in enforcing states could outweigh the innovative activity of a larger number of less innovative startups in nonenforcing states.

293 See Jessica S. Jeffers, *The Impact of Restricting Labor Mobility on Corporate Investment and Entrepreneurship* *3–5, 20–21 (working paper, Jan 3, 2018), archived at https://perma.cc/9EQX-GDTU.

g) Why the limitations of these studies likely affect the validity of their results. To be certain, the limitations we have discussed above do not mandate that the results in these studies are incorrect. It may be the case that some studies suffer from ordinary measurement error, which would underestimate the size of the effects found in those studies, or the errors we have identified are too minor to plausibly change these studies' results. However, there are strong reasons to doubt that the limitations described above are ordinary measurement errors or essentially trivial, implying that they *are* likely to alter these studies' results—either their size or significance, or even the direction and nature of the effects measured.

First, and perhaps most importantly, the Stuart and Sorenson scale misclassifies eight of ten states as "nonenforcing" but does not misclassify any of the "enforcing" states.[294] Such misclassification is not random, but rather is a one-way systemic error. Stuart and Sorenson's misclassification of "enforcing" and "nonenforcing" states lies at the heart of the empirical instruments in the Marx et al. studies used to measure worker mobility and the potential effects on innovative activity.[295]

Although Garmaise's scale appears to suffer more from random error than systemic error—because in our view, there is no scale, even Bishara's scale,[296] that has been definitively validated—it may be the case that Garmaise's results are subject to the same limitations as the Marx et al. studies. So while the results set forth in the Garmaise study and the Marx et al. studies may be statistically significant, they are not necessarily *meaningful* when determining the role noncompetes play in suppressing innovative activity.

Second, the failure to properly take account of the nonretroactivity of Michigan's change in law via MARA also casts considerable doubt on the reliability of the differences-in-differences methodology employed by the Marx et al. studies. Specifically, it confounds these studies' claims to causal identification, because the only Michigan employees not entering entirely new jobs subject to enforceable noncompetes post-MARA were those selected by their employers for "treatment," in other words, the signing of a noncompete provision. Such selection would not be random, but instead would turn on factors such as whether the employee was

[294] See Stuart and Sorenson, 48 Admin Sci Q at 190 (cited in note 220).

[295] See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 n 2, 396–97 (cited in note 219); Marx, Strumsky, and Fleming, 55 Mgmt Sci at 880 (cited in note 219).

[296] See Bishara, 13 U Pa J Bus L at 786–87 (cited in note 233).

at-will, had knowledge of company trade secrets, was highly skilled, and the like.

Third, the failure of the Garmaise study and the Marx et al. studies to properly take account of cross-border moves, as we note above, may systematically overestimate the effects of noncompetes on labor mobility because in some situations these moves would have been governed by a contrary set of laws than assumed in the empirical approaches in these studies.

Fourth, even if these studies' findings are nominally correct, because of various implicit assumptions about the law and external factors that are certainly or very likely inaccurate, one cannot casually attribute decreases in labor mobility wholly to noncompete enforcement trends. For instance, one or more of these studies wrongly assumes that noncompetes govern moves outside of an industry, that firm-level usage and enforcement of noncompetes is constant across states, that high-level executives' mobility would be prone to court decisions regarding the role of customer lists, and that nonretroactive changes in certain laws were exogenous "shocks."

In sum, of the four major nonexperimental studies examining the effects of noncompetes on innovation that we reviewed in detail, all suffer from multiple infirmities. In our view, these infirmities cast substantial doubt on the validity of the findings in these studies. In other words, there is a strong possibility that these errors would reduce the size of the effects in these studies, result in opposite effects, or potentially eliminate statistically significant effects entirely. Although Sorenson's revision of his earlier study nominally confirmed his earlier results, it remains subject to substantial limitations.[297] As such, none of these studies can be relied upon for a general assessment of the role noncompetes play in the innovative process.

All of the additional studies we could locate that find a negative effect on innovation from noncompetes appear to suffer from one or more of these limitations.[298] Given the theoretical reasons to doubt that noncompetes always have a negative effect on innovation, we believe that there is little to no empirical evidence that noncompetes necessarily retard innovation.[299] Rather, as explained later in the Article, noncompetes will sometimes hinder and sometimes foster innovative activity depending on a variety of contextual circumstances.

[297] See notes 241–47 and accompanying text.

[298] See notes 261–62 (listing studies relying on flawed scales).

[299] See Barnett and Sichelman, *Revisiting Labor Mobility* at *29 (cited in note 219).

2. Experimental studies.

Professors On Amir and Orly Lobel conducted an experimental study that found that participants in simulated noncompete treatment groups exerted less effort and made more errors than a restriction-free control group.[300] The study's experimental design abstracts away from the limitations of the empirical studies but introduces its own concerns that cast serious doubt on its applicability to any actual technology environment.

In the experimental setup, participants are informed that they will potentially complete two rounds of a given task. Each participant is paid $0.50 for the completion of each task plus a potential bonus. However, individuals in the "full noncompete" group are told they cannot participate in the second round. Individuals in the "partial noncompete" group are told they will receive 20 percent less payment in the second round. Individuals in the "no noncompete" group are given no restrictions. Participants either perform a creative, word association task or an effort-based, matrix addition task. Each participant performs only the first round.[301] Amir and Lobel find a large negative effect on completing the first round of tasks in the full noncompete group, but not the partial noncompete group, for both the creative and effort-based tasks. Additionally, they find a significantly larger error rate on the effort-based task for the full and partial noncompete group.

Based on this experimental result, Amir and Lobel conclude that "[o]ur behavioral experiment demonstrates that certain postemployment contractual restrictions may negatively impact motivation and performance, as evidenced by the greater rates at which individuals abandon tasks."[302] Although we agree that noncompetes may provide some incentives for employees to underinvest in their own human capital, Amir and Lobel's experimental setup does not take into account important real-world mechanisms to offset these effects.

First, as we discussed earlier, one of the major reasons for the use of noncompetes is to provide incentives for firms to invest in the human capital of their employees.[303] Consistent with that theoretical expectation, a study by Starr finds that stronger noncompete enforcement regimes are associated with increased

[300] See Amir and Lobel, 16 Stan Tech L Rev at 866 (cited in note 63).
[301] See id at 852–53, 870–74.
[302] Id at 863.
[303] See Part I.B.2.

employee training.[304] Amir and Lobel's setup does not allow for any firm-sponsored training.

Second, the flat payment scheme of $0.50 per task plus a bonus in Amir and Lobel abstracts away from the numerous other performance incentive mechanisms we discussed above—such as vesting options, deferred compensation, and the simple ability for star employees to renegotiate—that are present in a typical employment situation.[305]

Third, contrary to Amir and Lobel's setup, a noncompete agreement *never* means that there is no second round of performance. Employees are engaged in a repeat-play game with employers, who rationally reward high-performing employees and penalize low-performing employees. Simultaneously, employees are engaged in a repeat-play game with potential outside employers. Given the discipline imposed by the common-law reasonableness constraint and competitive labor markets, noncompetes are always limited in duration, geography, and industry scope. As a result, employees may port their industry-specific skills to competitors after a certain amount of time and may port their non-industry-specific skills to noncompetitors at any time. Even during the term of a noncompete, an employee can move to any firm that is willing to pay the price demanded by the existing employer to waive the noncompete.

These three reasons are likely to substantially dampen, if not eliminate, any incentives that noncompetes might otherwise create for employees to underinvest in their own human capital. Indeed, a more recent experimental study performed a similar experiment but found that those in the noncompete group exerted no less effort than those in the control group.[306] Using a more realistic setup, this experiment paid the noncompete group more to compensate for any disincentives created in the noncompete treatment—which is precisely what would be expected to occur in any rational employer-employee bargaining situation.

[306] See Guido Bünstorf, et al, *Win Shift Lose Stay—An Experimental Test of Non-Compete Clauses* *18–19 (Max Planck Institute for Research on Collective Goods Preprint No 2013/17, Sept 2013), archived at https://perma.cc/K2NM-4L4V.

3. Evaluation.

In current policy discussions concerning noncompetes, it is common to find statements referring to empirical studies "showing" that noncompetes depress inventor mobility and, as a result, reduce innovation in general. This interpretation is simply not supported by a close examination of the methodologies and substance of the empirical studies upon which these statements typically rely.[307] Even assuming without further examination that noncompetes have some appreciable marginal effect on inventor mobility—a proposition as to which there is considerable doubt[308]—there is no compelling basis to conclude that any such effect results in reduced innovation compared to a legal environment in which noncompetes had no legal force.

The most recent empirical research on the effects of noncompetes provides even more ground to doubt the conventional characterization of the evidence. That research has reached more nuanced results that are consistent with the older law-and-economics analysis that, as discussed earlier, had emphasized how noncompetes have the potential both to impede employee mobility *and* enhance firms' incentives to invest in cultivating employee capital.[309] In particular, these recent studies have found that the ability to enforce noncompetes can increase incentives at medical practices to make intrafirm client referrals (and thereby increase overall returns),[310] increase capital investment at knowledge-intensive firms while reducing the entry of new firms,[311] and result in the establishment of fewer but higher quality spin-offs from parent firms.[312] Another study finds that legal limitations on

[307] For a similar view, see Bishara and Starr, 20 Lewis & Clark L Rev at 498–502, 534–40 (cited in note 305) (finding that existing empirical literature suffers from methodological imperfections and cannot currently support policy actions to impose limitations or outright bans on the use of noncompetes).

[308] See Barnett and Sichelman, *Revisiting Labor Mobility* at *29 (cited in note 219) (stating that, due to methodological and other shortcomings, no existing empirical study can "be relied upon for a general assessment of the role noncompetes play in restricting labor mobility").

[309] See Part I.B.

[310] See Kurt Lavetti, Carol Simon, and William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers: Evidence from Physicians* *21, 34 (working paper, June 2018), archived at https://perma.cc/4CU3-LZE5. Specifically, the authors find that practices that used noncompetes for physicians enjoyed greater overall returns, even controlling for physician quality and other potentially relevant factors, which the authors attribute to stronger incentives to invest in advertising and making intrafirm client referrals (given the reduced risk of losing clients in the event of a physician departure).

[311] See Jeffers, *The Impact of Restricting Labor Mobility* at *22–23 (cited in note 293).

[312] See Starr, Balasubramanian, and Sakakibara, 64 Mgmt Sci at 563 (cited in note 258).

worker mobility can increase investment at firms that rely on higher-skill workers.[313] While we do not separately review these more recent studies, it would not be surprising if the empirical literature on noncompetes ultimately established that they result in a mixed bag of welfare effects that vary across firms and industries. That would be fully consistent with theoretical expectations that noncompetes can both promote and dampen overall innovation, and it is therefore indeterminate as to which effect will dominate in any particular case.

III. Making Noncompete Policy Under Uncertainty

The substantial theoretical and empirical literature on noncompetes (and, by implication, other restraints on employee mobility in innovation markets) appears to arrive at a dead end. Even if it were conceded that noncompetes have some marginal effect on labor mobility, neither the canonical Silicon Valley / Route 128 narrative nor the empirical literature provides support for then drawing an adverse connection between noncompetes and innovation outcomes in general. As a practical matter, however, the law cannot be neutral: it must take *some* position on whether noncompetes should be enforced. In this Part, we offer some tentative conclusions concerning the appropriate legal treatment of noncompetes, applying the error-cost approach from antitrust law that explicitly embeds uncertainty into policy analysis and the adjudicative process.[314]

In the course of this exercise, we identify certain variables that may impact the use and efficiency effects of noncompetes across different industries, firms, and even employee types. While this analysis is preliminary, it conforms to evidence on the rates of use of noncompetes, which suggests that markets tailor the use of noncompetes across employee categories, rather than chronically overusing them as assumed in the collective-action problem that drives Gilson's and the follow-on literature's laudatory characterization of California's noncompete policy. Given that this critical assumption appears to have a limited scope of application as an empirical matter, and in light of the material uncertainties that we identified in the empirical studies that are routinely cited

[313] See Ali Sanati, *How Does Labor Mobility Affect Corporate Leverage and Investment?* *3–4 (working paper, Mar 2018), archived at https://perma.cc/NU6M-6DNR.

[314] For the leading statements of this approach in the antitrust literature, see note 38.

in support of precluding noncompetes more broadly (and, by implication, other constraints on employee mobility),[315] we ultimately conclude that the reasonableness standard, applied on a case-specific basis through common law adjudication, is likely the best approach of all.

A. Policy Continuum

Throughout our discussion, we keep in mind three categories of policy options. As shown in the graphic below, these options can be located on a continuum extending from full enforcement (Option I), which we call the "per se legal" option, to zero enforcement (Option III), which we call the "per se illegal" option. Note that Option II, which corresponds to the common law's reasonableness standard, encompasses in practical terms a range of more and less stringent variants, which push the option closer toward the full- or zero-enforcement poles of the policy continuum. In practical terms, this intermediate range could encompass a number of different principles under which courts could adjudicate the enforceability of a particular noncompete provision and, in doing so, reflect the complex policy trade-off implicated by the enforcement of these provisions. To take just one example, a state may elect to enforce noncompetes subject to a reasonableness limitation but apply that limitation so that noncompetes are enforced only when the plaintiff shows that the noncompete promoted either the protection of trade secrets or the recovery of a training investment.[316] Such an approach would tend to push the law closer toward zero enforcement (at least in the case of noncompetes that do not generate any offsetting social advantage in the form of increased R&D or training incentives). Alternatively, a state may elect to enforce noncompetes subject to a "blue pencil" rule, according to which a court can "rescue" an otherwise invalid noncompete clause by restricting its durational, geographic or industry scope so that it falls within the boundaries of what the court determines to be reasonable.[317] Such an approach would tend to push the law closer toward full enforcement.

[315] See Part II.B.

[316] For example, New York courts will enforce a noncompete if it "(1) is no greater than is required for the protection of the legitimate interest of the employer, (2) does not impose undue hardship on the employee, and (3) is not injurious to the public." *BDO Seidman v Hirshberg*, 712 NE2d 1220, 1223 (NY 1999).

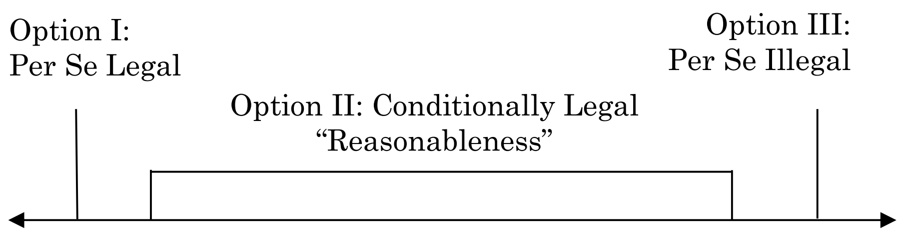
FIGURE 1: POLICY CONTINUUM OF NONCOMPETE ENFORCEMENT



B. The "Free Contracting" Baseline

From an economic point of view, a noncompete is a voluntary transaction involving a human capital asset being exchanged for some form of monetary or other compensation. As such, any efficiency analysis must start from the free contracting baseline—that is, the well-established view that voluntary exchanges result in mutual welfare gains for the contracting parties, absent evidence of market failure, such as fraud, coercion, or information asymmetries. Those private welfare gains represent social welfare gains so long as the parties' exchange transaction does not generate negative third-party externalities. The presumptive efficiency of voluntary exchange transactions accounts for the common law's traditional indifference to the substantive fairness of contracts; rather, courts generally determine enforceability based on whether an agreement meets certain formal procedural criteria.[318] While there are limited exceptions to this principle (for example, the unconscionability doctrine, although courts rarely accept it as a defense[319]), it holds true across contract law as a general matter.[320]

From this starting point, the per se legal option is the default policy approach, and California's refusal to enforce the noncompete clause demands justification from an efficiency or other perspective. In fact, based on the free contracting benchmark, even

318 See Alan Schwartz and Robert E. Scott, *Contract Theory and the Limits of Contract Law*, 113 Yale L J 541, 546, 556 (2003) (arguing that "efficiency is the only institutionally feasible and normatively attractive goal for a contract law that regulates deals between firms"); id at 555 (rejecting the "externality objection" to restricting commercial contract law to the pursuit of welfare-maximization, on the ground that "most commercial contracts affect only the parties to them").

319 See Colleen McCullough, *Unconscionability as a Coherent Legal Concept*, 164 U Pa L Rev 779, 785–87 (2016).

320 See Schwartz and Scott, 113 Yale L J at 555 (cited in note 318) (noting that contract law rarely creates "systematic distributional benefits for particular classes of parties").

the reasonableness principle used by the common law to assess the enforceability of noncompetes is suspect. Ignoring circumstances involving fraud, coercion, information asymmetries, or similar market defects, any economic justification for even qualified enforcement of noncompete clauses—let alone a blanket refusal to enforce—must identify significant third-party externalities that are not reflected in the terms of the noncompete clause and the broader employment agreement of which it is typically a part. Efficiency-based arguments for California's aversion toward enforcing noncompetes therefore rely on the reduction in knowledge spillovers, and collective reduction in innovative vigor in general, that would potentially result if noncompetes were enforced. This was precisely the basis for Gilson's characterization of California's refusal to enforce noncompetes as an efficient legal solution to a collective-action problem.

As we have discussed in detail, it is not clear that this theory has a sound basis in fact. Specifically, the extent to which noncompetes *actually* impede efficient human capital transfers and associated knowledge spillovers is empirically contestable and depends on the transaction costs involved in negotiating waivers of noncompetes, the extent to which noncompetes are actually enforced, and the availability of alternative mechanisms to regulate human capital flows. At a minimum, however, it is at least reasonable to assume that noncompetes impose *some* incremental transaction-cost burden relative to a zero-enforcement regime and thereby may have some incremental adverse effect on impeding the agglomeration economies and similar benefits that can promote innovation activity. Additionally, noneconomic considerations of personal autonomy and distributive justice that play an important role in real-world policy debates over noncompetes strongly disfavor a rule of per se legality. Consequently, we set aside per se legal as a policy option and consider the remaining possibilities that efficiency would be maximized by treating noncompetes as either (i) per se illegal (Option III) or (ii) conditionally legal subject to the reasonableness standard (Option II).

C. Is There Really a Collective Action Problem?

Any argument in favor of zero enforcement must rest on Gilson's justification for California's general refusal to enforce the noncompete clause (the closest real-world approximation of the per se illegal policy option), taking note that Gilson himself cautioned against reflexive application of the California model to all states and industries.[321] Recall that this argument supposes a world in which all (or at least most) firms would be better off if noncompetes were deemed unenforceable. Without coordination, it is in each firm's individual interest to include a noncompete clause (since it would otherwise unilaterally forfeit human capital assets to its competitors), which ultimately operates to all firms' collective detriment by impeding the flow of human capital and the innovation process in general. Under those assumptions, abolishing noncompetes saves firms from this collectively irrational outcome, which in turn enhances knowledge spillovers, fosters agglomeration economies, and accelerates innovation in the industry as a whole.

This line of argument relies heavily on a single assumption: namely, that when the law enforces noncompetes, firms widely, if not universally, adopt noncompetes, resulting in socially excessive constraints on the circulation of human capital. That is a theoretically plausible but empirically untested assumption, especially given the fact that almost all empirical studies compare mobility and innovation outcomes as a function of noncompete enforceability rather than use. Fortunately, recent empirical work has supplied data that can provide some insight into actual use of noncompetes in real-world technology markets.

Available data on the actual use of noncompetes in employment agreements demonstrate significant variation across different subsets of the labor market. As noted previously, two studies that survey CEOs and other top-level executives find usage rates ranging from 70–84 percent.[322] Another study finds comparable usage rates among venture capital-backed firms: in a sample of 213 venture capital investments in 119 firms during 1987–1999, founders were subject to noncompetes in 70.4 percent (or 73.5 percent excluding California firms) of total investments.[323] Those figures are compatible with the assumption that underlies the efficiency argument against noncompetes: without legal intervention, markets tend toward high, and potentially excessive, use of noncompetes. However, a survey study of engineers in the information technology industry report a lower rate of almost 47 percent.[324] A recent and much larger study by Professor

[321] See Gilson, 74 NYU L Rev at 629 (cited in note 8).

[322] See note 85 and accompanying text.

[323] Kaplan and Strömberg, 70 Rev Fin Stud at 289 (cited in note 272).

[324] See Marx, 76 Am Sociological Rev at 702 (cited in note 272). The sample consisted of 1,029 technical personnel (all members of the Institute of Electrical and Electronics Engineers) from a variety of industries.

Evan Starr and colleagues that surveys 11,505 workers across a broader range of industries finds even lower usage rates, reporting usage rates ranging from 31–36 percent in engineering positions, computer and mathematical positions, information industries, and professional and scientific industries.[325] The Starr et al. study further finds significant variation based on the relevant business interest that the employer may have in a noncompete with respect to a particular employee. For example, about one-third of employees subject to noncompetes work with trade secrets, as compared to about 15 percent of employees who only "work with clients or who have client-specific information."[326]

These data have been cited by scholars and policymakers who argue that significant numbers of employees are encumbered by these provisions.[327] One scholar claims that employees are now stuck in a "thicket" and that "[n]oncompete agreements are now required in almost every industry and position."[328] We interpret the data differently. The variation in reported usage rates across occupational and industry categories raises serious doubt as to whether it is reasonable to assume that, when noncompetes are enforceable, employers blindly use them in all circumstances. Consider the finding above that approximately one-third of technical personnel are subject to noncompetes. While that is a significant percentage, it means that approximately *two-thirds* of that work force is *not* subject to any such constraint. Even the high usage rates among top-level executives imply that about *one-third* of the relevant labor pool did not agree to a noncompete. Additionally, it is important to keep in mind that *effective* use of noncompetes almost certainly falls well below *nominal* use. A recent study finds that, in the state of Washington, which enforces noncompetes subject to the reasonableness standard, technology firms cultivate a reputation for nonenforcement[329]—meaning, that the actual use of noncompetes is far less common than the nominal use of noncompetes. That finding is consistent with prior reports (as discussed earlier) that firms in the Route 128 area widely tolerated employee departures and spin-offs during the

[327] See, for example, Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19); White House, *Non-Compete Agreements* at *5–7 (cited in note 36); Office of Economic Policy, *Non-compete Contracts* at *11–13 (cited in note 36).

[328] Lobel, 93 Tex L Rev at 791 (cited in note 9).

[329] See Gomulkiewicz, 49 UC Davis L Rev at 256–57, 277–80 (cited in note 274).

economic heyday (and, presumably, competitive market for technical talent) of the 1970s and 1980s, even though Massachusetts law nominally tolerated enforcement subject to the reasonableness standard.[330] Rather than being driven toward widespread use of noncompetes to constrain the outflow of human capital to competitors, actual market behavior shows that firms sometimes or usually *decline* to use or enforce noncompetes.

D. Why Employers Decline to Use Noncompetes

Significant variation in the use and enforcement of noncompetes does not favor the thesis that markets are prone to suffer from a collective-action problem resulting in inefficient overuse of noncompetes. Rather, it is more consistent with a standard competitive market model in which employers bid for managerial and technical talent by offering different packages of price and nonprice terms. Under competitive conditions, firms seek to attract the most highly valued labor by offering different types of employment agreements, some with and some without noncompetes.

It is entirely plausible that an employer may prefer to offer an employment package without a noncompete. The reason is simple: noncompetes are costly to employers and will not always be worth the price. Prospective employees anticipate that noncompetes will limit postemployment opportunities, which means that employees may be unable to access more lucrative outside employment options during the term of the noncompete and, as a result, will have reduced capacity to renegotiate the terms of employment with the employer in the future. The prospective employee may further anticipate that, given a limited set of outside employment options, the employer could hold up the employee and unilaterally degrade the terms of employment.[331] Based on these expectations, the prospective employee will demand either compensation up-front or, more plausibly, credible assurance that the firm will allocate internal rewards for strong performance that mimic the rewards that would be allocated in the external

330 See notes 186–90 and accompanying text.

331 See Margaret M. Blair, *Firm-Specific Human Capital and Theories of the Firm*, in Margaret M. Blair and Mark J. Roe, eds, *Employees and Corporate Governance* 58, 64–65, 72 (Brookings Institution 1999). Professor Oliver Williamson, the originator of the holdup concept in the institutional economics literature, makes the same observation but argues that repeat-play forces would typically dissuade employers from engaging in this behavior. See Oliver E. Williamson, *Economic Institutions of Capitalism* 248–49, 259–60 (Free Press 1985).

labor market.[332] If the employer is unwilling to pay the required up-front compensation, cannot credibly commit to reward employees' relative contributions to the firms' team product, or has other mechanisms by which to regulate human capital outflow or protect against knowledge leakage in the event of an employee departure, then, in any of those cases, it may decline to "purchase" a noncompete obligation from the employee.

The "talent wants to be free" school implicitly assumes a world in which employers unilaterally impose or dictate noncompetes and therefore the law must intervene. But that implausibly assumes that employers always or typically are price-setters in the labor market. In most markets, that would typically not be the case and, in technology markets in particular, the very opposite is more likely given the widespread observations that, in many technology market segments, skilled technical labor is scarce and employers bid aggressively to recruit them.[333] Absent market power, we should therefore expect to observe variation in the mix of postemployment constraints as employers compete over a limited talent pool.

More specifically, any such variation in the use of noncompetes will reflect different values placed by employers and employees on two variables:

(i) G_f: the *firm*'s net expected future gains from employee training and knowledge internalization attributable to a noncompete; and

(ii) G_e: the *employee*'s net expected future gains from postemployment opportunities at competitors within the typical duration of a noncompete.[334]

The value of G_f and G_e impacts the firm's and the employee's respective negotiating positions: as the value of G_f rises, the firm

[332] See Blair, *Firm-Specific Human Capital* at 66, 72–73 (cited in note 331). As Blair notes, the latter solution is more plausible because full up-front compensation would induce shirking on the part of the employee. See id at 62, 73. Note that assurance of an internal compensation system would be credible only if an employer entered into a contractual commitment to do so or, in the absence of a contract, pledged reputational capital to support any such assurance.

[333] For a review of the evidence, see National Science Board, *Revisiting the STEM Workforce* *9 (Feb 4, 2015), archived at https://perma.cc/S9GE-S5WA.

[334] In some situations, the employee may prefer a noncompete because gains to the employee's human capital from training—which could not occur absent a financing commitment—outweigh anticipated losses from foreclosing potential postemployment opportunities. See Rubin and Shedd, 10 J Legal Stud at 96–97 (cited in note 56). Indeed, a recent study finds that noncompetes are associated with a 5.5 percent increase in the likelihood

is willing to pay a higher price for a noncompete; as the value of G_e rises, the employee will demand a higher price for agreeing to a noncompete. The interaction between these two variables influences the likelihood that any given employer-employee negotiation is likely to yield a noncompete. As the value of G_f rises in value relative to G_e, we would expect to see greater adoption of noncompetes since employers value the noncompete highly and employees are willing to "sell" it at a low price; as that ratio is reversed, we would expect to see the opposite outcome. When the values of G_f and G_e are both high (or low), results are likely to be mixed.

We recognize that this model is inherently stylized and, in particular, is vulnerable to the objection that employers and employees in real-world contracting environments do not engage in customized negotiation—rather, employers sometimes include noncompetes in a "take-it-or-leave-it" employment package that does not facilitate term-specific negotiation.[335] This is especially so if the employer demands a noncompete not in the original employment agreement or terms, but only after the employee begins work.[336]

While some evidence supports the view that, in certain market segments, noncompete clauses are not typically negotiated,[337] it should not be automatically concluded that rational negotiation models have no descriptive force in this setting or, equivalently, that employers are free to "impose" noncompetes without paying any price for doing so. First, in the case of top-level executives, the full negotiation assumption almost always holds true as these

of receiving training on the job. Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *3 (cited in note 11). In order to address the strongest argument made against noncompetes, we nevertheless assume here that there is a net cost to the employee from agreeing to the noncompete.

335 See White House, *Non-Compete Agreements* at *9–10 (cited in note 36); Office of Economic Policy, *Non-compete Contracts* at *12–13, 24 (cited in note 36); Marx, 76 Am Sociological Rev at 696 (cited in note 272).

336 See, for example, Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *52 (cited in note 11) (indicating that only 6.3 percent of survey respondents who reported being asked to sign a noncompete after accepting their job offers attempted to negotiate the noncompete's terms, while this percentage was nearly twice as high for those who had received the noncompete before accepting their job offers).

337 See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *21 (cited in note 11) (finding that only 10 percent of noncompete signers attempt to negotiate the noncompete); Marx, 76 Am Sociological Rev at 706 tbl 4 (cited in note 272) (finding that 31 percent of surveyed employees received the noncompete request with the job offer, 22 percent received the request after the offer was accepted but prior to the start of work, 24 percent received the request on the first day of work, and 23 percent sometime after the starting work).

agreements are typically entered into with the advice of highly sophisticated counsel specialized in executive compensation matters.[338] Second, in the case of lower-level technical and managerial talent who may well not have the opportunity to negotiate customized terms of employment, the competitive model still has descriptive force even in the absence of transaction-specific negotiation over noncompetes, so long as at least some portion of the market observes employer behavior and disseminates information concerning the terms of employment.[339] Assuming competitive market conditions, that monitoring function may be filled by other employers who have a rational incentive to monitor the use or enforcement of noncompetes by competitors and offer prospective employees an employment package without such restrictions or a demonstrated enforcement record that tolerates employee departures notwithstanding a noncompete.

1. Variation in use of noncompetes across employee types.

While further theoretical refinement and empirical inquiry is warranted, this competitive bidding model anticipates the variation observed in available data on the use of noncompetes among executive and technical personnel populations. In particular, it explains the significantly higher usage of noncompetes among top-level executives as compared to lower-level technical personnel. The most comprehensive empirical study on the use of noncompetes finds a correlation between income (which often correlates with higher-skilled occupations) and the incidence of noncompetes. More specifically, that study finds that, whereas 37 percent of employees earning over $100,000 a year are subject

[338] Statement made based on one of the authors' personal experiences as a practicing transactional attorney.

[339] For the original version of this argument, made in the debate over the efficiency of contracts of adhesion, see Alan Schwartz and Louis L. Wilde, *Intervening in Markets on the Basis of Imperfect Information: A Legal and Economic Analysis*, 127 U Pa L Rev 630, 637–38 (1979) (arguing that the presence of consumers who engage in "moderate search" can protect consumers who engage in no search from "overreaching firms"). For an application to related debates in copyright-related settings, see Frank H. Easterbrook, *Contract and Copyright*, 42 Houston L Rev 953, 969–70 (2005). As Judge Easterbrook observes, the fact that a particular attribute of a product or service is not routinely negotiated on a transaction-specific basis does not imply that that attribute is being dictated by the supplier. Rather, that question is more profitably analyzed by asking whether the supplier possesses sufficient market power to be in a position to dictate any such term. Nonetheless we recognize that, in the noncompete context, this argument is predicated on the assumption that information is being disseminated in the market concerning a specific employer's noncompete policy, which we recognize may vary from case to case.

to a noncompete, this is only true of 14 percent of employees earning up to $40,000.[340] These findings conform to the expectations of rational bargaining between employers and employees. In the case of a higher-level executive, the employer most likely assigns a high value to G_f—that is, the firm prioritizes internalizing the valuable knowledge assets to which a top-level executive would be exposed and is therefore typically prepared to pay a substantial price for obtaining that concession from the employee. By contrast, a lower-level employee may not have comparable exposure to the highest-value knowledge assets, in which case the firm assigns a low value to G_f and is typically willing to forego the noncompete (or, what is functionally equivalent, foregoes enforcement even if a noncompete clause appears in the employment package).

2. Variation in the use of noncompetes across industry types.

The competitive bidding model not only anticipates variation in the use and enforcement of noncompetes across employee types, but also across industries. Using this framework, we can roughly anticipate the expected use of noncompetes in different industry types (a research path that may prove fruitful in future empirical inquiries). Industries that exhibit some or all of the following characteristics are less likely to adopt noncompetes: (i) low capital requirements; (ii) short product development times; (iii) rapid product obsolescence; (iv) strong intellectual property protection (including patents, copyrights, and trade secrets); (v) robust complementary assets (such as strong marketing or manufacturing capabilities); and (vi) high levels of industry-specific product interoperability.[341]

Under those conditions, the employer assigns a low value to G_f. A firm in industries with these characteristics is less likely to prioritize maintaining control over its knowledge assets because those assets are not particularly costly to develop, even successful

[340] See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *17–18 (cited in note 11).

[341] In industries involving high levels of interoperability, presumably there is substantial information sharing among firms, which is either protected by patents and other forms of intellectual property rights or not at all, at least within the circle of relevant competitors. Either way the gains from internalizing R&D via noncompetes are reduced in this situation. Additionally, interoperability implies that training results in industry-specific capital, which makes the value of intra-industry postemployment opportunities more valuable for employees. Thus, on balance, industries characterized by high levels of interoperability will, all other factors equal, typically fall into this category.

products have short lifetimes, and, in some cases, the product is embedded in a portfolio of IP assets and/or supported by complementary production and distribution assets that are difficult to replicate. For the same reason, employees in this setting are likely to place a high value on G_e. In a fast-paced market segment characterized by short product-development times and rapid product obsolescence, employees are likely to demand a high price for accepting noncompetes due to the expectation that a current employer's project is likely to conclude rapidly, in which case the employee may be compelled to seek employment elsewhere. Employment contracts in that type of industry are less likely to include a noncompete clause, and if they do, employers are unlikely to enforce them vigorously given the potential adverse consequences in the ability to recruit talent in the future. The software industry, particularly the Internet-based sector, tends to fit this mold.

Noncompetes are more likely to be selected in markets that exhibit the opposite characteristics. In the biopharmaceutical sector, capital requirements are enormous (approaching or exceeding $1 billion in the case of an FDA-approved drug[342]), product development is long (about ten years on average), product obsolescence is slow, and interoperability is minimal. Given those considerations, the employer is likely to place a high value on internalizing the gains from its R&D investment and therefore should be willing to pay a relatively high price for achieving that objective through restrictions on departing employees. Moreover, the potential costs to a biopharmaceutical employee from a noncompete are presumably lower than in the software industry given longer product development cycles, which—in view of the importance of project-specific knowledge to biopharmaceutical development—tend to ensure longer employee tenures and diminish the number of potential opportunities at competing firms. Consistent with this expectation, empirical evidence shows low levels of employee movement in the Canadian biotechnology industry as compared to the free flow of human capital associated with the semiconductor and other IT industries in Silicon Valley.[343] This observed

[342] See Joseph A. DiMasi, Ronald W. Hansen, and Henry G. Grabowski, *The Price of Innovation: New Estimates of Drug Development Costs*, 22 J Health Econ 151, 180–81 (2003). The development cost estimate includes the costs of failed projects previously funded by the pharmaceutical firm. See id.

[343] See Hugh P. Gunz, Martin G. Evans, and R. Michael Jalland, *Career Boundaries in a "Boundaryless" World*, in Maury A. Peiperl, et al, eds, *Career Frontiers: New Conceptions of Working Lives* 24–53 (Oxford 2000).

pattern in human capital flows may be in part a function of institutional design: empirical evidence shows that California biotechnology firms issue stock options with long vesting periods and employees of those firms hold large percentages of firm equity,[344] suggesting that, even when firms operate in a jurisdiction in which noncompetes are unenforceable, they adopt alternative tools to constrain the outflow of human capital.

E. Error Costs and Noncompete Policy

Economically informed policymaking on noncompetes, and other constraints on employee mobility in innovation markets, must recognize the fundamental uncertainty that attends the selection of any particular point on the policy continuum ranging from full enforcement (equivalent to Option I) to zero enforcement (equivalent to Option III). This is akin to the concept of error cost that occupies a central place in antitrust law and policy: the policymaker recognizes the inevitability of erroneous decisions in general and then selects a legal standard that minimizes the sum of error costs less the administrative costs of implementing any particular standard.[345] Hence, antitrust law reserves per se illegal standards, which have low administrative costs, for practices that usually, or almost always, are expected to result in net social harms (principally, horizontal price-fixing), while retaining rule of reason standards, which have high administrative costs, for practices that do not usually result in net social harms (for example, below-cost predatory pricing).[346] In the case of noncompetes, each option on the policy continuum raises the risks of both under- and over-enforcement relative to the socially optimal level of noncompete enforcement that would be costlessly and perfectly implemented by a hypothetical omniscient regulator. In the case of a per se legal policy (Option I), the market is immune from the risk of underuse of noncompetes but may be exposed to overuse, resulting in suppressed knowledge spillovers and a slowdown in innovation, not to mention concerns regarding personal autonomy and distributive justice. In the case of a per se illegal policy (Option III), the market is immune to the risk of overuse of noncompetes but may be exposed to underuse, resulting in reduced employer incentives to invest in employee training and certain types

344 See Julia Porter Liebeskind, *Ownership, Incentives, and Control in New Biotechnology Firms*, in Margaret M. Blair and Thomas A. Kochan, eds, *The New Relationship: Human Capital in the American Corporation* 299, 306 (Brookings Institution 2000).

345 See note 38 (listing the leading sources).

346 See Easterbrook, 63 Tex L Rev at 3 (cited in note 38).

of R&D projects. The intermediate range of policy options (Option II), which correspond to the real-world variants of the common-law reasonableness standard, result in some mix of aggregate overuse or underuse of noncompetes relative to the social optimum.

It is important to appreciate that the error-cost approach contemplates that courts and other policymakers may make mistakes with respect to any individual enforcement action, but, in the aggregate, courts and other policymakers will maximize net social gains over time relative to any other enforcement methodology, taking into account legal transaction costs. Following this long-term net-welfare-maximization standard, the efficient legal regime with respect to noncompetes maximizes over time (i) the gains generated by net-welfare-increasing noncompetes, less (ii) the losses generated by net-welfare-decreasing noncompetes, less (iii) the legal transaction costs incurred to distinguish between "good" and "bad" noncompetes. The selection of any option on the noncompete policy continuum inherently involves the task of distinguishing between net-welfare-increasing and net-welfare-decreasing noncompetes, subject to some positive administrative cost and taking into account some positive probability that any legal rule will sometimes make errors in individual cases in distinguishing between good and bad noncompetes. Options I (per se legal) and III (per se illegal) both have the advantage of low administrative costs as compared to Option II (some version of the reasonableness standard), but take extreme views with respect to the likely distribution of good and bad noncompetes and therefore run the risk of significant error costs in the form of overuse or underuse of noncompetes. Option I ("per se legal") is predicated on the view that noncompetes are always or typically efficient market choices, in which case it is not worthwhile to incur the administrative costs of case-specific adjunction and occasional erroneous enforcement of a "bad" noncompete would be immaterial in the long term. Option III (per se illegal) takes the opposite view with respect to each parameter, except that it agrees that it is not worthwhile to incur the administrative costs of case-specific adjudication. By contrast, Option II takes the intermediate position that the distribution of "good" and "bad" noncompetes may vary sufficiently across industries, employee populations and even individual transactions, so that it is worthwhile to incur the administrative costs required to engage in case-specific adjudication and thereby reduce erroneous enforcement and invalidation of noncompete clauses. This option is also best in our view for taking account of personal autonomy and distributive justice concerns, which vary depending on the specific circumstances of the employer, employee, and industry.

The earlier generation of law-and-economics scholarship had essentially expressed agnosticism as to the appropriate policy options, on the reasonable ground that available evidence did not provide any firm ground on which to make a choice.[347] Today, we are in a position to take an incrementally firmer view on the efficient legal treatment of noncompetes, grounded in the accumulated body of theoretical and empirical analysis of noncompetes, as well as the larger literature on human capital and agglomeration economies.

An error-cost approach to noncompete policy favors the pliable reasonableness standard set forth several centuries ago in *Mitchel v Reynolds*.[348] While it carries a higher administrative-cost burden compared to Options I and III, the range of more and less generous reasonableness standards encompassed by Option II exhibits a close fit with our best theoretical and empirical understanding—which is to say, our self-acknowledged limited understanding—of the complex efficiency trade-offs involved in enforcing noncompete clauses in any particular case. Moreover, we note that courts' application of the common-law reasonableness standard may not be especially costly given that that inquiry has historically been limited to a defined set of factors, usually limited to duration, geography, and industry scope.[349] Relatedly, we note that the administrative costs under Option III (per se illegality) may in practice be appreciably greater than zero insofar as an absolute ban on noncompetes may lead parties to challenge legal arrangements that arguably mimic the effect of noncompetes but serve legitimate economic functions. This contingency has already been realized in California, where a lower court recently applied the statutory prohibition of noncompetes to an exclusivity clause in a business-to-business agreement, which has never been considered to fall within the purview of that statute.[350]

In sum, the reasonableness limitations that the common law places on the durational, geographic, and industry scope of noncompete obligations may be interpreted as an indirect instrument

[347] See Part I.B.5.
[348] 24 Eng Rep 347, 347 (KB 1711).
[349] See note 150 and accompanying text.
[350] See notes 29–30 and accompanying text.

for limiting error costs under conditions of uncertainty with respect to the socially optimal enforcement policy in the case of any particular noncompete. By tolerating noncompetes subject to fairly strict limitations on duration, geographic reach, and industry scope, courts may effectively minimize the expected error costs inherent to the enforcement or nonenforcement of the total population of noncompetes over time, as compared to a regime in which noncompetes were either flatly enforced or prohibited in all cases without qualification. Additionally, if and when evidence concerning the net welfare effects of noncompetes achieves greater certainty, a reasonableness approach provides policymakers with latitude to adjust the permitted scope of noncompetes, an option that is unavailable under either the full-enforcement or zero-enforcement options. While the extreme poles of the policy continuum largely eliminate administrative costs, each is likely to result in significantly higher error costs over time absent extreme and, based on a close reading of the empirical evidence, factually unjustified assumptions with respect to the likely distribution of efficient and inefficient noncompetes in the marketplace.

Conclusion

Much of current scholarly and policy commentary asserts, often with little qualification, that prohibiting enforcement of noncompetes and other contractual limitations on employee mobility promotes innovation. As one scholar has stated: "[T]here remain no persuasive arguments in favor of enforcing [noncompete] agreements."[351] Based on these types of unqualified statements in the scholarly literature, US senators have proposed—and multiple state legislatures have already taken or are actively considering—actions to substantially limit or even prohibit noncompetes.[352]

We respectfully dissent. The case against noncompetes is typically illustrated by reference to the standard narrative of the rise of Silicon Valley and the decline of Route 128. A close review shows that this historical episode is substantially more complex than has been commonly understood. Technological and economic fundamentals, rather than fine differences in state contract law, most likely account for each region's different innovation trajectories—which, in the medium to long term, has been positive in

351 See Moffat, 52 Wm & Mary L Rev at 879 (cited in note 9).
352 See notes 19–28 and accompanying text.

both cases.[353] The most widely cited empirical studies of a broader sample of jurisdictions suffer from material limitations and, contrary to repeated characterizations in the policy debate, do not provide compelling support for the view that noncompetes inhibit innovation.[354] Moreover, more recent empirical work has uncovered evidence supporting theoretical claims that noncompetes sometimes induce firms to invest in cultivating employees' human capital.[355]

The current state of our empirical understanding thus continues to track the most refined theoretical analysis of the complex economics of human capital markets, which suggests that the net efficiency effects of noncompetes—and other constraints on employee mobility—in innovation markets will vary across industry types, employee types, and other market parameters.[356] Some market segments may benefit from a high incidence of noncompetes, while others may suffer. Contrary to the direction of recent scholarship, popular commentary, and policy activity, there is little certainty concerning the net efficiency effects of noncompetes in general and reasonable grounds to believe they have a net positive effect in certain innovation environments. If that is the case, then, from an economic point of view, the common law's admittedly uncertain reasonableness standard likely represents the best available approach for balancing the complex trade-offs raised by noncompetes and other constraints on the mobility of human capital in innovation markets.

[353] See Part II.A.
[354] See Part II.B.
[355] See notes 310–13 and accompanying text.
[356] See Part II.B.3.

APPENDIX

Changes to State Laws Affecting Noncompetes (2014–2019)[357]

State (Year)	Change	Reduces Enforceability?
Delaware (2014)	Bars noncompetes for home inspector trainees.	Y
New Hampshire (2014)	Employee must agree to noncompete prior to start of employment.	Y
Arkansas (2015)	Specifically authorizes noncompetes in certain circumstances.	N
Hawaii (2015)	Prohibits enforcement of non-competes by "technology businesses."	Y
Alabama (2016)	Specifically authorizes noncompetes in certain circumstances.	N
Connecticut (2016)	Limits enforceable geographic scope and duration of noncompetes involving physicians.	Y
Idaho (2016) (repealed 2018)	Specifically authorizes noncompetes in certain circumstances.	N
Illinois (2016)	Bars noncompetes for "low-wage" employees.	Y
Oregon (2016)	Maximum term of noncompete limited to eighteen months.	Y
Utah (2016)	Maximum term of noncompete limited to twelve months.	Y

[357] Note that this Table does not cover judicial decisions that may have effectively changed an individual state's treatment of noncompetes. Relevant statutes (with the exception of the 2018 Idaho and Utah amendments) are as follows (corresponding to states listed above from top to bottom): 28 Del Code Ann § 4109; NH Rev Stat Ann § 275:70; Ark Code Ann § 4-75-101 (2015); Hawaii Rev Stat Ann § 480-4; Ala Code § 8-1-190; Conn Gen Stat § 20-14p; Idaho Code § 44-2704(6); 820 ILCS 90/10; Or Rev Stat § 653.295; Utah Code Ann § 34-51-201; Cal Labor Code § 925; Nev Rev Stat § 613.195; Colo Rev Stat § 8-2-113; Neb Rev Stat § 87-404(2); Mass Gen Laws Ann ch 149, § 24L; Washington Substitute HB 1450, Washington House of Representatives, 66th Regular Legislative Sess (Mar 12, 2019); Connecticut Bill No 7424, Connecticut General Assembly, Jan Sess (2019); 26 Me Rev Stat Ann § 599-A(1); Md Labor & Empl Code Ann § 3-716 (as amended); NH Rev Stat Ann § 275-70-a (as amended); North Dakota HB 1351, North Dakota Legislative Assembly, 66th Sess (Jan 9, 2019), codified as amended at ND Cent Code § 9-08-06; RI Gen Laws § 28-58-1 et seq.

State (Year)	Change	Reduces Enforceability?
California (2017)	Limits ability of employers to require employees to litigate disputes outside of California or under the laws of another state.	Y
Nevada (2017)	Limits noncompetes to terms that are "no greater than is required for the protection of the employer." Authorizes courts to reform noncompetes that are unreasonable.	Y, N[358]
Colorado (2018)	Bars noncompetes for physicians.	Y
Idaho (2018)	Repeals Idaho 2016 statute relating to noncompetes.	Y
Nebraska (2018)	Provides that arbitrator or court may "reform" noncompete provisions in a franchise agreement.	N[359]
Utah (2018)	Curtails enforcement of noncompetes in the broadcasting industry.	Y
Massachusetts (2018)	Prohibits noncompetes for employees subject to the Fair Labor Standards Act and all other employees terminated without cause.	Y[360]

[358] While the limitations on the enforceability of noncompetes would appear to moderately reduce enforceability relative to the existing reasonableness standard, the specific authorization of courts to reform noncompetes that have excessive duration, scope, or other unreasonable terms tends to enhance enforceability.

[359] This change increases enforceability because it specifically authorizes a court to "blue pencil" a noncompete provision if it is found to be unreasonable in its existing form, rather than ruling the provision to be unenforceable in its entirety.

[360] Note that, while the Massachusetts statute reduced the enforceability of noncompetes in certain cases, it also codified the inevitable disclosure doctrine (which Massachusetts courts have historically resisted), which enables employers to partially mimic the effect of a noncompete. See note 149 and accompanying text.

State (Year)	**Change**	**Reduces Enforceability?**
Washington (2019)	Imposes high salary and compensation minimums on employees and contractors who may be subject to noncompetes; sets presumptive eighteen-month limit on term; requires agreement at time of acceptance of employment or additional compensation; requires additional payment to employees terminated without cause.	Y
Connecticut (2019)	Bars noncompetes in home health services industry.	Y
Maine (2019)	Bars noncompetes for certain lower-wage workers and, in all cases, requires that employers disclose noncompete prior to offer of employment.	Y
Maryland (2019)	Bars noncompetes for certain lower-wage workers.	Y
New Hampshire (2019)	Bars noncompetes for certain lower-wage workers.	Y
North Dakota (2019)	Clarifies that "goodwill sale" exception to ban on noncompetes can extend to firm's partners, members, or shareholders.	N
Rhode Island (2019)	Bars noncompetes for certain lower-wage workers, employees subject to the Fair Labor Standards Act, students, and workers age eighteen or younger.	Y

Re: Non-Compete Clause Rulemaking, Matter No. P201200

Dear Federal Trade Commission,

I am the owner of a small company that manufactures a wide range of refractory products and custom designed precast shapes. "Refractories" are commercial furnace linings. A major aspect of our industry is innovation: creating more effective products (both in performance and cost) year-after-year. As a result, my company must place considerable resources not only in researching and developing innovative refractory technologies but also in training and trusting employees with the company's intellectual property, trade secrets, and other confidential information. The refractory industry is complex; my business must employ highly skilled individuals and compensate those employees accordingly. The proposed regulation banning non-compete clauses, essentially, in their entirety will have catastrophic effects for industries like mine.

The Commission publicizes its primary mission in promulgating this rule as "protecting competition and protecting consumers." Nonsense. A blanket ban on non-compete clauses such as is proposed in my industry eliminates all but the largest firms, and punishes consumers with fewer product choices and prices jacked up by oligopolistic profits. That is the rule's effect; that must be the rule's purpose.

The ability effectively and safely to line iron and steel furnaces requires complex technology. That means I must innovate ANNUALLY to stay in business and effectively compete. That ability for small firms like mine to innovate new products annually and drive competition with larger firms necessitates the ability to attract (and retain) the most skilled employees to design, learn and execute this technology best, and to protect that new technology for a reasonable period once my skilled hires are trained.

The proposed rule obviously devastates precisely those the antitrust laws are supposed to protect. It eliminates the protection noncompetes afford against confiscatory pricing and employee poaching that harms both the market and the consumers. It guarantees small firms like mine cannot protect against big firms raiding our talent and poaching our ideas, thus reducing the refractory market to a few big firms and foreign firms from countries that, unlike the FTC, understand the need to protect their own technology and the value of poaching ours. It ensures that the remaining oligarchs can jack up profits and disregard consumer choice.

In the refractory industry and others like it, the effect of the proposed rule will be a concentrated market with less competition among large, favored firms while consumers and little guys like me lose out. Does that lower consumer prices? No. It creates big guy profit taking. Does that ensure I can do the annual innovation necessary to serve customer needs, remain in business and continue to employ my employees? No. It ensures my ruin. Do these deliberate consequences meet FTC enabling legislation aims? No. They do just the opposite.

Does a blanket ban on non-compete clauses across all industries and all employees serve any legitimate purpose? No. The rule's premise—that non-compete provisions prey on minimum wage employees' ability to change jobs—is transparent nonsense. It guarantees low wages and higher unemployment. The rule's deliberate impact guarantees fewer employment choices and ensures downward pressure on wages the remaining big guys get to pay their employees.

Does it protect employee mobility from overreaching? No. The bulk of jurisdictions in the country that allow non-competes expressly or by implication require employers like me to show a protectable interest in the job—i.e., to show why what we are seeking to protect has a unique value that justifies the restriction, and every jurisdiction limits the market and time within which the restriction applies based on what is necessary to protect that interest. The best case is that those who suggest otherwise are innocently misinformed.

Is this rule even a lawful exercise of agency authority? No. Commissioner Wilson aptly outlined in her Dissenting Statement the numerous challenges the FTC faces in promulgating and enforcing this blanket ban on non-compete clauses: "(1) the Commission lacks authority to engage in 'unfair methods of competition' rulemaking, (2) the major questions doctrine addressed in *West Virginia v. EPA* applies, and the Commission lacks clear Congressional authorization to undertake this initiative; and (3) assuming the agency does possess the authority to engage in this rulemaking, it is an impermissible delegation of legislative authority under the non-delegation doctrine, particularly because the Commission has replaced the consumer welfare standard with one of multiple goals."

There is simply no legitimate purpose for the FTC to reach beyond its congressionally authorized role and regulate matters that are already being adequately addressed by state legislatures and the courts. The deliberate results this rule will produce sends a clear message to firms like mine in industries like mine that only judicial action—and long-term political action—will restore constitutional and statutory rights the rule takes from most of those the FTC regulates to give advantage to favored big guys. We hope this rulemaking process will restore reason.

My firm and those like it offer good well-paying jobs to Americans in places where they often are hard to come by. I am sure the Commission shares my belief in the value of preserving firms like mine. I am confident a reasoned review of this rule's terms as compared to the FTC Act, the Administrative Procedures Act and the Constitution will cast this rule aside. There really is no other lawful option.

We all know that legitimately trying to protect minimum wage worker mobility has nothing to do with a blanket rule that will wreck high tech high skilled industries like mine. If the FTC insists on having a rule outside its expertise and likely to be struck down as exceeding agency authority, I suggest two things. Without them, it is impossible to know whether you even need a rule to achieve the stated aims, and if so, what that rule should say.

First, know what you are talking about; commission independent real world studies that are both widespread and detailed to specific industries. Such a study will help determine the impact of what is proposed before just flinging something onto the page. I am willing to bet the FTC could not identify the effect of its proposed rule on the refractory industry or others like it—for instance, could the FTC identify what percentage of workers in the refractory industry are minimum wage, what percentage of workers in the refractory industry are subject to a noncompete, and the different effects of the proposed rule on different types of workers across different industries. You have to do the work before you make the rule. Unless the injurious consequences to my industry were intended, the FTC clearly undertook no discernible effort to address them in the current rule's operation before proposing it.

Second, fix ONLY what is broke; if statistically valid industry by industry studies suggest a need in some instances for a national rule within the agency's authority, tailor it to industries the study identifies (if the study identifies any, perhaps low skill minimum wage jobs with quantifiable mobility barriers directly the result of overreaching noncompetes) and regulate the specific aspects of particular features (e.g., with temporal and geographic limits) that have withstood legislative muster in numerous state legislatures (and have been well-defined through decades of adjudication in state courts or federal courts sitting in diversity).

If the **true** aim is to protect competition and customers, first get the result of fact-specific inquiries in place before drafting, rather than politics-driven assumptions, and then confine the rule to the fact specific issues those inquiries identify rather than a mindless blanket national ban. Only that will ensure a final determination worthy of this great agency and effective for legitimate regulatory aims. I respectfully ask the Commissioners to conduct such a review, and to take appropriate action rejecting this rule without further waste of taxpayer dollars so that the courts will not be obligated to do so.

Very truly yours,

A Concerned Citizen (and Refractory-Business Owner)

AdvaMed
Advanced Medical Technology Association

March 16, 2023

By Electronic Submission to https://www.regulations.gov/

Ms. April Tabor
Federal Trade Commission
Office of the Secretary
600 Pennsylvania Avenue NW, Suite
CC-5610 (Annex C)
Washington, DC 20580

Re: Non-Compete Clause Rulemaking, Matter No. P201200

Dear Ms. Tabor:

The Advanced Medical Technology Association ("AdvaMed") appreciates this opportunity to submit the below comments in response to the Federal Trade Commission's ("FTC") Non-Compete Clause Rule Notice of Proposed Rulemaking ("NPRM"), published at 88 Fed. Reg. 3482 (January 19, 2023).

The FTC's proposed rule would significantly impede medical technology innovation and reduce competition, resulting in diminished quality and increased cost of healthcare available to patients. Any rule must take a more nuanced approach to regulating non-compete agreements to ensure patient health, innovation, and competition are not unintentionally sacrificed.[1]

I. AdvaMed and the Medical Technology Industry

A. Who We Are

AdvaMed is a trade association that represents the world's leading innovators and manufacturers of medical devices, diagnostic products, digital health technologies, and health information

[1] AdvaMed notes there is a question as to whether the FTC has authority to issue this proposed rule. The FTC asserts authority for the proposed rule under Section 5 of the Federal Trade Commission Act, however, as a threshold matter, the following legal questions must be addressed: (1) whether the FTC has authority to engage in "unfair methods of competition" rulemaking, (2) whether the FTC has clear Congressional authority to conduct rulemaking on a "major question" that will impact the entire economy *(see West Virginia v. EPA*, 142 S. Ct. 2587 (2022)), and (3) to the extent Congress granted such authority, whether that grant was an impermissible delegation of legislative authority.

systems. Together, our members develop and manufacture much of the lifesaving and life-enhancing healthcare technology purchased annually in the United States and globally. These include technologies, devices, equipment, diagnostic tests, and health information systems that help patients stay healthier longer; recover more quickly after treatment; and enable clinicians to detect disease earlier and treat patients as effectively and efficiently as possible, transforming healthcare.

Our members range from the largest to the smallest medical technology producers and include hundreds of small companies with fewer than 20 employees. They are committed to the development of new technologies and services that allow patients to lead longer, healthier, and more productive lives. As a result:

- Since 1980, five years have been added to the U.S. life expectancy attributed to advancements in medical technology;[2]
- Developments in medical technologies have dramatically reduced the number of patient-days spent in hospitals;[3] and
- Medical technology advancements have dramatically reduced disability rates, and dramatically increased disability-free life expectancy.[4]

At the same time, innovation and advancements in medical technology result in dramatically reduced healthcare costs.

B. Patient Health and Medical Technology Innovation

The role of medical technology innovation in improving patient health is well-known. As stated in a report requested by the Food and Drug Administration and prepared by the National Academy of Sciences, Institute of Medicine ("NAS Report"):

> Pain, suffering, and death from disease still plague patients worldwide. Even where solutions exist, many are suboptimal, and there is much room for improvement. Fortunately, the US economic system has created incentives and

[2] National Center for Health Statistics. "Health, United States, 2014: With Special Feature on Adults Aged 55-64." Hyattsville, MD. May 2015.

[3] Between 1980 and 2010, there was a 60% decrease in patient hospital days as a result of developments in medical technologies. National Center for Health Statistics. "Health, United States, 2014: With Special Feature on Adults Aged 55-64." Hyattsville, MD. May 2015.

[4] Disability rates declined by 25 percent from 1982 to 2000, and disability-free life expectancy has increased over time. National Center for Health Statistics. "Health, United States, 2014: With Special Feature on Adults Aged 55-64." Hyattsville, MD. May 2015.

> resources to promote and reward innovation. . . . That has created a medical device (also called medical technology) innovation ecosystem in which ideas can become realities that can affect health care.[5]
>
> The medical device innovation ecosystem has multiple components:
>
> - **'Fuelers'—**venture capitalists, investors, and public markets that support the process and invest in the innovators.
> - **Innovation catalysts—**small startups, large companies, incubators, and other entrepreneurs that invent the technology or take a concept through to commercialization.
> - **Regulators—**the Food and Drug Administration (FDA), the Centers for Medicare and Medicaid Services (CMS), third-party payers, and professional societies (which play a substantial role in patients' access to new technologies).
> - **Consumers—**patients, physicians, and hospitals.[6]

All these entities play an important role in the development and advancement of medical technologies. For example, practicing physicians often consult during the development of medical technology, where they share real-time feedback on how a device could be improved, communicating their essential knowledge from diagnosing and/or treating patients while company representatives share their essential knowledge of the technology with the physicians to ensure the best products are reaching patients.

As a result of the innovation ecosystem, the U.S. medical technology industry is responsible for a highly disproportionate share of medical advances globally.[7] Yet, this "medical technology innovation ecosystem is fragile and extremely sensitive to changes in the cost of innovation, which is substantial. . . .The system is already under immense economic pressure."[8] The fragility of the innovation ecosystem results from several factors, including (1) the short product device life cycle, in which products are replaced by new or improved products on average every two

[7] The United States is ranked first in various measures of healthcare innovation. *See, e.g.,* 2020 FREOPP World Index of Healthcare Innovation, ranking the United States first in Science & Technology Healthcare Innovation with a score of 75.14, well above second-place ranked Netherlands (49.97). Available at https://freopp.org/wihi2020-505b1b60bce6.

[8] NAS Report at 21.

years;[9] and (2) the process from concept to product launch is extremely expensive.[10] Numerous additional obstacles can stifle ideas and cost-saving improvements in healthcare from successfully reaching the market to help patients, including funding challenges, particularly for small companies; insurers' resistance to cover new treatments; and the complexity of the regulatory process. Robust competition in medical technology innovation is critical to the continued, rapid, and often dramatic advancements in healthcare made by medical technology companies. Indeed, innovation, not price, is the primary driver of competition in the medical technology industry.[11]

Another factor contributing to the delicate nature of medical technology innovation is the vital role of small companies in that process. As the NAS Report observed:

> The survival of small companies is critical for delivering innovation to patients. . . . Most of the ideas that really change the practice of medicine come from small companies or individual inventors. Department of Commerce statistics show that in 2002, 3,725 of the 6,007 US medical device firms being regulated by FDA had fewer than 20 employees, and only 150 had more than 500 employees.[12]

For these and other reasons, the continued ability of medical device companies of any size to make rapid, significant, and sometimes transformational advances in healthcare technology depends upon their continued substantial investments in innovation, research, and development, *as well as* their ability to protect and recoup their investments in these activities and their employees through fair competition. Protecting the value of their intellectual property, trade secrets, and other confidential business information via non-compete agreements is critical to achieving these goals and essential to fair competition in this innovation-driven industry. That is, non-compete agreements safeguard innovation and competition within the medical technology industry.

---

[9] *Id.* at 20. Invention, development, and commercialization of new medical technologies is a lengthy, complex, labor-intensive process, however, the life cycle for similar replacement products is typically much shorter such that protecting an innovator's initial investment in creating new technologies is paramount.

II. The FTC's Proposed Rule Would Harm Innovation, Investment, and Competition to the Detriment of Patients

The FTC suggests that non-compete agreements harm competition, however, within the medical technology industry, innovation and investment drive competition and prohibiting non-compete agreements harms innovation and investment. Trade secrets, intellectual property, proprietary, and other confidential business information (collectively "confidential business information") reflecting and/or utilizing companies' innovation, research, development, and inventions are the lifeblood of the medical technology industry. The risks posed to the medical technology industry by an employee/consultant joining a competitor and taking with them high-value confidential business information are profound.

Former employees are a major, if not the primary, source of misappropriation of medical technology confidential business information.[13] Where a former employee is employed by a competitor in the same capacity as their former job, it is often impossible for that former employee in such circumstances to do the work expected of them in their new job *without* using the non-public, proprietary, and valuable knowledge they gained in their former job. Once they join the new company and begin work, the harm to the former employer is often inevitable and difficult to detect by the employee's former employer.

In order for the medical technology industry to continue delivering lifesaving/life-enhancing technologies to patients, companies must be able to freely share their confidential business information during the design, development, and commercialization processes without fear that the employees and consultants critical to these initiatives will walk out the door and take the information to a competitor. This free sharing of information and ideas is critical to fostering the collaboration needed to invent new technologies and timely deliver them to patients. Non-compete agreements allow innovator companies to protect their knowledge assets from knowledge spillovers, limiting the risk their confidential business information will be obtained and misappropriated by competitors.

The FTC proposes that Nondisclosure Agreements ("NDAs") and federal and state trade secret laws are sufficient to protect confidential business information, however, NDAs and/or trade secret laws alone cannot adequately protect the medical technology industry from the risk and harm of trade secret misappropriation. For example, given the short innovation cycle in the medical technology industry, an innovator would be unlikely to learn about the misappropriation of its trade secrets until after the competitor releases its new competing product, resulting in substantial marketplace loss to the innovator that cannot be recouped through any available

[13] After an eight-week trial, a Texas state court jury recently returned a verdict finding that more than a dozen former employees, including the company's former Executive Vice President, conspired to steal company trade secrets to benefit a rival company and owed their former employer millions in damages and legal fees. *DNOW LP vs. Toby Eoff et al.*, case number 22-DCV-294327, in the 434th District Court of Fort Bend County, Texas.

legal remedy. NDAs also do not protect against unintentional disclosure of negative knowledge[14] or confidential business information when an employee is conducting research and development for their new employer. Even if individuals do not directly disclose negative knowledge, it is impossible to prevent employees from using information already in their head, and it is similarly impossible for the employees themselves to ignore negative knowledge or other confidential business information that they have already acquired.

Numerous courts have recognized that money damages cannot adequately compensate a manufacturer for the actual and future damages resulting from misappropriation of confidential business information in the form of "loss of goodwill, loss of competitive advantage, and loss of research incentives."[15] Courts have also correctly recognized that the "loss of trade secrets cannot be measured in money damages" because a "trade secret once lost is, of course, lost forever," and the fact that a single trade secret may be disclosed to a new employer is enough to cause irreparable harm.[16]

The FTC's proposed rule would likely result in reducing competition in the medical technology industry because the majority of the industry could not afford millions of dollars in litigation costs or the loss of their entire investment in research and development, significantly curtailing advancements in lifesaving medical technologies available to patients. A 2019 report from the American Intellectual Property Law Association estimated the median cost to litigate a trade secret case was $4.1 million where the financial risk was between $10 million and $25 million. In fact, the same report estimated that where the financial risk was less than $1 million, litigating

[14] Negative knowledge is experientially acquired knowledge of what does not work or what paths to avoid. In the medical technology industry, negative knowledge can include information grounded in years of research and development but quickly acquired by employees/consultants entering the technology development process at any point.

[15] *See, e.g., Brake Parts, Inc. v. Lewis*, 443 F. App'x 27, 27 (6th Cir. 2011) (absent a preliminary injunction, plaintiff would suffer irreparable injury such as loss of goodwill, loss of competitive advantage, and loss of research incentives, arising from the misappropriation of its brake-pad formulations); *Bimbo Bakeries USA, Inc. v. Botticella*, 613 F.3d 102, 118 (3d Cir. 2010) (former employer would suffer irreparable harm absent injunctive relief because the disclosure of its trade secrets by a former employer to a new employer would put the former employer at a competitive disadvantage that a legal remedy could not redress); *Par Pharm., Inc. v. Quva Pharma, Inc.*, 764 F. App'x 273, 278 (3d Cir. 2019) (former employer demonstrated a reasonable likelihood that its trade secrets had been misappropriated by its former employee, and absent injunctive relief it would suffer irreparable harm).

[16] *See, e.g., See, e.g., N. Atl. Instruments, Inc. v. Haber*, 188 F.3d 38, 49 (2d Cir. 1999) (a loss of trade secrets constitutes irreparable injury that cannot be measured in damages because once a trade secret is lost, it is lost forever); *FMC Corp. v. Varco Int'l*, Inc., 677 F.2d 500, 503 (5th Cir. 1982) (the fact that a single trade secret may be disclosed to a new employer is enough to cause irreparable harm); *Norbrook Labs. Ltd. v. G.C. Hanford Mfg. Co.*, 126 F. App'x 507, 509 (2d Cir. 2005) (plaintiff will suffer irreparable harm where the ex-employee had shared misappropriated trade secret with his new employer, including the loss of the advantage of being a pioneer in the field); *Fres-co Sys. USA v. Hawkins*, 690 F. App'x 72, 73 (3d Cir. 2017) (affirming finding of likelihood of irreparable harm and entry of injunction where former employee in possession of trade secrets was hired by competitor for same job, in the same industry, and in the same geographic area).

trade secret misappropriation would cost even more than the financial risk itself.[17] This is a considerable burden for a company of any size to bear, but particularly threatening to the small- and medium-sized enterprises that make up the majority of medical technology innovators in the United States.

There are various examples of how reasonable non-compete agreements are appropriately used in the medical technology industry to protect critical confidential business information. For example, employees working on ongoing research and development prior to a company filing for patent rights hold confidential business information at a critical juncture of invention protection. If one of these employees moves to a competitor and uses technology developed/learned at the original employer, then questions can be created as to inventorship as well as scope of information in the "public domain" – both of which would impair the patent rights of the original employer. Likewise, a nefarious foreign company need only set up shop next to an innovator company and hire away a few key employees to gain access to the innovator company's confidential business information through intentional/unintentional disclosures by the former employees, undermining the survival of the innovator company and all its remaining workers. Without non-compete agreements, medical technology companies would likely be forced to limit the number of people involved in the research and development process because they would not be able to otherwise protect their intellectual property, stifling the collaboration and diversity of thought necessary for ideas to come to life and reach patients.

Similarly, medical technology companies devote tremendous resources training sales consultants who, in turn, train and develop close working relationships with physicians/surgeons, acquiring specialized knowledge of the companies' products and the medical procedures for which the products are used. This training and communication with physicians/surgeons are necessary because medical technologies often have unique settings and technical controls that must be used properly to ensure safe and effective care of patients. For instance, sales representatives may assist the clinical/operating room team to ensure that the appropriate range of necessary devices and accessories are available during a procedure, especially when dealing with medical technology that involves multiple devices and/or accessories. Non-compete agreements allow the medical technology industry to invest in this expensive, sophisticated training without fear that a competitor can simply hire that same sales consultant to sell similar products used in the same procedures with the same physician(s), thereby free riding on the previous employer's training investment. Without non-compete agreements, medical technology companies may be forced to limit the number of people with access to this training to protect their investments in new technologies, resulting in fewer sales consultants available to provide sophisticated operating room training.

[17] *See* American Intellectual Property Law Association, Report of the Economic Survey (2019), available at https://www.ipwatchdog.com/wp-content/uploads/2021/08/AIPLA-Report-of-the-Economic-Survey-Relevant-Excerpts.pdf

Likewise, as discussed earlier, physicians play an important role in the medical technology innovation ecosystem, often consulting during the development of medical technology.[18] During that process, it is important that inventors are able to communicate freely with the consulting physicians while protecting their confidential business information, and non-compete agreements are an essential tool for doing so. Consulting physicians are typically compensated for their time and experience and, in exchange, agree not to consult with competing innovators while having no restrictions on their practice of medicine.

Additionally, as part of the medical technology industry's mission to bring lifesaving/life-enhancing technologies to patients, mergers and acquisitions ("M&A") (as well as venture capital and private equity) play a key role. Medical technology startups are critical to innovation but often require the capability and financial backing of other organizations to advance their transformative technologies, which requires performing clinical studies, obtaining regulatory approvals, and commercializing their inventions to ultimately reach a broad patient population in need. Non-competes are necessary tools in M&A/investment agreements and are commonly bargained for – the skills and knowledge of a startup's founder(s) and workforce are essential to the value of its technology such that the founder(s) and workforce can demand a high price for their innovation *and* subsequent wages. The FTC's proposed rule disrupts this freedom to contract by introducing an unnecessary threat to the buyer/investor of losing the value of their investment. For example, if key leaders have the immediate freedom to establish competing companies or engineers swiftly depart to work on competing technologies, the substantial value of the target company is lost, disincentivizing innovation because innovators will not be able to trust that they can obtain the investments necessary through M&A to ultimately bring their technologies to market. A complete ban on non-compete agreements would have a widespread impact on M&A and the ability to obtain capital in the United States, likely resulting in the majority of medical technology companies (smaller companies) never bringing their products to market, reducing competition and depriving patients of lifesaving/life-enhancing technologies.

Ultimately, NDAs and trade secret laws are ineffective tools for preventing the misappropriation of confidential business information and protecting the medical technology industry's significant investments in innovation and talent.[19] Additionally, the FTC's proposed rule brings even more uncertainty to innovators' ability to protect their confidential business information and investments by seeking to ban NDAs and other "covenants" that the FTC deems "function as"

[18] *See supra* at 3.

[19] The FTC mentions fixed-term contracts as another available alternative to protect valuable investments (NPRM at 99-100), but these contracts do nothing to protect confidential business information once the contract ends and the employee/contractor is no longer working for the employer innovator. Fixed-term contracts are also arguably more restrictive to employees because they bind employees to a particular job for a specified period of time, prohibiting employees from freely (at will) seeking employment anywhere (not just competitors) during the entire duration of the contract.

non-compete agreements, calling these agreements *de facto* non-competes,[20] as well as threatening to preempt longstanding existing trade secret laws. Likewise, retroactively invalidating legal non-compete agreements also jeopardizes an extraordinary amount of lifesaving/life-enhancing technologies. For the medical technology industry, preventing the misappropriation of confidential business information and protecting the industry's investments in innovation and talent are essential for ensuring patient access to the best medical technology possible. The FTC's overly broad and nebulous ban on non-compete and "*de facto* non-compete" agreements prevents the industry's ability to do so. In fact, the FTC's suggestion that non-compete agreements harm competition does not apply to the medical technology industry where innovation/investment drive competition and prohibiting non-compete agreements harms innovation/investment.

III. The FTC's Proposed Alternatives / Carve-Outs Do Not Protect Innovation and Patient Health

In putting forward various alternative proposals allowing for non-compete agreements to be used in certain circumstances, it appears the FTC is acknowledging that non-compete agreements have value. The FTC's alternative proposals, however, do not protect innovation and patient health. Any rule should take a tailored approach and consider what confidential business information is appropriate to protect through a reasonably construed non-compete restriction. For example, in the medical technology industry, salaries alone do not dictate who has confidential business information that, if misappropriated, would derail innovation to the detriment of patient health. Salaries also often vary based on geography and size of a company.

Similarly, the FTC's carve-out permitting non-compete agreements for the sale of a business shows there is value in non-compete agreements, but limiting this exception to individuals owning a 25% share of the company being purchased is not founded in the realities of the market – i.e. no individual, even a founder, typically owns 25% of a target company by the time it is being acquired. Private equity firms, for example, often own large percentages of start-up companies in exchange for providing the capital needed to bring their transformative technologies to market. The FTC's rejection of non-compete protections in these contexts will limit innovation and stifle much needed investments in research and development of medical technologies in the United States.

[20] NPRM at 108-110.

IV. Conclusion

The FTC's proposed rule to ban reasonable, appropriately used non-compete agreements takes away the only reliable mechanism for medical technology innovators to protect their confidential business information and investments in innovation and talent such that they can continue bringing lifesaving/life-enhancing technologies to patients as quickly and effectively as possible. Any rule must take a more nuanced approach to regulating non-compete agreements and recognize that certain confidential business information needs to be protected – anything less jeopardizes patient health, innovation, and competition.

The Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, D.C. 20580

Dear Commissioners:

We are law professors, economists, and business school professors who have written extensively in the field of innovation and law. We would like to submit an important article regarding noncompetes by two of us, Jonathan Barnett & Ted Sichelman, *The Case for Noncompetes*, 86 THE UNIVERSITY OF CHICAGO LAW REVIEW 953 (2020), for review by the FTC.

This article, which presents the most comprehensive review to our knowledge of empirical evidence concerning the economic effects of noncompetes, addresses – and contradicts – many of the claims made by the FTC in support of its recent proposed rule to effectively ban noncompetes nationwide. In this regard, it offers a viewpoint quite different from the vast majority of academics invited to speak at the FTC's January 9, 2020 workshop on the issue, *Non-Competes in the Workplace: Examining Antitrust and Consumer Protection Issues*, as well as the academic research cited by the FTC in favor of its proposed rulemaking.

Specifically, the article contributes a new perspective to the current policy debate over non-competition covenants and other contractual restrictions on employee mobility in technology sectors. As the FTC is aware, scholars have widely argued that innovation thrives in jurisdictions that prohibit noncompetes. This argument focuses on the rise of Silicon Valley as a technology hub, where noncompetes were allegedly not enforced, and the ostensible decline of Boston's Route 128 area, where noncompetes were allegedly enforced. In related work, other scholars have conducted empirical studies purporting to show that noncompetes produce significant economic costs and dampen innovation and startup creation. Based on these scholarly views, several states have recently enacted, and more are seriously debating, statutes that limit or prohibit noncompetes. Similarly, several U.S. Senators proposed legislation that would essentially ban noncompetes nationwide. And now, the FTC seeks a nationwide ban via its proposed rulemaking.

This article makes three original and notable contributions that the FTC should seriously consider. First, it shows that neither theory nor empirics supports the economic arguments commonly made in favor of prohibiting noncompetes. As a matter of theory, conventional wisdom emphasizes that noncompetes impede the circulation of intellectual capital and depress wages, but typically overlooking that noncompetes encourage firms to cultivate employees' human capital and invest in innovative activity. As a matter of empirics, the article contests the widely accepted view that Silicon Valley surpassed Boston because of supposed differences in noncompete enforcement, which tend to be exaggerated. A careful examination of the evidence shows that the Boston area has remained a significant innovation center and that technological and other economic factors explain Silicon Valley's exceptional trajectory. Second, the article identifies serious factual and methodological deficiencies in several widely-cited empirical studies, which cast substantial doubt on those studies' findings and policy implications. Notably, these studies misread and misunderstand state law and enforcement patterns related to noncompetes. Third, based an exhaustive review of the evidence, the article proposes an original error-cost framework to analyze noncompetes, which provides an economic rationale for the common law's centuries-old reasonableness standard in determining whether to enforce a non-compete.

Unfortunately, even though the FTC is well-aware of Prof. Barnett's and Sichelman's work, they have not been invited to the FTC's workshops on noncompetes, nor were they consulted for the recent round of rulemaking, nor was their research mentioned in the 216-page Notice of Proposed Rulemaking that sets forth the FTC's proposed Non-Compete Clause Rule. In the interests of making public policy on the basis of all available evidence and scholarship, we believe that the FTC's current consideration of noncompetes would be enriched by their research, and we hope the FTC will read their work carefully and contact them to discuss it.

In short, it is critical in our view that the FTC independently assess the validity of the studies it is relying upon so heavily for its proposed rulemaking before taking any actions based on those studies' claims.

Sincerely,

The Case for Noncompetes

Jonathan M. Barnett† & Ted Sichelman††

Scholars and other commentators widely assert that enforcement of contractual and other limitations on labor mobility deters innovation. Based on this view, federal and state legislators have taken, and continue to consider, actions to limit the enforcement of covenants not to compete in employment agreements. These actions would discard the centuries-old reasonableness standard that governs the enforcement of these provisions, often termed "noncompetes," in all but four states (notably, California). We argue that this zero-enforcement position lacks a sound basis in theory or empirics. As a matter of theory, it overlooks the complex effects of contractual limitations on labor mobility in innovation markets. While it is frequently asserted that noncompetes may impede knowledge spillovers that foster innovation, it is frequently overlooked that noncompetes may encourage firms to invest in cultivating intellectual and human capital. As a matter of empirics, we show that two commonly referenced bodies of evidence fail to support zero enforcement. First, we revisit the conventional account of the rise of Silicon Valley and the purported fall

of the Boston area as innovation centers, showing that this divergence cannot suitably be explained by differences in state law regarding noncompetes. Second, we show that widely cited empirical studies fail to support a causal relationship between noncompetes, reduced labor mobility, and reduced innovation. Given these theoretical and empirical complexities, we propose an error-cost approach that provides an economic rationale for the common law's reasonableness approach toward contractual constraints on the circulation of human capital.

INTRODUCTION

On February 23, 2017, two titans of Silicon Valley went to war in federal court: Google filed a lawsuit against Uber, accusing it of using intellectual property allegedly stolen by one of the lead engineers on Waymo, Google's self-driving automotive subsidiary.[1] Specifically, Google alleged that Anthony Levandowski had misappropriated Google's intellectual property before departing (along with other Google engineers) to found Otto, a self-driving car startup subsequently acquired by Uber for $680 million.[2] The legal basis for Google's lawsuit against Uber and Levandowski consisted of a medley of federal trade secret, patent infringement, and state trade secret and unfair competition claims.[3] Given the high economic stakes, commentators speculated that if Google prevailed, the ultimate damages could exceed a billion dollars.[4] While the litigation was pending, the trial judge ordered Levandowski to stop working on projects involving the technology that had been allegedly misappropriated.[5] Although Google and Uber settled the dispute shortly after trial proceedings commenced for a mere $245 million, an arbitration panel subsequently found against Levandowski (who was fired by Uber[6]) and, on an interim basis, awarded Google $127 million in damages, for which Uber may be financially responsible under indemnification obligations to its former employee.[7]

1 Complaint, *Waymo LLC v Uber Technologies, Inc*, No 3:17-cv-00939, *2–5 (ND Cal filed Feb 23, 2017) (available on Westlaw at 2017 WL 726994) (Waymo Complaint) (stating various causes of action against Uber relating to alleged actions by a former Waymo employee in connection with his departure from Waymo to Uber's self-driving car project).

2 See id at *3–4 (describing evidence showing that Levandowski, former Waymo engineer, misappropriated information from Waymo upon departure from company).

The Google-Uber litigation, and the rich suite of legal and economic instruments deployed to restrain the departure of a prized employee, is a notable counterexample to the now-standard account of unrestrained employee movement in Silicon Valley, the world's preeminent innovation cluster. That account emphasizes the ease with which technical and managerial talent, and the intellectual capital embodied in that talent, circulates among competitors, resulting in knowledge spillovers that redound to the collective benefit of the innovation ecosystem. This free-flowing movement of human capital is widely attributed to cultural norms, organizational practices, and, especially among legal scholars, California's refusal to enforce a contractual clause known as a "covenant not to compete" (or "noncompete").[8]

A noncompete typically limits a former employee's ability to work for competitors in a certain industry and a certain geographic area for a certain period of time. In contemporary scholarly and policy discussions of innovation policy, the noncompete has recently become a surprising focal point. Specifically, the literature has widely adopted the view initially espoused by Professor Ronald Gilson—albeit in a much more qualified form—that California's general refusal to enforce noncompetes in significant part explains the exceptional growth of Silicon Valley since the early 1980s while Massachusetts's willingness to enforce noncompetes spurred the purported decline of the Route 128 area around Boston.[9] Following this view, California has enjoyed a healthy

[8] On cultural norms and organizational practices, see AnnaLee Saxenian, *Regional Advantage: Culture and Competition in Silicon Valley and Route 128* 1–9, 32–34, 44–45, 50–56 (Harvard 1996) (arguing that Silicon Valley's comparative advantage compared to Route 128 derived from its "network-based" system that promotes collective learning through informal collaboration within and between firms, as compared to Route 128's hierarchical system based on centralized and vertically integrated corporate entities). On noncompetes, see Ronald J. Gilson, *The Legal Infrastructure of High Technology Industrial Districts: Silicon Valley, Route 128, and Covenants Not to Compete*, 74 NYU L Rev 575, 602–09 (1999) (arguing that differences in the enforceability of noncompetes contributed significantly to the ascendance of Silicon Valley over Route 128 by promoting the circulation of human and intellectual capital among competing firms).

[9] For the original statement of this view, see Gilson, 74 NYU L Rev at 602–09 (cited in note 8). In the legal literature, representative contributions that have adopted and expanded upon Gilson's insight include: Orly Lobel, *Talent Wants to Be Free: Why We Should Learn to Love Leaks, Raids and Free Riding* 67–70 (Yale 2013) (arguing that California's refusal to enforce noncompetes at least partly accounts for its ascendance over Route 128 and attributing this hypothesis to Ronald Gilson); Orly Lobel, *The New Cognitive Property: Human Capital Law and the Reach of Intellectual Property*, 93 Tex L Rev 789, 825–26 (2015) (likening noncompetes to "a thick cluster of property rights that rigidifies the market and reduces the ability to move forward"); Viva R. Moffat, *Making Non-Competes Unenforceable*, 54 Ariz L Rev 939, 979–80 (2013) (arguing for a uniform rule of nonenforceability on the ground that noncompetes skew the balance in intellectual property policy

circulation of human capital, while Massachusetts has been deprived of the "agglomeration economies" that promote robust innovation clusters.[10] The result in California is a virtuous circle of accelerated innovation that led to the rise of Silicon Valley; the result in Massachusetts is a sad story of a Silicon Valley that could have been but wasn't.

The recent surge of interest in noncompetes is a welcome extension of innovation policy analysis. Noncompetes, and the broader universe of contractual and economic restraints on labor mobility, are a critical but overlooked tool in promoting robust innovation ecosystems. Scholarly discussions of innovation policy typically focus on the extent to which intellectual property rights such as patents or copyrights regulate the flow of informational assets. But this misses a key component of any innovation environment—namely, the flow of intellectual capital embedded in the human beings that innovate and commercialize new products and services. In the business world, firms are keenly aware of the value of human capital and use contractual and economic instruments to avoid losing their most valuable personnel to competitors. Based on a survey of 11,500 participants, a recent study found that an estimated 18 percent of all US workers (roughly, 30 million people), and approximately one-third of workers in professional, scientific, and technical occupations, are subject to noncompetes.[11] The extent to which the law should enforce these contractual instruments is a matter of fundamental importance.

between protecting R&D incentives and the public domain); Viva R. Moffat, *The Wrong Tool for the Job: The IP Problem with Non-Competition Agreements*, 52 Wm & Mary L Rev 873, 911–20 (2010) (arguing that noncompetes are a poor tool for protecting IP rights). In the economics literature, see Sampsa Samila and Olav Sorenson, *Noncompete Covenants: Incentives to Innovate or Impediments to Growth*, 57 Mgmt Sci 425, 436 (2011) (arguing that empirical evidence supports relaxing enforcement of noncompetes to accelerate labor mobility and stimulate entrepreneurship). In an important variant on this line of argument, Professor Alan Hyde agrees that labor mobility lies behind the success of Silicon Valley but attributes this difference principally to California firms' reluctance to bring trade secret claims against former employees and California courts' resistance to grant such claims, rather than differences in the treatment of noncompetes. See Alan Hyde, *Working in Silicon Valley: Economic and Legal Analysis of a High-Velocity Labor Market* 32–40 (M.E. Sharpe 2003).

10 Gilson, 74 NYU L Rev at 576, 606–07 (cited in note 8).

11 See J.J. Prescott, Norman D. Bishara, and Evan Starr, *Understanding Noncompetition Agreements: The 2014 Noncompete Survey Project*, 2016 Mich St L Rev 369, 461; Evan Starr, J.J. Prescott, and Norman Bishara, *Noncompetes in the U.S. Labor Force* *16–19 (University of Michigan Law and Economics Research Paper, Aug 2019), archived at https://perma.cc/ZXU6-NAGU.

In recent years, a growing number of scholars and policymakers have adopted a simple answer to this question: *never*.[12] Following this view—popularized by the slogan, "talent wants to be free"—the free circulation of human capital always, or usually, promotes innovation. As such, any constraints "imposed" by employers reflect either overreaching or economic irrationality.[13] As a matter of policy, this view recommends that all states adopt California's purported zero-tolerance regime—a change that would undo the common-law "reasonableness" standard currently used by forty-six states to adjudge the enforceability of noncompetes.[14] (The current exceptions are California, North Dakota, and Oklahoma, which bar noncompete enforcement against individuals in most circumstances;[15] recently, Hawaii barred noncompetes for "technology business[es]."[16]) To be clear, even under the long-standing common law doctrine (dating from an English precedent in 1711[17]), noncompete clauses are enforceable only if they set forth "reasonable" temporal, geographic, and scope-of-industry limitations.[18] For the "talent wants to be free" school of

---

12 See note 13 (noting scholars and policymakers adopting this view); Part I.C (same).

13 For representative sources that express this view, see Lobel, *Talent Wants to Be Free* at 27–41, 201 (cited in note 9) (arguing that legal constraints, such as noncompetes, that impede labor mobility discourage innovation by hindering employee creativity and blocking interfirm flows of intellectual capital); Yochai Benkler, *Law, Innovation and Collaboration in Networked Economy and Society*, 13 Ann Rev L & Soc Sci 231, 235 (2017) (arguing that noncompetes are incompatible with a "network view," rather than an "atomistic view," of innovation, and citing empirical evidence that innovation thrives in network relationships with high rates of knowledge flow); Lobel, *Talent Wants to Be Free* at 64 (cited in note 9) (arguing that firms that advocate for noncompete enforcement "would likely benefit from the very movement they are attempting to limit"); Moffat, 52 Wm & Mary L Rev at 893–97 (cited in note 9) ("[N]oncompetes are at odds with both the fair bargaining process and efficiency underpinnings of the freedom of contract rationale."); id at 898–99 (arguing that the "IP justification" for noncompetes is insufficient and advocating a policy of zero enforcement); Alan Hyde, *Should Noncompetes Be Enforced?*, 33 Regulation 6, 9 (Winter 2010–11) (stating that losing an employee means gaining access to a new information network, rather than losing an information asset). Ronald Gilson expresses a similar view, although he clarifies that the positive welfare effects he attributes to California's refusal to enforce noncompetes may be limited to that particular state at a particular point in time in its economic trajectory. See Gilson, 74 NYU L Rev at 619–20, 627–29 (cited in note 8).

14 For a review of state laws on noncompetes, see generally J. Gregory Grisham, *Beyond the Red-Blue Divide: An Overview of Current Trends in State Non-Compete Law*, 18 Federalist Society Rev 42 (June 19, 2017), archived at https://perma.cc/33Q7-N9JF.

15 Cal Bus & Prof Code § 16600; ND Cent Code § 9-08-06; 15 Okla Stat § 217.

16 Hawaii Rev Stat Ann § 480-4(d).

17 *Mitchel v Reynolds*, 24 Eng Rep 347, 347 (KB 1711) (stating that a "bond or promise to restrain oneself from trading in a particular place, if made upon a reasonable consideration, is good").

18 See id at 348 (drawing distinction between restraints "not to exercise a trade throughout the kingdom," which are deemed to be void, and restraints that are "limited to

thought, it seems that no limitation on the movement of talent can ever be deemed reasonable.

These academic views now play a prominent part in ongoing policy debates and press coverage concerning proposed laws that would limit, or bar, the enforcement of noncompetes.[19] On March 7, 2019, a bipartisan group of six Democratic and Republican US senators sent a joint letter to the Government Accountability Office requesting that it investigate the impact of noncompetes "on workers and on the economy as a whole."[20] Citing academic research that "California's ban on non-compete agreements has been a prime factor in the state's growing economy," three Democratic US senators introduced legislation in April 2018 to impose a ban on noncompetes nationwide, which was re-introduced by

---

a particular place," which may be deemed reasonable). For more detailed discussion of the reasonableness standard, see Part II.A.3.b.

19 Reflecting unusual interest in the intricacies of employment contracts, *The New York Times*, *The Wall Street Journal*, *Forbes*, *Fortune*, *The Boston Globe*, and other media outlets have run stories and op-eds on the use of noncompete clauses and legislative proposals to ban these clauses. See, for example, Orly Lobel, *Companies Compete but Won't Let Their Workers Do the Same* (NY Times, May 4, 2017), archived at https://perma.cc/LG33-EUTV (discussing states' differences in enforcing noncompetes, federal proposals to limit noncompetes, and the harmful effects of noncompetes on employees); Steven Greenhouse, *Noncompete Clauses Increasingly Pop Up in Array of Jobs* (NY Times, June 8, 2014), archived at https://perma.cc/P575-QQCX (discussing proposed legislation in Massachusetts limiting enforcement of noncompetes); Neil Irwin, *When the Guy Making Your Sandwich Has a Noncompete Clause* (NY Times, Oct 14, 2014), archived at https://perma.cc/FQ4X-FNKB (discussing the economic, legal, and moral issues raised by noncompetes); Ruth Simon and Angus Loten, *Litigation over Noncompete Clauses Is Rising* (Wall St J, Aug 14, 2013), online at https://www.wsj.com/articles/litigation-over-noncompete-clauses-is-rising-does-entrepreneurship-suffer-1376520622 (visited Feb 17, 2020) (Perma archive unavailable) (discussing increasing litigation over, and prevalence of, noncompete agreements); Joann S. Lublin, *Companies Loosen the Handcuffs on Non-Competes* (Wall St J, Aug 12, 2013), online at https://www.wsj.com/articles/companies-loosen-the-handcuffs-on-noncompetes-1376320350 (visited Feb 11, 2020) (Perma archive unavailable) (discussing cases in which employers declined to strictly enforce noncompetes when executives departed for other large corporations); Eric Goldman, *Why Congress Should Restrict Employee Non-Compete Clauses* (Forbes, June 30, 2015), archived at https://perma.cc/52G4-KTLD (supporting federal legislation to limit enforcement of noncompetes); Claire Zillman, *Are Noncompete Agreements Hurting Tech Innovation?* (Fortune, July 1, 2015), archived at https://perma.cc/2YRK-95G4 (discussing differing views on enforceability of noncompetes, their impact on innovation, and proposed state legislation to limit enforceability); John McEleney, *Noncompetes Hurt Workers and Their Employers* (Boston Globe, June 28, 2015), online at https://www.bostonglobe.com/opinion/2015/06/27/onshape-ceo-john-mceleney-noncompetes-hurt-workers-and-their-employers/6NbXbI5jhZpl5wyvc28FSI/story.html (visited Feb 3, 2020) (Perma archive unavailable) (CEO of Massachusetts-based company arguing that noncompetes should "go away altogether").

20 Senator Christopher Murphy, et al, Letter to the Honorable Gene Dodaro, Comptroller General, US Government Accountability Office *1 (Mar 7, 2019), archived at https://perma.cc/W38U-2YRR.

two Democratic and Republican US senators in October 2019.[21] Like these US senators, advocates for strict limitations on, or outright bans of, noncompetes explicitly refer to selected empirical studies in arguing that these reforms would facilitate labor mobility and promote innovation.[22] A leading academic opponent of noncompetes has written: "[T]he research suggests that noncompetes should be banned for all employees, regardless of skill, industry or wage; they simply do more harm than good."[23] In 2018, the influential *Economist* magazine endorsed an only slightly more qualified position, arguing that noncompetes should be enforced only in narrow circumstances and similarly referring to academic research to support this position.[24]

A sizeable number of state legislatures have derived similar conclusions. Since 2014, the legislatures of thirty-seven states have formally considered laws that would affect the enforceability of noncompetes in employment agreements.[25] Of those proposed

21 On the April 2018 proposed legislation, see Office of Senator Ron Wyden, Press Release, *Wyden, Murphy, Warren Introduce Bill to Ban Unnecessary and Harmful Non-Compete Agreements* (Apr 26, 2018), archived at https://perma.cc/6N2T-V6N2 ("The new legislation would prohibit the use of non-compete agreements. . . . Many believe that California's ban on non-compete agreements has been a prime factor in the state's growing economy."); Workforce Mobility Act of 2018, S 2782, 115th Cong, 2d Sess (Apr 26, 2018). On the October 2019 proposed legislation, see Office of Senator Todd Young, Press Release, *Young and Murphy Introduce Bill to Limit Non-Compete Agreements, Protect Workers* (Oct 17, 2019), archived at https://perma.cc/PFU9-6GWW ("Research indicates that workers trapped by non-competes are less mobile, which results in firms having difficulty hiring workers with the right set of skills."); Workforce Mobility Act of 2019, S 2614, 116th Cong, 1st Sess (Oct 27, 2019).

22 See, for example, Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19). Lori Ehrlich, a Massachusetts representative who introduced a bill to preclude most noncompete enforcement, believes noncompetes have an "overall impact of stifling innovation" and cites academic studies on her website. Lori A. Ehrlich, *Fact Sheet: H. 2366* (2018), archived at https://perma.cc/6XJR-9ZY8 (discussing a "recent peer-reviewed academic paper" which shows that nearly one in five employees are bound by a noncompete). See also Zillman, *Are Noncompete Agreements Hurting Tech Innovation?* (cited in note 19).

23 Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19).

24 *Restrain the Restraints: The Case Against Non-compete Clauses* (The Economist, May 19, 2018), online at https://www.economist.com/leaders/2018/05/19/the-case-against-non-compete-clauses (visited Feb 11, 2020) (Perma archive unavailable) (supporting a requirement for employers to demonstrate genuine harm in noncompete litigation, as well as arguing that noncompetes should be enforced only if they apply for a short time and they are negotiated before an employee accepts a job offer).

25 These states are Alabama, Arkansas, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New York, Ohio, Pennsylvania, New Jersey, North Dakota, Oregon, Rhode Island, South Dakota, Texas, Utah, Vermont, Washington, and West Virginia. This includes all legislatures in which a member has formally proposed a law affecting noncompetes, whether generally or in specific industries, since 2014, based on a search of legislative proposals in the Westlaw and LexisNexis databases. See also Appendix.

bills, all but six proposed to limit enforceability (up to and including outright bans). In twenty-one states, these debates have translated into action. This includes Massachusetts, which in 2018 enacted a statute prohibiting noncompetes for certain categories of employees[26] and, in most other cases, imposes notice obligations on employers.[27] The Appendix shows all statutory changes to state noncompete laws during 2014–2019. Nineteen changes reduced enforceability and six enhanced it (although one was repealed two years later and the other was offset by other provisions that limited enforceability). In enacting its ban on noncompetes in the technology industry, Hawaii specifically referenced academic studies that purportedly supported this policy action as being conducive to innovation.[28] Additionally, in California, some courts have recently adopted expansive understandings of the state's statutory limitation on enforcing noncompetes against individuals, applying it to other contractual obligations that have long been thought to lie outside the purview of the statute.[29] In

[26] The statute primarily captures workers who are "nonexempt under the Fair Labor Standards Act," Mass Gen Laws Ann, ch 149, § 24L, which generally targets salaried workers employed on a fixed hourly basis and most likely would not target managerial and other professional employees. See US Department of Labor Wage and Hour Division, *Fact Sheet #17A: Exemption for Executive, Administrative, Professional, Computer & Outside Sales Employees Under the Fair Labor Standards Act (FLSA)* (July 2008), archived at https://perma.cc/7VDP-MURT. However, there may be ambiguities in certain cases. For further discussion, see Stephen T. Melnick, Chris Kaczmarek, and Melissa L. McDonagh, *Frequently Asked Questions About the New Massachusetts Noncompetition Agreement Act* (Littler, Sept 5, 2018), archived at https://perma.cc/ER4R-PMZZ.

[27] Mass Gen Laws Ann, ch 149, § 24L. The statute also requires that a noncompete "must be no broader than necessary to protect . . . legitimate business interests of the employer" and must have a reasonable geographic, temporal, and industry scope, see id; however, this language simply restates Massachusetts courts' holdings on this point. For further discussion, see notes 150–51 and accompanying text. Note further that the effect of the Massachusetts statute is qualified in two respects: (i) the law does not apply to a noncompete provision in an employer-employee separation agreement (if there is a seven-day period during which the employee can rescind acceptance), and (ii) Massachusetts simultaneously codified the "inevitable disclosure" doctrine, which entitles employers to seek injunctions against departing employees in the case of "threatened misappropriation," Massachusetts Trade Secrets Act, Mass HR 4868, § 19, 190th Sess (July 31, 2018). For further discussion, see note 130 and accompanying text.

[28] The legislature stated: "[A]cademic studies have concluded that embracing employee mobility is a superior strategy for nurturing an innovation-based economy." Robert B. Milligan, *Hawaii Bans Non-Compete and Non-Solicit Agreements with Technology Workers* (Seyfarth Shaw, July 6, 2015), archived at https://perma.cc/TTQ3-Y9G9.

[29] These decisions purport to apply the California Supreme Court's 2008 decision in *Edwards v Arthur Andersen LLP*, 189 P3d 285 (Cal 2008). See, for example, *Barker v Insight Global LLC*, 2019 WL 176260, *3 (ND Cal) (allowing claim that a nonsolicitation clause was illegal under California's noncompete ban to go forward); *AMN Healthcare, Inc v Aya Healthcare Services, Inc*, 28 Cal App 5th 923, 935–37 (2018) (holding that a firm could not enforce a nonsolicitation clause against a former recruiter employed by the firm, on the grounds that doing so would violate California's ban on noncompetes); *Golden v*

2018, a California lower court even applied the statutory limitation to prevent businesses from entering into exclusivity agreements between themselves, which had been traditionally the purview of California's antitrust provisions, not its statutory prohibition against noncompetes.[30] While the appellate court reversed this ruling, it is nonetheless indicative of an increasingly dogmatic approach against the enforcement of noncompetes or other contractual provisions deemed to have a comparable effect.[31]

The vigorous political debate and ongoing legislative activity relating to noncompetes encompasses a variety of policy concerns, including efficiency-related economic concerns as well as noneconomic concerns involving personal autonomy and distributive justice.[32] In markets for highly skilled technical and managerial labor (as distinguished from lower-income and lower-skilled occupations, which has been the focus of some of the proposed legislative bans[33]), the debate on both sides has principally relied on economic arguments. The toolkit of law-and-economics analysis is well suited to provide a balanced analysis of efficiency-related arguments for and against proposed policy shifts with respect to

California Emergency Physicians Medical Group, 896 F3d 1018, 1024–26 (9th Cir 2018) (refusing to uphold a litigation settlement agreement in which a physician-plaintiff agreed not to work at any facility that is owned, managed, or contracted by the medical group that had formerly employed the physician, but without imposing any other restrictions on the physician's pursuit of other employment opportunities). Note that the *Barker* and *AMN Healthcare* decisions depart from long-standing California precedent upholding the enforceability of postemployment nonsolicitation covenants subject to a reasonableness standard, see *Loral Corp v Moyes*, 174 Cal App 3d 268, 278–79 (1985).

30 See *Beckman Coulter, Inc v Quidel Corp*, 2018 WL 9943513, *1–2 (Cal Super).

31 See *Quidel Corp v Superior Court of San Diego County*, 39 Cal App 5th 530, 533, 535–36, 544–45 (2019) (reversing lower court's ruling based on *Edwards* invalidating the exclusivity agreement, and holding that *Edwards* does not extend beyond the employment context).

32 For a critique of noncompetes on distributional grounds, with an emphasis on the lack of meaningful negotiation on the part of the employee, see Rachel S. Arnow-Richman, *Bargaining for Loyalty in the Information Age: A Reconsideration of the Role of Substantive Fairness in Enforcing Employee Noncompetes*, 80 Or L Rev 1163, 1214–15 (2001). See also Christopher T. Wonnell, *The Contractual Disempowerment of Employees*, 46 Stan L Rev 87, 106 (1993). Because our Article focuses on the effects of noncompetes on technological innovation, we generally ignore the distributional (and autonomy-related) effects of noncompetes, though our intention is not to diminish their importance in the overall policymaking calculus.

33 See, for example, Office of Senator Marco Rubio, Press Release, *Rubio Introduces Bill to Protect Low-Wage Workers from Non-Compete Agreements* (Jan 15, 2019), archived at https://perma.cc/JM6P-QPS3 (describing a bill proposed by US Senator Marco Rubio to ban noncompetes nationwide for employees who are eligible for protection under federal overtime eligibility laws).

noncompetes that apply to technical and managerial personnel in technology markets.

In this Article, we undertake that task. Specifically, we look closely and broadly at the economic arguments, both theoretical and empirical, that have been advanced in support of the "talent wants to be free" view. While the details are complex and nuanced, our conclusion is simple and modest. Neither economic theory nor empirical evidence provides compelling support to abandon the common law's centuries-old reasonableness standard. Contractual restraints on labor mobility in technology markets raise complex trade-offs between employers' training and R&D incentives (generally favored by noncompetes) and employee mobility (generally disfavored by noncompetes).[34] While the latter is important for innovation, so is the former, and case-specific application of the reasonableness standard arguably offers the best, albeit imperfect, mechanism for balancing those competing considerations.

The now-popular view that innovation always or usually does best when human capital circulates freely relies heavily on a single historical example: the divergence in economic fortunes of Silicon Valley in California and Route 128 in Massachusetts and the different cultural norms and noncompete enforcement policies attributed to each innovation cluster. The results are surprising. Contrary to the standard account, we show that there is little compelling ground to attribute Silicon Valley's ascendance over Route 128 in the late 1980s and early 1990s to differences in the enforceability of noncompetes.[35]

There are multiple reasons. First, during Silicon Valley's ascendance, California's policy against noncompetes was clouded by several important exceptions. Second, California firms could significantly mimic noncompetes through trade secret and patent infringement litigation, long-term contracts, deferred compensation, and other mechanisms. Third, it is not clear that Massachusetts law substantially restrained employee turnover as an *effective* matter. Contemporary accounts of Route 128 in the heyday of the minicomputer industry in the 1970s and 1980s describe the same type of job hopping and spin-off formation associated with Silicon Valley. Fourth, Silicon Valley's rise over Route 128 most likely stemmed far more from technological and

[34] A potential negative secondary effect of noncompetes is to depress employee creativity and effort. We address this concern below in Part I.B.3.

[35] See Part II.A.

economic fundamentals associated with the "PC revolution," rather than fine distinctions in noncompete enforcement. Lastly, Route 128's decline was relatively short lived, and it has remained a significant innovation center, especially in the life sciences and certain information technology markets.

Our original and comprehensive reexamination of the Silicon Valley / Route 128 narrative raises doubts concerning the widely accepted causal sequence running from prohibiting noncompetes to increased employee mobility to increased innovation. These doubts are intensified by a close analysis of recent empirical studies that are regularly cited as evidence that noncompetes impede innovation. Contrary to the characterization of these studies in much of the policy commentary by academics and governmental agencies,[36] these studies suffer from significant methodological limitations, deliver statistically weak results, and do not provide compelling support for the view that banning noncompetes promotes innovation.

A fully informed policy position concerning noncompetes must reflect the uncertain state of our empirical understanding of the effects of these agreements in innovation markets. That is, it must reflect the fact that available evidence can neither support nor rebut any systematically adverse relationship between noncompetes and innovation outcomes in general. Only this measured conclusion, rather than the strongly "abolitionist" position that scholars and policymakers have increasingly advanced, is consistent with theoretical analysis that identifies the countervailing efficiency effects of noncompetes and other constraints on employee mobility. The free movement of talent implies efficiency

36 See, for example, Lobel, *Talent Wants to Be Free* at 67–72 (cited in note 9) (describing empirical studies that purportedly have confirmed Gilson's hypothesis attributing the rise of Silicon Valley in part to California's refusal to enforce noncompetes); The White House, *Non-Compete Agreements: Analysis of the Usage, Potential Issues, and State Responses* *2, 5–7 (May 2016), archived at https://perma.cc/CR5Y-V8JX (discussing empirical studies measuring the prevalence and economic effects of noncompetes on employee mobility and start-up formation); US Department of the Treasury, Office of Economic Policy, *Non-compete Contracts: Economic Effects and Policy Implications* *11–13, 18–23, 26 (Mar 2016), archived at https://perma.cc/V383-QXM7 (reviewing research on use and effects of noncompetes and concluding that economic justifications for noncompetes have weak support); Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19) (same); Lobel, 93 Tex L Rev at 827, 839–42 (cited in note 9) (describing empirical studies suggesting that noncompetes reduce employee mobility, depress employee effort, and reduce innovation); Benkler, 13 Ann Rev L & Soc Sci at 235 (cited in note 13) (describing empirical research purporting to show that enforcing noncompetes depresses employee mobility, reduces knowledge spillovers, and undermines innovation); Hyde, 33 Regulation at 9 (cited in note 13) ("Study after study shows how much more productive firms will be if they can hire, free of lawsuits, someone who worked at a rival.").

gains from knowledge sharing and accelerated "*n*-mover" innovation. However, a blanket prohibition of noncompetes implies efficiency losses from uncompensated transfers of intellectual capital to competitors—which, far from being mere efficiency-neutral transfers, may discourage *first*-mover innovation and employee training, which may depress the development of human intellectual capital in the first instance.

Complex problems deserve complex solutions. Contrary to what is hastily becoming conventional wisdom, which is in turn being converted into concrete policy actions, there is no one-size-fits-all solution to this trade-off as a matter of economic analysis. Based on available evidence, there is no reason to believe that the efficiency gains from freely circulating human capital systematically outweigh the efficiency losses from uncompensated uses of intellectual capital. Rather, the net efficiency effect of noncompetes in any particular market depends on the interaction between multiple factors that vary across industries, firms, and types of employees. Even if California's zero-enforcement policy has been *locally* optimal (or at least, sufficiently workable) from an efficiency perspective, it may be suited to a particular type of innovation economy at a particular time—an important but neglected qualification that Gilson made when he originally attributed Silicon Valley's success to California's refusal to enforce noncompetes.[37] At the same time, we emphasize that neither theory nor empirics support an unqualified freedom-of-contract approach that enforces noncompetes in all circumstances absent evidence of fraud or coercion. Rather, we explicitly recognize the uncertainty involved in assessing the net efficiency effects of noncompetes. Using the error-cost approach developed in antitrust analysis and jurisprudence,[38] we embed that uncertainty in our policy analysis, concluding that the common law's reasonableness standard remains the best available instrument to reflect, albeit imperfectly, the trade-off between efficiency gains and losses inherent to limitations on employee mobility in innovation markets.

---

[37] See Gilson, 74 NYU L Rev at 627–29 (cited in note 8).

[38] For the leading sources, see Frank H. Easterbrook, *Workable Antitrust Policy*, 84 Mich L Rev 1696, 1711 (1986) ("We want to hold to a minimum the sum of the costs of harmful activity wrongly condoned and useful activity wrongly condemned (or discouraged)."); Frank H. Easterbrook, *The Limits of Antitrust*, 63 Tex L Rev 1, 16 (1984) ("[W]e should prefer the error of tolerating questionable conduct, which imposes losses over a part of the range of output, to the error of condemning beneficial conduct, which imposes losses over the whole range of output.").

In sum, our Article makes three important contributions to the literature. First, it exhaustively reviews the widespread contention that noncompetes thwart innovation.[39] Our detailed analysis shows that neither theory nor empirics supports the economic arguments commonly wielded in favor of prohibiting noncompetes.[40] As a matter of theory, conventional wisdom emphasizes that noncompetes impede the circulation of intellectual capital while overlooking that noncompetes may encourage firms to cultivate employees' human capital.[41] As a matter of empirics, we contest the widely accepted view that Silicon Valley surpassed Boston because of supposed differences in noncompete enforcement, which tend to be exaggerated.[42] A careful examination of the evidence shows that the Boston area has remained a significant innovation center and that technological and economic factors better explain Silicon Valley's exceptional trajectory.[43] Second, we uncover serious factual and other deficiencies in several widely cited empirical studies, which cast substantial doubt on those studies' findings and policy implications.[44] Third, based on our exhaustive review of the available evidence, we propose an original error-cost framework to analyze noncompetes, which provides a robust economic rationale for the common law's reasonableness standard.[45]

The Article proceeds as follows. Part I describes the noncompete debate and, in particular, contrasts newly ascendant views favoring the free circulation of human capital with older views that recognize that reasonable contractual limitations on employee mobility may promote social welfare. Part II reexamines the standard narrative of the rise of Silicon Valley and the decline of Route 128, looking closely at multiple factors that may account for Silicon Valley's exceptional success as an innovation center. Additionally, we review more recent empirical studies on the relationship between noncompetes, employee movement, and innovation. Part III revisits the range of policy options with respect to noncompetes, using an error-cost approach that has not been previously applied to the enforcement of noncompetes. We briefly conclude.

I. Old and New Views: From Agnosticism to Abolitionism

In this Part, we review two key stages in the intellectual history of the current debate over noncompetes and other restraints on employee mobility, and situate that debate within a larger body of economic thought relating to the economics of human capital. First, we review an earlier generation of law-and-economics scholarship, which identified the social costs and gains attributable to noncompetes and generally adopted an agnostic position concerning these restraints as a general matter. These scholars were therefore sympathetic to the common law's reasonableness standard, which upholds or invalidates noncompetes on a case-specific basis. Second, we review a more recent school of thought that takes the strong view that the social costs associated with noncompetes typically or almost always outweigh the social gains, and therefore supports ending noncompete enforcement following California's example.

A. Foundations: Becker and Marshall

Economically informed analysis of noncompetes and other restraints on labor mobility in innovation markets stands at the intersection of two foundational bodies of economic thought: Gary Becker's breakthrough work on the economics of human capital and Alfred Marshall's classic writings on the agglomeration economies that derive from the interchange of intellectual capital. Contemporary discussions of the legal treatment of noncompetes has relied (sometimes implicitly) almost entirely on the work of Marshall, which is a key reference point in the literature on innovation policy, while devoting little attention to the insights of Becker, widely recognized as *the* foundational work in the modern field of labor economics.[46] We review both contributions briefly below and will then integrate these classic insights from innovation policy and labor policy scholarship throughout our analysis of noncompetes and other constraints on the mobility of human capital.

[46] On the importance of Becker's work, see generally Yoram Weiss, *Gary Becker on Human Capital*, 81 J Demographic Econ 27 (2015).

1. Becker: Human capital as an economic asset.

Nobel Prize–winning economist Gary Becker effectively founded the economic analysis of human capital with the publication of his landmark work, *Human Capital*, in 1962.[47] Becker showed that economic analysis could be applied to the acquisition and cultivation of human capital, whether through education, training, or other mechanisms. From an economic point of view, human capital acquisition involves the use of scarce resources to maximize net expected value, as with any other costly activity. In implementing this analysis, Becker drew a key distinction between *general* and *firm-specific* human capital assets.[48] General human capital refers to technical, managerial, and other skills and knowledge that have value across a broad pool of firms or industries.[49] Firm-specific human capital refers to the narrower set of technical, managerial, and other skills and knowledge that have value (or have greater value) only at a particular firm.[50] The scholarly literature that has followed Becker's work has identified an intermediate form of human capital that is specific to an industry—namely, skills and knowledge that have value within an industry but not more generally.[51] As discussed below, these different types of human capital give rise to different implications when analyzing the efficiency effects of noncompetes and other limitations on employee mobility.

2. Marshall: Industrial districts and agglomeration economies.

In the innovation context, economic analysis of noncompetes and other limitations on employee mobility often makes reference to the concept of "industrial districts," originated by Alfred Marshall in his landmark treatise, *Principles of Economics*, first

[47] See generally Gary S. Becker, *Human Capital: A Theoretical and Empirical Analysis, with Special Reference to Education* (Chicago 3d ed 1993). Subsequent notes refer to this edition, unless otherwise indicated. This is an updated edition of Gary S. Becker, *Human Capital: A Theoretical and Empirical Analysis, with Special Reference to Education* (National Bureau of Economic Research 1964). Some of the ideas were initially set forth in Gary S. Becker, *Investment in Human Capital: A Theoretical Analysis*, 70 J Pol Econ 9 (1962).

[48] See Becker, *Human Capital* at 33–51 (cited in note 47).

[49] See id at 33–34.

[50] See id at 40.

[51] See, for example, Derek Neal, *Industry-Specific Human Capital: Evidence from Displaced Workers*, 13 J Labor Econ 653, 653 (1995) (identifying categories of skills that are "specific to firms in a given industry or sector of the economy" and therefore do not fall into the existing categories of firm-specific or general human capital).

published in 1890.[52] In a short passage in that work, Marshall proposed that certain industries benefit collectively from a free-flowing exchange of ideas, even if an individual firm may periodically suffer the loss of some portion of its investment in developing an innovation.[53] In Marshall's famous words: "The mysteries of the trade become no mysteries; but are as it were in the air."[54] The movement of R&D personnel among firms is one of the key mechanisms by which the "mysteries of the trade" are disseminated and, according to Marshall, promote the general long-term welfare of all members of that innovation community. This line of reasoning is the basis for an extensive literature on the "agglomeration economies" that arise in innovation clusters in which geographically proximate firms and other entities draw from a free-flowing pool of human and intellectual capital assets to mutual advantage.[55]

B. The Old View: Restricting Labor Mobility Is Good and Bad for Innovation

The recent wave of academic interest in noncompetes is predated by scholars who had examined the efficiency of noncompete clauses and, explicitly or by implication, other restraints on employee mobility. Generally speaking, that view identifies both efficiency gains and losses that in general could arise from the use of noncompetes in innovation markets. Without an empirical methodology by which to quantify those potentially offsetting effects, that literature largely concluded that the net efficiency of noncompetes is indeterminate as a general matter.

1. The credible commitment problem.

Earlier scholars observed that human capital markets suffer from what economists call a credible commitment problem. Specifically, potential employees cannot provide adequate assurance to employers who are reluctant to invest in cultivating the human capital of employees who can simply move to another employer,

---

52 Alfred Marshall, *Principles of Economics* 169 (Palgrave MacMillan 8th ed 1920).

53 Id at 225.

54 Id.

55 See Rainer vom Hofe and Ke Chen, *Whither or Not Industrial Cluster: Conclusions or Confusions?*, 4 Indust Geographer 2, 4–8 (2006) (reviewing the literature on "agglomeration economies").

thereby conferring an advantage on a competitor.[56] When an employee leaves, the employer potentially suffers three costs: (i) it loses its training investment, which may involve a combination of firm-specific and general human capital; (ii) the employee may transmit proprietary information to a competitor; and (iii) the firm must incur costs to recruit and train a substitute employee, which again involves the transmission of firm-specific and general human capital.[57]

Without the ability to block employees from moving to a competitor, and without a sufficient up-front payment from employee to employer to cover the employer's expected costs in the event of the employee's departure, an employer faces two choices. Setting aside the possibility of various substitutes for deterring employee movement (most notably, deferred compensation arrangements and long-term employment contracts), the employer can (i) decline to hire the employee or (ii) hire the employee but underinvest in training (especially training that involves the cultivation of general human capital that has positive postemployment value) and the development and transmission of proprietary, often innovative, information.[58] These concerns account for apprenticeship systems that predate modern intellectual property regimes: limiting the apprentice's ability to switch employers enabled the master to internalize the gains from the intellectual capital transferred to the apprentice.[59] Or, put differently, limiting the apprentice's ability to switch employers enabled the apprentice to credibly commit against expropriating the employer's investment in the apprentice's human capital.

56 See Paul H. Rubin and Peter Shedd, *Human Capital and Covenants Not to Compete*, 10 J Legal Stud 93, 99–102 (1981) (arguing that employers will reduce investment in employee training absent noncompetes); Edmund W. Kitch, *The Law and Economics of Rights in Valuable Information*, 9 J Legal Stud 683, 685 (1980) (asserting that, absent noncompetes, poaching employers will free ride on training investments by existing employers, who will in turn decline to make those investments); Harlan M. Blake, *Employee Agreements Not to Compete*, 73 Harv L Rev 625, 647 (1960) (contending that the objective of postemployment restraints is "to prevent competitive use, for a time, of information or relationships which pertain peculiarly to the employer and which the employee acquired in the course of the employment").

57 See note 56 and accompanying text.

58 See Kitch, 9 J Legal Stud at 685 (cited in note 56).

59 See Rubin and Shedd, 10 J Legal Stud at 93–99 (cited in note 56) (arguing that covenants not to compete do not, as earlier scholars assumed, necessarily reflect an exercise of monopoly power by employers).

2. The noncompete solution.

Just like the apprentice contract, the noncompete clause can result in joint efficiency gains by enabling employment transactions (and associated knowledge transfers) that otherwise would not take place. This is beneficial not only for the employer but the employee and the industry as a whole. This point is overlooked in recent discussions of noncompetes that tend to emphasize how these clauses block employment opportunities and suppress innovation.[60] However, it is important not to overlook the possibility that the *absence* of noncompetes can block certain *other* employment opportunities. Assuming the prospective employee is financially constrained and cannot post a sufficient "bond" against expropriating the employer's training investment or R&D assets, an otherwise efficient employment transaction—and the associated cultivation of human capital—may not move forward. In that case, both employer and prospective employee are made worse off.

Even if the absence of noncompetes does not entirely block the employment relationship, it may distort the employer's behavior during the term of employment and, as a result, sometimes disadvantage both the firm and the employee. At least three distortions are possible. First, the inability to enforce noncompetes may induce an employer to modify the internal allocation of team personnel so as to mitigate informational leakage from employee departures. For instance, Apple is famous for its secrecy practices and separate teams that work on different projects so as to minimize information transfer between them.[61] Second, the firm may skew the allocation of training resources toward the cultivation of firm-specific human capital so as to maximize the employee's value in the internal labor market but minimize the employee's value in the external labor market.[62] Third, the firm may underinvest in R&D by reallocating resources to activities in which it is not generating informational assets that an employee can transmit to another employer. In a world in which noncompetes are enforceable at some reasonable cost and high probability, these distortions are mitigated and the firm can allocate resources more efficiently among the available set of innovation and non innovation activities.

60 See note 9 and accompanying text.

62 See Nicola Meccheri, *A Note on Non-competes, Bargaining and Training by Firms,* 102 Econ Letters 198, 200 (2009).

3. A weak objection to noncompetes.

Some commentators argue that noncompetes may discourage employees from cultivating their human capital (or, specifically, general or industry-specific human capital)—which in turn may depress employees' effort or creative output—due to the limited ability to access postemployment opportunities.[63] This objection is not especially persuasive. Discouraging employees from acquiring human capital would appear to be inconsistent with rational profit maximization. Put affirmatively, any employer has an incentive to reward employees who enhance their firm-specific human capital (or some value-maximizing combination of firm-specific, industry-specific, and general human capital) and can therefore make a greater contribution to firm value. While there are inherent measurement and verification difficulties in assessing employees' relative contributions in a team environment,[64] firms clearly use a variety of compensation systems to at least approximately reward employee performance, including promotion, monetary bonuses, and more tailored compensation mechanisms.[65] This is unsurprising: in a competitive market, any firm that includes noncompete clauses in its employment package has a rational self-interest in adopting incentive structures that correct for any underperformance effects that could arise as a result.[66] Market forces reward firms who do so successfully and discipline those who do not.

63 See On Amir and Orly Lobel, *Driving Performance: A Growth Theory of Noncompete Law*, 16 Stan Tech L Rev 833, 846 (2013) ("An employee who knows their market opportunities are significantly reduced due to an enforceable noncompete restriction will be less driven to perform well and to invest in his own human capital."); Mark Garmaise, *Ties That Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J L Econ & Org 376, 413–14 (2011) (setting forth model in which noncompete enforcement can induce employers to invest in managers' human capital but reduce managers' incentives to do so, in which case the manager's human capital may be lower relative to a zero-enforcement regime).

64 For the classic treatment, see Armen A. Alchian and Harold Demsetz, *Production, Information Costs, and Economic Organization*, 62 Am Econ Rev 777, 779 (1972) (discussing the difficulties of determining each individual's contribution when observing a team's output).

65 See Robert P. Merges, *The Law and Economics of Employee Inventions*, 13 Harv J L & Tech 1, 38–41 (1999) (discussing the "intra-firm appropriability environment" fostered by employee reward mechanisms).

66 Below, we criticize experimental studies that purport to confirm the depressing effects of noncompetes on the cultivation of human capital by noting that they fail to adequately account for the large menu of employee incentive mechanisms used in the actual market. See note 305 and accompanying text.

4. A better objection to noncompetes.

It is certainly the case that enforcing noncompetes limits to some extent the mobility of R&D personnel, which may impede the agglomeration economies that arise from the regular dissemination of knowledge within an industry. To be clear, however, it is not precise to say (as is often said) that a noncompete "binds" an employee to a firm; rather, a noncompete requires that the employee or (more typically) a third party pay a fee demanded by the employer to obtain a waiver of the noncompete.[67] Payments exchanged for waiver of a noncompete are mere wealth transfers without efficiency consequences from a short-term static perspective. Precisely understood, a noncompete is simply a mechanism by which resource-constrained employees can credibly commit to indirectly compensate their employer for training and knowledge leakage costs in the event employees depart for a competitor.[68] The employee's commitment is made credible by providing the employer with a contractual right that can be "sold" to the employee's next employer.

This is not to say that there is no circumstance in which noncompetes can frustrate the efficiency gains associated with the circulation of human capital from one firm to another. First, even when an employer permits an employee otherwise under a noncompete to move to a new firm, the transaction costs of negotiating and executing a waiver of the noncompete generate static costs that would not be incurred if noncompetes were wholly unenforceable. Of course, like all contracting costs, such costs are tolerable when the social gains from contracting (here, for a noncompete) outweigh these costs.

67 For example, in 2005, Nortel paid Motorola $11.5 million to release its chief operating officer from a noncompete agreement. See Robert McMillan, *Nortel Appoints Ex-Motorola Exec as Operations Chief* (Network World, Jan 19, 2006), archived at https://perma.cc/B4MJ-YTFC.

68 Noncompetes may also relieve an employer from having to increase existing employees' compensation to match alternative employment opportunities, given the departure costs imposed by the noncompete. For a theoretical model reaching this result, see Natarajan Balasubramanian, et al, *Locked In? The Enforceability of Covenants Not to Compete and the Careers of High-Tech Workers* *9–11 (Ross School of Business Working Paper No 1339, Jan 2017), archived at https://perma.cc/3SBZ-UJD8. It should be noted, however, that available evidence is generally inconsistent with this model. The most comprehensive empirical study finds that employees who sign noncompetes earn 6.6 percent *more* on average than employees who do not sign noncompetes (controlling for various other factors), although this wage differential is limited to employees who are presented with a noncompete prior to accepting a job offer. See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *28 (cited in note 11).

Second, when the costs of negotiating and executing the waiver of a noncompete are sufficiently great so as to impede employee turnover, this may generate long-term dynamic efficiency losses to the extent that slowing down employee turnover impedes the transmission of intellectual capital that benefits the industry as a whole. These dynamic efficiency costs present a potential collective action problem because these costs may not be fully internalized by an individual firm in a given industry when that firm makes a decision whether to adopt and enforce a noncompete for a particular employee.

5. Evaluation.

The welfare effects of noncompete agreements can now be summarized. On the one hand, noncompetes support employers' incentives to invest in employees' human capital and R&D projects that would otherwise be subject to expropriation by departing employees. On the other hand, noncompetes raise the transaction costs involved in the circulation of human capital, which may impede the innovation process in the industry as a whole. Given these offsetting effects, earlier scholars generally concluded that economic analysis does not support a definitive position against or in favor of enforcing noncompetes in all circumstances.[69] If noncompetes enable firms to secure gains from training and R&D investments, then barring noncompetes may reduce the common pool of technological knowledge that is available for circulation through employee movement. A ban on noncompetes would yield a net social gain over time only if the disincentive effects arising from uncompensated human capital transfers were exceeded by the agglomeration economies and other benefits associated with the unimpeded circulation of human capital. Without empirical evidence in any particular case, this analytical framework is agnostic in general with respect to the net long-term efficiency of those restraints. However, it does recognize a meaningful range of circumstances in which enforcing noncompetes could make firms and employees better off by resolving the credible commitment problem that might preclude or distort employment relationships.

69 See note 56 and accompanying text.

C. The New View: Restricting Labor Mobility is Bad for Innovation

The traditional approach is intellectually modest in taking the view that enforcing noncompetes *may* have a net positive effect on innovation. By contrast, the new view on noncompetes tends to take the bolder view that enforcing noncompetes usually, if not always, discourages innovation by slowing down the flow of intellectual capital and impeding the agglomeration economies and similar benefits that fuel the innovation process. This new view consists of a two-part logical sequence. In step one, it claims that barring noncompetes accelerates employee movement. Stated precisely, this assertion reflects the assumption that noncompetes increase the transaction costs of human capital movements. In step two, the new view makes the stronger assertion that increased circulation of R&D personnel promotes innovation by facilitating knowledge spillovers that benefit the industry as a whole. The normative implication is simple and clear: the law should decline to enforce noncompetes in all circumstances.

1. Background: Saxenian and Gilson.

The new view relies on the work of AnnaLee Saxenian, a sociologist, and Ronald Gilson, a law professor, both of whom apply the Marshallian concept of agglomeration economies to interpret a key episode in the history of US technology markets. Both Saxenian and Gilson contrasted Silicon Valley with Boston's Route 128 area to argue that institutional mechanisms—cultural norms and organizational forms in Saxenian's analysis[70] and a legal ban on noncompetes in Gilson's analysis[71]—that promote employee mobility can promote innovation by facilitating the flow of intellectual capital among competitors. Both authors identify these institutional differences as key factors in accounting for Silicon Valley's rise over Route 128 as the country's leading innovation center starting in the late 1980s.

More specifically, Gilson argued that California's ban on noncompetes represented a solution to a collective-action problem. While no firm individually would agree *not* to adopt a noncompete and thereby expose its human and intellectual capital to competitors, it may be in *all* firms' collective long-term interest to refrain from adopting noncompetes and thereby enjoy the resulting flow

---

70 See Saxenian, *Regional Advantage* at 1–9, 29–30, 59–60 (cited in note 8).
71 See Gilson, 74 NYU L Rev at 578–79, 602–09 (cited in note 8).

of knowledge spillovers.[72] By implication, Massachusetts firms were caught in a collectively irrational equilibrium in which all firms imposed noncompetes and could not enjoy the collective gains that would result from a more fluid circulation of human capital. Gilson cautioned that this explanation may be specific to Silicon Valley and would not necessarily generalize to other contexts.[73] Nonetheless, a significant body of commentary by legal scholars and economists has endorsed this proposition in stronger formulations and has made largely unqualified policy assertions that enforcing noncompetes and other restraints on employee mobility depresses innovation.[74] For these scholars, California's approach should be the rule, not the exception.

2. An initial critique.

The new view on noncompetes reflects a coherent and straightforward application of the standard collective-action problem in economic analysis. However, it is incomplete in significant respects. Specifically, the new view makes little effort to address the efficiency losses inherent to a legal regime in which a voluntary restraint on the mobility of talent is removed from the table of contracting options. Earlier analysis of noncompetes had recognized that an efficiency loss would arise in any circumstance in which an employee could not credibly commit against expropriating the employer's human capital investment and R&D assets. The employer would respond by distorting the terms of employment to limit its training investments or the employees' exposure to R&D assets or by declining to enter into an employment relationship at all.

---

72 See id at 596.

73 See id at 629.

74 See Lobel, *Talent Wants to Be Free* at 67–72 (cited in note 9) (arguing that empirical evidence supports California's "zero tolerance" policy for noncompetes); Lobel, *Companies Compete but Won't Let Their Workers* (cited in note 19) (same); Benkler, 13 Ann Rev L & Soc Sci at 235 (cited in note 13) (arguing that empirical evidence suggests that contractual and other legal constraints on employee mobility undermine innovation); Hyde, 33 Regulation at 10–11 (cited in note 13) (arguing that balance of evidence supports adopting California's policy of zero enforcement toward noncompetes); Moffat, 54 Ariz L Rev at 965 (cited in note 9) (advocating for a zero-enforcement policy toward noncompetes); Moffat, 52 Wm & Mary L Rev at 918–21 (cited in note 9) (same).

A recent economic model formulated by Professor James Rauch shows that this loss can extend well beyond just one employment transaction.[75] Consider a sequence of transactions consisting of (i) an initial employment transaction involving a parent firm and an individual employee, followed by (ii) a series of spin-off transactions involving employees who depart from the parent firm to form or join a spin-off firm, and then depart from the spin-off to form a new entity, and so forth. Noncompetes may raise the transaction costs relating to, and even frustrate, some portion, or even all, of the potential spin-off transactions. That is the focus of the "talent wants to be free" literature. However, it is important not to ignore the possibility that the inability to enforce a noncompete may preclude the initial hire by restoring the credible commitment problem, in which case the subsequent stream of spin-off transactions could be stunted or blocked entirely.[76] Moreover, if noncompetes are not enforceable, even a certain portion of the set of spin-offs may face the same credible commitment dilemma and may be wholly precluded or move forward under distorted terms.[77] If that is the case, then compared to a regime in which noncompetes are enforced, talent may be freer but it could well be worse off.

3. The empirical challenge.

As a theoretical matter, the new view on noncompetes, and the accompanying policy arguments in favor of a total or near-total ban, provide no reason to arbitrarily value the social costs attributable to noncompetes—primarily, potentially reduced circulation of intellectual capital (the focus of Marshall's analysis)—more heavily than the social gains—primarily, potentially increased investment in employee training and R&D (the focus of Becker's analysis). Given this uncertainty, we can only make progress toward assessing the relative intellectual strength of the new view based on empirical inquiry. Commentary by scholars and policymakers in favor of a ban on noncompetes often asserts that empirical data shows that noncompetes depress innovation.[78]

---

75 See James Rauch, *Dynastic Entrepreneurship, Entry, and Non-Compete Enforcement* *1–2, 19 (National Bureau of Economic Research Working Paper No 21067, Apr 2015), archived at https://perma.cc/TP8G-3372.

76 See id at *1–2, 9–11 (showing formally that the efficiency of noncompetes depends in part on a trade-off between these two countervailing effects on the parent firm and spin-off firms).

77 See id at *10.

78 See note 36.

In the next Part, we look closely at that body of evidence, finding that nearly all of these studies are badly flawed and, even so, common characterizations of their findings often dramatically overstate the policy conclusions that the data can reasonably support.

II. THE EVIDENCE AGAINST NONCOMPETES: A CLOSE LOOK

In this Part, we undertake the most comprehensive examination to date of the two principal bodies of empirical evidence that are commonly referenced in support of the "talent wants to be free" school of thought. First, we review in detail the explanation provided by Saxenian and in particular, Gilson, to account for Silicon Valley's dramatic rise over Route 128 as the world's leading innovation center. We find significant reason to doubt that this fundamental shift in economic trajectories can be traced back to relatively fine differences in the enforceability of noncompetes between California and Massachusetts. Second, we review some of the most highly cited empirical studies that purport to show a three-step causal link between bans on noncompetes, increased employee turnover, and increased innovation. This exercise identifies important methodological and other limitations that cast serious doubt on the policy positions for which those studies have been cited.

A. Reasons to Doubt the Standard Account of the Rise of Silicon Valley

As of the mid-1970s, Silicon Valley and Route 128 were both viewed as key centers for innovation in the electronics industry, but with different strengths.[79] Silicon Valley excelled in semiconductor chips while Route 128 excelled in minicomputers, a category situated between the supercomputer (or mainframe) segment dominated by IBM and the nascent "microcomputer" (in today's terms, PC) segment pioneered by Apple.[80] Starting in the

[79] See Willem Hulsink, Dick Manuel, and Harry Bouwman, *Clustering in ICT*, in Willem Hulsink and Hans Dons, eds, *Pathways to High-Tech Valleys and Research Triangles: Innovative Entrepreneurship, Knowledge Transfer and Cluster Formation in Europe and the United States* 53, 53–55 (Springer 2008) (stating that Route 128 predated the Silicon Valley technology cluster, which started growing in the 1950s and 1960s and overtook Route 128 in the 1970s); Nancy S. Dorfman, *Route 128: The Development of a Regional High Technology Economy*, 12 Rsrch Pol 299, 300, 313 (1983) (observing that, as of the late 1970s, the Boston area and Silicon Valley had the same number of high-tech employees while the greater San Francisco Bay Area had "about 30 percent more").

[80] See Hulsink, Manuel, and Bouwman, *Clustering in ICT* at 59 (cited in note 79) (describing how the "minicomputer manufacturers of Route 128 quickly lost ground to the manufacturers of the fast-emerging PCs and workstations in Silicon Valley").

early 1980s, Silicon Valley overtook Route 128 and secured its place as the world's preeminent information technology center. Saxenian attributes the ascendance of Silicon Valley, and the decline of Route 128, to differences in industrial organization and cultural norms.[81] The West Coast environment was characterized by a constant flow of technical personnel among a network of loosely connected firms, which spawned spin-offs that accelerated the innovation process. This structure was supported by industry norms that promoted information sharing and employee mobility.

By contrast, the East Coast environment was characterized by a small number of vertically integrated firms and exhibited little employee turnover. This structure was purportedly supported by industry norms that promoted loyalty to a single employer and discouraged information sharing. Building on Saxenian's narrative, Gilson argued that the free flow of human capital could be attributed in part to California's refusal to enforce noncompetes, while Massachusetts's insistence on enforcing noncompetes may have stagnated the flow of human capital, resulting in a slowdown in innovation.[82] Put together, Saxenian and Gilson's work identifies certain informal and formal institutional characteristics that purportedly set Route 128 on a path to decline, while sending Silicon Valley on an upward trajectory.

Both Saxenian's and Gilson's accounts of the rise of Silicon Valley and decline of Route 128 have been widely adopted in the academic literature.[83] In the discussion below, we identify several considerations that cast doubt on this now-standard account. These include: (i) there were several exceptions (and other legal causes of action) that substantially qualified California's "ban" on noncompetes during this period; (ii) firms could substantially mimic the effect of a noncompete through compensation and other mechanisms; (iii) it is not clear that differences in Massachusetts law on noncompetes and trade secrets resulted in substantial differences in employee mobility as a practical matter; (iv) there are fundamental technological and economic factors that more plausibly account for Silicon Valley's ascendance; and (v) Route 128 has continued to exhibit robust innovative performance.

---

81 See Saxenian, *Regional Advantage* at 1–9 (cited in note 8).

82 See Gilson, 74 NYU L Rev at 602–09 (cited in note 8).

83 As of February 19, 2020, Google Scholar estimates that Saxenian's leading contribution in the area, the book-length *Regional Advantage*, has been cited more than 13,200 times and Gilson's 1999 NYU article on Silicon Valley and Route 128 has been cited more than 900 times. See also note 9 (listing several scholarly publications that refer to and rely on Saxenian's or Gilson's work).

1. Did California courts really never enforce noncompetes?

Scholars have not adequately questioned whether California courts in actuality declined to enforce noncompetes during the period in which Silicon Valley overtook Route 128. That seems to be the case based on the California statute, which declares void "every contract by which anyone is restrained from engaging in a lawful profession, trade, or business of any kind."[84] Given that blanket prohibition, however, it is curious that California firms often insert noncompete clauses in executive employment agreements. Two studies that focus on adoption rates of noncompetes in executive employment agreements at large publicly traded firms find these clauses in 58–62 percent of agreements with firms headquartered in California, as compared to rates of 70–84 percent at the same types of firms headquartered in other states (which generally enforce noncompetes subject to the reasonableness standard).[85] Even more surprisingly, a broader study involving all types of employees finds that the incidence of noncompetes in California (19 percent) is approximately the same as observed in states that enforce noncompetes.[86]

This discrepancy between law and practice might be attributed to the possibility that technical personnel are unaware

---

[84] Cal Bus & Prof Code § 16600.

[85] Specifically, from a sample of 874 CEO employment contracts at S&P 1500 firms executed during 1996–2010, Norman Bishara, Kenneth Martin, and Randall Thomas found that California firms include noncompetes at a rate of 62 percent (compared to 84 percent for firms in other states). See Norman D. Bishara, Kenneth J. Martin, and Randall S. Thomas, *An Empirical Analysis of Noncompetition Clauses and Other Restrictive Postemployment Covenants*, 68 Vand L Rev 1, 34 (2015). Garmaise finds that, in a sample of large, publicly traded firms, approximately 70 percent of firms used noncompetes, including 58 percent of California-based firms. Garmaise, 27 J L Econ & Org at 396 (cited in note 63). Garmaise does not specifically identify the rate of noncompete adoption among firms located in the forty-eight enforcing states, although it would be expected that that rate would be somewhat higher than the 70 percent rate reported for the full sample of all firms in all states. See id.

[86] See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *19 (cited in note 11). We note two additional points concerning the methodology and findings of the Starr, Prescott, and Bishara study. On methodology, we note that the paper carefully distinguishes in its survey methodology between noncompetes and other related provisions such as nondisclosure or nonsolicitation covenants. This is important because it provides confidence that the findings relate specifically to noncompetes rather than other related provisions in employment agreements. See id at *3–4. On substance, we note that the authors do not find any meaningful change in the incidence of noncompetes in comparing "multi-unit" firms, which have operations in California and other states, and "single-unit" firms, which operate only in California. See id at *19. This is a noteworthy result because it might have been expected that large national firms in particular might include noncompete clauses as a "default" provision in their employment agreements since they mostly operate in states that uphold noncompetes under the common-law reasonableness standard.

of California law and firms include a noncompete clause as an *in terrorem* device to be used against departing employees. That explanation assumes that these personnel do not consult legal advisors, particularly a potential new employer's legal counsel, or review publicly available information about a basic point of law. Alternatively, one might argue that, because knowledgeable employees understand that noncompetes are generally *not* enforceable in California, it is not worth the transaction costs of negotiating with an employer to remove these clauses. At a minimum, it is worth inquiring whether the standard understanding of California law is entirely precise during the period in which Silicon Valley overtook Route 128.

In fact, it is not. Writing in 1989, a treatise on trade secrets law observed: "Despite the clear language of" California's statute, "the California courts do not regard all covenants not to compete . . . invalid *per se*."[87] Specifically, there were at least five important circumstances in which California employers could have had some expectation of being able to enforce a noncompete during the period in which Silicon Valley overtook Route 128. While it remains the case that California courts did not *generally* enforce noncompetes against individuals during this period, it is incorrect to assume that a sufficiently motivated employer would *never* rationally invest resources in enforcing (and therefore could never credibly threaten to seek) enforcement of a noncompete against a departing employee.

a) Narrow restraints. In 1987, the Ninth Circuit held that noncompetes were enforceable under California law if the noncompete narrowly restrained postemployment opportunities, as distinguished from a general restraint that barred entry into an entire profession.[88] From the 1970s through the 2000s, litigants that pursued variants of the narrow restraint exception achieved

---

87 See Melvin F. Jager, *Trade Secrets Law* § 13.01[2] (1989).

88 *Campbell v Board of Trustees of Leland Stanford Junior University*, 817 F2d 499, 502 (9th Cir 1987) (citing California law for the proposition that the statutory ban on noncompetes precludes only contractual restraints on entering an "entire business, trade or profession," as distinguished from "only a small or limited part of the business, trade or profession"), quoting *Boughton v Socony Mobil Oil Co*, 231 Cal App 2d 188, 192 (1964). The court purported to apply state law precedent, as set forth in *Boughton*, 231 Cal App 2d at 192, which in turn relied on *King v Gerold*, 240 P2d 710 (Cal App 1952). An earlier Ninth Circuit decision had upheld a clause in a collective bargaining agreement involving the partial forfeiture of certain pension and profit-sharing benefits in the event a retired employee took employment with another firm in the same industry. The court's decision relied on the view that California law does not prohibit an alleged restraint on employee mobility that is "limited in nature and furthers sound public policies." See *Smith v CMTA-IAM Pension Trust*, 654 F2d 650, 660 (9th Cir 1981).

mixed results, sometimes achieving success in (mostly) federal courts but usually not faring well in California state courts.[89] In 1997 and 1999, the Ninth Circuit again applied the exception to uphold a noncompete covenant.[90] Only in 2008, well after Silicon Valley had established its place as the world's technology center, did the California Supreme Court resolve this uncertainty by rejecting the narrow restraint exception.[91]

b) Sale of a business. Based on a statutory exception,[92] both federal and state courts typically enforced (and continue to enforce) noncompetes executed in connection with the sale of a business. The exception applies to noncompetes entered into by majority target shareholders and possibly other target employees with smaller equity interests.[93] This exception provides some of the legal logic behind the now-popular "acqui-hire" transactional structure, in which a large firm acquires a start-up firm primarily for purposes of retaining the services of its founders and senior managerial and technical personnel. Without a commitment from key personnel that they will remain with or at least not compete with the acquirer for some reasonable period of time, the transaction is not viable. This partially explains why exempting business

89 For cases recognizing the exception, see *Centeno v Roseville Community Hospital*, 107 Cal App 3d 62, 68–71 (1979); *Latona v Aetna US Healthcare Inc*, 82 F Supp 2d 1089, 1094 (CD Cal 1999); *Cin-Med Associates, Inc v Hemocue, Inc*, 2001 WL 1117562, *3–4 (CD Cal). In *Scott v Snelling & Snelling, Inc*, 732 F Supp 1034, 1042–43 (ND Cal 1990), the court recognized that "California courts may, in some circumstances apply a 'rule of reason' to only partial restrictions on competition" but declined to apply it in the case of a noncompete that imposed postemployment geographic and temporal restrictions. For cases rejecting the exception, see *Golden State Linen Service, Inc v Vidalin*, 69 Cal App 3d 1, 13 (1977); *Liberty Mutual Insurance Co v Arthur J. Gallagher & Co*, 1994 WL 715613, *3 (ND Cal); *Arrowhead Financial Group, Inc v Welty*, 2002 WL 31661269, *6–7 (Cal App); *Jan Marini Skin Research, Inc v Allure Cosmetic USA, Inc*, 2007 WL 1508686, *16 (Cal App); *Thompson v Impaxx, Inc*, 113 Cal App 4th 1425, 1430–31 (2003).

90 *General Commercial Packaging, Inc v TPS Package Engineering, Inc*, 126 F3d 1131, 1132–33 (9th Cir 1997) (enforcing a one-year noncompete between a contractor and subcontractor with respect to the contractor's clients); *International Business Machines Corp v Bajorek*, 191 F3d 1033, 1040–41 (9th Cir 1999) (holding that noncompete obligation in stock option agreement did not violate the California statutory ban on noncompetes).

91 *Edwards v Arthur Andersen LLP*, 189 P3d 285, 293 (Cal 2008).

92 Cal Bus & Prof Code § 16601.

93 It is not clear how large that equity interest must be. Rulings have been mixed. See *Hilb, Rogal & Hamilton Insurance Services of Orange County, Inc v Robb*, 33 Cal App 4th 1812, 1816, 1822–25 (1995) (in connection with the merger of an insurance company, upholding a noncompete with an employee of the merged company, who had held a 35 percent ownership interest in the merged company, on ground that a sufficient transfer of goodwill had taken place); *Vacco Industries, Inc v Van Den Berg*, 5 Cal App 4th 34, 48–49 (1992) (finding that a 3 percent interest, which was the ninth largest shareholder interest, in conjunction with an officer position, constituted a substantial shareholder).

acquisitions from noncompete enforcement limitations, which is the rule even in California, is likely to be, and is widely viewed as, efficient.

c) Protection of trade secrets. Since a California Supreme Court decision in 1958,[94] California law has recognized that the statutory bar against noncompetes does not extend to certain postemployment restrictions—most typically, nondisclosure and nonsolicitation covenants—that are enforced for the purpose of protecting an employer's trade secrets or confidential information.[95] Since the 1980s, California courts have periodically applied the trade secret exception to enforce nonsolicitation and nondisclosure obligations (and, in one recent case, even a noncompete clause "construed to bar only the use of confidential source code, software, or techniques"[96]) that were found to be narrowly tailored to protect a trade secret.[97]

94 *Gordon v Landau*, 321 P2d 456, 459 (Cal 1958) (upholding a nonsolicitation clause because "it did not prevent defendant from" engaging in the same or similar business as his former employer).

95 See Jager, *Trade Secrets Law* § 13:4 at 13-13 (cited in note 87) (observing that California courts sometimes enforce noncompetes to protect trade secrets or other confidential information). For cases stating this principle, see *Muggill v Reuben H. Donnelley Corp*, 398 P2d 147, 149 (Cal 1965) (stating that § 16600 invalidates noncompete provisions "unless they are necessary to protect the employer's trade secrets"); *Gordon Termite Control v Terrones*, 84 Cal App 3d 176, 178 (1978) (stating that § 16600 "has been construed by the Supreme Court as invalidating contracts not to compete, except where their enforcement is necessary to protect the trade secrets of an employer"); *Loral Corp v Moyes*, 174 Cal App 3d 268, 276 (1985) (stating that § 16600 "does not invalidate an employee's agreement not to disclose his former employer's . . . trade secrets"); *Moss Adams Co v Shilling*, 179 Cal App 3d 124, 130 (1986); *American Paper & Packaging Products, Inc v Kirgan*, 183 Cal App 3d 1318, 1322 (1986) (Section 16600 invalidates noncompetes "unless their enforcement is necessary to protect an employer's confidential information or trade secrets"); *Scott*, 732 F Supp at 1043 (recognizing a judicially created exception to § 16600 to the extent necessary to protect trade secrets).

96 *Richmond Technologies, Inc v Aumtech Business Solutions*, 2011 WL 2607158, *18–19 (ND Cal) (finding the nonsolicitation clause and noninterference clauses "are likely to be found unenforceable" because they "are more broadly drafted than necessary to protect . . . trade secrets," but a noncompete clause and related clause barring the use of confidential information are "likely enforceable as necessary to protect . . . trade secrets").

97 See *Hollingsworth Solderless Terminal Co v Turley*, 622 F2d 1324, 1338 (9th Cir 1980) (vacating and remanding the lower court's invalidation of a postemployment covenants involving nondisclosure of customer lists and nonsolicitation of a former employer's customers); *John F. Matull & Associates, Inc v Cloutier*, 194 Cal App 3d 1049, 1054–55 (1987) (upholding a nonsolicitation obligation); *Morlife, Inc v Perry*, 56 Cal App 4th 1514 (1997) (affirming a nonsolicitation covenant against former employees); *Asset Marketing Systems, Inc v Gagnon*, 542 F3d 748, 758 (9th Cir 2008) (observing that "non-competition agreements are unenforceable [under California law] unless necessary to protect an employer's trade secret"); *Lindzy v Q-Railing USA Co*, 2013 WL 4437164, *6 (Cal App) (finding a nondisclosure clause and a nonsolicitation clause valid).

In 2008, the Supreme Court of California specifically declined to affirm or reject the trade secret exception.[98] A recent federal court opinion summarizes the current state of California law on this point: "Although California courts have consistently 'condemned' agreements that place restraints on the pursuit of a business or profession . . . 'an equally lengthy line of cases has consistently held former employees may not misappropriate the former employer's trade secrets to unfairly compete with the former employer.'"[99] Simply put: Section 16600 does not preclude an employer from preventing a departing employee via injunctive relief from joining a new employer by enforcing nondisclosure, nonsolicitation, or other similar postemployment obligations when doing so promotes the employer's interest in protecting its trade secrets.

d) ERISA. A California employer can avoid the statutory ban on noncompetes by embedding the noncompete in a deferred compensation or severance pay arrangement governed by the Employee Retirement Income Security Act of 1974[100] (ERISA). These clauses operate as a forfeiture mechanism that conditions entitlement to certain benefits under the plan upon compliance with the noncompete obligation. As observed in practitioner commentary, this exception typically arises in litigation concerning deferred benefit plans for highly compensated executives.[101] In 1981 and 1987, the Ninth Circuit held that ERISA preempts state law, specifically including noncompete restrictions.[102] California state courts have adopted the same position.[103] This enforcement strategy is limited only by the ERISA requirement that a noncompete

99 *Richmond Technologies*, 2011 WL 2607158 at *18 (internal brackets omitted), citing *Edwards*, 189 P3d at 290–91 and *Retirement Group v Galante*, 176 Cal App 4th 1226, 1237 (2009).

100 Pub L No 93-406, 88 Stat 829, codified as amended in various sections of Title 26 and Title 29.

101 See Amy L. Blaisdell and Wendy S. Menghini, *Pulling Tricks Out of a Top Hat: Preemption of Non-Compete Laws Applicable to "Top Hat" Plans* *1 (DRI: The Voice of the Defense Bar, Dec 29, 2010), archived at https://perma.cc/4SYD-PEAV.

102 See *Clark v Lauren Young Tire Center Profit Sharing Trust*, 816 F2d 480, 481 (9th Cir 1987) (involving a noncompete under Oregon law); *Lojek v Thomas*, 716 F2d 675, 678, 679–80 (9th Cir 1983) (involving a noncompete under Idaho law). Gilson cites a 1965 California Supreme Court decision that invalidated this type of forfeiture provision in a retirement plan. See Gilson, 74 NYU L Rev at 607 n 100 (cited in note 8), citing *Muggill*, 398 P2d at 149. However, *Muggill* would not appear to survive the Ninth Circuit's interpretation of ERISA, which was enacted in 1974.

103 See, for example, *Weinfurther v Source Services Corp Employees Profit Sharing Plan and Trust*, 759 F Supp 599, 602 (ND Cal 1991).

forfeiture clause cannot be applied to deprive the employee of benefits accrued after ten years of service.[104]

e) Choice-of-forum clauses. California courts will not enforce a noncompete entered into under the law of another state that generally enforces noncompetes. However, prior to 2017, if an employer and former employee were subject to the jurisdiction of an out-of-state court that enforces noncompetes, and the decision was final in that state before any decision in a parallel California action, then a noncompete agreement was typically enforceable within California. In general, the two key factors at issue in such situations were whether (1) the agreement selected another state's courts as the forum for disputes; and (2) whether the employee is now a California resident employed by a California employer. Although California courts will generally not enforce an out-of-state choice-of-law clause, especially if the defendant-employee is a California resident employed by a California firm,[105] prior to 2017, they often respected an out-of-state choice-of-forum clause, even if the other state potentially applied its own law.[106] In practice, this meant that California employees employed by a firm with corporate headquarters out of state—or out-of-state employees moving to California—could be subject to enforceable noncompete restrictions under a properly drafted agreement prior to 2017.[107]

104 29 USC § 1053(a)(2)(A).

105 See *Application Group, Inc v Hunter Group, Inc*, 61 Cal App 4th 881, 894–905 (1998).

106 Compare *Davis v Advanced Care Technologies, Inc*, 2007 WL 2288298, *4–9 (ED Cal) (finding California law applicable to the case despite a Connecticut choice-of-law provision because California had a materially greater interest; the employee was a California resident, the former employer was based in Connecticut, and the new employer was a California-based employer), with *Universal Operations Risk Management, LLC v Global Rescue LLC*, 2012 WL 2792444, *6–7 (ND Cal) (enforcing a forum selection clause despite the strong possibility that the forum state would uphold the covenant not to compete).

107 See, for example, *Meyer v Howmedica Osteonics Corp*, 2015 WL 728631, *11–12 (SD Cal) (ordering a transfer of forum to New Jersey consistent with the forum selection clause, when there was also a choice of law provision for New Jersey law), citing *Swenson v T–Mobile USA, Inc*, 415 F Supp 2d 1101 (SD Cal 2006) (dismissing a California declaratory relief action in the presence of forum selection clause when the previous action was pending out-of-state); *Universal Operations Risk Management, LLC*, 2012 WL 2792444 at *6–7; *Advanced Bionics Corp v Medtronic, Inc*, 59 P3d 231, 232–34 (Cal 2002) (vacating a lower court's issuance of a temporary restraining order that had blocked the former employer from pursuing a noncompete action it had filed out of state); *Biosense Webster, Inc v Superior Court*, 135 Cal App 4th 827, 830 (2006) (extending the holding of *Advanced Bionics* to circumstances in which no previous action had been filed out of state); *Google, Inc v Microsoft Corp*, 415 F Supp 2d 1018, 1021–22, 1026 (ND Cal 2005) (staying noncompete proceedings pending those in Washington in order to prevent forum shopping). But see *Manchester v Arista Records, Inc*, 1981 US Dist LEXIS 18642, *13–17 (CD Cal) (upholding a choice-of-forum clause in a case involving Cal Labor Code § 2855, which limits

2. Substitutes for noncompetes.

In addition to the five exceptions described above, California firms could elect (and still can elect) from a large menu of substitute legal and economic instruments to deter employee mobility. To illustrate these alternatives concretely, we can return to the case involving the former Google engineer who took a new position with Uber. As noted previously, the employee had been involved in developing Google's autonomous driving technologies.[108] Under California law, Google would appear to be powerless to prevent the employee from working for Uber. Even assuming that Google cannot wield a noncompete covenant, however, Google has several other credible legal threats at its disposal. Given the existence of these additional legal instruments, any *marginal* preclusive effect that can be reasonably attributed to noncompetes appears to be significantly attenuated, and would need to at least be accounted for in any empirical analysis comparing the differential effects of noncompetes on innovation between California and out-of-state firms.

a) Patents. A firm may use patents to protect against knowledge leakage resulting from employee movement. Although a patent may not cover tacit knowledge per se, it may cover a product or method incorporating that tacit knowledge. Assuming the firm can bear the anticipated enforcement costs, the expropriation risk posed by a departing employee would then be limited to informational assets that fall outside the firm's patent portfolio. A patenting strategy makes any departing employee less attractive to competitors, which implies that the employee will receive fewer or lower offers from other firms and is less likely to leave the current employer. Hence, even in a jurisdiction that is hostile to noncompetes, there may be significant patent-based obstacles that discourage employee movement. Consistent with these expectations, a 2009 empirical study found a deterrent effect on labor mobility in the US semiconductor industry proportional to a firm's propensity to bring patent infringement suits.[109] Another study finds that, while the likelihood of an acquisition increases when a target's employees are subject to noncompetes, that effect weakens in the case of targets that hold strong patent

personal service employment contracts to a term of seven years, because the court determined that § 2855 did not apply to the contracts at issue).

[108] See notes 1 and 4.

[109] See Rajshree Agarwal, Martin Ganco, and Rosemarie H. Ziedonis, *Reputations for Toughness in Patent Enforcement: Implications for Knowledge Spillovers via Inventor Mobility*, 30 Strategic Mgmt J 1349, 1366–67 (2009).

portfolios, suggesting that patents substitute in part for noncompetes as a device for protecting against knowledge leakage after consummation of the acquisition.[110]

b) Breach of contract. If the employee had signed a nondisclosure agreement (NDA) and then took a position with a competing enterprise, Google could potentially bring (or threaten to bring) a breach of contract claim against the employee. As noted earlier, there is no plausible legal challenge under § 16600 to the enforcement of an NDA so long as it is sufficiently tailored to promote the employer's interest in protecting its trade secrets.[111] The credibility of Google's threat to sue to enforce an NDA would depend on the negotiated scope of the definition of "confidential information" in the NDA and the ease with which Google could demonstrate that the employee had actually breached the NDA's confidentiality provisions at his or her new position. In certain jurisdictions, courts are willing to enforce NDAs that encompass information that would not otherwise qualify as a trade secret;[112] in other jurisdictions (including California), Google may be required to show that enforcement of the NDA targets only nonpublic information that would be protected under trade secret law.[113]

Alternatively, Google could bring (or threaten to bring) a breach-of-contract claim if it had entered into a long-term employment contract or a shorter-term employment contract with periodic renewal at the employer's option. (The former option may be unattractive to both employers and employees because it locks each party into a potentially unwanted long-term commitment that is difficult to mitigate even through the most carefully

110 See Kenneth A. Younge, Tony W. Tong, and Lee Fleming, *How Anticipated Employee Mobility Affects Acquisition Likelihood: Evidence from a Natural Experiment*, 36 Strategic Mgmt J 686, 691–92 (2015).

111 See Part II.A.1.c.

112 See Richard F. Dole Jr, *The Contract Exception to the Uniform Trade Secrets Act and Its Implications for the Federal Defend Trade Secrets Act*, 34 Santa Clara High Tech L J 362, 377 n 80 (2018) (observing that courts in some jurisdictions will enforce NDAs that encompass information that would not qualify as a trade secret, subject to a reasonableness standard); Bishara, Martin, and Thomas, 68 Vand L Rev at 21–23 (cited in note 85) (stating that courts will sometimes enforce an NDA that applies to information that might not otherwise be protected under trade secret law, so long as the NDA is limited in time).

113 See, for example, *Richmond Technologies*, 2011 WL 2607158 at *19 (noting that a "clause prohibiting use of confidential information is likely enforceable to the extent that the claimed information is protectable as a trade secret"). On this point with respect to California law in particular, see Charles T. Graves, *Nonpublic Information and California Tort Law: A Proposal for Harmonizing California's Employee Mobility and Intellectual Property Regimes Under the Uniform Trade Secrets Act*, 2006 UCLA J L & Tech 1, 37–43.

crafted provisions for early separation under certain circumstances.) In yet another variation, Google could bring a tortious interference with contract claim against Uber, on the ground that Uber was aware of the long-term contract to which the departing engineer was then bound.[114]

c) Invention assignment agreements. In the technology industries, it is typical for employees to enter into invention assignment agreements, under which an employee agrees in advance that all "inventions" (as defined in the governing agreement) developed by the employee during the course of his or her employment are deemed to belong to the employer.[115] Under such an agreement, Google could bring a claim against the departing employee if the employee is using an "invention" that the employee made while employed by Google. As long as Google's claim could at least survive a motion to dismiss, it could credibly threaten to impose significant discovery and other litigation costs on the employee-defendant (or, more typically, the new employer who may have agreed to indemnify the employee-defendant). In a widely followed litigation over ownership of the "Bratz" line of dolls, involving Mattel (as plaintiff), Mattel's former employee (as codefendant), and a smaller toy manufacturer (as codefendant), an invention assignment agreement provided the basis for several years of protracted litigation that burdened the defendant with substantial legal fees.[116]

Alternatively, Google and its former employee may have entered into an invention assignment agreement with a "trailer" clause, which would grant Google ownership over any inventions that the former employee developed within a certain amount of time following termination.[117] That too may limit the employee's attractiveness to any potential outside employer. The doctrine of assignor estoppel can have a similar effect in a departing employee scenario. Under that doctrine, some courts have held that

[114] In the actual litigation between Google and Uber, this would not have been a feasible claim because Google and the departing employee were apparently not parties to a long-term contract.

[115] See Victoria Lee and Mark Lehberg, *Employee Proprietary Information and Inventions Assignment Agreements: What They Do, and What Could Happen Without Them* (DLA Piper, 2018), archived at https://perma.cc/J5QD-3FXX.

[116] See *Mattel, Inc v MGA Entertainment, Inc*, 616 F3d 904, 909 (9th Cir 2010) (observing that Mattel's ownership interest in the Bratz line of dolls "turns on the interpretation of Bryant's [the former employee's] 1999 employment agreement," which included an invention assignment clause). For a summary of the litigation, see *Barbie and Bratz: The Feud Continues* (WIPO Magazine, Aug 2011), archived at https://perma.cc/6RM2-W45Y.

[117] For discussion, see Merges, 13 Harv J L & Tech at 52–53 (cited in note 65).

not only is the employee precluded from arguing against the validity of a patent that the employee assigned to the former employer, but also any new employer of the employee is similarly precluded from doing so. The practical consequence: if the old employer brings a patent infringement suit against the new employer, the latter may be unable to argue in defense that the underlying patent is invalid. Like a trailer clause, this expansive understanding of the assignor estoppel doctrine may limit the attractiveness of an employee to any potential new employer.[118]

d) Trade secret misappropriation. Google could (and did) bring a trade secret misappropriation claim against the employee and Uber as the new employer, alleging that the employee or Uber had used or disclosed trade secrets belonging to Google.[119] In certain states (although not California today), even absent evidence of use or disclosure, Google could seek an injunction to prevent its former employee from joining Uber if the court found that the employee would *inevitably disclose* the employer's trade secrets in his new position.[120] Trade secret litigation in a departing employee scenario is not an uncommon occurrence in Silicon Valley. Intel, Broadcom, Cisco, Apple, and other Silicon Valley companies have been involved in prominent trade secret disputes involving former employees.[121] Depending on the credibility of any

118 See Mark A. Lemley, *Rethinking Assignor Estoppel*, 54 Houston L Rev 513, 537 (2016) ("[T]he doctrine of assignor estoppel serves effectively as a partial noncompete agreement, preventing inventors from starting new companies or moving to competitors in many circumstances and at least raising the costs of doing so.").

119 Waymo Complaint at *2–5 (cited in note 1).

120 Based on a survey of twenty-four states (current as of 2012), courts in only a handful of states explicitly reject the doctrine while the remainder either explicitly recognize the doctrine or, more commonly, apply it occasionally. See Ryan M. Wiesner, *A State-by-State Analysis of Inevitable Disclosure: A Need for Uniformity and a Workable Standard*, 16 Marq Intell Prop L Rev 211, 217–28 (2012). See also M. Claire Flowers, *Facing the Inevitable: The Inevitable Disclosure Doctrine and the Defend Trade Secrets Act of 2016*, 75 Wash & Lee L Rev 2207, 2223 (2018) (finding that not all states bar application of inevitable disclosure doctrine entirely; only those in the Eighth Circuit, California, Kentucky, Louisiana, Maryland, and Massachusetts expressly refused to adopt the doctrine). During the period in which Silicon Valley overtook Route 128 as a technology center, it was uncertain whether a California court could issue injunctive relief under the inevitable disclosure doctrine. See Part II.A.3.

121 These headline disputes include: Cisco's lawsuit against Arista, a company founded by departing Cisco employees, see Rachael King, *Cisco's Feud with Former Star Executive Turns Personal—and Costly* (Wall St J, Aug 17, 2017), online at https://www.wsj.com/articles/ciscos-feud-with-former-star-executive-turns-personaland-costly-1502980362 (visited Feb 17, 2020) (Perma archive unavailable); Intel's suit against Broadcom involving the departure of former Intel employees, see Karen Alexander, *Intel, Broadcom Settle Suit over Trade Secrets* (LA Times, Nov 22, 2000), archived at https://perma.cc/MQ9J-KEZA; and Apple's suit against Steve Jobs and Next, see Andrew Pollack, *Steven Jobs Settles Suit Filed by Apple* (NY Times, Jan 18, 1986), archived at

such legal threat, and the potential injunction, damages, and litigation costs to which the employee and future employer could be exposed,[122] Google may be able to dissuade Uber from hiring its employee. This effectively occurred in the Google-Uber litigation: first, Levandowski was barred by court order from working on certain projects at Uber; and, second, Uber fired Levandowski in connection with Google's litigation and related allegations of trade-secret theft.[123] Effectively, this approaches the result that would have been achieved if Google had been able to enforce a noncompete covenant against a departing employee.

Aside from these clearly legal mechanisms, Google and Uber might enter into a mutual "no-hire" (also known as antipoaching) agreement. Beginning in 2005, Apple, Google, and other Silicon Valley–based companies reportedly entered into unwritten "no-hire" agreements to protect their trade secrets and to suppress wage competition among one another.[124] Although these arrangements were ultimately dissolved following a settlement with the Department of Justice for alleged antitrust violations,[125] they illustrate how firms that are precluded from using noncompetes

https://perma.cc/5LRN-VK4T. For discussion of other trade secret suits involving departing employees, see Everett M. Rogers and Judith K. Larsen, *Silicon Valley Fever: Growth of High-Technology Culture* 91–94 (Basic Books 1984).

122 Gilson argues that trade secrecy claims are difficult to win (outside of blatant misappropriation) and, as a result, are not typically effective substitutes for noncompetes. Gilson, 74 NYU L Rev at 597–601 (cited in note 8). We feel this understates certain practical and legal realities. Although trade secrecy claims are certainly not as strong as an absolute bar on postemployment opportunities at competitors, they have considerable legal and *in terrorem* force (as Gilson acknowledges to some extent, see id at 600), especially given that, at least during 1984–2002, California law enabled courts to award relief in trade secret cases even in cases of merely "threatened" (rather than actual) misappropriation. See notes 132–34 and accompanying text. For similar views on the potency of California trade secret suits in certain circumstances, see Michael Risch, *Comments on Trade Secret Sharing in High Velocity Labor Markets*, 12 Empl Rts & Empl Pol J 339, 340–42 (2009) (arguing that California trade secret law provides a potent remedy in cases involving the misappropriation of "core" informational assets).

124 See Lobel, 93 Tex L Rev at 831–35 (cited in note 9) (describing antipoaching cartels entered into by leading Silicon Valley technology firms); Jeff Elder, *Silicon Valley Companies Agree to Pay $415 Million to Settle Wage Case* (Wall St J, Jan 15, 2015), online at https://www.wsj.com/articles/silicon-valley-companies-agree-to-pay-415-million-to-settle-wage-case-1421363288 (visited Feb 17, 2020) (Perma archive unavailable) (describing settlement of class-action antitrust lawsuit against major technology companies alleging "antipoaching" agreements).

125 US Department of Justice, Press Release, *Justice Department Requires Six High Tech Companies to Stop Entering into Anticompetitive Employee Solicitation Agreements: Settlement Preserves Competition for High-Tech Employees* (Sept 24, 2010), archived at https://perma.cc/RYG6-VEE5.

may have strong incentives to use other mechanisms to dampen labor mobility.

e) Economic alternatives to noncompetes. Even in the absence of any alternative legal instrument, employers have another potent mechanism by which to discourage employee movement: they can use deferred compensation mechanisms to encourage employees to remain with the firm.[126] There are multiple methods. Employers can set the vesting schedules of deferred equity compensation (often a substantial portion of an employee's compensation at high-tech firms) so that departing employees suffer an implicit financial penalty by departing prior to the date on which all their options to acquire stock in the company have been triggered. Cisco, a Silicon Valley incumbent and repeat acquirer of startups, typically requires that a target's employees waive vesting rights (in the target's stock) that accelerate upon an acquisition and adopt a new graduated vesting schedule (in Cisco's stock), precisely in order to deter departures by the target's key employees for a certain period of time following the acquisition.[127] Alternatively, an acquisition agreement can skew the division of deal consideration such that a small portion is allocated to the up-front purchase price and the remainder is allocated to a future postacquisition date, contingent on the founders and certain other employees remaining with the acquiror post-closing for a certain period of time.[128] In yet another variation, a recent empirical study shows that S&P 500 firms often pay severance to California-based executives in discretionary installments following separation (as contrasted with lump-sum amounts that the same firms usually pay to non-California-based executives immediately upon separation), subject to compliance

[126] See Richard A. Booth, *Give Me Equity or Give Me Death—the Role of Competition and Compensation in Building Silicon Valley*, 1 Entrepreneurial Bus L J 265, 271 (2006) (arguing that deferred equity compensation is used as a replacement for noncompete agreements for purposes of retaining employees). For empirical evidence that stock options promote employee retention, see Paul Oyer and Scott Schaefer, *Why Do Some Firms Give Stock Options to All Employees?: An Empirical Examination of Alternative Theories*, 76 J Fin Econ 99, 109–10, 131–32 (2005) (based on data on firms' stock option grants to middle managers, finding that this practice is primarily used for purposes of retaining employees and "sorting" between higher- and lower-quality employees).

[127] See David Mayer and Martin Kenney, *Economic Action Does Not Take Place in a Vacuum: Understanding Cisco's Acquisition and Development Strategy*, 11 Indust & Innovation 299, 312 (2004).

[128] See Marita A. Makinen, David B. Haber, and Anthony W. Raymundo, *Acqui-Hires for Growth: Planning for Success* *35 (Lowenstein Sandler PC, 2012), archived at https://perma.cc/5XBD-2Q76 (noting that certain acquisitions allocate more than 40 percent of the deal consideration to "incentive pool payments" and "equity grant roll overs . . . contingent on key employees staying with the buyer post-closing").

with noncompete provisions in the executives' employment agreements that are not directly enforceable through breach-of-contract suits.[129]

3. Was Massachusetts's noncompete and trade secret law significantly different from California's?

The traditional narrative relies on a significant difference in legal treatment between Massachusetts and California with respect to the enforcement of noncompetes and related doctrines that impact employee mobility. Below we look more carefully at comparative differences between Massachusetts and California law in the enforcement of noncompetes and trade secret law. We do not discern any meaningful differences with respect to trade secret claims. Although we do not contest that there were material differences in the enforceability of noncompetes between the two states during the historical period in question, the comparison is more nuanced than commonly explained, especially taking into account the above-noted exceptions to California's oft-described "ban" on noncompetes.

a) Trade secrets; inevitable disclosure. In general, there are few substantial differences in the trade secret doctrines followed by California and Massachusetts courts.[130] Where there are fine differences, these do not necessarily support the conventional expectation that Massachusetts provides stronger trade secret protections. To illustrate these tendencies, we look more closely at the inevitable disclosure doctrine and its evolution in California and Massachusetts during the period in which Silicon Valley rose to preeminence. Under this doctrine, a court can enjoin an individual from working for a new employer on the ground that the individual will inevitably disclose trade secrets belonging to the former employer.[131] This represents a plaintiff-favorable extension of trade secret law, which typically requires that the plaintiff show that the defendant has actually used or disclosed the trade secret after having misappropriated it.

[129] See Sarath Sanga, *Incomplete Contracts: An Empirical Approach*, 34 J L Econ & Org 650, 654, 670–77 (2018) (using a data sample consisting of 852 executive contracts disclosed in SEC filings during 1996–2016 by 75 S&P 500 firms that had employees in California and at least one state other than California).

[130] See Gilson, 74 NYU L Rev at 602 (cited in note 8) (stating that "[t]he scope of protection provided by trade secret law in California and Massachusetts appears to be roughly the same"). See also Robert G. Bone, *A New Look at Trade Secret Law: Doctrine in Search of Justification*, 86 Cal L Rev 241, 247 (1998) ("Although trade secret doctrine varies from state to state, the general rules are substantially similar in all jurisdictions.").

[131] See Flowers, 75 Wash & Lee L Rev at 2217 (cited in note 120).

As of the late 1970s and early 1980s, we are not aware of any indication in California or Massachusetts case or statutory law that either jurisdiction had explicitly recognized or rejected the inevitable disclosure doctrine or any equivalent under trade secret law. In 1984, however, it was California—not Massachusetts—that signaled openness to the inevitable disclosure doctrine by adopting the Uniform Trade Secrets Act (UTSA), which became effective the following year. California's version of the UTSA, the California Uniform Trade Secrets Act (CUTSA), follows the language of the model statute and provides that a plaintiff can obtain injunctive relief under trade secret law if the court finds there is "threatened misappropriation."[132] Those two words mattered: in 1996, AMD, a leading California semiconductor manufacturer, successfully relied on the inevitable disclosure doctrine to secure a preliminary injunction preventing more than twelve of its former employees from taking certain positions at their new employer, Hyundai.[133] Given the language in the CUTSA, and the outcome in the AMD-Hyundai litigation, it can be understood why a Silicon Valley practitioner observed in 1997 that it was unclear whether the inevitable disclosure remedy was available under California law.[134]

In 1998, the author of a leading treatise on trade secret law observed that California law authorized courts generally to intervene to protect against "threatened harm" and concluded: "California has never rejected the fundamental idea that underlies the [inevitable disclosure] doctrine."[135] In 1999, a California intermediate appellate court even explicitly adopted the doctrine (although it ruled against the trade secret claimant and the court's opinion was subsequently "depublished" by the California Supreme Court).[136] Commentators observed that the court's opinion reflected the actual law on the ground in some California

136 See generally *Electro Optical Industries, Inc v White*, 90 Cal Rptr 2d 680 (Cal App 1999), ordered not to be officially published, 2000 Cal LEXIS 3536 (Cal). Specifically, the Court of Appeal stated: "Although no California court has yet adopted it, the inevitable disclosure rule is rooted in common sense and calls for a fact specific inquiry. We adopt the rule here." 90 Cal Rptr 2d at 684.

lower courts: "The . . . decision now makes explicit what many trade secret practitioners have known for years: California courts will grant narrowly tailored injunctions in appropriate circumstances to prevent a former employee from performing certain tasks for a new employer to minimize the threat to a former employer's trade secrets."[137]

In the immediately ensuing years, the case law shifted in a more defendant-friendly direction, as several federal district courts applying California law[138]—and, in 2002, a California intermediate appellate court—rejected the inevitable disclosure remedy,[139] specifically distinguishing in the latter case between "inevitable disclosure" and the "threatened misappropriation" language in the CUTSA.[140] Nonetheless, a contemporary observer wrote that it remained uncertain whether a California court might apply the inevitable disclosure doctrine, given that the 2002 case was a ruling by an intermediate appellate court.[141] Reflecting this lingering uncertainty, a California court in 2008 recognized the continuing possibility of bringing a trade secret claim based on the "threatened misappropriation" language in the CUTSA.[142] Although it is almost certain today that the inevitable disclosure doctrine is no longer viable in California in view of *Edwards v Arthur Andersen LLP*,[143] during the ascendance of Silicon Valley in the 1980s, 1990s, and early 2000s, this was not the case.

During approximately the same period, the development of the law in Massachusetts concerning the inevitable disclosure

142 See *Central Valley General Hospital v Smith*, 162 Cal App 4th 501, 524–26 (2008) (stating that the rejection of the inevitable disclosure doctrine in *Whyte* does not imply rejection of trade secret claims based on threatened misappropriation, given that the California code explicitly recognizes such claims).

143 189 P3d 285 (Cal 2008). Reflecting the post-*Edwards* approach toward noncompetes and employee mobility more generally, a California court in 2009 awarded attorneys' fees as sanctions against a party that sought an injunction based on the inevitable disclosure doctrine (together with other evidence of bad faith). See *FLIR Systems, Inc v Parrish*, 174 Cal App 4th 1270, 1273–74, 1277 (2009). For further discussion, see Charles T. Graves, *Is There an Empirical Basis for Predictions of Inevitable Disclosure?*, 18 Wake Forest J Bus & Intell Prop L 190, 194–96 (2018).

doctrine followed a remarkably similar trajectory, with the only potential difference being that Massachusetts common law provided an even weaker basis for asserting the inevitable disclosure doctrine. Given that Massachusetts (unlike California) had not adopted the UTSA and therefore required that a trade secret claimant show actual use or disclosure by the defendant, there was arguably no basis under Massachusetts common law to issue injunctive relief under a theory of inevitable disclosure. In 1995, a federal district court (applying Massachusetts law) found that it was "inevitable" that a software developer would use his former employer's information in his new position; however, the case involved a noncompete agreement and therefore it was not necessary for the court to address the inevitable disclosure doctrine.[144] In 2002, a federal district court did address the doctrine directly and rejected it, stating: "Massachusetts law provides no basis for an injunction without a showing of actual disclosure."[145] As of 2003, a commentator summed up the state of the law by observing that "no Massachusetts appellate court has ruled on the viability of the inevitable disclosure doctrine, and the few Massachusetts trial court decisions dealing with the doctrine have been decidedly lukewarm about it."[146]

Consistent with our general view stated at the outset of this discussion, with respect to the inevitable disclosure doctrine, it was actually California that was more protective of trade secret holders. Any current differences can be dated either to 2008, the year of the *Edwards v Arthur Andersen LLP* decision (insofar as it signaled California courts' likely rejection of any effort by plaintiffs to seek injunctive relief under the inevitable disclosure doctrine), or 2018, when the Massachusetts legislature adopted its version of the UTSA. This gave rise to the same uncertainty that arose following California's adoption of the UTSA in 1984. Following the model statute, the Massachusetts version refers to "threatened misappropriation,"[147] which could provide a basis for Massachusetts courts to adopt the inevitable disclosure doctrine, although they may adopt California courts' now-prevailing understanding that the "threatened misappropriation" language does

not imply endorsement of the inevitable disclosure doctrine.[148] While that particular point remains unresolved today, it is notable that practitioners have commented that acceptance by Massachusetts courts of the inevitable disclosure doctrine would run counter to those courts' historical tendency to reject or at least resist application of the doctrine.[149]

b) Noncompetes. During the time in which Silicon Valley overtook Route 128, and continuing through the present, it is certainly the case that Massachusetts law, as compared to California law, provided employers with a higher level of confidence in the enforceability of noncompetes. But the differences should not be exaggerated nor should it be assumed that Massachusetts employers have had unfettered ability to enforce noncompetes without constraint. Like almost all states, Massachusetts applies the common-law reasonableness standard. This standard limits the enforceable scope of a noncompete by duration, scope and geography, provided in all cases that the noncompete is deemed necessary to protect the employer's legitimate business interests.[150] For this purpose, Massachusetts courts have defined the employer's legitimate interest narrowly. In a trilogy of cases decided in 1974, the Massachusetts Supreme Court emphasized that noncompetes were enforceable only to the extent required to protect the employer's goodwill, trade secrets, or confidential information.[151] Massachusetts courts apparently took these constraints seriously: writing in 1991, a leading practitioner of trade secret law observed that "Massachusetts courts have often refused to enforce non-competition agreements on the ground that no trade secrets or confidential business information were involved" and that "[i]n

numerous cases, Massachusetts courts have cut back restrictions to make them reasonable."[152]

Other obstacles stood in the way of a Massachusetts employer who sought to enforce a noncompete. Since 1968, Massachusetts courts have recognized the material change doctrine, which bars enforcement of noncompetes if the employee's position and salary changed significantly since starting employment.[153] In 1979 and 1982, the Massachusetts courts extended the reasonableness standard to employment contracts that required employees to forfeit certain deferred compensation upon termination, on the ground that these provisions implicitly operated as noncompetes.[154] Additionally, Massachusetts courts have held that noncompete agreements are to be construed strictly in favor of the employee and, relatedly, have declined to enforce noncompetes if the contractual language has been deemed to be excessively ambiguous.[155] Contrary to the standard narrative, Massachusetts courts during the decline of Route 128 were far from enthusiastic about noncompetes and applied the common-law reasonableness standard to limit their enforceability.

4. Did weak enforcement of noncompetes really cause the Valley to rise?

The standard narrative correctly observes that Massachusetts was an early pioneer of technological innovation. Ironically, the Boston area essentially originated what is now viewed as the Silicon Valley model consisting of a strong academic research complex coupled with a robust venture capital community and substantial movement of human capital among academia, startups, and large firms. In 1946, a Boston firm (the American

[155] See, for example, *Lanier Services, Inc v Ricci*, 192 F3d 1, 4–5 (1st Cir 1999) (finding that the term, "facilities management services," was ambiguous as a matter of law, interpreting the phrase against the former employer as the drafting party, and declining to enforce the noncompete). For discussion of additional cases during 1999–2002, see Reece, 88 Mass L Rev at 26 (cited in note 146).

Research and Development Corporation, or ARD) established the first major successful venture capital enterprise.[156] Supported by federal defense funding and local VC investors, MIT and Harvard University labs spawned hundreds of spin-offs throughout the 1960s and 1970s.[157] Those spin-offs included firms that later pioneered the "minicomputer"[158] market such as Digital Equipment Corporation (DEC) (founded in 1957 as a MIT startup with funding from ARD), Wang (founded by a Harvard physicist in the 1950s), Data General (founded in 1968 by ex-DEC engineers), and Prime (founded in 1972 by engineers from Honeywell).[159]

Contrary to Saxenian's account of cultural norms, Paul Ceruzzi describes the most important Route 128 firm, DEC, as having been characterized by a nonhierarchical engineer-driven culture that dispensed with the formalities and bureaucracy of incumbents such as IBM.[160] Certainly, as DEC and other large Route 128 firms grew, they tended to adopt vertically integrated structures.[161] But it would be inaccurate to describe the Route 128 environment in its heyday as a monolithic industry consisting of

[157] See id at 16–17; Martin Kenney and Urs von Burg, *Technology, Entrepreneurship and Path Dependence: Industrial Clustering in Silicon Valley and Route 128*, 8 Indust & Corp Change 67, 85–87 (1999); Edward B. Roberts, *A Basic Study of Innovators; How to Keep and Capitalize on Their Talents*, 11 Rsrch Mgmt 249, 254–55 (1968).

[158] The minicomputer refers to a class of computing devices that delivered computing power at a significantly reduced cost (and physical size) relative to the mainframe market (dominated by IBM). Advances in miniaturization and the development of the microprocessor yielded the "microcomputer" (equivalent to the modern PC), which delivered substantial computer power with a small physical "footprint," thereby rendering obsolete the minicomputer category. For discussion, see Paul E. Ceruzzi, *A History of Modern Computing* 124–26 (MIT 2d ed 2003).

[159] See id at 127 (noting that DEC was founded in 1957 by former MIT researchers with funding from ARD); id at 195 (stating that Data General was founded in 1968 by three former DEC engineers); Saxenian, *Regional Advantage* at 18–19 (cited in note 8) (noting that in 1951, An Wang, a scientist at Harvard, founded Wang Laboratories; in 1957, three scientists left Lincoln Labs to found DEC; in 1968, Edson DeCastro left DEC to found Data General; in 1972, William Poduska left Honeywell to found Prime); Kenney and von Burg, 8 Indust & Corp Change at 85–86 (cited in note 157) (noting that in 1957, Kenneth Olsen, a former MIT researcher, founded DEC with a capital investment from ARD); Lynn E. Browne and Steven Sass, *The Transition from a Mill-Based to a Knowledge-Based Economy: New England, 1940–2000*, in Peter Temin, ed, *Engines of Enterprise: An Economic History of New England* 211–12 (Harvard 2000).

[160] See Ceruzzi, *A History of Modern Computing* at 138 (cited in note 158) ("DEC represented everything that was liberating about computers, while IBM, with its dress code and above all its punched card, represented everything that had gone wrong.").

[161] See Kenney and von Burg, 8 Indust & Corp Change at 86–87 (cited in note 157) (stating that many minicomputer pioneers in the Route 128 area integrated vertically in order to reduce turnaround time and protect chip designs); Sarah Kuhn, *Computer Manufacturing in New England: Structure, Location and Labor in a Growing Industry* 29–33 (Joint Center for Urban Studies of MIT and Harvard University 1982).

a handful of vertically integrated incumbents. Although DEC and three other Route 128 firms (plus IBM) dominated the minicomputer segment in the late 1970s and early 1980s,[162] observers and studies systematically documented that those firms spawned a continuing flow of small-firm spin-offs.[163] An interview-based study of twenty-two Massachusetts-based computer firms between 1965 and 1975 found that half of the firms' products "were the result of direct technology transfer from previous employers and another quarter indirect transfer."[164] A study of patent coauthoring patterns found similarly that Boston innovators were regularly involved in information exchange networks that were comparable in robustness (but not size) to those in Silicon Valley.[165] In a manner akin to accounts of Silicon Valley, qualitative histories observe that Route 128 spin-offs could procure necessary inputs from a disaggregated network of small- to medium-size component producers and suppliers, assemblers, and distributors.[166] A history of the period concludes: "[C]ompanies spinning

166 See Franz Tödtling, *Regional Networks of High-Technology Firms—The Case of the Greater Boston Region*, 14 Technovation 323, 330 (1994) (describing regional network in Boston area comprising electronics, component and software firms, some of which act as "suppliers or subcontractors to the [large] minicomputer firms"); AnnaLee Saxenian, *In Search of Power: The Organization of Business Interests in Silicon Valley and Route 128*, 18 Econ & Society 25, 45 (1989) (stating that "research laboratories and firms producing components and services for each other co-located, and cross-fertilizations between the academic world, the federal government and local industry fuelled an ongoing expansion of technologically innovative activity in the [Route 128] region"); Dorfman, 12 Rsrch Pol at 306 (cited in note 79) (stating that the Boston area provides technology firms with access to a network of parts and components suppliers, "all particularly critical to new

off from other companies were at the very heart of the monumental growth that the Route 128 area experienced from the 1960s through the 1980s."[167]

On the West Coast, Silicon Valley pioneered innovations in the semiconductor field and, by the late 1970s, was the recognized leader.[168] Historical accounts of Silicon Valley's semiconductor industry typically attribute its origins to the departure in 1957 of leading engineers from Shockley Transistors to form Fairchild Semiconductor, which generated a sequence of leading semiconductor firms.[169] Semiconductor chips are a critical component in a wide array of computing and electronics products and operated as a launching pad for Silicon Valley to achieve dominance in information technology more generally.[170] Even after lower-cost Japanese producers in the 1980s undermined the local memory chip production industry, Silicon Valley adapted by shifting resources to the design and development of customized chips[171] and developing strengths in hardware and software markets. By contrast, the Massachusetts minicomputer industry did not recover as quickly from the entry of lower-cost workstations and personal computers.[172] Massachusetts had bet on the wrong horse and was unable to recover the lead.

Unlike the legal literature, the economic history and business management literature shows no consensus view as to the factors that best explain why Silicon Valley overtook Route 128 as an information technology center. Starting with Gilson, the legal literature has focused on the explanation advocated by Saxenian, who

start-ups that are developing prototypes and to manufacturers of customized equipment for small markets").

170 See Kenney and von Burg, 8 Indust & Corp Change at 78 (cited in note 157) ("In the postwar electronics industry, transistors and then integrated circuits were an enabling technology for nearly every important electronic innovation.").

171 See AnnaLee Saxenian, *Regional Networks and the Resurgence of Silicon Valley*, 33 Cal Mgmt Rev 89, 89–95 (1990) (describing how firms that specialize in the design of customized chips and outsource production enabled Silicon Valley to recover after Japanese firms entered the general-purpose semiconductor markets).

172 See Ceruzzi, *A History of Modern Computing* at 304–06 (cited in note 158) (describing how minicomputer companies based in the Boston area failed to adapt to the PC revolution); Kenney and von Burg, 8 Indust & Corp Change at 87 (cited in note 157) (stating that the minicomputer industry could not compete with "workstations" that offered comparable computing power at a substantially lower price); Richard N. Langlois, *Organizing the Electronic Century*, in Giovanni Dosi and Louis Galambos, eds, *The Third Industrial Revolution in Global Business* 119, 155 (Cambridge 2013) (same).

attributed this development to cultural norms and vertically integrated structures that constrained the flow of intellectual capital.[173] However, the business management and economic history literature is far less monolithic and identifies other salient reasons why Silicon Valley may have overtaken Massachusetts. Most commonly, these scholars identify factors such as the draw of warm weather, luck (in particular, Shockley Transistors' choice to locate in the Bay Area, which then gave rise to the Fairchild spin-off),[174] and, most compellingly, the fact that Silicon Valley had achieved leadership in a general-purpose technology (namely, the microprocessor pioneered by Intel in the 1970s) that could be applied to a wide variety of industrial, business, and consumer markets.[175] By contrast, the leading Massachusetts firms in the late 1970s and early 1980s had focused on developing specialized minicomputer and other technologies targeted for technical and industrial users.[176] Hence, once-pioneering Massachusetts firms such as DEC tended to focus on technologies that would service existing markets for technical and industrial users, rather than developing innovations—such as the personal computer—that would open up new and much larger markets in the corporate, small business, and home segments.[177]

This is not to say that East Coast firms were innovation laggards as compared to their West Coast counterparts. After all, it was IBM, headquartered in New York State, that in 1981 launched the personal computer, which precipitated the movement from closed "end-to-end" hardware systems to modular

173 See note 8.

174 In the words of Intel's cofounder: "[L]uck played a role in nearly every component of this story of semiconductors and the birth of Silicon Valley." See Gordon Moore and Kevin Davis, *Learning the Silicon Valley Way*, in Timothy Bresnahan and Alfonso Gambardella, eds, *Building High-Tech Clusters: Silicon Valley and Beyond* 7, 36 (Cambridge 2004).

175 See Kenney and von Burg, 8 Indust & Corp Change at 80 (cited in note 157) (noting that "the semiconductor found a far greater variety of applications than did the minicomputer" and "the semiconductor was important because it made so many other products possible").

176 See id (noting that Route 128 specialized in the minicomputer, which was a finished product, rather than a component that could be used to assemble other products); Dorfman, *Massachusetts' High Technology Boom in Perspective* at 2–4 (cited in note 162).

177 See Kenney and von Burg, 8 Indust & Corp Change at 87 (cited in note 157) (noting the common observation that Route 128 firms such as DEC failed to appreciate the threat posed by workstations and microcomputers, the precursors to the desktop personal computer); Ceruzzi, *A History of Modern Computing* at 243–45 (cited in note 158) (noting DEC's choice to focus on high-performance and larger computers rather than smaller and less expensive personal computers).

"plug-and-play" hardware systems as the standard product architecture in the computing market.[178] That East Coast innovation in turn led to the aforementioned decline of DEC, Wang, and other leading Massachusetts minicomputer firms that operated under closed models in which customers purchased all components from a single firm.[179] IBM's success is attributable in part to its then-novel decision to outsource design and production of many of the PC's components—most notably, the operating system (to Microsoft) and the microprocessor (to Intel)—as well as its inadvertent commoditization of the PC's hardware.[180] But these were strategies that could have been taken by a firm like DEC, which had previously made pioneering contributions to computing technology. In fact, DEC attempted to do just that. In 1988, IBM and DEC collaborated to establish the Open Software Foundation, an effort to develop OS/2, a nonproprietary operating system intended to challenge Microsoft's Windows system.[181] Similarly, some of DEC's Route 128 peers responded (albeit, somewhat belatedly) to the decline of the minicomputer by adopting alternative organizational structures.[182] Moreover, two Route 128 firms launched the first commercially successful spreadsheet applications (Visicalc, released in 1979, and Lotus 1-2-3, released in 1984),[183] which are recognized as key factors in the widespread adoption of the Mac and PC, respectively.[184] Hence, there does not seem to be any compelling reason to attribute the decline of DEC and other leading Massachusetts firms substantially to cultural norms or vertically integrated forms of industrial organization.

A similar observation complicates Gilson's argument that Massachusetts's willingness to enforce noncompetes suppressed labor mobility, which hindered the region's innovative performance. Critically, this argument fails to contemplate that

Route 128 firms could have chosen *not* to request or enforce noncompetes if competitive pressures in the labor market drove them to do so. Gilson argues that collective-action pressures precluded that possibility.[185] But there is compelling evidence that Route 128 firms sometimes, if not *typically*, elected to forgo adoption and enforcement of noncompetes. Contemporary accounts in the early 1980s observed that Route 128 was characterized by frequent spin-offs,[186] talented engineers often left their employees to form start-ups, and large incumbents were typically parents of multiple spin-off firms.[187] One observer records that Route 128 firms tolerated or even welcomed the movement of technical personnel because they "value[d] the knowledge they obtain[ed] by hiring employees from other firms more than they fear[ed] the loss of proprietary information,"[188] and that entrepreneurs often conceived of ideas "in the lab of an employer."[189] That same observer noted that "[n]ew and expanding firms hire[d] their 'know how' by bidding experienced employees away from competing firms."[190]

These accounts make no mention of the use of noncompetes to restrain employee turnover. Rather, firms attempted to retain valued employees by offering superior terms and more interesting work[191]—something that would have been unnecessary if noncompetes were legally potent. The lesson seems clear: when technical

[185] See Gilson, 74 NYU L Rev at 596 (cited in note 8).

[186] See David A. Garvin, *Spin-Offs and the New Firm Formation Process*, 25 Cal Mgmt Rev 3, 3 (1983) (observing that, as of the early 1980s, in both Silicon Valley and Route 128, new firms are continuously being formed through "spin-offs" founded by "individuals leaving an existing firm in the same industry").

[187] See Rosegrant and Lampe, *Route 128* at 29, 153–57 (cited in note 163); Dorfman, *Massachusetts' High Technology Boom in Perspective* at 69 (cited in note 162). Professor Sarah Kuhn observes as follows: (i) "[s]ome firms prefer to hire away employees of other computer manufacturing firms," Kuhn, *Computer Manufacturing in New England* at 72 (cited in note 161); (ii) Route 128 has "an unusually high turnover rate among its technical employees, see id at 124–25, and (iii) Route 128 firms provided survey responses indicating heavy reliance on hiring employees from competitors, see id at 125. Similarly, Nancy Dorfman remarks that the Route 128 area is characterized by a start-up entrepreneurial culture in which firms bid away experienced employees from competitors. See Dorfman, 12 Rsrch Pol at 308 (cited in note 79). She further observed that "scientists repeatedly leave their employers to commercialize and market new products whose concepts they helped to develop in the laboratory of a former employer" and it is a "challenge to find new enterprises whose founders did not come from an academic laboratory or another high tech firm." See id at 310.

[188] See Dorfman, *Massachusetts' High Technology Boom in Perspective* at 9 (cited in note 162).

[189] See id at 69.

[191] See Kuhn, *Computer Manufacturing in New England* at 125 (cited in note 161).

talent is scarce and market demand for that talent is high, bargaining leverage shifts to employees and differences in the enforceability of noncompetes make little practical difference. Any employer who sought to enforce a noncompete would be punished in the labor market.[192]

To be certain, there is no comprehensive quantitative evidence on noncompete usage and enforcement during this historical period. However, in more recent times—notably, after California substantially ratcheted up its aversion to noncompetes in 2008 in *Edwards*—Massachusetts and California have exhibited similar rates of employee noncompete usage, even among wholly in-state firms, according to the most comprehensive survey conducted to date.[193] Thus, it seems unlikely that during the historical period in question—when Massachusetts and California noncompete law were more similar than today—that the rate of noncompete usage and enforcement between the two states substantially differed.

There may be an additional material factor behind Silicon Valley's ascendance, which existing scholarship has overlooked. In 1979, the Department of Labor modified the "prudence rule" to permit pension fund trustees to invest in venture capital.[194] Based on this signal from federal regulators, state pension fund trustees took the view that it would be consistent with their fiduciary obligations to invest an appropriate portion of a fund's assets in venture capital and other high-risk "alternative" investments.[195] This change triggered a dramatic inflow of capital into VC investments

[192] Of course, monopsonistic labor markets exist, and assuming the predicate conditions for firm coordination in this context are satisfied—small number of employers with large market share, comparable employment positions, observable compensation, and a credible mechanism to punish defections—employers can credibly impose and enforce noncompetes. For discussion, see *Todd v Exxon Corp*, 275 F3d 191, 201–02, 207–14 (2d Cir 2001). However, we have no reason to believe that these challenging conditions were satisfied in the labor markets for highly skilled technical workers in the Route 128 area during this historical period, especially given evidence that this area was characterized by frequent spin-offs during this period. See notes 163–67 and accompanying text.

and, by the late 1980s, the emergence of pension funds as the single largest investor class in VC funds.[196] Presumably, the same is true of California pension funds' increase in VC investment at approximately the same time, given that CalPERS, the principal California state pension fund, followed the lead of the Department of Labor and directed assets toward venture capital funds, formally establishing an Alternative Investment Management program for this purpose in 1990.[197] Like other state pension funds (including Massachusetts), California state pension funds exhibit a significant in-state bias in their investments in VC and private equity funds.[198] VC funds in turn exhibit an in-state bias in the selection of portfolio firms.[199] The much larger size of the California pension system, combined with the in-state biases of California state pension fund managers and California VC principals, implies that Silicon Valley startups likely had access to a much larger pool of capital than Boston-based startups.[200]

[196] See id at 155–56, 163–66 (observing that change in the Department of Labor's "prudent man rule" led to investment in venture capital funds by pension funds, which became the primary source of capital for these funds).

[197] See *CalPERS Private Equity Investments Infuse Billions into California Businesses; Portfolio Is Positioned to Capitalize on Buying Opportunities* (Business Wire, Oct 17, 2003), archived at https://perma.cc/4C74-L6R5 (noting the establishment by CalPERS of Alternative Investment Management Program in 1990 as a vehicle for investing in private equity).

[198] See Yael V. Hochberg and Joshua D. Rauh, *Local Overweighting and Underperformance: Evidence from Limited Partner Private Equity Investments*, 26 Rev Fin Stud 403, 414–25 (2013).

[199] See Adam Lichtenstein, *Home-State Investment Bias in Venture Capital Funds*, 62 Fin Analysts J 22, 23–24 (2006). For further evidence that venture capital funds favor investments in geographically proximate regions, see Claudia B. Schoonhoven and Kathleen M. Eisenhardt, *Regions as Industrial Incubators*, in Edwin S. Mills and John F. McDonald, eds, *Sources of Metropolitan Growth* 210, 244–45 (Transaction 2012).

[200] Although data is not available from the time period in question, to get a sense of the sums involved, consider that, during 2007–2014, CalPERS has held between 8.5 percent and 13.5 percent of its private equity investments in California-based firms. In 2014, it held $31.5 billion of private equity investments, of which 11.5 percent was invested in California-based firms. See CalPERS, *CALPERS Comprehensive Annual Financial Report* *52, 100 (FY 2014); CalPERS, *CALPERS Comprehensive Annual Financial Report* *92 (FY 2010); California State Controller's Office, *CALPERS Comprehensive Annual Financial Report* *83 (FY 2009); CalPERS, *CALPERS Comprehensive Annual Financial Report* *86, 89 (FY 2008). Private equity includes VC investments as well as other investments in firms that are not publicly traded. The Massachusetts Pension Reserves Investment Trust Fund, which manages private equity investments on behalf of the Massachusetts state pension system, reported that, as of June 2014, it held $6.9 billion in investments in private equity, of which $1.4 billion was invested in venture capital. See Massachusetts Pension Reserves Investment Trust Fund, *Comprehensive Annual Financial Report* *35 (2014). The report does not disclose what portion of those funds were allocated to Massachusetts-based investment funds, although it does indicate that 27 percent of its private equity investments were made outside the US. See id at *84. Hence, it is extremely

5. Did Massachusetts really decline?

The traditional narrative relies both on the rise of Silicon Valley as a center of innovation in the electronics industry and the decline of Route 128. While it is correct that Silicon Valley has achieved a uniquely preeminent position, this narrative overstates both Massachusetts's relative historical prominence as a technology center and its relative retreat from that position in more recent decades.

While Route 128 was an historical pioneer in the IT industry since World War II, the period during which it was clearly a dominant center was a short period limited to the height of the minicomputer market during the late 1970s and early 1980s.[201] Even during that time, there was no single, overwhelmingly dominant innovation center akin to Silicon Valley's place today. Relative to the Boston area's important, but less than preeminent, position as of the early 1980s, it does not appear to have suffered a permanent decline in innovative performance since the collapse of the minicomputer industry.[202] Rather, the Boston area has recovered its place as a leading regional innovation center, even if it no longer rivals Silicon Valley in the IT market. Multiple innovation metrics provide suggestive evidence in support of this view. During 1985–2013, the Bay Area held and expanded its lead in the volume of VC investments while the New England region consistently occupied the second- or third-place position.[203] From 1987 through 2011, Massachusetts maintained consistently high levels of business-funded R&D intensity (defined as R&D funded by businesses as a percentage of "gross state product") in a range of approximately 3–4 percent, outperforming California in all years but one.[204] From 1997 through 2016, California and Massachusetts

unlikely that Massachusetts pension fund managers invested more capital in Massachusetts-based VC firms, as compared to CalPERS's investments in California-based VC firms.

204 Authors' calculations, based on (i) data on state-level R&D expenditures extracted on an alternating year basis from the National Center for Science and Engineering Statistics, *Industrial Research and Development Information System* (National Science Foundation, July 2011), archived at https://perma.cc/82ZP-4YS2, and (ii) data on "gross state product" available from the Bureau of Economic Analysis, *Comprehensive Revision of Gross State Product, 1977–2002, and Accelerated GSP Estimates for 2003* (US Department of Commerce, Dec 15, 2004), archived at https://perma.cc/28C3-RCTV. With respect to item (i), we excluded federal R&D expenditures in order to avoid reflecting any federal subsidies that might understate regional markets' ability to sustain innovation.

have appeared every year among the top three states in terms of business-performed R&D intensity (defined as R&D performed by businesses as a percentage of "private-industry output").[205] After the San Francisco area, the Boston area is the second-most popular location in the US that companies select for their primary R&D center (selected by 230 firms as of 2011, compared to 380 firms for San Francisco).[206]

The Boston area has preserved or regained a significant presence in biotechnology and the life sciences, computer systems design, telecommunications equipment, data storage, technical instruments, and industry-oriented software tools.[207] In fact, the success of the Boston area as a technology cluster since the collapse of the minicomputer industry has now lasted longer than the period during which DEC and its peers were dominant.[208] Notwithstanding Massachusetts's formal tolerance of noncompetes, multiple leading firms in various information technology sectors have spawned a steady flow of new firms providing complementary products and services.[209] In the life sciences (including biotechnology) and medical devices sector in particular, the Boston area is especially prominent (in 2015, biotech firms based in New England raised approximately $10.6 billion from outside investors, while biotech firms based in the San Francisco Bay Area raised approximately $6.5 billion).[210] Trade and scholarly commentary typically situates the Boston area among a triplet of

leading biotechnology clusters along with the Bay Area and San Diego,[211] in some cases ranking it as the leader among those three locations.[212] As of 2015, the Massachusetts Biotechnology Council stated that Massachusetts employed more personnel in biotechnology R&D than any other state and an MIT report found that, on a per capita basis, Massachusetts received significantly more funding ($351 per capita) from the National Institutes of Health than California ($88 per capita).[213] During 2012–2014, San Francisco firms received each quarter approximately 30–50 percent of funding in the national life sciences industry, while Boston firms received each quarter approximately 20–40 percent of funding.[214]

On a state-to-state level comparison, it may be surprising to learn that Massachusetts and California do not materially differ by multiple measures of innovative health. The State Technology and Science Index, which ranks states' innovation capacities by various objective measures, has ranked Massachusetts in first place since the index was inaugurated in 2002 and through its latest release in 2018.[215] In 2018, California ranked fourth, after having held fourth, third, and third places in 2016, 2014, and 2012, respectively.[216] According to the State New Economy Index, both California and Massachusetts are among the country's leading states on multiple innovation measures (reflecting data as of the years 2012 through 2016), including:

(i) industry-funded R&D as a percentage of total state GDP (CA: 2.5 percent (ranked third); MA: 2.1 percent (ranked fourth));

(iv) employment in high-technology industries as a percentage of total private-sector employment (CA: 6.8 percent (ranked fifth); MA: 7.9 percent (ranked first)).[217]

B. Empirical Studies: Noncompetes, Mobility, and Innovation

Even if the Silicon Valley / Route 128 narrative were more robust, it would be imprudent to base any policy conclusions on a single historical example. While Japan was once widely viewed as a model of a successful innovation economy, a regime characterized by lifetime job security and oligopolistic market structures would hardly be viewed today as an attractive innovation ecosystem.[218] Recently, empirical and experimental researchers have sought to move beyond the Silicon Valley example and, in doing so, have produced a sizeable body of studies concerning the effect of noncompetes on labor mobility and, in some cases, innovation. Unlike the literature that relies on the Silicon Valley / Route 128 narrative, these studies usefully apply formal methods to a broad sample of state jurisdictions, seeking to exploit interstate differences, or intrastate changes in, the legal treatment of noncompetes to identify the effects of such differences and changes on employee turnover and certain innovation indicators.

These studies fall into two categories. The larger category addresses only or principally whether noncompetes (or specifically, the enforceability of noncompetes) reduce labor mobility. In a companion paper, we review these studies comprehensively and provide a detailed discussion of the contributions and limitations of the most widely cited studies.[219] In that review, we describe significant methodological limitations and identify factual errors

[217] *The 2017 State New Economy Index* *10, 44, 47, 50 (Information Technology & Innovation Foundation, Nov 2017), archived at https://perma.cc/B8R7-CXAV.

[218] On the folly of these once-popular views, see Brink Lindsey and Aaron Lukas, *Revisiting the "Revisionists": The Rise and Fall of the Japanese Economic Model* (Cato Institute, July 31, 1998), archived at https://perma.cc/3GZN-SDGH.

[219] See Jonathan M. Barnett and Ted Sichelman, *Revisiting Labor Mobility in Innovation Markets* *12–29 (USC Gould School of Law Center for Law and Social Science Research Paper Series No CLASS16-13, May 26, 2016), archived at https://perma.cc/V2T9-6UGC.

concerning important points of state law. These shortcomings cast serious doubt on these studies' claims purporting to show a broad causal relationship between the enforcement of noncompetes and reduced labor mobility. For purposes of the review below, however, we will accept as given the findings of this first category of studies—that is, we will assume that the enforceability of noncompetes has some significant incremental effect on labor mobility. This assumption will enable us to focus our review below on a second and smaller group of studies that address the more fundamental question whether the enforceability of noncompetes has a detrimental effect on innovation.

1. Nonexperimental studies.

Several empirical studies have sought to test for a relationship between noncompetes, employee mobility, and innovation. Here, we address in detail four of the studies that scholars and policymakers have most heavily cited and relied upon. First, a 2003 study by Professors Toby Stuart and Olav Sorenson (the "Stuart and Sorenson study") examined biotechnology startups founded in the wake of an initial public offering (IPO) or acquisition of a previous company, finding a significant inverse relationship between in-state noncompete enforceability and overall startup formation. Specifically, in the absence of state-level fixed effects, the authors find that "states with weak non-compete regimes realize 217 percent higher founding rates than those that enforce non-compete covenants."[220] Additionally, taking account for state-fixed effects, Stuart and Sorenson find that the median IPO "occurring in . . . a weak enforcement state increases the founding rate [of new biotech firms] . . . by 26 percent."[221] Second, a 2011 study by Professor Mark Garmaise (the "Garmaise study") found that stronger noncompete enforceability, interacted with a measure of in-state competition, tends to suppress R&D spending and that increased enforceability reduces capital investment per

Our analysis in that paper focuses on the most widely cited studies, which include: Matt Marx, Jasjit Singh, and Lee Fleming, *Regional Disadvantage? Employee Non-compete Agreements and Brain Drain*, 44 Rsrch Pol 394 (2015); Garmaise, 27 J L Econ & Org 376 (cited in note 63); Matt Marx, Deborah Strumsky, and Lee Fleming, *Mobility, Skills, and the Michigan Non-compete Experiment*, 55 Mgmt Sci 875 (2009); Bruce Fallick, Charles A. Fleischman, and James B. Rebitzer, *Job-Hopping in Silicon Valley: Some Evidence Concerning the Microfoundations of a High-Technology Cluster*, 88 Rev Econ & Stat 472 (2006).

221 Id at 195.

employee.[222] Third, a 2011 study by Professors Sampsa Samila and Olav Sorenson (the "Samila and Sorenson study") found that states that enforce noncompetes dampen the effects of venture capital investment on firm formation and patenting rates.[223] Based on these findings, Samila and Sorenson conclude that the enforceability of noncompetes "significantly impedes entrepreneurship and employment growth."[224] Fourth, a 2015 study by Professors Matt Marx, Jasjit Singh, and Lee Fleming (the "Marx et al. study") found a "brain drain" of inventors from Michigan to states that do not enforce noncompetes after 1985, the year in which Michigan law restored the enforceability of noncompetes.[225] Moreover, the Marx et al. study found that this effect was strongest for more highly skilled inventors.[226] We now address substantial limitations and, in some cases, outright flaws of these studies. Although we do not have space to address every study examining the relationship between noncompetes and innovation, our critique applies to the vast majority of lesser-cited studies on the issue.

a) Improper characterization of how strongly states enforce noncompetes. First, all four of these studies, as well as many other studies, oversimplify and largely misjudge the variation in the strength of state-by-state enforcement of noncompetes. Specifically, these studies classify strength of enforcement either (1) in a binary fashion as "enforcing" or "non-enforcing" states, developed from the study by Stuart and Sorenson; or (2) according to a twelve-factor scale developed by Garmaise.[227]

Specifically, Stuart and Sorenson classify each state as "nonenforcing" or "enforcing."[228] They identify six states that, during the period 1985–1996, purportedly "preclude[d] the enforcement of *all* noncompete agreements" and five states that "only enforce[d] non-compete covenants under very specific circumstances."[229] These eleven states are considered nonenforcing.[230] In

[230] Id.

contrast, they identify twenty-six enforcing states that purportedly placed "*no* restrictions" on the enforcement of noncompetes, as well as thirteen other nonenforcing states that followed a "reasonable[ness]" approach or enforced noncompetes limited in time or space.[231] The Samila and Sorenson study as well as the Marx et al. study both rely on Stuart and Sorenson's classification system for their analyses.[232]

This binary approach is inherently inaccurate—all states enforce some noncompete provisions and no states enforce all noncompete provisions. Other than California, North Dakota, and Oklahoma (until 1989), all states during that time period essentially adopted a reasonableness approach to the enforcement of noncompetes, subject to variation in application.[233]

Even if one were to draw an arbitrary line between states, it would result in at most two nonenforcing states during this time period. Consistent with both Professor Norman Bishara's comprehensive state-by-state review[234] and our own independent review, we find that during the relevant time periods, other than California and North Dakota, none of the purported nonenforcing states in the Stuart and Sorenson study—namely, Alaska, Connecticut, Michigan, Minnesota, Montana, Nevada, Oklahoma, Washington, and West Virginia—can plausibly be classified in this manner.

It appears that Stuart and Sorenson primarily examined the language of specific state statutes as reproduced in the 1996 edition of the Malsberger treatise on state enforcement of covenants not to compete,[235] without carefully reviewing the descriptions of actual case law in the same treatise. Critically, any state's effective noncompete regime cannot be accurately described without taking into account *both* applicable statutes and judicial interpretation of those statutes. Montana is a case in point. Apparently on the basis of the Montana statute voiding "contracts in restraint

[231] Id (emphasis added).

Bishara, *Fifty Ways to Leave Your Employer: Relative Enforcement of Covenants Not to Compete, Trends, and Implications for Employee Mobility Policy*, 13 U Pa J Bus L 751, 757 (2011) ("While the majority of states provide some enforcement of noncompete agreements . . . there are only two extreme outliers in terms of restrictions on any noncompete enforceability: California and North Dakota.").

[234] See Bishara, 13 U Pa J Bus L at 767, 771–81, 786–87 (cited in note 233).

[235] See Stuart and Sorenson, 48 Admin Sci Q at 190 (cited in note 220).

of trade,"[236] which has common origins with California's statute, Stuart and Sorenson classify it as a state that "precludes the enforcement of *all* noncompete agreements."[237] Yet, the Malsberger treatise expressly states that "[d]espite subsection 703, Montana courts have upheld restrictive covenants in employment contracts" under a general reasonableness standard.[238]

For states without statutes, Stuart and Sorenson's summary of the Malsberger treatise is also inaccurate. Our detailed review of the treatise, including cases cited therein, shows that all of their study's supposed nonenforcing states lacking statutes—Alaska, Connecticut, Minnesota, and Washington—are misclassified.[239] Again, these states essentially enforce noncompetes under a reasonableness standard. Indeed, Bishara—completely contrary to Stuart and Sorenson—classifies Connecticut and Washington as the fourth and eighth *strongest* enforcing states in 1991, respectively.[240]

In response to an earlier draft of this Article, Sorenson ran robustness checks to the main estimates in the initial study with Stuart using the Bishara measure of enforceability as well as a separate binary coding scheme in which North Dakota and California are the only nonenforcing states.[241] In these revised models, the results are substantially similar to, and in some cases stronger than, Stuart and Sorenson's initial results.[242]

We are heartened by the fact that Sorenson—unlike Marx et al. or Garmaise—chose to revise his study's initial model to take into account our criticisms. However, even these new results are subject to substantial limitations. First, the major result—that the states with weak noncompete enforcement regimes experience higher absolute founding rates than states with strong regimes that abstract away from state fixed effects—is not determinative because other regional factors may correlate between

the weak regime and the level of new firm foundings in the region.[243] Second, for the models that take into account state fixed effects by examining new firm foundings following IPOs and acquisitions, the effects with the greatest magnitude are centered in California.[244] This may reflect the fact that California operates in a unique environment not applicable to other states. Third, even though weak enforcement states other than California showed significant declines in new firm foundings following IPOs and interindustry acquisitions, this does not account for the quality of the new firms.[245] As we note below, a more recent study by Starr and others finds that firms founded in strong enforcement states are of higher quality than those in weak enforcement states.[246] Fourth, even the Bishara scale faces significant methodological limitations and has not been independently verified.[247]

The Garmaise study replaces the oversimplified binary approach of Stuart and Sorenson with a graduated twelve-point scale that assigns equal weight (one or zero) to the answers (yes or no) to twelve questions based on those in a later version of the Malsberger treatise[248] regarding the strength and scope of noncompete law in various states.[249] While this is an improvement, this scale is still problematic because there is no legitimate legal or other basis to *equally* weight each of the twelve factors. Comparing two of the factors as an example, it is arguably much more important how a plaintiff must prove the existence of an enforceable covenant not to compete than what counts as sufficient postemployment consideration in considering the strength of a state's noncompete regime.

There are other problems with the Garmaise scale.[250] Garmaise's initial factor—whether the state has a statute bearing on the enforceability of noncompetes (as opposed to mere common law)—does not strike us as indicative one way or the other as to whether the state more strongly enforces noncompete law.[251] Although some very strict states (for example, California and North Dakota)

[243] See Stuart and Sorenson, 48 Admin Sci Q at 193–94 (cited in note 220) ("[A] number of omitted regional factors might correlate with both the weak non-compete enforcement dummy and the level of entrepreneurial activity in the region.").

have adopted statutes, so have some states following the flexible, common law reasonableness standard (for example, North Carolina and Ohio).

Next, arbitrary thresholds—such as whether a state has upheld a statewide three-year restriction versus only a two-year one—are not particularly meaningful in the overall scheme of noncompete enforcement. The Malsberger treatise does not of course catalog all the noncompete opinions in a given state—thus, Garmaise could not even answer correctly whether "3-year statewide restrictions have [ever] been upheld" in a particular state.[252] For instance, the applicable Malsberger treatise lists no cases in Wisconsin in which a three-year statewide noncompete was upheld;[253] rather, the treatise cites only a case in Wisconsin for which a three-year noncompete was found unreasonable.[254] But, contrary to Garmaise's scoring, Wisconsin courts in fact had upheld a six-year noncompete and suggested that a three-year noncompete would be reasonable.[255]

Last, for perhaps the most important question—"What is an employer's protectable interest and how is it defined?"—instead of examining the full range of protectable interests, Garmaise curiously focuses on whether an "employer can prevent the employee from future independent dealings with all the firm's customers, not merely with the customers with whom the employee had direct contact."[256] Besides omitting important protectable interests—such as trade secrets, training and development, and ordinary competition—customer relationships are not the type of interest that would typically be of great concern to the top executives at the large, publicly traded firms examined in Garmaise's study. Rather, customer relationships and list restrictions—at least at a large public firm—are more likely to apply to sales personnel, who have direct relationships with the firm's customers, but these personnel were not examined by Garmaise. Variation

[256] See Garmaise, 27 J L Econ & Org at 421 (cited in note 63).

among states in a factor not relevant to the examined class of employees may of course—like Stuart and Sorenson's scale—produce spurious results.

Ultimately, the ideal metric for evaluating a state's noncompete regime is the probability that a typical employee move that *would* be allowed in a hypothetical nonenforcing state *would not* be allowed in any given state. Although it is clearly impossible to achieve such accuracy, neither Stuart and Sorenson nor Garmaise provide sufficient verification for the legitimacy of their indices, such as an empirical analysis of actual cases. Such untested and rough assessments do not make for valid studies.[257]

This concern is confirmed by examining the correlations between the available enforcement scales. The correlation between the Stuart and Sorenson binary scale and the Garmaise twelve-point scale is only 0.43. Bishara constructs an alternate scale[258]—using seven of the twelve questions in the 1991 Richey and Malsberger treatise and the 2009 Malsberger treatise[259]—which, although it raises similar issues as the Garmaise scale, in our opinion is somewhat more likely to be accurate because it uses a graduated scale (unlike Stuart and Sorenson) and differentially weights different factors in the scale (unlike Garmaise). The correlation between the Bishara and Garmaise scales is 0.66, and the correlation between the Bishara and Stuart and Sorenson scales is 0.42.[260]

We recognize that some type of quantitative ranking is a necessary precondition to undertake systematic analysis of the economic effects of noncompete laws. However, given the clear errors in categorization and relatively low correlations among different scales, we are doubtful that the results of studies using the Stuart

[257] Garmaise additionally examines individual changes in law in three states by using time-series estimations, see Garmaise, 27 J L Econ & Org at 390–93 (cited in note 63), the limitations of which we address in Barnett and Sichelman, *Revisiting Labor Mobility in Innovation Markets* at *24, Part 3.2.7 (cited in note 219).

[258] See Bishara, 13 U Pa J Bus L at 771, 786–87 (cited in note 233). For an alternate scale modeled on the Bishara scale, see Evan Starr, Natarajan Balasubramanian, and Mariko Sakakibara, *Screening Spinouts? How Noncompete Enforceability Affects the Creation, Growth, and Survival of New Firms*, 64 Mgmt Sci 552, 558 (2018). The Starr and Bishara scales are correlated at 0.94; hence, we ignore the Starr scale.

[259] See Brian Malsberger, *Covenants Not to Compete: A State-by-State Survey* xvii–xviii (BNA Books 2009) ("Malsberger 2009"); P. Jerome Richey and Brian M. Malsberger, *Covenants Not to Compete: A State-by-State Survey* xvi–xvii (BNA 1991).

[260] We thank Norman Bishara for providing the data underlying his scale.

and Sorenson[261] or Garmaise[262] scales to measure the effects of noncompetes on labor mobility can be properly relied upon for empirical study.[263]

A better approach to construct an enforcement scale in our view would be to undertake a comprehensive assessment of the actual extent and conditions in which courts enforce (or not) noncompetes. A large number of actual cases should be randomly selected in each state across a time period of interest. The assessment would identify the outcome in the case along with key factors in each case, including occupation, at-will vs. contract employee, employer- vs. employee-driven termination, industry, term of the noncompete, geographic scope of the noncompete, and other key circumstances, such as whether trade secrets, sale of a business, dissolution of a partnership, choice of law or forum, and substantial employee training were present. Multivariate, logistic regressions could then be constructed to compare how different factors affect outcomes across states. These results could then be substituted, where appropriate, for factors like those in Bishara to construct more accurate scales.

b) Failure to properly reflect cross-border enforcement of noncompetes. Garmaise and Marx et al. include cross-state border job changes in their datasets.[264] The Marx et al. study focuses on the supposed "brain drain" from Michigan to "non-enforcing" states following its decision to enforce noncompetes.[265] Such cross-border moves are complex from a legal perspective, because, as

[261] Studies that rely on the Stuart and Sorenson scale include: Kenneth A. Younge and Matt Marx, *The Value of Employee Retention: Evidence from a Natural Experiment*, 25 J Econ & Mgmt Strategy 652, 658–70 (2016); Younge, Tong, and Fleming, 36 Strategic Mgmt J at 692 (cited in note 110).

[262] Studies that rely on the Garmaise scale include: I.P.L. Png and Sampsa Samila, *Trade Secrets Law and Mobility: Evidence from "Inevitable Disclosure"* *20 appx 2 (working paper, Feb 14, 2015), archived at https://perma.cc/MH8D-VWYS; Raffaele Conti, *Do Non-competition Agreements Lead Firms to Pursue Risky R&D Projects?*, 35 Strategic Mgmt J 1230, 1234–35 (2014); Bill Francis, et al, *When Finding a New Job Is Not Easy: The Influence of the State Law of Non-Competition Agreements on the Characteristics of M&As* *9 (working paper, Dec 2007), archived at https://perma.cc/U7JW-3V7A; Sharon Belenzon and Mark Schankerman, *Spreading the Word: Geography, Policy, and Knowledge Spillovers*, 95 Rev Econ & Stat 884, 895 (2013).

[263] Even Sorenson's revised results are subject to substantial qualifications. See notes 241–47 and accompanying text. Nor, as far we know, have these revised results been published in any form.

[264] See Marx, Singh, and Fleming, 44 Rsrch Pol at 394–95 (cited in note 219); Garmaise, 27 J L Econ & Org at 396–97 (cited in note 63).

[265] See Marx, Singh, and Fleming, 44 Rsrch Pol at 394 (cited in note 219).

Garmaise properly notes, the law of the state of the former employer will sometimes apply and, in other instances, the law of the state of the new employer will apply.[266]

Marx et al., however, overlook this complexity and erroneously assume that nonenforcing states *always* apply their own law so as to void a noncompete agreement that falls under the law of another state.[267] Even assuming that Marx et al.'s list of ten "nonenforcing" states is correct—which it is not, as we discussed above—the only nonenforcing states that generally refuse to enforce out-of-state noncompetes on public policy grounds are California and North Dakota.[268] Yet, even California does not always void out-of-state noncompete agreements. California courts sometimes transfer cases to another state or stay proceedings so those in another state can proceed, particularly when the employment agreement selects that other state's law and courts.[269]

Furthermore, and perhaps more importantly, all states—including California—will generally enforce a *prior* judgment of another state that afforded the parties a full and fair opportunity to litigate the matter. Thus, if an employee is subject to jurisdiction in the state of the former employer, which often will be the case, then the former employer can sue the employee in its home state. If the employee is not subject to an exclusive choice-of-forum clause, the employee may then sue for a declaratory judgment in

[266] The law of the state of the former employer may either be the state in which the employee was located or some other state, to the extent the employer uses a choice-of-law provision specifying the law of a different state (for example, its state of incorporation or headquarters). See Garmaise, 27 J L Econ & Org at 390 n 9 (cited in note 63); Gillian Lester and Elizabeth Ryan, *Choice of Law and Employee Restrictive Covenants: An American Perspective*, 31 Comp Labor L & Pol J 389, 396–97 (2009) (discussing the situation in which the choice-of-law clauses select the employer's place of incorporation).

[267] See Marx, Singh, and Fleming, 44 Rsrch Pol at 395, 403 (cited in note 219).

[268] We use the 1996 Malsberger treatise to make this determination, see Malsberger 1996 at 102, 136–37, 156–57, 201–02, 618, 684, 719, 857–58, 907, 1147, 1160 (cited in note 233) (citing various cases), as the 2015 Marx, Singh, and Fleming study relies on the same treatise to classify state enforcement regimes. See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 n 2 (cited in note 219), citing Stuart and Sorenson, 48 Admin Sci Q at 190 (cited in note 220) (relying on the 1996 Malsberger treatise for data on states that do not enforce noncompetes).

[269] California substantially restricted the situations in which it will enforce out-of-state noncompetes starting in 2017, but during the time periods in question of these studies, California courts were sometimes amenable to enforcing, directly or indirectly, out-of-state noncompetes. See notes 105–06 and accompanying text.

the state of the new employer. Although there are important nuances, essentially, whichever court enforces judgment first will typically bind the employee.[270]

The simplification of these doctrinal complexities in the Marx et al. study renders that study's key assumption—namely, that nonenforcing states always apply their own law—flawed, and thus confounds its causal identification strategy. As we explain below, given the small number of annual employee moves out of Michigan to nonenforcing states measured in the Marx et al. study, this flaw could lead to substantial overestimates of the measured effects of noncompetes.

The Garmaise study also suffers from difficulties relating to the treatment of out-of-state moves. Specifically, Garmaise includes within his analysis out-of-state moves, and, unlike the Marx et al. study, assumes for simplicity that these moves are always governed by the law of the state of the *former* employer.[271] Because Garmaise's dataset contains only a little over six hundred within-industry transfers (out-of-industry transfers would generally not be governed by noncompetes), it is essential to know what percentage of those transfers were out-of-state (and Garmaise does not disclose as much). If the percentage is large, then some results in the Garmaise study may not be accurate.

c) No data on actual usage of noncompete agreements by state. Even if one believes these studies accurately categorize strength of enforcement, no study—other than Garmaise's—provides any measure of the actual usage of noncompete agreements within their sample set or how often employers actually enforce noncompetes. Available evidence suggests widely varying use of noncompete agreements among various executive and technical employee groups,[272] and while there is new evidence regarding

[270] See Lester and Ryan, 31 Comp Labor L & Pol J at 405–20 (cited in note 266); Timothy P. Glynn, *Interjurisdictional Competition in Enforcing Noncompetition Agreements: Regulatory Risk Management and the Race to the Bottom*, 65 Wash & Lee L Rev 1381, 1385–86, 1418–28 (2008).

[271] See Garmaise, 27 J L Econ & Org at 396 n 15 (cited in note 63).

[272] Based on a sample of top-level executives, Garmaise finds a roughly 70 percent usage rate, see Garmaise, 27 J L Econ & Org at 396 (cited in note 63). Based on a sample of CEOs at S&P 1500 companies, Bishara, Martin, and Thomas, 68 Vand L Rev at 2 (cited in note 85), find an 80 percent rate. Based on a sample of founders of VC-backed firms, Professors Steven Kaplan and Per Strömberg find a roughly 70 percent rate. Steven N. Kaplan and Per Strömberg, *Financial Contracting Theory Meets the Real World: An Empirical Analysis of Venture Capital Contracts*, 70 Rev Econ Stud 281, 289 (2003). An IEEE study of engineers reports a 47 percent rate. See Matt Marx, *The Firm Strikes Back: Noncompete Agreements and the Mobility of Technical Professionals*, 76 Am Sociological Rev 695, 702 (2011). A 2015 study finds lower usage rates, reporting about 30 percent for managers and about 35 percent in the engineering, computer, and mathematical fields, see

noncompete usage (which we discuss below),[273] there is no evidence to our knowledge of the rate of enforcement across states. This inability to differentiate firm-level usage and enforcement behavior among states introduces the possibility that the observed variation in mobility is not the result of differing state-level enforcement regimes but rather unobserved variation of firm-level usage and enforcement of noncompete agreements and substitutes for noncompetes, such as trade secret actions.[274] If firms in different states substantially vary in their propensity to use and enforce noncompetes and noncompete substitutes, and this variance is not highly correlated with enforcement strength, regressing on enforcement indices may yield spurious results.

Relatedly, none of these studies attempted to control for the variation in state-level enforceability, much less usage and enforcement of noncompete substitutes, such as patents, trade secrets, stock options, long-term contracts, invention assignments, and the like, which we described earlier.[275] This omission alone can substantially confound any possible causal link between results and noncompete enforceability, usage, and enforcement.[276]

d) Measurement errors are exacerbated by small data sets. The previous criticisms are especially salient for the Marx et al. study (as well as a previous study performed by Marx and others in 2009) given the relatively small incremental decrease in absolute terms in labor mobility in Michigan identified in the 2009 and 2015 Marx et al. studies. The 2009 Marx et al. study considers 98,468 inventors and 27,478 inventor moves within Michigan

---

Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *43 fig 4 (cited in note 11). These differences are arguably explained by the different datasets—the studies by Kaplan and Strömberg; Garmaise; and Bishara, Martin, and Thomas focus on the most sophisticated companies, while Starr, Prescott, and Bishara's findings are likely more reflective of firms as a whole. Additionally, Garmaise and Bishara, Martin, and Thomas focus on top-level executives.

273 See Part III.C.

274 See Robert W. Gomulkiewicz, *Leaky Covenants-Not-to-Compete as the Legal Infrastructure for Innovation*, 49 UC Davis L Rev 251, 256–57, 277–80 (2015) (arguing that Washington technology firms rarely enforce noncompetes); Risch, 12 Empl Rts & Empl Pol J at 346 (cited in note 122) (acknowledging Gilson's theory that trade secret actions might be substitutes for noncompete actions for firms).

275 See Part II.A.2. Although some of these instruments fall under federal law, there remains effective variation in state-level enforcement of these instruments due to differing applications of the law at a regional level. See, for example, Mark A. Lemley, *Where to File Your Patent Case*, 38 AIPLA Q J 1, 28–37 (2010).

276 See Part II.A.2 (noting that any empirical study examining the marginal effects of noncompetes would need to take into account these substitute mechanisms).

over the period 1963–2006.[277] Labor mobility actually increased following the enactment of the Michigan Antitrust Reform Act[278] (MARA) over the full time period from 7.18 percent to 8.98 percent, whereas in other nonenforcing states there was a larger increase, from 7.95 percent to 10.80 percent.[279]

While the Marx et al. studies never report these differences in absolute numbers, they are easy to calculate. Specifically, the difference of in-state mobility in Michigan versus nonenforcing states in absolute terms was roughly 1 percent, equating to an absolute difference of about 100–200 moves per year purportedly lost within Michigan due to the enforcement of noncompetes. For inventors moving out of Michigan, the numbers are much lower—the purported difference of inventors moving out of Michigan to nonenforcing states pre- and post-MARA is in the range of merely twenty to twenty-five inventor moves per year. Given the very small number of job changes upon which the results of these studies are premised, the potentially negating effects of the shortcomings identified above cannot be easily dismissed.[280]

e) Unique problems of the Michigan studies. The 2009 and 2015 Marx et al. studies[281] have attracted particular attention because they exploit an apparently exogenous change to the legal treatment of noncompetes in a particular jurisdiction, which therefore provides an opportunity to study the effect of noncompete enforceability on inventor mobility and, potentially, innovation. As noted earlier, the legal change was effected by enactment of MARA, which restored the enforceability of noncompetes under Michigan law.

---

277 See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 880 (cited in note 219). The 2015 Marx, Singh, and Fleming study examines the period 1975–2005. See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 (cited in note 219).

278 Michigan Antitrust Reform Act § 4a (1987), codified at Mich Comp Laws § 445.774a.

279 See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 884 (cited in note 219).

280 Moreover, the Marx et al. studies track the mobility of employees to any firm, rather than mobility to competing firms. No state enforces noncompetes that purport to proscribe employment at *non*competing firms. Thus, in order to isolate the effects of noncompetes, it is essential to track labor mobility solely among competing firms. In empirical terms, an employee who makes an out-of-industry move to a noncompeting firm is, contrary to the implicit assumption of the Marx et al. study, not effectively subject to a noncompete restriction, and hence should not be classified within a "treatment" group. Thus, the number of inventor "moves" of interest to these studies is even lower than the numbers we calculate in the text.

281 Marx, Singh, and Fleming, 44 Rsrch Pol 394 (cited in note 219); Marx, Strumsky, and Fleming, 55 Mgmt Sci 875 (cited in note 219).

The striking results of the Marx studies—a state restores the enforceability of dormant noncompete provisions, inventor mobility slows down, and inventors flee the jurisdiction for states without enforceable noncompetes (essentially, California)—are commonly cited, including in federal government reports,[282] to support the view that noncompetes are unwise public policy for jurisdictions that seek to cultivate the next Silicon Valley.

However, beyond the serious shortcomings we have already described in these studies, the Marx et al. studies make an erroneous assumption that wholly undermines their identification methodology and hence, their results. Specifically, both the 2009 and 2015 studies assume that, following Michigan's regime change in 1985, preexisting noncompete provisions automatically became enforceable.[283] *This is not the case*. The study authors appear to overlook that MARA included a savings clause providing that the statute repealed by MARA would "remain in force for the purpose" of enforcing any liability under the repealed act.[284] Consistent with this saving clause, Michigan courts declined to enforce noncompetes that were entered into prior to MARA.[285]

In other words, *no* existing employee with noncompete clauses in employment agreements governed by Michigan law became bound by those clauses following MARA. Rather, any employer seeking to bind an existing employee would need to have that employee sign a new agreement or affirmatively assent to a prior agreement, which would generally result in employers incurring transaction costs and possibly providing additional compensation. As a result, one would expect that the number of employees in Michigan actually subject to enforceable noncompetes

---

[282] See, for example, Office of Economic Policy, *Non-compete Contracts* at *18 (cited in note 36); White House, *Non-Compete Agreements* at *7 (cited in note 36). While relying on the Marx et al. "Michigan" studies to support the view that noncompetes depress "labor market dynamism," the White House report did mention that "other authors dispute these findings." White House, *Non-Compete Agreements* at *7 (cited in note 36). This is most likely a somewhat oblique reference to our companion paper on noncompetes. See generally Barnett and Sichelman, *Revisiting Labor Mobility* (cited in note 219).

[283] For instance, the Marx et al. 2015 study states: "Given that the repeal of Public Act No. 05 merely removed the ban and did not stipulate any governing timeframe, all such contracts [i.e., preexisting noncompetes] would have become immediately enforceable." Marx, Singh, and Fleming, 44 Rsrch Pol at 396 (cited in note 219).

[284] Michigan Antitrust Reform Act § 18 (1985), codified at Mich Comp Laws § 445.788. For a detailed description of the history leading up to the passage of MARA, see *Bristol Window and Door, Inc v Hoogenstyn*, 650 NW2d 670, 673–79 (Mich App 2002).

[285] See, for example, *Compton v Joseph Lepak, DDS, PC*, 397 NW2d 311, 316 (Mich App 1986) ("When an agreement or contract is entered into in violation of the statute, repeal of that statute does not make the agreement valid because the Legislature cannot validate a contract which never had a legal existence.").

would be quite low for a considerable period following MARA's passage.

During this transition period, one cannot legitimately consider all Michigan inventors as being subject to enforceable noncompetes—a critical assumption in both papers. The true regime change (that is, taking into account both nominal and effective changes to noncompete enforceability) most likely took considerable time to impact contracting behavior in the market. As a result, the number of inventors who were immediately affected by MARA was small (which impacts the statistical force of the studies' results),[286] and a sizable portion of the studies' results are unlikely to be causally linked to the legal change effected by MARA.

Yet, the 2009 Marx et al. study finds the exact *opposite* of the effects one would expect from a gradual adoption of noncompetes after the enactment of the MARA statute, stating that "the effect of the policy reversal remained strong for several years and then weakened, both in terms of the magnitude and statistical significance of the coefficient on the interaction variable."[287] Thus, it is extremely likely in our view that factors unrelated to the change in noncompete law in Michigan explain the results, if they are at all correct, of the 2009 study. At a bare minimum, the factual misunderstanding of the *non*retroactive effect of the MARA change casts great doubt on the reliability of using the Marx et al. studies as a basis for substantive policy recommendations.

f) Correlation, not causality. Even if the results in these studies were somehow correct, none of these studies can show causation between noncompete enforcement and their findings of reduced innovation (as indicated by various proxy measures). Other than the Marx et al. study, they are all cross-sectional regressions and cannot rule out omitted variables to explain the observed variation. Additionally, Stuart and Sorenson's major finding (including, as noted earlier, Sorenson's revised major finding) abstracts away from state-level fixed effects, and they properly note that they "must interpret this result cautiously, as a number of omitted regional factors might correlate with both the weak non-compete enforcement dummy and the level of entrepreneurial activity in the region."[288] Stuart and Sorenson's models that take account of state-level fixed effects do not account for unique

286 For further discussion, see Barnett and Sichelman, *Revisiting Labor Mobility* at *22 (cited in note 219).

287 See Marx, Strumsky, and Fleming, 55 Mgmt Sci at 883 (cited in note 219).

288 See Stuart and Sorenson, 48 Admin Sci Q at 194 (cited in note 220).

within-state, regional omitted variables that may explain the observed patterns, plus are subject to a number of additional limitations.[289] The Samila and Sorenson study is subject to similar limitations, as well as another endogeneity concern. Specifically, this study uses the number of patents to measure innovative output, but patenting is in part a substitute for noncompete enforcement.[290] Thus, finding increased patenting in states with weak nonenforcement, such as California, is not necessarily meaningful. The Marx et al. study, despite the fact that it examines a seemingly exogenous shock to Michigan law, also suffers from causality concerns because—as explained in the previous Section—the regime change did not apply retroactively.

Aside from causality, some of the studies use rough proxies for innovative activity. Stuart and Sorenson merely examine the relationship of noncompetes to the absolute number of spin-offs following IPOs and acquisitions. Studies on patent value have indicated that a small number of high-quality innovations disproportionately account for the total value of all innovations; in other words, not all innovations—and, hence, not all innovative companies—are created equally.[291] Thus, it is not surprising that a more recent study finds that, while noncompetes may depress the absolute number of same-industry spin-offs, increased enforcement is associated with the founding of higher quality firms, particularly ones that began and continued with more employees and survived for longer periods.[292] Relatedly, another recent study finds that, while noncompetes reduce employee mobility and depress certain indicators of entrepreneurship, increased enforceability is associated with an increase in capital investment at existing "knowledge-intensive" firms,[293] suggesting that noncompetes sometimes support investment incentives consistent with theoretical expectations.

---

289 See notes 241–47 and accompanying text.

290 Samila and Sorenson, 57 Mgmt Sci at 430 (cited in note 9). As noted previously, Agarwal and coauthors found that aggressive patent litigation by US semiconductor firms discourages labor mobility (presumably, because potential new employers fear litigation and elect not to hire from those firms). See note 109 and accompanying text.

291 See John R. Allison, et al, *Valuable Patents*, 92 Georgetown L J 435, 448–65 (2004).

292 See Starr, Balasubramanian, and Sakakibara, 64 Mgmt Sci at 567 (cited in note 258). Although this Starr study does not compare the total innovative activity of the startups in nonenforcing and enforcing states, a smaller number of highly innovative startups in enforcing states could outweigh the innovative activity of a larger number of less innovative startups in nonenforcing states.

293 See Jessica S. Jeffers, *The Impact of Restricting Labor Mobility on Corporate Investment and Entrepreneurship* *3–5, 20–21 (working paper, Jan 3, 2018), archived at https://perma.cc/9EQX-GDTU.

g) Why the limitations of these studies likely affect the validity of their results. To be certain, the limitations we have discussed above do not mandate that the results in these studies are incorrect. It may be the case that some studies suffer from ordinary measurement error, which would underestimate the size of the effects found in those studies, or the errors we have identified are too minor to plausibly change these studies' results. However, there are strong reasons to doubt that the limitations described above are ordinary measurement errors or essentially trivial, implying that they *are* likely to alter these studies' results—either their size or significance, or even the direction and nature of the effects measured.

First, and perhaps most importantly, the Stuart and Sorenson scale misclassifies eight of ten states as "nonenforcing" but does not misclassify any of the "enforcing" states.[294] Such misclassification is not random, but rather is a one-way systemic error. Stuart and Sorenson's misclassification of "enforcing" and "nonenforcing" states lies at the heart of the empirical instruments in the Marx et al. studies used to measure worker mobility and the potential effects on innovative activity.[295]

Although Garmaise's scale appears to suffer more from random error than systemic error—because in our view, there is no scale, even Bishara's scale,[296] that has been definitively validated—it may be the case that Garmaise's results are subject to the same limitations as the Marx et al. studies. So while the results set forth in the Garmaise study and the Marx et al. studies may be statistically significant, they are not necessarily *meaningful* when determining the role noncompetes play in suppressing innovative activity.

Second, the failure to properly take account of the nonretroactivity of Michigan's change in law via MARA also casts considerable doubt on the reliability of the differences-in-differences methodology employed by the Marx et al. studies. Specifically, it confounds these studies' claims to causal identification, because the only Michigan employees not entering entirely new jobs subject to enforceable noncompetes post-MARA were those selected by their employers for "treatment," in other words, the signing of a noncompete provision. Such selection would not be random, but instead would turn on factors such as whether the employee was

[295] See Marx, Singh, and Fleming, 44 Rsrch Pol at 396 n 2, 396–97 (cited in note 219); Marx, Strumsky, and Fleming, 55 Mgmt Sci at 880 (cited in note 219).

[296] See Bishara, 13 U Pa J Bus L at 786–87 (cited in note 233).

at-will, had knowledge of company trade secrets, was highly skilled, and the like.

Third, the failure of the Garmaise study and the Marx et al. studies to properly take account of cross-border moves, as we note above, may systematically overestimate the effects of noncompetes on labor mobility because in some situations these moves would have been governed by a contrary set of laws than assumed in the empirical approaches in these studies.

Fourth, even if these studies' findings are nominally correct, because of various implicit assumptions about the law and external factors that are certainly or very likely inaccurate, one cannot casually attribute decreases in labor mobility wholly to noncompete enforcement trends. For instance, one or more of these studies wrongly assumes that noncompetes govern moves outside of an industry, that firm-level usage and enforcement of noncompetes is constant across states, that high-level executives' mobility would be prone to court decisions regarding the role of customer lists, and that nonretroactive changes in certain laws were exogenous "shocks."

In sum, of the four major nonexperimental studies examining the effects of noncompetes on innovation that we reviewed in detail, all suffer from multiple infirmities. In our view, these infirmities cast substantial doubt on the validity of the findings in these studies. In other words, there is a strong possibility that these errors would reduce the size of the effects in these studies, result in opposite effects, or potentially eliminate statistically significant effects entirely. Although Sorenson's revision of his earlier study nominally confirmed his earlier results, it remains subject to substantial limitations.[297] As such, none of these studies can be relied upon for a general assessment of the role noncompetes play in the innovative process.

All of the additional studies we could locate that find a negative effect on innovation from noncompetes appear to suffer from one or more of these limitations.[298] Given the theoretical reasons to doubt that noncompetes always have a negative effect on innovation, we believe that there is little to no empirical evidence that noncompetes necessarily retard innovation.[299] Rather, as explained later in the Article, noncompetes will sometimes hinder and sometimes foster innovative activity depending on a variety of contextual circumstances.

2. Experimental studies.

Professors On Amir and Orly Lobel conducted an experimental study that found that participants in simulated noncompete treatment groups exerted less effort and made more errors than a restriction-free control group.[300] The study's experimental design abstracts away from the limitations of the empirical studies but introduces its own concerns that cast serious doubt on its applicability to any actual technology environment.

In the experimental setup, participants are informed that they will potentially complete two rounds of a given task. Each participant is paid $0.50 for the completion of each task plus a potential bonus. However, individuals in the "full noncompete" group are told they cannot participate in the second round. Individuals in the "partial noncompete" group are told they will receive 20 percent less payment in the second round. Individuals in the "no noncompete" group are given no restrictions. Participants either perform a creative, word association task or an effort-based, matrix addition task. Each participant performs only the first round.[301] Amir and Lobel find a large negative effect on completing the first round of tasks in the full noncompete group, but not the partial noncompete group, for both the creative and effort-based tasks. Additionally, they find a significantly larger error rate on the effort-based task for the full and partial noncompete group.

Based on this experimental result, Amir and Lobel conclude that "[o]ur behavioral experiment demonstrates that certain postemployment contractual restrictions may negatively impact motivation and performance, as evidenced by the greater rates at which individuals abandon tasks."[302] Although we agree that noncompetes may provide some incentives for employees to underinvest in their own human capital, Amir and Lobel's experimental setup does not take into account important real-world mechanisms to offset these effects.

First, as we discussed earlier, one of the major reasons for the use of noncompetes is to provide incentives for firms to invest in the human capital of their employees.[303] Consistent with that theoretical expectation, a study by Starr finds that stronger noncompete enforcement regimes are associated with increased

[300] See Amir and Lobel, 16 Stan Tech L Rev at 866 (cited in note 63).
[301] See id at 852–53, 870–74.
[302] Id at 863.
[303] See Part I.B.2.

employee training.[304] Amir and Lobel's setup does not allow for any firm-sponsored training.

Second, the flat payment scheme of $0.50 per task plus a bonus in Amir and Lobel abstracts away from the numerous other performance incentive mechanisms we discussed above—such as vesting options, deferred compensation, and the simple ability for star employees to renegotiate—that are present in a typical employment situation.[305]

Third, contrary to Amir and Lobel's setup, a noncompete agreement *never* means that there is no second round of performance. Employees are engaged in a repeat-play game with employers, who rationally reward high-performing employees and penalize low-performing employees. Simultaneously, employees are engaged in a repeat-play game with potential outside employers. Given the discipline imposed by the common-law reasonableness constraint and competitive labor markets, noncompetes are always limited in duration, geography, and industry scope. As a result, employees may port their industry-specific skills to competitors after a certain amount of time and may port their non-industry-specific skills to noncompetitors at any time. Even during the term of a noncompete, an employee can move to any firm that is willing to pay the price demanded by the existing employer to waive the noncompete.

These three reasons are likely to substantially dampen, if not eliminate, any incentives that noncompetes might otherwise create for employees to underinvest in their own human capital. Indeed, a more recent experimental study performed a similar experiment but found that those in the noncompete group exerted no less effort than those in the control group.[306] Using a more realistic setup, this experiment paid the noncompete group more to compensate for any disincentives created in the noncompete treatment—which is precisely what would be expected to occur in any rational employer-employee bargaining situation.

3. Evaluation.

In current policy discussions concerning noncompetes, it is common to find statements referring to empirical studies "showing" that noncompetes depress inventor mobility and, as a result, reduce innovation in general. This interpretation is simply not supported by a close examination of the methodologies and substance of the empirical studies upon which these statements typically rely.[307] Even assuming without further examination that noncompetes have some appreciable marginal effect on inventor mobility—a proposition as to which there is considerable doubt[308]—there is no compelling basis to conclude that any such effect results in reduced innovation compared to a legal environment in which noncompetes had no legal force.

The most recent empirical research on the effects of noncompetes provides even more ground to doubt the conventional characterization of the evidence. That research has reached more nuanced results that are consistent with the older law-and-economics analysis that, as discussed earlier, had emphasized how noncompetes have the potential both to impede employee mobility *and* enhance firms' incentives to invest in cultivating employee capital.[309] In particular, these recent studies have found that the ability to enforce noncompetes can increase incentives at medical practices to make intrafirm client referrals (and thereby increase overall returns),[310] increase capital investment at knowledge-intensive firms while reducing the entry of new firms,[311] and result in the establishment of fewer but higher quality spin-offs from parent firms.[312] Another study finds that legal limitations on

307 For a similar view, see Bishara and Starr, 20 Lewis & Clark L Rev at 498–502, 534–40 (cited in note 305) (finding that existing empirical literature suffers from methodological imperfections and cannot currently support policy actions to impose limitations or outright bans on the use of noncompetes).

308 See Barnett and Sichelman, *Revisiting Labor Mobility* at *29 (cited in note 219) (stating that, due to methodological and other shortcomings, no existing empirical study can "be relied upon for a general assessment of the role noncompetes play in restricting labor mobility").

309 See Part I.B.

310 See Kurt Lavetti, Carol Simon, and William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers: Evidence from Physicians* *21, 34 (working paper, June 2018), archived at https://perma.cc/4CU3-LZE5. Specifically, the authors find that practices that used noncompetes for physicians enjoyed greater overall returns, even controlling for physician quality and other potentially relevant factors, which the authors attribute to stronger incentives to invest in advertising and making intrafirm client referrals (given the reduced risk of losing clients in the event of a physician departure).

311 See Jeffers, *The Impact of Restricting Labor Mobility* at *22–23 (cited in note 293).

312 See Starr, Balasubramanian, and Sakakibara, 64 Mgmt Sci at 563 (cited in note 258).

worker mobility can increase investment at firms that rely on higher-skill workers.[313] While we do not separately review these more recent studies, it would not be surprising if the empirical literature on noncompetes ultimately established that they result in a mixed bag of welfare effects that vary across firms and industries. That would be fully consistent with theoretical expectations that noncompetes can both promote and dampen overall innovation, and it is therefore indeterminate as to which effect will dominate in any particular case.

III. Making Noncompete Policy Under Uncertainty

The substantial theoretical and empirical literature on noncompetes (and, by implication, other restraints on employee mobility in innovation markets) appears to arrive at a dead end. Even if it were conceded that noncompetes have some marginal effect on labor mobility, neither the canonical Silicon Valley / Route 128 narrative nor the empirical literature provides support for then drawing an adverse connection between noncompetes and innovation outcomes in general. As a practical matter, however, the law cannot be neutral: it must take *some* position on whether noncompetes should be enforced. In this Part, we offer some tentative conclusions concerning the appropriate legal treatment of noncompetes, applying the error-cost approach from antitrust law that explicitly embeds uncertainty into policy analysis and the adjudicative process.[314]

In the course of this exercise, we identify certain variables that may impact the use and efficiency effects of noncompetes across different industries, firms, and even employee types. While this analysis is preliminary, it conforms to evidence on the rates of use of noncompetes, which suggests that markets tailor the use of noncompetes across employee categories, rather than chronically overusing them as assumed in the collective-action problem that drives Gilson's and the follow-on literature's laudatory characterization of California's noncompete policy. Given that this critical assumption appears to have a limited scope of application as an empirical matter, and in light of the material uncertainties that we identified in the empirical studies that are routinely cited

[313] See Ali Sanati, *How Does Labor Mobility Affect Corporate Leverage and Investment?* *3–4 (working paper, Mar 2018), archived at https://perma.cc/NU6M-6DNR.

[314] For the leading statements of this approach in the antitrust literature, see note 38.

in support of precluding noncompetes more broadly (and, by implication, other constraints on employee mobility),[315] we ultimately conclude that the reasonableness standard, applied on a case-specific basis through common law adjudication, is likely the best approach of all.

A. Policy Continuum

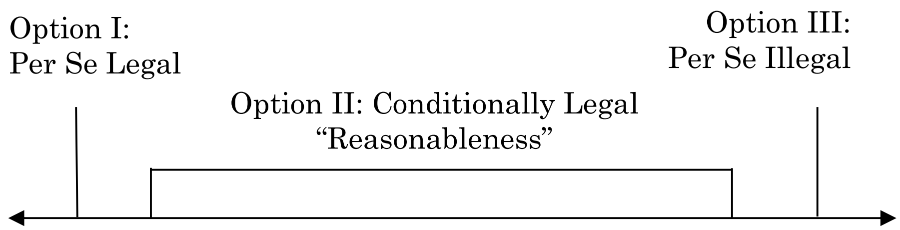
Throughout our discussion, we keep in mind three categories of policy options. As shown in the graphic below, these options can be located on a continuum extending from full enforcement (Option I), which we call the "per se legal" option, to zero enforcement (Option III), which we call the "per se illegal" option. Note that Option II, which corresponds to the common law's reasonableness standard, encompasses in practical terms a range of more and less stringent variants, which push the option closer toward the full- or zero-enforcement poles of the policy continuum. In practical terms, this intermediate range could encompass a number of different principles under which courts could adjudicate the enforceability of a particular noncompete provision and, in doing so, reflect the complex policy trade-off implicated by the enforcement of these provisions. To take just one example, a state may elect to enforce noncompetes subject to a reasonableness limitation but apply that limitation so that noncompetes are enforced only when the plaintiff shows that the noncompete promoted either the protection of trade secrets or the recovery of a training investment.[316] Such an approach would tend to push the law closer toward zero enforcement (at least in the case of noncompetes that do not generate any offsetting social advantage in the form of increased R&D or training incentives). Alternatively, a state may elect to enforce noncompetes subject to a "blue pencil" rule, according to which a court can "rescue" an otherwise invalid noncompete clause by restricting its durational, geographic or industry scope so that it falls within the boundaries of what the court determines to be reasonable.[317] Such an approach would tend to push the law closer toward full enforcement.

[315] See Part II.B.

[316] For example, New York courts will enforce a noncompete if it "(1) is no greater than is required for the protection of the legitimate interest of the employer, (2) does not impose undue hardship on the employee, and (3) is not injurious to the public." *BDO Seidman v Hirshberg*, 712 NE2d 1220, 1223 (NY 1999).

[317] See, for example, *Coates v Heat Wagons, Inc*, 942 NE2d 905, 914–15 (Ind App 2011) (endorsing the blue pencil doctrine).

FIGURE 1: POLICY CONTINUUM OF NONCOMPETE ENFORCEMENT



B. The "Free Contracting" Baseline

From an economic point of view, a noncompete is a voluntary transaction involving a human capital asset being exchanged for some form of monetary or other compensation. As such, any efficiency analysis must start from the free contracting baseline—that is, the well-established view that voluntary exchanges result in mutual welfare gains for the contracting parties, absent evidence of market failure, such as fraud, coercion, or information asymmetries. Those private welfare gains represent social welfare gains so long as the parties' exchange transaction does not generate negative third-party externalities. The presumptive efficiency of voluntary exchange transactions accounts for the common law's traditional indifference to the substantive fairness of contracts; rather, courts generally determine enforceability based on whether an agreement meets certain formal procedural criteria.[318] While there are limited exceptions to this principle (for example, the unconscionability doctrine, although courts rarely accept it as a defense[319]), it holds true across contract law as a general matter.[320]

From this starting point, the per se legal option is the default policy approach, and California's refusal to enforce the noncompete clause demands justification from an efficiency or other perspective. In fact, based on the free contracting benchmark, even

318 See Alan Schwartz and Robert E. Scott, *Contract Theory and the Limits of Contract Law*, 113 Yale L J 541, 546, 556 (2003) (arguing that "efficiency is the only institutionally feasible and normatively attractive goal for a contract law that regulates deals between firms"); id at 555 (rejecting the "externality objection" to restricting commercial contract law to the pursuit of welfare-maximization, on the ground that "most commercial contracts affect only the parties to them").

319 See Colleen McCullough, *Unconscionability as a Coherent Legal Concept*, 164 U Pa L Rev 779, 785–87 (2016).

320 See Schwartz and Scott, 113 Yale L J at 555 (cited in note 318) (noting that contract law rarely creates "systematic distributional benefits for particular classes of parties").

the reasonableness principle used by the common law to assess the enforceability of noncompetes is suspect. Ignoring circumstances involving fraud, coercion, information asymmetries, or similar market defects, any economic justification for even qualified enforcement of noncompete clauses—let alone a blanket refusal to enforce—must identify significant third-party externalities that are not reflected in the terms of the noncompete clause and the broader employment agreement of which it is typically a part. Efficiency-based arguments for California's aversion toward enforcing noncompetes therefore rely on the reduction in knowledge spillovers, and collective reduction in innovative vigor in general, that would potentially result if noncompetes were enforced. This was precisely the basis for Gilson's characterization of California's refusal to enforce noncompetes as an efficient legal solution to a collective-action problem.

As we have discussed in detail, it is not clear that this theory has a sound basis in fact. Specifically, the extent to which noncompetes *actually* impede efficient human capital transfers and associated knowledge spillovers is empirically contestable and depends on the transaction costs involved in negotiating waivers of noncompetes, the extent to which noncompetes are actually enforced, and the availability of alternative mechanisms to regulate human capital flows. At a minimum, however, it is at least reasonable to assume that noncompetes impose *some* incremental transaction-cost burden relative to a zero-enforcement regime and thereby may have some incremental adverse effect on impeding the agglomeration economies and similar benefits that can promote innovation activity. Additionally, noneconomic considerations of personal autonomy and distributive justice that play an important role in real-world policy debates over noncompetes strongly disfavor a rule of per se legality. Consequently, we set aside per se legal as a policy option and consider the remaining possibilities that efficiency would be maximized by treating noncompetes as either (i) per se illegal (Option III) or (ii) conditionally legal subject to the reasonableness standard (Option II).

C. Is There Really a Collective Action Problem?

Any argument in favor of zero enforcement must rest on Gilson's justification for California's general refusal to enforce the noncompete clause (the closest real-world approximation of the per se illegal policy option), taking note that Gilson himself cautioned against reflexive application of the California model to all states and industries.[321] Recall that this argument supposes a world in which all (or at least most) firms would be better off if noncompetes were deemed unenforceable. Without coordination, it is in each firm's individual interest to include a noncompete clause (since it would otherwise unilaterally forfeit human capital assets to its competitors), which ultimately operates to all firms' collective detriment by impeding the flow of human capital and the innovation process in general. Under those assumptions, abolishing noncompetes saves firms from this collectively irrational outcome, which in turn enhances knowledge spillovers, fosters agglomeration economies, and accelerates innovation in the industry as a whole.

This line of argument relies heavily on a single assumption: namely, that when the law enforces noncompetes, firms widely, if not universally, adopt noncompetes, resulting in socially excessive constraints on the circulation of human capital. That is a theoretically plausible but empirically untested assumption, especially given the fact that almost all empirical studies compare mobility and innovation outcomes as a function of noncompete enforceability rather than use. Fortunately, recent empirical work has supplied data that can provide some insight into actual use of noncompetes in real-world technology markets.

Available data on the actual use of noncompetes in employment agreements demonstrate significant variation across different subsets of the labor market. As noted previously, two studies that survey CEOs and other top-level executives find usage rates ranging from 70–84 percent.[322] Another study finds comparable usage rates among venture capital-backed firms: in a sample of 213 venture capital investments in 119 firms during 1987–1999, founders were subject to noncompetes in 70.4 percent (or 73.5 percent excluding California firms) of total investments.[323] Those figures are compatible with the assumption that underlies the efficiency argument against noncompetes: without legal intervention, markets tend toward high, and potentially excessive, use of noncompetes. However, a survey study of engineers in the information technology industry report a lower rate of almost 47 percent.[324] A recent and much larger study by Professor

[321] See Gilson, 74 NYU L Rev at 629 (cited in note 8).

[322] See note 85 and accompanying text.

[323] Kaplan and Strömberg, 70 Rev Fin Stud at 289 (cited in note 272).

[324] See Marx, 76 Am Sociological Rev at 702 (cited in note 272). The sample consisted of 1,029 technical personnel (all members of the Institute of Electrical and Electronics Engineers) from a variety of industries.

Evan Starr and colleagues that surveys 11,505 workers across a broader range of industries finds even lower usage rates, reporting usage rates ranging from 31–36 percent in engineering positions, computer and mathematical positions, information industries, and professional and scientific industries.[325] The Starr et al. study further finds significant variation based on the relevant business interest that the employer may have in a noncompete with respect to a particular employee. For example, about one-third of employees subject to noncompetes work with trade secrets, as compared to about 15 percent of employees who only "work with clients or who have client-specific information."[326]

These data have been cited by scholars and policymakers who argue that significant numbers of employees are encumbered by these provisions.[327] One scholar claims that employees are now stuck in a "thicket" and that "[n]oncompete agreements are now required in almost every industry and position."[328] We interpret the data differently. The variation in reported usage rates across occupational and industry categories raises serious doubt as to whether it is reasonable to assume that, when noncompetes are enforceable, employers blindly use them in all circumstances. Consider the finding above that approximately one-third of technical personnel are subject to noncompetes. While that is a significant percentage, it means that approximately *two-thirds* of that work force is *not* subject to any such constraint. Even the high usage rates among top-level executives imply that about *one-third* of the relevant labor pool did not agree to a noncompete. Additionally, it is important to keep in mind that *effective* use of noncompetes almost certainly falls well below *nominal* use. A recent study finds that, in the state of Washington, which enforces noncompetes subject to the reasonableness standard, technology firms cultivate a reputation for nonenforcement[329]—meaning, that the actual use of noncompetes is far less common than the nominal use of noncompetes. That finding is consistent with prior reports (as discussed earlier) that firms in the Route 128 area widely tolerated employee departures and spin-offs during the

329 See Gomulkiewicz, 49 UC Davis L Rev at 256–57, 277–80 (cited in note 274).

economic heyday (and, presumably, competitive market for technical talent) of the 1970s and 1980s, even though Massachusetts law nominally tolerated enforcement subject to the reasonableness standard.[330] Rather than being driven toward widespread use of noncompetes to constrain the outflow of human capital to competitors, actual market behavior shows that firms sometimes or usually *decline* to use or enforce noncompetes.

D. Why Employers Decline to Use Noncompetes

Significant variation in the use and enforcement of noncompetes does not favor the thesis that markets are prone to suffer from a collective-action problem resulting in inefficient overuse of noncompetes. Rather, it is more consistent with a standard competitive market model in which employers bid for managerial and technical talent by offering different packages of price and nonprice terms. Under competitive conditions, firms seek to attract the most highly valued labor by offering different types of employment agreements, some with and some without noncompetes.

It is entirely plausible that an employer may prefer to offer an employment package without a noncompete. The reason is simple: noncompetes are costly to employers and will not always be worth the price. Prospective employees anticipate that noncompetes will limit postemployment opportunities, which means that employees may be unable to access more lucrative outside employment options during the term of the noncompete and, as a result, will have reduced capacity to renegotiate the terms of employment with the employer in the future. The prospective employee may further anticipate that, given a limited set of outside employment options, the employer could hold up the employee and unilaterally degrade the terms of employment.[331] Based on these expectations, the prospective employee will demand either compensation up-front or, more plausibly, credible assurance that the firm will allocate internal rewards for strong performance that mimic the rewards that would be allocated in the external

330 See notes 186–90 and accompanying text.

331 See Margaret M. Blair, *Firm-Specific Human Capital and Theories of the Firm*, in Margaret M. Blair and Mark J. Roe, eds, *Employees and Corporate Governance* 58, 64–65, 72 (Brookings Institution 1999). Professor Oliver Williamson, the originator of the holdup concept in the institutional economics literature, makes the same observation but argues that repeat-play forces would typically dissuade employers from engaging in this behavior. See Oliver E. Williamson, *Economic Institutions of Capitalism* 248–49, 259–60 (Free Press 1985).

labor market.[332] If the employer is unwilling to pay the required up-front compensation, cannot credibly commit to reward employees' relative contributions to the firms' team product, or has other mechanisms by which to regulate human capital outflow or protect against knowledge leakage in the event of an employee departure, then, in any of those cases, it may decline to "purchase" a noncompete obligation from the employee.

The "talent wants to be free" school implicitly assumes a world in which employers unilaterally impose or dictate noncompetes and therefore the law must intervene. But that implausibly assumes that employers always or typically are price-setters in the labor market. In most markets, that would typically not be the case and, in technology markets in particular, the very opposite is more likely given the widespread observations that, in many technology market segments, skilled technical labor is scarce and employers bid aggressively to recruit them.[333] Absent market power, we should therefore expect to observe variation in the mix of postemployment constraints as employers compete over a limited talent pool.

More specifically, any such variation in the use of noncompetes will reflect different values placed by employers and employees on two variables:

(i) G_f: the *firm*'s net expected future gains from employee training and knowledge internalization attributable to a noncompete; and

(ii) G_e: the *employee*'s net expected future gains from postemployment opportunities at competitors within the typical duration of a noncompete.[334]

The value of G_f and G_e impacts the firm's and the employee's respective negotiating positions: as the value of G_f rises, the firm

[332] See Blair, *Firm-Specific Human Capital* at 66, 72–73 (cited in note 331). As Blair notes, the latter solution is more plausible because full up-front compensation would induce shirking on the part of the employee. See id at 62, 73. Note that assurance of an internal compensation system would be credible only if an employer entered into a contractual commitment to do so or, in the absence of a contract, pledged reputational capital to support any such assurance.

[333] For a review of the evidence, see National Science Board, *Revisiting the STEM Workforce* *9 (Feb 4, 2015), archived at https://perma.cc/S9GE-S5WA.

[334] In some situations, the employee may prefer a noncompete because gains to the employee's human capital from training—which could not occur absent a financing commitment—outweigh anticipated losses from foreclosing potential postemployment opportunities. See Rubin and Shedd, 10 J Legal Stud at 96–97 (cited in note 56). Indeed, a recent study finds that noncompetes are associated with a 5.5 percent increase in the likelihood

is willing to pay a higher price for a noncompete; as the value of G_e rises, the employee will demand a higher price for agreeing to a noncompete. The interaction between these two variables influences the likelihood that any given employer-employee negotiation is likely to yield a noncompete. As the value of G_f rises in value relative to G_e, we would expect to see greater adoption of noncompetes since employers value the noncompete highly and employees are willing to "sell" it at a low price; as that ratio is reversed, we would expect to see the opposite outcome. When the values of G_f and G_e are both high (or low), results are likely to be mixed.

We recognize that this model is inherently stylized and, in particular, is vulnerable to the objection that employers and employees in real-world contracting environments do not engage in customized negotiation—rather, employers sometimes include noncompetes in a "take-it-or-leave-it" employment package that does not facilitate term-specific negotiation.[335] This is especially so if the employer demands a noncompete not in the original employment agreement or terms, but only after the employee begins work.[336]

While some evidence supports the view that, in certain market segments, noncompete clauses are not typically negotiated,[337] it should not be automatically concluded that rational negotiation models have no descriptive force in this setting or, equivalently, that employers are free to "impose" noncompetes without paying any price for doing so. First, in the case of top-level executives, the full negotiation assumption almost always holds true as these

of receiving training on the job. Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *3 (cited in note 11). In order to address the strongest argument made against noncompetes, we nevertheless assume here that there is a net cost to the employee from agreeing to the noncompete.

335 See White House, *Non-Compete Agreements* at *9–10 (cited in note 36); Office of Economic Policy, *Non-compete Contracts* at *12–13, 24 (cited in note 36); Marx, 76 Am Sociological Rev at 696 (cited in note 272).

336 See, for example, Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *52 (cited in note 11) (indicating that only 6.3 percent of survey respondents who reported being asked to sign a noncompete after accepting their job offers attempted to negotiate the noncompete's terms, while this percentage was nearly twice as high for those who had received the noncompete before accepting their job offers).

337 See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *21 (cited in note 11) (finding that only 10 percent of noncompete signers attempt to negotiate the noncompete); Marx, 76 Am Sociological Rev at 706 tbl 4 (cited in note 272) (finding that 31 percent of surveyed employees received the noncompete request with the job offer, 22 percent received the request after the offer was accepted but prior to the start of work, 24 percent received the request on the first day of work, and 23 percent sometime after the starting work).

agreements are typically entered into with the advice of highly sophisticated counsel specialized in executive compensation matters.[338] Second, in the case of lower-level technical and managerial talent who may well not have the opportunity to negotiate customized terms of employment, the competitive model still has descriptive force even in the absence of transaction-specific negotiation over noncompetes, so long as at least some portion of the market observes employer behavior and disseminates information concerning the terms of employment.[339] Assuming competitive market conditions, that monitoring function may be filled by other employers who have a rational incentive to monitor the use or enforcement of noncompetes by competitors and offer prospective employees an employment package without such restrictions or a demonstrated enforcement record that tolerates employee departures notwithstanding a noncompete.

1. Variation in use of noncompetes across employee types.

While further theoretical refinement and empirical inquiry is warranted, this competitive bidding model anticipates the variation observed in available data on the use of noncompetes among executive and technical personnel populations. In particular, it explains the significantly higher usage of noncompetes among top-level executives as compared to lower-level technical personnel. The most comprehensive empirical study on the use of noncompetes finds a correlation between income (which often correlates with higher-skilled occupations) and the incidence of noncompetes. More specifically, that study finds that, whereas 37 percent of employees earning over $100,000 a year are subject

[338] Statement made based on one of the authors' personal experiences as a practicing transactional attorney.

[339] For the original version of this argument, made in the debate over the efficiency of contracts of adhesion, see Alan Schwartz and Louis L. Wilde, *Intervening in Markets on the Basis of Imperfect Information: A Legal and Economic Analysis*, 127 U Pa L Rev 630, 637–38 (1979) (arguing that the presence of consumers who engage in "moderate search" can protect consumers who engage in no search from "overreaching firms"). For an application to related debates in copyright-related settings, see Frank H. Easterbrook, *Contract and Copyright*, 42 Houston L Rev 953, 969–70 (2005). As Judge Easterbrook observes, the fact that a particular attribute of a product or service is not routinely negotiated on a transaction-specific basis does not imply that that attribute is being dictated by the supplier. Rather, that question is more profitably analyzed by asking whether the supplier possesses sufficient market power to be in a position to dictate any such term. Nonetheless we recognize that, in the noncompete context, this argument is predicated on the assumption that information is being disseminated in the market concerning a specific employer's noncompete policy, which we recognize may vary from case to case.

to a noncompete, this is only true of 14 percent of employees earning up to $40,000.[340] These findings conform to the expectations of rational bargaining between employers and employees. In the case of a higher-level executive, the employer most likely assigns a high value to G_f—that is, the firm prioritizes internalizing the valuable knowledge assets to which a top-level executive would be exposed and is therefore typically prepared to pay a substantial price for obtaining that concession from the employee. By contrast, a lower-level employee may not have comparable exposure to the highest-value knowledge assets, in which case the firm assigns a low value to G_f and is typically willing to forego the noncompete (or, what is functionally equivalent, foregoes enforcement even if a noncompete clause appears in the employment package).

2. Variation in the use of noncompetes across industry types.

The competitive bidding model not only anticipates variation in the use and enforcement of noncompetes across employee types, but also across industries. Using this framework, we can roughly anticipate the expected use of noncompetes in different industry types (a research path that may prove fruitful in future empirical inquiries). Industries that exhibit some or all of the following characteristics are less likely to adopt noncompetes: (i) low capital requirements; (ii) short product development times; (iii) rapid product obsolescence; (iv) strong intellectual property protection (including patents, copyrights, and trade secrets); (v) robust complementary assets (such as strong marketing or manufacturing capabilities); and (vi) high levels of industry-specific product interoperability.[341]

Under those conditions, the employer assigns a low value to G_f. A firm in industries with these characteristics is less likely to prioritize maintaining control over its knowledge assets because those assets are not particularly costly to develop, even successful

[340] See Starr, Prescott, and Bishara, *Noncompetes in the U.S. Labor Force* at *17–18 (cited in note 11).

[341] In industries involving high levels of interoperability, presumably there is substantial information sharing among firms, which is either protected by patents and other forms of intellectual property rights or not at all, at least within the circle of relevant competitors. Either way the gains from internalizing R&D via noncompetes are reduced in this situation. Additionally, interoperability implies that training results in industry-specific capital, which makes the value of intra-industry postemployment opportunities more valuable for employees. Thus, on balance, industries characterized by high levels of interoperability will, all other factors equal, typically fall into this category.

products have short lifetimes, and, in some cases, the product is embedded in a portfolio of IP assets and/or supported by complementary production and distribution assets that are difficult to replicate. For the same reason, employees in this setting are likely to place a high value on G_e. In a fast-paced market segment characterized by short product-development times and rapid product obsolescence, employees are likely to demand a high price for accepting noncompetes due to the expectation that a current employer's project is likely to conclude rapidly, in which case the employee may be compelled to seek employment elsewhere. Employment contracts in that type of industry are less likely to include a noncompete clause, and if they do, employers are unlikely to enforce them vigorously given the potential adverse consequences in the ability to recruit talent in the future. The software industry, particularly the Internet-based sector, tends to fit this mold.

Noncompetes are more likely to be selected in markets that exhibit the opposite characteristics. In the biopharmaceutical sector, capital requirements are enormous (approaching or exceeding $1 billion in the case of an FDA-approved drug[342]), product development is long (about ten years on average), product obsolescence is slow, and interoperability is minimal. Given those considerations, the employer is likely to place a high value on internalizing the gains from its R&D investment and therefore should be willing to pay a relatively high price for achieving that objective through restrictions on departing employees. Moreover, the potential costs to a biopharmaceutical employee from a noncompete are presumably lower than in the software industry given longer product development cycles, which—in view of the importance of project-specific knowledge to biopharmaceutical development—tend to ensure longer employee tenures and diminish the number of potential opportunities at competing firms. Consistent with this expectation, empirical evidence shows low levels of employee movement in the Canadian biotechnology industry as compared to the free flow of human capital associated with the semiconductor and other IT industries in Silicon Valley.[343] This observed

[342] See Joseph A. DiMasi, Ronald W. Hansen, and Henry G. Grabowski, *The Price of Innovation: New Estimates of Drug Development Costs*, 22 J Health Econ 151, 180–81 (2003). The development cost estimate includes the costs of failed projects previously funded by the pharmaceutical firm. See id.

[343] See Hugh P. Gunz, Martin G. Evans, and R. Michael Jalland, *Career Boundaries in a "Boundaryless" World*, in Maury A. Peiperl, et al, eds, *Career Frontiers: New Conceptions of Working Lives* 24–53 (Oxford 2000).

pattern in human capital flows may be in part a function of institutional design: empirical evidence shows that California biotechnology firms issue stock options with long vesting periods and employees of those firms hold large percentages of firm equity,[344] suggesting that, even when firms operate in a jurisdiction in which noncompetes are unenforceable, they adopt alternative tools to constrain the outflow of human capital.

E. Error Costs and Noncompete Policy

Economically informed policymaking on noncompetes, and other constraints on employee mobility in innovation markets, must recognize the fundamental uncertainty that attends the selection of any particular point on the policy continuum ranging from full enforcement (equivalent to Option I) to zero enforcement (equivalent to Option III). This is akin to the concept of error cost that occupies a central place in antitrust law and policy: the policymaker recognizes the inevitability of erroneous decisions in general and then selects a legal standard that minimizes the sum of error costs less the administrative costs of implementing any particular standard.[345] Hence, antitrust law reserves per se illegal standards, which have low administrative costs, for practices that usually, or almost always, are expected to result in net social harms (principally, horizontal price-fixing), while retaining rule of reason standards, which have high administrative costs, for practices that do not usually result in net social harms (for example, below-cost predatory pricing).[346] In the case of noncompetes, each option on the policy continuum raises the risks of both under- and over-enforcement relative to the socially optimal level of noncompete enforcement that would be costlessly and perfectly implemented by a hypothetical omniscient regulator. In the case of a per se legal policy (Option I), the market is immune from the risk of underuse of noncompetes but may be exposed to overuse, resulting in suppressed knowledge spillovers and a slowdown in innovation, not to mention concerns regarding personal autonomy and distributive justice. In the case of a per se illegal policy (Option III), the market is immune to the risk of overuse of noncompetes but may be exposed to underuse, resulting in reduced employer incentives to invest in employee training and certain types

344 See Julia Porter Liebeskind, *Ownership, Incentives, and Control in New Biotechnology Firms*, in Margaret M. Blair and Thomas A. Kochan, eds, *The New Relationship: Human Capital in the American Corporation* 299, 306 (Brookings Institution 2000).

345 See note 38 (listing the leading sources).

346 See Easterbrook, 63 Tex L Rev at 3 (cited in note 38).

of R&D projects. The intermediate range of policy options (Option II), which correspond to the real-world variants of the common-law reasonableness standard, result in some mix of aggregate overuse or underuse of noncompetes relative to the social optimum.

It is important to appreciate that the error-cost approach contemplates that courts and other policymakers may make mistakes with respect to any individual enforcement action, but, in the aggregate, courts and other policymakers will maximize net social gains over time relative to any other enforcement methodology, taking into account legal transaction costs. Following this long-term net-welfare-maximization standard, the efficient legal regime with respect to noncompetes maximizes over time (i) the gains generated by net-welfare-increasing noncompetes, less (ii) the losses generated by net-welfare-decreasing noncompetes, less (iii) the legal transaction costs incurred to distinguish between "good" and "bad" noncompetes. The selection of any option on the noncompete policy continuum inherently involves the task of distinguishing between net-welfare-increasing and net-welfare-decreasing noncompetes, subject to some positive administrative cost and taking into account some positive probability that any legal rule will sometimes make errors in individual cases in distinguishing between good and bad noncompetes. Options I (per se legal) and III (per se illegal) both have the advantage of low administrative costs as compared to Option II (some version of the reasonableness standard), but take extreme views with respect to the likely distribution of good and bad noncompetes and therefore run the risk of significant error costs in the form of overuse or underuse of noncompetes. Option I ("per se legal") is predicated on the view that noncompetes are always or typically efficient market choices, in which case it is not worthwhile to incur the administrative costs of case-specific adjunction and occasional erroneous enforcement of a "bad" noncompete would be immaterial in the long term. Option III (per se illegal) takes the opposite view with respect to each parameter, except that it agrees that it is not worthwhile to incur the administrative costs of case-specific adjudication. By contrast, Option II takes the intermediate position that the distribution of "good" and "bad" noncompetes may vary sufficiently across industries, employee populations and even individual transactions, so that it is worthwhile to incur the administrative costs required to engage in case-specific adjudication and thereby reduce erroneous enforcement and invalidation of noncompete clauses. This option is also best in our view for taking account of personal autonomy and distributive justice concerns, which vary depending on the specific circumstances of the employer, employee, and industry.

The earlier generation of law-and-economics scholarship had essentially expressed agnosticism as to the appropriate policy options, on the reasonable ground that available evidence did not provide any firm ground on which to make a choice.[347] Today, we are in a position to take an incrementally firmer view on the efficient legal treatment of noncompetes, grounded in the accumulated body of theoretical and empirical analysis of noncompetes, as well as the larger literature on human capital and agglomeration economies.

An error-cost approach to noncompete policy favors the pliable reasonableness standard set forth several centuries ago in *Mitchel v Reynolds*.[348] While it carries a higher administrative-cost burden compared to Options I and III, the range of more and less generous reasonableness standards encompassed by Option II exhibits a close fit with our best theoretical and empirical understanding—which is to say, our self-acknowledged limited understanding—of the complex efficiency trade-offs involved in enforcing noncompete clauses in any particular case. Moreover, we note that courts' application of the common-law reasonableness standard may not be especially costly given that that inquiry has historically been limited to a defined set of factors, usually limited to duration, geography, and industry scope.[349] Relatedly, we note that the administrative costs under Option III (per se illegality) may in practice be appreciably greater than zero insofar as an absolute ban on noncompetes may lead parties to challenge legal arrangements that arguably mimic the effect of noncompetes but serve legitimate economic functions. This contingency has already been realized in California, where a lower court recently applied the statutory prohibition of noncompetes to an exclusivity clause in a business-to-business agreement, which has never been considered to fall within the purview of that statute.[350]

In sum, the reasonableness limitations that the common law places on the durational, geographic, and industry scope of noncompete obligations may be interpreted as an indirect instrument

[347] See Part I.B.5.
[348] 24 Eng Rep 347, 347 (KB 1711).
[349] See note 150 and accompanying text.
[350] See notes 29–30 and accompanying text.

for limiting error costs under conditions of uncertainty with respect to the socially optimal enforcement policy in the case of any particular noncompete. By tolerating noncompetes subject to fairly strict limitations on duration, geographic reach, and industry scope, courts may effectively minimize the expected error costs inherent to the enforcement or nonenforcement of the total population of noncompetes over time, as compared to a regime in which noncompetes were either flatly enforced or prohibited in all cases without qualification. Additionally, if and when evidence concerning the net welfare effects of noncompetes achieves greater certainty, a reasonableness approach provides policymakers with latitude to adjust the permitted scope of noncompetes, an option that is unavailable under either the full-enforcement or zero-enforcement options. While the extreme poles of the policy continuum largely eliminate administrative costs, each is likely to result in significantly higher error costs over time absent extreme and, based on a close reading of the empirical evidence, factually unjustified assumptions with respect to the likely distribution of efficient and inefficient noncompetes in the marketplace.

CONCLUSION

Much of current scholarly and policy commentary asserts, often with little qualification, that prohibiting enforcement of noncompetes and other contractual limitations on employee mobility promotes innovation. As one scholar has stated: "[T]here remain no persuasive arguments in favor of enforcing [noncompete] agreements."[351] Based on these types of unqualified statements in the scholarly literature, US senators have proposed—and multiple state legislatures have already taken or are actively considering—actions to substantially limit or even prohibit noncompetes.[352]

We respectfully dissent. The case against noncompetes is typically illustrated by reference to the standard narrative of the rise of Silicon Valley and the decline of Route 128. A close review shows that this historical episode is substantially more complex than has been commonly understood. Technological and economic fundamentals, rather than fine differences in state contract law, most likely account for each region's different innovation trajectories—which, in the medium to long term, has been positive in

351 See Moffat, 52 Wm & Mary L Rev at 879 (cited in note 9).
352 See notes 19–28 and accompanying text.

both cases.[353] The most widely cited empirical studies of a broader sample of jurisdictions suffer from material limitations and, contrary to repeated characterizations in the policy debate, do not provide compelling support for the view that noncompetes inhibit innovation.[354] Moreover, more recent empirical work has uncovered evidence supporting theoretical claims that noncompetes sometimes induce firms to invest in cultivating employees' human capital.[355]

The current state of our empirical understanding thus continues to track the most refined theoretical analysis of the complex economics of human capital markets, which suggests that the net efficiency effects of noncompetes—and other constraints on employee mobility—in innovation markets will vary across industry types, employee types, and other market parameters.[356] Some market segments may benefit from a high incidence of noncompetes, while others may suffer. Contrary to the direction of recent scholarship, popular commentary, and policy activity, there is little certainty concerning the net efficiency effects of noncompetes in general and reasonable grounds to believe they have a net positive effect in certain innovation environments. If that is the case, then, from an economic point of view, the common law's admittedly uncertain reasonableness standard likely represents the best available approach for balancing the complex trade-offs raised by noncompetes and other constraints on the mobility of human capital in innovation markets.

APPENDIX

Changes to State Laws Affecting Noncompetes (2014–2019)[357]

State (Year)	Change	Reduces Enforceability?
Delaware (2014)	Bars noncompetes for home inspector trainees.	Y
New Hampshire (2014)	Employee must agree to noncompete prior to start of employment.	Y
Arkansas (2015)	Specifically authorizes noncompetes in certain circumstances.	N
Hawaii (2015)	Prohibits enforcement of non-competes by "technology businesses."	Y
Alabama (2016)	Specifically authorizes noncompetes in certain circumstances.	N
Connecticut (2016)	Limits enforceable geographic scope and duration of noncompetes involving physicians.	Y
Idaho (2016) (repealed 2018)	Specifically authorizes noncompetes in certain circumstances.	N
Illinois (2016)	Bars noncompetes for "low-wage" employees.	Y
Oregon (2016)	Maximum term of noncompete limited to eighteen months.	Y
Utah (2016)	Maximum term of noncompete limited to twelve months.	Y

[357] Note that this Table does not cover judicial decisions that may have effectively changed an individual state's treatment of noncompetes. Relevant statutes (with the exception of the 2018 Idaho and Utah amendments) are as follows (corresponding to states listed above from top to bottom): 28 Del Code Ann § 4109; NH Rev Stat Ann § 275:70; Ark Code Ann § 4-75-101 (2015); Hawaii Rev Stat Ann § 480-4; Ala Code § 8-1-190; Conn Gen Stat § 20-14p; Idaho Code § 44-2704(6); 820 ILCS 90/10; Or Rev Stat § 653.295; Utah Code Ann § 34-51-201; Cal Labor Code § 925; Nev Rev Stat § 613.195; Colo Rev Stat § 8-2-113; Neb Rev Stat § 87-404(2); Mass Gen Laws Ann ch 149, § 24L; Washington Substitute HB 1450, Washington House of Representatives, 66th Regular Legislative Sess (Mar 12, 2019); Connecticut Bill No 7424, Connecticut General Assembly, Jan Sess (2019); 26 Me Rev Stat Ann § 599-A(1); Md Labor & Empl Code Ann § 3-716 (as amended); NH Rev Stat Ann § 275-70-a (as amended); North Dakota HB 1351, North Dakota Legislative Assembly, 66th Sess (Jan 9, 2019), codified as amended at ND Cent Code § 9-08-06; RI Gen Laws § 28-58-1 et seq.

State (Year)	Change	Reduces Enforceability?
California (2017)	Limits ability of employers to require employees to litigate disputes outside of California or under the laws of another state.	Y
Nevada (2017)	Limits noncompetes to terms that are "no greater than is required for the protection of the employer." Authorizes courts to reform noncompetes that are unreasonable.	Y, N[358]
Colorado (2018)	Bars noncompetes for physicians.	Y
Idaho (2018)	Repeals Idaho 2016 statute relating to noncompetes.	Y
Nebraska (2018)	Provides that arbitrator or court may "reform" noncompete provisions in a franchise agreement.	N[359]
Utah (2018)	Curtails enforcement of noncompetes in the broadcasting industry.	Y
Massachusetts (2018)	Prohibits noncompetes for employees subject to the Fair Labor Standards Act and all other employees terminated without cause.	Y[360]

[358] While the limitations on the enforceability of noncompetes would appear to moderately reduce enforceability relative to the existing reasonableness standard, the specific authorization of courts to reform noncompetes that have excessive duration, scope, or other unreasonable terms tends to enhance enforceability.

[359] This change increases enforceability because it specifically authorizes a court to "blue pencil" a noncompete provision if it is found to be unreasonable in its existing form, rather than ruling the provision to be unenforceable in its entirety.

[360] Note that, while the Massachusetts statute reduced the enforceability of noncompetes in certain cases, it also codified the inevitable disclosure doctrine (which Massachusetts courts have historically resisted), which enables employers to partially mimic the effect of a noncompete. See note 149 and accompanying text.

State (Year)	Change	Reduces Enforceability?
Washington (2019)	Imposes high salary and compensation minimums on employees and contractors who may be subject to noncompetes; sets presumptive eighteen-month limit on term; requires agreement at time of acceptance of employment or additional compensation; requires additional payment to employees terminated without cause.	Y
Connecticut (2019)	Bars noncompetes in home health services industry.	Y
Maine (2019)	Bars noncompetes for certain lower-wage workers and, in all cases, requires that employers disclose noncompete prior to offer of employment.	Y
Maryland (2019)	Bars noncompetes for certain lower-wage workers.	Y
New Hampshire (2019)	Bars noncompetes for certain lower-wage workers.	Y
North Dakota (2019)	Clarifies that "goodwill sale" exception to ban on noncompetes can extend to firm's partners, members, or shareholders.	N
Rhode Island (2019)	Bars noncompetes for certain lower-wage workers, employees subject to the Fair Labor Standards Act, students, and workers age eighteen or younger.	Y

Business Roundtable Comment to the FTC on the NPRM to Ban Non-Competes

April 17, 2023

I. Introduction

Business Roundtable (BRT) represents more than 200 chief executive officers (CEOs) of America's leading companies, representing every sector of the U.S. economy. Business Roundtable CEOs lead U.S.-based companies that account for one in four American jobs and almost a quarter of U.S. GDP. Business Roundtable members develop and advocate for policies to promote a thriving U.S. economy and expanded opportunity for all. With the aim of advancing that goal, we are pleased to submit these comments in response to the U.S. Federal Trade Commission (FTC) Non-Compete Clause Rulemaking, Matter No. P201200.[1]

Business Roundtable acknowledges that non-compete agreements are not appropriate in all circumstances, as courts have recognized. However, Congress simply did not authorize the FTC to engage in legislative-type rulemaking to expansively prohibit non-compete agreements for all categories of workers and without reference to the relevant scope of competition. Moreover, the overbroad prohibition on non-compete agreements proposed by the FTC ignores important valid uses that encourage innovation and pro-competitive investment in employees, R&D, and other aspects of business growth that benefit workers and the American economy more broadly. It also ignores the importance of evaluating the use of non-compete agreements in specific circumstances, as the FTC is instructed to do using its case-by-case adjudicative function. The FTC should not use a rulemaking to circumvent the analysis required to determine whether non-compete agreements used by a specific company in a specific circumstance are, in fact, unfair methods of competition (UMC).

II. The Proposed Rule Exceeds the FTC's Authority.

A. The statutory framework does not authorize UMC rulemaking.

Section 5 of the FTC Act directs the FTC to prevent (1) unfair methods of competition, and (2) unfair or deceptive acts and practices.[2] Section 5(b) specifies that the FTC is to accomplish this goal through adjudication, and Section 6(g) empowers the FTC "[f]rom time to time to classify corporations and . . . to make rules or regulations for the purpose of carrying out the provisions" of the FTC Act.[3] The most natural reading of this statutory scheme is that the FTC's 6(g) rulemaking must <u>support</u> its adjudicatory function, not replace that function with a legislative-type

[1] Press Release, FTC Proposes Rule to Ban Noncompete Clauses, Which Hurt Workers and Harm Competition (Jan. 5, 2023) https://www.ftc.gov/news-events/news/press-releases/2023/01/ftc-proposes-rule-ban-noncompete-clauses-which-hurt-workers-harm-competition; Federal Register Notice at https://www.govinfo.gov/content/pkg/FR-2023-01-19/pdf/2023-00414.pdf.

[2] 15 U.S.C. § 45.

[3] *Id.* at §§ 45(b), 46(g).

role that would allow the FTC to classify broad swaths of conduct as UMC without considering the specific effects on competition in each individual case.

This natural reading of the text is corroborated by Congress's decision in 1975 to grant the FTC legislative-type rulemaking authority only for unfair or deceptive acts or practices (UDAP) offenses. Section 202(a) of the Magnuson-Moss Warranty Act of 1975 amended the FTC Act to give the FTC express authority to issue UDAP rules, while imposing heightened procedural requirements for such rulemaking.[4] As amended, the text of the FTC Act provides "the Commission may prescribe . . . rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce (within the meaning of section 45(a)(1) of this title)."[5] Congress specified no such authority for UMC offenses.[6]

This statutory scheme requiring case-by-case adjudication without pre-judgment or classification of conduct in the competition context makes sense in light of the long history of antitrust jurisprudence in the United States. Courts have consistently reiterated that the vast majority of competition concerns must be evaluated on a case-by-case basis for reasonableness because market realities, including the foundational question of who really competes against whom in dynamically changing industries, dictate different conclusions as to similar-sounding conduct. Just as acquiring a competitor is not always an unfair method of competition, nor is contracting for worker exclusivity for a limited time. In particular, courts at the federal and state levels have repeatedly indicated that there are important pro-competitive uses of worker non-competes, meaning that any particular use must be evaluated to ensure it advances a legitimate business justification and is not broader than reasonably necessary to achieve that justification.[7] Likewise, the Department of Justice (DOJ)—the FTC's sister agency in antitrust enforcement— recently acknowledged the pro-competitive uses of non-compete agreements with workers to include "inducing productive employment or new investment in human capital," but cautioned that the

[4] Magnuson-Moss Warranty-Federal Trade Commission Improvement Act, Pub. L. No. 93-637, 88 Stat. 2183 (1975).

[5] 15 U.S.C. § 57a(a)

[6] *Id.* ("The Commission shall have no authority under this subchapter, other than its authority under this section, to prescribe any rule with respect to unfair or deceptive acts or practices in or affecting commerce . . . . The preceding sentence shall not affect any authority of the Commission to prescribe rules . . . with respect to unfair methods of competition in or affecting commerce."). The reference to "any authority" of the FTC to engage in UMC rulemaking—as opposed to "the authority"— reflects Congress's agnostic view on whether the FTC possesses any such authority, leaving the question open for the courts to resolve.

[7] *See, e.g., United States v. Addyston Pipe & Steel Co*., 85 F. 271, 281 (6th Cir. 1898) (non-compete agreements may be used if they are "reasonably necessary . . . to the enjoyment by the buyer of the property, good will, or interest in the partnership bought."); *Aya Healthcare Servs. v. AMN Healthcare,* 9 F.4th 1102, 1109 (9th Cir. 2021); *Newburger, Loeb Co., Inc. v. Gross*, 563 F.2d 1057, 1082 (2d. Cir. 1977) ("we have held that a per se ban on all such restrictive covenants [that serve a legitimate business purpose] would not be warranted" and holding that legitimate business purposes include "prevent[ing] a departing employee from expropriating his employer's secrets and clientele"); *Community Hosp. Grp., Inc. v. Moore*, 869 A.2d 884 (N.J. 2005) (investment in the training of a physician was a legitimate interest protectable by a non-compete agreement); *Sharvelle v. Magnante*, 836 N.E.2d 432, 437 (Ind. Ct. App. 2005) (recognizing a clinic's legitimate interest in "its good will, its established patient base, and the time and resources spent to build its practice").

"time period of restraints found reasonable under this doctrine usually has been no more than a few years."[8]

The FTC cites *National Petroleum Refiners Association* for the proposition that "Sections 5 and 6(g) provide the Commission with the authority to issue regulations declaring practices to be unfair methods of competition."[9] As several legal scholars and commentators have noted, however, that decision is unlikely to be treated as good law.[10] First, it was decided before Congress passed the Magnuson-Moss Warranty Act and clarified only a limited set of substantive rulemaking powers for UDAP offenses. Second, the D.C. Circuit's decision rests on a method of statutory interpretation that is now clearly disfavored in the Supreme Court's jurisprudence on administrative law.

After analyzing the statutory text, the D.C. Circuit examined decisions addressing other agencies' rulemaking authority, which at the time established "[t]he need to interpret liberally broad grants of rule-making authority like the one we construe here."[11] The court emphasized that "there is little question that the availability of substantive rule-making gives any agency an invaluable resource-saving flexibility in carrying out its task of regulating parties subject to its statutory mandate" and extolled the benefits of rulemaking over case-by-case adjudication when developing agency policy.[12] Substantive rulemaking authority would permit the FTC to carefully consider and develop ideal standards of conduct, avoid the slow development of rules through adjudication, and minimize the unfairness of a case-by-case approach that requires compliance of only the party at issue and leaves other competitors free to commit violations.[13]

The court acknowledged that the more limited view of Section 6(g) was plausible, though, so it considered the legislative history of the FTC Act.[14] The court characterized the legislative history of Sections 5 and 6(g) as "ambiguous" and found that it did not compel the narrow

construction.[15] Instead, the court reasoned that "[t]his relationship between rule-making's probable benefits and the broad concerns evident when the FTC was created, together with the express language of Section 6(g), help[ed] persuade [the court] that any purported ambiguity of the statute be resolved in favor of the Commission's claim."[16]

This reasoning does not comport with modern principles of statutory interpretation and administrative law. Since the D.C. Circuit's decision, courts—including the Supreme Court—have cabined agency authority narrowly to the powers expressly in statutory text.[17] "Federal agencies are creatures of statute. They possess only those powers that Congress confers upon them."[18] Importantly, an agency is "bound, not only by the ultimate purposes Congress has selected, but by the means it has deemed appropriate, and prescribed, for the pursuit of those purposes."[19] The FTC Act undoubtedly grants the FTC the authority to restrain UMC and UDAP, but the best reading of the organic statute reflects that the FTC is to enforce its statutory mandate by means of adjudication. Section 5, the heart of the FTC Act, focuses entirely on adjudication and makes no mention of rulemaking.

The D.C. Circuit in *National Petroleum Refiners* discounted the significance of Section 5 indicating that adjudication is the means for restraining UMC and UDAP, reasoning that Section 5(b) did not use limiting language and that Section 6(g) provides a source of substantive rulemaking authority.[20] But this approach is in tension with the elephants-in-mouseholes doctrine developed by the Supreme Court in recent years. "Congress . . . does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions—it does not, one might say, hide elephants in mouseholes."[21] The Court in *AMG* recently applied similar principles in the context of the FTC's redress authority under the FTC Act:

> But to read those words as allowing what they do not say, namely, as allowing the Commission to dispense with administrative proceedings to obtain monetary relief as well, is to read the words as going well beyond the provision's subject matter. In light of the historical importance of

[21] *Whitman v. Am. Trucking Associations*, 531 U.S. 457, 468 (2001).

> administrative proceedings, that reading would allow a small statutory tail to wag a very large dog.[22]

The "dog" here—substantive UMC rulemaking authority—is at least as large as the canine in *AMG*, for it carries the authority to declare large swaths of conduct illegal under the antitrust laws in a way that would dramatically affect business in the U.S. economy.

The Court in *AMG* also looked to "the structure of the Act" and emphasized that it should be read to "produce[] a coherent enforcement scheme."[23] Applying the principles enunciated in *Whitman* and *AMG*, Section 5 is best read as specifying the sole means of enforcement (adjudication), and Section 6(g) is best understood as permitting the FTC to specify how it will carry out its adjudicative, investigative, and informative functions. Thus, Section 6(g) grants ministerial, not legislative, rulemaking authority.

B. Even if Section 6(g) authorizes some UMC rulemaking, the question of whether to adopt a nationwide ban on nearly all non-competes was not properly delegated to the FTC.

A nationwide ban on non-compete agreements clearly implicates the dispositive disqualifying factors in *West Virginia v. EPA*, the recent decision in which the Supreme Court struck down an EPA rule on the basis that it was a "major question" that Congress would not have delegated to an agency without a clearer expression of authority.[24] Under the major questions doctrine, an agency's expansive view of its own authority is unlikely to comport with Congress's intent when:

1. The agency's action is one of "economic and political significance."[25] In *West Virginia*, the court called the EPA's requirement that a major industry switch to a different input the exercise of "unprecedented power over American Industry."[26] It cited the troubling cost increases that the policy would create for the energy industry, and determined "[t]he basic and consequential tradeoffs involved in such a choice are ones that Congress would likely have intended for itself."[27]

2. The agency claims "to discover in a long-extant statute an unheralded power" representing a "transformative expansion in [its] regulatory authority."[28] The problem is even more acute if the agency "located that newfound power in the vague language of an 'ancillary provision[]' of the Act, one that was designed to function as a gap filler and had rarely been used in the preceding decades."[29]

3. "The agency's discovery allowed it to adopt a regulatory program that Congress had conspicuously and repeatedly declined to enact itself."[30]

Writing in concurrence, Justice Gorsuch enumerated two additional important factors: whether the agency is intruding "where state authority has traditionally predominated" and whether the regulated sector of the economy has "links to every other sector."[31]

All of the *West Virginia* factors, including the two in Justice Gorsuch's concurrence, would be present if the FTC promulgated its proposed ban on non-competes. The FTC's NPRM undoubtedly seeks to weigh "basic and consequential tradeoffs" between the incentives to invest in business growth and the protection of opportunities for workers who are employed by businesses. There is no question that the rule would reshape American Industry—the text of the NPRM itself estimates that 1 in 5 employment contracts would be affected.

Second, the FTC is knowingly seeking a "transformative expansion" of its power, based on the vague language of an "ancillary provision"—Section 6(g)—which has rarely been used.[32] Moreover, there is no question that the meaning of Section 6(g) is ambiguous, at best—even *National Petroleum Refiners* explains the statutory text that way.

Third, Congress has conspicuously and repeatedly declined to enact a nationwide ban on worker non-competes, choosing instead to leave this area of economic regulation to states. Indeed, the NPRM repeatedly cites a fifty-state survey as short-hand to convey the various approaches to non-

judges presume that Congress does not delegate its authority to settle or amend major social and economic policy decisions.")).

Khan to Chair Cicilline and Ranking Member Buck Regarding "Reviving Competition, Part 4: 21st Century Antitrust Reforms and the American Worker (explaining the agency is "adjusting its approach" to labor markets). *See also* Rohit Chopra and Lina M. Khan, *The Case for "Unfair Methods of Competition" Rulemaking*, 87 U. CHI. L. REV. 357 (2020).

competes in the economy today.[33] While there is no question that federal antitrust law sometimes applies to worker non-competes, it is by far more common for state law to predominate in determining whether a particular restriction is unreasonable.

Finally, the FTC's proposed rule is the epitome of having "links to every other sector." There is no sector of the economy excepted from the rule—literally every firm would be required to rethink how they contract for labor, and at what cost.[34] Such a broad rule would affect the way firms produce the goods and services used throughout the economy.

Even if the nationwide ban on non-competes survives the "major questions" doctrine, the legislative-type rulemaking would likely run afoul of the nondelegation doctrine. That constitutional doctrine requires Congress to provide "an intelligible principle" to guide the legislative discretion of any agency with delegated authority from Congress.[35] The FTC's long history of disagreement over the contours of its UMC authority, and the areas in which it exceeds the DOJ's authority to enforce the Sherman and Clayton Acts, tends to demonstrate that there is no such intelligible principle to set clear boundaries for the FTC's exercise of discretion.[36]

C. An overbroad rule would run afoul of the APA as "not in accordance with law" because courts have settled the meaning of "unfair method of competition" with respect to worker non-compete clauses.

There is still yet another category of legal challenge that is likely to imperil an FTC rule banning all non-compete agreements: the FTC is not writing on a blank slate to define which worker non-competes are "unfair methods of competition." Courts have already foreclosed the interpretation that the FTC proposes in the NPRM, meaning that such a rule would not be in accordance with law. More specifically, the Seventh Circuit rejected the FTC's argument that worker non-compete agreements could be categorically treated as unfair methods of competition.[37]

[34] Some types of firms are excepted by statute from FTC's jurisdiction (such as banks and common carriers). Although they may not be directly affected by the FTC's proposed rule, they would still experience indirect effects because the labor markets in which they compete will be fundamentally transformed. Indeed, this awkward, distortional effect of the FTC's limited jurisdiction is further indication that Congress did not intend to give the FTC authority to pass a national labor market regulation.

Khan on the Withdrawal of the Statement of Enforcement Principles Regarding "Unfair Methods of Competition" Under Section 5 of the FTC Act, *with* Dissenting Statement of Commissioner Christine S. Wilson Regarding the "Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act" | Federal Trade Commission (ftc.gov).

[37] *Snap-On Tools Corp. v. Fed. Trade Comm'n*, 321 F.2d 825, 837 (7th Cir. 1963) ("Restrictive clauses of this kind are legal unless they are unreasonable as to time or geographic scope; but even if this restriction is unreasonable as to geographic scope, we are not prepared to say that it is a per se violation of the antitrust laws.").

The court required the FTC to evaluate the business justification for the agreement, and whether the time and geographic scope were reasonably tailored to advance the business justification. The approach in the NPRM would specifically contradict that holding by dispensing with the need to look at the context and justification for any particular use of a non-compete agreements.

What is more, the Seventh Circuit's approach was consistent with a long history applying the antitrust laws to agreements limiting workers from competing with their employers—many courts had previously confirmed that there are legitimate uses of non-competes.[38] Whatever the FTC's authority is to define unfair methods of competition, it cannot turn legitimate means of competition into "unfair" means in direct contravention of courts that have considered the impact of the conduct. An overly broad rule banning broad swaths of non-compete agreements without analyzing whether they advance legitimate business purposes would do just that.

Additionally, the Supreme Court has recently rejected the logic employed by the NPRM that businesses must narrowly tailor their approach, or use the least restrictive means available, to achieve legitimate business justifications. The NPRM categorizes worker non-competes as an unfair method of competition despite admitting various pro-competitive uses of non-competes, reasoning that those same results could be achieved by non-disclosure clauses, non-solicitation clauses, or trade secret enforcement actions. But the FTC's logic runs afoul of the Supreme Court's recent explanation that "antitrust law does not require businesses to use anything like the least restrictive means of achieving legitimate business purposes. To the contrary, courts should not second-guess 'degrees of reasonable necessity' so that 'the lawfulness of conduct turn[s] upon judgments of degrees of efficiency.'"[39]

One last legal concern is the FTC's authority to preempt state law. As described above, the settled view is that it is legitimate for businesses to use non-compete agreements in certain circumstances—for instance, to protect trade secrets, confidential business information, and investments in training and the development of goodwill. It is against this background that the federal government has long deferred to the states to legislate more specific contours that might further limit the way businesses use non-competes, in order to advance other interests like worker mobility. If the FTC usurped this role from states by promulgating a rule that purports to preempt less restrictive state laws, then it might run afoul of federal preemption doctrine by preventing

[38] *See, e.g.*, *United States v. Addyston Pipe & Steel Co.*, 85 F. 271, 281 (6th Cir. 1898) (post-employment non-compete agreements ancillary to a transaction were "reasonably necessary . . . to the enjoyment by the buyer of the property, good will, or interest in the partnership bought"); *Newburger, Loeb Co., Inc. v. Gross*, 563 F.2d 1057, 1082 (2d. Cir. 1977) ("we have held that a per se ban on all such restrictive covenants [that serve a legitimate business purpose] would not be warranted").

[39] *NCAA v. Alston*, 594 U.S. ___ (2021), slip op., at 26 (quoting *Rothery Storage*, 792 F. 2d, at 227; *Continental T.V., Inc. v. GTE Sylvania Inc.*, 433 U. S. 36, 58, n. 29 (1977)).

states from legislating in the field—for instance, when they decide how to trade off more business growth against maximizing the portion of gains from trade that go to workers.[40]

These various legal infirmities each establish an important reason that the FTC should pursue its laudable goal of rooting out unfair methods of competition in labor markets by evaluating particular uses of non-compete agreements on a case-by-case basis.

III. The FTC Should Not Prohibit the Uses of Non-Competes that Are Both Reasonable and Critical for the Economic Growth that Benefits Workers and Consumers.

The proposed rule is not only legally infirm in its origins, but also irrationally broad in its design. By treating nearly all non-competes as *per se* illegal, the proposed rule needlessly prohibits reasonable and valuable uses of non-compete clauses, which protect investments that public policy and the antitrust laws have sought to encourage. If the FTC instead took a case-by-case approach, it could consider whether specific uses of non-compete agreements contributed to these important public policy goals.

The FTC's enforcement approach should, at a minimum, allow companies to use non-compete agreements in the scenarios explained below. BRT's member companies have identified significant costs associated with prohibiting non-compete agreements in these scenarios. If the FTC does not change course, its rule would have the counterproductive effect of stifling competition and worker welfare by imposing such costs on the American economy.

A. Several examples of reasonable uses of non-compete agreements illustrate how the proposed rule is overbroad.

At a minimum, employers should be able to negotiate non-compete agreements with workers in the following scenarios:

1. <u>Senior executives who have a view of the company's strategic roadmap, or other confidential information about how the company plans to compete.</u>

Businesses have a legitimate and important interest in protecting their competitively sensitive information, including future strategic plans, by limiting the ability of high-level employees with access to this information to immediately work for a competitor. As we discuss in more detail below, this information is not easily defined in a way that could be reduced to a non-disclosure agreement or litigated under trade secret law. Accordingly, under the FTC's proposed rule, an inability to protect this information adequately will deter information sharing and strategic

[40] *See Am. Optometric Ass'n v. FTC*, 626 F.2d 896, 910 (D.C. Cir. 1980) (casting doubt that Congress authorized the FTC to "pre-empt state law to the extent of pre-empting the whole field" and "gratuitously intrude[] on the exercise of the police powers of the states).

cohesion within firms, which in turn will result in less business growth on the merits, and reduced productivity throughout the economy.

Moreover, noncompete agreements play a protective function against traditional anticompetitive behavior. Antitrust enforcers have long been concerned that the sharing of competitively sensitive information between rivals could soften the need to compete vigorously. The DOJ recently signaled its amplified concern over such conduct by withdrawing guidance that had historically provided safe harbors for some forms of information sharing; in doing so, it announced heightened concern over dampening competition through information sharing.[41] Hiring rivals' workers is one obvious way that a company could gain access to the plans of its rivals, change tack to match whatever competition its rival is planning, and cease driving toward the most competitive performance. The FTC should recognize the valid pro-competitive use of non-compete agreements to prevent this sort of outcome.

Additionally, the FTC should recognize that workers who fit this description are sometimes compensated for the time they spend not competing. Many executives have severance agreements that pay consideration during a critical period when their knowledge is especially competitively sensitive, but only if the executive does not take employment with a competitor. These contingent payments show both that there would be a real cost to the business if the worker shared their knowledge during this limited period, and that the worker had bargaining leverage to ensure payments reflected at least a portion of that value to the business. In other words, it is unlikely the worker was exploited, and it is likely that the business had a legitimate interest to protect. A rule defining such an arrangement as per se illegal would be too broad to advance the FTC's interest in fair competition.

2. <u>Personnel who work on competitively important R&D projects or have knowledge of proprietary technologies or methods.</u>

Likewise, when firms use reasonably tailored non-compete agreements to keep significant information about research and development projects or proprietary technologies or methods from falling into the hands of a competitor, their practices align with the goals of the antitrust laws. That is because such uses ensure firms reap the benefits of their own investments in R&D, and thus protect the incentives for businesses to invest in transformative innovation. That investment is an important engine of economic growth and, often, labor productivity and wage growth. The FTC's proposed rule would define such uses as per se unlawful, undermining its own goal of facilitating competition on the merits and worker welfare.

In addition to facilitating free riding, the rule would make it easier for competitors to hire knowledge workers to expropriate insight into a competitor's plans, successes, and failures. This would be valuable competitive intelligence, allowing a competitor to ease up on its innovation push, even if (and maybe especially if) the R&D or business innovation process has not yet yielded legally protectible intellectual property. Accordingly, in BRT members' experience, the option of

[41] Justice Department Withdraws Outdated Enforcement Policy Statements | OPA | Department of Justice; Principal Deputy Assistant Attorney General Doha Mekki of the Antitrust Division Delivers Remarks at GCR Live: Law Leaders Global 2023 | OPA | Department of Justice.

taking legal action to enforce trade secrets or non-disclosure provisions is an ineffective way of protecting their valuable investments in innovation. Among other reasons, experience teaches that enforcing these other provisions comes *after* valuable knowledge has been lost to competitors. It is difficult to monitor ex-employees and discover disclosures, expensive and time-consuming to litigate, impossible to undo the effects of disclosure through litigation, and difficult to prove the causal chain necessary to get damages. Sometimes, the valuable and competitively sensitive information is not even cognizable under the law of trade secrets. Accordingly, the estimated value of litigation is always significantly less than the competitive harm from disclosure, meaning that litigating *ex post* is ineffective and incomplete as a means of protecting procompetitive investments. The proposed rule would thus result in increased cost and uncertainty for businesses, which will now need to rely on trade secret litigation to protect their competitive advantages. This result will also disadvantage relatively small companies with less litigation know-how and smaller administrative budgets.

Additionally, the FTC's rule itself undermines the efficacy of a regime based on NDAs and non-solicitation agreements, because it has vaguely warned that some uses of these provisions might be "de facto" non-compete agreements, and thus banned. This creates uncertainty for businesses that will chill the use of NDAs and non-solicitation agreements, at an even greater cost to businesses trying to protect their innovative efforts.

But even assuming, as the NPRM does, that non-disclosure obligations could reliably keep a former worker from sharing valuable information about R&D and trade secrets through direct communications, it would still be nearly impossible to prevent an ex-employee who goes on to work for a competitor from directing the new company's resources without taking into account their former employer's positions. Trade secret law refers to this phenomenon as the "inevitable disclosure doctrine" and the several U.S. states that have adopted the doctrine restrict worker mobility even without a contractual agreement on the part of the worker with such key knowledge.[42]

But there would be no place for these sort of case-by-case considerations under the FTC's ban. The cost, in terms of growth, would be profound in R&D-intensive industries, and the FTC has not attempted to identify how that cost weighs against the benefits of preventing any unreasonable use of non-competes in those industries in particular. Indeed, the FTC has not even catalogued evidence of, or brought any enforcement actions against, any such unreasonable uses. The FTC's generalized evidence measuring statewide wage effects provides no information about the relative costs and benefits of using non-competes with workers exposed to significant information about R&D. A rule that applies to such workers should at a minimum be informed by specific evidence of how much bargaining leverage workers tend to have in R&D-intensive industries, and whether firms tend to use any unequal bargaining leverage they may have to require non-compete agreements that are broader than necessary to protect R&D investments. Such

[42] See Deqiu Chen et al., "Human Capital-Driven Acquisition: Evidence from the Inevitable Disclosure Doctrine," 67 J. Mgmt. Sci. 8, 4653 (Aug. 2021) (showing that U.S. states adopting the inevitable disclosure, which prevents employees with trade secret knowledge from working for competitive firms, have better retention of relevant employees after an acquisition, which explains "a significant increase in the likelihood of being acquired for firms headquartered in states that recognize such a doctrine relative to firms headquartered in states that do not")

evidence will undoubtably show that businesses should be allowed to use non-compete agreements with workers knowledgeable about R&D efforts and proprietary technologies and methods in order to protect the incentives to fully invest in, and staff, R&D projects.

3. Personnel who receive sophisticated, specialized training or whose position requires on-the-job training or relationship-building.

Many BRT members invest in specialized training or other sophisticated human capital development that is particularized to their industry or business, and they use both long-term incentive payments and non-compete agreements to ensure that the trained workers stay at the company and use their business-provided training to benefit the business, and also to ensure that the training does not work against the business's interests by benefitting free-riding rivals. If they could not use non-compete agreements, then the free-riding rivals could capture the benefit of investments made by other firms by offering the employee a payment that the original employer could not afford because it had already incurred the expense of the training. As the FTC itself recognized, such a dynamic would undermine incentives for firms to invest in training that both enriches the employee's development and improves the firm's productivity.[43] That result is at odds with the goals of the antitrust laws to protect incentives to compete through legitimate means, like the development of one's workforce.

Sometimes, the expensive training may come in the form of on-the-job training, as is often the case for sales agents who become valuable to firms as they gain a reputation for trusted expertise in the market. In this sort of arrangement, younger, inexperienced employees are often paid over their marginal value to the firm on the belief that the firm will recoup the benefit of their skills and expertise later in their careers. Again, if a competitor who would benefit from the same expertise offers the employee a payment to leave just as the employee is producing more benefit than cost, then the rival would be able to compete more cheaply, but only in the short term while it could take advantage of this dynamic. In the long term, the total amount of training would suffer, as the FTC itself recognizes. This would leave all the firms in the economy with less able workforces, which could depress wages.[44]

Businesses that depend on building client relationships and a reputation for excellent client service are warranted in paying employees to perform the task of client development on behalf of the firm. There is no inherent reason that such a contractual relationship is exploitative—employees could bargain for ownership over their client relationships, in exchange for compensation commensurate with the reduced value to the firm. And in many cases, a non-compete agreement is important to protect the intended exchange of value in this freely negotiated exchange of services and value. As state courts routinely recognize, the goodwill created by client development services is easily expropriated by competitors, and protecting against such an

expropriation is a legitimate reason to use a non-compete agreement.[45] State legislatures have routinely made a similar policy judgment. An FTC rule overriding this legislative judgment would add to concerns that the FTC was overstepping the authority Congress granted it by preempting an entire field that states traditionally regulate.

4. Key personnel of acquired companies.

Companies buying the assets and goodwill of another firm are warranted in seeking to realize the value of their purchase price by ensuring that the key personnel responsible for the goodwill and possessing sensitive knowledge about the products and plans of the firm being acquired cannot leave and offer those benefits to rivals soon after the close of the transaction. Federal and state common law has routinely affirmed the goal of protecting goodwill through non-compete agreements ancillary to the sale of a business.[46] The FTC also acknowledges as much in the NPRM. One of the NPRM's stated purposes of rulemaking is to preserve the ability and incentive for "entrepreneurship and new business formation."[47] The NPRM recognizes that non-compete agreements collateral to M&A transactions play an important role in achieving that goal. Because non-compete clauses are often vital to protect the value of a business acquired by a buyer, restricting such non-compete clauses would "affect business acquisitions, including the incentives of various market actors to start, sell, or buy businesses."[48] Evidence from the real world corroborates the FTC's logic that reducing incentives for M&A could be counterproductive to the goal of growth through entrepreneurship and new business formation. Empirical research has

[45] *See, e.g.*, *St. Clair Med., PC v. Borgiel*, 270 Mich. App. 260, 266 (2006) ("In a medical setting, a restrictive covenant can protect against unfair competition by preventing the loss of patients to departing physicians."); *Sharvelle v.Magnante*, 836 N.E.2d 432, 437 (Ind. Ct. App. 2005) (recognizing a service business's legitimate interest in "its good will, its established [client] base, and the time and resources spent to build its practice").

[46] *See, e.g., United States v. Addyston Pipe & Steel Co*., 85 F. 271, 281 (6th Cir. 1898) (non-compete agreements may be used if they are "reasonably necessary . . . to the enjoyment by the buyer of the property, good will, or interest in the partnership bought."); *Wenzell v. Ingrim*, 228 P.3d 103 (Ala. 2010) ("Unlike covenants not to compete ancillary to employment contracts, which 'are scrutinized with particular care because they are often the product of unequal bargaining power,' this level of scrutiny is not applied to covenants ancillary to the sale of a business because the contracting parties are more likely to be of equal bargaining power."); *Ellis v. McDaniel*, 95 Nev. 455, 459 (1979) ("[B]ecause the loss of a person's livelihood is a very serious matter, post employment anti-competitive covenants are scrutinized with greater care than are similar covenants incident to the sale of a business."). See also NPRM at 56 (citing *Woodward v. Cadillac Overall Supply Co.*, 240 N.W. 2d 710, 715 (Mich. 1976) (non-competes ancillary to the sale of a business do not suffer from bargaining power); *Bybee v. Isaac*, 178 P.3d 616, 622 (Idaho 2008) (promote the protection of goodwill); *Centorr-Vacuum Indus., Inc. v. Lavoie*, 609 A.2d 1213, 1215 (N.H. 1992) (do not create undue hardship for the encumbered workers)).

[47] Statement of Chair Lina M. Khan Regarding Joined by Commissioner Rebecca Kelly Slaughter and Commissioner Alvaro M. Bedoya Regarding the Notice of Proposed Rulemaking to Restrict Employers' Use of Noncompete Clauses at 1, Commission File No. P201200 (Jan. 5, 2023), https://www.ftc.gov/system/files/ftc_gov/pdf/statement-of-chair-lina-m-khan-joined-by-commrs-slaughter-and-bedoya-on-noncompete-nprm.pdf.

[48] 88 Fed. Reg. at 3514.

shown that making M&A deals less attractive will tend to stifle the innovative efforts of start-ups, who are often looking to exit by acquisition.[49]

Despite acknowledging this cost, the FTC's rule still bans all non-compete agreements ancillary to M&A transactions, with an extremely limited exception for personnel that own 25% of the equity of a business being sold. While the FTC's stated intent to protect incentives for pro-competitive M&A is laudable, the 25% requirement is substantially unsuited to that goal.

First, a 25% carve out would do nothing to protect the value of a huge number of pro-competitive M&A transactions each year. In 2021, for instance, there were 1,357 venture-capital backed M&A exits. When founders accept venture capital to help build their business, they are typically diluted below the 25% equity threshold. Indeed, the average time from the first venture capital fundraising round to acquisition for those 1,357 businesses was 6.1 years.[50] It is extremely unlikely that venture-capital backed businesses could operate and grow for that length of time without accepting funding that diluted founders' and key employees' equity stake. Under the FTC's proposed rule, then, none of the employees could have been bound by a non-compete, which would have chilled the prospect of M&A, and the corresponding incentives to grow the business while in that nascent, start-up state.

Second, even the FTC and DOJ do not seem to equate 25% ownership with being "key" to the value of a purchased business. The DOJ's most recent publication explaining its procedures for evaluating merger remedies endorses the same fundamental logic as dealmakers in the private market:

> "Incumbent employees often are essential to the productive operation of the divested assets, particularly in the period immediately following the divestiture. For example, they may have unique technical knowledge of particular manufacturing equipment or may be the authors of essential software. While knowledge is often transferrable or reproducible over time, the immediate loss of certain employees may substantially reduce the prospect that the divestiture will preserve competition, at least at the outset.

[49] The National Venture Capital Association (NVCA) published data showing, the average annual ratio from 2010 to 2020 of VC-backed acquisitions to IPOs was approximately 13:1. NVCA Yearbook, National Venture Capital Association (2020), https://nvca.org/wp-content/uploads/2021/03/NVCA-2021-Yearbook.pdf. Additionally, empirical research by Gordon M. Phillips and Alexei Zhadov, of the University of Southern California and the University of Lausanne respectively, confirms the hypothesis that the "Possibility of being acquired induces innovations efforts by large and small firms, but especially by the small firms." Gordon M. Phillips and Alexei Zhdanov, *R&D and the Incentives from Merger and Acquistion Activity*, The Review of Financial Studies, Oxford University Press (2012).

[50] NVCA Yearbook, National Venture Capital Association (2022) at 38, https://nvca.org/wp-content/uploads/2022/03/NVCA-2022-Yearbook-Final.pdf.

> To protect against this possibility, the Division may prohibit the merged firm from re-hiring these employees for some limited period."[51]

Accordingly, in court- or Commission-approved final orders requiring the sale of a business in order to remedy a larger merger, the agencies have both sought prohibitions on "key" personnel competing against the divested business.[52] The text of these court-ordered non-competes is worded flexibly, applying to "key" personnel as determined in good faith by the parties to the divestiture transaction, or applying broadly to all employees who "support[ed]" the functioning of the business being acquired. Obviously, this is much broader than only restricting employees with more than a 25% ownership in the company being acquired. The FTC should take a similarly flexible approach to privately negotiated transactions to ensure that acquiring firms can reliably contract for the goodwill of a business.

5. <u>Personnel who are retiring.</u>

Personnel who choose to retire rather than re-enter the labor market are appropriately treated differently under tax laws and social norms. Executive (non-qualified) retirement plans often have "forfeiture event" provisions (*i.e.*, if the executive competes within X years of leaving, then the company can stop certain of the retirement payments). In this situation, competition against the firm would act as a proxy to establish that the worker had not really retired (the worker may also be covered by one of the other special scenarios above and so could be at risk of expropriating value from the firm). But these forfeiture provisions mean that employees are always free to choose between competing and receiving payments.

The FTC's approach should not make it more difficult for companies to contract in a way that provides extra compensation to retirees. Additionally, as a matter of fairness, the FTC's approach should not retroactively punish firms that have done so by cancelling the existing non-

[51] 2020 Merger Remedies Manual (justice.gov). Prohibiting the merged firm from re-hiring divested employees is a narrower form of non-compete than is typical in privately negotiated transactions. The agencies perhaps use this form of non-compete because consent decrees can bind only the companies that enter them, not the employees who work for those companies, or any other competitor who might hire away the transferred employees. Regardless, the point is to determine *who* is critical to realizing the strategic goals in the sale of a business. The agency's practice indicates that the sale of a business may not be successful if it does not include a much broader group of employees than just equity owners with 25% share and above.

[52] *See, e.g.*, Final Order, *FTC v. Otto Bock HealthCare North America, Inc.*, Dkt No. 9378, at 4, 9-10 (F.T.C. Nov. 6, 2019) available at https://www.ftc.gov/system/files/documents/cases/d09378commissionfinalorder.pdf (listing "Key Employees" to the success of the divestiture, instructing the parties to "work together in good faith to determine whether any additional [employee] should be identified as a Key Employee," and subjecting the merged party to a two-year prohibition on re-hiring); Final Judgment, *United States v. Thales S.A.*, No. 1:19-cv-00569, at 5, 9-10 (D.D.C. 2019) (defining "relevant personnel" as "employees who have supported or whose job related to the Divestiture Assets" and prohibiting defendants from re-hiring those relevant employees for a period of two years); Final Judgment, *United States v. CVS Health Corp.*, No. 1:18-cv-02340, at 3, 10 (D.D.C. 2019) (defining "Relevant Personnel" as "every person providing pharmacy network, product development, and actuarial support for" the divested business, and prohibiting Defendants from re-hiring those relevant employees for a period of one year).

compete provisions in contracts with retirees, who then would receive such payments but would be free to come out of retirement.

B. The FTC has not justified the costs of prohibiting reasonable uses of non-competes.

In general, the proposed rule fails to measure the isolated effects of banning *reasonable* uses of non-competes. For instance, the FTC does not take into account the costs to workers from the likelihood that firms would reduce the use of long-term incentive payments, retention bonuses, and severance payments for workers with competitively sensitive positions.[53] For workers who were going to retire or move to a non-competitive position anyway, they will lose out on post-employment payments.[54] For workers who wanted to stay employed with the firm, they will lose out on the consideration offered by businesses that want certainty that their investments in labor will not be utilized to the advantage of their competitors.[55] The NPRM's statements about general wage effects are inapposite to the costs of the rule for specific workers such as these.

Additionally, the NPRM does not articulate any benefits specific to banning non-competes in the scenarios explained above. The FTC has therefore failed to justify imposing the explained costs on business and economic growth.

C. The NPRM's rationale and evidence for determining that non-compete agreements are "unfair methods of competition" do not apply to these reasonable uses.

Many of the uses of non-competes discussed above are highly negotiated, and covered workers are well compensated with company equity and additional pay and benefits. Where workers have unique skills or decide to invest in their own development by agreeing to accept training that will make them more valuable employees, they are not being "exploited" by employers who seek to induce their employment and prevent their own investments from being used to harm their competitive interests. Indeed, for some highly specialized or senior-level professionals, it is commonplace for the worker to have considerably more bargaining power than the employer. This dynamic results in companies paying retention bonuses that workers agree to forfeit if they go to work for a competitor. These provisions allow workers to weigh the value of the new position against the various costs that their former employer would have to bear when they leave (as described above). Long-term incentive payments conditioned on agreeing not to compete allow workers to freely decide whether the benefits outweigh the costs. A

[53] To reduce these costs, the FTC should at a minimum clarify that long-term incentive payments and retention bonuses that are contingent on remaining employed at the firm are not unfair methods of competition.

[54] Severance and retirement payments to former workers may also be more heavily taxed under a tax code provision that exempts certain payments for value (i.e., in exchange for non-compete requirements). This result would deprive some workers of the expected benefit of their bargain when the FTC's proposed rule comes into effect to cancel existing agreements.

[55] The FTC could minimize these costs by clearly stating an exemption for "voluntary equity awards" where employees can choose to take payments in exchange for promises not to compete, but where the worker's continued employment is not at stake in the transaction.

perverse result of the rule would allow the employee to take the benefit of a bonus payment without having to provide the company that paid it with the promised value. The FTC's approach should be sensitive to the relative bargaining position, and the benefits of the bargain obtained, in each scenario where they enforce the FTC Act against a worker non-compete.[56]

Additionally, many of these uses do not implicate the FTC's purpose of ensuring that sufficient labor is available to competitors. That is because the agreements not to compete can sometimes be "bought out" by competitors, meaning that competitors can pay the original employer to release the worker from their obligation not to compete. Through this mechanism, a new firm can repay the original employer for the investment they made in the worker. Many BRT members use non-compete agreements that specify in the contract the expected loss to the firm if the worker left for a competitor: these look like claw back provisions on earlier-paid bonuses, or promises of future compensation or equity payouts conditional on refraining from competition. When firms price these provisions in reasonable accordance with the expected value from their investment in the human capital, they are output maximizing and allow for labor mobility, contrary to the justification for the blanket prohibition put forth by the FTC.

The FTC's logic is also incorrect when it suggests that many of these situations can be addressed with NDAs, non-solicits, or trade secret law. As described above, these tools alone are often inadequate and inefficient to protect sensitive business information. What is more, the proposed rule chills the use of these alternatives because it is unclear what the FTC means when it says that some will be treated as *de facto* non-compete agreements.[57] The NPRM is therefore wrong when it reasons that non-compete agreements are all unjustifiable because there is a less restrictive way to achieve the same goal.[58] It is not reasonable to require companies to use an expensive and uncertain alternative. Additionally, some competitive interests are not protectable at all with NDAs, non-solicits, and trade secret law. For instance, a senior executive cannot be expected to "unknow" competitively sensitive information, or avoid applying that knowledge to strategic decision-making for the competitor. In fact, an employee is incentivized to use competitively sensitive information to their advantage to perform well at the competitor. Thus,

[56] It may be appropriate for the FTC to use minimum income or salary thresholds to establish a presumption that a worker has significant bargaining power, and therefore to exempt those uses of non-competes from any special treatment under the FTC's "unfair methods of competition" authority, as opposed to the framework for assessing competitive impact that would be applied under the Sherman Act. However, any such presumption should be used to guide the FTC's own case-by-case enforcement priorities, not to institute a legislative-type rule. That is because any wage or salary threshold is going to necessarily need to be adapted for industry- and context-specific market realities like the use of apprenticeships, cost of local living, etc.

[57] In order to minimize uncertainty and maximize the efficacy of the alternatives to non-compete agreements, the FTC should at a minimum create a clearer safe harbor for NDAs, non-solicitation agreements, and actions to enforce trade secrets.

[58] Additionally, the FTC may not require companies to use the least restrictive means to achieve legitimate business justifications. *See NCAA v. Alston*, supra note 39. As the Supreme Court and the Second Circuit held in cases involving the FTC's UMC authority, "avoided litigation costs" are "legitimate justifications" that an antitrust defendant may show in an antitrust proceeding to show lawfulness under the rule of reason. *FTC v. Actavis, Inc.*, 570 U.S. 136, 156 (2013); *accord 1-800 Contacts, Inc. v. FTC*, 1 F.4th 102, 121 (reducing litigation costs in a trademark action was a legitimate objective proffered by the defendants for a settlement payment, and "what is reasonably necessary is likely to be determined by competitors during settlement negotiations" (cleaned up)).

their knowledge is often inevitably disclosed at their new employer, but their former employer has no visibility to know when such disclosure has occurred and when it has not.

IV. The FTC Should Not Apply Its Rule Retroactively

In addition to all the legal concerns explained above, the FTC would be on especially shaky ground making its rule retroactive to cancel existing non-compete provisions after firms have already made conditional payments to workers. Such a retroactive application would have the effect of destroying the value that firms bargained for when they relied in good faith on the legality of such provisions. This result raises constitutional concerns including the possibility that the FTC's rewriting of private contracts is a taking without compensation, or that it did not provide fair notice of the law in violation of the Due Process Clause.

The retroactivity of the proposed rule would also create high, unjustified costs for most businesses throughout the American economy. The FTC's projected costs associated with retroactivity are unrealistically low. It does not take into account the lost value firms bargained for when agreeing to exchanges of value for promises not to compete, or the increase in legal costs for companies who have to pursue their interests through NDA or trade secret litigation. Moreover, it fails to account for the significant time and administrative costs of requiring companies to find ex-employees and renegotiate provisions meant to protect competitively sensitive information

V. Conclusion

Case-by-case enforcement is the best use of the FTC's resources and most closely comports with its obligation to take into account the myriad context-specific factors discussed above. It also avoids the legal infirmities of the rule regarding whether Section 6(g) gives the FTC authority to pass legislative-type rules, and whether Congress could delegate that authority.

Additionally, state law has been active in defining contours of reasonableness that largely follow the reasoning explained above. Accordingly, the FTC's resources would be better spent bringing specific enforcement actions where a company's use of non-competes is violating their state law, but the bargaining position of workers is too weak to assert those rights effectively. A policy statement announcing this enforcement intention, which is clearly within the FTC's authority and therefore a significantly superior alternative, would have important deterrent value against the most harmful behavior.

April 17, 2023

Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, DC 20580

Re: Notice of Proposed Rulemaking, Federal Trade Commission; Noncompete Clause Rule; 88 Fed. Reg. 3482-3546 (January 19, 2023)

The undersigned organizations, who together represent businesses that provide goods and services to virtually every American in every corner of the country, submit these comments regarding the proposed Noncompete Rule. We strongly oppose the proposal because noncompetes serve vital business and employee interests and because the FTC lacks legal authority to issue the proposed rule.

Most importantly, noncompetes serve pro-competitive interests. Courts, scholars, and economists all have found that noncompetes encourage investment in employees and help to protect intellectual property. In every sector of the economy, employers rely on noncompetes to protect investments in their workforce, to protect trade secrets and other confidential information, and to structure their compensation programs. As the FTC's own economist John McAdams recently explained, noncompetes "allow firms to reduce recruitment and training costs by lowering turnover," encourage firms to offer higher wages to compensate new employees, and "increase the returns to research and development," thereby promoting innovation.[1] Unfortunately, the Commission ignored or downplayed this evidence, thereby undermining "confidence in the integrity of the rulemaking process or the ultimate outcome."[2]

Moreover, noncompetes promote pro-competitive interests far more effectively than alternatives such as trade-secret laws or nondisclosure agreements. By relying on noncompetes over nondisclosure agreements or trade-secret law, "employers avoid the difficulties of proving an actual or threatened misappropriation of trade secrets to secure an injunction," a costly and time-consuming process.[3] Scholars have found that noncompetes "may represent a more efficient mechanism to prevent proprietary knowledge transfers in certain circumstances, particularly when monitoring and the enforcement of trade secrets law is costly."[4]

Noncompetes are also often used as part of contractual arrangements between the employer and the employee that result in additional compensation to the employee, in the form of added pay, retention bonuses, stock awards, deferred compensation or as part of a severance package. Noncompetes are also essential to the sale of a business. Businesses often have multiple owners with ownership levels beneath the 25 percent threshold recognized by the proposed rule, yet noncompetes would be banned in these instances as well. Employers often make significant investments in providing upskilling for their employees. These investments often require the employee to agree to stay with the employer for a period of time. The proposed rule fails to appropriately recognize any of these applications, all of which fail to demonstrate a clear harm to competition or harm to the employee.

In addition to the damage the proposal would inflict on businesses and employees, the FTC lacks the statutory authority under the FTC Act to issue the rule. Section 5 of the FTC Act empowers the Commission to pursue individual enforcement actions against "unfair methods of competition," and Section 6(g) provides narrow authority to develop internal procedural rules. Neither provision, nor any other, authorizes the FTC to adopt generally applicable substantive rules defining unfair methods of competition. In contrast, Congress has repeatedly granted the FTC the authority to promulgate substantive rules on "unfair or deceptive acts and practices" and other discrete topics, but has declined to authorize regulations addressing unfair methods of competition.

Without express authorization from Congress, the FTC also lacks the constitutional authority to promulgate the proposed rule. As the Supreme Court recently explained, the major-questions doctrine requires that Congress speak clearly if it wishes to assign decisions of "vast economic and political significance" to an agency.[5] That doctrine recognizes that "extraordinary grants of regulatory authority are rarely accomplished through modest words, vague terms, or subtle devices," even when there is a "colorable textual basis" for the agency's position.[6] Nothing in the FTC Act shows a hint of a decision by Congress to allow the Commission to invalidate contracts affecting tens of millions of workers, particularly given that Congress itself has recently considered legislation that would regulate noncompetes.

Similarly, the proposed rule also runs afoul of the nondelegation doctrine. A statutory delegation is constitutional only so "long as Congress lays down by legislative act an intelligible principle" to cabin the agency's discretion.[7] If the term "unfair methods of competition" is divorced from history and precedent, and if the Commission can condemn any business practice as unfair based on nothing more than "nefarious-sounding adjectives,"[8] then there is effectively no limit to what the Commission could condemn under Section 5.[9]

Finally, the proposed rule also violates bedrock principles of federalism. For centuries, noncompetes have been a matter of state law, and today, forty-seven States enforce reasonable noncompete clauses. If Congress "intends to alter the usual constitutional balance between the

States and the Federal government," it must be "unmistakably clear,"[10] particularly when an agency's regulation would disrupt areas of "traditional state regulation."[11]
121314

While there are many ways for this proposal to be narrowed, because the FTC lacks the authority to issue any regulation on this issue, it should withdraw its proposed rule, and revert to the authority granted to it by Congress to address questions of unfair methods of competition through its adjudicative function.

NYU Langone Health

Robert I. Grossman, MD
Dean and Chief Executive Officer

March 20, 2023

The Honorable Lina Khan
Chair
Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, DC 20580

SUBJECT: COMMENTS IN SUPPORT OF NON–COMPETE POST−EMPLOYMENT CLAUSES (MATTER N⁰ P201200)

Dear Chair Khan:

On behalf of NYU Langone Health, I am submitting comments in support of the Federal Trade Commission's (FTC) Non-Compete Clause Rule, and specifically addressing why non-compete post-employment clauses should be prohibited in employment agreements with doctors.

The core of NYU Langone's success as the #1 ranked hospital system in New York[1] is our integrated culture devoted to excellence in patient-centered care. It is our belief that non-compete post-employment clauses in doctor employment agreements are anathema to excellence in patient-centered care. We fully support the efforts to ban non-compete clauses in employment agreements. We disagree with the American Hospital Association, American Medical Association, Federation of American Hospitals and the U.S. Chamber of Commerce. We applaud the states of California, Delaware, Massachusetts, New Hampshire and Rhode Island that have banned non-compete clauses in doctor contracts. We have encouraged New York State to follow their example. We're encouraged by the bi-partisan legislation introduced last month by Senators Murphy (D-CT) and Young (R-IN) that would nationally ban non-compete clauses in employment agreements.

The overriding reason to ban non-compete post-employment clauses in doctor agreements is the harm they can deliver to patients.

NON-COMPETE POST-EMPLOYMENT CLAUSES SHOULD BE PROHIBITED IN MEDICAL PHYSICIAN EMPLOYMENT AGREEMENTS

Non-compete post-employment clauses impede patient access to doctors, limit a physicians' ability to choose their employer and intentionally restrict physician mobility. Such restrictions are a challenge for the doctor and they are harmful for the patients. Non-compete clauses have significant deleterious impacts on:

- Patient−Doctor Relationship,
- Patient Access, and
- Patient Choice

The enforcement of a non-compete post-employment clause could, for example, negatively impact a long-standing Patient−Doctor relationship, particularly in cases where the physician has been regularly and actively involved in helping the patient manage an ongoing medical condition. If a non-compete post-employment clause requires the doctor to relocate a significant required distance

[1] https://health.usnews.com/best-hospitals/area/new-york-ny

NYU Langone Health

to continue practicing their specialty, the patient may not be able to continue to see the doctor and the relationship is severed.

Enforcement of a non-compete post-employment clause could also have negative consequences on patient care outside of a long-term Patient−Doctor relationship. Depending on the medical condition and the rarity of the disorder, there may only be a few medical professionals with the expertise to properly care for the patient. Even in the New York metropolitan area, with the depth and breadth of its medical community, there can exist shortages in certain specialties available to serve the needs of the patient population. Requiring a doctor to exit the area, even if it leaves several remaining physicians practicing locally, reduces the number of available specialists which will absolutely hinder patient access by increasing wait times - - that, of course, assumes the remaining doctors have the capacity to take on new patients.

Implementation of a non-compete post-employment clause may also detrimentally impact a patient's choice of physician. If a patient's preferred physician relocates to an area that remains geographically accessible to the patient, but due to network considerations, e.g., the relocation forces the doctor off of the patient's health insurance or health plan network, the financial burden may compel the patient to select another, in-network doctor.

Finally, non-compete post-employment clauses unfairly constrain physicians, creating an intolerably high barrier to leaving a situation that may have become not only disadvantageous, but possibly toxic, for the physician. The doctor, who cannot leave their employer, has no bargaining leverage to improve their own situation or the quality of care for their patients. If the physician, for example, needs the latest endoscope, interoperative MRI, or other specialty needs, and the hospital refuses to provide the equipment, the physician and the patients are put at a significant disadvantage, because the non-compete clause completely prevents curing the disadvantage. It is in the physician's and the healthcare public's interest that skilled doctors be able to effectuate change without having to leave their community, or sit out from their professional practice, for one or more years.

NYU LANGONE FINDS NON-COMPETE POST-EMPLOYMENT CLAUSES TO BE ANTI-COMPETITIVE

NYU Langone has more than 350 medical office practice locations in the New York metropolitan area that employ approximately 3,450 medical physicians (collectively the "Faculty Group Practice" or "FGP"). The FGP had in excess of 10 million outpatient visits and revenue in excess of $2.4 billion in 2022. The use of fair compensation, appropriate benefits, a culture of quality and safety, and *esprit de corps* are the motivating factors for group's success.

Due to NYU Langone's reputation, award-winning quality, commitment to excellence and patient-centered culture, many physicians from other health care institutions desire to work here, only to find out that they are subject to severe non-compete post-employment clauses in their employment agreements. [Examples of such clauses are included as Appendix 1]

NYU Langone finds non-compete post-employment clauses which block an employee from working for their preferred employer once their employment is terminated to be anti-competitive. In fact, such clauses represent unfair methods of competition and, as you know, Section 5 of the FTC Act states that "unfair methods of competition" are unlawful, and Section 6 of the Act instructs the Commission to make rules and regulations that prohibit such unfair methods. NYU Langone encourages the promulgation of such rules and regulations.

NYU Langone Health

For the record, all of the physicians in the NYU Langone FGP have employment agreements, and during the life of the agreement, the physicians are restricted to working exclusively at NYU Langone. All of our employment agreements are for a stated and reasonable period of time. The restriction does not continue past the date of stated employment. Once an agreement reaches its stated end date, employment either (a) continues through a new or amended agreement, or (b) is concluded. Under no circumstances, does NYU Langone bind the doctor with any post-employment restrictions that prohibit the doctor from working anywhere.

FALSE PREMISE OF EMPLOYERS' REASONS FOR NON-COMPETE POST-EMPLOYMENT CLAUSES

Many academic medical centers and large hospital networks in the New York metropolitan area subject their physicians to onerous non-compete post-employment clauses. They maintain that the restrictive clause is necessary because they have provided the physician with proprietary information, training, and patient contacts. This argument is totally meritless. All of the concerns could be mitigated, and probably eradicated, with the inclusion of a highly enforceable non-disclosure agreement and a patient non-solicitation clause in the employment agreement. The non-compete post-employment clauses are punitive and totally unnecessary.

Some New York area academic medical centers argue that hired doctors represent an *"investment"*. They purchase equipment, hire staff and maintain infrastructure to support the practice of the physician and, therefore, need to protect their investment. They argue that if the doctor leaves their network for a neighboring competitor, that they will be disadvantaged and it will lead to a loss of revenue. Yes, that is the nature of competition in a capitalistic society, and a perfect example of why non-compete post-employment clauses need to be eradicated. It's unfortunate that these competitors are misguided with their focus on doctor-based return-on-investment rather than patient-centered care.

AMERICAN MEDICAL ASSOCIATION VS AMERICAN BAR ASSOCIATION REGARDING NON-COMPETE POST-EMPLOYMENT CLAUSES

The American Medical Association ("AMA") has taken multiple and inconsistent positions on non-compete post-employment clauses. AMA's Council on Ethical and Judicial Affairs, Ethical Opinion 11.2.3.1. states:

> Competition among physicians is ethically justifiable when it is based on such factors as quality of services, skill, experience, conveniences offered to patients, fees, or credit terms.
>
> Covenants-not-to-compete restrict competition, can disrupt continuity of care, and may limit access to care.
>
> Physicians should not enter into covenants that:
>
> (a) Unreasonably restrict the right of a physician to practice medicine for a specified period of time or in a specified geographic area on termination of a contractual relationship; and
>
> (b) Do not make reasonable accommodation for patients' choice of physician. Physicians in training should not be asked to sign covenants not to compete as a condition of entry into any residency or fellowship program.

The AMA believes, however that non-compete post-employment clauses are allowable so long as the agreements protect a legitimate business interest of the employer, and are reasonable with respect to duration and geography.

NYU Langone Health

NYU Langone agrees with the words and spirit of Ethical Opinion 11.2.3.1, but disagrees with the AMA's business interest argument that non-compete post-employment clauses are permissible.

As a juxtaposition to the AMA, the American Bar Association ("ABA") does not equivocate one iota in its position on non-compete post-employment clauses for lawyers. Attorneys are ethically barred from signing non-compete agreements. *Rule 5.6 - ABA, Rules of Professional Conduct, Restrictions of Rights to Practice* states that an attorney shall not enter into an agreement *"that restricts the right of a lawyer to practice after the termination of a relationship."* This ABA ethics rule has been ratified by all state bars and is uniformly followed throughout the United States.

The contrast between the legal profession and the medical professional is unexpected. The legal association is protecting the rights of the lawyers' clients; the medical association **IS NOT** protecting the needs of the doctors' patients. **Conventional wisdom is upended when lawyers are more empathetic than doctors.**

We encourage the FTC to move forward with its Non-Compete Clause Rule. We recognize that some hold that the FTC is potentially regulating beyond its Congressionally-mandated authority, as well as not having oversight over not-for-profit hospitals. We don't find these arguments germane. Setting the principle that non-compete clauses are harmful is the correct course of action and we ask the FTC to move expeditiously. NYU Langone will continue to endeavor to seek legislative relief regarding the banning of non-compete clauses with the State Legislature in Albany, and with the Congress of the United States.

Thank you for this opportunity to submit our comments.

Sincerely,

Robert I. Grossman, M.D.
Dean and Chief Executive Officer

APPENDIX 1

Examples of Actual Non-Compete Post-Employment Clauses

As part of our submission to the FTC, we are including excerpts from two actual employment agreements from physicians who worked at other academic medical centers who were interested in working at NYU Langone, but were unaware that their employment agreements included non-compete post-employment clause.

Example #1 below is straightforward and it prohibits the physician from practicing for one-year and cites specific institutions where the physician is prohibited from working. The mere fact that the non-compete post-employment clause cites specific health care institutions and not all health care institutions is a clear indication that the employer's intent of including the clause was *de facto* anti-competitive against the cited institutions.

EXAMPLE #1

> By accepting this offer, you hereby covenant and agree that, during the term of this Agreement and until the date that is one (1) year following the cessation of your employment for any reason, you shall not, without the prior written approval of the Senior Vice President of Ambulatory Services, manage, operate, control or engage in the operation of, consult with or for, be employed by or otherwise provide services to or participate in any manner at NYU Langone Medical Center, Mount Sinai Health System, ProHealth Care Associates, LLP, New York Presbyterian Hospital or any of the foregoing entities' subsidiaries, successors or affiliates. The agent, principal, shareholder, partner or representative of, or the holder of an ownership interest in, any person, partnership, firm, corporation or other entity. Notwithstanding anything to the contrary, the provisions of this paragraph shall be waived and shall not be applicable to you if, after the Initial Term, Hospital does not renew this Agreement or offers to renew this Agreement on terms which are materially different than those set forth in this Agreement and such terms are unacceptable to you.

Example #2 on the following page may be the single worst form of a non-compete post-employment clause that NYU Langone has encountered. These are the facts: an ophthalmological surgeon employed by another academic medical center in New York City approached NYU Langone with an interest in joining our faculty medical staff. The surgeon said he had an employment agreement, but said he did not think he had a problem "getting out" of the agreement and working elsewhere. Upon review of his employment agreement, it was quickly determined that he had a significant non-compete post-employment clause. Section 10(b) of the clause has a two-year geographic restriction that stretches far beyond the New York metropolitan area. In addition to the entire City of New York, the restriction includes Nassau, Suffolk, Westchester and Rockland Counties in New York State and Bergen and Hudson Counties in New Jersey. Section 10(e) includes a financial penalty in the event that the restricted covenant is legally challenged and held to be invalid, illegal or unenforceable. In such case, the employee is required to pay the employer liquidated damages of $500 per day for each day the covenant was violated. Section 10(f) mandates that the employer is entitled to recover from the employee any and all attorney's fees and other costs of litigation.

NYU Langone Health

EXAMPLE 2

10. Restrictive Covenant:

(a) In the course of your employment with the University, you will be introduced to the University's referring physicians and patients as well as hospital personnel, other health care providers and the like. You will also be given the opportunity to become a participating provider in various health maintenance organizations and managed care plans with which the University's physicians have existing contractual relationships. Termination of your employment for any reason or in any manner after at least two (2) years of employment with the University, followed by your continuing to practice ophthalmology in the same geographic area as the University, would thereby enable you to take many of those sources of the University with you to the detriment of the University.

(b) In light of the foregoing, except with written permission from the Chair and the Dean, you covenant and agree that in the event your employment with the University terminates for any reason you shall not, for a period of two (2) years thereafter, except with the written consent of the University, either directly or indirectly, within Westchester, Rockland, Nassau, and Suffolk counties, and the five counties that make up the City of New York, and Bergen and Hudson County New Jersey; (i) engage in the practice of Ophthalmology as an employee, independent contractor, shareholder, partner or otherwise and whether as a separate specialty or in conjunction with any other practice of medicine; or (ii) operate or have any financial or other interest in any medical practice involved in the practice of Ophthalmology`.

(c) In the event of a breach or an alleged breach by you of the provisions of this Section 10, you agree to refrain from violating the restrictive covenant set forth above during any judicial proceeding until such matter is conclusively settled on it merits pursuant to such proceeding. In connection therewith, you agree that the University shall be entitled to an injunction restraining you from violating the terms of the restrictive covenant set forth here in (without the necessity of securing a bond) and any other legal or equitable remedies available for such a breach or threatened breach.

(d) If you violate this restrictive covenant and the University brings legal action for injunction or other relief, the University shall not, as a result of the time involved in obtaining the relief, be deprived of the benefit of the full period of the restrictive covenant. Accordingly, the restrictive covenant shall be deemed to have the duration specified herein, computed from the date the relief is granted by reduced by the time between the period when the restriction began to run and the date of the first violation of the covenant by you.

(e) If any restriction contained in this Section 10 shall be deemed to be invalid, illegal or unenforceable by reason of the extend, duration or geographical scope thereof, or other otherwise, the court making such determination may reduce such extend, duration, geographical scope, other provisions hereof, and in its reduced form, such restriction shall then be enforceable in the manner contemplated hereby. In addition, the University shall be entitled to liquidated damages in the amount of Five Hundred ($500) Dollars for each day that you are determined to have violated the foregoing restrictive covenant. This sum shall be considered as liquidated damages and not as a penalty and is agreed to by the parties inasmuch as there is no other precise method of determining the University's damages in the event of your violation of the restrictive covenant.

(f) It is hereby further agreed that, in the event of any litigation at law or in equity with respect to any breach of the restrictive covenant, the University shall be entitled to recover any and all reasonable attorney's fees and other costs of litigation, even after the termination of this agreement.

(g) The existence of any claims or causes of action by you against the University whether predicated upon this agreement or otherwise, shall not: constitute a defense to the enforcement by the University of the foregoing restrictive covenant.

(h) The parties acknowledge that the provisions of this Section 10 are necessary and reasonable in order to protect the University in the conduct of its business, particularly in light of the difficulty in ascertaining damages in the event of a breach.

APPENDIX 2
NYU Langone — Who We Are

NYU Langone Health is one of the nation's premier academic medical centers. Our trifold mission to serve, teach, and discover is achieved daily through an integrated academic culture devoted to excellence in patient care, education, and biomedical research. NYU Langone Health is the name of the combined operations of NYU Langone Hospitals and the two medical schools operated by New York University ("NYU") - the **NYU Grossman School of Medicine** ("NYUGSOM") and the **NYU Long Island School of Medicine** ("NYULISOM"), collectively the NYU "Schools of Medicine".

NYU Langone Hospitals is a quaternary care teaching hospital that operates five inpatient acute care facilities and over 40 ambulatory facilities in Manhattan, Brooklyn, and Long Island. The Manhattan 813-bed inpatient facilities are comprised of the **Kimmel Pavilion** (which also houses the **Hassenfeld Children's Hospital**) and **Tisch Hospital**. **NYU Langone Orthopedic Hospital**, also located in Manhattan, is a 225-bed facility specializing in orthopedic, neurologic, and rheumatologic services. **NYU Langone Hospital-Brooklyn** is a 444-bed facility in the Sunset Park section of Brooklyn. **NYU Langone Hospital-Long Island** is a 591-bed facility located in Mineola, New York. NYU Langone Hospitals also owns CCC550 Insurance, SCC, which provides professional liability insurance to NYU Langone Hospitals, physicians employed by NYUGSOM, and other non-employed physicians.

As noted above, NYU Langone Hospitals is integrated with two accredited Schools of Medicine, NYUGSOM, which ranked number 2 in the nation for research on the 2023 U.S. News & World Report "Best Graduate Schools" rankings, and NYULISOM, which is focused on education and training physicians and academic leaders in primary care medicine. Both of these Schools of Medicine operate as unincorporated divisions of NYU. NYUGSOM, employs approximately 3,450 faculty physicians who form the division known as the Faculty Group Practice ("FGP"). FGP physicians deliver patient care at more than 350 practice locations in the New York metropolitan area and two practice locations in Delray Beach and West Palm Beach, Florida. These physicians constitute the principal clinical service providers for NYU Langone Hospitals' facilities and are connected by NYU Langone Hospitals' enterprise-wide electronic medical record system, Epic.

On March 1, 2022, pursuant to the terms of an Affiliation Agreement, NYULH System became the sole corporate member of each of Long Island Community Hospital at NYU Langone Health, an acute care hospital licensed to operate 306 beds located in Suffolk County.

Recognition for Quality and Excellence

Management believes that patient-centered, quality care differentiates NYU Langone Health in the marketplace with patients, payors, and employers. NYU Langone Health has made substantial investments to ensure full clinical integration across all sites of service and to provide one standard for quality in clinical care with one integrated medical record, made possible by the enterprise-wide Epic system.

Awards and recognition NYU Langone Hospitals has received for the quality of its patient care are as follows:

- NYU Langone Hospitals ranked No. 3 nationally on the 2022-23 U.S. News and World Report Honor Roll, moving up several spots from its No. 8 ranking in 2021. In addition, it now ranks No. 1 in New York.
- NYU Langone Hospitals has 14 specialties nationally ranked in the top 20 rankings by U.S. News and World Report in 2022-23, 11 of them being in the top 10. Of note, NYU Langone Hospitals ranked No. 1 for Neurology and Neurosurgery in the U.S.
- Hassenfeld Children's Hospital tied overall for No. 3 in New York City and No. 9 in the Mid-Atlantic Region on the 2022-23 U.S. News and World Report "Best Children's Hospitals" survey.
- NYU Langone Hospitals achieved a five-star rating on the Centers for Medicare and Medicaid Services (CMS) Hospital Compare for 2022, a rating received by only 13.9% of evaluated hospitals. NYU Langone Hospitals is one of only eight five-star hospitals in New York State.
- NYU Langone, for the past nine years, has received top rankings for overall patient safety and quality of care from Vizient, Inc. In 2022, NYU Langone was recognized as the top performer in the Bernard A. Birnbaum, MD, Quality Leadership Annual Ranking for demonstrating high quality and safety performance.
- NYU Langone's faculty group practice network has been ranked the highest performer for the last eight years among participating medical centers nationwide by Vizient. In 2022, NYU Langone ambulatory care practices ranked No. 1 in Vizient's Ambulatory Care Quality and Accountability Ranking for demonstrating excellence in delivering high-quality outpatient care.
- NYU Langone Hospitals' nurses are recognized for excellence in the care they provide, with every inpatient location in the system receiving Magnet status by the American Nurses Credentialing Center. Most recently, NYU Langone Hospital—Brooklyn became the only hospital in Brooklyn with Magnet recognition. Magnet designation is an honor achieved by only 9.4% of hospitals in the country. This achievement comes after NYU Langone Hospital—Long Island and NYU Langone Orthopedic Hospital were re-designated as Magnet sites in June 2021 and June 2022, respectively.

- NYU Langone Hospitals, which includes its Manhattan Tisch/Kimmel Hospital, NYU Brooklyn and NYU Long Island hospitals, were each awarded an 'A' in the fall 2022 Leapfrog Hospital Safety Grade, a national distinction recognizing NYU Langone Hospitals' achievement in providing the highest level of patient care across the health system and an honor attained by only 29% of hospitals across the country. NYU Langone Hospitals was recognized as the #1 hospital in New York State in Critical Care, Pulmonary Care, and Stroke Care, and #5 in Coronary Intervention in the Healthgrades 2022 State Ranking Awards.

- NYU Langone Hospitals was re-accredited with the Gold Seal of Approval® by the Joint Commission in 2021, the first re-accreditation since NYU Long Island joined the institution.

- NYU Langone Hospitals' Transplant Institute was rated the top lung and heart transplant center in New York State, according to data published by the Scientific Registry of Transplant Recipients (SRTR) in 2022. NYU Langone Hospitals has the highest one-year kidney survival rate in the nation and transplants more kidneys than any other center in New York State.

- NYU Langone Hospitals' Pediatric Congenital Heart Program was recognized by the New York State Department of Health in May 2021 for having the best risk-adjusted survival rate of any hospital in New York State.

- For 10 years in a row, NYU Langone Health has been designated an LGBTQ+ Healthcare Equality Leader by earning a perfect score on the Human Rights Campaign Foundation's Healthcare Equality Index, in recognition of its commitment to providing high-quality, individualized care for all patients.

- NYU Long Island's Medical Intensive Care Unit has received a gold-level Beacon Award for Excellence by the American Association for Critical-Care Nurses— one of just 15 critical care units in New York State to receive a gold-level designation.

- NYU Langone Health is certified as an integrated Comprehensive Stroke Center by The Joint Commission, including NYU Langone's Tisch Hospital, NYU Langone Hospital—Brooklyn, and NYU Langone Hospital—Long Island. The certification acknowledges the highest level of commitment at every level of the institution to deliver timely, lifesaving care to people experiencing a stroke.

Comment

Non-compete clauses are absurd. When I worked at a burrito place, they claimed a non-compete. I couldn't go down the street to another burrito shop because I might bring with me the knowledge of how to roll a tortilla around a mess of rice and beans. If you don't see the absurdity in that situation, you have no place making decisions that affect other people's lives. It's out of control. Stop allowing corporations to have control over the lives of people after those people leave the corporations' employ.

Introduction and Executive Summary 3

I. Empirical Evidence on the Effects of NCAs and NCA "Enforceability" Does Not Support the Commission's Proposed Federal Ban 11

A. The Existing Studies of NCAs Yield Mixed Results 14

1. The evidence shows ambiguous effects of NCAs on wages and mobility and supports the argument that they provide procompetitive benefits 14

2. The downstream effects of NCAs on competition and consumers is theoretically ambiguous and empirically unestablished 20

3. The weight of the evidence does not support the claim that NCAs decrease innovation 26

B. The Existing Event Studies Depend on Eccentric Events and Their Results Are Not Sufficiently Generalizable 30

1. Hawaii changed more than NCAs but only for a small number of tech workers 31

2. Oregon banned NCAs for hourly and low-wage workers during the depths of the Great Recession which muddies general applicability 33

3. Michigan's statutory changes were not a clear switch from unenforceable to enforceable and back again 37

4. California is not a clean event study due to California's unique attributes 40

C. Because There is No Objective Measure of "Enforceability," Many of the Causal Studies Contain a Fatal Methodological Weakness 40

D. The Predicted Effects of the Proposed Rule Are Flawed Because Observed State-Level Changes May Not Apply Linearly to the Proposed Rule's National-Level Policy Change 50

II. The Proposed Rule Fails to Account for NCAs' Procompetitive Benefits and Wrongly Assumes Equivalent Benefit from Alternatives to NCAs 52

A. Trade Secret Law Protects Different Intangible Assets than NCAs and Is More Difficult to Enforce 54

B. Non-Disclosure Agreements Are Substantially Less Effective than NCAs at Encouraging Worker Training and the Sharing of Valuable Information with Workers 56

C. Fixed Duration Employment Contracts Are Subject to Remedial Limitations that Render Them Ineffective Substitutes for NCAs 57

D. The Claim that Higher Wages and Enhanced Benefits Can Substitute for NDAs Reflects a Misunderstanding of the Hold-Up Problem 58

III. The Commission's Relevant Experience, Expertise, and Capacity to Enforce Proposed Rule Is Limited 59

IV. The Commission's Legal Authority to Issue the Proposed Rule is Contentious—and Dubious 71

A. The Commission's Claimed Authority to Adopt Competition Rules Is Unlikely to Withstand Judicial Scrutiny 72

B. The Proposed Rule Presents Major Questions that Can Be Addressed Only by Congress 74

C. A Grant of Substantive Statutory Authority Sufficient to Support the Proposed Rule Would Amount to an Impermissible Delegation of Authority 76

V. Conclusion 77

Appendix A: Authors and Contributing Signatories A1

Introduction and Executive Summary

We appreciate the opportunity to comment on the Commission's Notice of Proposed Rulemaking regarding non-compete clauses, Matter No. P201200 ("NPRM").[1] The authors and contributors to these comments are scholars of law and economics with an interest in ensuring the effective functioning of the antitrust laws and of the Federal Trade Commission. The full list of signatories can be found in Appendix A, *infra*.

The Commission's interest in non-compete agreements, non-compete clauses, non-compete terms, or covenants not to compete (collectively, "NCAs") is understandable and, at some level, laudable. NCAs have been prominent in recent public policy debates, and numerous NCAs may be overbroad, inefficient, or otherwise objectionable. While most policy concerns regarding NCAs are not antitrust concerns (and most NCA-focused litigation not antitrust litigation), a given employer might possess significant market power in one or more specific local labor markets, and might exploit that market power to, e.g., foreclose entry or expansion by would-be competitors. In that regard, a specific NCA, under specific facts and circumstances, might well prompt antitrust concern and, potentially, a finding of liability.

Nevertheless, as explained below, we cannot recommend that the Commission adopt the proposed Non-compete Clause Rule ("Proposed Rule"). It is not supported by the evidence—empirical and otherwise—that is reviewed in the NPRM; neither is it supported by the Commission's experience, authority, or resources.

First, while the NPRM amply catalogs *potential* problems associated with non-competes, NCAs, like other vertical restrictions in labor agreements, are not *necessarily* inefficient, anticompetitive, or harmful to either labor or consumer welfare; they can be efficiency-enhancing and pro-competitive. NCAs can solve a range of potential hold-up problems in labor contracting.[2] For example, both firms

[1] Non-Compete Clause Rule, 88 Fed, Reg, 3482 (RIN 3084, proposed Jan. 19, 2023) (to be codified at 16 C.F.R. Part 910) [hereinafter NPRM].

[2] *See infra.*, Section II. *See also, e.g.*, Daron Acemoglu & Robert Shimer, *Holdups and Efficiency with Search Frictions*, 40 INT. ECON. REV. 827 (1999). The potential benefits of NCAs, and the importance of context in evaluating them, were discussed at the FTC's 2020 workshop on NCAs. FTC, *Non-competes in the Workplace: Examining Antitrust and Consumer Protection Issues* (Jan. 9, 2020) [hereinafter FTC 2020 NCA Workshop; references to the workshop transcript will be cited by speaker and transcript page number ("Tr.")]. A web page for the workshop, with links to the agenda, speaker biographies, public comments, and a transcript of the proceedings, is at https://www.ftc.gov/news-events/events/2020/01/non-competes-workplace-examining-antitrust-consumer-protection-issues. FTC 2020 NCA Workshop, Kurt Lavetti, Tr. at 144 ("context matters. So although non-compete agreements can reduce earnings on average, in some contexts there's evidence they might systematically increase earnings."); *id.*, the Hon. Noah Phillips, Tr. at 218 ("non-competes can serve good purposes, incentivizing investment in workers and protecting trade secrets, worthy goals in our increasingly knowledge-based economy"); *id.*, Ryan Williams, Tr. at 175-6 (can "say some good things about non-compete contracts"); *id.*, Ryan Nunn, Tr. at 126 (questioning utility of NCAs in various contexts, but noting NCAs can address a hold-up problem in training, and

and workers have incentives to invest in employee training, but employees often lack the resources required to acquire adequate training—especially, but not only—job-specific training on their own. Employers, for their part, may have resource advantages; at the same time, employers may reasonably worry about their likely return on investment in employee training: because experienced labor is alienable, firms may worry that competitors will free ride on their investments by poaching trained employees; employees, for their part, may walk out the door or renegotiate compensation before their employer has recouped its investment. Facing those prospects, firms may tend to under-invest in employee training. Appropriately tailored NCAs can mitigate employers' investment risks, and thereby encourage additional employee training. Firms can face analogous hold-up concerns when it comes to sharing private or privileged information—such as trade secrets or client lists—with their employees.[3] NCAs can mitigate the risk (and risk of hold-up) that firms would face if there were no constraints on job switching. NCAs can also reduce search and training costs by reducing turnover; and the benefits of reduced search costs may be shared, at least to some extent, with employees.[4] As we explain below, these potential benefits find support in both the economic literature and common-law standards of "reasonable" restraints.[5]

Second, and most critically, the emerging body of economic literature regarding the effects of NCAs—or the effects of what is purported to be the relative "enforceability" of NCAs—does not support the categorical ban on NCA usage contemplated by the NPRM.[6] Although the Commission proposes to prohibit NCAs across the economy, there appear to be numerous and broad gaps in the literature. For many sectors, industries, and occupations, there appear to be no studies of NCA's effects. Moreover, the Commission cites only a single study of the impact of NCA enforceability on downstream prices, and that regards a specific occupation (physicians) delivering heavily regulated services. There are studies investigating wage and mobility effects, but even partial equilibrium analyses of labor markets provide an incomplete picture of the total impact of NCAs on labor markets, even if existing studies are taken at face value. And while some studies do suggest the potential for NCAs to reduce wages or worker mobility under certain circumstances, findings are mixed rather than unidirectional, and many of the relevant studies suffer significant data and methodological limitations. As a working

[4] *See, e.g.*, John McAdams, *Non-Compete Agreements: A Review of the Literature*, Working Paper (2019), *available at* https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3513639.

[5] For an early case, see *Mitchel v. Reynolds*, 24 E.R. 347 (1711) (upholding a noncompete contract between a bakery and a baker, upon finding the contract's terms, including a geographic restriction to the same parish as the bakery, reasonable).

[6] *See infra.*, Section I.

paper from the Commission's Bureau of Economics notes, the "more credible empirical studies tend to be narrow in scope, focusing on a limited number of specific occupations . . . or potentially idiosyncratic policy changes with uncertain and hard-to-quantify generalizability."[7] That is not to say that none of the research is useful, but rather that the literature is not comprehensive or settled, and that it cannot support the adoption of sweeping federal regulations that preempt the development of a more nuanced body of state labor and NCA law.

Part of the problem is that measuring this so-called "enforceability" is far from trivial. There is no objective measure of enforceability, and no proven metric for making such a measurement. Studies of enforceability employ similar measurement schema, but these vary in their implementation, and there is no evident benchmark by which to evaluate the alternatives. As we explain in some detail in Section I, below, most of the literature investigating the effects of NCA policy changes—nominally, changes in NCA enforceability—employs one or another version of a triply-subjective scoring rubric. The taxonomy of relevant legal markers, the relative import (that is, weighting) of those markers, and the coding of legal changes all depend on subjective assessments of specific judicial decisions and legislative acts against no specified baseline. None represents the universe of potential policy reforms. And none specifies a theory of enforceability that it seeks to implement. Collectively, the enforceability studies depend on what is, at best, an essentially soft, variable, and heavily coding-dependent method; at worst, it's a black box. The problem might be avoided going forward. Given recent, clear, income-based restrictions on enforcement in nine states and the District of Columbia, the Commission might well collect data to enable event studies without the artifice of enforceability ordering.[8] But those data do not yet exist and have not been analyzed. The absence of such data, and of any objective enforceability metric, tend to undermine many of the results on which the Commission relies.

In addition, the Commission should consider that most labor markets are local, rather than statewide or national.[9] As a corollary, research suggesting that, e.g., certain wage changes associated with changes in NCA enforceability, *on-average and state-wide*, do not resolve the question whether observed effects obtain across all (or nearly all) labor markets in the state or, in the alternative, are dominated by effects in those local labor markets in which key employers enjoy heightened market power. Of direct relevance to the Proposed Rule, "[t]there is little evidence on the likely effects of broad prohibitions of non-compete agreements."[10] Indeed, they do not resolve the question how

[10] *Id.*

wage changes are distributed across workers, or whether the observed effects are due to workers receiving raises or, rather, to firm efforts to mitigate hold-up problems by hiring more experienced or better trained workers at higher wages.[11] This remains a developing body of economic literature and—as a related matter—improved data sources. The FTC can and should foster the further development of pertinent economic research before adopting a general rule or, in the alternative, before advising Congress on potential statutory restrictions on NCAs.[12]

Third, the Commission has very little experience with NCAs, several very recent settlement agreements notwithstanding.[13] The three 2023 matters discussed in the NPRM were concluded with consent orders announced the day before the Commission's announcement of the NPRM. The Commission's decisions contained no finding or stipulation of an antitrust violation, whether under Section 5 or any other antitrust statute.[14] That does not, of course, establish that the Commission erred in its complaints. Still, the settlements established no legal precedents, and the complaints and orders do little to set forth guidance on the Commission's applications of Section 5 to the specific facts and circumstances underlying the three matters.[15]

[15] Dissenting Statement of Commissioner Christine S. Wilson, *id.* at 2 ("[E]ach Complaint runs three pages, with a large percentage of the text devoted to boilerplate language. Given how brief they are, it is not surprising that the complaints are woefully devoid of details that would support the Commission's allegations.").

At common law, NCAs might be found reasonable or unreasonable restraints of trade based on their terms, under specific facts and circumstances.[16] Federal law[17] and state laws[18] have tended to hew to this common law tradition, even if state laws vary in their criteria of reasonability. And while some states impose significant limitations on the ability of employers to enforce NCAs in court, *no state* has adopted the general prohibition on NCA usage that the FTC has proposed. No state chiefly restricts NCAs via a regulatory ban; and no state has adopted the seemingly arbitrary 25% share restriction that the Commission has proposed for permitting certain NCAs in conjunction with the sale of a business.[19] In addition, as noted by several participants in the FTC's 2020 NCA workshop,[20] courts have tended to find that NCAs do not violate the antitrust laws,[21] even if certain NCAs may

---

[16] *Compare Mitchel v. Reynolds*, *supra* note 5 (upholding specific NCA restrictions as reasonable) *with John Dyer's Case*, Year-Book Mich. 2 Hen. V, fo. 5, pl. 26 (1414) (rejecting NCA terms in an indenture contract as void under the common law).

[17] *See Nat'l Soc'y of Prof'l Engrs. v. United States*, 435 U.S. 679, 689 (1978) ("The Rule of Reason suggested by *Mitchel v. Reynolds* has been regarded as a standard for testing the enforceability of covenants in restraint of trade which are ancillary to a legitimate transaction, such as an employment contract or the sale of a going business." (*citing Mitchel v. Reynolds*, 1 P. Wms. 181, 24 Eng. Rep. 347 (1711))); *see also United States v. Addyston Pipe & Steel Co.*, 85 F. 271, 279 (6th Cir. 1898), *aff'd as modified*, 175 U.S. 211 (1899) ("It was of importance that business men and professional men should have every motive to employ the ablest assistants, and to instruct them thoroughly; but they would naturally be reluctant to do so unless such assistants were able to bind themselves not to set up a rival business in the vicinity after learning the details and secrets of the business of their employers.").

[18] For a recent overview of state NCA laws, see, e.g., Russell Beck, *Employee Noncompetes: A State-by-State Survey* (last updated Feb. 11, 2023), *available at* https://beckreedriden.com/50-state-noncompete-chart-2.

[19] The only express exception in the Proposed Rule regards NCAs executed in conjunction with the sale of a business, where the NCA applies to a seller who "is a substantial owner of, or substantial member or substantial partner in, the business at the time the person enters into the non-compete clause. Proposed § 910.1(e) would define substantial owner, substantial member, or substantial partner as an owner, member, or partner holding at least a 25% ownership interest in a business entity." NPRM at 3515. While an exception providing for NCAs in conjunction with the sale of a business is common in states with some general hostility to NCAs, as under Cal. Bus. & Prof. Code § 16601, the identification of a 25% ownership requirement appears arbitrary and excessive. For example, California law permits certain NCAs for, *inter alia*, "[a]ny person who sells the goodwill of a business, or any owner of a business entity selling or otherwise disposing of all of his or her ownership interesting in the business entity." Cal. Bus. & Prof. Code § 16601. We have not found any authority restricting such ownership to anything like a 25% share. That proposed restriction may prove far too narrow, not just when natural persons owning a startup or small business number more than four, but when, e.g., venture capital investment reduces the founders' shares of a startup.

[20] FTC 2020 NCA Workshop, *supra* note 2.

[21] *See, e.g.,* FTC 2020 NCA Workshop, *supra* note 2, Eric Posner, Tr. at 72-73 (("I took upon myself the dreary task of trying to read every antitrust case ever decided involving non-competes, but it turned out not to be that dreary because there are only a handful of such cases ~ a few dozen or maybe more. Virtually none of them successful, basically they all fail. The plaintiffs always lose in these cases."); *id.*, Randy Stutz, Tr. at 60-68 (discussing difficulties of making out an antitrust case against an NCA under the rule of reason); *Cf.* Business Electronics Corp. v. Sharp Electronics Corp. 485 U.S. 717, 729 n. 3 (1988) (Justice Scalia citing the English common law case of *Mitchel v. Reynolds* in support of the proposition that "[t]he classic 'ancillary' restraint is an agreement by the seller of a business not to compete within the market.") The NPRM notes that the Commission has identified 17 antitrust matters brought by private parties or state or federal antitrust authorities, under either the Sherman Act or state antitrust law, NPRM at 3496, suggesting that two of the matters the plaintiffs "were

violate some state labor or commercial laws. Yet the NPRM contemplates what would be tantamount to a *per se* prohibition of NCA usage.

The Commission's view that NCAs are generally, or even typically, anticompetitive seems to lack any basis in antitrust jurisprudence. Looking beyond the Sherman Act jurisprudence, we have not found any decisions by a federal court holding that an NCA violates Section 5 of the FTC Act or, specifically, the Commission's standalone Section 5 authority over unfair methods of competition. Importantly, while the complaints in the three settled matters identified specific NCA terms, as well as other facts and circumstances, under which the NCAs in question were alleged to violate Section 5, there is no reason to expect that those specific terms or circumstances are representative of the very diverse terms in NCAs, as they are employed across industries, firms, labor markets, and individual employees.

The Commission's limited experience with NCAs—or any vertical restrictions in labor agreements—undercuts the rationale for a general prohibition of NCAs, but it also undercuts the proposal that the Commission serve as a federal regulator of NCAs generally. Specifically, it does not bode well for likely court challenges to the Proposed Rule or the Commission's authority to issue it. And while the Commission notes hearings and workshops it has conducted to gather information about NCAs and other labor competition issues,[22] neither the Commission nor its staff has issued any report summarizing or synthesizing information gathered through those inquiries. Such reporting would be consistent with the FTC's mission under Section 6 of the FTC Act,[23] and it would be an important prologue to any consideration of rulemaking.

Fourth, the Commission lacks the resources required for effective enforcement of the Proposed Rule.[24] According to some survey evidence and the NPRM, NCAs now apply to roughly one fifth of all employed persons in the U.S. labor force; that is, nearly 30 million workers.[25] Regulations are not self-enforcing. And while regulation may be, in certain regards, more streamlined than case-by-case enforcement, it still requires investigation of alleged infractions, administration, and, in addition to regulatory challenge mechanisms, the resources to defend at least some challenges to

successful to some degree." *Id.* In a 2015 matter, the "degree" of success reported was a federal district court's denial of a motion to dismiss. *Id.* In the other matter—*American Tobacco*—the Supreme Court, in 1911, held that certain covenants not to compete were among a number of practices that, collectively violated the Sherman Act, although the Court expressly did not consider the various practices "legality, isolatedly viewed." *U.S. v. Am. Tobacco Co.*, 221 U.S. 106, 183 (1911). The other 15 matters did not reflect some degree of success. NPRM at 3496.

[22] NPRM at 3497-8.

[23] 15. U.S.C. § 46 (especially subsections (a), (b), and (f)).

[24] *See infra.*, Section III.

[25] U.S. Bur. Labor Stats., Monthly Labor Review (Jun. 2022) (reporting 149,785 total employed), https://www.bls.gov/opub/mlr/2022/article/us-labor-market-shows-improvement-in-2021-but-the-covid-19-pandemic-continues-to-weigh-on-the-economy.htm.

regulatory determinations and penalties in federal court. Detection alone may often be a challenge to the extent that many "workers are totally uninformed about the law."[26]

Effective enforcement need not entail detecting, much less penalizing, every violation, but it does require sufficient enforcement activity to establish a credible threat that violations will be penalized, without raising concerns about selective enforcement.[27] Yet the NPRM contains no assessment of the resources required for adequate enforcement of the Proposed Rule or any alternative NCA regulation. Enforcement staff in the Commission's Bureau of Competition ("BC") have substantial antitrust expertise in mergers and diverse conduct matters, but little experience in labor matters and none in the enforcement of competition regulations. Moreover, the Commission has recently reported that BC staff are barely able to meet the Commission's already established and important workload.[28] Adding an obligation to monitor restrictions in labor agreements across all industries and occupations in the U.S. would drain the staff's ability to scrutinize mergers and conduct under settled antitrust law.

Fifth, it is not clear that the Commission has the authority to adopt the Proposed Rule.[29] There is a grant of *some type* of rulemaking authority in Section 6(g) of the FTC Act; And there is a 1973 D.C. Circuit opinion in which the court defers to the Commission's interpretation of the scope of its own regulatory authority. But as participants in the FTC workshop and numerous administrative law scholars have recognized, contemporary courts are unlikely to uphold that degree of agency deference. Recent decisions of the Supreme Court have declined to recognize broad grants of regulatory authority without express statutory language that is both specific and cabined in its grant of authority, and the Court has read the plain language of FTC Act narrowly on the specific question of the FTC's remedial powers.

Finally, the economic import and the sweep of the Proposed Rule amplify each of the concerns stated above. Subject to very limited exceptions,[30] the Commission proposes to ban the use of NCAs of

(2022) (Prepared Statement of the Fed. Trade Comm.) ("While we constantly strive to enforce the law to the best of our capabilities, there is no doubt that—despite the increased appropriations Congress has provided in recent years—we continue to lack sufficient funding."), https://www.ftc.gov/system/files/ftc_gov/pdf/P210100SenateAntitrustTestimony09202022.pdf.

[29] *See infra.*, Section IV.

[30] The only express exception in the Proposed Rule regards NCAs executed in conjunction with the sale of a business, where the NCA applies to a seller who "is a substantial owner of, or substantial member or substantial partner in, the business at

any duration, and of any geographic or occupational scope, adopted under any business contexts, across the entire U.S. workforce. Moreover, the Commission proposes to ban the maintenance of any existing NCAs, no matter what compensation may have been negotiated or conferred conditional on acceptance of the terms of an NCA. The scope of the Proposed Rule poses a tremendous challenge to the Commission's experience and resources; it greatly outstrips the evidentiary basis cited on behalf of the Proposed Rule; and it increases the very real legal risk the Commission faces, with regard to both the substance of a rule that the Commission might adopt and the Commission's regulatory and enforcement authority.

The Commission's interest in NCAs is laudable. And the Commission is well-positioned to contribute to the further development of economic research regarding NCAs and, specifically, to the further application of Industrial Organization economics to research on NCAs and labor market competition. New research, and a critical synthesis of the relevant hearings and FTC workshops cited in the NPRM, could contribute to case-by-case antitrust enforcement, and to policy debates involving NCAs in Congress and in the states.[31] The Commission is also well positioned to help develop the antitrust case law where NCAs and related vertical restrictions on labor agreements demonstrably harm competition and consumers. These tasks are potentially important; they are tractable, given the Commission's resources, including its human capital; and they fit well within the Commission's jurisdiction. They should precede, not follow, a proposed federal NCA regulation.

the time the person enters into the non-compete clause. Proposed § 910.1(e) would define substantial owner, substantial member, or substantial partner as an owner, member, or partner holding at least a 25% ownership interest in a business entity." NPRM at 3515. While an exception providing for NCAs in conjunction with the sale of a business is common in states with some general hostility to NCAs, as under Cal. Bus. & Prof. Code § 16601, the identification of a 25% ownership requirement appears arbitrary and excessive. For example, California law permits certain NCAs for, *inter alia*, "[a]ny person who sells the goodwill of a business, or any owner of a business entity selling or otherwise disposing of all of his or her ownership interesting in the business entity." Cal. Bus. & Prof. Code § 16601. We have not found any authority restricting such ownership to anything like a 25% share. That proposed restriction may prove far too narrow, not just when natural persons owning a startup or small business number more than four, but when, e.g., venture capital investment reduces the founders' shares of a startup.

[31] For an example of a current legislative proposal, see, e.g., S.379—Freedom to Compete Act of 2023, 118th Cong. (2023-24) (which would amend the Fair Labor Standards Act to prevent the use of NCAs in employment contracts for certain non-exempt employees).

I. Empirical Evidence on the Effects of NCAs and NCA "Enforceability" Does Not Support the Commission's Proposed Federal Ban

There is a significant and developing body of literature investigating the economic import of NCAs, but it does not support the Commission's Proposed Rule. Much of the NPRM is devoted to a review of the literature regarding NCA usage and the effects of NCAs (or, in many cases, the effects of the relative "enforceability" of NCAs under the laws of the various states). The Commission's attention to the empirical literature is welcome, and many parts of the discussion comprise useful summaries of published studies or research in progress. Overall, however, the NPRM's discussion of the literature seems uneven. Some acknowledged limitations in the literature are discussed at some length, and others obliquely or not at all. It is not always clear how reliable the Commission finds the relevant methods or how accurate it deems relevant findings. In addition, some of the NPRM's extrapolations from the literature seemed strained.[32] The scope of the Proposed Rule—a sweeping federal ban on the use of NCAs, including those already in effect, even if bargained-for—would seem to demand a far more settled and comprehensive body of economic literature, and far less mixed results, than we see in evidence.

Some studies do suggest the potential for NCAs to reduce wages or worker mobility, at least under certain circumstances. But findings on the effect of NCAs on wages are mixed, rather than unidirectional, and many of the relevant studies evidence significant data and methodological limitations. Some of those limitations cast doubt on the extent to which certain findings may be generalized; others may impugn the findings themselves. Moreover, as discussed at the FTC 2020 NCA Workshop, available findings tend to address *average* effects rather than the distribution of those effects.[33] A substantial number of observations of workers' wages might vary from the average not just in magnitude but in sign; that is, it may be that wages were observed to increase for a large number of workers, which would be of no small import to antitrust (or to contract law). And a key question turns on the local nature of most labor markets,[34] and is—or should be—of special relevance to merits of antitrust intervention: if a wage effect is observed on average, state-wide, is that effect ubiquitous or is it chiefly driven by local labor markets in which key employers enjoy outsize market power? Also, because these studies cannot distinguish the workers *whose* wages appear to increase with legal reform, they do not resolve the question whether the observed average wage effects are due to

[32] *See infra* Section I.D.

[33] FTC 2020 NCA Workshop, *supra* note 2, Kurt Lavetti, Tr. at 139.

[34] *See* Local Area Unemployment Statistics Geographic Concepts, BLS, https://www.bls.gov/lau/laugeo.htm (Mar. 20, 2020); *see also* Marinescu & Rathelot, *supra* note 9 ("more than 80% of [all] job applications occur where the applicant and prospective employer are within the same 'commuting zone.'"); PHILLIP E. AREEDA & HERBERT HOVENKAMP, ANTITRUST LAW ¶ 552 (5th ed. 2022) (explaining that "commuting costs" limit a supplier's ability to operate in a distant geographic market).

workers receiving raises or, rather, to substitute hiring practices, with some firms seeking to mitigate hold-up problems by hiring more experienced or better trained workers at higher wages.[35]

One notable omission from the NPRM's substantial discussion of the literature is a 2016 paper by Bishara and Starr, leading contributors to the economic literature on NCAs. Bishara and Starr observed serious research challenges, as well as significant data and methodological limitations to the then-available body of research:

> First… identifying the causal effects of noncompete enforceability is a challenging task. Cross-sectional studies must somehow disentangle the effect of noncompete policies across states from the myriad of other potential state policies or state differences that are correlated with noncompete policies. Similarly, studies that examine the before and after effects of a noncompete policy change within a state must separately identify the impact of the noncompete laws from other trends or state level changes that might be occurring simultaneously. These are challenging identification issues to overcome, especially given that very few states have significantly changed their noncompete policies in the last 30 years.[36]
>
> Second, since not all policy changes equally affect the noncompete-signing population, the measurement of noncompete enforceability is necessarily error-ridden without data on who signs noncompetes.[37]
>
> Third, because enforceability is the key variable, not noncompete signing status, assumptions about knowledge of noncompete policies among the various actors must be made.[38]
>
> Fourth, analyses comparing outcomes in high-enforceability versus low-enforceability states cannot disentangle the impact of the potentially increased use of noncompetes in higher-enforceability states from the impact of the noncompete policy on those who do and do not sign noncompetes.[39]
>
> Fifth, the aggregate perspective cannot directly identify the potential micro-mechanisms at work, and thus limits the potential policy options. For example, how exactly might noncompete enforceability reduce mobility?[40]

While the literature has grown since Bishara and Starr's review, their concerns remain salient. Not incidentally, the NPRM cites at least ten papers cited in the Bishara and Starr critique. However, the

[40] Id.

Commission seems more confident than Bishara and Starr about the implications of the academic research. For example, when discussing Samila and Sorenson, Bishara and Starr say:

> The authors ambitiously conclude that noncompete enforceability "significantly impedes entrepreneurship and employment growth." Such a conclusion may be too strong, however… [I]t could be that the causal effect of noncompete enforceability on entrepreneurship is positive, but that it is diminished in high venture-capital areas.[41]

Unfortunately, the NPRM recognizes no such qualifications when discussing Samila and Sorenson's results with respect to new business formation,[42] although the Commission is more reserved when discussing the paper's results for innovation.[43]

Other research by Bishara and Starr—jointly and separately—is discussed at length, and cited liberally, throughout the NPRM,[44] and Professor Starr participated as a panelist at the FTC 21st C. Hearings, the FTC 2020 NCA Workshop, and the FTC/DOJ 2021 Labor Competition Workshop. Yet Bishara and Starr's critical review, and the concerns raised therein, are neither cited nor discussed in the NPRM.

Another puzzling omission is a 2019 literature review conducted by staff in the FTC's Bureau of Economics.[45] That literature review was much discussed in comments submitted to the FTC 2020 NCA Workshop, and at the workshop itself.[46] Yet the McAdams paper is not even mentioned in the NPRM. McAdams observes that economic research regarding NCAs "has made important strides."[47] However, he also observes mixed results, and he describes numerous data and methodological limitations running throughout the body of literature. Overall, he finds that the "more credible empirical studies tend to be narrow in scope, focusing on a limited number of specific occupations… or potentially idiosyncratic policy changes with uncertain and hard-to-quantify

---

[41] Bishara & Starr, *supra* note 2, at 525.

[42] *See* NPRM at 3491.

[43] *See id.* at 3492. For example, the Commission admits the paper is not causal: "The study by Samila and Sorensen examines the enforceability of noncompete clauses across all states but does not consider changes in enforceability: they are therefore unable to rule out that their results could be due to underlying differences in the states rather than non-compete clause enforceability."

[44] The NPRM discusses at least 10 of Professor Starr's articles (and co-authored articles) repeatedly, and at length, with more than 40 citations.

[45] *See* McAdams, *supra* note 4. We also note that the named staff author of the review, John McAdams, moderated a session at the FTC 2020 NCA Workshop.

[46] *See, e.g.*, FTC 2020 NCA Workshop, Kurt Lavetti, Tr. at 140 ("There's also a new working paper by John [McAdams] that provides a great overview of this literature.")

[47] McAdams, *supra* note 4, at 4.

generalizability."[48] Of direct relevance to the Proposed Rule, "[t]here is little evidence on the likely effects of broad prohibitions of non-compete agreements."[49]

Research on NCAs is ongoing. Still, most of the studies cited in the NPRM predate the FTC 2020 NCA Workshop and the BE review, and many predate the 2016 Bishara and Starr critique. Not a few of the shortcomings identified in that work were revisited by panelists at the 2020 workshop;[50] these discussions, too, are absent from the NPRM. As a general matter, citations to the records of the workshops and the hearings seem both sparse and highly selective. The NPRM strains to discount positive findings by, among other things, disfavoring research regarding the effects of NCAs themselves in favor of research regarding changes in NCA "enforceability,"[51] conspicuous limitations in the more supporting research notwithstanding. *Ad hoc* and uneven critical scrutiny aside, the implications of the "enforceability" studies are far less clear than they might seem. As we discuss below, there is no objective metric for "enforceability." Instead, relative "enforceability" scores result from various—if related—means of scoring disparate provisions of state statutory and judge-made law on a subjective basis.[52] None of these means is authoritative. And even as soft measurement tools, they fail to account for, much less reliably order, the universe of policy options.

A. The Existing Studies of NCAs Yield Mixed Results

1. The evidence shows ambiguous effects of NCAs on wages and mobility and supports the argument that they provide procompetitive benefits

Evidence regarding the impact of NCAs on wages is neither definitive nor unidirectional. Rather, as McAdams observed, it "is mixed." While the NPRM correctly observes that several studies report negative wage effects associated with increased "enforceability" of NCAs[53] or, inversely, positive wage

---

[48] *Id.*

[49] *Id.*

[50] *See*, e.g., FTC 2020 NCA Workshop, Evan Starr, Tr. at 158 (noting "much harder to estimate causal effects using noncompete agreements); Tr. at 159 (lack of studies isolating random variation in use of noncompetes); *Id.*, Ryan Williams, Tr. at 192 (regarding identification issues); *Id.*, Ryan Nunn, Tr. at 192.

[51] The NPRM's misapplication of a model in the Lavetti, Simon, and White paper is one example of a strained attempt to discount—and indeed invert—research findings. NPRM at 3501, 3524. The presentation of an alternative model—one that leads to merely "suggestive" observations, to make an *ad hoc* adjustment to account for an unobserved base rate of "enforceability" is simply conjecture. As we explain below, the "enforceability" assessment itself is deeply problematic. More than that, the NPRM seems to be suggesting a weak rewrite of the paper at issue, without any replication of the original work, all in the service of a finding that no existing study demonstrates or suggests. That is not credible evidence that anyone has demonstrated a negative impact of NCAs or NCA enforceability on physician wages.

[52] For a discussion of some of the difficulties raised by studies' use of "enforceability" assessments, see Jonathan Barnett & Ted Sichelman, *The Case for Noncompetes*, 87 U. CHI. L. REV. 953 (2020).

[53] Matthew S. Johnson, Kurt Lavetti, & Michael Lipsitz, *The Labor Market Effects of Legal Restrictions on Worker Mobility*, Working Paper (2020) at 2, https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3455381.

effects associated with decreased or limited "enforceability," other studies suggest positive wage effects, at least for certain categories of highly compensated workers.

Studies also suggest that the effects of NCAs (or enforceability) are context dependent. For example, Starr, Prescott, and Bishara exploit their 2014 survey on NCA usage to study the impact of signing an NCA on wages and other factors, such as training.[54] They find a significant positive association between NCAs and wages, although they also find that the wage differential depends when employees receive notice of their NCAs: their results suggest that employees who learn of their NCAs before accepting a job offer have 9.7% *higher* earnings, but employees who learn of their NCAs after accepting a job offer have "no observable boost in wages or training."[55]

As Alan Meese notes, the top-line lesson of this study is that the *typical* NCA *increases* wages, and distinguishing between properly disclosed and improperly disclosed NCAs—and *encouraging*, not prohibiting, the former—could have significant positive wage effects:

> [Starr, et al.] has also found that 61 percent of employee noncompete agreements are disclosed *before* employees accept employment. Moreover, when employers do disclose such agreements, employees bound by them earn significantly *higher* wages than similarly situated employees not bound by such agreements. Taken together and viewed in their entirety, these data suggest two distinct results. First, the average impact of employee noncompete agreements is to reduce wages, and this result is driven by a subset of *atypical* employee noncompete agreements, i.e., those not initially disclosed to employees. Second, where employee noncompete agreements are disclosed, and the *typical* agreement *is* disclosed, employees receive higher wages than they would have received had they not entered into such agreements. These higher wages presumably reflect the parties' expectations—confirmed by the data—that such agreements will induce additional training and/or the production of information.[56]

Further research into the impact of timing—of when employees become aware of a job's NCA terms—could have significant policy implications. Government intervention to lower workers' information costs, and reduce employee/employer information asymmetries, might be very different from—and

[54] Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force,* 64 J.L. & ECON. 53 (2021). Note that, whereas the prior Starr study considered the impact of NCA enforceability, this finding by Starr, Prescott, and Bishara has to do with *signing* an NCA.

[55] *Id.* at 75. In a footnote, the authors explain that this is among the observations that may be driven by unobservables. *Id.* at n. 34-35. We are not suggesting that the finding is definitive. Indeed, we spend a large part of these comments on data and methodological questions arising across the body of empirical literature. For those reasons, we suggest that this is an area that merits additional research.

[56] Alan J. Meese, *Don't Abolish Employee Noncompete Agreements*, 57 WAKE FOREST L. REV. 631, 702 (2022). On the inducement of additional training and/or production of information, see *infra* notes 85-90 and accompanying text, and Section II.

less costly than—interventions that prohibit NCA usage. They may also have implications for the distribution of policy effects across workers, firms, and (downstream) consumer welfare.

There are other studies suggesting contexts in which NCAs might increase wages or compensation. For example, Lavetti, Simon, and White conducted a survey of primary care physicians in five states.[57] Nearly 2,000 respondents provided input into panel data on both the use of noncompetes and various labor market outcomes of interest, such as earnings, incentive-based payments, and patient characteristics. Those survey data were analyzed with and without the findings from a 2011 survey by Bishara on the relative strength of enforceability across the states.[58] The results suggest that—at least for physicians—greater enforceability is associated with higher, not lower, compensation:

> Using three years of longitudinal earnings data per physician, we estimate that [NCAs] increase the annual rate of earnings growth by an average of 8 percentage points in each of the first 4 years of a job, with a cumulative effect of 35 percentage points after 10 years on the job.[59]

Analyzing wage growth in terms of enforceability amplifies the difference: cumulative earnings gain over the first ten years is estimated to be 70% among those with NCAs but only 35% for those without them, on average; "comparable estimates are 89% and 36% respectively in the model using variation in state enforceability."[60]

They also find a higher incidence of patient referrals associated with NCAs,[61] which may imply allocative and search efficiencies, and potentially patient benefits, in addition to whatever benefits accrue to the physicians. As the authors note, physicians present an interesting and distinctive occupational case study, in part because the practitioner-patient relationship may be a distinctive and durable form of human capital[62] (or, in the alternative, of good will), and in part because legal restrictions—notably anti-kickback laws—restrict both explicit and implicit payments or revenue-sharing for referrals.[63] Those distinctions may suggest other occupations worth scrutiny; they also suggest limits to the generalizability of the physician organization findings.

A 2019 study by Kini, Williams, and Yin examines the impact of NCAs on Chief Executive Officer (CEO) compensation. CEOs are distinctive in several ways. For one, due to SEC filings, CEOs are an exception to our typical inability to know which workers are signing NCAs. Second, CEOs are likely to be relatively well informed about the terms of their employment and better equipped to bargain over terms such as NCAs and non-disclosure terms, as well as compensation.[64] The study exploits staggered, state-level changes in NCA enforceability to estimate the relationship between NCA usage on both the CEO compensation and the monitoring of CEO performance.[65] Results suggest that increases in NCA usage and enforceability are both associated with higher total CEO compensation: among other things, the annual total compensation for CEOs with NCAs is 18.4% higher than it is for CEOs without NCAs.[66] Also,

> As stricter enforcement enhances the likelihood that a CEO with an NCA [NCA] will be fired for poor performance and limits the CEO's outside options, the CEO will demand an increase in total compensation for bearing increased job risk. The board agrees to the higher compensation but increases alignment of interest and risk-taking incentives to reduce the possibility of the CEO taking actions that can harm long-term shareholder value but reduce the CEO's short-term job risk.[67]

Other studies also suggest potential efficiencies associated with NCAs, if not higher wages. Garmaise (2011), for example, studied the effects of NCA enforceability on both executive compensation and firm investment by analyzing both time series and cross-sectional variation in enforceability across the states.[68] He found that greater enforceability reduces both compensation growth and total compensation.[69] In addition, he found greater enforceability to be associated with a shift in compensation towards salary, and increased salary growth, relative to other forms of compensation.[70] These

[65] *Id.* Data regarding CEO contracts were compiled by hand based on SEC filings. The authors were able to identify 7,661 unique CEOs from ExecuComp, but found employment contracts for only 3,192; that is "only 41.67% of all CEOs in the ExecuComp database have employment contracts during our sample period." Still, the study incorporates data on nearly half of all CEOs of publicly traded firms.

[66] *Id.* at 25-6.

[67] *Id.* at 26.

[68] Mark J. Garmaise, *Ties that Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J. L. ECON. & ORG. 376 (2011). Data regarding executive compensation and board participation were taken from Standard and Poor's ExecuComp database, which includes such data on the five most highly paid executives for 2,610 large publicly traded U.S. firms; on R&D investment, capital expenditures, and acquisitions were obtained at the firm level from Compustat. *Id.* at 388.

[69] *Id.* at 21 ("For a given executive, a shift to a tougher enforcement regime reduces compensation growth by 8.2%, which is 25% of the mean growth rate."). Garmaise defines total compensation as the sum of salary, bonus, "other annual," total value of restricted stock granted, total value of stock options granted, long-term incentive payouts, and "all other total" as defined and reflected in the ExecuComp data.

[70] *Id.* at 22.

compensation effects represent benefits to the firms: that is, greater enforceability was found to be associated with lower turnover and greater Board of Directors participation, not just lower total compensation growth.[71]

Gurun, Stoffman, and Yonker find decidedly mixed effects. The authors exploit a commercial policy change, rather than a statutory one, to study the impact of NCAs on financial advisors and their industry.[72] Specifically, they use firms' adoption of the "Protocol for Broker Recruiting" ("Protocol") as an event. The Protocol permitted a financial adviser to take client lists and contact information, from a firm participating in the Protocol, to a new place of employment without fear of legal action.[73] In effect, the Protocol reduced both NCA enforceability and enforcement for numerous firms and advisors, even in states with permissive enforcement regimes. Unlike other enforceability studies, this was based on firm-specific data that reflect actual changes in both NCA usage and NCA enforcement.[74]

Adviser turnover was observed to increase, initially and temporarily, after firms join the protocol.[75] Because advisors could decamp for new firms without fear of suit, firms became less willing to fire advisors for misconduct, and broker misconduct increased.[76] In addition, by the second year after adopting the Protocol, "client fees increased by about 13% from pre-adoption levels. After three years, fees remain about 18% higher than pre-adoption fee levels."[77] As the authors note, "[t]hese findings, along with those on higher misconduct rates, call into question whether unlocking clients makes them better off."[78]

[71] *Id.* at 25. Garmaise did not, however, find significant impact on firm value or profitability. *Id.* at 27-8.

[78] *Id.*

A 2015 study of hair salons by Johnson and Lipsitz did not examine wage *per se*, but a wage-related aspect of NCAs,[79] surveying NCA use among hair salons by e-mail.[80] Specifically, the study examined the conjecture that NCAs may be used to transfer utility from employees to employers when the market-clearing wage is constrained.[81] Findings supported the hypothesis that the minimum wage will have a negative effect on employment when NCAs are unenforceable, but not when they are.[82] There was also evidence for the proposition that NCAs were surplus maximizing for some salons, but not others; that is, NCAs may be employed by salons that are wage constrained and lack access to credit, to the detriment of the joint surplus (salon plus employee).[83] Like many of the studies discussed in the NPRM, Johnson and Lipsitz depend centrally on survey evidence, and the cross-sectional convenience sample of 218 salon owners[84] is a conspicuous limitation. Still, the study suggests important questions about the total impact of NCAs on labor markets and, for low-income employees, about the potential interaction of NCAs with minimum wage policies on employment. Additional research into these issues with better data could be important, to the extent one is concerned about the total impact of NCAs on labor markets and, especially, on workers.

In the same paper, Johnson and Lipsitz investigate the impact of NCAs on on-the-job training.[85] They find that salons using NCAs are 14% more likely than the mean to provide training to newly hired workers.[86] Starr also observes a training effect—one similar in magnitude—across categories of workers.[87] His results suggest that, if a state were to adopt a policy change in which it moves from non-enforceability of NCAs to average enforceability, the likelihood of worker training would increase 14.7%.[88] Moreover, Starr's results demonstrate that "the positive correlation between noncompete enforceability and training… is driven almost entirely by firm-sponsored training. The relationship between noncompete enforceability and self-sponsored training is practically zero."[89] While Starr, Prescott, and Bishara did not find a relationship between training and the *timing* of employees

learning about NCA terms, these and other studies suggest that NCAs can, in fact, ameliorate hold-up problems associated with investments in employee training, as well as potential tradeoffs in labor markets, such as tradeoffs between wages and firms' investments in employee training.[90]

None of our discussion is meant to suggest that the various cited papers based on natural experiments[91] are without value. Indeed, in a body of literature based on so few natural experiments (relative to, e.g., the literature regarding the effects of minimum wages), we do not simply dismiss all the studies that lack a clear causal design. Our purpose, rather, is threefold. First, we mean to point out that the empirical basis for regulatory intervention is limited, especially when one considers federal regulations that would sweep as broadly as the Proposed Rule. Second, as we discuss below, the emerging empirical picture is more complex—and the results more mixed—than the Commission seems to recognize. Third, as discussed by Bishara and Starr, McAdams, and numerous participants in the FTC's 2020 workshop, there remain significant data and methodological limitations across the existing body of literature. Collectively, these undercut both the generality of the Commission's purported findings about the effects of NCAs (or NCA enforceability), and the confidence that the Commission and other policy makers ought to attribute to such findings.

2. *The downstream effects of NCAs on competition and consumers is theoretically ambiguous and empirically unestablished*

Setting aside the study of the Broker Protocol,[92] the NPRM notes precisely one study on the downstream price effects of either NCA usage or enforceability, stating that a 2021 paper by Hausman and Lavetti on the effects of physician NCAs, is "the only study of how non-compete clauses affect prices."[93] That suggests a gaping hole in the literature. Antitrust has not yet abandoned (and should not abandon) its concern with consumer welfare and downstream prices.[94]

At the outset, we might wonder how well a study of physician NCAs and health care services prices will generalize across occupations, products, and services. We might also wonder about endogeneity and identification issues, given data limitations on specialty distribution within firms, myriad state

[93] NPRM at 3490 (citing Naomi Hausman & Kurt Lavetti, Physician Practice Organization and Negotiated Prices: Evidence from State Law Changes, 13 AM. ECON. J. APPLIED ECON. 258 (2021)).

[94] Or with other cognizable downstream effects, such as the impact of qualitative aspects of goods or services, output, etc.

and federal policy changes pertaining to health care reimbursement, background changes in physician practice organization, and a dearth of major state law NCA policy changes in the period in question, 1996-2007.[95] Changes in physician organization have been ongoing for several decades, and include not just a general trend towards consolidation, but increasing vertical integration, as primary and ambulatory care practices are acquired by hospitals, hospital systems, and networks.[96]

The issue of measuring changes in NCA enforceability seems especially salient, given the difficulty of quantifying changes in enforceability associated with legal changes, especially common law ones,[97] soft or subjective elements of the metric used to attempt quantification, and the fact that neither Bishara's approach to measurement nor its implementation in the study seems ever to have been tested against any objective measures of litigation impact. The nature, sensitivity, and specificity of the metric also seem critical given the study's findings, which indicate that the *sign* of the putative effect changes as one shifts one's focus from establishment-level changes to firm-level changes in provider organization.[98]

The NPRM's treatment of the Hausman & Lavetti study seems especially puzzling given the Commission's considerable experience with health care competition matters and, specifically, economic research on health care competition issues conducted by FTC staff in BE. The paper is, in many ways, a careful and thoughtful attempt to investigate the relationship between NCAs and the organization of physician practices. And, indeed, the authors acknowledge various challenges posed by data limitations, among others.[99]

At the same time, the study employs market definitions and analytic methods eschewed in the Bureau's investigations of health care provider mergers. The NPRM also is unclear on the confidence the Commission attaches to the study's striking findings:

> we find that a 100 point increase in the *establishment*-based HHI causes a reduction in negotiated prices of about 1.4 percent to 1.9 percent on average. In contrast, the same increase in

Fulton, *Health Care Market Concentration Trends in The United States: Evidence and Policy Responses*, 35 HEALTH AFFS. 1520 (2017).

[97] *See* Barnett & Sichelman, *supra* note 52.

[98] *See* Hausman & Lavetti, *supra* note 93, at 260 ("100 point increase in the *establishment*-based HHI causes a reduction in negotiated prices of about 1.4 percent to 1.9 percent on average. In contrast, the same increase in concentration caused by firm-level consolidation holding fixed establishment concentration causes prices to increase by 1.7 percent to 2.1 percent.").

[99] *See id.* at 277-8.

> concentration caused by firm-level consolidation holding fixed establishment concentration causes prices to increase by 1.7 percent to 2.1 percent. OLS specifications imply very small (but statistically significant) positive price effects of 0.02 percent or less, consistent with within-state evidence from Baker et al. (2014).[100]

While we should not dismiss surprising results out of hand, these findings seem more a red flag than a credible interval estimate. 100-point changes in HHI are not at all likely to signal competitively significant events. Small changes in concentration are not *necessarily* infra-marginal in their price effects, but this is supposed to be a general result across geographic and service markets, and a decade, not surprising observations in specific geographic and service market. As such, it seems highly unlikely, and at odds with both the FTC's considerable experience with provider mergers and the larger body of health care competition research.[101]

As the Commission is well aware, calculating HHI based on market share is elementary, given a measure of market share: for a given market, one sums the squares of each firm's percentage market share. That's it. And, as the Department of Justice Antitrust Division reports:

> The agencies generally consider markets in which the HHI is between 1,500 and 2,500 points to be moderately concentrated, and consider markets in which the HHI is in excess of 2,500 points to be highly concentrated.[102]

Consider, for example, a geographic market in which 10 firms (10 group practices) provide general pediatric services. For the sake of simplicity, assume that each firm has an identical 10% market share. In that case, the HHI is 1,000 (that is, $10(10^2)$). Suppose, further, that two of the ten firms merge, such that eight non-merging firms each retains its 10% market share, leaving the merged entity with a 20% share. In that case, the HHI would be $8(10^2) + 20^2 = 1{,}200$. That single acquisition would yield a 200-point change in HHI: double the change that is supposed to be robustly associated with significant price increases. The estimate does not seem credible.

The study employs a commercial database that includes the "medical claims for all active employees and their dependents from a sample of large firms," from 1996-2007.[103] That is a substantial longitudinal (and nationwide) sample, although it is worth noting that this study, like many, lacked access

[103] Hausman & Lavetti, *supra* note 93, at 269.

to All-Payer Claims databases,[104] and one might wonder whether the sample from large firms skews the data. Moreover, the data include prices for ambulatory care services only. Hence, the extent to which hospitals as organizations, and even group and individual practices, cross-cut the delivery of ambulatory and hospital-based services may be a confounding factor of interest, as their longitudinal business database permits firm-level observations, but does not identify the specialties of the physicians at each firm—and, as we noted above, there is evidence of ongoing vertical integration in health care provider markets.[105] Identification may be especially important here, as the findings are *directionally inverse* depending on the choice of firm-level or establishment-level analysis.

Also noted above, the study depends on "a new database quantifying the variation in state-level NCA laws systematically over time, following the measurement system developed by Bishara (2011)."[106] Note that while a number of the "enforceability" studies cited in the NPRM also follow Bishara's framework, they do not all employ the same scale. Moreover, although the notion of "enforceability"—like the relative stringency of regulations—carries a rough intuitive connotation, there is no objective measure of "enforceability" and, as we discuss below, it is not clear what the study's ordering system measures, or how well.

Hausman and Lavetti acknowledge that their "modeling approach follows the general structure-conduct-performance (SCP) frame- work for estimating effects of market structure on prices, which has several well-known limitations."[107] Indeed, while HHIs may still be used for rough and preliminary screening purposes, merger analysis has, by and large, and for decades, left the SCP framework behind, as both theoretical and empirical work has undermined the approach.[108] We would not expect merger screening or analysis to rely upon regressions of HHIs. Does the Commission's Bureau of Economics contend that they should?

Work from the Bureau of Economics has reinforced the background methodological trend away from the SCP paradigm in provider markets. Both staff and management in the Bureau of Economics have made substantial contributions to the study of competition in health care markets, with a

focus on the study of provider consolidation.[109] That research seems to have had a significant impact on the courts' treatment of provider mergers. Between 1993 and 2000, the federal antitrust agencies (FTC and DOJ) challenged eight hospital mergers, losing all eight challenges.[110] Hospital merger challenges were nearly abandoned, but the losing streak spurred renewed research efforts, both within the Bureau and across the academy. Critically, BE staff undertook a series of merger retrospective studies, ranging from individual case studies to reviews of dozens of consummated provider mergers.[111] These are, in essence, forensic investigations, aiming "to determine ex post how, if at all, a particular merger affected equilibrium behavior in one or more markets."[112] Such studies complement diverse cross-sectional and theoretical work on hospital mergers, and on provider consolidation more generally.[113] The retrospectives have helped refine merger screening methods employed within the FTC; and they have been widely credited with reversing the way provider mergers are viewed in the courts.[114]

Research on health care competition from BE and elsewhere, coupled with enforcement by the FTC's Bureau of Competition, represents a signal model of the application of applied industrial organization research to policy development and law enforcement. Notably, this research program militates against SCP assumptions in provider mergers, and against the market definition

alternatives employed by Hausman and Lavetti's study. Results suggest, for example, that various "the new screening tools (in particular, WTP and UPP) are more accurate than traditional concentration measures at flagging potentially anticompetitive hospital mergers for further."[115] Results also suggest "no statistically significant relationship between post-merger price change and the HHI screens, regardless of the geographic market or share metric employed."[116] Hausman and Lavetti are aware of the health care competition literature and attempt to address some of its challenges.[117] Still, given BE's research, and given the unlikely numerical findings, the NPRM's discussion of potential limitations to this single study of the downstream effects is curiously oblique:

> Generally, greater concentration may or may not lead to greater prices in all situations and may arise for reasons which simultaneously cause higher prices (indicating, therefore, a noncausal relationship between concentration and prices). In this case, the authors claim that researching the direct link between changes in law governing non-compete clauses and changes in concentration allows them to identify a causal chain starting with greater enforceability of non-compete clauses, which leads to greater concentration, and higher consumer prices.[118]

Both points seem correct as far as they go, but the NPRM is entirely unclear on the question what they imply for the significance of the study's findings. The NPRM states that "[t]here is evidence that non-compete clauses increase consumer prices and concentration in the health care sector."[119] In the NPRM's introduction, the suggestion is broader: "research has also shown that, by suppressing labor mobility, non- compete clauses have negatively affected competition in product and service markets in several ways."[120] Perhaps, but the Commission has identified only one study indicating downstream price effects. Does the Commission find the evidence credible? Or generalizable? The NPRM continues to expound on the study's dubious findings, and on conjectures about the mechanisms at play, at some length.[121] It also extrapolates on the reported findings, suggesting that they are reinforced by "another study, by Michael Lipsitz and Mark Tremblay, [that] shows increased enforceability of non-compete clauses at the state level increases concentration, as measured by employment-based HHI."[122] Does the Commission deem that finding important?

None of this is to say that NCAs cannot have an anticompetitive effect in health care markets, and it's certainly not meant to suggest that provider consolidation cannot be anticompetitive. BE research and FTC enforcement have demonstrated that health care provider mergers and acquisitions *can* be anticompetitive, under certain facts and circumstances. Many hospital markets are highly concentrated—on any measure—and providers of health care services who have market power might employ NCAs to create (or exacerbate) barriers to entry in both those services markets and input markets, such as professional labor markets. Many provider markets are subject to regulatory barriers to entry as well, such as state law Certificate of Need or Certificate of Public Advantage regimes,[123] which might interact with restraints on labor mobility. Rule of reason inquiry into physician NCAs in specific labor (and service) markets might well find harm to competition and consumers. And further economic research, such as that commenced by Hausman and Lavetti, might well foster successful and pro-consumer antitrust enforcement. But there are serious reasons to doubt the specific interval estimates produced by the one price study available, and there remain questions about the importance of context in assessing the effects of NCAs, and of the distribution of average NCA effects (of whatever accuracy), across distinct labor markets.

In any case, the substantial literature on health care competition, and the distinctive characteristics of health care product, service, and labor markets—highly regulated at the state and federal levels, and subject to a complex mix of public and private payment—strongly suggest that one cannot reliably generalize the results of a single study on NCAs and ambulatory care prices across the entire national work force, much less to the downstream price effects of NCAs across industries, products, and services markets.

3. *The weight of the evidence does not support the claim that NCAs decrease innovation*

The Commission argues that the "weight of the evidence indicates non-compete clauses decrease innovation."[124] The "weight of the evidence" is unclear. There are, indeed, some studies suggesting that greater NCA "*enforceability*" is associated with some innovation-relevant harm. The main paper that seems to fit the Commission's model of reliable studies on the topic examines seven legal changes from 1992-2008, which were reported to increase or decrease the level of a state's NCA

[124] NPRM at 3492.

enforceability.[125] That paper finds, according to the NPRM, "that the value of patents, relative to the assets of the firm, increase by about 31% when non-compete clause enforceability decreases."[126] But overall, findings are mixed, the literature is hardly settled or comprehensive, and there remains the question of the confidence one should attach to existing studies, separately or in aggregate.

For the papers that the Commission cites, two find that the enforceability of NCA increases in innovation, one finds a decrease, and one is ambiguous.[127] On the one hand, citing reasonable limitations, the Commission suggests that it puts relatively less weight on those studies. On the other hand, the Commission seems sufficiently confident to conclude that "enforceability broadly diminishes the rate of innovation,"[128] based on one paper that looks at value of patents, which is but one of several commonly used, and oft-debated, measures of innovation.[129] Later, the Commission admits it "is unable to extrapolate from the relevant studies to quantify or monetize this benefit."[130]

As a background matter—and conspicuous in the economic literature on innovation—innovation (and rates of change in innovation) can be hard to quantify, in part because there are diverse indicators of innovation, but no definitive one.[131] Patents have value and some connection with innovation, but patents vary wildly in their value.[132] Value-adjusted patents are better indicators, but patent value, and the time frame in which it's best evaluated, may be hard to assess, as evidenced by, e.g.,

[132] For a classic review of the literature on the economic significance of patents, and difficulties in determining what aspects of economic activity are, and should be, captured by patent statistics, see Zvi Griliches, *Patent Statistics as Economic Indicators: A Survey*, 28 J. ECON. LIT. 1661, (1990),

FRAND disputes,[133] or the bundles or thickets in which many patents are sold or licensed. Also, patents may be more (or less) relevant given the technology in question, just as trade-secrets and copyrights might have greater or lesser significance depending on the sector and the nature of the tech; for example, trade secrets and copyright might have greater import in areas as diverse as software and biotech. Factors such as venture capital funding, the establishment and growth of startups, etc. also are significant but, again, of varying significance relative to other signals.[134]

Second, the theoretical impact of NCAs on innovation is ambiguous, and empirical findings regarding the complex subject of innovation suggest mixed effects associated with NCAs (or, more commonly, with changes in NCA enforceability).[135] For example, a 2018 study by Starr, et al., examines the impact of greater NCA enforceability on the creation, growth, and survival of spinouts and other new entrants, based on matched employer-employee data on 30 states and 5.5 million new firms. On the one hand, it finds that greater enforceability is associated with fewer within-industry spinouts; on the other hand, the within-industry spinouts created in greater enforceability states "tend to start and stay larger, are founded by higher-earners, and are more likely to survive their initial years."[136] They find no impact on entry by firms that are not within industry spinouts.[137] They suggest that greater enforceability may screen the formation of within-industry spinouts by dissuading founders with lower human capital.

[133] *See, e.g.*, Eli Greenbaum, *No Forum to Rule Them All: Comity and Conflict in Transnational FRAND Disputes*, 94 WASH. L. REV. 1085 (2019). Because objective valuation of FRAND terms may often be difficult, authorities tend to focus on the conditions under which (and forums in which) good faith negotiation can occur. *Compare* U.S. PTO/U.S. DOJ, *Draft Policy Statement on Licensing Negotiations and Remedies for Standards-Essential Patents Subject to Voluntary F/RAND Commitments* (Dec. 19, 2019), https://www.justice.gov/atr/page/file/1228016/download (emphasizing conditions of negotiation) *with* U.S. PTO/NIST/U.S. DOJ, *Withdrawal of 2019 Draft Policy Statement on Licensing Negotiations and Remedies for Standards-Essential Patents Subject to Voluntary F/RAND Commitments* (Jun. 8, 2022), https://www.uspto.gov/sites/default/files/documents/SEP2019-Withdrawal.pdf (emphasizing case-by-case evaluation of conduct).

[134] *Cf.* Bronwyn H. Hall & Dietmar Harhoff, *Recent Research on the Economics of Patents*, 4 ANN. REV. ECON. 541 (2012) (reviewing the literature and noting the importance of patents in certain sectors, while also concluding that "the sheer size and growth of the recent literature might lead one to assume that patents are an extremely important instrument of economic development and growth, which therefore attract a great deal of interest from researchers and policy makers. But this seems at odds with the weak evidence that patents serve as an incentive for innovation and the fact that relatively few firms find them an important means of securing returns to innovation").

[137] *Id.*

A recent working paper by Jeffers suggests that certain labor frictions in knowledge-intensive occupations can play an important role in investment decisions.[138] Using matched employee-employer data from LinkedIn, Jeffers finds that increases in NCA enforceability led to 7-11% declines in worker departures for workers in those occupations where the majority of workers have at least a bachelor's degree. Those declines, in turn, led to increased investment by those firms that rely more on knowledge intensive occupations.[139]

As we discuss below (and as noted in the NPRM), Marx, et al., 2009 exploited a Michigan statutory change—one deemed to increase NCA enforceability—to study worker mobility—specifically, innovator mobility.[140] Their findings suggest the increased enforceability was associated with lower mobility—or job switching rate—of inventors (roughly, employees who are patent holders). However, a 2019 study by Carlino exploited the same legislative event to investigate the effect of NCA enforceability on startups and job creation.[141] Based on a difference-in-differences analysis, he found that an increase in NCA enforceability had a small effect to none-at-all on startups, and a very small, if positive, effect on job creation.[142]

Third, a 2020 paper by Barnett and Sichelman in the University of Chicago Law Review reviews ambiguities and limitations (including plain errors) in the NCA innovation literature in detail.[143] One of its key observations is that almost none of the relevant studies has a causal design; that is, the studies that employ cross-sectional regressions cannot be said to show that changes in NCA enforceability *cause* the observed effects.[144] We do not recapitulate their article here, but we commend it to the Commission as another important commentary on the available literature. We note, specifically, as we discuss in Section I.B.3, *infra*, their observation that several of the event studies

cited by the NPRM depend on oversimple, and in some regards erroneous, readings of Michigan law.[145]

We do not suggest that any specific mixed or positive findings be considered definitive. Rather, the piecemeal, mixed, and in some regards infirm findings might be considered suggestive as to some of the impact of NCAs on factors associated with innovation, but they cannot be considered adequate grounds for the general conclusion that "non-compete clauses decrease innovation"; certainly, they are inadequate if they are to be considered a significant plank in the justification of a sweeping federal ban on NCA usage.

B. The Existing Event Studies Depend on Eccentric Events and Their Results Are Not Sufficiently Generalizable

The NPRM notes the importance of event studies —"'natural experiments' resulting from changes in state law"—to assess *the effect* of changes in state law on earnings.[146] According to the NPRM, "[t]he use of a natural experiment allows for the inference of causal effects, since the likelihood that other variables are driving the outcomes is minimal."[147] That observation should be subject to significant qualification, but we agree that event studies *can* support causal inferences and that, broadly speaking, they represent an important means of investigating the economic implications of policy changes.

However, as Starr and others have noted, observable variation in NCA law had long been limited, myriad subtle differences across the states notwithstanding. Workshop panelists and others have noted the difficulty of estimating the causal impact of NCA use, due in part to a dearth of exogenous variation.[148] As Bishara and Starr put it in 2016, "very few states have significantly changed their noncompete policies in the last 30 years."[149] More recent changes in state NCA law may be more significant. In the past several years, nine states and the District of Columbia have adopted income- or wage-based limits on NCA enforcement.[150] These may yield data for informative event studies without the artifice of "enforceability" measurement, but the studies cited in the NPRM predate

---

[145] *Id.* at 1018 ("Marx et al., however, overlook this complexity and erroneously assume that nonenforcing states always apply their own law so as to void a noncompete agreement that falls under the law of another state.").

[146] NPRM at 3486.

[147] *Id.*

[148] *See, e.g.*, FTC 2020 NCA Workshop, Evan Starr, Tr. at 173.

[149] Bishara & Starr, *supra* note 2, at 537.

[150] Since 2019, five states (Maine, Maryland, New Hampshire, Rhode Island, and Virginia have adopted statutes preventing enforcement of NCAs against low-wage workers; and since 2020, four states (Colorado, Illinois, Oregon, and Washington) and the District of Columbia have adopted similar limits pertaining to middle-income (to mid-plus) workers. For a recent overview of state NCA laws, see, e.g., Beck, *supra* note 18. The NPRM's examples of event studies mostly concern estimates of relative "enforceability" across many, and often subtle or ambiguous, changes in state laws, instead of studies that focus on unique, major changes in NCA law. It's not at all clear that these are properly regarded as event studies, but, in any case, as we discuss in detail below, they rest on a soft and problematic metric for legal change.

these statutory changes. Without such changes, the many, highly varied, and mostly subtler legal changes that had been available constrain the likely generalizability of existing NCA event studies. As McAdams observed, "the more credible empirical studies tend to be narrow in scope, focusing on a limited number of specific occupations (e.g., executives) or potentially idiosyncratic policy changes with uncertain and hard-to-quantify generalizability (e.g., banning non-competes for technology workers in Hawaii)."[151]

1. *Hawaii changed more than NCAs but only for a small number of tech workers*

The Hawaii technology workers study, Balasubramanian, et al., is in many regards well designed and well executed. It exploits a 2015 statutory event in Hawaii to study the effect of NCA enforceability changes on employee wages and mobility.[152] The authors "find that Hawaii's 2015 CNC ban increased new-hire monthly earnings by 4.2 percent, while overall (that is, all worker average) monthly earnings rose 0.7 percent."[153] Supplementing their initial Hawaii analysis with a cross-state analysis, they find that "eight years after starting a job in an average enforceability state, technology workers have about 8 percent fewer jobs and 4.6 percent lower cumulative earnings relative to equivalent workers starting in a nonenforcing state [NCA]."[154] They suggest that their results are consistent with the notion of a significant lock-in effect associated with NCAs. The finding could be especially significant, as the results suggest that the NCA enforcement effects are not confined to low-wage workers.

At the same time, the study seems to illustrate all of McAdams's general concerns about "the more credible empirical studies."[155] Regarding workers' occupations, the authors correctly observe that the relevant statutory change pertained to the tech sector, or "an employee of a technology business."[156] And the statute established that NCAs for tech workers "shall be void and of no force and effect."[157] But there are several wrinkles here.

First, the statute did not so neatly address tech workers. Under the Hawaii statute, tech workers do not include employees of "any trade or business that is considered by standard practice as part of the broadcast industry or any telecommunications carrier."[158] That is, the statute covered tech workers, but not those in the telecom or broadcast industries, or, indeed, any tech workers employed by

[157] *Id.*

[158] *Id.*

any firm "other than a trade or business that derives the majority of its gross income from the sale or license of products or services resulting from its software development or information technology development."[159] Administrative assistants at tech firms were in, but, say, programmers in telecom, government, education, transportation, or health care were out.

Second, as the authors acknowledge, the occupational definition was not the law's only idiosyncrasy. The legislation did not simply apply to NCAs. Rather, it restricted a "noncompete clause or a non-solicit clause in any employment contract."[160] Given sufficient state law variation, that wrinkle could be a feature rather than a bug: post-employment restrictions often are bundled,[161] and one might like to study the effects of changes in the law bearing on the various elements of the bundle, jointly and severally. Given the current levels of variation across state laws, it is a limitation.

In addition, it's unclear how much of a change the law effected, even for tech workers (as defined), and for NCAs and non-solicit clauses. As the authors acknowledge, the statute was not retroactive;[162] that is, it would apply to new employment agreements, going forward from the effective date, but not to those already in effect. Workers already covered by NCAS were still covered. Moreover, prior to the statutory change, Hawaii NCAs already were subject to "a reasonableness analysis."[163] NCAs could easily fail Hawaii's reasonableness test, as Hawaii courts had considered "the benefits to the employer from noncompete or nonsolicit agreements" to duplicate those of trade secret law, and hence "impose undue hardship upon employees of technology business and the Hawaii economy."[164]

Finally, we might wonder whether the Hawaii tech sector (as defined under Hawaii law) is representative of tech sectors in other states. Hawaii is a very small state, with a total population (not just its workforce) numbering approximately 1.4 million (approximately 1.36 million in 2010, and approximately 1.44 million in 2022).[165] And Hawaii does not appear to have a vibrant tech sector, even relative to its small size. One source suggests that there is not a single tech firm among the 100 largest employers in Hawaii.[166]

In sum, we have a key legislative event that pertains to one industry (not necessarily one occupational category), on an idiosyncratic definition of that industry; the legal change did not apply exclusively to NCAs, it did not apply retroactively to existing NCAs, and it changed the enforceability of NCAs relative to an uncertain, but apparently somewhat stringent, standard of reasonability. It did so in a very small state, where the workforce included some tech workers, but no significant tech industry to speak of. The authors responsibly acknowledge a few of these idiosyncrasies, and their potential to raise "concerns about generalizability."[167] But that seems to put it mildly. It's entirely unclear whether observations that turn on Hawaii's 2015 NCA legislation can be generalized at all, whether to a potential ban on NCA usage, to changes in NCA enforceability that apply beyond the tech industry, or to potential changes in enforceability pertaining to either the tech industry or tech workers anywhere outside Hawaii. To its credit the FTC, likewise, acknowledges the concern about generalizability.[168] At the same time, the Commission seems comfortable making a "preliminary finding" of estimated wage effects across the nation, occupations, and industries based on a "back-of-the-envelope" extrapolation from unpublished findings regarding an idiosyncratic statutory reform in a state with a very small workforce and – even given the state's small size – a relatively small tech industry.[169] Picking the mid-point of this back-of-the-envelope range estimate does not make the Commission's preliminary estimate "conservative," but highly speculative. Respectfully, this does not seem suitable as an estimated effect for a Proposed Rule that would regulate tens of millions of labor agreements.

2. *Oregon banned NCAs for hourly and low-wage workers during the depths of the Great Recession which muddies general applicability*

A 2019 paper by Lipsitz and Starr exploits a 2008 statutory change in Oregon's NCA law that "banned [NCAs] for hourly and low-wage workers."[170] The Oregon statutory change, like the Hawaii legislation discussed above, is of interest in part because relatively little of the considerable state-by-state variation in NCA laws has to do with the simple binary question whether, for some tranche of the workforce, NCAs are or are not enforceable in court. And Oregon seems in several regards less of an outlier than Hawaii. First, it's a substantially larger state;[171] and second, a statutory change focused on hourly and low-wage workers may be more generalizable than one that applies to an eccentric segment of the tech industry in a state lacking a significant tech industry. Looking

[169] *Id.* ("Extrapolating from the estimates for Hawaii to the average impact on high-tech workers in each state, a prohibition such as the one in this proposed rule would increase earnings of high-tech workers in the average state by 4.8%.").

[170] *See* Lipsitz & Starr, *supra* note 91, at 162.

[171] *State Population Totals and Components of Change*, US CENSUS BUREAU, https://www.census.gov/data/tables/time-series/demo/popest/2020s-state-total.html#v2022 (estimating Oregon's population at 4,237,291 as of July 1, 2020).

specifically at hourly workers and comparing observed changes in Oregon against several groups of control states, Lipsitz and Starr find that, "on average, banning… [NCAs] increased the earnings of hourly workers [in Oregon] by 2-3%, with stronger effects for those in jobs most likely to sign… [NCAs], while raising monthly job-to-job mobility by 17%."

Those are significant effects but, as McAdams notes, the study is subject to potentially confounding factors.

First, Oregon's 2008 statutory change coincided with the beginning of "the Great Recession"; that is, with the most significant recession since the Great Depression of 1929-39.[172] McAdams also observes that "[r]esearch on regional recessions finds that the timing of recessions (both the onset and recovery) differs across states," including states in the same census region.[173] Hence, the timing of the statutory change may be regarded as "unfortunate," from a research perspective. Indeed, it

> raises the possibility that the paper's estimated effects are confounded by macroeconomic factors that—similar to [NCAs]—also influence wage growth and worker mobility, as well as by the differential policy responses by states. Indeed, in Lipsitz and Starr (2019), the mobility of workers in Oregon increased (relative to control states) soon after the ban took force in 2008, but average wages did not increase until a full three years post-ban (in 2011). Actual (or threatened) worker mobility is an important channel through which we expect workers to achieve wage growth in Oregon after its ban on non-competes. The fact that Oregon saw an increase in mobility without an increase in average wages raises the possibility that there are confounding factors at play.[174]

Second, as with Hawaii, we might question the extent to which the 2008 statute changed the state's law regarding NCAs and low-wage workers. Lipsitz and Starr state that they examine low-wage workers specifically to "focus our empirical analysis on the subset of workers for whom NCAs [NCAs] were enforceable before 2008, but were clearly voidable after 2008."[175] But Lipsitz and Starr themselves note that the NCA restrictions were not retroactive."[176] Hence, low-wage workers who did not change jobs were not among the subset of workers against whom NCAs were enforceable before 2008 but not after, at least not until a post-2008 change of jobs. And as with Hawaii, there were certain other wrinkles in the state law. Exceptions to the employees covered by Oregon's NCA limits included not just professionals—or persons "engaged in administrative, executive or professional

work who: (a) Performs predominantly intellectual, managerial or creative tasks; (b) Exercises discretion and independent judgment; and (c) Earns a salary and is paid on a salary basis,"[177] and *inter alia*, federal employees at any wage level,[178] various agricultural workers, including those paid on a piece-rate,[179] and a person "principally engaged in the range production of livestock and earns a salary and is paid on a salary basis,"[180] persons "employed in domestic service on a casual basis in or about a family home,"[181] and persons "engaged in the capacity of an outside salesperson or taxicab operator."[182]

In addition, the authors, citing a 2008 law review article by Rassas, note that, pre-2008 Oregon NCAs were subject to a reasonability test, involving "criteria meant to ensure that legitimate business interests were being protected without unduly harming workers."[183] That, of course, raises the question of the extent to which Oregon courts, prior to 2008, found NCAs for low-wage workers to serve legitimate business interest without harm to those workers.

The law review article they cite provides no objective measure, but it plainly suggests that Oregon courts, and indeed Oregon statutory law, were skeptical of NCAs prior to 2008. As Rassas observed,

> The former Oregon statute attempted to balance competing interests of the employee and employer by mostly "codify[ing] the basic common law rules" of reasonableness. Oregon courts imposed additional requirements for enforcement, tipping the balance in favor of the employee's interest in mobility....
>
> Oregon statutory law mandated that non-competes in any industry were void unless "entered into upon the: (a) [i]nitial employment of the employee with the employer; or (b) [s]ubsequent bona fide advancement of the employee with the employer."[184]

Statutory limits on NCAs in Oregon had been in place, undergoing piecemeal changes, since 1977.[185] Reviewing the case law, Rassas emphasizes that "Oregon courts did not take these

requirements lightly."[186] They imposed, among other things, both geographic and temporal limits on NCAs, which they deemed "'covenant[s] in restraint of trade,' the enforcement of which generally runs counter to public policy."[187] In addition, decisions by federal courts in the Ninth Circuit reinforced the substance of Oregon's statutory restrictions on NCAs. For example, in *Nike, Inc. v. McCarthy*, the Ninth Circuit found it…

> apparent that the legislature intended to permit employers to require existing employees to agree to a noncompete agreement, so long as the employee's job content and responsibilities materially increased and the employee's status within the company likewise improved. Otherwise, the employer would merely be imposing a new condition for the "same job." Id. Thus, an advancement would ordinarily include such elements as new, more responsible duties, different reporting relationships, a change in title and higher pay.[188]

And in *Ikon Office Solutions, Inc. v. Am. Office Prods., Inc.*, a federal district court held that, "[u]nder Oregon law, the right not to be subjected to a non-competition agreement, except as authorized… is an 'important employment-related statutory right.'"[189]

We do not argue that Oregon's 2008 legislation was inframarginal in its effects, or that it did not increase the cost of enforcement of NCAs for at least some employers of low-income workers.[190] Rather, given the statutory idiosyncrasies, and the complex pre-2008 restrictions, the magnitude of the change (on any clear measure) is uncertain. Indeed, it is not at all apparent that it represented a major change for hourly and low-income workers. For those reasons, and the confounding timing of the statutory change at issue and the Great Recession, it is not at all clear how the magnitude of Oregon's 2008 change in enforceability compares—or should be compared—with the disparate legal changes observed in control states.

We can ask a further question. When measuring or ordering the relative enforceability of state NCA laws, how should we assess, e.g., restrictions pertaining to a specific occupation (such as, e.g., tech industry employees in Hawaii) relative to those pertaining to, e.g., a certain income level, given that the specifics of the statutes vary? We might consider the percentage of the state's workforce fitting a categorical restriction under state law, the percentage actually or likely covered by NCAs, or various

other measures, and we might consider the domain of the restriction somehow normalized according to, e.g., the stringency of limitation. There is no objectively correct way to do this, but one or another means might be more or less useful for economic or antitrust analysis; and, in any case, we might want to know how it is being done within any given study and across the "enforceability" literature.[191]

3. Michigan's statutory changes were not a clear switch from unenforceable to enforceable and back again

Several papers exploit 2005 statutory changes in Michigan—the Michigan Antitrust Reform Act ("MARA")[192]—with or without a subsequent amendment in 2007, to investigate the impact of NCA enforceability on worker mobility, especially as it relates to innovation. MARA—perhaps inadvertently, increased the enforceability of NCAs. Marx, et al. 2009[193] found that the increased NCA enforceability permitted by MARA reduced the mobility—or job switching rate—of inventors; that is, roughly, employees who were patent holders. In a follow-up study, Marx, et al. 2015[194] found what might be viewed as a "brain drain":

> from Michigan to non-enforcing states following the… policy reversal: during a symmetric window from 1975-1996 surrounding [the change], the rate of emigration to non-enforcing states grew in Michigan (0.24%-0.32%) while dropping in states that did not enforce non-competes. The relative risk of post[change] emigration was 1.35 in Michigan, twice as high as in states that continued not to enforce non-competes.[195]

Barnett and Sichelman demonstrate in detail that these studies evidence significant problems in both data and analysis.[196] A central concern has to do with the legal analysis underlying the assessments of changes in enforceability. Marx, et al. (2009)[197] and Marx, et al. (2015)[198] both suppose that NCAs were generally unenforceable, prior to MARA's enactment in 2005, under a statute providing that "[a]ll agreements and contracts by which any person…agrees not to engage in any avocation or employment…are hereby declared to be against public policy and illegal and void."[199] They also argue—not without evidence—that MARA's repeal of Public Act 329 was inadvertent. They also note a 2007 statutory amendment to the pertinent provision of MARA, which represented its

retrenchment (not rescission).[200] Specifically, the 2007 amendment added a "reasonableness doctrine" that "did not reinstate the previous ban."[201]

Neither event was quite what the research supposed. As Barnett and Sichelman explain, the assumption that NCAs were unenforceable in Michigan prior to 1985, but generally enforceable from 1985-87,[202] seems to misread the law. Prior to 2005, Michigan courts might uphold NCA terms or approve changes of venue due to, e.g., choice-of-law provisions in the NCAs or the larger employment agreements within which they were situated. Perhaps more important, the authors of the Michigan studies

> appear to overlook that MARA included a "savings clause" that provided that the statute repealed by MARA would "remain in force for the purpose" of enforcing any liability under the repealed act. Consistent with the saving clause, Michigan courts declined to enforce NCAs that were entered into prior to MARA.[203]

That savings clause has implications for both the 2005 and 2007 events. The 2005 adoption of MARA had no bearing on NCAs entered-into prior to the law's enactment and, hence, no bearing on employees actually or putatively subject to NCAs before 2005. Multi-state firms with strong incentives to employ NCA terms would have had a natural incentive to use choice-of-law provisions to impose or maintain those terms in Michigan pre-2005. The studies assume that California's relatively recent decisions disfavoring the application of such choice-of-law clauses to NCAs in California represent the general case, but, as Barnett and Sichelman demonstrate, it does not.[204] Moreover, operative NCAs would have included not just employees subject to extra-Michigan NCAs, but some employees whose employment agreement documents pre-2005 included NCA terms, even if, for those employees, the terms were, at least arguably, unenforceable under Michigan's prior law. As the NPRM notes, and as several authorities have observed, employment agreements commonly contain NCA terms, even in states where such terms are unenforceable; and NCAs are common in engineering and other technical occupations. There are also questions when, to what extent, and on what

terms, the 2005 policy change fostered the negotiation (or imposition) of NCAs on tech professionals whose employment remained unchanged from 2005-07.

The savings clause also has implications for Michigan's 2007 policy reform, beyond whatever retrenchment was accomplished by the savings clause post-2007. Because the 2005 policy change was smaller than the studies suppose, the effect of its 2007 retrenchment was also smaller than the studies suppose. As noted by Barnett and Sichelman, errors and ambiguities in assessing the magnitude of legal changes are especially salient for the Marx et al. [2015] study (as well as a 2009 study by Marx and others), given the relatively small decrease, in absolute terms, in labor mobility observed in Michigan. The 2009 Marx et al. study considers 98,468 inventors and 27,478 inventor moves within Michigan over the period 1963-2006. In absolute terms, labor mobility increased post-MARA over the full time period from 7.18% to 8.98%, although other "non-enforcing" states saw a larger increase, from 7.95% to 10.80%.[205]

> While the Marx, et al. studies never report these differences in absolute numbers, they are easy to calculate. Specifically, the difference of in-state mobility in Michigan versus non-enforcing states in absolute terms was roughly 1%, equating to an absolute difference of about 100-200 moves per year purportedly lost within Michigan due to the enforcement of noncompetes. For inventors moving out of Michigan, the numbers are much lower.[206]

In brief, errors and uncertainty in assessing legal changes in Michigan and in control states takes on an outsize import given the small number of job changes potentially attributable to the Michigan statutory change.[207]

One might suppose that such misinterpretations of the law represent "mere" coding errors, and that such errors are occasional (and sometimes minor or debatable), adding some degree of random error, and hence noise, to signals of the economic impact of policy changes, while leaving findings directionally—and approximately—intact. But the Michigan case should remind us that, with small numbers of observations and/or small effects, recoding might well render previously observed effects statistically insignificant or nil. As we have seen above, such coding issues seem significant across key event studies in the literature, rather than outlier events. And as we discuss in Section III.D below, such issues point to fundamental questions about the meaning and reliability of the "enforceability" metric on which so many studies—and the Commission's conclusions—rely.

---

[205] *See* Barnett & Sichelman, *supra* note 52, at 1021.

[206] *Id.*

[207] Needless to say, it is highly unlikely that all tech professional job changes in the pertinent interval were caused by the change in NCA enforceability.

4. *California is not a clean event study due to California's unique attributes*

Policy discussions of NCAs often look to Gilson's 1999 paper,[208] and a few follow-on cross-sectional studies, suggesting that California's hostility to the enforcement of NCAs helps explain the rise of Silicon Valley and what's taken to be the fall to tech innovation in Massachusetts.[209] Barnett and Sichelman dissect these arguments with some care, and we commend their discussion to the Commission, even as aspects of Gilson's comparison now seem dated.[210] Gilson's account is interesting, but in scientific terms, the Silicon Valley/Rt. 128 comparison seems more of a "just-so story," than an empirical vindication of any specific theory about NCAs. At best, it is an existence proof for the claim that relatively stringent limits on the private enforcement of NCAs can, under some facts and circumstances, co-exist with vibrant tech innovation. But that proposition is not much at issue.

California *would* present an especially difficult case for an event study, not least because of timing questions. California's NCA policy is anchored by a provision in the state's Business and Professions Code from 1941, [211] and that provision has both statutory and case law roots dating to the 19th Century.[212] Data problems for a credible event study abound, and not just because key events in the state's growth—as a center of innovation and otherwise—are hard to tie to any specific legal events regarding NCAs.

C. Because There is No Objective Measure of "Enforceability," Many of the Causal Studies Contain a Fatal Methodological Weakness

As we noted above, the Commission is well-positioned to contribute to the further development of economic research regarding NCAs and, specifically, to the further application of Industrial Organization economics to research on NCAs and labor market competition. A critical synthesis of the relevant hearings and FTC workshops could contribute to policy debates involving NCAs in

Congress and in the states.[213] Additional studies, and the development of better data sources—perhaps in cooperation with the Department of Labor—are well within the staff's competence, and these too could better inform policymaking and state and federal law enforcement. Moreover, the Commission is well-positioned to help develop the antitrust case law where NCAs and related vertical restrictions on labor agreements demonstrably harm competition and consumers. These tasks are potentially important; they are tractable, given the Commission's resources, including its human capital; and they fit well within the Commission's jurisdiction. They should precede, not follow, a proposed federal NCA regulation.

In the NPRM's account of the empirical evidence, the Commission notes that:

> The belief that studies of non-compete clause use do not reflect causal estimates is shared by the authors of at least one of the studies of non-compete clause use. As noted in Starr et al., "Our analysis of the relationships between noncompete use and labor market outcomes… is best taken as descriptive and should not be interpreted causally." As a result, the Commission gives these studies minimal weight.[214]

We agree that it is important to distinguish between correlation and causation. That is not to say that none of the non-causal studies is suggestive, but we note that the studies to which the Commission ascribes "minimal weight" constitute a significant portion of the available literature. Central to much of the literature—including most of the papers the Commission seems to consider causal—examine the putative effects of NCA "enforceability," or of changes in levels of enforceability, under state law.

On the surface, there is some intuitive appeal to this approach for several reasons. For one, there is survey evidence on the incidence of NCA usage within and across states, but little evidence on the individuals bound by (or perceived to be bound by) NCAs, so it is difficult to study the impact of NCA usage directly. Second, one might suppose that evidence on the effect of various policies (and policy changes) bears directly on the question what legal policy, if any, to impose. Third, at a high level of abstraction, we might have an intuitive sense that some regulations are more stringent than others, and that some jurisdictions are more (or less) plaintiff friendly, whether with regard to NCAs specifically or across most civil suits. For example, it seems plain enough that the decisions of California courts, applying California Business and Professions Code Section 16600, recognize a

---

[213] For an example of a current legislative proposal, see, e.g., S.379—Freedom to Compete Act of 2023, 118th Cong. (2023-24) (which would amend the Fair Labor Standards Act to prevent the use of NCAs in employment contracts for certain non-exempt employees).

[214] NPRM at 3487 (*citing* Starr, Prescott & Bishara, *supra* note 54).

stringent restriction on a plaintiff firm's ability to enforce the terms of an NCA against an employee.[215] Hence, we can think of California as a "low enforceability" state.

However, there is no objective measure of "enforceability," and, hence, no established metric with which to detect or approximate such a measure. And if we seek to unpack the notion of enforceability, as prologue to identifying or formulating a useful metric, it seems clear that any number of factors or end points might be relevant to our high-level intuition. For example, we might be interested in the cost (average, median, or modal) of litigating an NCA dispute to its conclusion; we might be interested in the ratio of plaintiff to defendant success in litigating such cases to their conclusion; we might be interested in the frequency with which NCA claims are filed and, if filed, settled or, in the alternative, survive, e.g., motions to dismiss for failure to state a claim or motions for summary judgement. We might also be interested in the way the law—and these various factors—affect not just the incidence of NCAs in a state, but the distribution and terms of those NCAs (or the terms of those NCAs employers seek to enforce). These are all related factors, but they are not equivalent, and, *a priori*, there is no obvious set of them, or weighted sum of them, that is best for all (or any specific) policy purposes.

Given the centrality of "enforceability" to the Commission's empirical brief for regulation, the underlying enforceability metrics and measurements deserve serious scrutiny. Before turning to the specifics of the scoring tools employed in the various NCA studies, we note that the cited studies of enforceability do not use the same metric, even if many of them share some basic assumptions or sources.

The Commission observes that the various studies are based on Malsberger's treatise, *Non-compete Clauses: A State by State Survey*, with some augmented by the 50-state survey conducted by Russell Beck.[216] The Commission also suggests that, while the "studies have defined enforceability of non-compete clauses in slightly different ways, each uses enforceability as a proxy for the chance that a given noncompete clause will be enforced."[217] It is not at all clear that the claim is correct. That is, at least most of the studies appear to lack any express claim about that proxy, and it is not at clear that anyone has ever investigated empirically the link between such measures and such a likelihood. Perhaps it is simply the ratio of suits (perhaps successful) to employees (putatively?) bound by NCAs, or perhaps the likelihood that an NCA will be enforced, conditional on, perhaps an (arguably)

---

[215] California law provides that "[e]xcept as provided in this chapter, every contract by which anyone is restrained from engaging in a lawful profession, trade, or business of any kind is to that extent void." Cal. Bus. & Prof. Code § 16600. It also provides for an exception for NCAs for a person selling ownership interest in a business, the assets of a business, or the goodwill of a business. Cal. Bus. & Prof. Code § 16600.

[217] *Id.* at 3486.

covered employee's departure to subsequent employment, or perhaps the employee's departure to a competing employer.... What is more, the differences in measurement approaches are not obviously trivial. Some of the key studies take pains to critique the way other (apparently key) studies seek to implement their assessments of enforceability.[218] Differences in the approach employed may be especially important when considering relatively small effects, relatively few observations, or analyses based on correlations that barely meet significance thresholds.

Second, the various approaches to measuring enforceability are all soft measures; that is, they depend on subjective judgments, and, indeed, on series of subjective judgments. Most of the relevant studies are based, to some extent, on a periodic 50-state review of NCA law by Malsberger and others, as well as a set of accompanying questions suggested to guide state-by-state assessments of NCA laws, as published.[219] For example, Bishara's 2011 study examines state statutory and, chiefly, decisional law regarding NCAs and, based on twelve criteria of enforceability identified by Malsberger, applies "seven questions because they directly address the legal issues relevant to measuring a given jurisdiction's intensity of noncompete enforcement."[220]

1. Is there a state statute of general application that governs the enforceability of covenants not to compete?"
2. What is an employer's protectable interest and how is that defined?"
3. What must plaintiff be able to show to prove the existence of an enforceable covenant not to compete?"
4. [numbered 3a by Bishara, but ranked separately] Does the signing of a covenant not to compete at the inception of the employment relationship provide sufficient consideration to support the covenant?"
5. [labeled 3b and 3c, and scored jointly] Will a change in the terms and conditions of employment provide sufficient consideration to support a covenant not to compete entered into after the employment relationship has begun?
6. Will continued employment provide sufficient consideration to support a covenant not to compete entered into after the employment relationship has begun? If the restrictions in the covenant not to compete are unenforceable because they are overbroad, are the courts permitted to modify the covenant to make the restrictions narrower and to make the covenant enforceable? If so, under what circumstances will the courts allow reduction and what form of reduction will the courts permit?"

---

[218] *See generally, e.g.*, Bishara & Starr, *supra* note 2.

[219] That is, as published in state codes and, to a lesser extent, in published judicial decisions. *See, e.g.*, Richey & Malsberger, *supra* note 216.

[220] Norman Bishara, *Fifty Ways to Leave Your Employer, supra* note 58, at 771.

7. [labeled 8] If the employer terminates the employment relationship, is the covenant enforceable?"[221]

The seven questions were applied to statutory and decisional provisions for each state, with each state receiving a score of zero, five, or ten in response to each question, and then an aggregate score that was a weighted sum of the individual response scores. For example, in applying Question 1,

> a score of 10 was awarded to a state that has a statute that favors strong enforcement, a 5 was awarded to a state that either did not have a statute or had a statute that was neutral in its approach to enforcement and a 0 was given to a state that has a statute that disfavors enforcement. This question was given an overall weight of ten.[222]

By way of contrast, for question 3,

> a score of 10 was awarded to a state that places a weak burden of proof on the plaintiff employer, a 5 was awarded to a state that has a balanced approach to the burden placed on the employer and a 0 was awarded to a state that places a strong burden of proof on the employer. This question was given an overall weight of 5.[223]

Bishara suggests that:

> Ultimately, this research will present a subtle yet authoritative view of the development of noncompete enforcement and provide evidence of trends in enforcement, as well as give guidance for state policymakers, businesses, and employees when evaluating the pros and cons of negotiating and attempting to enforce a noncompete agreement.[224]

We assume that Malsberger's survey was based on a well-informed review of relevant legal materials. At the same time, the review was not comprehensive, and its identification and characterization of relevant holdings and statutory provisions are matters of subjective—if informed—legal judgment. That is, they are not objective measures. Similarly, the twelve factors of import are matters of subjective—if informed—legal judgment.

Building on that review, Bishara applies his own rubric, which includes the scoring scheme (0, 5, or 10), scoring (or coding) of provisions under that scheme, and weighting of the seven scores to enable a weighted sum for each state, and an ordering of the states according to those sums. Given each sum, the ordering is objective, but the rubric is not: the choice of scoring scheme and—critically—the

---

[221] *Id.* at 773-7. It's not clear whether or how answers to individual questions influenced each other. For example, would a given court holding on an employer's protectable interest be scored differently according to the state's statute of general application?

[222] *Id.* at 773.

[223] *Id.* at 775.

[224] *Id.*

scoring and weighting of provisions and holdings under that scheme are all matters of subjective judgement or intuition.

The problem is more than simply that any index is imperfect; the limited inputs and rubric makes it difficult for other scholars to investigate and compare different legal changes. It is worth comparing Bishara's rubric and index to an index like the World Economic Forum's Global Competitiveness Report, for example.[225] The Global Competitiveness Report comprises 12 "pillars," each of which aggregates multiple categories and explicit data points.[226] Any change in the index can be explicitly traced to a change in one of the data points or survey questions. Researchers can adjust weightings (but not the specified data points) as they see fit to test the robustness of the index. From there, researchers using the Global Competitiveness Report can debate whether the index is picking up appropriate policy and legal changes, so that causal estimates are properly identified using changes in the index. We discuss identification further in Section I.D, *infra*.

While Malsberger's identification of pertinent legal decisions and enforceability criteria reflect considered and informed legal judgment, they track a relatively limited amount of the variation observed in state law. Moreover, they are, as we have said, matters of subjective judgment; and we can find no evidence that the criteria (or questions) were ever tested against any specific outcomes. As noted above, it does not appear to be the case that anyone has investigated, empirically, the contention that the enforceability criteria serve as an effective (or accurate) proxy for the likelihood of litigation to enforce an NCA. And to unpack the "theory" of enforceability further, we might consider the varied litigation criteria we listed at the top of this section: there seems never to have been any investigation of the empirical relationship between, e.g., the presence or absence of a state law generally (on some level of generality) and, e.g., the incidence, duration, or cost of NCA enforcement cases litigated to their conclusion. We don't know specifically for what "enforceability" is a proxy, and we don't know how well it serves as a proxy measure for reasonable candidates.

The same can be said of Bishara's rubric and its implementation. Either or both might reflect considered legal judgment. They nonetheless represent subjective assessments; and again, we are unaware of any attempt at empirical assessment of the relationship between any of the individual scores, or the weighted sums of those scores, on any of the enforcement measures we listed at the top of this section. That is not to say that none of the scoring and ranking criteria signals anything of interest. It is, however, intended to underscore that the enforcement measures, (1) constitute a family of related schema, rather than any objective metrics, (2) it's not clear what indicia of relevance that the scores are supposed to function as proxies for, (3) all entail several stages of subjective judgment, and (4) that many other approaches may be available, and perhaps preferrable, for some area

[226] *Id.* at 611-25.

of inquiry or other. We suspect that the combined econometric and legal expertise of the FTC's staff could improve upon these metrics, if tasked to do so.

The various measurement schema employed in the enforceability studies also recall our discussion, above, of the importance of coding to the reported results. The Hawaii, Oregon, and Michigan studies all exploited legal events that were in some regards idiosyncratic and in others simply misread. Hawaii presented an idiosyncratic legal change (bearing on both NCAs and non-solicit terms, for employees of certain tech firms but not others, with no application to existing NCAs), in an idiosyncratic context (a very small state lacking a significant tech sector). The Michigan studies, as discussed, seemed to depend upon readings and coding of a legislative event in Michigan that overstate the regards in which the event effected a change in the law, and perhaps in NCA. Oregon, too, involved a legal change that, while apparently non-trivial, may have affected less legal change than it seemed at first glance; and in any case, the Oregon event coincided with the onset of the Great Recession, which might well have been a confounding factor in assessing observed effects in Oregon against those in control states.

We might also wonder about the enforceability scale employed in the Hausman and Lavetti study of physician organization and health care services prices. That study exploits not a distinct legislative event, but "rich variation in the relevant legal environments" across the states, employing an enforceability rating scheme akin to the one in Bishara.[227] The single example of such changes discussed expressly in the article concerns a judicial decision in Louisiana:

> For example, in *Shreveport Bossier v. Bond* (2001) a Louisiana construction company attempted to enforce an NCA against a carpenter. The state Supreme Court ruled that the NCA could only prevent the carpenter from establishing a new business, but not from joining a pre-existing firm. This decision abruptly changed the law in the state, allowing all workers, including employed physicians, who had previously signed NCAs to escape the restrictions and move to other firms."[228]

This seems to imply that NCAs were generally (or at least typically) enforceable against employees moving to another firm as employees before the decision, but not after. In one regard, that would be simply erroneous. The decision in question, *SWAT 24 Shreveport Bossier v. Bond*,[229] did not change the law of the entire state of Louisiana; it resolved a circuit split.[230]

The extent to which the Louisiana Supreme Court decision changed the law, as read by courts in any of the state's circuits, is unclear. The decision was rendered against a backdrop of Louisiana's

[230] *Id.* at 296, 307.

longstanding "public policy disfavoring noncompetition agreements between employers and employees."[231] Specifically, "[p]rior to the enactment of the first statutory prohibition of noncompetition agreements in 1934, Louisiana courts consistently held these agreements to be unenforceable."[232] Subsequent statutory amendments continued to restrict NCAs, but provided for certain exceptions under which NCAs would be enforceable. At issue in *SWAT 24* had been an exception established under a 1989 statutory amendment that did not expressly address NCAs and could be read narrowly or broadly. Under a narrow reading, a Louisiana court would not uphold an NCA if an employee left to work as an employee of another firm, but it might uphold the NCA if the employee left "to pursue his own competing business."[233] Under a broad reading, an NCA might be found valid even if the employee left to work, as an employee, of another firm. Louisiana's second circuit court of appeals had read the exception narrowly in the matter on appeal, and had done so in prior decisions,[234] but the state's fourth circuit read it more broadly in 1998, as did the third circuit in 1999.[235] The state Supreme Court sustained the narrow reading.

The *SWAT 24* decision describes other potentially relevant aspects of Louisiana law, but, plainly, firms suing to enforce NCAs in Louisiana were subject to significant statutory and decisional constraints prior to the circuit split. And while the third and fourth circuit decisions repudiated in *SWAT 24* did provide employers considerable latitude, this much seems clear, and as close to an objective reading of the law as one can get: the *SWAT 24* decision did not change authoritative reading of the law by courts in Louisiana's second circuit.

It is possible that this represents an isolated coding error in the assessments of enforceability employed by Hausman and Lavetti. *But it is an error in the sole legal example they discuss*. In conjunction with the more central errors underlying, e.g., the Michigan and Hawaii event studies, it highlights a more general issue about the measurement of complex changes in statutory and decisional law, as well as their coding.

First, the legal changes being coded do not occur in a vacuum; judicial decisions as well as statutory reforms are set within a larger legal context that tends to comprise preceding statutory law (where relevant provisions may or may not be confined to a specific chapter or section of state law) and a body of jurisprudence that may include unpublished decisions as well as published ones. And given

that most of the legal changes that have been in evidence are relatively subtle ones, we should worry not just about random errors in coding—about noise—but about systematic errors.

Assessing a legal change by any measure may require familiarity with the body of law in that state. Experienced attorneys in the field—especially those experienced in the state in question—might well be accurate judges of the *directional* impact of a pertinent new statutory provision or authoritative decision on, say, the plaintiff's burden in seeking to enforce the terms of an NCA, likely dependent on specifying the sort of burden at issue and the terms and employment context of the NCA in question. We might assume that all of the systems would consider California's broad statutory limit on NCA enforcement to be a strong one, and that (nearly) all coders would code it as such. There remains the question how much the 1941 enactment of the specific provision of the California Business and Professions Code we see today changed the law in California, and in what respects, given antecedent California statutes and common law restrictions on NCAs dating to the 19th Century.[236]

Quantifying the change is another matter, and for most of the statutory changes that might be observed, one that depends more heavily on identifying both the specifics of the statutory provision and some specific effect, or endpoint—some specific dependent variable—on which the change is supposed to bear, as well as the terms and employment context of the NCAs at issue. Practiced attorneys may or may not have reliable intuitions about how to score such changes. The cruder the scale, the better their chances may be, but the cruder scales may not be much help in scoring or ordering the myriad policy variations one observes in NCA law. What's more, even with relatively crude scales, we have no evidence of the degree to which they may be reliable in one or another regard. Intuitive estimates of the relative effects of diverse changes across numerous states might be arbitrary or otherwise unreliable. And again, they have never been tested against any objective standard. The further we move from the best case—a licensed practicing attorney experienced in the employment law of a given state—the less confidence we might have in the ability of those reading, interpreting, and coding the law to estimate the magnitude of any specific change on any specific variable of interest. As we have seen, there seem to be plain and substantial errors at the level of reading and interpreting statutory and judicial reforms underlying key studies in the literature.

As we observed already, the endpoint (or dependent variable) of interest does not appear to have been specified in any of the "enforceability" studies. And the Commission's suggestion that, while the "studies have defined enforceability of non-compete clauses in slightly different ways, each uses

---

[236] California law provides that "Except as provided in this chapter, every contract by which anyone is restrained from engaging in a lawful profession, trade, or business of any kind is to that extent void." Cal. Bus. & Prof. Code § 16600. It also provides for an exception for NCAs for a person selling ownership interest in a business, the assets of a business, or the goodwill of a business. Cal. Bus. & Prof. Code § 16600. Section 16600, in its present form, appears to date to 1941, but the provision has both statutory and common law roots extending into the 19th Century. *See, e.g.*, *City Carpet Beating Works v. Jones*, 102 Cal. 506 (Cal. 1894) (*citing* Cal. Civil Code §§ 1673, 1674).

enforceability as a proxy for the chance that a given noncompete clause will be enforced,"[237] is itself unclear: the likelihood of what specifically, given what (if any) attributes of an NCA and employment context? In brief, we are left with a search for one or several unspecified dependent variables, without any theory of legal change to identify the quantity of interest, much less to guide how we operationalize its measurement.

None of this proves that the various implementations of the Malsberger-based enforceability rating schema do not signal anything, but we have seen that it's not clear *what* they signal, or that they all signal the same thing. Again, there is no objective metric of "enforceability." At best, we have a family of related subjective approaches to quantifying some related aspects of policy reform. At worst—and arguably—we have the results of running various labor indicators through a black box.

Under the best-case scenario, we have a developing body of economic research, some of it suggestive of reasonable concerns we might have, on average, about some of the effects of NCAs. That is not a solid ground on which to rest a sweeping federal regulation. It is, rather, an invitation for the Commission to continue to gather information on, and experience with, the competitive effects of various NCAs. And it is an invitation to the Commission to commit resources to the further development of this body of research, including improved data sources, as well as refined methods and additional findings. For example, as Starr and others have suggested, we have both an over-reliance on survey data on NCA usage and a dearth of data on who is subject (actually or on paper) to an NCA. The Commission might, for example, help refine available survey instruments—perhaps in cooperation with the Department of Labor—and it might employ its Section 6(b) authority to gather direct evidence of NCA usage, and of what terms are employed in what contexts. Moreover, more recent state-level statutory reform—especially wage-based restrictions on NCA enforcement, as in Virginia, Illinois, Massachusetts—may yield data for a series of event studies that do not require the artifice of the enforceability measure.

We might add a final question: whatever it is that the enforceability studies do or do not signal, and however well, how do the various scoring schema, and the empirical results obtained employing them, array the universe of available policy options? We don't have any results suggesting *regulatory* alternatives, as it does not appear that any of the states have approached NCAs via regulation.[238] Not incidentally, we have no documented evidence of the effects of implementing a ban on use or maintenance of NCAs (as in the Proposed Rule), as opposed to limits on the abilities of plaintiff firms to enforce them, in civil court, against former employees. Beyond that, there remains the more

---

[237] NPRM at 3486.

[238] A few states do provide for suits by the employee. 2020 amendments to the Virginia code restrict NCAs for low-wage employees. Va. Code § 40.1-28.7:8. Such employees can bring an action to have a putative NCA declared void, *and* for other equitable relief including restitution and money damages. While violations of the pertinent provision involve attempts to enforce an NCA against a low-wage worker, not the mere existence of sanctioned terms, such violations are subject to regulatory penalties. But as such, neither the administration of those regulatory penalties nor their effects have been studied.

complicated question how the various systems illustrate the differential effects of the myriad policy options a legislature, court, or regulator might consider, from diverse presumptions against (or for) plaintiff firms seeking to enforce NCAs, to "red-pencil" or "blue pencil" latitude for judges, to restrictions on one or another tranche of the income distribution, or one or another set of occupations are, or should be, rated and ordered.

The Commission has asked for input on various policy alternatives to the sweeping regulatory ban proposed in the NPRM. But it is not at all clear that the empirical evidence allows anyone to sort the optional wheat from the potential chaff. Unfortunately for the Commission, this is also an invitation for courts to strike down any Proposed Rule as insufficiently supported.

D. The Predicted Effects of the Proposed Rule Are Flawed Because Observed State-Level Changes May Not Apply Linearly to the Proposed Rule's National-Level Policy Change

It is not enough to simply lump some studies under the heading of "natural experiment." A natural experiment is just a name given to a situation outside of researchers' control that the user of the term believes allows them to identify a causal estimate. Any causal estimate is identified only with respect to a model. Relative to the model of supply and demand, regressing quantity purchased on price has an identification problem.[239] We cannot say that changes in price cause changes in quantity. But relative to a model of standard consumer theory, there is no identification problem. Variation in price does cause a change in the quantity purchased. Much of the debate surrounding modern empirical economics papers is the extent to which people accept a proposed model or identifying assumptions.

Moreover, the question of causation is not a simple yes or no. For example, the Commission quotes Starr, et al., noting that certain results are "'best taken as descriptive and should not be interpreted causally.'"[240] But in a working paper version of the paper, the authors include an appendix on "Potential Instruments for Noncompetes," which considers policy changes gathered as an instrumental variable for NCAs.[241] An instrumental variable potentially generates a causal estimate under an appropriate model. However, the authors conclude that the regressions "yield implausible estimates."[242] In Section I.B, *supra*, we gave reasons why the identifying assumptions around event studies (such as parallel trends between different states around the Great Recession) may not hold. As the Commission sometimes observes, we should vary the weight we attribute to certain results

---

[239] *See, e.g.,* SCOTT CUNNINGHAM, CAUSAL INFERENCE: THE MIXTAPE 21 (2021).

[240] NPRM at 3487 (*quoting* Starr, Prescott & Bishara, *supra* note 54, at 73.

[241] Starr, Prescott & Bishara, *supra* note 54, at 57.

[242] *Id.*

according to the degree to which we believe the identifying assumptions.[243] Instead of lumping all under "natural experiments," it is important to clearly delineate papers on changes of an enforceability index from papers that study an explicit policy change (Hawaii, Oregon, or Michigan). The latter comprise a much smaller body literature. Both sorts of studies may provide valuable insights, but they rely on fundamentally different identifying assumptions—as do the papers with regressions that the Commission considers not to be natural experiments, which would have a causal interpretation if the model were the regression used in each paper.

Once we are confident that what we are picking up is likely to be a true causal effect, then we can ask about external validity and how that estimate can inform a policy change beyond the scope considered in the data, such as the FTC's Proposed Rule. While the Commission uses a "conservative" estimate of the effect on wages, it does not actually provide a robust defense of this estimate; rather, only a "back-of-the-envelope" extrapolation from a single unpublished study.[244] It is difficult to imagine that such a casual approach will satisfy courts assessing whether there is sufficient empirical support for the specific Proposed Rule.

The NPRM assumes a linear relationship between the enforceability index and the log of wages, and that the linear relationship would hold in the context of a national policy change. There are reasons to place little weight on both steps of the extrapolation since it is so far out of sample.

First, the changes picked up in the index used by Johnson, et al. may bear little resemblance to even a state level version of the Proposed Rule.[245] The impact of policy changes at the state level may be linear, supralinear, or sublinear. In other words, there could be linear returns to decreasing enforceability (as assumed), increasing returns, decreasing returns, or even, eventually, negative returns. Taking "the most conservative estimate" does nothing to mitigate this uncertainty, since the estimate technique assumes linearity.[246] Indeed, although a conservative estimate is likely better than the alternative, for any given state (or industry, wage level, type of employee, or any number of other variables) it may still be wildly inaccurate—even *directionally* so.

An alternative would be to use an estimate from a suitable event study, which would allow an explicit comparison between the event study's policy change and the Proposed Rule. If the event study resembled the Proposed Rule, we need to worry about whether the relationship is linear or not, as we have the estimated effect for the relevant treatment, at least at the state level. Unfortunately, no such

---

[245] *Id.*

[246] NPRM at 3522.

event study exists because no state has implemented such a stringent policy against NCAs as the Proposed Rule would be.

Second, simply extrapolating from a state policy change—even a comparable one—to a national policy change is not straightforward. It is not obvious that so-called "general equilibrium effects" operate the same at the state level as at the local or national level. For a simple example, state level estimates of the tax elasticity of capital gains are different from what we should predict from a national capital gains tax change.[247] In the context of NCAs, we know that firms set uniform policies across states. This is why workers sign NCAs in states where they are illegal; everyone in the company signs one. Similarly, any estimate of a state policy change will not pick up firm responses that occur only when the policy applies sufficiently broadly. The NPRM suggests that businesses have substitutes for NCAs, such as NDAs.[248] We explain why NDAs do not perfectly replicate NCAs in Section **Error! Reference source not found.**, *infra*. Nevertheless, they may be partial substitutes. In that case, we should expect that businesses will substitute more to NDAs for a national policy change to NCAs than they do for a state policy change. In that case, simply extrapolating from the state estimate will overestimate any effects—good or bad—of the Proposed Rule.

II. The Proposed Rule Fails to Account for NCAs' Procompetitive Benefits and Wrongly Assumes Equivalent Benefit from Alternatives to NCAs

As the Commission observes, courts have long recognized that NCAs may "increase employers' incentive to make productive investments, including in worker training, client attraction, or in creating or sharing trade secrets with workers."[249] The Commission concedes that "there is evidence non-compete clauses increase worker training and capital investment (*e.g.*, investment in physical assets, such as machines),"[250] and cites three studies indicating such effects.[251] Nevertheless, it concludes that these well-established, and empirically supported business justifications "do not alter" its

---

[248] NPRM at 3505.

[249] *Id.*

[250] *Id.*

[251] *Id.* at 3493 (citing Starr, *Consider This*, *supra* note 87 (finding that moving from mean NCA enforceability to no NCA enforceability would decrease the number of workers receiving training by 14.7% in occupations that use NCAs at a relatively high rate); Jeffers, *supra* note 138 (finding that knowledge-intensive firms invest 32% less in capital equipment following decreases in the enforceability of NCAs); Johnson & Lipsitz, *supra* note 79 (finding that hair salons that use NCAs train their employees at a higher rate and invest in customer attraction through the use of digital coupons at a higher rate, both by 11 percentage points)).

conclusion that all NCAs, save those that come within its narrow exception for the sale of a business, merit condemnation as unfair methods of competition.

The Commission states two reasons for refusing to account for procompetitive uses of NCAs:

> First, employers have alternatives to non-compete clauses that reasonably achieve the same purposes while burdening competition to a less significant degree. Second, the asserted benefits from these commonly cited justifications do not outweigh the considerable harm from non-compete clauses.[252]

Neither of these reasons justifies the Commission's sweeping NCA ban. Indeed, the NPRM provides no account of the degree to which, and cost at which, such alternatives function as either alternatives or complements to NCAs.

The Commission identifies four "alternatives to non-compete clauses for protecting valuable investments": trade secret lawsuits, non-disclosure agreements (NDAs), fixed-duration employment contracts, and enhanced wages and benefits.[253] None of those alternatives is as effective as an NCA in preserving incentives to make output-enhancing investments that could be taken to the investing employer's rivals, however.

Moreover, any effort by employers to try to *make* these alternatives as effective as an NCA would *also* run afoul of the Commission's' Proposed Rule. The Commission in its Proposed Rule makes *de facto* alternatives to non-compete agreements illegal:

> [T]he following types of contractual terms, among others, may be *de facto* noncompete clauses:
>
> (i) A non-disclosure agreement between an employer and a worker that is written so broadly that it effectively precludes the worker from working in the same field after the conclusion of the worker's employment with the employer.
>
> (ii) A contractual term between an employer and a worker that requires the worker to pay the employer or a third-party entity for training costs if the worker's employment terminates within a specified time period, where the required payment is not reasonably related to the costs the employer incurred for training the worker.[254]

While these inclusions may be necessary to achieve the Commission's intended effect – to completely prohibit NCAs, including anything that *functions* like an NCA – they also undermine the

[252] NPRM at 3505.

[253] *Id.* at 3505, *et seq.*

[254] NPRM at 3535.

Commission's claim that "alternatives" remain available. And it is precisely to the extent that alternatives actually *function* as alternatives that they would run afoul of the Proposed Rule.

Meanwhile, to the extent these alleged alternatives might be found permissible under the "*de facto*" clause of the Proposed Rule only because they remain *less* effective, this highlights how the Proposed Rule deviates from accepted competition principles: Prevailing antitrust doctrine does not credit less restrictive alternatives that are less effective than the restraints they would replace.[255]

A. Trade Secret Law Protects Different Intangible Assets than NCAs and Is More Difficult to Enforce

The Commission maintains that trade secret law provides a substitute means by which an employer may protect valuable information from being transferred to a rival.[256] It states (misleadingly, as explained below) that the Uniform Trade Secrets Act provides legal protection for "information that (1) derives independent economic value from not being generally known to other persons who can obtain economic value from its disclosure or use, and (2) is the subject of reasonable efforts to maintain its secrecy."[257] The ability to sue workers who misappropriate such information, the Commission says, provides an adequate incentive for employers to produce and engage in the intra-firm sharing of competitively valuable information, negating a key business justification for NCAs. But trade secret law is less effective than NCAs at protecting employer interests for at least five reasons.

First, trade secret law provides little to no protection against the appropriation of skills training. Training an employee how to perform the tasks necessary to be a productive worker for an employer is not typically or chiefly a secret to rivals engaged in the same basic business. The benefit those rivals get from hiring the training employer's workers is not secret information but the return on the training employer's sunk training costs. If a firm cannot prevent the loss of such benefits before recouping its investment, it will be less likely to incur such costs in the first place. Trade secret law cannot address that problem.

---

[255] *See O'Bannon v. Nat'l Collegiate Athletic Ass'n*, 802 F.3d 1049, 1076 (9th Cir. 2015) (refusing to credit less restrictive alternative that was not "virtually as effective" as challenged restraint); *County of Tuolumne v. Sonora Cmty. Hosp.*, 236 F.3d 1148, 1159 (9th Cir. 2001) (requiring plaintiffs show alternative is "virtually as effective" in serving defendant's objective, concluding proposed LRAs were less effective, and ruling in favor of defendants at final net-effects step). *See also* C. Scott Hemphill, *Less Restrictive Alternatives in Antitrust Law*, 116 COLUM. L. REV. 927, 944-5 (2016) ("Equal effectiveness is an explicit limitation in cases, jury instructions, and commentary.").

[256] NPRM at 3506. The Commission points to the Uniform Trade Secrets Act, which provides a state law civil cause of action for trade secret misappropriation; the federal Defend Trade Secrets Act, which establishes a similar cause of action under federal law; and the Economic Espionage Act of 1996, which criminalizes theft of a trade secret for either the benefit of a foreign entity or the economic benefit of anyone other than the owner.

[257] *Id.*, *citing* Uniform Trade Secrets Act § 1(4).

Second, trade secret law fails to protect valuable competitive information besides that implicated in employee training. The NPRM misstates the definition of a trade secret in a manner that obscures key limits on the law's protections. The first element of a trade secret defined by the Uniform Trade Secrets Act is not as stated in the NPRM, but is instead "information… that (1) derives independent economic value, actual or potential, from not being generally known to, and not being readily ascertainable by proper means by, other persons who can obtain economic value from its disclosure or use…."[258] The Commission's characterization obscures the requirement that a protectable trade secret must "*not be readily ascertainable by proper means*" by rivals. This requirement has often prevented competitively valuable information like customer lists and information about customers' interests and preferences from qualifying for trade secret protection.[259] An employer who cannot protect such information is less likely to compile it, or to share it with workers who may leave for a rival.

Third, reliance on trade secret law to protect competitively valuable information tends to limit efficient sharing of such information within the firm. Many businesses operate most effectively when numerous employees are aware of competitively valuable information, such as customer preferences, buying patterns, etc. But the second element of a protectable trade secret is that the information be "the subject of efforts that are reasonable under the circumstances to maintain its secrecy."[260] The more freely a piece of information is shared *within* a firm, the less likely it is to merit trade secret protection.[261] NCAs, by contrast, do not discourage the intra-firm sharing of competitively sensitive information.

Fourth, trade secret law has much higher enforcement costs than NCAs. An employer who believes that its former employee has shared competitively valuable information with a rival must first prove that the information qualifies as a trade secret—i.e., that it (1) has independent economic value, actual or potential; (2) is not generally known to other persons who would benefit from it; (3) is not readily ascertainable by proper means; and (4) is the subject of reasonable efforts to maintain secrecy.[262] It must then show that the departing worker shared the information with a rival. In many cases, the rival could have acquired the competitively valuable information from numerous sources, and it will be difficult for the employer to prove misappropriation. As a practical matter, then, trade

---

[258] *Id. See, e.g.,* Florida Uniform Trade Secrets Act, FL. Stat. § 688, *et seq.* (2022) for an example of the USTA, as adopted by the state of Florida.

[259] *See, e.g.*, *Hamer Holding Group, Inc. v. Elmore*, 202 Ill. App. 3d 994, 560 N.E.2d 907 (1st Dist. 1990) (determining that the plaintiff's customer list information was not protectable as a trade secret because it could be readily duplicated by anyone with access to the Secretary of State's information, even though it cost the plaintiff $60,000 to condense).

[260] USTA § 1(4)(ii).

[261] *See* Michelle L. Evans, *Trade Secret Misappropriation of Former Employer's Customer List* §8, 139 AM. JUR. TRIALS 293 (orig. published 2015) ("Limiting the number of employees within a company who are aware of the trade secret information tends to protect trade secret status.").

[262] *See* UTSA § 1(4).

secret violations will be relatively difficult to detect, and relatively costly to prosecute—again, diminishing their effectiveness as a substitute for NCAs. NCAs, then, are a complement to trade secret protection, not fully covering the same scope, but enabling firms to ensure some degree of trade-secret protection at comparatively lower cost.[263]

Fifth, even if an employer succeeds in establishing liability under trade secret law, its remedy will often be inadequate, or even worthless. Once a trade secrete has been appropriated, the cat is out of the bag.[264] An aggrieved employer can seek damages, but those can be extremely difficult to prove with adequate certainty (further adding to enforcement costs above). The appropriating employee will often be judgment-proof, and third-party beneficiaries of the trade secrets will be likely unreachable. Rational employers will often forego trade secret actions even in the rare cases in which they could establish trade secret status, misappropriation, and the degree of their damages without undue cost.

B. Non-Disclosure Agreements Are Substantially Less Effective than NCAs at Encouraging Worker Training and the Sharing of Valuable Information with Workers

The Commission observes that:

> Employers that seek to protect valuable investments also have the ability to enter into NDAs [*i.e.*, Non-Disclosure Agreements] with their workers. NDAs, which are also commonly known as confidentiality agreements, are contracts in which a party agrees not to disclose information the contract designates as confidential. NDAs may also prohibit workers from using information that it designated as confidential. If a worker violates an NDA, the worker may be liable for breach of contract.[265]

According to the Commission, the availability of NDAs obviates the need for NCAs. But NDAs—like trade secret actions, and for many of the same reasons—are substantially less effective than NCAs at encouraging worker training, client attraction, and the creation and intra-firm sharing of competitively valuable information.

---

[263] *See* Iancu & Kappos, *supra* note 3.

[264] *See id*. ("If a high-level executive at a company that depends on proprietary technology moves to a Chinese competitor, for example, and shares highly confidential information taken from his last employer, that last employer's competitive edge might evaporate forever to China's benefit. By the time the afflicted company sues to enforce trade secret laws, it may be too late; irreparable damage is often done when the information is disclosed to the new employer because that bell can't be unrung."). *See also* Lauren Weber, *FTC Plan to Ban Noncompetes Clauses Shifts Companies' Focus*, WALL ST. J. (Jan. 17, 2023), https://www.wsj.com/articles/ftc-plan-to-ban-noncompete-clauses-shifts-focus-to-deferred-pay-nondisclosure-agreements-11673904728 ("'Once someone goes to another company, you're really on the honor system. You have no way to monitor what information is being disclosed or not.'") (*quoting* Julie Levinson Werner of Lowenstein Sandler LLP).

[265] NPRM at 3507.

Many employer investments, such as skills training, can be transferred to hiring rivals without any disclosure whatsoever. And courts do not enforce NDAs to preclude a trained employee's subsequent *use* of skills funded by a prior employer. Favorable customer relationships created by employer investments also cannot be protected by NDAs. The departing employee who attracts her prior employer's customers engendered by the initial employer's efforts to foster favorable employee/customer interactions does not breach a non-disclosure commitment.

There are also significant practical impediments to using NDAs to protect employer investments in worker training, customer attraction and loyalty, and competitively valuable information. Simply drafting an NDA that could substitute for an NCA poses a challenge because the employer must anticipate and specify ex ante all the categories of information a departing employer might misappropriate and the ways it might do so. To establish liability, the employer must prove that the employee disclosed or illicitly used the information; again, the mere fact that another learned the information does not establish that that the employee disclosed it. If the employer surmounts this hurdle, it must establish its damages with reasonable certainty[266]—challenging when, as is typical, damages comprise lost profits.[267] And, again, departing employees may often be judgment-proof.

Instead of being substitutes, NDAs may be a complement to NCAs, as NCAs may decrease the enforcement costs of NDAs. In that case, we would expect to see NCAs bundled with other trade secret agreements,[268] which we do, especially among higher earning individuals, which we do, as the NPRM points out.[269]

C. Fixed Duration Employment Contracts Are Subject to Remedial Limitations that Render Them Ineffective Substitutes for NCAs

The Commission states that:

---

[266] Restatement (Second) of Contracts § 352 (1981) ("Damages are not recoverable for loss beyond an amount that the evidence permits to be established with reasonable certainty.").

[267] *Id.* at § 352, cmt. a ("Courts have traditionally required greater certainty in the proof of damages for breach of contract than in the proof of damages for a tort. ... [This principle] excludes those elements of loss that cannot be proven with reasonable certainty. The main impact of the requirement of certainty comes in connection with recovery for lost profits.").

[268] *See* Natarajan Balasubramanian, Evan Starr, & Shotaro Yamaguchi, B*undling Employment Restrictions and Value Appropriation from Employees* Working Paper (Jan. 2023) at 35, https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3814403. *See also* NPRM at 3485 n. 42 ("This survey also found that non-compete clauses are often used together with other restrictive employment covenants, including non-disclosure, nonrecruitment, and non-solicitation covenants. Id. at 17 (reporting that respondents that had a noncompete clause reported having all three of the other restrictive employment covenants 74.7% of the time).").

[269] NPRM at 3487 ("Balasubramanian et al. [*supra*, note 91] find that while non-compete clause use is associated with 2.1–8.2% greater earnings (compared with individuals with no post-contractual restrictions), this positive association is due to noncompete clauses often being bundled with non-disclosure agreements.").

> [I]f an employer wants to prevent a worker from leaving right after receiving valuable training, the employer can sign the worker to an employment contract with a fixed duration. An employer can establish a term of employment long enough for the employer to recoup its training investment without restricting a worker's ability to compete with the employer after the worker's employment ends.[270]

The problem with relying on fixed duration employment contracts is the law of contract remedies. Given the repugnancy of involuntary servitudes and the practical difficulty an administering court would face in ensuring that any compelled service is of adequate quality, contract law does not permit specific performance as a remedy for breach of personal service contracts.[271] Hence, no court would order an employee subject to a fixed duration employment contract to abide by her commitment. The remedial options would be either a negative injunction barring the employee from engaging in competing employment[272]—effectively a judicially imposed NCA—or money damages. But here too, lost profits would be difficult to ascertain and, often, impossible to collect.

D. The Claim that Higher Wages and Enhanced Benefits Can Substitute for NDAs Reflects a Misunderstanding of the Hold-Up Problem

Finally, the Commission maintains that NCAs are unnecessary because employers could prevent their workers from leaving for a rival by providing them with greater benefits:

> Employers that wish to retain their workers can also pay the worker more, offer them better hours or working conditions, or otherwise improve the conditions of their employment. These are all viable alternatives for protecting training investments, and other investments an employer may make, that do not restrict a worker's ability to work for a competitor of the employer or a rival's ability to compete against the worker's employer to attract the worker.[273]

These observations by the Commission betray a fundamental misunderstanding of the hold-up problem that justifies particular NCAs.

Employers often must undertake costly investments to enable their employees to generate as much value as possible. For example, they may provide them with costly training, share competitively valuable information with them, and grant them opportunities to build personal relationships with

---

[270] NPRM at 3507.

[271] Restatement (Second) of Contracts § 367(1) (1981) ("A promise to render personal service will not be specifically enforced."); *id.* at § 367, cmt. a ("A court will refuse to grant specific performance of a contract for service that is personal in nature. The refusal is based in part on the undesirability of compelling the continuance of personal association after disputes have arisen and confidence and loyalty are gone and, in some instances, of imposing what might seem like an involuntary servitude.").

[272] *See*, *e.g.*, Lumley v. Wagner, 42 Eng. Rep. 687 (1852).

[273] NPRM at 3507.

firm clients. Such investments are made at risk: if the employee leaves before the investing employer has received an adequate return on its investment, the cost of the investment is lost, and perhaps transferred to a rival. A higher wage may be justified for a subsequent employer, as the employee comes with the added value provided by the former employer (e.g., training, knowledge of competitively valuable information, relationships with potential customers). Employees in which employers have invested are thus well-positioned to press their employers for greater compensation. The risk of such hold-up prompts a tendency of employers to underinvest in training and information sharing. NCAs ameliorate such risks and, hence, their tendency to prompt such underinvestment.

To provide greater compensation before firm investments in employees have generated adequate returns is to compensate an employee for the firm's investment. In effect, it endorses, rather than ameliorates, the risk of hold-up. Thus, simple deal-sweetening is not, as the Commission asserts, a "viable alternative[] for protecting training investments[] and other investments an employer may make."[274]

III. The Commission's Relevant Experience, Expertise, and Capacity to Enforce Proposed Rule Is Limited

The NPRM states that the

> rulemaking represents the culmination of several years of activity by the Commission related to non-compete clauses and their effects on competition. This activity has included extensive public outreach and fact-gathering related to non-compete clauses, other restrictive employment covenants that may harm competition, and competition in labor markets generally.[275]

Specifically, the NPRM cites to the record of several hearings and workshops: two hearings sessions among the Commission's Hearings on Competition and Consumer Protection in the 21st Century "FTC 21st C. Hearings"),[276] the FTC 2020 NCA Workshop,[277] and a 2021 workshop, jointly sponsored by the FTC and the Antitrust Division, regarding the broader topic of labor market

---

[274] *Id.*

[275] NPRM at 3498.

[276] The FTC convened fourteen sets of Hearings on Competition and Consumer Protection in the 21st Century, running from September 2018 through June 2019. Two sets of hearings were of special relevance: On October 16, 2018, a full day of hearings was devoted to issues to do with Antitrust in Labor Markets, including NCAs; and on June 12th, 2019, one of the panels in the hearing comprising a Roundtable with State Attorneys General included discussion of NCAs and other labor restrictions. Information regarding the full set of hearings, including links to agendas and transcripts for individual hearings, can be found at Fed. Trade Comm'n, Hearings on Competition and Consumer Protection in the 21st Century [hereinafter FTC 21st C. Hearings], https://www.ftc.gov/enforcement-policy/hearings-competition-consumer-protection.

[277] FTC 2020 NCA Workshop, *supra* note 2.

competition. ("FTC/DOJ 2021 Labor Competition Workshop").[278] The Commission also cites three competition matters involving NCAs that were resolved by consent orders on the eve of the Commission's announcement of the NPRM.[279] In addition, the Commission notes a 2019 petition for a rulemaking from the Open Markets institute and various co-signatories.[280]

While we do not doubt that the staff conducted appropriate investigations in each of the three matters – or in a fourth settled in March – we note that the consents were achieved without either trial or adjudication by the Commission, and without any finding or stipulation of any antitrust violations.[281] Moreover, as noted by Commissioner Wilson in her dissenting statement to two of the three orders, the Consent Orders are exceedingly brief, providing little guidance as to how the conduct at issue violated—in the Commission's view—either the FTC Act or the Sherman Act.[282] A fourth matter has been settled since, but that provides little further guidance. And, like two of the three initial matters, it involves facts and circumstances specific to the glass container industry.[283]

In *Prudential Security, et al.*, security guards allegedly were subject to NCAs that barred the guards from undertaking related employment with any of Prudential's competitors, and from starting a competing business. Those prohibitions were alleged to apply for two years following conclusion of the guards' work for the Respondent, anywhere within a 100-mile radius of their main place of work for the Respondent. The NCAs also were alleged to impose liquidated damages of $100,000 per guard, per violation.[284] Such terms seem extreme, given the occupation: they might well be untethered from, e.g., any of the firm's interests in protecting proprietary information or the firm's employee-specific investments;[285] and they might well be inefficient, "unreasonable" (as found by a Michigan state court, applying Michigan law),[286] or otherwise objectionable.

Since publishing the NPRM, the Commission has announced a fourth NCA settlement, also in the glass container industry. *In the Matter of Anchor Glass Container, Corp.*, FTC File No. 211 0182 (Mar. 15, 2023) (decision and order)

[280] NPRM at 3497. To the best of our knowledge, the Commission has never reported any evaluation of the 2019 petition.

[281] *See* citations *supra* at note 14.

[282] *See* Dissenting Statement of Commissioner Christine S. Wilson, *supra* note 15.

[283] *See supra* note 279.

[284] *In the Matter of Prudential Security, et al.*, *supra* note 14, at 3.

[285] That is our initial reaction to what are, of course, questions of fact, on which the Commission has not reported.

[286] *Prudential Security, Inc. v. Pack*, No. 18-015809-CB (Mich. Cir. Ct. Dec. 13, 2018).

Based on the available documents, however, it remains unclear whether competition in specific Michigan labor markets was harmed by the conduct at issue. The Commission's complaint alleged harm to "competitive conditions," and to individual security guards in some relevant labor market or markets. [287] The supporting documents also allege that the NCAs were "coercive and exploitative."[288] The Commission opines that such conduct, causing "harm to competitive conditions," constitutes a violation of Section 5's prohibition of unfair methods of competition. It cites, as authority, its recent Policy Statement Regarding Unfair Methods of Competition Under Section 5 of the FTC Act.[289] Indeed, such language is to be found in the policy statement, and terms such as "exploitative" and "coercive" occur in *dicta* in certain Supreme Court decisions. But, as we have noted elsewhere, while those terms are evocative in colloquial usage, they have no established meanings in antitrust jurisprudence; and their meaning, application, and connection to antitrust jurisprudence is not explained in the Commission's policy statement.[290] Critically, novel applications of the Commissions 2022 policy statement have not yet been vindicated in the courts.

It is well established that NCAs can vary along multiple dimensions: duration, geographic scope, occupational scope, application to certain types of firms, and stipulated damages, among others.[291] Even supposing, *arguendo*, that the conduct at issue in *Prudential, et al.*—like the conduct at issue in *Ardagh Group, et al.*, and *O-I Glass*—violated Section 5's prohibition of "unfair methods of competition," the consent orders seem to turn on specific facts and circumstances, such as the duration of the restrictions and the outsize liquidated damages provisions in Prudential, et al. It remains entirely unclear how well information uncovered in the staff's investigations might inform competition analyses of NCAs with different terms, or in other labor markets. As Howard Shelanski—a former Director of the FTC's Bureau of Economics and a former Administrator of the White House Office of Information and Regulatory Affairs during the Obama Administration—noted at the FTC's 2020 workshop, enforcement is a "slow" way to gather the information requisite to the issuance of useful guidance or regulations, in part due to selection bias.[292] That is not to gainsay the importance of developing the case law. Rather, it is to underscore the need to develop a body of case law that reflects the diversity of NCAs, the contexts in which they are employed, and their effects. Three or four settled fact-specific investigations, *in toto*, seem a very slender reed on which to hang a major

[292] FTC 2020 NCA Workshop, *supra* note 2, Howard Shelanski, Tr. at 263.

federal regulation on labor agreements generally. That seems all the more significant, given the history of NCA litigation, both in competition matters and at common law, where the specific terms and conditions, and the context in which they are employed, have tended to determine whether or not specific NCAs were found enforceable or lawful.[293]

With respect to the hearings and workshops mentioned in the NPRM,[294] while not focused exclusively on NCAs, these were significant information-gathering efforts on competition issues in labor markets by FTC staff. The Commission's call for comments, issued in conjunction with the 2020 workshop, solicited responses to various questions, both descriptive and normative, including several on the adequacy of existing NCA laws and regulations; the FTC also asked for input on possible legal reforms. They also addressed the Commission's practical ability and legal authority to advance policy reforms by regulation. The NPRM notes that 328 comments were submitted to the record of the 2020 workshop, and that 27 comments were submitted to the record of the FTC/DOJ 2021 Labor Competition Workshop.[295] In addition, 280 comments were submitted in response to a 2021 call for "public comments on contract terms that may harm competition, including 'non-compete clauses that prevent workers from seeking employment with other firms.'"[296] All of these, according to the NPRM, informed the rulemaking process:

As it has developed this Proposed Rule, the Commission has closely considered the views expressed at these forums and the public comments it has received through these engagement efforts. The comments have informed the Commission's understanding of the evidence regarding the effects of non- compete clauses; the law currently governing non-compete clauses; and the options for how the Commission may seek to restrict the unfair use of non- compete clauses through rulemaking, among other topics.[297]

That may be true, but, as we noted in the Introduction and Executive Summary of these comments, the Commission has never issued a report summarizing or synthesizing the information gleaned from these various endeavors. What is more, references to the evidence gathered through those substantial investigations seem extremely limited and highly selective. The diversity of views and evidence presented at the hearings and workshops, and in submissions to the records of those events, is not in evidence in the NPRM or, specifically, the Proposed Rule. Some well-documented complications get slight treatment in the NPRM, while others are simply absent from the discussion. While workshop presentations and submissions cannot settle the complex questions presented by NCAs and the Proposed Rule, they do offer substantial input on matters ranging from stakeholder views

[293] *See* text accompanying notes 16-21, *supra*.

[294] NPRM at 3497-8.

to legal challenges, to the developing state of the empirical evidence. A proper analysis of the record, rather than summary reference to it, is wanted.

Even a brief survey of the record indicates the complexity of stakeholder viewpoints, policy issues, and evidence. At the FTC's 2020 workshop, panelists and commenters expressed diverse views on the most basic questions whether the FTC could or should regulate NCAs. Several workshop participants and numerous comments endorsed some measure of federal intervention to restrict the use or enforcement of NCAs, at least in some contexts.[298] Some of those comments endorsed federal intervention as a complement to state NCA law. For example, comments submitted jointly by twenty state Attorneys General advocated for "federal rulemaking that is consistent with [the states] ability to pursue enforcement and legislative priorities to the benefit of workers and consumers," while also noting advantages to "the type of experimentation and variation that our system of government is designed to promote,"[299] with the states serving as Brandeisian "laboratories of democracy."[300] At the same time, they recommended that federal rules should not preempt state law.[301]

Other comments took a dimmer view of federal intervention, while also lauding state law variation: "[s]tate laws are sufficient to address any harms that may be associated with noncompete agreements. Federal intervention (whether at the statutory or regulatory level) is not necessary."[302] And the Global Antitrust Institute commented that they were "concerned… that many proposals to address… [concerns about NCAs] through ex ante antitrust regulatory interventions, such as an FTC rule, are ill-suited and will likely do more harm than good."[303]

[302] NCA Workshop Comments, *supra* note 298, Comment Submitted by Russell Beck (and 21 co-signatories), Comment #0319. *See also, e.g.*, Comment of the Global Antitrust Institute, Antonin Scalia Law School, George Mason University, Comment #0243 ("We are concerned, however, that many proposals to address … [concerns about NCAs] through *ex ante* antitrust regulatory interventions, such as an FTC rule, are ill-suited and will likely do more harm than good."); Comment Submitted by the U.S. Chamber of Commerce—Sean Heather and Glenn Spencer, Comment #0303 ("the Chamber sees as unnecessary rulemaking by the FTC under either its unfair methods of competition authority (assuming such authority even exists), or its unfair and deceptive practices authority."); Comment Submitted by The Center On Executive Compensation ("Center")—Andrew Maletz, Comment #0264 (association representing chief human resources officers of large firms stating that "We believe an FTC rule regarding non-compete agreements is unnecessary.")

[303] *Id.*, Comment of the Global Antitrust Institute, Antonin Scalia Law School, George Mason University, Comment #0243.

Comments from the Antitrust Law Section of the ABA questioned the need for federal intervention.[304] They also questioned whether the available evidence provided an adequate foundation for policy reform:

> The Section does not have the impression that the research and analysis of non-compete clauses are far enough along such that lawmakers and policymakers—whether at the federal, state, or local level—have a clear sense of the nature and extent of the harms, an ability to evaluate the adequacy of existing legislative and regulatory regimes to address those harms, and a blueprint for additional legislation or regulation should current regimes be deemed inadequate.[305]

Howard Shelanski stated plainly that an outright ban would be "deeply problematic."[306]

Commissioner Noah Phillips's noted the Commission's extremely limited experience with competition rulemaking in general: "The FTC has issued a competition rule just once in its history, in the 1960s."[307] And several workshop participants also focused on the demands of rulemaking for the FTC or, more specifically, the demands that would attend any rulemaking likely to survive court challenges. Commissioner Phillips argued that the broad language of Section 5 might raise Constitutional concerns, including those associated with the Nondelegation Doctrine; and, further, that "[n]ondelegation concerns may also be exacerbated by other factors here, including the lack of clarity in the rulemaking authority, the traditional commitment of the issue to the states, the fact that neither the FTC nor any court has found non-competes to violate the FTC Act's prohibition against unfair methods of competition."[308]

---

[304] We note that the Section has submitted comments in response to the NPRM Comment from the American Bar Ass'n, Antitrust Law Section, FTC-2023-0007-9980, March 2, 2023, *available at* https://www.regulations.gov/comment/FTC-2023-0007-9980. These more recent comments note that the literature remains limited, but that it tends to support the proposition that NCAs for low-wage workers are "generally harmful and not justified" by procompetitive rationales that may apply with other workers. The comment does not appear to advocate for any specific regulation, and it does not appear to address the question whether the FTC, specifically, should adopt a regulation restricting the use of NCAs for low-wage workers. We agree with the Section's claim that the literature remains limited, and with their suggestion that standard rationales for NCAs can seem strained in the case of low-wage workers. Restrictions on low-wage workers may generate various policy concerns. However, as should be clear from our comments overall, we do not agree that the literature provides adequate grounds for the adoption of any FTÇ competition regulation under Sections 5 and 6(g) the FTC Act.

[308] *Id.* at 221.

Such concerns should be all-the-more salient, given the Supreme Court's recent articulation of the Major Questions Doctrine in *West Virginia v. EPA*.[309] Reviewing certain power plant emissions standards adopted by the Environmental Protection Agency, the Court observed that…

> our precedent teaches that there are "extraordinary cases" that call for a different approach—cases in which the "history and the breadth of the authority that [the agency] has asserted," and the "economic and political significance" of that assertion, provide a "reason to hesitate before concluding that Congress" meant to confer such authority.[310]

Separation of powers principles, in addition to readings of legislative intent, required "something more than a plausible textual basis for the agency action"; for that reason, given the scope and economic impact of the EPA's regulation, the Court held that EPA had exceeded its statutory authority.

In the NPRM, the Commission contemplates a regulation that would, by the Commission's own estimation, alter the terms of employment for approximately 30 million American workers, with an economic impact of "$250 to $296 billion per year," on wages alone. That is, the Commission asserts that its Proposed Rule would be one of significant economic impact, just as public controversy over NCAs and the proposed preemption of state law suggest significant political impact. Independent of proposed rules and advanced notices of proposed rulemaking, the Commission reports that it has some 18 guides and regulations under review.[311] Most of these were adopted under express statutory authority considerably narrower than the charge of Section 5. The FTC Act comprises no such express grant of authority with respect to NCAs or other terms of labor agreements.

We cannot be certain how the courts might evaluate an FTC NCA regulation, but it's clear enough that the federal courts have increasing concerns about agency deference. With that in mind, adoption of NCA regulations as proposed would seem to pose a substantial risk to the Commission; that is, to both the substance of such regulations and the Commission's regulatory authority in competition matters, at least. A thoroughgoing analysis of the scope of the Proposed Rule and the present (and developing) state of agency deference and statutory interpretation in Supreme Court jurisprudence seems sorely needed. Former FTC Chairman William Kovacic took a less settled position on FTC authority, while also observing that the contemporary judiciary is skeptical of agencies' initiatives to extend their own reach.[312] While Kovacic did not suggest that the courts find all regulatory innovation anathema, he did emphasize the importance of building a comprehensive foundation

for any forays into competition rulemaking likely to survive judicial scrutiny.[313] Howard Shelanski similarly advocated for the further development of the empirical evidence before entertaining rulemaking;[314] he also suggested that there was much work—such as the issuance of guidance and the development of research—that the Commission might undertake on NCAs besides, or prior to, regulation.[315]

As discussed in more detail in Section I of these comments, *supra*, various panelists at the FTC 2020 NCA Workshop—including leading contributors to the empirical literature cited in the NPRM—noted significant limitations to the state of the literature, as did comments submitted to the record. For example, Evan Starr noted the difficulty of estimating the causal effects of using NCAs,[316] and the need for more research on those causal effects.[317] Challenges to such research include, *inter alia*, the fact that NCAs are commonly bundled with other restrictions, such as non-solicitation and non-disclosure terms (and attendant selection issues),[318] an over-reliance on survey data,[319] a dearth of longitudinal data,[320] a relative dearth of exogenous variation,[321] and a dearth of findings regarding total welfare implications of NCAs and, specifically, of research on the downstream effects of NCAs on product and service markets, and thereby on consumers.[322] Panelists also suggested mixed results, rather than uniform findings on, e.g., pay, and on potential tradeoffs in labor markets, such as tradeoffs between wages and firms' investments in employee training.[323]

Panelists at the FTC 2020 NCA Workshop also noted mixed results, rather than uniform findings on, e.g., pay, as well as potential tradeoffs in labor markets, such as tradeoffs between wages and firms' investments in employee training.[324] And several panelists noted both observed and potential benefits to NCAs.

[324] *Id.*, Evan Starr, Tr. at 162, 166, 174; Ryan Williams, Tr. at 179, *et seq.* (negotiation and compensation for CEOs); Kurt Lavetti, Tr. at 144-6 (regarding physician compensation); Howard Shelanski, Tr. at 263 (noting "ambiguity" in the research).

For example, Ryan Williams presented research on the effects of NCAs for CEOs suggesting that NCAs provide compensation benefits for the CEOs themselves, and that firms are more likely to fire a CEO for poor performance when there is a NCA in force, which potentially benefits both shareholders and employees.[325] Overall, he said that the findings imply a positive story for CEO NCAs. Similarly, Kurt Lavetti reviewed research suggesting both physician benefits and efficiencies associated physician NCAs.[326] And Commissioner Noah Phillips noted the potential of NCAs to ameliorate hold-up problems in labor agreements by, for example, encouraging investment in worker training and the sharing of proprietary information with employees.[327] In sum, as Kurt Lavetti concluded, "we're still far from reaching a scientific standard of concluding that non-compete agreements are bad for overall welfare."[328]

One more issue seems notable. The NPRM omits any reference to a 2019 literature review conducted by staff in the FTC's Bureau of Economics.[329] That literature review was much discussed in comments submitted to the 2020 workshop and in the workshop itself.[330] Not incidentally, the named staff author of the review, John McAdams, moderated a session at the 2020 workshop. Yet the McAdams paper is not even mentioned in the NPRM. McAdams observes that economic research regarding NCAs "has made important strides."[331] At the same time, however, he observes mixed results, and he describes numerous data and methodological limitations running throughout the body of literature. Overall, he finds that the "more credible empirical studies tend to be narrow in scope, focusing on a limited number of specific occupations… or potentially idiosyncratic policy changes with uncertain and hard-to-quantify generalizability."[332] Of direct relevance to the Proposed Rule, "[t]there is little evidence on the likely effects of broad prohibitions of non-compete agreements."[333]

That, too, is part of the Commission's expertise and experience regarding NCAs. But it is a part that suggests caution, and grounds for research development, rather than a rush to adopt a sweeping uniform regulation like the Proposed Rule. The NPRM's review of the literature is substantial but skewed; and, as we discuss below, the NPRM fails to adequately address many of the well-known

limitations to available studies. The Proposed Rule carries real risk to the Commission's authority, as well as its resources. As Kovacic said at the 2020 workshop, "the bolder the measure, the stronger the evidentiary armor is going to have to be and the more thoughtful the analyses," if an intervention, and the Commission's authority, are to be sustained.[334] As a general matter of policy, we cannot recommend adoption of so sweeping a rule as the one that the Commission has proposed. That fundamental policy issue aside, it should be conspicuous that a more fulsome development of the record, and a more critical review of the literature, is needed before the FTC proposes any regulation of NCAs.

The imposition of a sweeping federal regulation and the preemption of state law suppose general and durable market failure causing substantial consumer harm. Observation of certain market imperfections, or frictions, falls well short of that mark.[335] Recent empirical findings suggesting potential harms and benefits associated with NCAs in different, and specific, contexts also fall short. The case for regulation also supposes that regulatory intervention can be effective and efficient, yet there is no model in state law for the ban proposed by the FTC, and the NPRM provides no analysis of the likely effects of the difference between the Commission's proposal and state law alternatives. No state has adopted the general prohibition on NCA usage that the FTC has proposed. No state chiefly restricts NCAs via a regulatory ban; and no state has adopted the seemingly arbitrary 25% share restriction that the Commission has proposed for permitting certain NCAs in conjunction with the sale of a business.[336] And while the NPRM includes a casual attempt at a cost-benefit analysis, it lacks even a cursory analysis of the resources that would be required for effective implementation and enforcement of the Proposed Rule. These would not be trivial. As noted in the NPRM, there is survey evidence suggesting that NCAs now apply to roughly one fifth of all employed persons in the

---

[334] *Id.*, William Kovacic, Tr. at 37.

[335] Regarding competition in labor markets generally, see, e.g., Diana Furchtgott-Roth, *Antitrust and Modern U.S. Labor Markets: An Economics Perspective*, HARV. J. L. & PUB. POL'Y PER CURIAM 1 (Summer 2022) ("data from the Bureau of Labor Statistics of the U.S. Department of Labor show that exercise of monopsony power is generally not occurring in today's 21st century economy, nor has it been characteristic of labor markets over the past half century."); Richard A. Epstein, *The Application of Antitrust Law to Labor Markets: Then and Now*, 15 N.Y.U. J. LAW & LIBERTY 709 (2021).

[336] The only express exception in the Proposed Rule regards NCAs executed in conjunction with the sale of a business, where the NCA applies to a seller who "is a substantial owner of, or substantial member or substantial partner in, the business at the time the person enters into the non-compete clause. Proposed § 910.1(e) would define substantial owner, substantial member, or substantial partner as an owner, member, or partner holding at least a 25% ownership interest in a business entity." NPRM at 3515. While an exception providing for NCAs in conjunction with the sale of a business is common in states with some general hostility to NCAs, as under Cal. Bus. & Prof. Code § 16601, the identification of a 25% ownership requirement appears arbitrary and excessive. For example, California law permits certain NCAs for, *inter alia*, "[a]ny person who sells the goodwill of a business, or any owner of a business entity selling or otherwise disposing of all of his or her ownership interesting in the business entity." Cal. Bus. & Prof. Code § 16601. We have not found any authority restricting such ownership to anything like a 25% share. That proposed restriction may prove far too narrow, not just when natural persons owning a startup or small business number more than four, but when, e.g., venture capital investment reduces the founders' shares of a startup.

U.S. labor force; that is, nearly 30 million workers.[337] Regulations are not self-enforcing: and while regulation may be, in certain regards, more streamlined than case-by-case law enforcement, it still requires investigation of alleged infractions, administration, and, in addition to regulatory challenge mechanisms, compliance monitoring, guidance to industry and workers, periodic rule review, and the resources to defend at least some challenges to agency determinations of violations, and assessments of penalties, in federal court. Detection alone may often be a challenge to the extent that many "workers are totally uninformed about the law."[338]

Effective enforcement need not entail detecting, much less penalizing, every violation, but it does require sufficient enforcement activity to establish a credible threat that violations will be penalized, and that enforcement is not selective. Yet the NPRM contains no assessment of the resources required for adequate enforcement of the Proposed Rule or any alternative NCA regulation. Enforcement staff in the Commission's Bureau of Competition ("BC") have substantial antitrust expertise in mergers and diverse conduct matters, but little experience in labor matters and none in the enforcement of competition regulations. Moreover, the Commission has recently reported that BC staff are barely able to meet the Commission's already established and important workload.[339] Adding an obligation to monitor restrictions in labor agreements across all industries and occupations in the U.S. would be both futile and an unnecessary drain on the staff's ability to scrutinize mergers and conduct under settled antitrust law.

Enforcement burdens would be greater still, given the Commission's proposal "that whether a contractual term is a non-compete clause for purposes of the Rule would depend on a functional test,"[340] rather than a nominal one. Currently, NCAs may be confined to distinct and readily parsed provisions among terms of employment, or they may be drafted in more complex terms, and perhaps distributed across multiple provisions or documents. A general bar on NCA use, subject to substantial regulatory penalties, would encourage firms that value NCAs to seek marginally permissible alternatives and various workarounds; these might tax staff resources further still, from detection and investigation through challenges in either administrative process or federal court.

---

[337] NPRM at 3485. The latest survey from the BLS survey suggests approximately 18%, but survey findings vary somewhat, and, at least roughly, cluster in the neighborhood of 20%. And BLS estimates a workforce of approximately 150 million employed persons. U.S. Bur. Labor Stats., Monthly Labor Review (Jun. 2022) (reporting 149,785 total employed), https://www.bls.gov/opub/mlr/2022/article/us-labor-market-shows-improvement-in-2021-but-the-covid-19-pandemic-continues-to-weigh-on-the-economy.htm.

[339] *See, e.g.*, Oversight and Enforcement of the Antitrust Laws, Prepared Statement of the Federal Trade Commission, *supra* note 28 ("While we constantly strive to enforce the law to the best of our capabilities, there is no doubt that—despite the increased appropriations Congress has provided in recent years—we continue to lack sufficient funding.").

[340] NPRM at 3509.

The Commission's experience with enforcing its own Contact Lens Rule (CLR),[341] which implements a specific statutory charge in the Fairness to Contact Lens Consumers Act (FCLA),[342] may be instructive. The CLR was adopted following "decades of regulatory and research experience regarding the optical goods industry."[343] That experience included adoption and enforcement of the Eyeglass Rule[344] (adopted in its initial form in 1978), and two substantial studies of competition and consumer protection issues regarding regulation and retail sales of contact lenses specifically, with the latter report conducted pursuant to an express statutory charge in the FCLA.[345]

The key provision in both the FCLA and the CLR was a simple "prescription release" requirement: "[w]hen a prescriber completes a contact lens fitting, the prescriber . . . shall provide to the patient a copy of the contact lens prescription."[346] Periodic rule review led the Commission to solicit comments on the CLR in September 2015;[347] review of those comments, and other input, led to an NPRM proposing amendments to the CLR in 2016,[348] a supplemental NPRM in 2019,[349] and publication of amendments to the CLR in 2020.[350] As the Commission explained in amending the rule, there was a "need to improve compliance with the Rule's automatic prescription-release requirement, as well as a need to create a mechanism for monitoring and enforcing the Rule."[351] In plain language, the Commission found that its own rule was difficult to enforce, and that non-compliance was widespread. To quantify the enforcement challenge might be difficult, but one number seems salient: we are aware of precisely zero matters in which the Commission enforced the CLR's prescription release requirement between its initial 2004 effective date and its 2020 amendment.

We do not mean to gainsay the challenge of enforcing the CLR. To the contrary, we believe that the Commission's experience with the CLR illustrates the challenges of drafting, and enforcing, effective

regulations, even when an agency has decades of experience with the issues those regulations are meant to address.

IV. The Commission's Legal Authority to Issue the Proposed Rule is Contentious—and Dubious

The NPRM implicates a range of questions regarding the Commission's legal authority. These questions relate both to the scope of the Commission's substantive legal authority to regulate NCAs and to its authority to undertake such regulation through the adoption of a substantive rule, rather than through adjudication.[352] These issues are made all the more complicated given the infrequency with which the Commission has attempted to undertake competition rulemaking in implementation of its Unfair Methods of Competition ("UMC") authority under Section 5 of the FTC Act—arguably, just once in over 100 years of FTC UMC authority. Meanwhile, there is very little judicial authority discussing the Commission's competition rulemaking authority, and none of it is recent.[353] And recent judicial trends exacerbate the issue, as the courts have been increasingly skeptical of claims of regulatory authority such as the Commission makes in the NPRM.

This is a contentious area of law and policy. Several of the key issues are discussed below; other comments submitted to this proceeding develop these arguments in more detail.[354] Our primary purpose here is to emphasize that the Commission's Proposed Rule, if adopted, would regulate into market uncertainty and legal controversy.

The Commission is the nation's chief inter-sectoral regulator of domestic trade and commercial activity. With its statutory mandate to prevent unfair methods of competition comes a corollary mission to promote a robust and competitive marketplace. Uncertainty is anathema to such a marketplace. The Commission's Proposed Rule would upset dozens of state laws. Not incidentally, NCAs already are a topic of extensive legislative discussion at the federal level.[355] If adopted, these rules will be subject to years of litigation. One of the few things that can be said with certainty is that media and other coverage would lead to substantial confusion and disruption for employees and employers alike.

---

[352] *See generally, e.g.*, Thomas W. Merrill, *Antitrust Rulemaking: The FTC's Delegation Deficit,* ADMIN. L. REV. (forthcoming 2023), *available at* https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4344807.

[353] The most recent case to opine on the Commission's substantive competition rulemaking authority dates to 1973. *See Nat'l Petroleum Refiners Ass'n* v. *Fed. Trade Comm'n,* 482 F.2d 672, 697-8 (D.C. Cir. 1973).

[354] *See, e.g.*, comments submitted to this Docket by TechFreedom, the United States Chamber of Commerce, and the Washington Legal Foundation.

[355] *See* Workforce Mobility Act of 2023, H.R. 731, 118th Cong. (2023-2024) and Workforce Mobility Act of 2023, S. 220, 118th Cong. (2023-2024).

In the comments below, we discuss the following issues: whether the Commission has statutory authority to adopt substantive Unfair Methods of Competition rules (under current D.C. Circuit precedent, yes; but that precedent is unlikely to withstand judicial review today); whether the Proposed Rule presents major questions for the purposes of the Major Questions Doctrine (it does); whether it would withstand judicial scrutiny under the Major Questions Doctrine (it likely would not); and whether the Proposed Rule, if adopted, would be based upon an unconstitutional delegation of authority to the Commission (they likely would be).

A. The Commission's Claimed Authority to Adopt Competition Rules Is Unlikely to Withstand Judicial Scrutiny

The Commission's claim of general competition rulemaking authority under Section 6(g) of the FTC Act rests on an ambiguous statutory clause and a 1973 opinion of the D.C. Court of Appeals in National Petroleum Refiners Association v. FTC.[356] That opinion has not been affirmatively repudiated by the Court of Appeals or reversed by the Supreme Court, but there has been little occasion to revisit it: The Commission has not proposed or enforced competition rules since the 1970s. As the Commission is well aware, the *National Petroleum Refiners* Court considered an octane labeling rule that operates chiefly as a consumer protection regulation, although one deemed at the time to have both competition and consumer protection elements. And the case was decided before Congress enacted the Magnuson-Moss Warranty Act,[357] which amended the FTC Act to include substantial procedural constraints on the consumer protection rulemaking that had constituted nearly the whole of the FTC's regulatory activity.[358] What is more, the 1973 opinion reflects a degree of agency deference that is increasingly out of favor with the federal courts.[359]

Other comments will argue the best reading of Section 6(g) in more detail than we undertake here. Our purpose here is more limited. We remind the Commission that its reading of its own authority is contentious.[360] Administrative law scholars have argued that a far more limited reading of 6(g) is likely to prevail in the courts.[361] And, in any case, the Commission must recognize that the promulgation of a broad regulatory prohibition of NCAs under the Commission's UMC authority, first, is

nearly certain to be challenged in the courts and, second, risks both the substantive provisions of such a rule and a Supreme Court repudiation of the Commission's authority to issue substantive or "legislative" competition rules more generally.

Section 6(g) states: that "the Commission shall also have power… from time to time to classify corporations and… to make rules and regulations for the purpose of carrying out the provisions of this Act."[362] For the proponents of a broad rulemaking power, this is taken to be a catch-all provision providing a general power to issue "rules and regulations," subject only to the relatively light-touch procedural requirements for "informal rulemaking" in Section 553 of the Administrative Procedure Act.[363]

As prominent commentators have noted, there is no "plain meaning" of "rules" within the meaning of section 6(g).[364] In *National Petroleum Refiners*, the D.C. Circuit opted to "favor an interpretation which would render the statutory design effective in terms of the policies behind its enactment and to avoid an interpretation which would make such policies more difficult of fulfillment, particularly where, as here, that interpretation is consistent with the plain meaning of the statute."[365]

A contemporary court, reading the same statutory language, would not likely agree that the meaning of "rules" in section 6(g) is "plain," based on suppositions about the general policy behind the initial enactment of the FTC Act.

Most importantly, we note that the remainder of Section 6 empowers the Commission to investigate and report on the business practices of corporations. More recent amendments have to do with investigating, reporting, consulting, and advising by the Commission.[366] No part of Section 6 expressly authorizes the Commission to undertake any enforcement action or impose any penalties, and the authority it does explicitly grant is limited to information gathering and analysis by the Commission.

Recent judicial trends are far less deferential to administrative agencies, and far more likely to curtail agency discretion in the face of statutory ambiguity. For example, in *AMG Capital Management*, the Supreme Court narrowly interpreted the Commission's power to obtain equitable remedies, repudiating established Commission practice.[367] And, as explained below, in cases like *West Virginia v.*

[365] *National Petroleum Refiners*, 482 F.2d, at 689.

[366] *See* Merrell, *Antitrust Rulemaking*, *supra* note 352, at 28.

[367] *AMG Capital Management, LLC v. FTC*, 141 S. Ct. 1341 (2021). The FTC had argued that monetary damages were impliedly available under the power in section 13(b) of the FTC Act to seek injunctive relief, but the Supreme Court disagreed and restricted the Agency to injunctive relief only, without the implicit grant of damage.

EPA, the Supreme Court has demonstrated concern with the general breadth of the administrative state and, specifically, has rejected the proposition that courts defer to agency interpretations of vague grants of statutory authority where such interpretations are of major economic and political import.[368]

B. The Proposed Rule Presents Major Questions that Can Be Addressed Only by Congress

Adoption of a broad NCA rule such as proposed in the NPRM will likely also face scrutiny under the major questions doctrine. The Supreme Court's recent opinion in *West Virginia v. EPA*[369] has brough substantial attention to the Major Questions Doctrine. While the contours of this doctrine are still being defined by the courts, it stands roughly for the proposition that Congress must "speak clearly if it wishes to assign to an agency decisions of vast economic and political significance."[370] The Proposed Rule is broad—on the Commission's own account it would affect around 30 million employees and hundreds of billions of dollars in commerce annually. It would also insert the Commission into an area that is already heavily regulated by the states and the federal government: Numerous federal statutes and rules regulate employer/employee relations, and a vast—and active—body of state statutory and judge-made law addresses NCAs specifically. If adopted, the Proposed Rule would clearly be one of vast economic and political significance. Indeed, one could well call the Proposed Rule the very model of a modern major question.

If deemed to be a major question, it beggars belief to think that the courts would find that Congress, through the FTC Act's capacious but general language, has spoken clearly enough to grant the Commission the authority to regulate labor in this way. Both the substance of the Proposed Rule and the mechanism of issuing such rules are likely to be found infirm. The Commission's relevant authority is to proscribe unfair methods of competition. The scope of that authority has long been understood as largely coextensive with, but slightly broader than, the scope of the antitrust laws. Historically, the Commission's UMC authority has been exercised through case-by-case enforcement actions.

The Commission's Proposed Rule would go far beyond the established scope of the FTC's UMC authority, and it would abandon case-by-case enforcement entirely. Indeed, there is no question that traditional *indicia* of anticompetitive conduct are of no relevance to the Proposed Rule. For example, the proposed prohibition is not limited to firms with market power. What's more, there is no legitimate argument that NCAs are *categorically* anticompetitive (or otherwise unfair methods of competition). Many rules are somewhat overinclusive—that goes hand in hand with the legislative prerogative—but the Commission's claim to rulemaking authority is strained at best, and its substantive legal

---

[368] *West Virginia v. Envtl. Prot. Agency*, 142 S. Ct. 2587 (2021).

[369] *Id.*

[370] *Util. Air Regul. Grp. v. Envtl. Prot. Agency*, 573 U.S. 302, 324 (2014).

authority is limited on its face to enforcing the prohibition of unfair methods of competition, not to regulating competition to ensure that broad categories of commercial practices are *on net* competitive.

Moreover, there is no paucity of legislative interest or ability to regulate in this area. Both Congress and the states are very active in the areas that the Commission's rules would regulate.[371]

Other comments in this proceeding take up the arguments that the Proposed Rule presents major questions and would likely be rejected under the Major Questions Doctrine. We add to those comments, both to join in those concerns and to add a broader institutional perspective. The Commission's recent moves towards aggressive use of its Unfair Methods of Competition authority run in the opposite direction of contemporary administrative law. The Commission's recent policy statement on its use of its UMC authority, for instance, cites to myriad cases that are four or more decades old, antedating the modern era of antitrust law, and often rely on *dicta* in doing so.[372] At the same time, in cases like *West Virginia v. EPA*, the Supreme Court has shown concern with the general breadth of the administrative state, and in cases like *AMG Capital*,[373] the Court has taken action to limit, or has shown concern about, the scope of the Commission's authority specifically. And just last week, in Axon Enterprise,[374] the Supreme Court held that defendants in FTC and SEC administrative proceedings need not exhaust agency process on the merits before raising constitutional challenges to the agencies' actions in federal district court.

The cost of risky and resource-draining litigation cannot be gainsaid. Importantly, this observation is endogenous to the question of the Commission's authority: The Commission is the nation's chief inter-sectoral commercial regulator. The Proposed Rule promises to be exceptionally disruptive to the entire American economy—a destabilizing force that runs counter to the Commission's purpose and that should, in any case, be an important consideration, even when the Commission exercises a clear statutory mandate. But here, the only certainty is uncertainty. The Commission is considering regulations that would subject vast swaths of the United States' economy, employees, and employers to confusion and uncertainty. The Commission ought to be more circumspect about the potential to disrupt the process it is charged to protect.

None of this is to reject the Commission's authority to challenge a specific firm's specific use of NCAs under Section 5 of the FTC Act. Through case-by-case basis adjudication, the Commission

might determine that a specific course of conduct, in a specific factual setting, makes out either a UMC or UDAP claim; that is wholly consistent with the purposes and language of the FTC Act.

C. A Grant of Substantive Statutory Authority Sufficient to Support the Proposed Rule Would Amount to an Impermissible Delegation of Authority

While the Court's application of the Major Question Doctrine in *West Virginia v. EPA* is grounded in several established strands of constitutional jurisprudence, the precise meaning of the doctrine remains uncertain. One line of inquiry suggests the doctrine is a new instantiation of the Non-Delegation Doctrine. There is some sense to that. The Major Questions Doctrine requires that Congress must clearly—and with some specificity—indicate an agency's authority to engage in significant rulemaking. The non-delegation doctrine, meanwhile, requires that Congress provide an intelligible principle that limits the scope of congressional authority delegated to an agency.[375] But the Non-Delegation Doctrine stands on its own: it could be the case that major questions present delegation issues, but there remain potential non-delegation issues separate from major questions. And the Court has also noted, e.g., separation of powers concerns at play in major questions.

The Non-Delegation Doctrine was famously articulated in *Schechter Poultry*, a 1935 Supreme Court opinion striking down the National Industrial Recovery Act (NIRA).[376] This is a seminal case in the administrative-law canon: decided on the same day as *Humphrey's Executor*, it dealt with the permissibility of Congressional delegations of authority to federal agencies. The central issue is that the United States Constitution vests "all legislative powers" in Congress.[377] Federal agencies are empowered to act on Congress's behalf, which seemingly could violate the Constitution's legislative vesting clause, which would render all agencies unconstitutional.

To resolve this issue, the Court found that Congress can empower agencies to exercise specific powers on Congress's behalf, but that there must be limits to these delegations of authority. The constitutional limit is that "Congress is not permitted to abdicate or to transfer to others the essential legislative functions with which it is thus vested."[378]

---

[375] Regarding nondelegation generally, see, e.g., Thomas W. Merrill, *Rethinking Article I, Section 1: From Nondelegation to Exclusive Delegation*, 104 COLUM. L. REV. 2097 (2004). *Compare Gundy v. United States*, 139 S. Ct. 2116, 2123 (2019) (reaffirming the traditional test permitting the delegation of discretionary authority if constrained by an "intelligible principle") *with id.* at 2135-7 (Gorsuch, J. dissenting) (insisting that delegations should be limited to filling the details in statutes with major questions resolved by Congress). *See also* Noah Joshua Phillips, *Against Antitrust Regulation*, supra note 360.

[376] *A.L.A. Schechter Poultry Corp. v. United States*, 295 U.S. 495 (1935).

[377] U.S. Const., Art. I.

[378] *Schechter Poultry*, 295 U.S. at 529.

Schechter Poultry is all-the-more relevant to the Proposed Rule because it discusses that doctrine in direct comparison to the Commission's statutory authority.[379] Both NIRA, which required the National Recovery Agency (NRA) to enforce codes of "fair competition," and the Federal Trade Commission Act, which prohibits "unfair methods of competition," have similar and similarly broad grants of statutory authority. In striking down NIRA, the Court explained its flaws in direct comparison to the FTC's statutory authority to deem certain methods of competition unfair. It explained that…

> "unfair methods of competition" are thus to be determined in particular instances, upon evidence, in the light of particular competitive conditions and of what is found to be a specific and substantial public interest…. To make this possible, Congress set up a special procedure. A Commission, a quasi-judicial body, was created. Provision was made [for] formal complaint, for notice and hearing, for appropriate findings of fact supported by adequate evidence, and for judicial review to give assurance that the action of the Commission is taken within its statutory authority.[380]

While the Court does not *expressly* say that it is the case-by-case, adjudicatory nature of the Commission's UMC authority that renders the FTC Act a constitutional delegation of authority, the Court did point to the lack of these specific quasi-judicial procedures in holding NIRA's delegation of authority to the NRA to be unconstitutional.

In other words, if the FTC were successfully to assert that the FTC Act authorizes it to enact broad competition rulemakings like the Proposed Rule, that holding may contain the seeds of its own demise, if the Court determines that such a broad grant of authority without the constraints of adjudicatory process or special Mag-Moss-like procedural rules is contrary to the Non-Delegation Doctrine.

V. Conclusion

As we said in the introduction to these comments, we cannot recommend that the Commission adopt the Proposed Rule. It is not supported by the evidence, empirical or otherwise; neither is it supported the Commission's experience, authority, or resources.

Our comments have, like the Commission's own NPRM, reviewed the empirical literature regarding NCAs in some detail. In doing so, we can conclude only that the Commission's conclusions about "the weight of the evidence" are untenable.

---

[379] This discussion draws from the analysis in William C. MacLeod, *Regulating Beyond the Rule of Reason*, __ GEO. MASON. L. REV. __ (*forthcoming*).

[380] *Shechter Poultry*, 295 U.S. at 533-4.

First, as made amply clear at the FTC 2020 NCA Workshop, evidence about the effects of NCAs themselves is both limited and mixed. And like the more substantial body of evidence on the putative effects of NCA "enforceability," it is hardly comprehensive. Moreover, as made clear in the literature, and at the FTC's various workshops and hearings regarding NCAs and other labor competition issues, significant data and methodological limitations are observed throughout the relevant empirical literature. These are endemic and far from trivial. While the NPRM's review of the literature responsibly notes many of these limitations in discussing individual studies, the Commission seems wholly to ignore such limitations in making its general observations about the available empirical findings.

Second, most of the studies that have employed causal designs depend heavily on a dubious set of "enforceability" metrics. These lack any clearly specified subject; they are variable in their implementation; they depend upon several layers of subjective assessments; and they are highly coding dependent. Each implementation might best be considered a "black box." There is no such thing as an objective measure of enforceability.

Finally, most of the studies cited by the Commission have limited relevance to antitrust enforcement. The Commission seems to be in no position to offer even a partial equilibrium analysis of NCA effects. To ignore the question of downstream effects on consumers (and the paucity of evidence in this area) would be irresponsible. What is more, findings on, e.g., average wage effects observed in a particular state tell us little about the question of substitution effects, or about the basic question of the extent to which such average effects—even if taken at face value—may be driven by specific local labor markets in which specific employers exploit a significant degree of monopsony power. As Howard Shelanski observed, "[i]t's very possible that a small employer that ties up six employees in a noncompete has zero effect on the market."[381] At the same time, imposition of an NCA without notice could be a material omission, and potentially actionable under the Commission's UDAP authority.[382]

None of this is to say that the literature is without merit, or that none of the cited studies are suggestive of legitimate policy concerns. It is to say that the existing body of literature is developing and substantially incomplete. Available findings are mixed, there are far too many unanswered questions, and most empirical observations are far too uncertain in their findings and in their generalizability to ground a sweeping federal rule.

But beyond the Proposed Rule's evidentiary infirmities lie still more problems. The Commission plainly lacks both the experience required to ground such a rule and the resources that would be necessary to enforce it. Moreover, as the Commission is aware, adoption of the Proposed Rule would

---

[381] FTC 2020 NCA Workshop, *supra* note 2, Shelanski, Tr. at 293.

[382] *Id.*, Shelanski, Tr. at 191.

be nearly certain to prompt legal challenges to both the substance of the NCA regulations and, more broadly, to the Commission's authority to issue substantive or "legislative" competition rules under Section 6(g) of the FTC Act. While the Commission may be persuaded it has been granted such authority, and might cite a fifty-year-old D.C. Circuit case in support of that proposition, the Commission cannot gainsay changes in judicial construction that have occurred since *National Petroleum Refiners*. More specifically, the Commission cannot ignore the Supreme Court's more recent holdings on non-delegation and major questions that are wholly at odds with the sort of agency deference that obtained in 1973. That is, the Commission cannot ignore either the litigation burden or the risk to its own authority—nor the legal and economic uncertainty—that the adoption of the Proposed Rule would entail.

All is not lost. As we have also discussed, the Commission is in a position to develop better data sources, and the staff are capable of making substantial contributions to the literature. These could include, among other things, development of directly observed data on NCA terms and usage that would reduce, if not obviate, an excessive reliance on survey data. In addition, recent developments in state law—specifically, income-based restrictions on NCA enforcement—should enable data collection and event studies that do not depend upon soft and untested enforceability metrics.

The Commission, Congress, and state policy makers could all benefit from a more extensive development of the Commission's experience with NCAs. We note that the Commission has not issued any report of the findings of its 21st C. Competition Hearings, and that it has not issued any report on its 2020 workshop. We recommend that the Commission undertake a careful review of the records of pertinent FTC hearings and workshops, and that it issue a substantial report of its findings as prologue to any consideration of federal NCA regulations. Importantly, such reports could inform policy reforms that do not rest on antitrust. Recent state-level statutes, such as income-based limits on NCA enforcement, are not merely opportunities for event studies. Rather, they highlight the various policy concerns that might motivate state or federal reforms in labor policy, whether in conjunction with, or apart from, any observations of conduct that exploits market power in violation of the FTC Act or the federal antitrust laws, to the detriment of competition and consumers.

Competition policy can make an important contribution to such potential policy reforms, without necessarily coopting them. For example, it may be that NCAs for low-income workers serve no procompetitive goal, even if there are many labor markets in which NCAs do not harm competition but prove otherwise politically unobjectionable. That might provide a foundation for further state or federal policy reform, wholly apart from the question whether there are UMC violations that could support FTC competition rulemaking.

Finally, the Commission has asked about alternatives to the Proposed Rule, and "whether the rule should apply uniformly to all workers or whether there should be exemptions or different standards for different categories of workers."[383] We believe that the existing literature simply does not permit the making of viable inferences regarding the different effects of potential alternative policies, and thus that the issuance of the Proposed Rule or any alternative NCA rule by the Commission would be premature. Further research could confirm the Starr, Prescott, and Bishara finding that the timing of an NCA disclosure bears critically on the wage impact of an NCA, for example.[384] If so, that might ground a general finding that the failure to disclose NCA terms at some point before the commencement of employment is a material omission, perhaps with sufficient frequency and effect to support a Mag-Moss UDAP rulemaking. At present, that too would be premature, however.

Indeed, if the existing evidence is to be taken at face value, arguably the wage-effect evidence, especially that adduced by Starr, Prescott, & Bishara, counsels *against* a broad prohibition on NCAs:

> To be sure, regulatory regimes must sometimes rely on clear rules that ban (or allow) particular conduct, and such rules will be overinclusive or underinclusive. As then-Judge Breyer once explained, the cost of assessing the exact impact of each type of conduct would be prohibitive. The benefits of additional investigation do not always warrant the costs. However, if the anticipated impact on wages should drive the treatment of employee noncompete agreements, the cost of discriminating between contracts likely to reduce such wages and those likely to increase them is extremely low. Agencies and courts need simply ask whether the employer disclosed the agreement before acceptance. If the answer is "yes," any presumption that such an agreement will reduce wages must evaporate. If anything, the presumption should shift in favor of a conclusion that the agreement will produce net benefits.[385]

That is not to say that no enforcement is ever warranted. The Commission has brought and settled four Section 5 cases in which they alleged that specific NCAs, under specific facts and circumstances, violated the prohibition of unfair methods of competition. Although the antitrust analysis in the public documents is not entirely clear, we do not maintain that there have been no NCAs that constitute UMC violations; and there might well be uninvestigated matters in which the Commission might demonstrate actual or likely harm to competition and consumers. In the alternative, as noted above, an FTC investigation might find a UDAP violation under some specific set of facts and circumstances.

But the Proposed Rule at issue here is not tied to credible evidence and is not nearly so restrained. The extensive concerns discussed in this comment militate against the Commission's adoption of the Proposed Rule and, indeed, based on the available record, against any general competition rulemaking restricting the use of NCAs by the Commission.

Re: Non-Compete Clause Rulemaking, Matter No. P201200

Dear Ms. Tabor,

Managed Funds Association[1] (**"MFA"**) submits these comments to the Federal Trade Commission (the **"Commission"** or **"FTC"**) in response to the Commission's proposed rule to ban non-compete agreements ("**NCAs**") between employers and employees (the **"Proposed Rule"**).[2] While MFA understands the Commission's objective of protecting American workers and ensuring their mobility, particularly in farming and manufacturing industries, we believe that the Proposed Rule, as drafted, is too broad for this objective.[3] The Proposed Rule would significantly increase the burdens on organizations while impeding their ability and legitimate need to protect their intellectual property and proprietary interests. The Proposed Rule would have a significant negative impact on MFA members, which include hedge funds, crossover funds, and credit funds. The beneficiaries of these funds are pensions, foundations, and endowments, and their investment returns help secure retirements, fund medical research, and provide college scholarships, among other things.

Accordingly, we urge the Commission to reconsider the Proposed Rule as it would significantly harm MFA members with respect to research, investment, and competitiveness in the United States. To the extent that the Commission determines to move forward with the Proposed

[1] Managed Funds Association ("**MFA**") represents the global hedge fund and alternative asset management industry and its investors by advocating for regulatory, tax, and other public policies that foster efficient, transparent, and fair capital markets. MFA's more than 150 member firms collectively manage nearly $2.6 trillion across a diverse group of investment strategies. Member firms help pension plans, university endowments, charitable foundations, and other institutional investors to diversify their investments, manage risk, and generate attractive returns over time. MFA has a global presence and is active in Washington, Brussels, London, and Asia. www managedfunds.org.

[2] Non-Compete Clause Rule, 88 Fed. Reg. 3482 (proposed Jan. 19, 2023).

[3] The Commission's own recent enforcement actions taken a single day before announcing the Proposed Rule do not prohibit non-compete provisions for senior executives and employees involved in research and development. *See* O-I Glass, Inc., File No. 211-0182, https://www ftc.gov/system/files/ftc_gov/pdf/2110182o-iglassdraftorderappxa.pdf (Jan. 4, 2023) (Decision and Order Appendix A); Ardagh Glass Group S.A., File No. 211-0182, https://www.ftc.gov/system/files/ftc_gov/pdf/2110182ardaghdraftorderappxa.pdf (Jan. 4, 2023) (Decision and Order Appendix A). This fact is a clear indication that there are legitimate business justifications for such non-compete provisions and is a recognition by a majority of the Commission that a blanket ban on non-compete provisions goes too far.

Rule, we would urge the Commission to provide a carveout[4] to allow for the use of NCAs where the following conditions are satisfied:

(1) The NCA has terms reasonably related to the protection of the firm's business interests, including intellectual property, trade secrets, and confidential and proprietary information, for the purpose of competitive advantage;

(2) The NCA is in effect for no more than two years after termination of employment or the maximum term allowed under state law applicable to the NCA, whichever is shorter;

(3) The NCA applies only to employees earning at least $100,000 per year or the highest wage floor amount in the states that impose wage floors, whichever is higher;

(4) The NCA provides for payment of no less than the ex-employee's base salary[5] during the post-employment period in which the ex-employee's subsequent employment is restricted by the NCA; and

(5) The NCA is otherwise in accord with applicable state law(s).

I. MFA Members Rely on Non-Compete Agreements to Protect Their Proprietary Information

MFA members frequently use NCAs with other contractual safeguards to protect some of their most valuable investment assets and proprietary information. Typically, the secrecy of MFA members' proprietary information is an inherent part of its value because such information would have little value if it were widely known and, therefore, priced into the markets. Accordingly, MFA members limit the use of NCAs only to employees whose departure would run the risk of exposing such proprietary information and result in competitive harm. In such cases, NCAs are used to protect proprietary strategies and processes that result from research and development. Indeed, MFA members often file for patent protection (or otherwise rely on trade secret law) in respect of their proprietary technologies, processes, and formulae. However, as explained in further detail below, NCAs afford MFA members unique protection against cases where departing employees misappropriate their proprietary information.

Importantly, NCAs foster the free flow of information within a firm that results in the innovation that is so critical to the competitive process in the investment management industry. Restricting MFA members' use of NCAs would impede the sharing of information within a given firm and limit the number of employees who have access to each firm's proprietary information. Currently, MFA members use NCAs to safely allow covered employees to access a firm's strategies

[4] The only exception currently in the Proposed Rule is inadequate because individuals who own less than 25% of a firm, including those with no ownership interests, often have access to the same proprietary information as those who own at least 25% of a given firm.

[5] Provided that the ex-employee's base salary is not less than $100,000, consistent with the third condition.

and proprietary information. Having access to such information enables employees to gain valuable experience to progress in their careers, and many often go on to start their own firms, increasing competition in this industry. Without the protection of NCAs, firms would be forced to severely limit the number of employees with access to their proprietary information, and the employees without access would be relegated to working on discrete projects without understanding the broader implications of their work. As a result, employees would likely lose out on career-advancing learning opportunities.

This is not a hypothetical concern. Employees of MFA members already recognize that employees who enter NCAs with their employer receive increased access to the firm's proprietary information, which allows them to have a greater impact within the firm. Because of this fact, there have been instances where the ***employees*** of MFA members have requested to enter NCAs with their employers. The Proposed Rule would prevent employees from making such a choice.

In turn, the use of NCAs allow MFA members to utilize the unique perspectives of each covered employee, which is needed to develop and implement investment strategies for pension plans, university endowments, charitable foundations, and other institutional investors. These investors depend on the innovation that allows MFA members to diversify their investments, manage risk, and generate attractive returns over time.

Significantly, NCAs limit harm to employees in the investment management industry, as such employees are typically compensated during the non-compete period. The net result is that the use of NCAs by MFA members fosters investments in employees and creates the prospect of more competition once the post-term non-compete period ends. Not only do new firms started by former employees benefit from the use of NCAs, but other new entrants do too. Both benefit from knowing that their startup investment in their own proprietary information will be protected. A blanket ban on the use of NCAs would not only harm former employees and new entrants looking to compete, but it would result in less competition overall, which would have a negative effect on investors.

NCAs play a crucial role in allowing MFA members to protect their proprietary information, investment strategy, and investors while balancing the interests of employees.

II. A Blanket Ban on Non-Competes Would Harm MFA Members and Their Employees

As discussed in more detail below, NCAs are one of the most effective ways MFA members can ensure protection of their proprietary information, know-how, and investment strategies after their employees with access to such information leave. As noted above, much of the value in MFA members' proprietary information comes from its secrecy, which makes preventative measures, particularly NCAs, necessary. A recent study published on the Commission's website found that "[w]hen NCAs are relaxed, firms become less willing to fire advisers for misconduct and advisers' propensities to engage in misconduct and client fees increase."[6] In the investment management industry, NCAs serve to reduce costs and foster new market entry and competition. As noted above,

[6] Amit G. Gurun, Noah Stoffman & Scott E. Yonker, *Unlocking Clients: The Importance of Relationships in the Financial Advisory Industry*, 141 J. Fin. Econ. 1218 (2021).

employees in this industry need to have access to proprietary information and strategies to develop their skills and knowledge, which also allows them to deliver better results and client service for investors.

For example, MFA members often create and market new funds centered around specific portfolio managers, generally one or more individuals, who develop and implement the investment strategies of that fund. Before developing a new fund centered around one or more portfolio managers, to justify the substantial financial commitment required to launch and market a new offering, firms typically require assurances that the individual(s) will not misappropriate the firm's existing or future proprietary information and strategies. The Proposed Rule's ban on NCAs would likely dampen the market for new fund launches and, accordingly, put downward pressure on innovation and competition.

The Commission recites two reasons why the Proposed Rule may in fact increase new firm formation: first, workers would be free to launch new firms to compete with their former employer, and second, firms would be more willing to enter markets in which potential sources of labor are not restricted by NCAs. However, these rationales are largely inapposite in the investment management industry.[7] Often, it is the employee's former employer that seeds the new fund launch in return for an economic interest in the general partner entity, as well as the typical exposure of a limited partner and additional, preferential fund-level rights. Further contrary to the Commission's rationales, firms in this industry are generally unwilling to enter the market unless they can reach a sufficient comfort-level that their highly compensated, highly skilled workforce cannot immediately take the firm's proprietary information and strategies to a competitor.

To be sure, strategies employed by private funds vary widely and are highly proprietary. In fact, investors in funds are subject to confidentiality and non-disclosure agreements when they receive confidential information from these funds. It often takes a considerable investment of time, effort, and resources to develop and refine a strategy, and to develop a track record and sufficient reputation, to market that strategy to potential investors. NCAs protect this investment by MFA members. Accordingly, a complete ban on NCAs would have a chilling effect on new fund formations and investments in the investment management industry, which would harm investors.

The Proposed Rule's ban on NCAs could also harm employees in the investment management industry by eliminating the consideration employees are paid for signing NCAs, thereby potentially decreasing wages. Employees who are subject to NCAs are typically sophisticated, highly compensated investment professionals who can negotiate higher wages based, in part, on the requirement that they execute NCAs. The same is also true when NCAs are added or extended while such professionals are employed by MFA members. If NCAs are no longer permitted, the result could be downward pressure on the wages paid to such employees. Indeed, increased weighting toward deferred compensation may be substituted for NCAs,[8] and in such cases, departing employees receive

---

[7] To note, none of the academic studies on which the Commission relies dealt specifically with the investment management industry.

[8] *See* Richard A. Booth, *Give Me Equity or Give Me Death—the Role of Competition and Compensation in Building Silicon Valley*, 1 Entrepreneurial Bus. L. J. 265, 271 (2006) (arguing that deferred equity compensation is used as a

neither the compensation associated with an NCA nor unvested awards of deferred compensation.[9] We urge the Commission to consider the potential impact on such wages.

Further, many funds rely heavily on their traders' and developers' knowledge and innovation in developing algorithms for quantitative trading. If a developer were to leave and join another firm, they would be taking that key asset with them, thereby exposing, and immediately devaluing, their former employer's trading strategy and harming its competitive position. Consequently, investors, as the clients of those firms, ultimately bear the costs resulting from firms' loss of intellectual property and the increased costs of doing business. More broadly, absent NCAs, firms would be forced to keep proprietary information limited to only a very select group of employees, stifling the flow of valuable information and ideas that support innovation and bring value to investors.

Contrary to the Commission's view, in practice, confidentiality, non-disclosure, and non-solicitation agreements do not afford MFA members the same level of protection as NCAs. Putting aside the difficulties with detecting misuse of proprietary information, even if detected, it is often too late to do anything meaningful about it. After-the-fact litigation is often an inadequate alternative because the harm has already occurred once the information has been divulged. Moreover, complicated assessments of ownership of investment algorithms can be costly, lengthy, and potentially result in disclosure of proprietary information as part of the litigation process.

Further, the cost and business disruption that engaging in litigation would bring hurts the firm and has a negative impact on the investment management industry as a whole.[10] To the extent that MFA members cannot rely on NCAs, they would be forced to litigate alleged confidentiality breaches much more frequently to protect their proprietary information. There have been many well-publicized cases of such trade secret litigation and the great expense at which the firms involved enforced their rights, including both core litigation expenses (which may be incurred over many years) and collateral expenses, such as those associated with internal investigations, cooperation with federal law enforcement, etc. Consequently, contrary to the objective of the Proposed Rule, a ban on NCAs would likely have a chilling effect on firms hiring their competitors' former employees. Accordingly, a blanket ban on NCAs would harm MFA members and their employees.

III. The Proposed Rule Should Carve-Out and Permit Certain NCAs

If the Commission decides to proceed with the Proposed Rule, the Commission should provide a carveout in the Proposed Rule and explicitly allow NCAs that meet the following conditions:

First, the NCA has terms reasonably related to the protection of the firm's business interests, including intellectual property, trade secrets, and confidential and proprietary information, for the purpose of competitive advantage. Most states currently employ a reasonableness standard when

replacement for NCAs for purposes of retaining employees).

[9] *See* Jonathan M. Barnett & Ted Sichelman, *The Case for Noncompetes*, 87 U Chi. L. Rev. 953, 991 (2020).

[10] A blanket ban may well harm smaller, budding firms and new entrants as they may not be able to keep their teams together or keep their own proprietary information internal.

examining NCAs.[11] This nearly ubiquitous standard reflects a balance between an employer's legitimate interest in protecting its proprietary information, an employee's mobility (and, more broadly, competitive conditions in labor markets), and the public interest.

Second, the NCA is in effect for no more than two years[12] after termination of employment or the maximum term allowed under state law applicable to the NCA, whichever is shorter. Generally speaking, the terms of NCAs in the investment management industry are variable and tailored to the business interests of the particular firm. Anecdotally, we understand that firms may employ NCAs with terms ranging from 12 to 36 months. In consideration of the variability of NCA terms and the business purposes for which they are suited, we urge the Commission to consider an NCA in effect for no more than two years after termination of employment to be presumptively valid. NCAs with a longer term may be valid to the extent reasonably related to the protection of the firm's business interests and not applied on a firm-wide, one-size-fits-all basis.

Third, the NCA applies only to employees earning at least $100,000 per year or the highest wage floor amount in the states that impose wage floors, whichever is higher.[13] By the Commission's own admission, this threshold is "relatively high."[14] Indeed, under such a threshold, NCAs would not have been permitted with respect to roughly 84% of workers with wage or salary income in 2021.[15]

Fourth, the NCA provides for payment of no less than the ex-employee's base salary[16] during the post-employment period in which the ex-employee's subsequent employment is restricted by the NCA. Crucially, such a requirement, currently only present in two states,[17] ensures that there would not be any economic harm to employees who enter NCAs.

---

[11] Non-Compete Clause Rule, 88 Fed. Reg. at 3494 ("In the 47 states where at least some non-compete clauses may be enforced, courts use a reasonableness inquiry…"); *see*, *e.g.*, *Data Mgmt., Inc. v. Greene*, 757 P.2d 62, 65 (Alaska 1988); *Valley Med. Specialists v. Farber*, 982 P.2d 1277, 1283 (Ariz. 1999).

[12] Post-term NCAs of up to two years are permitted in many states. *See* Ala. Code § 8-1-190 (Alabama); Ark. Code Ann. § 4-75-101(d) (Arkansas); Fla. Stat. § 542.335(1)(d)(1) (Florida); Ga. Code Ann. § 13-8-57(b) (Georgia); La. Stat. Ann. § 23:921(C) (Louisiana); S.D. Codified Laws § 53-9-11 (South Dakota).

[13] Only a limited number of states have a wage floor requirement for employee NCAs. *See, e.g.*, D.C. Code Ann. § 32-581.01(6), (10), (13) (Washington, D.C. – at least $150,000, adjusted annually for inflation); 820 Ill. Comp. Stat. Ann. 90/10(a) (Illinois – at least $75,000)); Me. Rev. Stat. Ann. tit. 26 § 599-A(3) (Maine – at or below 400% of the federal poverty level); Md. Code Ann., Lab. & Empl. § 3-716(a) (Maryland – at least either $15 per hour or $31,200 annually); Or. Rev. Stat. § 653.295(1) (Oregon – exceeds $108,575.64 in 2023, adjusted annually for inflation); Wash. Rev. Code Ann. § 49.62.020(1)(b) (Washington – exceeds $100,000, adjusted annually for inflation ($116,593.18 in 2023)).

[14] Non-Compete Clause Rule, 88 Fed. Reg. at 3518 ("An earnings threshold could be relatively high (as in, *e.g.*, the State of Washington, where a non-compete clause is void unless the worker's annual earnings exceed $100,000 for employees…").

[15] U.S. Census Bureau, *PINC-10. Wage and Salary Workers--People 15 Years Old and Over by Total Wage and Salary Income, Work Experience, Race, Hispanic Origin, and Sex*, https://www2.census.gov/programs-surveys/cps/tables/pinc-10/2022/pinc10_1.xlsx (last revised Aug. 17, 2022).

[16] Provided that the ex-employee's base salary is not less than $100,000, consistent with the third condition.

[17] Mass. Gen. Laws Ann. ch. 149, § 24L(b)(vii) (Massachusetts – arrangement must provide for the payment of at least 50% of the employee's highest annualized base salary paid by the employer within the preceding 2 years); Or. Rev. Stat. § 653.295(7) (Oregon – arrangement must provide for the payment of (a) compensation equal to at least 50% of the

Finally, the NCA is otherwise in accord with applicable state law(s).[18]

This narrowly tailored carveout to the Proposed Rule is in fact necessary to achieve the Commission's goal of increasing competition in the labor market, particularly in the financial sector. As discussed at length above, NCAs provide firms with protection—and consequently, comfort—to share their proprietary information with employees, which in turn allows the employees to gain the necessary know-how. The Commission should incorporate this carveout into the Proposed Rule to preserve the benefits derived from NCAs while balancing employers' need to protect their information and the Commission's goal of promoting competition.

employee's annual gross base salary and commissions at the time of the employee's termination or (b) 50% of $100,533, adjusted annually for inflation, whichever is greater).

[18] For clarity, MFA does not believe that its proposed carveout of the Proposed Rule should alter or otherwise preempt any state laws.

NATIONAL ASSOCIATION OF Manufacturers

Brian Walsh
Director
Labor and Employment Policy

April 18, 2023

Lina M. Khan
Chair
Federal Trade Commission
600 Pennsylvania Avenue NW
Suite CC-5610 (Annex C)
Washington, DC 20580

Re: **FTC- 2023-00414; RIN 3084-AB74: Comments on "Noncompete Clause Rulemaking, Matter No. P201200"**

Dear Chair Khan:

The National Association of Manufacturers (NAM) respectfully submits these comments in response to the Federal Trade Commission's Proposed Rule on Noncompete Agreements.

The NAM is the largest manufacturing association in the United States. Its more than 14,000 members represent every industrial sector and hail from all 50 states. Manufacturing is essential to the American economy. Manufacturers employ nearly 13 million men and women, contribute more than $2.8 trillion to the U.S. economy annually and provide the greatest economic impact of any major sector. Manufacturing also pays workers over 18% more than the average for all businesses—on average, manufacturing workers earn $95,990 in pay and benefits.[1] Taken alone, manufacturing in the United States would be the eighth-largest economy in the world. The NAM is the voice of this critical ecosystem, and it serves as the leading advocate for a policy agenda that enables manufacturers to compete in the global economy.

Manufacturers in the United States drive more innovation than any other sector, performing 55% of private-sector research and development. In 2021 alone, manufacturers spent nearly $350 billion on R&D.[2] Research is the lifeblood of manufacturing: new products, new materials and new processes help propel manufacturing in America forward. Noncompete agreements, and the intellectual property interests they help protect, serve as critical incentives to encourage private businesses to invest the billions in R&D as well as the development of a leading industrial infrastructure that serves the economic interests of the United States.

With this manufacturing landscape in mind, the FTC's proposed ban on all noncompete agreements will lead to a dramatic shift in business operational practices and procedures and impair the economic engine that is the manufacturing sector by needlessly eliminating long-standing contracts between employer and employee. Noncompete agreements provide protection to encourage private sector investment in R&D and infrastructure development and

1 https://www.nam.org/facts-about-manufacturing/
2 Ibid.

support manufacturing competitiveness. According to a recent NAM survey, close to 87% of respondents use covenants such as a noncompete, non-disclosure or non-solicit agreements with around 70% stating that they use noncompete agreements.[3] Manufacturers employ these covenants selectively to cover manufacturing employees with highly specialized skillsets and/or knowledge of confidential, proprietary or strategically important information like senior managers, engineers and sales employees. Manufacturers typically craft their noncompete agreements on an individualized, case-by-case basis, shaped by an employee's role within the company and his unique knowledge, expertise or training.

The proposal as communicated in the January 19 NPRM offers a one-size-fits all approach that would lead to significant disruptions in manufacturing operations, most directly as it relates to the management of human capital, with clear downstream impacts on innovation. Further, the FTC's proposal raises significant concerns regarding the scope of the agency's statutory and constitutional authority. Indeed, the proposed rule transgresses the FTC's properly interpreted authority under the FTC Act, under both the Supreme Court's major questions doctrine and the prohibition on delegation of legislative authority. Moreover, noncompete agreements have been adequately regulated at the state level for over a century through both legislation and common law. Most states permit noncompete agreements that are narrowly tailored to protect a company's legitimate business interests and reasonable in scope. Manufacturers have structured their employment agreements based on this recognized legal framework which provides important protections to both employer and employee.

If the FTC proceeds with this novel rulemaking, manufacturers request that the agency consider how implementation of a blanket ban on noncompetes will impact the unique requirements and demands of advanced manufacturers and other complex businesses that are heavily reliant on innovation. Manufacturers are particularly concerned that a blanket ban on noncompete agreements will:

- Discourage investment in R&D and critical infrastructure;
- Disregard the deliberate and intentional process that manufacturers use to protect their trade secrets and other intellectual property;
- Ignore the threats that manufacturers face from both foreign and domestic competitors related to intellectual property;
- Harm business to business relationships and competitive business strategies;
- Complicate long-standing talent recruitment and retention strategies;
- Exceed the agency's authority under the FTC Act, which does not extend to promulgating binding, substantive competition regulations that outlaw economic arrangements that have legally existed for generations; and
- Disrupt the stability of noncompete agreements that are regulated at the state level.

Noncompete Agreements Protect Manufacturing Innovation

Manufacturers are innovators and inventors who have a vision for the future and the drive to make it real. From new technologies and lifesaving medicines to sustainability solutions and humanitarian breakthroughs, manufacturers lead the way toward solving challenges today and creating opportunities tomorrow. R&D in the manufacturing sector has risen from $132.5 billion in 2000 to $347.4 billion in 2021.[4] With the right federal policies in place, manufacturers in America will be able to compete with the rest of the world and lead toward more progress for

[3] https://www.nam.org/wp-content/uploads/2023/03/Noncompete_Survey_Data_Report.pdf
[4] https://www.nam.org/facts-about-manufacturing/

more people. Those policies must include robust intellectual property (IP) protections and enforcement.

The NAM has advocated for policymakers to strengthen the protection of IP rights under domestic laws and international agreements and to pursue policies that reflect the vital importance of manufacturers' IP rights for industrial competitiveness. In fact, the NAM is leading the fight against counterfeit goods and the threat they pose to manufacturers, urging the U.S. government to enact policy and take action to deter IP theft from foreign governments, state-sponsored actors and criminals. Noncompete agreements are a critical preventative tool in the arsenal to combat this threat to manufacturers' IP. It is unsurprising that approximately 93% and 72% of manufacturers surveyed use noncompete agreements to protect their intellectual and industrial processes respectively.[5] The FTC's proposed ban encroaches on the suite of tools on which manufacturers routinely rely to protect their IP, threatening future innovation and continued domestic manufacturing investment.

In 2014, the Center for Responsible Enterprise and Trade (CREATe.org) and PricewaterhouseCoopers (PwC) estimated that the cost of trade secret misappropriation ranged from one to three percent of the U.S. Gross Domestic Product, potentially costing U.S. companies hundreds of billions per year.[6] That number has only increased since 2014. Equally significant, 85 percent of trade secret thefts are committed by either an employee when they move to a competitor or by someone else known to the party whose trade secrets were stolen.[7]

The unique knowledge and capabilities that individual employees gain through training and product development are a built-in feature of the product patents process. For each step of this process to work effectively, maximizing the benefit of the product for the public, these individuals must obtain extensive training and deep expertise on the product. Noncompete agreements encourage manufacturers to make these worthwhile personnel investments, allowing the product experts to collaborate from an innovation center to a factory floor to environments such an operating room and other real-life applications.

For example, R&D necessitates investment in a range of highly skilled workers like engineers, scientists and physicians. Advanced manufacturers in the life sciences sector, in particular, employ tailored noncompete agreements to cover these workers throughout a product's lifecycle. Incorporating the know-how of physicians and other experts in the planning, research, development, testing, marketing and release of new products is critical. This knowledge is later brought to an operating or consultation room where the safe and effective use of a medical device is incredibly valuable yet unprotected by the product patent. Upon release to the public, the engineers who develop the device will educate the sales consultants, who in turn provide training resources and opportunities to the surgeon and surgical team.

Under the current proposal, however, these vital perspectives could only be obtained at risk of revealing critical information to a potential competitor—and thus may ultimately go missing, meaning less employee and management participation as products are researched, developed, tested, marketed and ultimately released to the public. Manufacturers must be able

---

[5] https://www.nam.org/wp-content/uploads/2023/03/Noncompete_Survey_Data_Report.pdf

[6] *See* Economic Impact of Trade Secret Theft: A framework for companies to safeguard trade secrets and mitigate potential threats, https://www.innovation-asset.com/hubfs/blog-files/CREATe.org-PwC-Trade-Secret-Theft-FINAL-Feb-2014_01.pdf

[7] *See* World Intellectual Property Organization, https://www.wipo.int/wipo_magazine/en/2016/01/article_0006.html

to staff R&D teams fulsomely and have access to as many perspectives as possible, including from technical employees at all seniority levels. Banning noncompetes risks further isolation of ideas and siloing of information to prevent potential threats of theft, to the ultimate detriment of American innovation and economic competitiveness.

Further, without noncompetes, manufacturers would be less likely to invest in capital-intensive projects and the necessary trial and error that is inherent in testing new products and processes. This information could easily end up in the hands of a competitor. The competitor would need only wait until the product or process proves its viability and hire the particular worker(s) involved, reaping a windfall from others' hard work, time, and financial resources, and thus discouraging critical investment in innovation. Noncompete agreements cover these situations and allow manufacturers to maintain their competitive edge.

Noncompetes are an essential tool for protecting trade secrets—vital intellectual property that does not qualify for patent protection. Many types of confidential technical information do not meet the legal requirements for patentability, yet the Supreme Court has recognized both the value of such information to businesses that legitimately develop it, and the unfairness of allowing competitors to cut corners by misappropriating that information.[8] Moreover, a business may be uncertain whether a discovery is patentable or not, and decide not to risk disclosing it publicly in a patent application that could be rejected. And business strategy information like customer lists, pricing, and the like are never patentable, but are valuable to their proprietors and attractive targets for competitors.

Non-disclosure agreements are also not a sufficient tool to protect businesses' intellectual property. Enforcement of an NDA requires the company to prove the actual obtaining and use of covered information, which is very difficult to achieve when compared to the deterrent effect of a noncompete. Further, NDAs do not address the reality that it is simply unrealistic to expect that employees will mentally separate the trade secrets they have developed expertise on when they go to a competitor. The current remedies for misappropriation of trade secrets under state laws modeled after the Uniform Trade Secrets Act, and in federal court under The Defend Trade Secrets Act (DTSA), do not prevent misappropriation of trade secrets, but rather only offer a remedy after the misappropriation has occurred. Noncompete agreements are, therefore, a necessary and important complement to non-disclosure agreements and trade secret litigation for companies attempting to protect their proprietary scientific, technical, and business information.

Noncompete Agreements Protect Business to Business Activity and Company Strategy

Mergers and acquisitions play a critical role in the manufacturing sector. The proposed rule will hinder M&A activity, including the acquisition of startups. These vital transactions provide growth opportunities for both acquiring and acquired companies; they also lead to significant business efficiencies, to include, but not limited to capital formation, jobs, and innovation. For consumers, mergers can decrease prices, increase available goods, and enhance choice. Mergers and acquisitions allow companies of all sizes to evolve and grow, leading to downstream effects that produce lower prices, increase output and create greater

---

[8] *Kewanee Oil Co. v. Bicron Corp.*, 416 U.S. 470, 481-482 (1974) ("[E]ven though a discovery may not be patentable, that does not destroy the value of the discovery to one who makes it, or advantage the competitor who by unfair means, or as the beneficiary of a broken faith, obtains the desired knowledge without himself paying the price in labor, money, or machines expended by the discover.") (quotation marks omitted)

choice for consumers. Without access to noncompete agreements, it will become harder for manufacturers to protect company assets, leading to dramatic changes in M&A strategy and impacting the roughly half of manufacturers that use noncompetes to protect these critical transactions.

Noncompete agreements are ubiquitous in M&As, especially in transactions involving highly technical or complex businesses. Acquiring companies need not only the original product inventors but also other key talent to sign and abide by noncompete agreements for a defined period in connection with an acquisition. That key talent includes engineers and other workers who maintain first-hand, technical knowledge and expertise on the product and play an integral role in further development and innovation. These concerns are echoed by many manufacturers and are especially salient for manufacturers in the pharmaceutical and chemical sectors.

As an example, in the pharmaceutical and chemical sectors, where business models often include robust M&A activity, manufacturers are especially reliant on enforceable noncompete agreements. Noncompete agreements enable manufacturers to buy businesses from the original inventor or owner—in many cases, small startups or family-owned operations. After doing so, the acquiring company invests in that technology and helps expand the product's reach to a global scale, to the benefit of consumers. Manufacturers are willing to make these acquisitions with the assurance that those inventors and their integral employees have signed noncompetes, preventing them from starting a new business in the same industry to directly compete and potentially destroy the value of the acquired business.

Although the proposed rule includes a limited exception for noncompete clauses between the seller and buyer of a business, this exception is available only where the party restricted by the noncompete clause is an owner, member or partner holding at least a 25% ownership interest in a business entity. But many startups and small companies acquired by larger entities already have private equity involved in their corporate governance structure and ownership meaning that it is extremely unlikely that any single owner, member or partner maintains 25% or more ownership stake. As a result, the agency's 25% threshold for ownership is arbitrary, capricious and unrealistic.

Without noncompetes, manufacturers will spend more time and capital to protect trade secrets and the technologies they have acquired. This will mean more internal controls to capture the information that workers know and more litigation, since courts do not grant injunctions quickly on these matters. The proposed ban is also in tension with the FTC's current stance on mergers and acquisitions—which, like both longstanding antitrust law and state law on the enforceability of noncompetes, recognizes that such agreements can have important pro-competitive effects in the merger context.[9] In the NAM's experience, after a merger agreement

---

[9] *See, e.g.*, *United States v. Addyston Pipe & Steel Co.*, 85 F. 271, 281 (6th Cir. 1898) (Taft, J.) (explaining that noncompete agreements in the acquisition context "are generally upheld as valid" when they are "reasonably necessary … to the enjoyment by the buyer of the property, good will, or interest in the partnership bought"), *aff'd*, 175 U.S. 211 (1899); *Shearson Lehman Bros. Holdings, Inc. v. Shmertzler*, 116 A.D.2d 216, 222 (N.Y. App. Div. 1986) ("[N]on-competition agreements … incident to the sale of a business are more liberally enforced 'on the premise that the buyer of a business should be permitted to restrict his seller's freedom of trade so as to prevent the latter from recapturing and utilizing, by his competition, the good will of the very business which he transferred for value."); FTC, *Just because it's ancillary doesn't make it legal* (Sept. 30, 2019), https://perma.cc/3T2J-T8UF (noting that "non-compete provisions" entered into as "ancillary parts of a merger or joint venture agreement" will be reviewed by the FTC and allowed to proceed "if they are reasonably necessary for accomplishing the benefits of the transaction, and narrowly tailored to the circumstances surrounding the transaction.").

has been finalized, it is standard to have a cooling off period to avoid any suspicion of collusion or price fixing. The proposed rule, instead, allows employees of an acquired company to leave immediately and start a direct competitor to the company. This departure from widely accepted practice will not only drive up the cost of acquisitions, but divert resources away from scaling and innovating the technology or product that was acquired in the process.

<u>Noncompete Agreements Support Talent Recruitment and Retention</u>

As manufacturers respond and adapt to ongoing workforce challenges, companies must continuously safeguard their competitive edge by investing in human capital through best-in-class training and competitive compensation packages that support both the company and the individual. The FTC's blanket ban of noncompete agreements is not a workable solution to addressing the challenges the FTC has identified. The agency's viewpoint is prejudiced by the idea that noncompete agreements exist solely to restrict worker mobility. The NAM understands that misuse of these agreements has occurred and recognizes that the FTC has the authority to pursue enforcement proceedings against entities that abuse the law.

The agency, through this rulemaking, misunderstands the fundamental and proper use of noncompete agreements in business and manufacturing environments. Noncompete agreements allow manufacturers to invest in their workers' development while securing their companies' interest in the knowledge acquired in the process. The majority of manufacturers have restricted the use of noncompetes to select employees and tailor those agreements to preserve the interests of both parties. For example, 93% of manufacturers stated that their agreements last no more than 2 years total from the employee's departure.[10]

Manufacturers utilize noncompetes for specific workers because they possess a level of skill and understanding that is critical to a company's ability to consistently and seamlessly conduct business successfully. Through further investment and cross-training, the worker's skills and knowledge are cultivated to help the employer achieve its goals, from developing the latest technological innovation to expanding operations into a new market. Approximately half of manufacturers surveyed stated that they are more likely to invest in their workers if the employee has signed a noncompete.[11] These key workers have been granted exclusive access to the inner workings of a firm. They are appropriately and competitively compensated for the integral roles they serve on behalf of their employers.

At the same time, manufacturing employers recognize that these key workers can depart at any time, taking with them intimate knowledge of the company's proprietary and strategically important information. That is why most manufacturers have tailored their noncompete agreements to balance their legitimate business interests with their investment in their employees. These agreements are used on an as-needed, negotiated basis depending on the information a manufacturer seeks to protect when employees choose to seek other employment. Manufacturers' noncompete agreements are varied and devised using a wide variety of options specific to the individual and protectable interest involved, and can included concepts like "garden leave" (compensating the worker the regular rate of their salary for the duration of the noncompete) in some cases, and identifying specific competitive concerns in others. Employers use noncompete agreements to give themselves protection while they show that the worker is integral to the organization.

---

10 https://www.nam.org/wp-content/uploads/2023/03/Noncompete_Survey_Data_Report.pdf
11 Ibid.

Across all industrial sectors, the prototypical role within a company that requires the use of a noncompete agreement is that of senior executive. Generally, it is widely recognized and accepted among the manufacturing sector that senior executives possess significant negotiating leverage in their employment relationships and are compensated in return. Applying a noncompete ban to senior executives allows individuals who have the most sophisticated skillset and intimate knowledge of a company to immediately provide those same tools and information to a competitor. Further, compensation for a senior executive often includes equity in the company or garden leave. If the noncompete is voided on the employee's own will, then the compensation is returned to the employer. The agency's proposed rule overlooks the nuances of these compensation arrangements, including the tax implications for both the employer and the executive, creating unnecessary uncertainty for both sides of the agreement.

Manufacturers also utilize noncompete agreements for workers that have developed deep expertise on a product, including, for example, sales and marketing employees. Approximately 87% of manufacturers use noncompetes to protect their customer service and sales information.[12] The workers that are covered in these arrangements have obtained detailed and specific market intelligence on their employer's customer base and hold knowledge of a company's business and investment strategy. These workers are key to supporting the existing market and supporting increased sales and customer growth. Their understanding of a company's growth strategy puts these employees in a unique role to achieve company-wide goals and require a level of protection that a noncompete offers.

Manufacturers similarly rely on noncompetes to protect their investment in product engineers and workers who serve an integral role throughout a product's lifecycle. Engineers are involved in every step of the process from initial product design and development to ultimate fabrication, marketing and sale. In some cases, product maintenance also falls under their purview. This iterative process requires deep involvement by these workers in various components of the manufacturing process and business strategy. Around 65% of manufacturers cover engineers under their noncompete agreements.[13]

In manufacturing, there is a sharing in expertise across the business enterprise. As previously stated, it is not uncommon that an engineer, scientist, or physician is required to be in constant communication and collaboration with other workers in different departments. For example, the engineer will need to work with sales and marketing employees to explain the details surrounding a product. Or they will need to collaborate with high-level senior executives to make sure that the product is delivered on time. Each employee's functional expertise operates with a layer of protection that company assets will not be willfully shared as there is a common understanding to protect what is inherently competitive. The FTC fails to take into account that company expertise is not siloed and that company operations require a multi-pronged approach to protecting what makes the enterprise unique.

FTC Lacks the Authority to Ban Noncompete Agreements

Apart from being misguided, the proposed ban on noncompetes exceeds the FTC's statutory and constitutional authority, is impermissibly vague and overbroad, and imposes a one-size-fits-all federal mandate on a subject adequately regulated under state law. *See generally* Dissenting Statement of Commissioner Christine S. Wilson, 88 Fed. Reg. 3,540, 3,543-45 (Jan. 19, 2023). This section will explore these serious legal concerns in turn.

12 Ibid.
13 Ibid.

The Proposal Conflicts With the Major Questions Doctrine

First, the FTC lacks the authority under the FTC Act to engage in unfair-competition rulemaking. This rulemaking is subject to evaluation under the Supreme Court's major questions doctrine, under which the Court requires an agency to "point to clear congressional authorization for the power it claims," when "the history and the breadth of the authority that [the agency] has asserted, and the economic and political significance of that assertion, provide a reason to hesitate before concluding that Congress meant to confer such authority." *West Virginia v. EPA*, 142 S. Ct. 2587, 2608 (2022) (quotation marks omitted).

As in the Supreme Court's major questions cases, the FTC here has "claim[ed] to discover in a long-extant statute an unheralded power representing a transformative expansion in [its] regulatory authority" (*West Virginia*, 142 S. Ct. at 2608 (quotation marks omitted)); indeed, as Commissioner Wilson explains, Section 6(g) of the Act was long understood not to provide any substantive rulemaking power, and only a single substantive rule prior to this one (never enforced and later withdrawn) was ever premised solely on the Commission's putative competition authority. 88 Fed. Reg. at 3,544.

More, the noncompete ban plainly represents an "assertion of extravagant statutory power over the national economy." *West Virginia*, 142 S. Ct. at 2608. The proposed rule explains that it would abrogate provisions of 30 million employment contracts—one for every five American workers; *see* 88 Fed. Reg. at 3,485. The Commission further estimates that its rule would result in a transfer of wealth of $250 to $296 billion per year. *Id.* at 3,501. Further underscoring the great "economic and political significance" of the proposed rule, Congress has consistently "considered and rejected" similar proposals. *West Virginia*, 142 S. Ct. at 2614.[14] And finally, as detailed further below, contracts not to compete have thus far been the "particular domain of state law." *Id.* at 2621 (Gorsuch, J., concurring); *see* 88 Fed. Reg. at 3,494 (recognizing that state law governs the enforceability of noncompetes).

Given this overwhelming authority, the Commissioners who voted in favor of the proposed rule concede the applicability of the major questions framework by asserting that "the FTC is operating under clear statutory authority." 88 Fed. Reg. at 3,538. But the FTC Act contains no clear statement authorizing the FTC to lead a substantive competition rulemaking. To the contrary, the grant of substantive power to "prevent persons … from using unfair methods of competition" is located in a statutory section dealing exclusively with individual enforcement proceedings. 15 U.S.C. § 45(a)(2). The notion that by this language Congress meant to empower the FTC to outlaw widely used and lawful business practices, rather than simply to promulgate interpretive or procedural rules for its adjudicative proceedings, runs contrary to the fundamental principle that "Congress … does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions—it does not, one might say, hide elephants in mouseholes." *Whitman v. Am. Trucking Ass'ns*, 531 U.S. 457, 468 (2001).

The legislative history further supports the lack of substantive competition rulemaking authority. *See* 88 Fed. Reg. at 3,544 n.45 (collecting legislative history, including a statement

---

[14] *See* MOVE Act, S. 1504, 114th Congress, 1st Session (2015); LADDER Act, H.R. 2873, 114th Congress, 1st Session, (2015); Freedom for Workers to Seek Opportunity Act, H.R. 4254, 114th Congress, 1st Session (2015); Workforce Mobility Act of 2018, 115th Congress, 2d Session (2018) (recently reintroduced as the Workforce Mobility Act of 2023, S. 220, 118th Congress, 1st Session (2023)); Freedom to Compete Act, S. 2375, 117th Congress, 1st Session (2021).

from the House sponsor of the FTC Act that "the Federal Trade Commission will have no power to prescribe the methods of competition to be used in the future," and the Commission instead "will exercise power of a judicial nature"). The later-enacted Magnuson-Moss Act, which created a complex rulemaking scheme for FTC's *consumer protection* rules, explicitly left the FTC's rulemaking authority with respect to *unfair competition* untouched, meaning that the authority to promulgate substantive competition rules must be located in the original 1914 Act, or nowhere at all. *See* 15 U.S.C. § 57a(a)(1)-(2).

The Commission relies on the D.C. Circuit's decision in *National Petroleum Refiners Ass'n v. FTC*, 482 F.2d 672 (D.C. Cir. 1973), for its claim of substantive competition rulemaking power. *See* 88 Fed. Reg. at 3,499 & n.226. The court there applied precisely the opposite presumption than that which the Supreme Court has now mandated in *West Virginia*. Rather than being "reluctant to read into ambiguous statutory text" a delegation of sweeping agency power and thus requiring "clear congressional authorization" (142 S. Ct. at 2609), the D.C. Circuit based its decision on the then-extant principle that "[a]ll authority of the Commission need not be found in explicit language." *National Petroleum*, 482 F.2d at 680; *but see, e.g.*, *FEC v. Ted Cruz for Senate*, 142 S. Ct. 1638, 1649 (2022) ("An agency, after all, literally has no power to act … unless and until Congress authorizes it to do so by statute.") (quotation marks omitted). *National Petroleum* is thus incompatible with the modern major questions doctrine.

The specifics of the proposed rule are also lacking in "clear congressional authorization" for another reason: Even apart from the lack of substantive rulemaking authority writ large, the FTC Act certainly does not empower the Commission to promulgate retroactive binding regulations. *See, e.g.*, *Bowen v. Georgetown Univ. Hosp*., 488 U.S. 204, 208 (1988) ("[A] statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms."). While the proposed rule disclaims retroactivity (88 Fed. Reg. at 3,512), its purpose and effect is to render illegal 30 million existing employment contracts, in addition to preventing such contracts going forward. In sum, the statutory authority for the proposed rule—both in its generalities and its specifics—appears to be at best ambiguous. Under *West Virginia*, that is not enough.

The Proposal Constitutes an Impermissible Delegation of Legislative Authority

Second, and apart from the major questions problem, if the FTC Act is construed to authorize substantive rulemaking like that attempted here, it could constitute an unconstitutional delegation of legislative authority. *See generally Gundy v. United States*, 139 S.Ct. 2116 (2019) (plurality op.) (explaining that "Congress . . . may not transfer to another branch powers which are strictly and exclusively legislative," and that "[t]he constitutional question is whether Congress has supplied an intelligible principle to guide the delegee's use of discretion."); *see also id.* at 2131-2148 (Gorsuch, J., dissenting) (noting the "traditional rule that Congress may leave the executive the responsibility to find facts and fill up details," but Congress itself must "make[] the policy decisions.").

While the Supreme Court has only ever struck down two statutes on nondelegation grounds, one of them empowered the agency in question to do almost *exactly* what the FTC claims power to do here: to promulgate "codes of fair competition." *A.L.A. Schechter Poultry Corp. v. United States*, 295 U.S. 495, 529-543 (1935). The Supreme Court found this delegation unconstitutional and specifically distinguished the FTC Act on the grounds that the "scope" of the FTC Act's "unfair methods of competition" would be "left to judicial determination *as controversies arise*," and contemplated that the FTC would act in a "quasi-judicial" capacity itself. *Id.* at 532-533 (emphasis added). The FTC's current action would thus overstep the permissible role outlined for the agency in *Schecter Poultry*, instead attempting to unconstitutionally promulgate "codes of fair competition."

The Proposal is Vague and Overbroad

In addition to exceeding these fundamental limits on the agency's power, the proposed rule is also overly broad and ambiguous in its definition of what qualifies as a noncompete agreement. The proposal claims that other types of restrictive covenants, such as non-disclosure or non-solicit agreements, *may* fall within the ambit of the rule as "de facto" noncompetes depending on the scope of prohibited behavior. The agency offers only a vague explanation as to what type of restrictions would qualify, with the potential to discourage or halt otherwise permissible and valuable business practices. Further, the definition of a worker is ill-defined and the agency must provide greater specificity to those it seeks to regulate.

The rule's retroactive ban on all noncompete agreements is poorly conceived and will create a trail of business consequences ranging from additional paperwork burdens to complex concerns around IP protection. Business decisions have been made with the understanding that these agreements will protect manufacturers' intellectual property and will be enforced properly by courts in the future. Manufacturers will also find it costly and burdensome to re-examine all their employment agreements to ensure that none contain noncompetes or other employment covenants that could be misinterpreted as de facto noncompetes and provide the requisite notice to current and former employees. For the 75% of manufacturers who use non-disclosure agreements, the rule's 180-day implementation period is unrealistic for this type of all-encompassing compliance effort.[15] Additionally, in order to be lawful, any final rule would need to forthrightly address the reliance interests of the businesses, including many manufacturers, that have entered into a variety of employment contracts that the proposed rule would abrogate. As the Supreme Court has made clear, "[i]t would be arbitrary and capricious to ignore such matters," as the FTC has done here. *See DHS v. Regents of Univ. of Cal.*, 140 S. Ct. 1891, 1913 (2020).

Noncompetes Are Properly Governed by State Law

Lastly, state law has been adequately evaluating noncompetes for centuries with the necessary flexibility for manufacturers. Individual states have picked the regulation that suits their individual policy preferences, ranging from outright bans (in a small minority of states) to no legislation at all. In general, state courts undertake a highly factual inquiry to determine whether a noncompete is valid and consider a company's legitimate business interests, as well as the agreement's geographic scope, duration and scope of proscribed activities. This rule, by contrast, treats noncompetes as *per se* invalid, as opposed to the rule of reason standard that courts have used to assess these agreements for years. As Commissioner Christine S. Wilson explained in her dissent, the proposed rule "represents a radical departure from hundreds of years of legal precedent that employs a fact-specific inquiry into whether a noncompete clause is unreasonable in duration and scope, given the business justification for the restriction."[16]

[15] https://www.nam.org/wp-content/uploads/2023/03/Noncompete_Survey_Data_Report.pdf

[16] 88 Fed. Reg. at 3,540; *see also* Christine Wilson, *Why I'm Resigning as an FTC Commissioner* (Feb. 14, 2023), https://www.wsj.com/articles/why-im-resigning-from-the-ftc-commissioner-ftc-lina-khan-regulation-rule-violation-antitrust-339f115d

Conclusion:

Manufacturing innovation and intellectual property are a critical foundation both for a globally competitive manufacturing base here at home and for U.S. global leadership in manufacturing. Patents, trademarks, trade secrets, industrial designs, trade dress, copyrights, genetic resources and other forms of IP are increasingly important to manufacturers large and small, enabling them to research and develop new industries, invest in advanced manufacturing and create new products for their customers around the world. Yet, inadequate global IP rules and growing theft of all forms of intellectual property present a growing challenge for innovative manufacturers, undermining hard-won American manufacturing innovation and the jobs and exports that innovation fuels. The consequences of weak IP protections are severe, and a step in the wrong direction hinders consumer health, safety, national security and rule of law.

This one-size-fits all proposal is unworkable as currently proposed, and threatens to allow trade secrets and other types of closely held company information to be freely accessed by competitors and foreign adversaries. In an already highly competitive and volatile business environment, losses will be incurred and manufacturers will face additional business challenges. Innovation is one of our greatest strengths and a major contributor to economic growth and industrial competitiveness. For this reason, it is important for policymakers both to nurture the creation and application of technology and to vigorously protect intellectual property, as the creation of technology is the creation of intellectual property. Without strong protection, the incentives for future innovation-directed R&D will be diminished.

While the FTC correctly identifies that one-in-five American workers are governed by a noncompete clause as a condition of their employment, the commission oversimplifies the use of noncompete clauses in its justification for this rulemaking. Further, the commission's rationale for pursing this rulemaking does not offer a full picture on the use of noncompete clauses as conditions of employment for complex businesses in highly sensitive and technical industries. Moreover, the retroactive nature of this proposal is likely to cause substantial confusion and damage to employers and employees alike.

Manufacturers are opposed to the commission's proposal in its current form. If the Commission wishes to consider a more tailored approach to restrict noncompete agreements that contemplates certain exemptions, manufacturers request that the current rule be withdrawn and resubmitted with exemptions clearly articulated and justified for the public's consideration.

Thank you for the opportunity to express manufacturers' ongoing concerns with this proposed rulemaking.

Re: Docket No. FTC-2023-0007: Non-Compete Clause Rule, Matter No. P201200

Dear Ms. Tabor:

The Retail Industry Leaders Association (RILA) appreciates the opportunity to submit comments on the Federal Trade Commission's (FTC's or the Commission's) proposed rule banning non-compete clauses in employment agreements. *See* 88 Fed. Reg. 3,482 (Jan. 19, 2023).

RILA is a trade association of the world's largest, most innovative, and recognizable retail companies and brands. We convene decision-makers, advocate for the retail industry, and promote operational excellence and innovation. Our aim is to elevate a dynamic retail industry by transforming the environment in which retailers operate. RILA members include more than two hundred retailers, product manufacturers, and service suppliers, who together employ over 42 million Americans and account for $2.7 trillion in annual sales and hundreds of thousands of stores, manufacturing facilities, and distribution centers domestically and abroad.

RILA members fully support dynamic labor markets and competition in the American economy. The retail industry itself is hypercompetitive. Retail companies vigorously compete for a share of consumer spending by providing quality innovative products that meet customers' needs and expectations at a price they can afford. Retailers also compete for skilled talent to strengthen organizations, drive innovation and enhance customer experience.

RILA members agree with the FTC that overbroad and anticompetitive non-compete clauses in employment agreements are not appropriate and should be condemned. However, RILA members that use reasonable non-competes and other restrictive clauses are concerned that the FTC's proposal fails to consider various limited uses of these clauses, which provide benefits to employees and employers alike and do not on balance harm competition. RILA members do not use non-compete clauses for front-line hourly workers. Instead, those members that use non-compete clauses do so only for small number and limited categories of employees—namely, executives, senior business leaders and skilled employees who are exposed to confidential business information and trade secrets. Non-compete clauses allow these retailers to recruit high quality talent for these kinds of positions, helping them improve the quality of the retailers' products and services, while protecting confidential business information and trade secrets. In exchange for agreeing to a non-compete, impacted employees receive additional benefits such as specialized skills training or compensation (*e.g.*, bonuses, equity, long term incentives, etc.).

A blanket ban on all non-compete clauses (and restrictive covenants deemed "*de facto*" non-compete clauses) is unsupported by the evidence and is unwise policy. Such a ban sweeps in all categories of workers, including those that are highly sophisticated and well compensated. Because non-compete clauses and other restrictive covenants can provide significant societal benefits without being overbroad and anticompetitive, they should be reviewed on a case-by-case basis to determine whether any given clause is reasonably tailored to the circumstances and warrants enforcement.

At a more fundamental level, it is vital for the American system of governance that federal agencies act only within the confines of the authority Congress grants them. To date, Congress has not provided the FTC with the legislative power to issue rules banning non-compete clauses as "unfair methods of competition" (UMC), but rather has only granted the FTC the power to proceed through case-by-case adjudication to prevent unfair methods of competition in commerce. Accordingly, any broad federal policy concerning non-compete clauses should be left to Congress and those agencies they deem to have the expertise and appropriate authority to develop employment policy.

The FTC should reconsider the proposed rule in light of the experiences of the RILA members that use non-compete clauses and given the serious constitutional and other legal concerns associated with this proposed rulemaking.

Executive Summary

I. When non-compete clauses are properly tailored, they can serve as important tools that provide incentives to employers to invest in employees without unfairly restricting employment mobility. Retailers typically use non-compete clauses only for executive, senior business leaders or highly skilled employees who are exposed to confidential business information and trade secrets. Non-compete clauses allow retailers to operate their businesses effectively and efficiently by ensuring that confidential information and trade secrets they share with certain employees will be protected. Retailers also use non-compete clauses in certain circumstances when they provide skills training for employees. A non-compete prevents such an employee from using that training in competing stores (usually subject to geographic and time limits), protecting the retailer's investment. These limited uses of non-compete clauses are reasonable and overall beneficial to employees, employers, and consumers.

II. The FTC's proposed rule banning nearly all non-compete clauses used by employers under its jurisdiction is unsound public policy that will cause unintended harmful consequences. It prevents the traditional case-by-case evaluation and enforcement of pro-competitive non-compete clauses, eliminating their benefits to commerce. By including ill-defined "*de facto*" non-compete clauses in the ban, the FTC's proposed rule creates significant uncertainty regarding the legality of other restrictive covenants, without which employers will be further hampered in their ability to protect confidential business information. And by proposing that the ban apply retroactively to existing contracts, the FTC would hugely disrupt the operation of businesses that rely on non-compete clauses and prevent employers from receiving the benefits of contractual provisions that they bargained for.

III. The proposed rule is beyond the FTC's legal authority. The FTC bases the proposed rule on its asserted authority to issue binding rules preventing "unfair methods of competition" in commerce, but Congress has never delegated what would be immense power to regulate the national economy through rulemaking to the FTC. Rather, Congress originally designed the FTC so that the Commission would evaluate conduct on a case-by-case basis. While Congress later provided the FTC with the power to issue binding rules with regard to "unfair or deceptive acts or practices" using specific procedures, it declined to provide the FTC with competition rulemaking authority.

IV. The proposed rule does not withstand constitutional scrutiny. The FTC's reliance on rulemaking grant language, which provides the FTC with authority to issue internal rules, does not pass the major-questions doctrine test. This language is at most ambiguous in scope and does not clearly provide the FTC with the power to decide a major national policy question regarding regulation of non-compete clauses in employment agreements. The FTC Act also does not provide the agency with an intelligible principle to issue rules on "unfair methods of competition," so if the statute were read to grant the agency power to issue the proposed rule, the statute would constitute an unconstitutional delegation of legislative authority. To avoid concluding that the FTC Act is unconstitutional, courts would likely decide that the Act does not grant the FTC the power to issue the proposed rule. Finally, the proposed rule also threatens principles of federalism because the FTC is seeking to regulate an area of contract law that is ordinarily left to the states.

V. The proposed rule Is arbitrary and capricious, in violation of the Administrative Procedure Act. The FTC's conclusion that non-compete clauses are categorically "unfair methods of competition" is based on cherry-picked studies that are inconclusive or methodologically flawed, and the FTC cannot rely on its own experience to support the rule because its experience with non-compete clauses is virtually nonexistent. The same goes for the FTC's proposal to ban "*de facto*" non-compete clauses, which is based on even slimmer support. The proposed rule is also arbitrary and capricious because the FTC failed to consider reliance interests, including those of retailers that have structured their businesses relying on the availability of non-compete clauses that states have deemed legal and those of employees who have benefited financially and professionally from these clauses. Furthermore, the FTC failed to conduct an adequate cost-benefit analysis of the proposed rule.

VI. The FTC should withdraw the proposed rule. It should continue evaluating non-compete clauses on a case-by-case basis so that it can prevent deceptive, unfair, or anticompetitive non-compete clauses without banning reasonable ones that provide benefits to commerce.

All of these issues are discussed in more detail below.

Comments

I. Reasonably Tailored Non-Compete Clauses Are Important Tools for Creating Employment Opportunities

The FTC's proposed rule casts aside the significant benefits provided by reasonable non-compete clauses to employees, employers, consumers, and commerce as a whole. As detailed below, the limited use of appropriately tailored non-compete clauses is a reasonable and helpful tool that can allow employers to provide financial benefits and opportunities to individual employees, including higher wages, additional training, and access to confidential information. RILA members that use non-competes do so in a way that is specifically tailored to the circumstances of their individual businesses.

A. Tailored non-compete clauses are beneficial to both employees and employers.

Appropriately tailored non-compete clauses such as those used by a number of RILA members benefit both employees and employers. They provide strong incentives for companies to invest in and financially reward employees, as they ensure to a reasonable degree that employers benefit from training employees and that confidential business information—including business strategies—and company trade secrets will not be taken to competitors immediately upon the departure of an employee.[1]

Employees benefit from non-compete clauses because they can lead to more money in their pockets. As the FTC acknowledges, non-compete clauses are often associated with higher

[1] *See* John M. McAdams, Federal Trade Commission, Non-Compete Agreements: A Review of the Literature 13 (2019) ("The bulk of the empirical literature finds that workers signing non-compete agreements, or workers who reside in areas with a higher incidence of NCAs, receive more training [and] more access to information."); Evan Starr, *Consider This: Training, Wages, and the Enforceability of Non-Compete Clauses*, 72 I.L.R. Rev. 783, 808 (2019) ("Noncompete enforceability is associated with more training."); Mark J. Garmaise, *Ties that Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J.L., Econ., & Org. 376, 379 (2011) (Non-competes "encourage firms to make investments in their managers' human capital."); Johnson, Matthew S., and Michael Lipsitz, *Why are Low-Wage Workers Signing Noncompete Agreements*, 57 J. of Human Resources 689 (2017) (finding that non-competes result in increased training of salon workers).

wages.[2] Prospective and current employees can, and do, bargain for higher pay or other compensation in exchange for a non-compete clause.[3]

A recent survey of RILA members confirms that reasonably tailored non-compete clauses provide mutual benefits. Retailers indicated that retail employees subject to non-compete clauses receive a variety of financial benefits in exchange for agreeing to post-employment restrictions. An overwhelming majority of these companies provide employees receive equity grants or some other long-term incentive as consideration for non-compete clauses. Other financial benefits commonly provided by retailers as consideration include retention payments, bonuses, and severance payments.

Employees can also receive employer-paid specialized skills training as consideration for signing a non-compete agreement. In many instances, this type of training is offered to current company employees who may be in hourly or lowered paid positions within retail stores or distribution centers. Employees benefit from gaining new skills and career-enhancing professional development. The specialized training offered by many retailers can provide individuals not only with a new job opportunity but also with an upward career trajectory and future financial opportunities.

Non-compete clauses are beneficial to employers and commerce as a whole, too. In addition to protecting companies' trade secrets, confidential business information, and investments in employees, non-compete clauses can facilitate information-sharing within organizations to make them more connected, innovative, and effective—bolstering the competitiveness of firms and the economy. Non-competes can also enhance business collaborations among firms by providing guardrails for joint ventures. Without the availability of non-compete clauses, a firm might hesitate to engage in joint-venturing activities or to contribute its best talent to the joint venture for fear that an employee could be stolen by the co-venturer company. Thus, non-compete clauses facilitate the creation and effectiveness of new joint business ventures and help instill new ideas and innovation into the marketplace.

Because properly tailored non-compete clauses provide benefits to both employees and employers and are not unduly restrictive to employee mobility, the vast majority of states allow courts to enforce reasonable non-compete clauses. States have and continue to experiment to determine what limits on non-competes best preserve the balance of interests between businesses, workers, and the economy as a whole.[4] Indeed, courts routinely find that non-compete clauses that are limited in scope, noncoercive and tied to specific business interests—similar to those used by RILA members—are reasonable and even procompetitive.[5] Courts have

[3] *See* Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & Econ. 53, 80 (2021) (explaining that the evidence of higher earnings is consistent with the notion that "noncompetes [are] a solution to a holdup problem").

[4] *See infra* at IV.C.

[5] *See*, *e.g.*, *Eichorn v. AT&T Corp.*, 248 F.3d 131, 148 (3d Cir. 2001); *Behrend v. Comcast Corp.*, 2012 WL 1231794, at *27–28 (E.D. Pa. Apr. 12, 2012); *KW Plastics v. U.S. Can. Co.*, 2001 WL 135722, at *22 (M.D. Ala. Feb. 2, 2001); *see also infra* at IV.C.

found that non-compete clauses lead to myriad competitive benefits, including: (1) increasing incentives for employers to train their employees; (2) ensuring that operations remain fully staffed; and (3) protecting trade secrets or other sensitive information.[6] As one court summed it up, "[t]he recognized benefits of reasonably enforced noncompetition covenants are by now beyond question."[7]

B. Retailers use non-compete clauses that are reasonably tailored and reflect unique, fact-specific circumstances.

Competition is a core trait of the retail industry. Retailers are in constant competition with each other for customers and talent. RILA members do not seek to limit frontline or lower-paid worker mobility by requiring that such workers sign non-compete clauses in unreasonable situations—particularly because doing so would make it more difficult to attract workers in the competitive entry-level job market. Rather, RILA members that use non-compete clauses reasonably tailor the scope of employee positions subject to those clauses, using non-compete clauses for only a small percentage of their workforce. A recent survey of RILA members indicated that the majority of retailers that use non-compete clauses do so with less than 1% of their workforce and an additional quarter use non-competes with less than 10% of their workforce.

Retailers primarily use non-competes with a limited number of executive-level, senior business leaders, or other skilled employees—that is, those who work closely with confidential information and trade secrets. These are positions where it would be difficult for an employee not to use the confidential information, even unintentionally, if the employee were to work in a similar position for a competitor. As the employees involved are ordinarily sophisticated and well-informed, any concerns about information asymmetries and bargaining power in these negotiations are limited. Additionally, the employees involved are typically highly paid and/or receive additional financial compensation in exchange for agreeing to abide by non-compete restrictions.[8]

A few examples modeled off the responses to the recent RILA survey may provide the Commission with insight into how retailers use reasonably tailored non-competes. Retailer A negotiates an employment package with a prospective CEO who will direct the strategic direction of the company. Given the potential for harm to the business should the future CEO with knowledge of Retailer A's business strategies leave the company, the employment package

---

[6] *See Eichorn*, 248 F.3d at 144 (non-compete clauses reasonable to ensure workforce continuity during sale of subsidiary); *Polk Bros., Inc. v. Forest City Enters., Inc.*, 776 F.2d 185, 189 (7th Cir. 1985) (non-compete clauses encourage employers to "train the employee, giving him skills, knowledge, and trade secrets that make the firm more productive"); *Aydin Corp. v. Loral Corp.* 718 F.2d 897, 901 (9th Cir. 1983) ("[Non-compete] covenants often serve legitimate business concerns such as preserving trade secrets and protecting investments in personnel.").

[7] *Innovation Ventures, LLC v. Custom Nutritions Labs., LLC*, 451 F. Supp. 3d 769, 791 (E.D. Mich. 2020) (quoting *Lektro-Vend Corp. v. Vendo Co.*, 660 F.2d 255, 265 (7th Cir. 1981)).

[8] *E.g., Capital One Fin. Corp. v. Kanas*, 871 F. Supp. 2d 520, 530-31 (E.D. Va. 2012) (enforcing non-compete agreements against "executives of a publically traded company" because they were "at the pinnacle of sophistication," received significant "consideration . . . in return for their covenant not to compete," and "stood 'on equal footing at the bargaining table' with their employer" (citation omitted)).

includes a time-limited non-compete clause and other restrictive covenants in exchange for severance pay. Similarly, Retailer B uses time-limited non-compete clauses with employees at the director (or higher) level (who comprise less than .05% of its workforce), as these employees have a direct line of sight into the company's strategic plans and direction, as well as in-depth knowledge of talent pools. The rationale for non-compete clauses in each instance is reasonable. As one retail executive stated in response to the RILA survey, "Since we use noncompete clauses only for VPs and above, we're talking about people who have vast knowledge of the business well beyond their particular job area. It would be impossible for them to work for a competitor without utilizing some of that knowledge and skills they acquired working here even unintentionally. We don't want to invest in people only [for them] to turn around and use it against us."

In another example, Retailer C negotiates a retention agreement with a non-compete clause for a highly skilled employee in charge of the development of a new product that is scheduled to launch shortly. Similarly, Retailer D seeks a non-compete as part of an employment agreement with an employee before he moves to a new position leading a project involving an innovative use of artificial intelligence to make Retailer D's inventory and merchandising operations more efficient. Without the protection of non-competes, Retailers C and D could lose a significant portion of their investments and face competitive disadvantages should the employees take their knowledge of the upcoming product or the new project (and related information regarding the business's operations) to competitors.

Additionally, some RILA members use non-compete clauses justifiably in circumstances where they invest significant resources in specialized skill training for employees. It is fair to use non-compete clauses in these circumstances because both the employee and the employer deserve to receive the benefit of their bargain. Employees gain new career-enhancing skills that provide future financial opportunities, and in exchange retailers should be able to receive the benefit of their investment in the employee for a reasonable time period.

In addition to limiting the use of non-compete clauses to select employee positions, RILA members reasonably tailor their non-compete clauses in other ways. More than 40% of respondents stated that the standard length of time for their non-competes is between 6 months to 1 year. And almost half of RILA member survey respondents indicated that they tailor the length of time of their non-competes depending upon the specific nature and volume of confidential information that the employee has been exposed to, rather than using a standard time period on all non-competes. Accordingly, the length of time that restrictions remain in place are appropriately limited in retailers' non-compete clauses.

Retailers also limit the scope of companies that fall under the definition of "competitor" for purposes of non-compete clauses and frequently list specific companies that offer the same product lines or operate in the same retail pillar (*e.g.*, auto, grocery, general consumables, home improvement, fashion, department store, footwear, pharmacy, sports supply, specialty, or discount). So, for example, to protect its trade secrets and confidential business information, in a retention agreement with its chief financial officer Retailer E, a fashion retailer, tailored a non-compete clause to include a list of direct competitor fashion retailers—for which it provided additional compensation. Under the terms of the agreement, the CFO may seek employment with any other retailer that is not a direct competitor to Retailer E. The CFO is only limited from moving to a direct competitor fashion retailer for a limited time.

The non-compete clauses used by these RILA members are also limited in geographic scope. Typically, the non-compete restriction in these clauses is directly tied to the geographic scope of the retailer's operations and the justification for the restriction.[9] For example, a regional retailer might limit the scope of its non-competes to the scope of its regional operations, while the geographical scope of the non-compete for a national retailer could justifiably be nationwide. When a non-compete clause is required for client service positions where an employer provides specialized skills training, the non-compete is often limited to locations near the retailer's local stores. This is a reasonable means to encourage employers like certain RILA members to pay for specialized skills training, as otherwise, following their training, former employees could use that training against them by immediately going to work for a competitor or setting up a competing business nearby.

The overall impact of these retailers' narrowly tailored non-compete clauses is not anticompetitive or unfair. Retailers who use non-competes and other restrictive covenants go to great lengths to craft them in such a way as to give companies reasonable protections while providing financial or training benefits to employees and not unreasonably limiting their employment opportunities or mobility. Under a typical retailer's non-compete clause, an employee is prevented only from moving to a "direct" competitor within a defined geographic area for a limited time period. Even in the event that an employee is looking to move to a direct competitor, retailers frequently demonstrate flexibility and will negotiate an accommodation for the employee. Take for example, the situation of Retailer F's former head merchant of women's accessories seeking an employment opportunity with a direct competitor, Retailer G. Retailer F further narrowed its non-compete clause—designed to protect Retailer F's confidential and strategic business information—to allow this former employee to work for Retailer G as a merchant in another product category. After expiration of the reasonable period of time required under the revised clause, its former employee could work as Retailer G's head merchant of women's accessories.

In sum, the non-compete clauses used by certain RILA members in limited circumstances are reasonable. The FTC's proposal to unilaterally ban such clauses will eliminate the many benefits they provide to employees, employers, and the overall economy.

II. The FTC's Proposed Blanket Ban On All Non-Compete Clauses Is Bad Public Policy

Plainly put, the FTC's proposed blanket ban on all non-compete clauses is bad public policy. Such a broad ban precludes consideration of the unique facts and circumstances like those detailed here that would make enforcement of a particular non-compete clause appropriate. The proposed rule is also improper because its inclusion of other commonly used restrictive clauses

[9] *See, e.g.*, *Coates v. Bastian Brothers, Inc.*, 276 Mich. App. 498, 507–09 (2007) (holding that "noncompetition clause was reasonable" where it "only applied for one year" and was limited to "within one hundred miles of any business location" of the employer); *St. Clair Med., P.C. v. Borgiel*, 270 Mich. App. 260, 269 (2006) (holding that non-compete clause was enforceable where its geographic scope was reasonably limited to "seven miles" around two of the employer's "offices").

(*e.g.*, non-disclosure clauses, non-solicitation clauses, etc.) as "*de facto*" non-compete clauses would create uncertainty for all stakeholders regarding the legality of such clauses. Further, the proposed retroactive application of the blanket ban would unfairly adversely impact millions of employees and employers and lastly, overall, the proposed rule will have significant unintended consequences.

A. The variety of facts and circumstances that support reasonably tailored non-compete clauses requires consideration on a case-by-case basis.

RILA members agree that overbroad and anticompetitive non-compete clauses are never appropriate and should not be enforced. However, a rule categorically outlawing *all* non-compete clauses for industries subject to the FTC's authority is like taking a bulldozer to a building that needs only tailored repairs. Retailers' business models and operations are as unique and distinctive as their brands. Thus, the operations of one retailer that support a reasonable non-compete for a specific employee would not be identical to those of another retailer, even one that operates within the same product category. The FTC's proposed blanket ban precludes consideration of the unique facts and circumstances underlying a particular non-compete clause, such as the specific situations like those described above that make it reasonable to enforce retailers' non-competes for certain executives, employees in key positions, highly skilled employees, or employees that the retailers have invested in skills training.

The need for case-by-case consideration of the competitive impact of a specific non-compete clause is even more acute when considering the breadth and range of operations and circumstances across all industries. The FTC's broad-brush approach ignores the untold number of situations where use of a non-compete is reasonable, mutually beneficial, and pro-competitive and instead, improperly labels all non-competes as overbroad and anticompetitive. This ill-advised approach would unilaterally override courts' decades-long experience using case-by-case analysis and recognition of the pro-competitive benefits of reasonable non-compete provisions to employees, employers, and consumers.

We urge the FTC not to abandon its long-held approach of analyzing whether a non-compete is anticompetitive on a case-by-case basis. To the extent there is any change to this federal public policy and approach on non-compete clauses, it should be carefully drafted by Congress and targeted to prevent only overbroad and anticompetitive non-compete clauses.[10] This would permit precisely the case-by-case analysis that states and courts have long felt best assesses whether a particular clause is anticompetitive.[11]

B. The FTC's proposed ban on "*de facto*" non-compete clauses is similarly overly broad and creates significant uncertainty.

Aside from pure "non-compete clauses," the proposed rule also would ban innumerable *other* types of commonly used restrictive covenants that may also function as so-called "*de facto* non-

[10] *See infra* at IV.A, VI.

[11] *See infra* at IV.C, VI.

compete clauses."[12] The standard for what qualifies as a "*de facto"* non-compete clause is hopelessly vague and overly broad, and will create significant business uncertainty, including among RILA members, regarding which covenants are unlawful. According to the proposed rule text, covenants that may qualify as "*de facto"* non-competes may include certain non-disclosure agreements and training repayment agreements that the FTC decides "has the effect of prohibiting the worker from seeking or accepting work with a person or operating a business after the conclusion of the worker's employment with the employer."[13] In the preamble, the FTC also pointed to other covenants, such as client or customer non-solicitation agreements, no-business agreements, no-recruit agreements, and liquidated damages provisions as other possible "*de facto*" non-competes.[14]

Retailers, along with other employers, routinely use some of the covenants that could fall under the FTC's proposed definition of a "*de facto*" non-compete clause (*e.g.*, non-disclosure, confidentiality, repayment, forfeiture, non-solicitation, etc.). In RILA's recent survey, the overwhelming majority of respondents indicated that they use one or more of these clauses. The rule's broad language leaves it entirely unclear whether any of these frequently used covenants would remain legal. Many retailers currently use repayment clauses, under which employees who receive signing bonuses or relocation payments agree to repay those costs if they leave the firm within a designated period of time. These clauses generally have a phased repayment schedule where the longer the employee stays before leaving the company, a smaller percentage would need to be repaid. The rationale for these repayment clauses is fairness. Employers are willing to give employees additional financial benefits beyond their standard salary, which can amount to tens of thousands of dollars, in exchange for a reasonable expectation that the employer will benefit from the employee working for the company for a specified limited amount of time. Without the ability to have and enforce repayment clauses, an employee could accept a job offer with a retailer that includes a signing bonus and relocation payment and then leave the retailer shortly after moving his/her family across country and having the moving costs covered and signing bonus paid.

Retailers may also use repayment clauses when the employer pays the upfront costs of specialized skills training. Examples of such training include commercial driver license training, pilot training on a new type of aircraft, HVAC, elevator, escalator, cosmetology, pet groomer and more. Based on feedback from RILA members, the cost of advanced skills training can be significant, depending on the specific training provided, ranging from a low of $5,000 to over $50,000 for training on specialized equipment. Retailers use repayment agreements that are reasonable in scope and impact and which balance burdens on workers with the value of the investment by the retailer. In exchange for receiving career enhancing training paid for by the employer, an employee agrees to pay back the cost of training if he/she leaves the company within a specified time. The total length of time of a repayment clause is largely dependent on the total costs of the training paid for by the retailer. Lower cost trainings will have a shorter repayment period while higher cost training will typically have a longer repayment period. An employee leaving the company immediately after training will repay a higher percentage of the

[12] 88 Fed. Reg. at 3509/3.

[13] *Id.* at 3535/1-2.

[14] *Id.* at 3484/2.

total training costs than an employee who chooses to leave the company toward the end of the repayment period.

Like the other repayment situations described above, the rationale for training repayment agreements is one of fairness. Both the employee and employer deserve to receive the benefit of their bargain. Reasonable repayment clauses do not prevent an employee from leaving the company after receiving the training. Instead, these clauses are intended to help the retailer recover a portion of the costs of the specialized training if the employee leaves the company within a specified time. It should be clear that even with the repayment of training costs, retailers will not be made "whole" as they will still have costs related to employee turnover and will not have the continued benefit of the trained employee's skills.

The rule's standard that such clauses are "*de facto*" non-competes where they are not "reasonably related to the costs the employer incurred for training the worker" is unclear. The proposed rule creates significant doubt as to legality of training-repayment agreements and will certainly have a chilling effect on their use. This raises the possibility that employees may receive contracted-for benefits without having to provide the consideration that they had agreed to. If training-repayment agreements are unlawful, employers would be further disincentivized from covering training and certification costs, as they could ultimately pay for training that would primarily benefit competitors if those employees could immediately leave after receiving the training and work in competition with their former employer.

Forfeiture clauses are another commonly used clause that could get swept up in the FTC's broad net of purported "*de facto*" non-compete clauses. RILA's members often include forfeiture clauses in grants of equity or other long-term investment awards, which are given in recognition of a senior-level employee's contribution to the company and may be paid out over a period of time. These awards typically detail a specific percentage of the total award that is available to the employee immediately and include a vesting schedule listing the future dates of any additional equity or cash awards to be issued. Equity and long-term investment awards are intended to reward and incentivize current company employees. Not surprisingly, these grants include forfeiture clauses, where employees with unvested equity or awards (*i.e.*, those for which the vesting date(s) has not yet passed) forfeit those unvested awards when they leave the company. If forfeiture clauses are deemed to be "*de facto*" non-competes, however, the employer may have to pay for talent that is no longer with the company. To prevent this from occurring, companies would certainly have to revise their current compensation packages and equity and long-term investment award practices to protect their financial resources and investments in talent and minimize financial risks to the company and its shareholders.

Non-solicitation clauses could also get swept under the FTC's proposed ban. These clauses can take two forms: non-solicitation of customers or clients and non-solicitation of employees. As with all the other covenants described here, those retailers that use non-solicitation clauses do so only in those limited situations where the facts and circumstances warrant their use, and the terms of the non-solicitation clause are narrowly tailored to protect an important business interest. For example, retailers do not want employees that provide services to their customers to unfairly gain access to a company's book of customers, then leave to set up a competitor. As another example, in the event of a departure of a senior executive that has been leading an important strategic project for the company, retailers do not want that former senior executive soliciting former work colleagues who have also been working on the project to leave the company and move to a competitor. Non-solicitation of employee clauses do not prevent any employees from leaving the company to go to work with the former senior executive. The clause merely prohibits the former executive from taking affirmative proactive action to "solicit" the departure of these key employees. While the proposed rule states that it would "generally not include" non-solicitation clauses, the FTC also suggests that such clauses *may* be "*de facto*" non-competes if they are "unusually broad in scope."[15] The Commission does not explain what would make a non-solicitation clause "unusually broad," and will thus also have a chilling effect on businesses—including RILA's members—reasonable use of non-solicitation clauses.

The FTC's vaguely worded proposed ban on "*de facto*" non-competes has the potential to ban standard business clauses (*e.g.*, repayment, forfeiture and non-solicitation) that are commonly used across industries. The threat of a potential FTC enforcement action for these now-uncertain practices will harm employees and chill business activity and innovation.

C. The proposed rule's retroactive application would invalidate millions of contracts, adversely affecting employees and employers alike.

Among its many deficiencies, the proposed rule is perhaps most clearly unfair in its retroactive application, which would invalidate millions of existing non-compete clauses. As discussed further below, the FTC does not have statutory authority to promulgate competition rules.[16] However, assuming for the sake of argument the FTC does has such authority, it certainly does not have the power to ban non-competes retroactively. Agencies such as the Commission generally have statutory authority to impose rules *prospectively*. Indeed, courts have strictly scrutinized agency actions that attempt to retroactively apply regulations.[17] The reasoning behind this heightened scrutiny is simple: under the principles of fairness and due process, individuals and business should have notice of the standards and requirements they will be held to, and thus generally should not be held accountable retroactively for behavior or actions that were previously legal. In those limited circumstances where retroactive application of a rule is allowed, courts have required that the power to do so be explicitly granted by Congress.[18] Such authority is absent here. Nowhere in the FTC's discussion of its purported statutory power to issue competition rules does the Commission point to an express grant of such authority by Congress to regulate *retroactively*.

Moreover, the effects of a retroactive application of the ban would be substantial. Many employers, including those RILA members that use non-competes, have structured their businesses relying on the enforceability of non-compete clauses and other covenants that could be deemed "*de facto*" non-competes. *See infra* at V.B. The FTC's proposed rule would disrupt

[15] *Id.* at 3482/3.

[16] *See infra* at III, IV.A–B.

[17] *See Mexichem Flour, Inc. v. EPA*, 866 F.3d 451, 462 (D.C. Cir. 2017) ("The Due Process Clause limits the Government's authority to retroactively alter the legal consequences of an entity's or person's past conduct.").

[18] *See Bowen v. Georgetown Univ. Hosp.*, 488 U.S. 204, 208 (1988) ("[A] statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms.").

these business models and eliminate guarantees that employers bargained for and accounted for in offering compensation and benefits to their employees. Take for example a senior employee who was recently laid off from the company who signed a time limited non-compete clause as part of a severance payment agreement. The retroactive application of a ban on non-competes would unfairly penalize both the employee (who wants the continued severance payment to support his/her family) and the employer (who willingly agreed to make the severance payment in return for a reasonable non-compete). A company would be faced with a difficult choice: continue to make payments to the former employee despite the elimination of key consideration (the non-compete) or, to the extent that they can legally do so, attempt to renegotiate all outstanding severance agreements with formers employees that contain non-compete clauses to adjust the compensation paid to reflect the lesser value of the consideration without an enforceable non-compete. Neither is an option that retailers should be forced to take.

The FTC's proposed action would insert the agency retroactively into negotiations and prevent employees from accessing benefits for which they were willing to exchange for non-compete clauses. This challenging scenario would be played out across a company's business operations. Retention agreements, severance plans, equity and long-term investment awards, and expanded senior executive retirement pay plans all may potentially include retroactively banned non-competes. The FTC can prevent this chaos by eliminating the retroactive application of the proposed ban. We encourage the Commission to do so.

D. The proposed rule will have severe unintended consequences.

Even if the proposed rule is limited to apply *prospectively* only, it will still have a significant negative impact on employees' benefits, compensation, and career advancement opportunities. Wage growth could be impacted if non-compete clauses are prohibited, as employers will no longer pay a premium for them.[19] Without an enforceable non-compete clause to serve as consideration, employers may no longer see the need for severance payments at all, or at least severance payments at current levels. Because the proposed rule would eliminate protections for employers who invest in employees by training them in various specialized career-enhancing skills, employer-paid training will be curtailed, harming employees' professional development and denying them future financial opportunities. Instead of paying the cost of advance skills training for employees, employers could choose to offer those positions only to those applicants that are already certified or have that specific training. This could effectively eliminate a new career path for an employee who may not be able to pay for the specialized skills training she desires without the employer's assistance.

Banning non-competes will significantly heighten the risks of leaked confidential information and trade secrets.[20] The FTC is mistaken that trade-secret law and non-disclosure agreements can adequately protect trade secrets and confidential information.[21] These alternatives are inadequate substitutes for non-compete clauses for several reasons. First, trade-secret litigation is costly and

[19] As discussed, non-compete clauses are associated with higher wages. *See supra* at nn. 2–3.

[20] *See, e.g.*, Aaron Levine & Matt Todd, *FTC Noncompete Ban Could Erode Trade Secret Protections*, Law360 (Feb. 28, 2023), https://www.law360.com/articles/1579186/ftc-noncompete-ban-could-erode-trade-secret-protections.

[21] *See* 88 Fed. Reg. at 3505/2–3507/2.

protracted, and eliminating the availability of non-compete clauses threatens to make it only more so.[22] As noted by multiple retailers in response to the recent RILA survey, eliminating retailers' ability to use reasonable non-competes will mean that companies will incur substantial additional legal costs and expenses for enforcement and litigation related to improper disclosure of confidential business information and trade-secret violations. Increased legal costs mean that retailers will have to tighten their budgets, and might have to allocate fewer resources to business innovation or personnel. In addition, trade-secret litigation is often brought after a former employer suspects misappropriation, but once a trade secret is lost, significant harm ensues and cannot be undone. During the lengthy time it can take to establish harm, the negative impact of the unfair competition from misappropriated trade secrets can continue to grow and compound as the business struggles. Also, to the extent the FTC erroneously believes it can apply the non-compete rule extraterritorially, it is critically important that the agency not do so, because global corporations often have little to no other effective means of legal recourse against misappropriated trade secret and confidential information in certain non-U.S. locations. Thus, in these situations, non-compete clauses offer the only protection for this highly sensitive information.

Banning non-compete clauses also will affect the ability to protect valuable confidential business information that does not necessarily meet the threshold for trade-secret protection.[23] Non-disclosure agreements provide insufficient protection for confidential business information because employees in certain positions cannot reasonably operate in similar positions for competitors without necessarily divulging such information.[24] Moreover, the proposed rule even calls into question the enforceability of non-disclosure agreements by stating that they also could be considered *de facto* non-compete clauses.[25]

To avoid these risks, those RILA members who now rely on non-compete clauses to protect their confidential business information will likely have to adjust their business models. They might do so by limiting how much information is shared with employees to the extent possible and restricting the kinds of positions that have access to strategic confidential business information. As one of RILA's members reported, a ban on non-competes would leave the company unable to share trade secret and confidential, proprietary company information outside a very small group.

Rev. 593, 610 (2003) ("Noncompete agreements can also reduce the cost of trade secret litigation. . . . Instead of claiming misappropriation of trade secrets, an employer can simply bring a contract action for breach of the covenant not to compete, which would be less costly and easier to prove.").

[23] *See e.g.*, *Int'l Bus. Machines Corp. v. De Freitas Lima*, 2020 WL 5261336, at *7 (S.D.N.Y. Sept. 3, 2020) (recognizing that the non-compete agreement at issue "protects a broader range of [confidential] information than the common law New York doctrine of 'trade secrets' might protect" and finding the agreement enforceable), *aff'd*, 833 F. App'x 911 (2d Cir. 2021); *Ak Steel Corp., v. Miskovich*, 2014 WL 11881029, at *11 (S.D. Ohio Apr. 17, 2014) ("'[C]onfidential information need not meet the stringent requirements of a trade secret' to constitute a legitimate business interest protectable by a non-compete agreement." (citation omitted)).

[24] *See, e.g.*, *Nike, Inc. v. McCarthy*, 379 F.3d 576, 586 (9th Cir. 2004) (enforcing non-compete agreement with senior executive who had intimate knowledge of the company's "product allocation, product development and sales strategies" and could thus put that to use for its rival by "developing strategic sales plans, providing overall direction for product allocation and shaping product lines").

[25] 88 Fed. Reg. at 3484/2, 3509/2–3510/1.

This will hamper employees' ability to do their jobs effectively and efficiently and hurt their career development and therefore, future financial opportunities. It will also hamper employers' flexibility to run their companies.

The proposed blanket ban on non-competes and purported "*de facto*" non-competes is bad public policy. It will negatively impact employees' wages, compensation and benefits. Opportunities for employees to get career enhancing positions that have access to strategic confidential business information will be limited and employees also will be deprived of specialized skills training. Companies will not be able to structure compensation, benefits and severance packages to meet employees' expectations and will have challenges retaining key talent including senior executives and skilled employees. Retailers also will be unable to recoup training costs and will incur added legal expenses. These costs will negatively impact companies' profitability and shareholder value, reduce innovation, and increase prices for consumers. For all these reasons, the proposed rule should be withdrawn, and federal public policy on non-compete clauses (if any) should instead come from narrowly targeted legislation.

III. The FTC Lacks Statutory Authority to Issue Unfair Methods of Competition Rules.

In addition to being bad public policy, the proposed rule goes well beyond the legal authority of the FTC. First, the FTC does not have the authority to issue substantive rules defining unfair means of competition—the authority cited by the proposed rule permits the FTC only to issue *internal* rules governing its own conduct. Second, the lack of FTC authority is validated both by subsequent congressional action, which confirms that the FTC cannot issue substantive rules, and the consistent practice of states exercising authority in this area. Finally, judicial precedent interpreting Section 5 of the FTC Act hems in the FTC and prohibits it from departing from the requirement to conduct case-by-case analysis using the long-followed rule-of-reason standard.

A. The FTC Act does not grant the FTC authority to issue legislative rules.

The FTC says that Section 5 and Section 6(g) of the FTC Act of 1914 authorize the agency "to issue regulations declaring practices to be unfair methods of competition."[26] As discussed briefly in these comments below and in more detail in numerous other comments, the Commission's interpretation of its statutory authority is incorrect.

Section 5 directs the agency to prevent "[u]nfair methods of competition" in commerce.[27] But Congress envisioned that the FTC would enforce this prohibition through case-by-case adjudications.[28] In 1914, it provided the FTC with investigatory, reporting, and procedural powers in Section 6 of the Act, and nestled among these powers to "classify corporations and . . . *to make rules and regulations* for the purpose of carrying out the provisions of this subchapter," including Section 5. However, that delegation of rulemaking authority is much narrower than FTC now claims it to be.[29] In the early 20th century, Congress did not draft broad legislative

---

[28] *See id.* § 45(b)–(l).

[29] *See id.* § 46 (a), (c)–(d), (g)–(h) (emphasis added).

rulemaking grants without pairing them with sanctions for violations of the rules.[30] Because the FTC Act did not (and does not) provide any sanctions for violations of rules promulgated under Section 6(g), Congress did not mean for such rules to regulate the conduct of private actors.[31] Instead, Congress intended that any rules issued under Section 6(g) would cover only the development of internal agency processes and procedures for implementing the provisions of the statute.[32]

Agency action "based upon a determination of law . . . may not stand if the agency has misconceived the law."[33] Here, the Commission has issued the proposed rule relying on its flawed interpretation of its underlying statutory authority, and therefore its action cannot stand.

B. Subsequent congressional action confirms that the FTC lacks authority to issue binding rules on "unfair methods of competition."

For over 50 years, the FTC acted consistently with Congressional intent and did not attempt to issue legislative rules. That changed in the early 1970s when the FTC claimed the power to issue substantive regulations prohibiting certain practices under the authorities in Section 5 and Section 6(g), and in 1973 the D.C. Circuit agreed. That case—*National Petroleum Refiners Association v. FTC*—is the only authority cited by the agency supporting its assertion that it now may issue unfair methods of competition rules.[34] The FTC's reliance on this case for authority to issue a rule banning non-competes is misplaced. *National Petroleum* was wrongly decided. The D.C. Circuit's policy-driven reasoning there was flawed, particularly because it did not consider that in the early 20th century, broad grants of power to issue rules with the force of law were paired with sanctions for violations of those rules—a drafting convention not present in Section 6(g).[35]

Moreover, Congress' subsequent actions in response to *National Petroleum* confirm that it was wrongly decided. In the 1975 Magnuson-Moss Warranty-Federal Trade Commission Improvement Act, Congress *expressly authorized* the FTC to issue *consumer-protection* rules—regulations "defining with specificity acts or practices which are unfair or deceptive acts or

Ohlhausen & James Rill, *Pushing the Limits? A Primer on FTC Competition Rulemaking* 10–13, U.S. Chamber of Commerce (2021).

practices"—and laid out detailed procedures for the FTC to engage in those rulemaking that are more onerous than the default rulemaking procedures of the Administrative Procedure Act.[36] If the reasoning in *National Petroleum* were correct, then this express rulemaking grant would have been wholly unnecessary. Meanwhile, Congress did *not* grant the FTC authority to issue *competition* rules (*i.e.*, rules declaring a practice to be an unfair method of competition) in the Magnuson-Moss Act.[37] Five years later, Congress amended the FTC Act again to add even more hurdles for the FTC to issue consumer-protection rules, but again did not authorize competition rulemakings.[38] It is highly doubtful that Congress would require that the agency follow strict and onerous procedures to issue consumer-protection rules, but leave open an easier route to issue competition rules, which have much broader implications for the U.S. economy.[39]

In the decades since the Magnuson-Moss and 1980 amendments to the FTC Act, the FTC has not attempted to issue a binding competition rule again until now. To put it another way, with one limited exception, in the 100-plus years since the initial enactment of the FTC Act, and after multiple Congressional tweaks and amendments to the underlying statute, the FTC has consistently recognized the limitations to its statutory authority to issue rules under Section 6(g). RILA and its members urge the Commission to reverse its current flawed course of action and return to its long-held statutorily consistent interpretation of Section 6(g) as precluding the issuance of binding substantive regulations.

C. The FTC lacks authority to bypass required individualized case-by-case reviews using the rule-of-reason standard.

The proposed rule also mistakenly asserts that the FTC has authority to depart from the rule-of-reason standard and issue a blanket ban on non-compete clauses. But the rule-of-reason standard, with its statutory and common-law foundation, has been the recognized standard governing non-compete clauses for hundreds of years.[40] The Commission and courts have used the rule-of-

[40] *See, e.g.*, *Bus. Elecs. Corp. v. Sharp Elecs. Corp.*, 485 U.S. 717, 730 n.3 (1988) ("The classic ancillary restraint is an agreement by the seller of a business not to compete within the market." (citing *Mitchel*)); *Eichorn*, 248 F.3d at 144 ("[C]ourts have uniformly found that covenants not to compete should be examined under the rule of reason."); *Consultants & Designers, Inc. v. Butler Serv. Group, Inc.*, 720 F.2d 1553, 1561 (11th Cir. 1983) ("[T]here has been an unbroken line of cases holding that the validity of covenants not to compete under the Sherman Act must be analyzed under the rule of reason."); *Nichols v. Spencer Int'l Press, Inc.*, 371 F.2d 332, 337 (7th Cir. 1967) ("Agreements not to compete are tested by a standard of reasonableness."); *Snap-On Tools Corp. v. FTC*, 321 F.2d 825, 837 (7th Cir. 1963) ("Restrictive clauses of this kind are legal unless they are unreasonable as to time or geographic scope…."); *United States v. Addyston Pipe & Steel Co.*, 85 F. 271, 281 (6th Cir. 1898) (Taft, J.) (noting that agreements "not to compete" are assessed under the rule of reason); *Ulrich v. Moody's Co.*, 2014 WL 12776746,

reason standard to assess the reasonableness of a challenged restraint based on an all-of-the-circumstances analysis.[41] Indeed, courts have repeatedly held that the rule of reason—including its requirement that courts analyze anticompetitive effects based on consumer welfare and consider procompetitive justifications—is applicable to claims brought under Section 5.[42] As then-Commissioner Wilson emphasized in her dissenting statement to the proposed rule, this clear precedent requires the FTC to take a case-by-case, "fact-specific" approach to non-compete clauses, including under Section 5.[43]

Yet the FTC makes almost no effort to account for its radical departure from this long-held legal approach, mentioning the rule of reason only three times in the proposed rule's 65 pages—and two of those are in the same paragraph.[44] The FTC points to no new statutory authority or recent court decisions to justify its actions.[45] Instead, the proposed rule's justification for a blanket ban is based on the FTC's legally erroneous November 2022 Policy Statement purporting to set forth new guidance on "the scope and meaning of unfair methods of competition under Section 5."[46] The 2022 Policy Statement, which did not go through notice-and-comment rulemaking, deviated from the FTC's years-long policy and practice including its most recent formal statement of policy on this issue. The Commission's prior policy statement had been "adopted on a bipartisan basis . . . six years prior because it embodied a sound approach to antitrust law that reflected decades of legal precedent and economic learning."[47] In contrast, the 2022 Policy Statement did not reflect bipartisan support—for good reason—as it, like the proposed rule, abandons the rule of reason and repudiates the consumer welfare statement without a sound legal foundation and, as detailed below, raises significant constitutional issues. The FTC cannot rely on a unilateral, legally flawed policy statement as authority for the proposed rule. The proposed rule should therefore be withdrawn.

IV. The Proposed Rule Raises Significant Constitutional and Other Legal Issues

A. The major-questions doctrine dictates that the FTC lacks authority to issue the proposed rule.

Courts "expect Congress to speak clearly if it wishes to assign to an agency decisions of vast "economic and political significance."[48] Under the "major-questions doctrine," even where an agency's assertion of rulemaking authority has a "plausible textual basis," an agency lacks the authority to resolve major policy questions absent "clear congressional authorization."[49] As the Supreme Court has explained, it is incorrect to construe vague or cryptic statutory provisions to include "sweeping and consequential authority" to agencies.[50] For example, in *Alabama Association of Realtors v. Department of Health and Human Services*, the Court rejected the Centers for Disease Control and Prevention's attempt to institute a nationwide eviction moratorium in response to the COVID-19 pandemic under its authority to adopt measures "necessary to prevent the . . . spread of " disease.[51]

Regulation of the national economy is certainly a major policy question that is implicated by any unfair methods of competition rule by the FTC. Hence this doctrine teaches that the ambiguous rulemaking provision in Section 6, tucked away among provisions concerning the FTC's investigative powers, cannot be properly read to be a delegation of broad competition rulemaking power. And application of the major-questions doctrine is *especially* clear *here*, where the agency admits its rule would preempt employment laws in 47 states (at least in part) and invalidate roughly one out of every five employment contracts.[52] Recent congressional action also confirms that the issue of a potential national ban on non-compete clauses is a major policy question. Members of Congress have recently introduced bills that would prohibit a substantial portion of non-compete clauses (and in some instances nearly all).[53] As recently as February, members of Congress reintroduced bills in both the House and the Senate for the Workforce Mobility Act, which would prohibit non-compete clauses in most circumstances (although, for example, permit one-year non-compete periods for senior executive employees).[54] Notably, this proposed legislation would treat certain non-compete clauses as violations of the FTC Act's prohibition on "unfair or deceptive acts or practices," not "unfair methods of competition," and would provide joint enforcement authority to the FTC *and* the Department of Labor.[55]

(2022) (bill to amend the Fair Labor Standards Act of 1938 to prevent employers from using non-compete agreements in employment contracts for certain non-exempt employees); Freedom To Compete Act, S.B. 2375, 117th Congress (2021) (similar).

[54] *See* Workforce Mobility Act of 2023, S.B. 220, 118th Cong. (2023); Workforce Mobility Act of 2023, H.R. 731, 118th Cong. (2023).

[55] *See id.* § 6.

Section 6(g) is not a clear grant of legislative power to the FTC in any respect; it certainly is not a clear grant of authority to dictate *employment*-related policy nationwide. Under the major-questions doctrine, the FTC cannot rely on "the previously little-used backwater of" Section 6(g)—the only source of rulemaking authority the FTC relies on—to issue a national ban on non-compete clauses.[56]

B. The non-delegation doctrine and constitutional-avoidance doctrine counsel against interpreting the FTC Act to provide the FTC with the authority to issue the proposed rule.

The major-questions doctrine provides a sufficient basis for the FTC to recognize that the proposed rule is beyond its authority, but that conclusion is bolstered by the constitutional-avoidance canon, which counsels avoiding interpreting the ambiguous Section 6(g) as a possibly unconstitutional delegation of legislative power.[57] Congress must articulate an "intelligible principle" for an agency to follow when exercising legislative rulemaking authority; absent an intelligible principle to guide the agency, the grant of authority is an unconstitutional delegation.[58] Section 5 proscribes "unfair methods of competition," but this term is so broad and vague that it is highly questionable whether it qualifies as an "intelligible principle" that can guide the FTC in crafting legislative rules relating to competition.[59] This concern is highlighted by the series of vague adjectives the FTC recently used in its November 2022 Section 5 Policy Statement to describe conduct that it asserts it could ban as "unfair methods of competition": conduct which "may be coercive, exploitative, collusive, abusive, deceptive, predatory, or involve the use of economic power of a similar nature" or is "otherwise restrictive or exclusionary, depending on the circumstances."[60] This Policy Statement dramatically expands the category of conduct covered by Section 5. It also makes it even less clear what conduct could be characterized by the FTC as "unfair."[61]

A reading of the FTC Act to grant of statutory authority to promulgate legislative rules defining "unfair methods of competition" would thus be deemed by the courts to be an unconstitutional delegation, given the vagueness of the phrase "unfair methods of competition"—particularly as articulated by the FTC in its November 2022 Policy Statement. Indeed, the Supreme Court held a similar grant of rulemaking power constitutionally impermissible when it struck down "codes of

[60] Policy Statement, *supra* n.46, at 9.

[61] *See* Wilson, Section 5 Policy Statement Dissent, *supra* n.47, at 2 ("[T]he Policy Statement adopts an 'I know it when I see it' approach premised on a list of nefarious-sounding adjectives, many of which have no antitrust or economic meaning."); *cf. Gundy v. United States*, 139 S. Ct. 2116, 2129 (2019) (explaining that Congress "has set out an intelligible principle" when it "has made clear to the delegee the general policy [it] must pursue and the boundaries of [its] authority" (quotation marks omitted)).

fair competition" in *A.LA. Schechter Poultry Corp. v. United States.*[62] In doing so, the Supreme Court specifically contrasted Congress's purported grant of authority to issue ex-ante legislative rules called "codes of fair competition" with the FTC's authority to prevent "unfair methods of competition" through case-by-case adjudication.[63] Rules defining conduct as "unfair methods of competition" are very much like "codes of fair competition." Lastly, the constitutional-avoidance canon would instruct a court to reject an interpretation of Section 6(g) that includes a grant of legislative rulemaking authority, since a reading that does not raise constitutional infirmities is just as, if not more, plausible.

C. The proposed rule also threatens principles of federalism.

In addition to raising red flags under the major-questions doctrine and non-delegation doctrine, the proposed rule also fails to respect principles of federalism. As the proposed rule acknowledges, it has long been left the states to regulate non-compete clauses relating to employment.[64] States have experimented with a wide variety of regimes in this context: three states ban non-compete clauses nearly in toto;[65] at least thirty-two other states permit some non-compete clauses but bar others depending on industry or job of the worker;[66] and at least ten others allow non-competes with employees who are paid above an established threshold amount.[67] This experimentation has ramped up in recent years, with many states testing out different types and levels of non-compete restrictions in recent decades.[68]

Despite acknowledging this rich tapestry of state law, the proposed rule does not even mention federalism, much less explain why the FTC thinks it appropriate at this late date to intrude into this realm of "traditional state regulation" without clear congressional authority.[69] As explained above, the authority invoked by the FTC for its promulgation of the proposed rule does not support the rule and is very far from the "clear manifestation of congressional purpose" necessary to disrupt the status quo balance of power between the states and the federal

[62] *See* 295 U.S. 495, 532–34 (1935).

[63] *Id.* at 532–33 ("What are 'unfair methods of competition' are thus to be determined in particular instances, upon evidence, in the light of particular competitive conditions and of what is found to be a specific and substantial public interest.").

[64] *See* 88 Fed. Reg. at 3494/1–3.

[65] *Id.* at 3494/1 (California, North Dakota, and Oklahoma).

[66] *Id.* at 3494/1–2; *see* Russell Beck, Beck Reed Riden LLP, *Employee Noncompetes: A State-by-State Survey* (August 17, 2022) ("Beck Reed Riden Chart") (listing states with exemptions based on industry).

[67] 88 Fed. Reg. at 3594/1–2; *see* Beck Reed Riden Chart (listing states with exemptions based on salary or wage amounts). Other states have unique rules. For instance, in Massachusetts, non-competes cannot govern for more than 12 months, and there is a strict notice requirement. Mass. Gen. Laws Ann. ch. 149, § 24L. In Rhode Island, employers may include non-competes in their contracts with employees, but the circumstances in which courts will enforce the clauses are limited. R.I. Gen Laws § 28–59–3(a)(1). And in Nevada, non-competes may not be used for hourly wage earners. NRS 613.195(3).

[68] *Id.* at 3494/2–3.

[69] *Pegram v. Herdrich*, 530 U.S. 211, 237 (2002).

government in this area.[70] This lack of clear congressional authority makes the proposed rule susceptible to potential legal challenges. In such a situation, because courts must abide by the "guiding principle" of interpretation that "where a statute is susceptible of two constructions, by one of which grave and doubtful constitutional questions arise and by the other of which such questions are avoided, [their] duty is to adopt the latter," courts would likely interpret the FTC Act narrowly in order to avoid constitutional federalism issues.[71]

Without express congressional authority and in light of the significant constitutional major question, non-delegation and federalism concerns raised by the proposed rule, the best course of action for the FTC to take is to retract the rule and wait to take action until Congress determines if, and when, to give the Commission authority to issue competition rules and the parameters of that authority.

V. The Proposed Rule Is Arbitrary and Capricious and Otherwise Violates the APA.

Even if the FTC did have the statutory authority to issue a rule banning non-compete clauses (which RILA members do not believe it does, for the reasons articulated above), the proposed rule is still fatally flawed under the Administrative Procedure Act (APA). The evidence cited in the rule to support the ban on non-compete clauses is unreliable and conflicting; the FTC barely considers the reliance interests that all stakeholders (employees and businesses) have in using non-compete clauses that are currently legally permitted; and the proposed rule's cost-benefit analysis is deeply flawed. Accordingly, the proposed rule is flawed and should be withdrawn.

A. The FTC's determination that non-compete clauses and other restrictive covenants are "unfair methods of competition" is flawed.

The proposed rule's condemnation of non-compete clauses as "unfair" is misguided and mistaken. In making that determination, the rule largely falls back on conclusory, subjective language like "exploitative and coercive" that is drawn directly from the November 2022 Policy Statement.[72] But that vague language bears no relationship to the governing standard for unfairness under the rule of reason—whether a restraint is "harmful to the consumer."[73] The FTC's resort to these ambiguous standards is no surprise, as the actual evidence cited in the proposed rule regarding the competitive effects—the real standard for evaluating restraints—of non-competes is unreliable and mixed.

The proposed rule cites, in the main, studies that are both inconclusive and methodologically flawed. For instance, many of the studies relied upon by the FTC studied the effect of a few

---

[70] *Id.*; *see also Gregory v. Ashcroft*, 501 U.S. 452, 460–61 (1991) ("[I]f Congress intends to alter the usual constitutional balance between the States and the Federal Government, it must make its intention to do so 'unmistakably clear in the language of the statute." (internal quotation marks omitted).

[71] *Jones v. United States*, 529 U.S. 848, 857 (2000).

[72] 88 Fed. Reg. at 3502/2–3.

[73] *Leegin Creative Leather Prods., Inc.*, 551 U.S. at 877 (restraints unlawful only where they are "harmful to the consumer"); *see also* 15 U.S.C. § 45(n) (act or practice unfair where it "causes or is likely to cause substantial injury to consumers").

state-level policies targeting non-compete clauses.[74] But an FTC economist elsewhere has explained in describing those studies that no broad principles can be extrapolated from them given the differing industries, types of firms, and makeup of the employee base in each state.[75]

The FTC also inconsistently evaluates the extant studies—giving great credence to studies that support a non-compete ban while downplaying and ignoring other studies that have a more favorable or nuanced view of non-competes. For example, relying solely on a study of the healthcare market—in which pricing is incredibly complex—the FTC concludes that non-compete clauses increase prices.[76] But when confronted with studies demonstrating that non-competes increase job-creation rates, the FTC strains to distinguish them—including by unsupported speculation about *why* the job-creation rate may have increased.[77] More broadly, the FTC ignores evidence that reasonably drawn non-competes have procompetitive effects on labor, product, and service markets.[78] By side-stepping an "important aspect" of the issues at hand, the FTC has acted arbitrarily and capriciously.[79] And where it does engage with the issues, its approach to the evidence is "internally inconsistent," which also is arbitrary and capricious.[80]

This is also true for the FTC's ban on "*de facto*" non-compete clauses. For that decision, the rule cites only two court decisions and one law review article.[81] This bare, evidence-free showing is plainly insufficient to support a finding that these restrictive covenants are "unfair."

Finally, the FTC cannot rely on its own experience as evidence supporting the rule, either, because it wholly lacks meaningful adjudication and enforcement experience in the context of non-compete clauses.[82] As then-Commissioner Wilson pointed out in her dissent, the *only* case the FTC has ever litigated challenging a non-compete clause ended in a finding that the clause did *not* violate Section 5.[83] Yet now, the FTC seeks to ban all non-competes across the nation in

[83] *See* 88 Fed. Reg. at 3542/1 (citing *Snap-On Tools Corp.*, 321 F.2d at 837).

one fell swoop. The FTC's overreaching behavior is improper, and its reliance on non-existent experience in an attempt to support a rule is arbitrary and capricious.[84]

B. The proposed rule gives inadequate consideration to reliance interests.

Under governing Supreme Court precedent, agencies must fully consider any "legitimate reliance" interests of those affected by agency action.[85] The proposed rule does not expressly acknowledge any of the reliance interests that employees and businesses have in employing reasonable non-compete clauses, which are lawful under current laws subject to the rule-of-reason framework used by the FTC, and federal and state courts. By failing to account for significant reliance-interests costs, the proposed rule's cost-benefit analysis is flawed.[86]

For instance, in a recent informal survey of RILA's members, almost all of those who responded currently use non-compete clauses or other restrictive covenants (non-disclosure, non-solicitation, forfeiture, repayment, etc.) for a small number of their employees (*e.g.*, executives, key senior employees, and employees with specialized skills). These retailers have structured their operations around their ability to use non-compete clauses to retain workers in whom they have invested substantial money, and to prevent trade secrets or other confidential financial and planning information from leaking to competitors.[87] Similarly, other restrictive covenants protect companies' book of customers, and investments made in employee training, long-term incentive benefits and signing and relocation bonuses. These companies likely would not have structured their operations in this way if they had known that the FTC would propose an outright ban on their reasonable non-compete clauses. They had no reason to suspect such a ban was forthcoming: after all, as explained above, the clear and consistent approach from all available judicial precedent, which they relied upon, is to analyze non-compete clauses and other restrictive clauses under the rule of reason. *See supra* at II.C.

In addition, employees nationwide have come to rely on the added compensation and benefits associated with reasonable non-competes and other restrictive clauses, including higher wages, generous severance plans and packages, equity awards, and other long-term incentives as well as the opportunity for career-enhancing specialized skill training. All the positive effects of these clauses for employees and employers would be undermined by the proposed rule's ban. *See supra* at II.A. By discounting many costs—such as the forced re-negotiation of thousands of employment contracts—that will ensue because of the proposed ban, the Commission's cost-benefit analysis is faulty and cannot support the rule.

---

[84] *Cf. District of Columbia v. Dep't of Ag.*, 444 F. Supp. 3d 1, 27–28 (D.D.C. 2009) (agency likely acted arbitrarily and capriciously where it relied on "unsupported" assertions of "operational experience").

[85] *Dep't of Homeland Sec. v. Regents*, 140 S. Ct. 1891, 1913 (2020); *see id.* ("When an agency changes course, . . . it must be 'cognizant that longstanding policies may have engendered serious reliance interests that must be taken into account.'" (quoting *Encino Motorcars, LLC v. Navarro*, 579 U.S. 211, 221–22 (2016))).

[86] *See* 88 Fed. Reg. at 3528/1–3530/1.

[87] *Cf. Aya Healthcare Servs., Inc. v. AMN Healthcare, Inc.*, 9 F.4th 1102 (9th Cir. 2021) (non-compete clauses in franchise context prohibit franchisees from "proactively raiding" each other's workers and thus allows them to "collaborate for the benefit of [their customers] without cutting their own throat" (cleaned up)).

The proposed rule does not establish a new policy on a "blank slate."[88] Instead, it attempts bulldoze over the longstanding approach that businesses have been reasonably relying upon in employing non-compete clauses and other commonly used clauses that could be deemed "*de facto*" nom-competes, arbitrarily ignoring the reliance interests employees and businesses have in that approach. In failing to consider these significant reliance interests, the proposed rule fails to meet a key requirement of the APA.

C. The FTC's cost-benefit analysis is flawed.

The proposed rule's cost-benefit analysis is also deeply flawed. It both *under*states the costs of the rule (in addition to ignoring many other costs altogether) and *over*states the benefits.

First, as to costs, the few costs the FTC actually acknowledges are significantly understated. For instance, the rule dramatically underestimates the amount companies will have to spend reviewing and revising contracts for incoming, current, and former employees. The rule estimates that process will take only one or four to eight hours of lawyer time, respectively, *per firm*.[89] But companies, including some of RILA's members, use many different types of agreements (*e.g.*, employment agreements, retention agreements, severance plans, severance agreements, equity and long term investment award grants, specialized training programs, signing bonuses, and relocation payment agreements, to name a few) that may contain various forms of non-competes or other clauses. Given the broad range of clauses (*e.g.*, non-disclosure, non-solicitation, repayment clauses, etc.) that potentially could be caught in the "*de facto*" non-compete clause net, this could involve reviewing and analyzing many different agreements and programs involving hundreds of thousands of current and former retail employees. If any revisions to contracts and programs are required, additional time will be needed. In all, this process will likely take hundreds of hours of lawyer time per employer. And those hours would cost, in all likelihood, at least *ten times* more per hour than the FTC estimates.[90]

Likewise, the FTC's estimate that it will take only 20 minutes of a "human resources specialist's" time to engage with each affected employee and notify him or her of the revised contract ignores the upfront costs of determining which of many potential explicit and "*de facto*" non-compete clauses actually apply to which employees.[91] Employers will also need to spend time renegotiating each of these contracts—a cost that will uniquely burden small businesses who do not have substantial internal legal teams or outside counsel relationships. A few RILA members estimated that implementing the proposed rule would initially cost them at least $100,000 to $200,000 each; the combined cost of implementing the proposed rule for all RILA members will be in the tens of millions of dollars. Given that these are only the costs that would

[89] 88 Fed. Reg. at 3528/2.

[90] The FTC's cited figure of $61.54 per hour is the median hourly income of lawyers nationwide. *See* 88 Fed. Reg. at 3528/2–3. The more relevant statistic is the average hourly billing rate of a private-practice lawyer, whether a partner ($749/hour) or an associate ($546/hour). Wolters Kluwer, 2022 *Real Rate Report*, available online at https://www.wolterskluwer.com/en/news/wolters-kluwer-elm-solutions-2022-real-rate-report-indicates-that-timekeeper-rates-continue-to-rise.

[91] 88 Fed. Reg. at 3528/2.

be incurred by RILA's 100-plus members, it is clear that the total costs of implementation across *all* industries throughout the United States would be astronomical.

The FTC's woeful underestimation of implementation cost is indicative of how the Commission treats other costs, too. As discussed in more detail above,[92] the rule gives short shrift to the negative effects a ban will have on business investment, conceding only that it might lead firms to reduce employee training or investment in capital assets that enhance the effectiveness of human capital[93]—which the FTC nowhere attempts to enumerate. Those costs will likely be enormous. The proposed rule also barely addresses the potential that banning non-compete clauses will *reduce* wages, despite citing some studies that support that notion.[94]

Nor does the rule consider the inefficiencies and downsides of alternative practices firms may have to employ to protect their trade secrets in lieu of non-competes, such as limiting workers' access to information, which are likely to both be disruptive and lead to a loss of opportunities for the workers. As explained above, in many cases it will be virtually impossible to wall off confidential business information (including trade secrets) from general business knowledge, forcing companies to minimize the number of employees who can see confidential company information, which will have negative impact on business efficiencies and overall competitiveness of the company.[95] Nor does the proposed rule consider the significant inefficiencies caused by forcing businesses to implement more substantial guardrails *within* their organizations to protect confidential information, without the availability of non-compete clauses. The FTC also minimizes the increased litigation costs to protect trade secrets and confidential business information that are likely to result from barring clear and easy-to-enforce non-competes.[96] Moreover, companies who do not currently employ such alternative provisions would have to *add* them to their contracts and implement related policies and procedures, at substantial expense.

Further, many other obvious costs are ignored entirely by the proposed rule. The rule does not consider, for example, the costs that firms will incur from former employees soliciting the firm's clients or customers. One reason that some firms employ non-compete clauses in worker contracts is to prevent workers from leaving for a competitor and soliciting their clients to come with them.[97] This can be especially damaging to small businesses who cannot withstand the loss of a major client. Lastly, the rule's analysis under the Regulatory Flexibility Act also downplays

the costs to small businesses arising from higher worker turnover and worker poaching by other firms.[98]

Second, as to benefits, the rule dramatically overstates the purported social goods that would flow from a ban on non-compete clauses. The rule's benefits calculation is premised on the notion that 30 million workers—or roughly 18% of the workforce—are currently bound by such clauses. But that number is supported by only a single study that relies on a decade-old survey of a nonrepresentative sample of workers.[99] This outdated data fails to account for the fact that many states have limited the use of non-competes in recent years.[100] Companies have responded by reevaluation their use of non-compete clauses, meaning that there are very likely many fewer workers presently bound by non-compete clauses than the FTC's estimate—and thus fewer benefits (if any) could follow from banning non-compete clauses. The results of a recent RILA member survey supports the argument that the number of impacted workers is overstated. The majority of responding members that use non-compete clauses indicate that they do so with less than 1% of their workforce and an additional 26% of respondents use these clauses with 10% or less of their total workforce.

A foundational requirement of the APA is that before imposing a new regulation, an agency must accurately and thoroughly weigh the costs and benefits of doing so. Here, the FTC's flawed cost-benefit analysis, with its overstatement of benefits and understatement of costs, does not satisfy a core requirement of the APA, and therefore the proposed rule should be withdrawn.

VI. The FTC Should Abandon the Proposed Rule and Continue Adjudicating Non-Compete Clauses on a Case-By-Case Basis.

RILA members do not support overbroad and anticompetitive non-competes that limit worker mobility. Targeting overbroad and anticompetitive non-compete clauses, however, does not require a blanket ban like the FTC proposes. Moreover, a broad public policy on non-compete clauses is a matter for federal and state elected officials to address. RILA is currently engaged, and looks forward to continuing to engage, with Congress to find a solution that tackles anticompetitive non-competes while still providing employees and businesses flexibility to negotiate mutually beneficial contract provisions.

For all the reasons stated above, the FTC's proposed rule is unlawful and ill-conceived. The FTC lacks the requisite statutory authority for the proposed rule, and it is bad policy in any event. To the extent the FTC seeks to address non-compete clauses going forward, it should not act through rulemaking, but instead remain within the bounds of its statutory authority and evaluate particular non-compete clauses on a case-by-case basis using the rule-of-reason standard.[101] This adjudicatory process established by the FTC's authorizing statute enables the agency to weigh

[98] 88 Fed. Reg. at 3531/2–3.

[99] *See id.* at 3485/2–3 (citing Starr *et al.*, *supra* n.3, at 53, 63).

[100] *See id.* at 3494/2–3.

[101] *See, e.g.*, ABA Section of Antitrust Law, Comments, *supra* n.32, at 60 (Apr. 24, 2020) ("As the Commission's historical experience with rulemaking suggests, adjudication may be a superior way to address the potential problem of non-compete clauses.")

any anticompetitive harms that such clauses may cause against their procompetitive benefits.[102] There is no reason that the FTC cannot eliminate truly unfair non-compete clauses using its existing statutory authority and processes.

Lastly, in the proposed rule the FTC implies that it is willing to consider limiting or modifying the rule in some manner. As noted above, RILA and its members do not believe that the FTC's current statutory authority authorizes the Commission to issue any competition rule, including a potentially limited rule on non-competes. However, assuming for the sake of argument that the FTC does have such authority, in the event that the Commission decides to modify or limit the proposed rule in any fashion, under the requirements of the APA, the FTC must repropose any new modified rule and take stakeholder feedback on the new proposal.

Conclusion

RILA appreciates the opportunity to provide these comments on the FTC's proposed non-compete clause rule. We would welcome an opportunity to discuss our feedback with the commission.

Re: Non-Compete Clause Rulemaking, Matter No. P201200

Dear Ms. Tabor:

Ryan, LLC appreciates the opportunity to submit a comment regarding the Commission's proposed Non-Compete Rule. *See* FTC, *Notice of Proposed Rulemaking: Non-Compete Clause Rule*, RIN 3084-AB74, 88 Fed. Reg. 3482, 3534–35 (Jan. 19, 2023). Ryan is a global tax-consulting firm that employs over 2,500 professionals in dozens of offices in the United States.

Ryan strongly supports free and competitive markets. The Proposed Rule does not promote competition. Instead, it will put hard-earned trade secrets and other confidential business information at risk, as well as stifle innovation, workforce development, and productive mergers and acquisitions. It will harm consumers, businesses, workers, and the American economy as a whole. Ryan opposes the Proposed Rule.

The Proposed Rule jettisons centuries of precedent and practice by imposing a blanket prohibition on non-competes and quite possibly on many other restrictive covenants, regardless of a worker's occupation, skill, salary, or knowledge of sensitive, confidential business information. Non-competes and other restrictive covenants serve a vital business purpose, especially in the consulting industry, where methods, approaches, and playbooks developed over years can form the backbone for the services offered to clients. Non-competes and other restrictive covenants are necessary to protect those assets; they prevent a firm's former workers from divulging sensitive information (including confidential data belonging to a firm's clients) to future employers. Tailored uses of non-competes and other restrictive covenants have no anti-competitive effects—in fact, they are beneficial—but the Proposed Rule nevertheless prohibits them, thereby threatening to upend entire industries and disrupt entrenched, highly productive business models.

The Commission should withdraw the Proposed Rule because it is unlawful and arbitrary and capricious. First, the FTC lacks authority to issue the rule. The Federal Trade Commission Act, 15 U.S.C. § 45, does not authorize the Commission to promulgate legislative rules regarding "unfair methods of competition" at all, much less to ban virtually all non-competes in a manner that runs roughshod over centuries of state law and flouts bedrock principles of administrative and constitutional law. Second, the Proposed Rule's sweeping approach of banning all non-competes is irreconcilable with the antitrust laws, those laws' centuries-old common law roots, and basic principles of due process. Third, the Proposed Rule is arbitrary and capricious; its analysis of the evidence on non-competes and its cost-benefit analysis ignore the numerous benefits that non-compete clauses offer to firms, workers, and consumers, which greatly overweigh the Commission's limited and flawed evidence of harms.

EXECUTIVE SUMMARY

I. Ryan is a global tax-consulting firm that employs over 2,500 people in the United States. Ryan is owned and operated by 200-plus principals, who are sought-after tax experts. Principals' shareholder agreements contain post-employment non-competes to protect Ryan's confidential information and to prevent departing principals from poaching Ryan's clients and employees. The Proposed Rule would annul these non-competes, thereby threatening Ryan's trade secrets, stability, and ability to acquire other firms. It would also force Ryan to reduce employee-training opportunities and to silo sensitive information to minimize the risk of departing employees—principals and non-principals alike—taking and sharing confidential information with Ryan's competitors.

II. The Proposed Rule is illegal. It exceeds the Commission's statutory authority, as Section 5 of the FTC Act does not authorize the Commission to issue substantive regulations preventing "unfair methods of competition," which can be addressed only through case-by-case adjudication. Section 6(g), which grants the Commission the power to "make rules and regulations for the purpose of carrying out the provisions of this subchapter," is limited to the power to make procedural rules furthering case-by-case adjudication. The Magnusson-Moss Act affirms this. It grants the Commission the power to promulgate substantive rules regarding "unfair or deceptive acts or practices," suggesting that no corresponding authority exists for making rules targeting "unfair methods of competition." Moreover, under the major questions doctrine, no court would conclude that the Commission has the statutory authority to promulgate the Proposed Rule. And even if the Commission did have the statutory authority to issue the Proposed Rule, that grant of authority would violate the Constitution's prohibition on the delegation of legislative power from Congress to the Executive Branch.

III. The Proposed Rule's per se ban on non-competes is inconsistent with common law and federal antitrust law and violates due process. Centuries of common law and statutory decisions under the Clayton and Sherman Acts require case-by-case adjudication of the legality of non-competes. The Commission claims that case-by-case adjudication is unnecessary because non-competes always lack valid business justification, but that assertion is wholly unsupported by legal precedent and (as discussed in Part IV) empirical evidence. The Commission's November 2022 Policy Statement, in which it dubiously claimed the power to regulate practices that *could* harm competitive *conditions*—as opposed to demonstrably harming competition itself—does not salvage the Proposed Rule because it is neither legally binding nor legally accurate. Furthermore, due process requires a case-by-case analysis of non-competes because businesses have the right to present reasons why their specific practices are not anti-competitive.

IV. The Proposed Rule's justifications for banning non-competes are arbitrary and capricious. The Commission proposes to make an enormous change in the American economy based on an inconsistent analysis of limited, flawed, recent, and inconclusive evidence about the competitive effects of non-competes. The Commission's conclusions, moreover, are in large part dependent on its analysis of non-competes' purported effects on the labor market and workers themselves—but that is not a proper basis for Commission action since its statutory mandate is to protect *consumers*. Moreover, a fair analysis of the evidence shows that, contrary to the Commission's conclusions, non-competes have overall pro-competitive effects in the labor market and are not "exploitive and coercive." They also benefit the market for products and services by increasing innovation, increasing worker training, and decreasing prices. Finally, the

Commission's decision to extend its proposed ban to so-called "de facto" non-competes is based on *zero* evidence of anti-competitive effects of those agreements.

V. The Commission's errors in analyzing the evidence to justify the Proposed Rule carry over to its cost-benefit analysis. The Commission overstates the benefits and understates the costs due to the same mistakes that cause it to mis-analyze the evidence and other mistakes unique to the cost-benefit analysis. Worse yet, the Commission ignores a host of costs not just to firms, but to workers and the economy as a whole.

I. The Proposed Rule Will Harm Ryan LLC and Thousands of Other Client-Service Businesses. 8

A. Ryan's business. 8

B. Ryan's use of restrictive covenants is beneficial and legitimate. 9

C. The Proposed Rule will disrupt Ryan's business model and harm fair competition in the tax-consulting market. 10

II. The FTC Lacks Statutory Authority to Adopt Unfair Methods of Competition Rules. 12

A. The FTC has never had the authority to issue rules defining unfair methods of competition, notwithstanding the D.C. Circuit's 1973 decision in *National Petroleum*. 13

B. The Magnuson-Moss Act confirms *National Petroleum* was incorrect, and supersedes it. 15

C. The Commission also lacks authority for the Proposed Rule under the major-questions doctrine. 16

D. The non-delegation doctrine also prohibits the Proposed Rule. 18

III. A Per Se Ban on Non-Competes Is Inconsistent with Common Law and the Antitrust Statutes and Violates Due Process 19

A. The Commission fails to analyze non-competes individually, as required by the rule of reason and centuries of precedent. 19

B. Due process requires case-by-case analysis of whether non-compete clauses are pro- or anti-competitive. 22

TABLE OF CONTENTS

Page

IV. The FTC's Evidence and Justifications for a Per Se Ban on Non-Competes Do Not Withstand Scrutiny 23

A. Non-competes promote competition in the market for products and services. 25

1. Non-competes foster innovation and successful business formation. 25

2. Non-competes can decrease prices. 28

3. There is no evidence that non-competes create recruiting "deadweight losses," outside the specialized market for CEOs. 29

B. Non-competes benefit workers and promote competition in the labor market. 30

1. Non-competes boost job creation. 30

2. Non-competes promote employer investment in worker training. 30

3. Non-competes are associated with higher earnings. 32

4. Workers can and do benefit from and bargain over non-competes. 35

C. The focus of the FTC Act is consumer welfare, so any evidence that non-competes negatively affect the labor market or supposedly exploit workers is not a proper basis for this rulemaking. 38

D. The studies cited by the FTC are too new, inconclusive, and methodologically flawed to justify the Proposed Rule. 39

E. The FTC's evaluation of the evidence and its reasoning are inconsistent. 43

F. The FTC cites no empirical evidence whatsoever to support prohibiting so-called "de facto non-competes." 45

TABLE OF CONTENTS

Page

V. The Commission's Cost-Benefit Analysis Is Flawed. 46

A. The Commission overstates the Proposed Rule's purported benefits. 46

B. The Commission understates the costs it does acknowledge. 47

C. The Commission ignores a number of other costs. 50

1. The Commission ignores costs resulting from increased worker turnover. 50

2. The Commission ignores other significant costs to firms. 52

3. The Commission ignores other costs that will affect the economy as a whole. 53

I. The Proposed Rule Will Harm Ryan LLC and Thousands of Other Client-Service Businesses.

A. Ryan's business.

Ryan, LLC is a global tax services firm that provides an integrated suite of federal, state, local, and international consulting services to corporate clients to liberate them from the burdens of over-taxation. Ryan is headquartered in Dallas, Texas, and has dozens of offices across thirty states and the District of Columbia in both major metropolitan areas and smaller markets. As a global tax-consulting firm, Ryan also has offices in eight countries throughout Europe as well as in Canada, Australia, India, and the Philippines.

Ryan represents leading corporate clients in established and emerging industries ranging from food services and retail to cryptocurrency and telecommunication. Ryan's tax-consulting services include audit representation, strategic-advisory services and public-affairs services, advanced tax software, and compliance assistance. Ryan has over 18,000 clients, including 97% of the companies that make up the Dow Jones Industrial Average. Clients hold Ryan's services in high regard, with over 90% reporting that they are extremely satisfied with Ryan and extremely likely to return. Ryan's 4,300 employees, over 2,500 of whom are in the United States, express similar satisfaction, as reflected by the numerous employee-satisfaction awards Ryan has won. For instance, Fortune magazine recently named Ryan one of the best workplaces for women, one of the best workplaces in consulting, and one of the best workplaces for millennials, as well as one of the 100 best companies to work for. *See* Ryan.com, *About Ryan: Awards*, https://tinyurl.com/55vsavnh.

Like other leading consulting firms, Ryan relies on a traditional, principal-driven business model. Ryan's 200-plus principals are sought-after tax experts who frequently join Ryan after years of experience in the tax industry. They include former administrative law judges, legislators, policy officials, auditors, attorneys, and statisticians. Each principal is a Ryan shareholder. Together, they supervise thousands of employees, most notably managers and consultants, who assist in providing Ryan's services.

The methods, approaches, and playbooks for advising clients and solving their problems are often developed through a collaborative process that can take years of research and trial and error to perfect. Ryan's principals and employees constantly reevaluate and modify those methods, approaches, and playbooks in light of changing laws and regulations, market trends, and even the identities of the relevant regulators. That know-how is an extraordinarily critical corporate asset.

B. Ryan's use of restrictive covenants is beneficial and legitimate.

Ryan uses non-compete clauses in a tailored fashion. Ryan's principals, who make up less than 10% of Ryan's U.S.-based workforce, all are subject to post-employment non-competes pursuant to the terms of their shareholder agreements.[1] The vast majority of Ryan's employees, including its client-facing employees, are not subject to post-employment non-competes. Ryan does not require its non-consultant employees such as administrative assistants, human-resources specialists, and in-house counsel to sign non-compete agreements. All partners and employees are subject to clauses prohibiting the disclosure of confidential information and solicitation of Ryan clients and employees. Non-compete clauses and non-solicitation clauses are temporally limited.

This limited use of non-competes strikes a healthy balance between the interests of Ryan and its departing principals and employees. Ryan appropriately protects its confidential business information and clients' sensitive information and insures itself for a limited period against the threat of client-poaching by tailoring agreements to the seniority of the individuals and, sometimes, the particular risks associated with an individual's access to sensitive information.

In Ryan's experience, non-disclosure agreements are less effective than non-competes. An unauthorized disclosure of confidential business information or confidential client information is more problematic the fresher the information is. Because they are prospective in nature, non-competes alone can prevent even accidental disclosure or use of sensitive information by ensuring that, for a period of time, former workers do not join competing firms. A worker may have no intent to use confidential information but may do so inadvertently in the very process of competing with his former employer. Non-disclosure agreements are inadequate to protect confidential information because they act only retroactively, and, due to the difficulty of learning about and obtaining proof of disclosure, are harder to enforce. Cases involving violations of non-disclosure obligations or theft of confidential business information are also difficult to win and, even when the plaintiff prevails, substantial time often has passed, reducing the effectiveness of any remedy.

[1] Ryan has inherited non-compete agreements applicable to non-partners that were entered into by predecessor firms as part of an acquisition. Sometimes it agrees to a non-compete clause with a non-partner where that employee has access to particularly sensitive business information.

For example, Ryan has been litigating a case involving an alleged theft of its trade secrets for over two-and-a-half years, yet still has not proceeded to trial. Non-competes thus can be a critical and reasonably tailored tool for preventing both intentional and accidental disclosure of confidential business and client information.

C. The Proposed Rule would disrupt Ryan's business model and harm fair competition in the tax-consulting market.

Although Ryan's use of non-competes is limited in scope, it is nevertheless essential to Ryan's ability to compete in the tax-consulting market and to provide world-class services to its clients. By erecting a total ban on worker non-competes, the Proposed Rule would overturn Ryan's longstanding business model to the detriment of Ryan, its principals, its employees, and its clients. That risk is heightened by the Proposed Rule's coverage of so-called "de facto non-competes," which would substantially chill both the inclusion of any restrictive covenant in an agreement and the attempted enforcement of the covenant for fear of it being deemed an unfair method of competition subject to FTC enforcement. Far from being pro-competitive, the Proposed Rule would actually have anti-competitive effects on the tax-consulting industry and penalize consumers and employees alike.

First, the Proposed Rule places Ryan's business secrets at considerable risk of exposure. Like other leading consulting firms of varying types, Ryan has developed innovative and highly successful methods, approaches, and models for solving its clients' problems. These methods are often extremely difficult and expensive to develop because they require considerable amounts of manpower, expertise, and resources. Non-competes and other restrictive covenants such as non-disclosure agreements are necessary to protect these methods, which may fall outside the scope of federal and state trade-secrets statutes. The risk of exposure increases as individuals become more senior and gain access to more sensitive information, which is why Ryan requires principals, in particular, to sign non-competes.

Second, the Proposed Rule would lead to more unfair and anti-competitive client-poaching. If the Proposed Rule goes into effect, principals who depart Ryan could immediately solicit the business of Ryan's clients. Of course, Ryan acknowledges that it has no entitlement to its clients' business and appreciates that in a competitive market, clients will frequently shift their business from a firm to its competitor when they believe it can offer higher-quality or lower-cost services. Indeed, some of Ryan's clients were previously clients of Ryan's competitors. The purpose of a non-compete therefore is not to perpetually lock up a client's business but, instead, to prevent principals from engaging in gamesmanship and taking advantage of Ryan's resources for their own business purposes. Non-competes prevent principals from forming relationships with Ryan's clients and learning Ryan's trade secrets with the intent of departing Ryan and promptly poaching the client. The (time-limited) non-compete in Ryan's Shareholder Agreement ensures that Ryan can maximize principal-client interaction without fear of client-poaching in the short term.

Third, the Proposed Rule would similarly lead to more unfair and anti-competitive employee-poaching. If principals were to depart Ryan without non-compete restrictions, they might attempt to bring Ryan's consultants with them. Ryan offers its consultants robust on-the-job training, mentorship and professional-development opportunities, and unparalleled real-world experience. This helps consultants to grow professionally and provide Ryan's clients with the best services in the industry. Ryan realizes that some of its consultants will eventually choose to seek employment elsewhere for personal and professional reasons and does not require the vast majority of its employees to sign non-competes. However, if departing principals were able to solicit the employment of Ryan's consultants, the impact of each departure would be magnified, inflicting considerable human-capital losses upon Ryan. This would disincentivize Ryan from investing in training and offering business opportunities to consultants whom Ryan believes are vulnerable to poaching by recently departed principals. This could result in lower-quality consulting services and a less capable workforce; the Proposed Rule would thereby harm those it purports to protect: consumers and employees.

Fourth, the Proposed Rule would lead to reduced information-sharing and decreased staffing within Ryan. To reduce the harms from departing principals poaching clients and consultants, Ryan would be forced to limit certain principals' access to clients, consultants, and information. That, in turn, would raise the costs of providing client services. Again, this could result in lower-quality client services and fewer professional-development opportunities.

Fifth, the Proposed Rule would curb Ryan's acquisition of smaller tax-consulting firms and hiring of outside experts. When new principals join Ryan, they bring a wealth of expertise and experience, contributing to economies of scale that enable Ryan to pioneer innovative products and services at reasonable cost. But each new addition comes with a corresponding risk of future departure from Ryan and the accompanying loss of confidential business information and client- and consultant-poaching. If the Proposed Rule goes into effect, Ryan's ability to mitigate these risks will be significantly restricted.[2] Thus, Ryan likely would make fewer acquisitions and hire fewer new principals, stifling growth and innovation to the detriment of Ryan, its employees, and its clients.

Of course, the effect of the Proposed Rule would not be limited to Ryan. Innovation by Ryan pushes its competitors to catch-up—i.e., to *compete* with each other—which increases options and improves products and services for consumers. Impairing Ryan's effectiveness impairs competition in the industry. Further, Ryan's competitors in the tax consulting industry similarly rely on non-competes to protect their own business secrets and investments in clients and employees. The Proposed Rule would stifle innovation across the industry, and harm not only Ryan's clients, but all those who rely on tax consultants to reduce their tax burden.

Finally, the Proposed Rule would be bad for individual consultants. Without the protection of non-competes—and with other restrictive covenants threatened by the proposal—Ryan and other firms would have to guard their business methods and client information more tightly, which would mean more siloing of workers and fewer training and career-growth opportunities. Without the assurances provided by non-competes, along with the risks that other restrictive covenants may not be enforceable and of higher costs of doing business, compensation growth would be constrained. In short, employees lose, too.

II. The FTC Lacks Statutory Authority to Adopt Unfair Methods of Competition Rules.

The Proposed Rule is breathtaking in its scope and ambition. In seeking to override the laws of 47 states and to cancel tens of millions of contracts, the Commission dramatically exceeds its statutory authority and triggers significant constitutional concerns.

The Commission claims that "[t]aken together, Sections 5 and 6(g) provide the Commission with the authority to issue regulations declaring practices to be unfair methods of competition." 88 Fed. Reg. at 3499. In truth, and as the text, history, and structure of the FTC Act make clear, Section 6(g) merely grants the Commission the authority to make procedural rules, not to promulgate substantive rules governing private parties. The only case to the contrary, *National Petroleum Refiners Ass'n v. FTC*, 482 F.2d 672 (D.C. Cir. 1973), was wrongly decided.

[2] The Proposed Rule suggests that firms use non-disclosure agreements and trade-secrets lawsuit as alternatives to non-competes. 88 Fed. Reg. at 3505. These alternatives do nothing to stop former principals from soliciting Ryan's clients and consultants.

In any event, Congress superseded that decision with the Magnuson-Moss Warranty – Federal Trade Commission Improvement Act, which does not grant the FTC the authority to promulgate unfair-method-of-competition rules and confirms that Section 6(g) does not either. Finally, the major-questions and non-delegations doctrines each prohibit reading Section 6(g) to grant the FTC its asserted power to remake the American economy at will.[3]

A. The FTC has never had the authority to issue rules defining unfair methods of competition, notwithstanding the D.C. Circuit's 1973 decision in *National Petroleum*.

Section 5 of the FTC Act outlaws "unfair methods of competition" and "empower[s]" the Commission to "prevent persons . . . from using unfair methods of competition." 15 U.S.C. § 45(a)(1)–(2). But from its creation in 1914 until the 1960s, the Commission was understood—including by the Commissioners themselves—to be empowered to prevent unfair methods of competition only through case-by-case adjudication. In 1962, the Commission for the first time claimed that Section 6(g) granted it the authority to make substantive rule by vesting it with "power . . . [f]rom time to time classify corporations and . . . to make rules and regulations for the purpose of carrying out the provisions of this subchapter." This latter understanding was incorrect.

The structure of the FTC Act makes clear that Section 6(g) only grants the Commission the authority to promulgate procedural rules. As mentioned above, Section 5 of the FTC Act empowers the Commission to prevent the use of unfair methods of competition. *See* 15 U.S.C. § 45(a). However, Section 5 also creates a fully fleshed-out system for *how* the Commission is to prevent unfair methods of competition. Specifically, Section 5 empowers the Commission to hold a hearing to determine whether a person is employing an unfair method of competition and to then issue a cease-and-desist order if that method is determined to constitute an unfair method of competition. 15 U.S.C. § 45(b). Section 5 also provides for judicial review, 15 U.S.C. § 45(c),

[3] Additionally, as a multimember "independent agency" purportedly shielded from presidential control, the Commission is unconstitutionally structured. Article II of the Constitution vests the entire executive power in the President alone, so "lesser officers" within the Executive Branch "must remain accountable to the President." *Seila Law LLC v. CFPB*, 140 S. Ct. 2183, 2197 (2020); *see also Collins v. Yellen*, 141 S. Ct. 1761 (2021). Thus, as a general rule, the president must retain "unrestricted removal power." *Id.* at 2198–2200. However, the FTC Act, allows removal of the Commissioners only for "inefficiency, neglect of duty, or malfeasance in office." 15 U.S.C. § 41. Although the Supreme Court upheld the constitutionality of the FTC Act's good-cause provision in *Humphrey's Executor v. United States*, the rationale for that century-old decision, even if it was correct at the time, no longer holds today because the FTC has since been granted numerous indisputably executive powers, including to seek monetary and injunctive relief in court; it is even less intelligible now to say that the agency can act only "quasi legislatively" and "quasi judicially." 295 U.S. 602, 628 (1935); *see* 15 U.S.C. § 45(m) (granting the FTC executive authority).

once such orders become final, *id.* § 45(g)–(j), and for the assessment of penalties for violations of orders, 15 U.S.C. § 45(*l*). In sum, Section 5 is a self-contained enforcement scheme.

Section 6 lays out ancillary powers of the Commission to aid in the administration of that scheme. Most of these provisions grant the Commission investigatory powers. *See* 15 U.S.C. § 46(a), (b), (c), (d), (h), (i), (j). Some grant the Commission the ministerial powers to make recommendations to the Department of Justice, *see* 15 U.S.C. § 46(e), (k), and to publish reports, *see id.* § 46(f). And Section 6(g) grants the Commission the power to "classify corporations," and to "make rules and regulations for the purpose of carrying out the provisions of this subchapter." 15 U.S.C. § 46(g).

Read in context, it is clear that Section 6(g) grants only the power to make procedural rules. "Congress . . . does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions—it does not, one might say, hide elephants in mouseholes." *Whitman v. American Trucking Ass'ns*, 531 U.S. 457, 468 (2001). Section 6 provides the Commission with ancillary powers to enable it to effectively execute the adjudication-centric regulatory scheme laid out in Section 5. It is unfathomable that Congress, in one half of one subsection to a different provision, also provided the Commission with the power to issue legislative rules to supplement a fundamentally different, reticulated regulatory scheme, let alone legislative rules to remake broad swaths of the American economy.

The history of the FTC Act and the Commission's interpretation of it bolsters that conclusion. In 1914, when Congress passed the Act, it was unheard of for Congress to grant an agency broad legislative rulemaking authority without also enacting a provision providing penalties for violating those rules. *See generally* Thomas W. Merrill & Kathryn Tongue Watts, *Agency Rules with the Force of Law: The Original Convention*, 116 HARV. L. REV. 467, 549–57 (2002). There is no such provision for Section 6 rules. *See* 45 U.S.C. § 46. By contrast, there is now, and was then, a provision for violating orders that result from Section 5 adjudications. *See* 15 U.S.C. § 45(*l*)–(m); Federal Trade Commission Act, ch. 311 § 5, 38 Stat. 717, 720 (1914) ("If such person . . . fails or neglects to obey such order of the Commission . . .").

Moreover, the fact that the FTC did not understand Section 6(g) to grant it substantive rulemaking authority for approximately the first fifty years of its existence counsels against reading it to do so now. The Supreme Court has said that "[i]n construing [a provision of the FTC Act], it is helpful to understand how the Commission's authority (and its interpretation of that authority) has evolved over time." *AMG Cap. Mgmt., LLC v. Fed. Trade Comm'n*, 141 S. Ct. 1341, 1345–46 (2021). The FTC was created in 1914 but did not claim to have rulemaking authority until 1962. In fact, between 1914 and 1962, the FTC explicitly disclaimed substantive rulemaking authority on multiple occasions. *See Nat'l Petroleum Refiners Ass'n*, 482 F.2d at 693 & n.27 (explaining that the FTC "indicated intermittently before [1962] that it lacked" the power to promulgate substantive rules). Especially notable, because it was nearly contemporaneous with the original Act, is the FTC's 1922 annual report, which said, "One of the most common mistakes is to suppose that the commission can issue orders, rulings, or regulations unconnected with any proceeding before it." Annual Report of the Federal Trade Commission 36 (1922); *see also* Hearings on H.R. 2321 Before the House Committee on Interstate & Foreign Commerce, 82d Cong., 1st Sess., 160 (1951) (statement of Mr. Henry Miller, Assistant General Counsel, FTC) ("[O]ur trade practice rules do not require mandatory labeling because we have felt that we have not the power to require it. . . [W]e can apply the powers we have under the [FTC] Act[, but] those powers cannot be applied quickly enough to provide an over-all and adequate remedy. You have to go through the procedure of an investigation. Then you have to [go through the procedure of an adjudication.]") It is hard to argue that the Commission misunderstood its authority merely 8 years after it was created, but then became enlightened 40 years later.

Despite these textual, structural, and historical reasons to interpret Section 6(g) as granting only the authority to make procedural rules, the D.C. Circuit ruled otherwise in 1973. *See National Petroleum Refiners Ass'n*, 482 F.2d at 697–98. For the reasons explained above, and as others have explained, that decision was incorrect when it was decided. *See* Richard J. Pierce, *Can the Federal Trade Commission Use Rulemaking to Change Antitrust Law?*, GW Law Faculty Publications & Other Works. 1561, at 6, 9 (2021); Maureen K. Ohlhausen & James Rill, *Pushing the Limits? A Primer on FTC Competition Rulemaking* 10–13, U.S. CHAMBER OF COMMERCE (2021).

B. The Magnuson-Moss Act confirms *National Petroleum* was incorrect, and supersedes it.

In 1975 Congress enacted the Magnuson-Moss Warranty-Federal Trade Commission Improvement Act, which simultaneously supersedes *National Petroleum* and demonstrates that it was incorrect from its inception. *See* Pub. L. No. 93-637, 88 Stat. 2183 (1975). The Act authorizes the Commission to promulgate "rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce." 15 U.S.C. § 57a(a)(1)(B). That provision would be pointless surplusage if Section 6(g) already granted the Commission the authority to promulgate substantive rules. *Cf. Reiter v. Sonotone Corp.*, 442 U.S. 330, 339 (1979) ("In construing a statute we are obliged to give effect, if possible, to every word Congress used.").

What the Magnuson-Moss Act did *not* do is as important as what it did do. Though the Act explicitly authorized the Commission to promulgate substantive rules regarding unfair or deceptive acts or practices, it said nothing about authorizing the Commission to promulgate substantive rules regarding unfair methods of competition. These "circumstances support[] a sensible inference that the [rulemaking authority] left out must have been meant to be excluded." *Chevron U.S.A. Inc. v. Echazabal*, 536 U.S. 73, 81 (2002). Moreover, the Magnuson-Moss Act imposed procedural hurdles beyond those required by the Administrative Procedure Act to promulgate rules regarding unfair or deceptive acts. *See* 15 U.S.C. § 57a(b)–(d). Particularly given that declaring a practice to be an unfair method of competition can have much broader implications for the economy than declaring an act or practice to be unfair or deceptive, it would be very odd for Congress to impose additional procedural hurdles for consumer-protection rules but to leave competition rules unconstrained. The only reasonable interpretation is that the Commission has no competition rulemaking authority at all.[4]

C. The Commission also lacks authority for the Proposed Rule under the major-questions doctrine.

To the extent there were any ambiguity in the FTC Act, the "major-questions doctrine" would confirm that the Commission lacks authority to promulgate the Proposed Rule. That doctrine recognizes limitations on a federal agency's authority to enact regulations of "vast economic and political significance." *West Virginia v. EPA*, 142 S. Ct. 2587, 2605 (2022). An agency can promulgate such regulations only if it has "clear congressional authorization" to

[4] Congress also provided that its express grant of authority for rules defining unfair and deceptive acts or practices, and accompanying procedural hurdles, did "not affect any authority of the Commission to prescribe rules . . . with respect to unfair methods of competition." 15 U.S.C. § 57a(a)(2). This disclaimer does not remove the clear implication of providing explicit—yet tightly constrained—authority to promulgate rules defining unfair and deceptive acts or practices, while providing no rulemaking authority regarding unfair methods of competition. At most, the language is an evasion that confirms Congress withheld the clear authority for competition rules required by the major questions doctrine. *See infra* at 16–17; *see also* Eugene Scalia, THE MAJOR QUESTIONS DOCTRINE, NATIONAL PETROLEUM, AND THE FEDERAL TRADE COMMISSION'S COMPETITION RULEMAKING AUTHORITY 7–8, AM. ENTERPRISE INST. (Dec. 2022).

undertake a "transformative expansion in [its] regulatory authority." *Id.* at 2609–2610. A "plausible textual basis" in a statute is insufficient. *Id.* at 2609.

There is little doubt that the banning of non-competes presents a major question. First, the Proposed Rule "intrudes into an area that is the particular domain of state law." *Alabama Ass'n of Realtors v. Dep't of Health & Hum. Servs.*, 141 S. Ct. 2485, 2489 (2021); *see also W. Va. v. EPA*, 142 S. Ct. at 2621 (Gorsuch, J., concurring). Non-competes have been regulated by the common law of contract since before the American Revolution; the Proposed Rule would preempt the laws of 47 states. 88 Fed. Reg. at 3494, 3515.[5] Second, the Proposed Rule is of great "economic significance," *W. Va. v. EPA*, 142 S. Ct. at 2608, since by the Commission's estimate it would invalidate the contracts of "one in five American workers—or approximately 30 million workers," thereby upending reliance interests and entrenched business models, 88 Fed. Reg. at 3485; *see also infra* at 46. Further, its predicted economic impact is over $250 *billion* per year. 88 Fed. Reg. at 3522.

Third, courts are especially likely to invoke the major-questions doctrine when an agency seeks to effectuate "fundamental revision of [a] statute, changing it from one sort of scheme of regulation into an entirely different kind." *West Virginia*, 142 S. Ct. at 2587 (cleaned up). That is precisely what the Proposed Rule attempts to do. The FTC Act's prohibition on "unfair methods of competition," 15 U.S.C. § 45(a), has historically been limited to pricing practices, mergers, and conspiracies in restraint of trade that are independently actionable under the Sherman and Clayton Acts. The FTC Act has never been interpreted to allow the Commission to regulate labor markets, much less to vest the Commission with the power to invalidate contractual terms that have been legal in the majority of jurisdictions for hundreds of years. The Proposed Rule endeavors to transform what is in essence an antitrust statute into a worker-protection law. Protecting workers' economic interests is a task for Congress and the agencies empowered by Congress to do so; it is not the role of a consumer-protection agency.

The Commission lacks the "clear congressional authorization" to decide the major question of whether non-competes are lawful or unlawful across the board and across the country.

[5] The federalism canon, which requires a clear Congressional authorization before an agency may "encroach[] upon traditional state power," independently indicates that the FTC lacks the power to regulate non-compete agreements. *Solid Waste Agency of N. Cook Cnty. v. U.S. Army Corps of Engineers*, 531 U.S. 159, 172–74 (2001).

D. The non-delegation doctrine also prohibits the Proposed Rule.

The interpretive canon of constitutional avoidance also weighs decisively against the Proposed Rule because using the broad terms of the FTC Act to authorize rules that define and proscribe unfair methods of competition would violate the non-delegation doctrine.

Congress "is not permitted to abdicate or to transfer to others the essential legislative functions with which it is thus vested." *A.L.A. Schechter Poultry Corp. v. United States*, 295 U.S. 495, 529 (1935). Rather, Congress can delegate power to an agency only if it provides an "intelligible principle" by which the agency can exercise it. *Mistretta v. United States*, 488 U.S. 361, 372 (1989). The relevant questions, then, are whether Section 5's supposed grant of rulemaking power to the Commission is "legislative" and if so, whether this grant is accompanied by an "intelligible principle" that delineates the scope and purpose of the Commission's purported rulemaking authority.

There is no intelligible principle to guide an unfair method of competition rulemaking. Congress "has set out an intelligible principle" when it "has made clear to the delegee the general policy [it] must pursue and the boundaries of [its] authority." *Gundy v. United States*, 139 S. Ct. 2116, 2129 (2019) (quotation marks omitted). Neither Section 5 nor Section 6(g) does this. Particularly as recently interpreted by the Commission, the determination of which trade practices are "unfair" is a necessarily subjective, value-laden inquiry; the Commission last year expanded the term to encompass any conduct that "may be coercive, exploitative, collusive, abusive, deceptive, predatory, or involve the use of economic power of a similar nature" or is "otherwise restrictive or exclusionary, depending on the circumstances." Policy Statement Regarding the Scope of Unfair Methods of Competition under Section 5 of the Federal Trade Commission Act, Federal Trade Commission File No. P221202 (Nov. 10, 2022). The Director of the Bureau of Competition has hailed that purported power as "open-ended." Holly Vedova, Update from the FTC's Bureau of Competition 2 (2023), https://www.ftc.gov/system/files/ftc_gov/pdf/vedova-gcr-law-leaders-global-conference.pdf. But the Constitution does not allow the Commission "to exercise an unfettered discretion to make whatever laws [it] thinks may be needed or advisable." *Schechter*, 295 U.S. at 537. Indeed, the Commission's asserted authority to promulgate rules establishing unfair methods of competition looks eerily like the authority to issue "codes of fair competition" that the National Industrial Recovery Act gave the President—but that the Supreme Court held violated the Constitution in *Schechter*. *See id.* at 532–34. Crucially, *Schechter* contrasted those constitutionally impermissible "codes" with the Commission's case-by-case adjudication of "unfair methods of competition" under Section 5, indicating that the incremental, case-specific nature of the Commission's authority was instrumental to its constitutionality. *Id.* at 532–33 ("What are 'unfair methods of competition' are thus to be determined in particular instances, upon evidence, in the light of particular competitive conditions and of what is found to be a specific and substantial public interest.").

The constitutional-avoidance canon "counsel[s] that ambiguous statutory language be construed to avoid serious constitutional doubts." *FCC v. Fox Television Stations*, 556 U.S. 502, 516 (2009). For this reason too, the FTC Act must not be interpreted to provide a delegation of authority to promulgate rules establishing unfair methods of competition such as the Proposed Rule.

III. A Per Se Ban on Non-Competes Is Inconsistent with Common Law and the Antitrust Statutes and Violates Due Process

This rule would be unlawful even if the Commission did have the authority to promulgate substantive unfair method of competition rules. It contradicts reams of precedent applying the rule of reason, rather than the per se rule, to non-competes under both common law and the antitrust statutes. Applying the per se rule to non-competes would also violate the Due Process Clause.

A. The Commission fails to analyze non-competes individually, as required by the rule of reason and centuries of precedent.

The Proposed Rule's categorical prohibition of non-competes is arbitrary and capricious and contrary to law because it discards the case-by-case approach of the rule of reason in favor of an unprecedented one-size-fits-all approach to evaluating fairness.

Courts have two approaches to analyzing whether economic agreements violate the antitrust laws. The first approach, governing the vast majority of agreements, is the rule of reason, which requires an individualized analysis of whether a specific agreement has a substantial adverse effect on competition. *Tampa Elec. Co. v. Nashville Coal Co.*, 365 U.S. 320 (1961). Second, for a few particular types of economic arrangements, courts hold that the arrangement is per se anticompetitive. *See Leegin Creative Prods., Inc. v. PSKS, Inc.*, 551 U.S. 877, 888 (2007). Exclusive dealing agreements, "whether challenged under section 3 of the Clayton Act or section 1 of the Sherman Act . . . [are] judged under the Rule of Reason." *Roland Mach. Co. v. Dresser*

Indus., Inc., 749 F.2d 380, 393 (7th Cir. 1984). Thus, as federal courts have repeatedly recognized, non-competes must be analyzed under the centuries-old rule of reason. *See Eichorn v. AT&T Corp.*, 248 F.3d 131, 144 (3d Cir. 2001) ("[C]ourts have uniformly found that covenants not to compete should be examined under the rule of reason."); *see also, e.g.*, *Consultants & Designers, Inc. v. Butler Serv. Group, Inc.*, 720 F.2d 1553, 1561 (11th Cir. 1983); *Aydin Corp. v. Loral Corp.*, 718 F.2d 897, 900 (9th Cir. 1983). In fact, the rule of reason was first articulated in a 1711 case evaluating a non-compete. *See Mitchel v. Reynolds*, 24 Eng. Rep. 347. Applying the rule of reason more recently, courts have often found that non-competes have pro-competitive effects and are therefore perfectly legal under the Sherman and Clayton Acts.

Non-competes have numerous benefits, and "[t]he per se rule is designed for cases in which experience has convinced the judiciary that a particular type of business practice has no (or trivial) redeeming benefits ever." *In re Sulfuric Acid Antitrust Litig.*, 703 F.3d 1004, 1011-12 (7th Cir. 2012)); *see infra* at 25–37 (detailing benefits). The Commission must therefore use the rule of reason to determine whether a specific non-compete violates the FTC Act. Indeed, the only court to have considered whether non-competes are an unfair method of competition under the FTC Act held that non-competes do not violate Section 5 "unless they are unreasonable as to time or geographic scope." *Snap-On Tools Corp. v. FTC*, 321 F.2d 825, 837 (7th Cir. 1963). And as Commissioner Wilson explained in her dissent, this was a clear recognition that non-competes must be evaluated on a case-by-case basis, as they have for hundreds of years. 88 Fed. Reg. at 3540.

Rather than analyzing non-competes on a worker-, firm-, or even industry-specific basis, the FTC proposes to declare that nearly every non-compete, everywhere in the country, is anticompetitive and therefore violates Section 5 of the FTC Act. But "statutes will not be interpreted as changing the common law unless they effect the change with clarity." ANTONIN SCALIA & BRYAN A. GARNER, READING LAW 318 (2012). Section 5 of the FTC Act declared that unfair methods of competition are unlawful. It did not change the application of the rule of reason to non-competes under the antitrust laws at all, and certainly did not change it with the clarity needed to derogate longstanding common law rules. The FTC therefore has no statutory authority to rewrite the antitrust laws. *See SEC v. Chenery Corp.*, 318 U.S. 80, 94 (1943) (An agency action "may not stand if the agency has misconceived the law."). And the Commission certainly cannot do so without at least grappling with the hundreds of years of precedents it is disregarding. *See Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983).

The Commission's apparent justification for declaring non-competes per se unlawful does not actually grapple with the precedents judging them under the rule of reason. The Commission appears to justify a per se rule for non-competes by first declaring them an unfair method of competition and then reasoning that "business justifications can overcome a finding that conduct is an unfair method of competition" only in "narrow" circumstances. 88 Fed. Reg. at 3504. In other words, the Commission does not consider the business justifications as part of its determination of whether non-competes are an unfair method of competition, but instead considers only whether the business justification can legalize something that has already been determined to be an unfair method of competition. That approach merely dodges, and does not directly consider, the application of the rule of reason to non-competes. Under proper application of the rule of reason, the business justifications are part of the calculus for whether a given non-compete is anti-competitive and thus an unfair method of competition. *See Aydin Corp.*, 718 F.2d at 901 (applying the rule of reason because non-competes "often serve legitimate business concerns such as preserving trade secrets and protecting investments in personnel"); *see also Polk Bros., Inc. v. Forest City Enters., Inc.*, 776 F.2d 185, 189 (7th Cir. 1985) (non-compete clauses encourage employers to "train the employee, giving him skills, knowledge, and trade secrets that make the firm more productive").

The two cases the Commission cites in support of its position that business justifications need not be considered are inapposite. *Fashion Originators' Guild of America v. FTC*, 312 U.S. 457 (1941), concerned an agreement among manufacturers to boycott certain retailers. The Supreme Court held that the agreement furthered a monopoly, so there was no need to consider whether the boycott was justifiable or reasonable. In contrast, the Commission does not claim that firms are colluding to coerce workers. The second case, *Atlantic Refining Co. v. FTC*, 381 U.S. 357, 371 (1965), instructs that it is "unnecessary" to conduct "extensive economic analysis of market percentages or business justifications" when "anticompetitive effects . . . are clear on the record." But three hundred years of precedent forecloses this approach towards non-competes; and the revisionist, preliminary administrative record the FTC has cobbled together is anything but clear that non-competes *always* have anticompetitive effects, as discussed at length below.

Infra Part IV. Therefore, these cases do not change the fact that business justifications must be considered as part of the analysis of whether non-competes are unlawful under the rule of reason.[6]

B. Due process requires case-by-case analysis of whether non-compete clauses are pro- or anti-competitive.

Abandoning the case-by-case approach to judging non-compete clauses also violates the due process clause. "The opportunity to present reasons, either in person or in writing, why proposed action should not be taken is a fundamental due process requirement." *Cleveland Bd. of Educ. v. Loudermill*, 470 U.S. 532, 546 (1985). For hundreds of years, employers have had the opportunity to present reasons why their particular non-compete clause was reasonable, and courts have often agreed. But under the Proposed Rule, to find that an employer violated Section 5 of the FTC Act, the Commission would only have to find that it had a non-compete clause. *See* 88 Fed. Reg. at 3535 (explaining that the proposed rule would define entering into a non-compete to be an unfair method of competition). By adopting a rule that non-competes are per se anti-competitive, despite the long history of courts finding them pro-competitive, the Commission would deny the employer before it the opportunity to present reasons why its particular non-compete was pro-competitive, and thus not an unfair method of competition. This does not comport with due process's core requirement of an opportunity to be heard.

The resulting procedures by which the FTC would hold hearings only to determine whether an employer used a non-compete also violates the balancing test articulated in *Mathews v. Eldridge* under which "a court evaluates (A) the private interest affected; (B) the risk of erroneous deprivation of that interest through the procedures used; and (C) the governmental interest at stake." *Nelson v. Colorado*, 581 U.S. 128, 135 (2017) (citing *Mathews v. Eldridge*, 424 U.S. 319, 335 (1976)). The private interest in being able to use pro-competitive non-competes is quite strong—for example, they are instrumental to enabling firms to train employees without fear that their investment in their employees will be for naught. And the risk of an erroneous deprivation

[6] The Commission's November 2022 Policy Statement cannot salvage the Proposed Rule. The Policy Statement arbitrarily and capriciously departs from longstanding Commission practice and judicial precedent by asserting that whether challenged practices have "the tendency to harm competitive conditions" is the lodestone of the Section 5 analysis. The Commission, in turn, criticizes non-competes as "negatively affect[ing] competitive conditions." 88 Fed. Reg. at 3500. However, the relevant question is not whether non-competes might harm competitive conditions through reducing worker mobility but whether they actually harm competition itself. *See Brunswick Corp. v. Pueblo Bowl-o-Mat, Inc.*, 429 U.S. 477, 487 (1977) ("The antitrust laws . . . were enacted for the protection of competition not competitors."). The Policy Statement itself cannot override antitrust law.

is quite high under the Proposed Rule; many non-competes are pro-competitive, and these would all be erroneously declared to be unfair methods of competition under the Proposed Rule. Finally, the government has essentially zero interest in abandoning the case-by-case method that has worked for hundreds of years. Therefore, the Proposed Rule violates due process.[7]

IV. The FTC's Evidence and Justifications for a Per Se Ban on Non-Competes Do Not Withstand Scrutiny.

The Commission concludes that non-compete agreements are per se anti-competitive. On the contrary, both economic theory and the empirical evidence indicate that, on the whole, non-competes have significant pro-competitive effects and can be good for both companies and workers. Non-competes lead to greater innovation by increasing protections for intellectual property, encouraging internal collaboration, removing disincentives to invest in research and development, and creating incentives for companies to invest in worker training. In particular, non-competes solve a market failure whereby firms free-ride on each other's training of employees; non-competes thus result in more upskilling and reskilling. Greater innovation, along with more and better training, increases productivity, decreases prices for consumers, and benefits the economy. Workers and the labor market also benefit from more and better training and more jobs, as well as from higher wages. The Commission speculates that the Proposed Rule might lead to minor increases in wages for hourly workers. The evidence in support of this proposition is slim and belied by the experience of Ryan and innumerable other companies, as well as by common sense: workers subject to non-competes are often paid more both because they are paid for the non-competes and because their work is more innovative and valuable. Regardless, the wage increases the Commission suggests could result from the Proposed Rule would by the Commission's own admission accrue principally to higher-paid white collar workers, with CEOs

[7] Additionally, due process requires a more specific standard for determining when a restrictive covenant constitutes a non-compete. "It is a basic principle of due process that an enactment is void for vagueness if its prohibitions are not clearly defined." *Grayned v. City of Rockford*, 408 U.S. 104, 108 (1972). The Due Process Clause entitles people to "notice of what the law demands of them." *United States v. Davis*, 139 S. Ct. 2319, 2323 (2019). And a vague law enables "arbitrary and discriminatory enforcement." *Grayned*, 408 U.S. at 108. The Proposed Rule violates this bedrock principle of due process by banning so-called "de facto" non-competes without giving any meaningful guidance as to what might constitute a de fact non-compete. The rule says that non-disclosure agreements are acceptable, but also says that such agreements could be deemed de facto non-competes. 88 Fed. Reg. at 3506–07. The FTC says that "unusually broad" non-disclosure agreements might qualify as non-competes but gives zero explanation of how much breadth is acceptable. Worse yet, the FTC says that other unspecified types of agreements might also qualify as de facto non-competes. *See* 88 Fed. Reg. at 3535. This vagueness violates due process.

seeing a nearly 10% increase in earnings. See 88 Fed. Reg. at 3524. Assuming the Commission is correct that the Proposed Rule would increase earnings, the rich would get richer, while hourly workers would receive a slight bump in pay that would be more than overwhelmed by the inevitable inflation resulting from the impediments to innovation and productivity.

In any event, the evidence on which the Commission relies is too new, too flawed, and too inconclusive to draw such a strong conclusion, and the Commission reaches its desired result by inconsistently scrutinizing the available evidence and by ignoring logical inconsistencies in its reasoning. Further, it cites no evidence to establish that "de facto" non-competes are anti-competitive or exploitative and coercive.

The Proposed Rule is ultimately a solution in search of a problem. The states have for decades experimented with how much to restrict the enforceability of non-competes. Often, those states' experience has led them to conclude that non-competes should be made *more* enforceable. *See* Norman D. Bishara, *Fifty Ways to Leave Your Employer: Relative Enforcement of Covenants Not to Compete. Trends, and Implications for Employee Mobility Policy*, 13 U. PA. J. BUS. L. 751, 780 (2011) (explaining that from 1991 to 2009 "there [was] a measurable drift of the aggregate policies in the United States toward greater enforcement"). For example, in 1996 Florida passed a law explicitly clarifying that non-competes were enforceable and loosening the standards with which courts applied to them. *See* Fla. Stat. Ann. § 542.335; Hyo Kang & Lee Fleming, *Non-Competes, Business Dynamism, and Concentration: Evidence From a Florida Case Study*, 29 J. ECON. & MGMT. STRATEGY 663, app. B (2020) (detailing how the 1996 law increased the enforceability of non-competes). In 2011, Georgia did the same. *See* O.C.G.A. §§ 12-8-50–54 (Restrictive Covenant Act). Sometimes, as the Commission points out, states' experiences have led to the opposite conclusion, with three states banning nearly all non-competes and eleven others plus the District of Columbia limiting their use based on varying compensation thresholds or nonexempt status under the Fair Labor Standards Act.

There are few better illustrations of how "[i]t is one of the happy incidents of the federal system that a single courageous state may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country." *New State Ice Co. v. Liebmann*, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting). It is unfortunate that the FTC would interfere with the contractual relationships and business practices of many thousands of American companies when the economy is already teetering on the edge of a recession and that it would intervene in a labor market that has alternated between overheated, distressed, and overheated in little more than three years. Undoubtedly, non-compete agreements—like many legitimate practices—are sometimes abused. This calls for a case-by-case approach to identify those circumstances, the approach that courts have taken for hundreds of years. Applying a per se ban to a practice that has pro-competitive benefits is illogical, arbitrary, and capricious. Even if the FTC "has the power to prevent" the states' ongoing "experiment" with non-competes, it should set aside its "prejudices," listen to "reason," and withdraw the Proposed Rule. *Id.*

A. Non-competes promote competition in the market for products and services.

Practical experience, published evidence, and common sense all agree that non-compete clauses promote competition in the market for products and services. They encourage innovation and the formation of successful businesses and can decrease prices. The Commission's arguments to the contrary are unpersuasive. Finally, the Commission's claim that non-competes create economically inefficient deadweight losses is unverifiable and too insubstantial to outweigh the positive effects of non-competes.

1. Non-competes foster innovation and successful business formation.

The evidence—and logic—show that non-compete clauses promote innovation in the market for products and services and encourage the launch and growth of successful businesses, all of which is pro-competitive.

To begin, non-competes foster innovation by protecting firms' investments in developing talent, services, and novel solutions. Indeed, it is widely recognized "that stricter non-compete enforceability leads to more innovation, consistent with their reducing information spillovers to competitors." John M. McAdams, FEDERAL TRADE COMMISSION, NON-COMPETE AGREEMENTS: A REVIEW OF THE LITERATURE 19 (2019) (collecting papers). That is true for established firms like Ryan, but is particularly true for new and small firms, whose founders often enter the market with the express intention of developing a product or service that will entice a larger firm to pay a premium to acquire the company, its intellectual property, and its experienced workforce. These small firms rely on non-competes to prevent larger firms from poaching their workers instead of acquiring the business.

Non-competes also promote greater sharing of information and ideas within a firm, because there is less of a risk of those ideas walking out the door the next day. Ryan's experience is that the security provided by non-competes encourages the type of transparent, collaborative internal processes that often catalyze innovative ideas.

Perhaps more importantly, and as discussed in more detail below, *see infra* at 30–32, non-competes lead to better training, and better-trained workers perform more efficiently, make fewer mistakes, and develop better goods and services. This benefits all participants in product and service markets, including the firms that enjoy a higher-performing workforce, and consumers who receive higher quality products and services.

Non-competes also improve innovation and productivity by lengthening worker tenure. Longer-tenured workers have greater familiarity with a firm's business model, products and services, and its physical and human capital. As they gain that expertise, they produce corresponding gains in innovation and are increasingly valuable to their firms. When a talented worker on R&D projects leaves a firm, the project might stall until the worker is replaced, or could falter entirely if the worker is irreplaceable. Hence "firms may be reluctant to invest in risky R&D when departing workers can transfer proprietary information to competitors." McAdams, *Non-Compete Agreements* at 8. Non-competes address this problem, and thereby "create incentives to undertake riskier R&D paths . . . and induce firms to undertake projects in new technological areas." Raffaele Conti, *Do Non-competition Agreements Lead Firms to Pursue Risky R&D Projects?*, 35 STRAT. MGMT. J. 1230, 1231 (2014).

The Commission ignores these benefits of worker tenure, simplistically assuming that the movement of workers between firms necessarily promotes innovation, and that non-competes stifle innovation "by reducing the movement of workers between firms, which decreases knowledge flow between firms." 88 Fed. Reg. at 3492. But worker movement will not necessarily lead to innovation, for multiple reasons. First, non-disclosure agreements, which the Commission lauds as a preferable means of protecting firms' trade secrets, *id.* at 3507, can prevent a worker from resuming her R&D activities at a new firm. Second, the new firm may lack the resources to support a worker in advancing the project she was working on at her prior employer. This is especially likely in industries with high fixed costs and large economies of scale, like drug research, hardware development, and electronics manufacturing. For instance, a leading biologist who leaves a large company with a hundred-million-dollar research budget, state-of-the-art equipment, and dozens of highly qualified subordinate researchers would likely be unable to complete her work on a drug-development project at a smaller startup. And third, a new firm might simply be uninterested in having a new worker complete an R&D project begun at her old firm. The Commission fails to consider these scenarios or other ways in which innovation could be cut short at one firm without compensating advances at the new firm.

The Commission similarly erred by not crediting a study that found that non-competes increased the number of new medical devices. 88 Fed. Reg. at 3492–93; *see* Fenglong Xiao, *Non-Competes and Innovation: Evidence from Medical Devices*, 51 RESEARCH POL'Y 1 (2022). The Commission refused to rely on the study because the companies evaluated in the study already operated in the medical device space. That makes no sense; innovation is equally valuable regardless of whether the company coming up with new ideas already works in that area. The Commission's reasoning in rejecting the study is also inconsistent with its decision not to credit a study that found non-competes encourage riskier research and development, because—the Commission reasoned—riskier research and development leads to fewer overall breakthroughs, albeit larger ones. See 88 Fed. Reg. at 3492 (discussing Raffaele Conti, *Do Non-Competition Agreements Lead Firms to Pursue Riskier R&D Strategies?*, 35 STRATEGIC MGMT. J. 1230 (2014)). That is, when a study finds that non-competes lead to a larger number of modest innovations, the Commission claims that only big breakthroughs matter. But when another study finds non-competes lead to fewer, but bigger, breakthroughs, the Commission champions the number of breakthroughs as the appropriate measure of innovation. This inconsistency is arbitrary and capricious (*see infra* at 43–45), and in truth, both studies indicate that non-competes increase innovation.

The Commission nevertheless maintains that non-competes reduce competition by reducing the number of firms in the market. But that conclusion is unsupported by the evidence. The Commission cites studies purporting to show that non-competes reduce the number of new businesses formed. *See* 88 Fed. Reg. at 3491. These studies suffer from the same flaws as other studies based on the enforceability of non-competes, including that their conclusions are not generalizable and that they do not control for significant confounding variables. *Infra* at 33–34.

More importantly, these studies fall short because a raw count of new businesses formed is not a sound measure of the amount of competition in the market. "No paper has directly studied the link" between firm entry and competition in product markets. McAdams, *Non-Compete*

Agreements, *supra* at 19. Start-ups that form and quickly die do not contribute to a competitive market; a new firm must survive to challenge incumbent firms. The fact is that most startups fail. *See generally* Tom Eisenmann, *Why Start-ups Fail*, HARV. BUS. REV. (2021). Workers who leave established firms for doomed startups damage the market for products and services: The R&D programs of established firms suffer, the startups go out of business, and consumers and workers realize no benefits. Non-competes disincentivize such socially wasteful activity. And the new companies that are formed are more likely to be successful. *See* Evan Starr, Natarajan Balasubramanian, and Mariko Sakakibara, *Screening Spinouts? How Noncompete Enforceability Affects the Creation, Growth, and Survival of New Firms*, 64 MGMT. SCI. 552 (2017) (finding that non-competes lead to fewer but more successful startups); *see also* Gerald A. Carlino, *Do Non-Compete Covenants Influence State Startup Activity? Evidence from the Michigan Experiment*, Fed. Reserve Bank of Phila. Working Paper 21–26 at 3 (2021).

Despite the evidence discussed above, the Commission claims the "weight of the evidence indicates non-compete clauses decrease innovation." 88 Fed. Reg. at 3492. Yet that "weight" comes entirely from a single unpublished working paper that bases its conclusion on a limited amount of data from a handful of state policy changes. See 88 Fed. Reg. at 3493 (citing Zhaozhao He, *Motivating Inventors: Non-Competes, Innovation Value and Efficiency* (2021), https://ssrn.com/abstract=3846964). Moreover, the study measures innovation indirectly, by measuring the effect of patent applications on stock prices. As the Commission concedes, though, patents are a poor measure of innovation in this context because patents and non-competes are substitute means of protecting intellectual property. 88 Fed. Reg. at 3492.

Overall, then, the theoretical and empirical evidence indicate that non-competes increase innovation, and, thus, competition in the product and services markets.

2. Non-competes can decrease prices.

At least one study has found that non-competes are associated with lower prices. A study of the financial advising market found that firms without non-compete agreements charged their clients higher fees. *See* Umit G. Gurun, Noah Stoffman, & Scott E. Yonker, *Unlocking Clients: The Importance of Relationships in the Financial Advisory Industry*, 141 J. FIN. ECON. 1218 (2021). The Commission ignores this evidence, claiming that "there is no . . . direct evidence on the link between non-compete clauses and consumer prices," apart from a single study the Commission prefers instead. 88 Fed. Reg. at 3490.

The Commission concludes that non-competes increase prices based on one study of the healthcare market. *See* 88 Fed. Reg. at 3940 (citing Naomi Hausman & Kurt Lavetti, *Physician Practice Organization and Negotiated Prices: Evidence from State Law Changes*, 13 AM. ECON. J. APPLIED ECON. 258, 294 (2021)). But the healthcare market study cannot be generalized to other industries because that market is unusual and complex: it is highly regulated; the supply of labor is restricted by educational and licensing requirements; and most people pay for healthcare only indirectly through health insurance. Simply, health care pricing is notoriously complex (and controversial), and a particularly poor basis for modeling price effects in other industries.[8]

3. There is no evidence that non-competes create recruiting "deadweight losses," outside the specialized market for CEOs.

Similar problems plague the Commission's conclusion that non-competes cause a deadweight loss by requiring employers to buy out new hires from their non-competes.[9] The Commission's only evidence of this is a single unpublished working paper studying CEOs. *See* 88 Fed. Reg. at 3491 (citing Liyan Shi, *Optimal Regulation of Noncompete Contracts* (2022)). No firm conclusions can be drawn from that study, for a number of reasons. Most obviously, CEOs "represent only a tiny segment of the labor market" and a "unique subset of employees." Matt Marx, *Reforming Non-Competes to Support Workers* at 7, Brookings Institute (Feb. 2018). The study itself counsels "caution[]" in "extrapolating the results to other labor market segments." Shi, *Optimal Regulation of Noncompete Contracts* at 39. The study also admits "there is no comprehensive buyout data available," so there is no way to validate the model it uses. *See id.* at 33. In short, the study is too slim a reed on which to base conclusions even about CEOs, much less about industry as a whole.

[8] To the extent non-competes do increase prices in the healthcare market, it is likely because they increase wages. *See* Kurt Lavetti, Carol Simon, & William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers Evidence from Physicians*, 55 J. HUM. RES. 1025, 1042 (2020) (finding that non-competes increase physicians' earnings).

[9] A deadweight loss is a loss in economic surplus created by a market inefficiency.

B. Non-competes benefit workers and promote competition in the labor market.

The Commission concludes that non-competes universally have anti-competitive effects in the labor market and harm workers. But in fact, the evidence shows that non-competes have pro-competitive effects in the labor market and can benefit workers.

1. Non-competes boost job creation.

Non-competes benefit the labor market by boosting businesses' creation of new jobs and their investment in workers. Studies show that non-compete agreements are associated with a greater number of jobs available in the labor market. *See* Gerald A. Carlino, *Do Non-Compete Covenants Influence State Startup Activity? Evidence from the Michigan Experiment* 16 (Fed. Reserve Bank of Phila. Working Paper 21–26, 2021); Evan Starr, Natarajan Balasubramanian, & Mariko Sakakibara, *Screening Spinouts? How Noncompete Enforceability Affects the Creation, Growth, and Survival of New Firms*, 64 MGMT. SCI. 552, 561 (2018). The Commission acknowledges these studies but refuses to credit them, citing the studies' purported limitations. *See* 88 Fed. Reg. at 3488–89. The studies are the only available evidence on the important association between non-competes and job creation—the Commission cannot simply dismiss the issue out of hand.

2. Non-competes promote employer investment in worker training.

Non-compete agreements also are a pro-competitive solution to a market failure in which firms are incentivized to free-ride on other firms' provision of employee training. *See* Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & ECON. 53, 80 (2021) (explaining that evidence of higher earnings is consistent with the notion that "noncompetes [are] a solution to a holdup problem").

Training is needed to bridge the skills gap. For many jobs, formal education or training is legally required. The Bureau of Labor Statistics estimates that 45% of civilian workers are employed in roles that require credentials "issued by a certification body, industry association, or professional association" or educational certificates, "issued by an educational institution (or a training provider)." Bureau of Labor Statistics, *Occupational Requirements Survey* (2022), available online at https://tinyurl.com/3xm5vfva. And 19% of workers, including electricians, bus drivers, pharmacy technicians, teachers, and medical professionals, are required to hold a professional license issued by a governmental agency. *Id*. The labor market depends on a sufficient number of workers completing these legally required trainings. Even when not legally required, training improves worker productivity, to the benefit of both the employer and employee. More senior workers who completed their training prior to the development of newer methods or technologies often need further training to remain adept. Workers in technological, medical, and scientific sectors need training to keep abreast of new research and technologies. Workers across the spectrum undeniably can perform their jobs better when taught about new methods and developments in their industry. Training is also required to help workers transition from obsolete professions to areas of job growth. *See* Bureau of Labor Statistics, *Employment Projections*, available online at https://www.bls.gov/emp/tables/fastest-growing-occupations.htm (projecting for the period 2021-2031 a more than 20% increase in jobs like wind turbine service technicians, data scientists, information security analysts, web developers, and solar photovoltaic installers).

All told, American firms spend roughly $90 billion per year on training such as executive development, management training, development of interpersonal skills, technology and sales training, and industry-specific courses. *2021 Training Industry Report*, Training (2021), available online at https://tinyurl.com/khvdpdet. Investment in training by employers is essential because workers often cannot afford to pay for training themselves.

Non-competes are often crucial to employers' decision to invest in training, since non-competes help ensure that the employer receives a return on its investment. As Professor Meese explains, in the absence of non-competes, there is an incentive for employers to free-ride on employee training provided by other firms. Non-competes solve the free-rider problem, leading to more training. *See* Alan J. Meese, *Don't Abolish Employee Noncompete Agreements*, 57 WAKE FOREST L. REV. 631, 679–84 (2022); *see also id.* at 697–704.

The empirical evidence confirms this important link between non-competes and training. *See* McAdams, *Non-Compete Agreements* at 13 ("The bulk of the empirical literature finds that workers signing non-compete agreements, or workers who reside in areas with a higher incidence of NCAs, receive more training [and] more access to information."). Simply put, "[n]oncompete enforceability is associated with more training." Evan Starr, *Consider This: Training, Wages, and the Enforceability of Non-Compete Clauses*, 72 I.L.R. REV. 783, 808 (2019). Economists have found that "employees with early notice of a noncompete" receive "more training [and] more information." Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in* *the U.S. Labor Force*, 64 J.L. & ECON. 53, 80 (2021). Similarly, non-competes "are related to an increased likelihood of receiving firm-sponsored, off-site and outsider-taught, skill-upgrading training." Starr, *Consider This*, 72 I.L.R. REV. 783 at 812. These trends are observed in both white-collar and blue-collar occupations. *See, e.g.*, Mark J. Garmaise, *Ties that Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J.L., ECON., & ORG. 376, 379 (2011) (Non-competes "encourage firms to make investments in their managers' human capital."); Johnson, Matthew S., & Michael Lipsitz, *Why are Low-Wage Workers Signing Noncompete Agreements*, 57 J. HUM. RES. 689 (2017) (finding that non-competes result in increased training of salon workers).[10]

Workers obviously benefit from training, which makes them more valuable to both their current and any future employer—that is, workers can earn more if they are better trained and better skilled. Training is associated with higher earnings because it increases a worker's human capital and productivity. Moreover, workers who accept non-competes are compensated for doing so. That is part of the reason non-competes "are positively associated with wages," and the effect is even larger for more educated and skilled workers—confirming that there is room for bargaining. Rothstein & Starr, *Mobility Restrictions, Bargaining, and Wages* at 19. In short, when non-competes are "presented along with the job offer," they are associated with more training, greater access to information, and higher wages and job satisfaction, as well as "higher wages earlier in tenure." Starr et. al, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & ECON. at 57.

3. Non-competes are associated with higher earnings.

The Commission finds that non-competes have an anti-competitive effect in the labor market based entirely on its conclusion that non-compete clauses are associated with reduced earnings. Wages are reduced, the Proposed Rule theorizes, because non-competes "inhibit[] optimal matches from being made between employers and workers across the labor force." 88 Fed. Reg. at 3486. But, as the Commission acknowledges, studies that actually set about

[10] *See also* Kurt Lavetti, Carol Simon, & William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers Evidence from Physicians*, 55 J. HUM. RES. 1025, 1042 (2020) (finding that physicians' earnings grow faster when they work in practices with non-competes, indicating that they are receiving better training from more senior physicians).

measuring the effect of the use of non-competes on earnings find that non-competes are associated with *higher* earnings. *See* 88 Fed. Reg. at 3487.

Moreover, the studies linking non-competes to reduced earnings are flawed. The Commission relies on studies that look at changes in wages that accompany changes in state law regarding the enforceability of non-competes. These studies are too limited and methodologically flawed to bear the weight the Commission gives them. *See* Stephen G. Bronars, *A Critical Evaluation of the FTC's Empirical Evidence That Prohibiting Non-Compete Clauses Will Increase Earnings*, EDGEWORTH ECONOMICS (Mar. 7, 2023), https://www.edgewortheconomics.com/publication-ftc-evidence-that-non-competes-reduce-earnings-is-inconclusive.

First, as the Commission's own economist noted when reviewing these studies, they are based on only a small handful of state policy changes, and therefore can't be generalized. *See* McAdams, *supra* at 11. Different states have different prevalent industries, different compositions of firms, and different workforces. As McAdams points out, the only study that examines heterogeneity in the relationship between non-competes and earnings found that non-competes did not matter in a host of industries. *See id.* (citing Bruce Fallick, Charles A. Fleischman, & James B. Rebitzer, *Job-Hopping in Silicon Valley: Some Evidence Concerning the Microfoundations of a High-Technology Cluster*, 88 REV. ECON. & STAT. 472 (2006)).

Second, because these studies focus on the effect of *enforceability* of non-competes, rather than the *presence* of non-competes, they have multiple confounding variables. As the Commission notes, the studies "rely on *twelve* concepts of enforceability." 88 Fed. Reg. at 3486 n.52 (emphasis added).[11] Of these twelve factors, only one—whether there is a state statute—measures whether non-competes are permissible. These studies do not measure the correlation between non-competes and earnings; instead, they simultaneously measure the effect of all twelve factors on earnings, with no possible way to disaggregate them. Also, the only study that did attempt to

[11] The variables are: (1) whether there is a statute governing enforceability; (2) how broadly an employers' protectable interest is defined; (3) what standard courts apply to determine whether the clause is enforceable; (4) whether an employment relationship is sufficient consideration to support a non-compete clause that is part of a job offer; (5) whether a change in the terms of employment is sufficient consideration to support a non-compete clause entered into after work has begun; (6) whether continued employment is sufficient consideration for the same; (7) whether courts consider an employee's economic hardships caused by the non-compete clause; (8) whether the employer or employee bears the burden of proof; (9) how broad the geographic restriction can be; (10) whether courts modify or strike overbroad non-compete clauses; (11) whether non-compete clauses are enforceable if the employer terminated the employment relationship; and (12) whether an employer can recover punitive damages for breach. *See* Mark J. Garmaise, *Ties that Truly Bind: Noncompetition Agreements, Executive Compensation, and Firm Investment*, 27 J.L., ECON., & ORG. 376, 421–22 (2011).

disaggregate the factors concluded that it was not the *presence* of non-competes that was associated with reduced earnings, but rather whether *consideration* was required for the non-compete. *See* Evan Starr, *Consider This: Training, Wages, and the Enforceability of Non-Compete Clauses*, 72 I.L.R. REV. 783, 799 (2019). That study concludes, "[t]he adoption of consideration policies are associated with higher earnings, while other policies that increase the enforceability of non-competes are associated with more training."

The Commission acknowledges these limitations in the studies but claims that they nevertheless support its conclusions because other studies show that non-compete clauses reduce earnings for workers who are *not* subject to a non-compete clause. 88 Fed. Reg. at 3487. But that is no answer, because those studies are based on the same enforceability index and thus have the same confounding variables. *See* Matthew S. Johnson, Kurt Lavetti, & Michael Lipsitz, *The Labor Market Effects of Legal Restrictions on Worker Mobility* 12 (2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3455381; Evan Starr, Justin Frake, & Rajshree Agarwal, *Mobility Constraint Externalities*, 30 Org. Sci. 961, 966 (2019).

Simply put, the studies the Commission uses to conclude that non-competes are associated with lower earnings, by their own design and admission, have too many confounding variables to support the Commission's desired conclusion. This may explain the observation, in a study the Commission repeatedly cites for other purposes, that in the earnings studies "differences in the enforcement regime . . . yield[ed] implausible estimates." Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & ECON. 53, 73 n.27 (2021).

Even if the evidence conclusively demonstrated that non-competes were correlated with reduced earnings, that by itself would not establish that non-competes have an anti-competitive effect. The Commission commits the basic statistical error of conflating correlation and causation, jumping to the conclusion that reduced earnings evidence that non-competes impede competition by preventing optimal matches. Indeed, the evidence indicates that the labor market is competitive. *See* Diana Furchtgott-Roth, *Antitrust and Modern U.S. Labor Markets: An Economics Perspective*, 19 HARV. J.L. & PUBLIC POL'Y PER CURIAM 1, 2 (2022) ("[D]ata from the Bureau of Labor Statistics of the U.S. Department of Labor show that exercise of monopsony power is generally not occurring in today's 21st century economy, nor has it been a characteristic of labor markets over the past half century."); *see also Number of Unemployed Persons Per Job Opening,* *Seasonally Adjusted*, BUREAU OF LABOR STATISTICS, https://www.bls.gov/charts/job-openings-and-labor-turnover/unemp-per-job-opening.htm# (showing there have been more job openings than unemployed persons since May 2021). Given that, it is unclear why the Commission attributes anti-competitive factors to any correlation that exists between non-competes and reduced earnings. The Commission theorizes that reduced earnings result from non-competes, inhibiting optimal matches between firms and employees—but it cites no evidence to support that speculation. There are other, credible explanations. As one example, by reducing turnover, non-competes enable firms to project their headcount more accurately, eliminating the need to hire extra workers to account for attrition. This would reduce demand for labor, and thus earnings. But it wouldn't be anti-competitive; it would reflect a pro-competitive productivity gain.

4. Workers can and do benefit from and bargain over non-competes.

The Commission also asserts that non-compete clauses are "exploitative and coercive" of workers—with the sole exception of "senior executives"—both "at the time of contracting" and "at the time of the worker's potential departure from the firm." 88 Fed. Reg at 3503–04. The Commission's theory is that workers lack bargaining power and are therefore forced into "exploitative" contracts that handcuff them to their employers while offering no benefits. But that narrative is simply not true.

Non-competes can benefit workers. The Commission ignores that workers benefit from non-compete agreements in the form of increased training and increased earnings. *See supra* at 30–35. Both those benefits fatally undermine the Commission's claim that non-competes are inherently "exploitative."

Nor are non-compete clauses by their nature "coercive." *See id.* The Commission's assertion that only "senior executives" have the requisite bargaining power to avoid being "coerced" into a non-compete is demonstrably false. Business owners certainly have negotiating power, even when they own less than 25% of the company. Skilled workers can and often do negotiate their conditions of their employment. There is ample evidence that less skilled workers can affect the terms and conditions of employment, whether through unionization or simply by responding to the market demand for their services—as reflected in the over 12.5% increase in hourly wage rates for production and nonsupervisory workers in the last two years alone. *See* Bureau of Labor Statistics, *The Employment Situation — February 2023*, Table B-8; Bureau of

Labor Statistics, *The Employment Situation — February 2022*, Table B-8. Workers' bargaining power is also the reason that, quite often, they are specially compensated for entering non-compete agreements.

In fact, multiple categories of workers can and do negotiate their terms of employment. Because "[m]ost employers disclose [non-compete] agreements before the employee accepts the employment offer," non-competes are commonly one of the negotiated terms. Meese, *Don't Abolish Employee Noncompete Agreements*, *supra* at 677.

First, in many cases, the *owners* of a business are its primary labor force. For instance, Ryan's principals are both part owners of the firm and drive its services and innovation. The same is true of other consulting firms and partnership models. Owners of a business certainly are not in a "disadvantageous bargaining position" vis a vis the business, nor is there reason to worry that they have an information asymmetry. 88 Fed. Reg. at 3494. This is true, moreover, whether the owner owns more or less than 25% of the business. This is why the limited nature of the Proposed Rule's exception for the sale of a business is so illogical. Pursuant to proposed § 910.3, the ban on non-competes would not apply to contracts that are "entered into by a person who is selling a business entity or otherwise disposing of all of the person's ownership interest in the business entity . . . when the person restricted by the non-compete clause is a substantial owner of, or substantial member or substantial partner in, the business entity at the time the person enters into the non-compete clause." 88 Fed. Reg at 3536. "Substantial" means "at least a 25% ownership interest." *Id.* at 3535 (Proposed § 910.1(e)). But the distinctions between, say, a 20% owner and a 30% owner, and between an owner who goes to work for the buyer after the acquisition and an owner who does not, have nothing to do with the relative bargaining power and informational positions of the sellers. There is no reason to treat these situations differently. Doing so is arbitrary and capricious. *See Westar Energy, Inc. v. FERC*, 473 F.3d 1239, 1241 (D.C. Cir. 2007) ("A fundamental norm of administrative procedure requires an agency to treat like cases alike.").

Second, *skilled workers* can and do negotiate their terms and conditions of employment. The American labor market is competitive. *See* Furchtgott-Roth, *Antitrust and Modern U.S. Labor Markets: An Economics Perspective*, *supra*. In a competitive labor market, skilled or sought-after workers generally have the opportunity to work at one of several firms and have the freedom to choose the firm that best suits their individual needs. Countless workers have unique expertise, special talents, or a strong bargaining position due to labor-market conditions. This gives them leverage in negotiations. Just as senior executives can "negotiate the terms of their employment," 88 Fed. Reg. at 3403, so too can other talented workers, and they often do. Surveys indicate that 42% of college graduates aged 25–35 attempted to negotiate salary or other conditions of employment, and that 85% of those who negotiated succeeded in obtaining at least some of what they sought. Fidelity, *2022 Career Assessment Study*, available online at https://tinyurl.com/yjxvt2hy. Workers including professors,[12] medical professionals,[13] and data scientists[14] negotiate the terms of their employment.

Third, though *less skilled workers* have less bargaining power, they can increase it by unionizing, a fact which the Commission completely ignores. As the petitioners advocating this rulemaking acknowledge, unionized workers "band together and exercise collective power in negotiating with employers [and] can exercise significant power, including by threatening to strike and disrupt the employer's business." Open Markets Inst. et al., *Petition for Rulemaking to Prohibit Worker Non-Compete Clauses*, at 13 (March 20, 2019), available online at https://tinyurl.com/mwsk9han (cited at 88 Fed. Reg. 3497 n.203).

Undoubtedly, there are circumstances where workers feel they have no choice but to sign an unreasonable non-compete agreement. Of course, that agreement by definition would be unenforceable under state law. As for the cases where non-competes are legally "reasonable" but still sub-optimal, the Commission's proposed solution of banning all non-competes is still vastly over-inclusive. "Banning all such agreements because a fraction is suboptimal could unnecessarily destroy wealth, making many employers and employees worse off." Meese, *Don't Abolish Employee Noncompete Agreements*, *supra* at 677. At a minimum, then, the Commission should consider measures such as regulating *when* non-competes are signed, not *whether* they may be signed. *See* Rachel Arnow-Richman, *Cubewrap Contracts and Worker Mobility: The Dilution of Employee Bargaining Power Via Standard Form Noncompetes*, 2006 MICH. ST. L. REV. 963, 984–989 (2006).

C. The focus of the FTC Act is consumer welfare, so any evidence that non-competes negatively affect the labor market or supposedly exploit workers is not a proper basis for this rulemaking.

Even if it were true that non-competes have anti-competitive effects in the labor market or exploit and coerce workers, it would not justify this rulemaking because the lodestar for whether an act or trade practice is an "unfair method of competition" is whether it harms consumers. Put differently, a rule focused on purportedly benefiting workers is outside the Commission's authority. Under federal antitrust statutes, a restraint on trade is lawful unless it is "harmful to the consumer." *Leegin Creative Leather Prod., Inc. v. PSKS, Inc.*, 551 U.S. 877, 877 (2007); *see also Reiter v. Sonotone Corp.*, 442 U.S. 330, 343 (1979) ("Congress designed the Sherman Act as a 'consumer welfare prescription.') (quoting ROBERT BORK, THE ANTITRUST PARADOX 66 (1978)). Thus, it is reductions in consumers' welfare, not workers' welfare, that trigger violations.

The same is true of the FTC Act. Congress's purpose in using the term "unfair method of competition," rather than referring explicitly to the Sherman and Clayton Acts, was to allow the FTC to fill in the "interstices" of those laws, not to allow the FTC to define violations out of whole cloth. *E.I. du Pont de Nemours & Co. v. F.T.C.*, 729 F.2d 128, 136 (2d Cir. 1984). And the legislative rulemaking authority the Commission *does* have—to declare acts or practices unfair or deceptive—is limited to those acts or practices that "cause[] or [are] likely to cause substantial injury to consumers." 15 U.S.C. § 45(n); *see also In Matter of Cliffdale Assocs., Inc.*, 1984 WL 565319, at *37 (1984) ("the Commission will find an act or practice deceptive if, first, there is a representation, omission, or practice that, second, *is likely to mislead consumers* acting reasonably under the circumstances, and third, the representation, omission, or practice is material") (emphasis added). Though one member of the Commission would like the FTC to "connect[] the dots with how people participate in the economy as whole people . . . rather than just looking at consumers," Congress did not give it that authority. Flavia Fortes, *US FTC Examines Competition Concerns Considering 'Whole People,' Slaughter Says* (Mar. 2, 2023) (quoting Commissioner Slaughter). Instead, Congress authorized the Commission to protect consumers by ensuring fair competition that maximizes consumer welfare, and by preventing unfair and deceptive practices.

The word "consumers" is not defined in the FTC Act, so it must be given its "ordinary meaning." *Schindler Elevator Corp. v. U.S. ex rel. Kirk*, 563 U.S. 401, 407 (2011). A consumer is "someone who buys goods or services for personal, family, or household use, with no intention of resale; a natural person who uses products for personal rather than business purposes."

Consumer, Black's Law Dictionary (11th ed. 2019); *see also, e.g.*, American Heritage Dictionary (4th ed. 2000) (defining a consumer as "[o]ne that consumes; especially one that acquires goods or services for direct use or ownership rather than for resale or use in production and manufacturing").

Other provisions of the FTC Act and other statutes confirm that Congress used "consumer" in its ordinary sense in the FTC Act. Elsewhere in the Act, for example, the Commission is authorized to seek "such relief as the court finds necessary to redress injury to consumers or other persons, partnerships, and corporations resulting from the rule violation or the unfair or deceptive act or practice, as the case may be." 15 U.S.C. § 57b. If "consumer" included the parties to an employment relationship, it would already include "other persons, partnerships, and corporations," rendering the term's inclusion surplusage. *See Reiter v. Sonotone Corp.*, 442 U.S. 330, 339 (1979) ("In construing a statute we are obliged to give effect, if possible, to every word Congress used.").[15]

Neither employees nor employers are "consumers" as properly construed. Unless an arrangement between them affects consumer welfare, the arrangement cannot be an unfair method of competition. Therefore, the most relevant evidence would be the effect of non-competes on prices. As explained in Part IV.F.4, *infra*, non-competes can decrease prices, contrary to the Commission's conclusions. In any event, all the evidence that purportedly shows that non-competes have anti-competitive effects in the labor market and exploit and coerce workers is legally insufficient—it still cannot render non-competes a per se unfair method of competition under the FTC Act.

D. The studies cited by the FTC are too new, inconclusive, and methodologically flawed to justify the Proposed Rule.

Given that the Proposed Rule would upend the policies of 47 states and hundreds of years of precedent regarding non-competes, one would expect the Commission to have strong evidence that non-competes are per se anti-competitive. But in fact, there is plenty of evidence that non-competes are *pro*-competitive, as discussed above. By contrast, there is a paucity of evidence from

[15] The Magnuson-Moss Act defines "consumer" as a "buyer (other than for purposes of resale) of any consumer product, any person to whom such product is transferred during the duration of [a] . . . warranty, and any other person who is entitled by the terms of such warranty . . . or under applicable State law to enforce against the warrantor . . . the obligations of the warranty." 15 U.S.C. § 2301(3).

which to draw the opposite conclusion. The academic literature that the Commission cites is too new, too inconclusive, and too flawed to sustain a rule of this magnitude.

In 2019, one of the Commission's own economists reviewed the literature on non-competes and concluded, "there is little evidence on the likely effects of broad prohibitions of non-compete agreements." McAdams, *supra* at 4. "Data on non-compete use in the U.S. are sparse," this review concluded. *Id.* at 3. And the methodological approaches to measuring the competitive effects of non-competes using that sparse data are often flawed. *See id.* at 10–13. Even when studies that looked at in-state policy changes were theoretically sound, the "paucity" of those changes made it impossible to assess whether the findings would "extend to other states . . . industries . . . or occupations." *Id.* at 11. It also made it impossible to quantify the uncertainty of the studies' findings. *Id.* The other methods common in the literature—comparing industries with high and low levels of non-competes and comparing workers who did and did not sign non-competes—had far too many confounding factors to draw any conclusions. *See id.* at 11–13. McAdams thus concluded that "the existing empirical literature on non-compete agreements suffers from several important limitations that raise questions as to whether it has successfully estimated the causal effect of such agreements on mobility, wages, entrepreneurship, and innovation." *Id.* at 20.

The FTC staff are not alone in recognizing the weaknesses of this literature. Other economists reviewing the literature concluded that "many of the most basic questions regarding the use and consequences of noncompetes remain either entirely unanswered or at least unsettled." Norman D. Bishara & Evan Starr, *The Incomplete Noncompete Picture*, 20 LEWIS & CLARK L. REV. 497, 497 (2016). Even at the Commission's 2020 workshop on non-competes, Professor Kurt Lavetti said "[m]ore empirical evidence is necessary before comprehensive curtailing of [non-competes] in all contexts." Kurt Lavetti, *Economic Welfare Aspects of Non-Compete Agreements, Remarks at the FTC Workshop on Non-Compete Clauses in the Workplace* (Jan. 9, 2020), https://www.ftc.gov/system/files/documents/public_events/1556256/non-compete-workshop-slides.pdf. The studies themselves commonly acknowledge their own limitations and that the need for additional research caveats their findings.[16]

---

[16] *See, e.g.*, Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & Econ. 53, 81 (2021) ("There are several additional limitations to our work that we hope future research will address."); Zhaozhao He, *Motivating Inventors: Non-Competes, Innovation Value and Efficiency* 8 (2021), https://ssrn.com/abstract=3846964 ("[O]wing to the lack of variation in these laws and limited data on the use of non-competes, estimating the impacts of non-competes has proven challenging"); Jessica Jeffers, *The Impact of Restricting Labor Mobility on Corporate Investment and Entrepreneurship* 44 (2019),

These limitations persist to this day, with newer studies suffering from the same methodological and data limitations as earlier research. The studies examining in-state policy changes are based on the same "handful of policy changes" as the pre-2019 papers. McAdams, *supra* at 11. The only post-2019 studies the Commission cites to support its position that non-compete enforceability is associated with reduced earnings are based on the same policy changes as the pre-2019 literature.[17] Likewise for the only study the Commission credits in determining that non-competes reduce innovation.[18] There are not enough data to responsibly generalize these studies of a few states to the entire nation.

Even if the studies did purport to conclusively demonstrate that non-competes are anti-competitive, it would be unreasonable for the Commission to rely on them because they are too new and untested. For many of its key findings, the Commission relies exclusively on unpublished working papers that have not been subjected to peer review.[19] "[S]ubmission to the scrutiny of the scientific community is a component of 'good science,' in part because it increases the likelihood that substantive flaws in methodology will be detected." *Daubert v. Merrell Dow Pharms., Inc.*, 509 U.S. 579, 593 (1993); *see also* Jacalyn Kelly, Tara Sadeghieh, & Khosrow Adeli, *Peer Review in Scientific Publications: Benefits, Critiques, & A Survival Guide*, 25 J. INT'L FED'N CLINICAL

[18] *See* Zhaozhao He, *Motivating Inventors: Non-competes, Innovation Value and Efficiency* 16 (2021), https://ssrn.com/abstract=3846964 (explaining the data was based on the same policy changes as others).

[19] *See, e.g.*, 88 Fed. Reg.at 3486 (relying solely on J.J. Prescott & Evan Starr, *Subjective Beliefs About Contract Enforceability* (2022), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3873638, to conclude that workers do not know whether their non-compete is enforceable); *id.* at 3490 (relying on Michael Lipsitz & Mark Tremblay, *Noncompete Agreements and the Welfare of Consumers* (2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3975864, as the only evidence that non-competes increase concentration outside the healthcare market); *id.* at 3492 (weighing Zhaozhao He, *Motivating Inventors: Non-Competes, Innovation Value and Efficiency* (2021), https://ssrn.com/abstract=3846964, over published studies finding a different result); *id.* at 3507 (relying solely on Rachel Arnow-Richman et al., *Supporting Market Accountability, Workplace Equity, and Fair Competition by Reining In Non-Disclosure Agreements* (2022), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4022812, to conclude that so called de facto non-competes can have anti-competitive effects).

CHEMISTRY & LAB'Y MED. 227, 227 (2014) (explaining that peer review "helps ensure that papers . . . draw accurate conclusions based on professionally executed experimentation" and "acts as a filter to prevent [low-quality] work from reaching the scientific community."). Though an agency's consideration is not limited to peer-reviewed work, the Commission's heavy reliance on new and untested papers is suspect—particularly when used to topple centuries of practical experience in virtually every state in the nation.

As for the peer-reviewed studies the Commission does cite, they also are too new and untested to justify such heavy reliance. With time, academic studies often prove to be incorrect either due to methodological flaws or statistical noise. *See* Jonah Lehrer, *The Truth Wears Off*, THE NEW YORKER (Dec. 5, 2010), https://www.newyorker.com/magazine/2010/12/13/the-truth-wears-off (citing numerous examples). And there has not been enough time for scholars who disagree with these studies to publish rebuttals for the FTC to consider; the first rejoinders began appearing in late 2022—more are certain to come. *See, e.g.*, Alan J. Meese, Don't Abolish Employee Noncompete Agreements, 57 WAKE FOREST L. REV. 631, 679–84 (2022).

Finally, it is notable that the same handful of scholars authored most of the studies on which the Commission relies. For example, the Commission cites three separate studies that Professor Lavetti co-authored. *See* 88 Fed. Reg. at 3486 nn.53 & 63, 3490 n.101. Professor Starr co-authored a whopping eight (8) studies cited by the Commission. *See id.* at 3485 nn.42, 46, & 48, 3486 nn.57 & 66, 3488 nn.76 & 87, 3489 n.95. Both Professor Lavetti and Professor Starr have expressly stated that the literature is unsettled. *See supra* at 40. The Commission errs seriously if it believes that this massive regulatory change can be sustained by a spate of recent papers by a coterie of like-minded academics.

Nor can the FTC fall back on its own experience policing non-compete clauses. It has none. Though unfair methods of competition have been unlawful for over one-hundred years, *see* Federal Trade Commission Act, ch. 311 § 5, 38 Stat. 717, 719 (1914), and non-compete agreements date back far longer, *see Mitchel v. Reynolds*, 24 Eng. Rep. 347 (1711), the FTC has brought only four enforcement actions related to non-competes. Three of these were concluded by consent agreements rushed out in the weeks immediately prior to the notice of proposed rulemaking, and the fourth was announced months after. *See* 88 Fed. Reg. at 3542 ("Until yesterday, the Commission had announced no cases . . . to conclude that non-compete clauses harm competition in labor markets . . . Just yesterday, though, the Commission rushed out the announcement of three consent agreements . . ."); *FTC Takes Action Against Another Company That Imposed Harmful Noncompete Restrictions on Its Workers* (Mar. 15, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/03/ftc-takes-action-against-another-company-imposed-harmful-noncompete-restrictions-its-workers. What hubris, for an agency to declare *per se* illegal a practice that states across the country have been examining for centuries, but which the agency began inspecting in isolated cases just a few weeks earlier. In any final rule, the Commission will have to make a far better showing that it is right, and 47 states and hundreds of years of experience are wrong.

E. The FTC's evaluation of the evidence and its reasoning are inconsistent.

The Proposed Rule is further undermined by the patent inconsistencies in the Commission's evaluation of the evidence and in its reasoning. Such "[i]llogic and internal inconsistency are characteristic of arbitrary and unreasonable agency action." *Chamber of Commerce of U.S.A. v. U.S. Dep't of Labor*, 885 F.3d 360, 382 (5th Cir. 2018); *see also Air Line Pilots Ass'n v. F.A.A.*, 3 F.3d 449, 454 (D.C. Cir. 1993).

The Commission repeatedly ignores flaws in studies on which it relies while discrediting contrary studies based on similar (or lesser) limitations. The following are just three examples of the many ways in which the Commission inconsistently evaluates the evidence for and against its position.

First, the Commission overlooks confounding variables in studies that support its conclusion but uses that very ground to discredit studies when it dislikes their conclusions. For example, as detailed above, the studies finding that non-competes are associated with lower earnings have an obvious confounding factor in that they simultaneously measure *twelve* different metrics of how enforceable non-competes are, only one of which is whether non-competes are permitted. The authors of those studies note that limitation in their work, but the Commission overlooks it. The studies that find that non-competes are associated with higher earnings, on the other hand, are discredited by the Commission because of the possibility that "non-compete use and earnings may both be determined by one or more confounding factors." 88 Fed. Reg. at 3487.

Second, the Commission is willing to overlook a lack of causation in studies that support its conclusion, but discredits other studies for the same shortcoming. For example, the Commission credits a study finding that non-compete agreements reduce earnings for workers who are not themselves subject to an agreement, even though the study admits that its methodology "calls into question the causal relationship outlined in the study." 88 Fed. Reg. at 3488 (citing Evan Starr, Justin Frake, & Rajshree Agarwal, *Mobility Constraint Externalities*, 30 ORG. SCI. 961, (2019)). The Commission was willing to credit the study, it said, because "the authors employ[ed] tests to increase confidence in the causal interpretation." 88 Fed. Reg. at 3488. The Commission was not willing to extend that same grace, though, to a study finding that non-competes are associated with *higher* earnings. That study's authors had cautioned that their results "should not be interpreted causally," the Commission notes ominously. 88 Fed. Reg. at 3487 (citing Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, *supra* at 73). Yet the Commission declines to note that those authors had "ease[d] . . . concerns about" causation by "using several approaches to assess the sensitivity of our empirical results, including inspecting the robustness of our findings to the inclusion of a rich set of controls in our regression analysis, testing for selection on unobservables, and asking respondents directly about their experiences with noncompetes." Starr et al, *Noncompete Agreements in the U.S. Labor Force*, *supra* at 73. The Commission never explains why it credits one study but not the other.

Third, the Commission generalizes from studies of idiosyncratic markets when the studies support its Proposed Rule, but it declines to do so with studies that contain inconvenient truths. For example, as detailed above, the Commission concludes that non-competes raise prices based on a single study of the healthcare market. *See* 88 Fed. Reg. at 3490. Yet the FTC declines to find that non-competes are associated with higher earnings based on another study of the healthcare market. *See* 88 Fed. Reg. at 3487. Once again, the inconsistency goes unexplained.

In addition to inconsistently evaluating the evidence, the Commission ignores blatant inconsistencies in its reasoning. For example, basic economic theory suggests that when a firm's marginal cost to produce a good or service increases, the price of that good or service will increase. Defying such basic theory, the Commission suggests that somehow eliminating non-competes will *increase* workers' earnings (and thus firms' labor costs) yet simultaneously *decrease* prices. *Compare* 88 Fed. Reg. 3486–88 (non-competes reduce wages), *with id.* at 3490 (non-competes raise prices).

In a similar feat of logical gymnastics, the Commission's reasoning for why eliminating non-competes will increase innovation is flatly inconsistent with its claim that firms can protect their confidential information through alternative means. The Commission reasons that non-competes impede innovation by "decreas[ing] knowledge flow between firms." 88 Fed. Reg. at 3492. In other words, non-competes impede innovation by preventing employees from sharing one firm's information with another firm. But in dismissing the valid business justifications for non-competes, the Commission claims that firms can use non-disclosure agreements and trade secret law to protect their confidential information. 88 Fed. Reg. at 3505. Both cannot be true: either non-disclosure agreements and trade secret law are sufficient protections for firms to protect their confidential information, in which case eliminating non-competes will not increase the flow of valuable knowledge between firms; or eliminating non-competes will increase knowledge flow, in which case the alternatives are insufficient.

F. The FTC cites no empirical evidence whatsoever to support prohibiting so-called "de facto non-competes."

The Proposed Rule does not stop at banning non-competes. Instead, it also prohibits any "contractual term that is a de facto non-compete clause." 88 Fed. Reg. at 3535. As examples of the practices that might fall within this impermissibly vague and protean language, *supra* at 22 n.7, the Commission cites non-disclosure agreements and training-repayment agreements. 88 Fed. Reg. at 3484. 88 Fed. Reg. at 3535 (proposed § 910.1(b)(2)).

The Commission has *zero* evidence that non-disclosure agreements, training-repayment agreements, or any other potential contractual agreement that the Commission may one day decide constitute a de facto non-compete have anti-competitive effects. It merely notes that some scholars and courts have *theorized* that some contract terms may have effects similar to those attributed to non-competes. *See* 88 Fed. Reg. at 3484 nn.35 & 36, 3507 n.328. But no empirical work has been done to support that theory, let alone to support a restriction on the range of practices that might fall within the amorphous "de facto" non-compete prohibition. The Commission may not impose a per se ban on an unknowably large array of contractual agreements that it theorizes *might* act like non-competes and *might* have an anti-competitive effect.

The Commission has an astonishing shortage of evidence to support its per se ban on non-competes. With no evidence of anti-competitive effects, it has little to stand on beyond buzzwords like "exploitative" and "coercive" from its November 2022 Section 5 Policy Statement. That is far too little to sustain a rule with the breadth and burdens of the Commission's Proposal.

V. The Commission's Cost-Benefit Analysis Is Flawed.

As discussed at length above, *supra* at 23–45, the Commission overstates the purported anticompetitive effects of non-competes while understating their procompetitive benefits. The flaws in the Commission's evaluation of the evidence carry over to its cost-benefit analysis of the rule. The benefits are overstated, the costs the Commission does identify are understated, and the Commission ignores a host of other costs. A proper cost-benefit analysis would show that the economic costs of banning non-competes far outweigh the benefits.

A. The Commission overstates the Proposed Rule's purported benefits.

Relying on a small number of contradictory and methodologically flawed studies, the Commission concludes that the Proposed Rule would liberate 30 million workers from supposedly exploitative non-competes and promote innovation and new business formation. These alleged benefits are speculative and exaggerated.

Citing a single study that relies on a decade-old survey of a nonrepresentative sample of workers, the Commission concludes that 20% of American workers are bound by non-competes. 88 Fed. Reg. at 3485 (citing Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & ECON. 53 (2021)). As states have restricted the use of non-competes in the last few years, 88 Fed. Reg. at 3594, the Commission likely overestimates the number of workers who supposedly would benefit from its Proposed Rule, and likewise inflates the Proposed Rule's allegedly positive effects on innovation and new business formation.

By the Commission's own admission, the Proposed Rule would have a limited impact on hourly workers. Citing a study of workers in Oregon, the Commission estimates that hourly workers would see a 2.3% increase in wages if non-competes were no longer enforceable. 88 Fed. Reg. at 3524. This increase is miniscule. Hourly Wages for production and nonsupervisory workers increased more than twice that—over 5%—in the one-year period from January 2022 to January 2023; they increased more than *five times* that amount—over 12%—in the two years from January 2021 to January 2023. *See The Employment Situation — January 2023*, Table B-8; *The Employment Situation — January 2022*, Table B-8. The estimated 2.3% increase is a fraction of the 6.4% increase in consumer prices just between January 2022 and January 2023. *See* Bureau of Labor Statistics, *Consumer Price Index — January 2023*. Even then, the Commission warns that "[c]aution is recommend in interpreting this extrapolation" of the Oregon data, "since results from one segment of the workforce . . . may not necessarily inform outcomes that would occur in the rest of the country." 88 Fed. Reg. at 3524. The Commission exhibited no such caution, of course, when extrapolating from more favorable data regarding CEO and physician earnings, *supra* at 29, yet another example of its opportunistic treatment of any available evidence.

B. The Commission understates the costs it does acknowledge.

The Commission discusses only a handful of potential costs. It significantly underestimates them, leading to a deeply flawed cost-benefit analysis.

First, the Commission downplays the direct costs of compliance. The Commission observes that the Proposed Rule would require firms to modify the contracts of incoming workers and revise the contracts of current workers. 88 Fed. Reg. at 3528. The Commission estimates that modifying contracts of incoming workers will take just one hour of a lawyer's time per firm, and that revising contracts of current workers will take an average of four to eight lawyer hours per firm. This is a massive underestimate. Large companies employing many thousands of people will have many different employment contracts, each of which must be reviewed and analyzed not just for non-competes, but any other restrictive covenant to determine whether the Commission might consider it a "de facto" non-compete. Lawyers would have to spend hundreds of hours analyzing and revising these contracts. Small businesses could actually need more attorney time per employee, as they are less likely to consistently use form contracts.

The Commission also vastly underestimates the cost of lawyers at $61.54 per hour. 88 Fed. Reg. at 3528. That is the reported median hourly income of lawyers nationwide, which includes lawyers who work at nonprofits and for the government, earning substantially less than lawyers for corporations in the private sector. The Commission should use instead the average hourly billing rate of a private-practice lawyer: $749 for a partner and $546 for an associate. Wolters Kluwer, *2022 Real Rate Report*, available online at https://www.wolterskluwer.com/en/news/wolters-kluwer-elm-solutions-2022-real-rate-report-indicates-that-timekeeper-rates-continue-to-rise.

The Commission falsely portrays proposed § 910.2(b)(3) as a solution to the costs of revising the contracts of current workers. That subsection provides that an employer that notifies workers that their non-competes are no longer effective has satisfied the proposed requirement to rescind non-competes. 88 Fed. Reg. 3528. The Commission posits that firms can comply with

§ 910.2(b)(3) by having a human-resources specialist spend 20 minutes providing email notice to all workers currently bound by non-competes. Again, this overlooks that under the Proposed Rule, identifying which workers are bound by a now-illegal agreement would require considerable legal analysis. *See* 88 Fed. Reg. 3482 ("The proposed rule would also clarify that whether a contractual provision is a non-compete clause would depend not on what the provision is called, but how the provision functions.").

Nor does the Commission acknowledge the immense costs of developing and implementing other methods of protecting confidential business information. Many companies will put greater restrictions on sensitive information through software and business practices that reduce information sharing and make it more difficult and costly to bring a product or service from conception to completion. These methods of protecting confidential information are more costly to maintain and enforce, as well, as they require ongoing monitoring and can be enforced only after a breach. Non-competes have de minimis set-up costs, act prophylactically, and are much more efficient to enforce.

Second, the Commission improperly minimizes the Proposed Rule's adverse effects on investment. The Commission concedes its proposal might cause firms to reduce training and investment in capital assets that "complement[] human capital." 88 Fed. Reg. at 3528. But it makes no effort to quantify these costs, which may be immense. As discussed in detail below, reduced training and decreased investments in human capital would harm firms, workers, and consumers by impeding innovation and productivity. *Infra* at 51.

Third, the Commission claims that the Proposed Rule "would likely reduce litigation costs associated with non-compete clauses, since there would be little to no uncertainty that the vast majority of those clauses are prohibited." 88 Fed. Reg. 3530. But there would be considerable uncertainty—and subsequently litigation—regarding whether "a restrictive covenant not called a 'non-compete clause' but so unusually broad in scope it functions as such . . . would be within the definition of non-compete clause in proposed § 910.1(b)(1)." 88 Fed. Reg. 3509. In any event, any savings from reduced litigation of non-compete clauses may well be offset by increased compliance costs, *supra* at 47, as well as costs to the Commission in investigation and enforcing the Proposed Rule and to firms in responding to Commission investigations and defending against Commission enforcement actions.

The Commission also acknowledges that litigation costs "associated with trade secret claims or other post-employment restrictions, such as non-disclosure agreements or non-solicitation agreements" would increase. 88 Fed. Reg. at 3530. This is assuredly correct. Valid non-competes are easy to enforce. When a firm learns that a former employee has accepted employment elsewhere in violation of a non-compete—and when the firm determines that the new job poses sufficient threat to warrant legal action—it has all the information it needs to go to court or, in many cases, to avert litigation through a cease-and-desist letter (an often, a negotiated resolution). It is far harder to develop and prosecute a case for violation of a non-disclosure agreement or the trade-secret laws, which typically depends on information outside a company's possession that can be obtained only through costly discovery. This reduces protections for intellectual property, as discussed above, and makes litigation more costly to bring and more difficult to resolve, because of information asymmetries.

Fourth, the Commission glosses over the Proposed Rule's effects on small businesses. The Commission asserts that the Proposed Rule would not "have significant impact on a substantial number of small entities." 88 Fed. Reg. 160. But it considers only "direct compliance costs and the costs of updating contractual practices." *Id.* It does not consider costs resulting from increased worker turnover or the poaching of clients by former employees who leave for large firms. *Infra* at 50–51. Similarly, it proposes that as an alternative to non-competes, employers can simply "pay the[ir] workers more" to encourage workers to remain "long enough for the employer to recoup its training investment." 88 Fed. Reg. 3507. Countless small businesses will be unable to do this; the Commission assumes without basis that firms have cash surpluses, can increase wages at will, and are prepared to pay workers more for contractual terms that give the company less in return. In truth, many small businesses find it hard to afford wage increases, and those that can will pass the costs onto their customers. This means it will be easier for larger firms, which are likelier to have the ability to withstand temporary losses from higher wages, to poach employees from smaller firms than vice versa. In the long run, this would harm competition by promoting consolidation and decreasing business formation, ultimately reducing wage growth.

Fifth, the Commission overlooks the immediate effects of suddenly invalidating an important term in what the Commission estimates to be 30 million employment contracts. Many of these workers were given higher wages in return for agreeing to non-competes. Employers can be expected to respond by clawing back deferred compensation guarantees and slowing wage growth.

C. The Commission ignores a number of other costs.

1. The Commission ignores costs resulting from increased worker turnover.

The Commission ignores the considerable costs that firms, workers, and consumers incur from worker turnover. Firms suffer significant costs when workers leave and they have to rehire. According to one study, which is consistent with Ryan's experience, replacing an employee can cost up to 200% of the employee's annual salary. Kimberly Gisldorf, Fay Hanleybrown, & Dashell Laryea, *How to Improve the Engagement and Retention of Young Hourly Workers*, HARV. BUS. REV. (Dec. 6. 2017), https://hbr.org/2017/12/how-to-improve-the-engagement-and-retention-of-young-hourly-workers. Non-competes decrease worker turnover, so if non-competes were made illegal, the costs of worker turnover would increase. These include hiring costs. When workers leave their jobs, firms generally replace them. For educated, specialized, or highly paid workers, replacement is not always easy; firms must promote job vacancies, collect and review applications, evaluate candidates, and conduct interviews. This often entails hiring additional human-resources staff or outside recruiters, purchasing advertisements in industry publications, and paying for candidates' travel. There are often opportunity costs when conducting interviews and evaluating candidates because employees performing these tasks must take time away from other duties.

Worker turnover gives rise to the need for new worker training, which is expensive. For complex jobs, training can take days or weeks. During this time, new workers are relatively unproductive. This is a drain on firm resources. Additionally, firms must pay current employees to train new ones. The more new employees there are, the greater the costs of training them.

Likewise, the Commission fails to consider the competitive disadvantages that a firm incurs when it trains workers who depart for a competitor. Firms that excel at training workers are not necessarily the largest, wealthiest, or most successful firms, nor do they necessarily offer the highest salaries. In a world without non-competes, workers who are new to an industry might rationally seek out firms that offer the best training and plan to depart for a better-paying rival as soon as training is complete. The result is that firms that offer workers better training in exchange for a lower salary may struggle to retain talent and to remain competitive, and may face challenges when the workers they trained utilize that training on behalf of a direct competitor. This is especially true if training-repayment agreements would be illegal under the Proposed Rule, which is unclear. Absent these agreements, workers could depart small firms with excellent training programs as soon as training is complete and seek employment at larger firms that pay more.

Although the Commission acknowledges that "worker training . . . would likely decrease under the proposed rule," 88 Fed. Reg at 3528, it neglects to include a full analysis of the costs of decreased training. The longer a firm anticipates retaining a worker, the more the firm will invest in her training. Conversely, a firm has little incentive to train workers that it believes will soon leave. Because the Proposed Rule facilitates "voluntary churn in labor markets," 89 Fed. Reg. at 3522, firms would respond by reducing training and professional-development opportunities. The result would be a less-trained workforce, to the detriment of workers, firms, and consumers alike.

Workers would suffer most from the reduction in training. "The evidence is quite clear that workers who receive training from their bosses are rewarded with higher pay, greater likelihood of promotion, and more job security." David B. Bills and Randy Hodson, *Worker training: A review, critique, and extension*, 25 Research in Social Stratification and Mobility, 258, 292 (2007). Workers who receive more training also report higher levels of job satisfaction and happiness. *See, e.g.*, Ping He, Hank Findley, and Robert Wheatley, *The effects of training on job satisfaction and service quality among temporary employees: the mediating role of affective commitment*, 21 J. OF MGMT. & MARKETING RESEARCH at 3 (2017) (collecting studies).

Reduced worker training harms firms and consumers too. All else being equal, better-trained workers are more productive, more knowledgeable, more efficient, and more innovative. As workers transition between jobs more frequently as a result of the Proposed Rule (if finalized), their familiarity with their current firm will decrease. This will cause reduced job performance, at least during the first few weeks or months at a new firm, which in turn will lead to reduced profits or lower-quality products and services. In tandem with the higher wages that the Proposed Rule would supposedly produce, *see, e.g.*, 89 Fed. Reg. at 3539, this means that consumers will pay more to get less. Additionally, increased worker turnover means that more job vacancies will exist, resulting in a decrease in the supply of products and services.

The Commission accounts for none of these costs.

2. The Commission ignores other significant costs to firms.

In addition to downplaying the costs to firms of reduced training, investment, innovation, and compliance, *supra* at 47–50, the Commission fails to take several other predictable costs into account. For instance, although the Commission condemns "non-solicitation agreements" that prohibit workers "from soliciting former clients or customers" of their previous employers, it pays no attention to the costs that solicitation imposes on the prior employer. 89 Fed. Reg. at 3484. Firms often request non-competes to prevent workers who have formed unique relationships with clients—thanks, in part, to resources the firm provided—from leaving and soliciting those clients for a competitor. *See, e.g.*, Kurt Lavetti, Carol Simon, William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers: Evidence from Physicians*, 55 J. HUM. RES. at 2 (2020). Solicitation is not a zero-sum game in which a firm's losses are always negated by a competitor's gains. Rather, it can wreak havoc upon firms, especially small ones. Consider, for instance, a prominent employee of a small consulting firm or veterinary or medical practice who joins a large national firm and then successfully solicits the small firm's clients. This could cause the small firm to commence layoffs or go out of business, whereas the benefit to the large firm might be marginal or limited to a handful of partners. The Commission fails to consider how non-competes protect firms, especially small firms, by preventing former employees from soliciting clients.

Moreover, the Commission does not account for firms' reliance interest on the legal status quo. Firms that use non-competes have structured their hiring, organizational, logistical, and personnel decisions around the reasonable presumption that centuries-old common-law and statutory precedent regarding the legality of non-competes will remain valid. To these firms, compliance with the Proposed Rule would not be as simple as rewriting contracts and obtaining legal advice. Rather, many firms would have to revise entire business models, especially models centered around selling the services of highly educated and specialized experts. For instance, consulting firms sell the services of expert shareholders, who form close relationships with clients who seek out the services of a specific expert rather than a specific firm. When shareholders transition between firms, clients often follow. Consulting firms therefore use non-competes to prevent shareholders from poaching clients—a problem that non-disclosure agreements and trade-secrets lawsuits cannot solve. *Supra* at 9–11. The Commission does not consider the disruption of entrenched reliance interests in the consulting industry and similar expert-driven industries.

3. The Commission ignores other costs that will affect the economy as a whole.

Finally, the Commission does not discuss several other foreseeable costs that the Proposed Rule would inflict on the economy as a whole.

First, the Commission does not consider inflation. As discussed above, *supra* at 30–32, the Proposed Rule would lead to increased costs of production through reduced training and limited worker access to information. That will result in higher prices, worsening the existing inflationary challenges. The inflationary effects of the Proposed Rule would only be greater if the Commission is correct that the Proposed Rule would increase wages by $250 billion to $300 billion. *See* 88 Fed. Reg. at 3523. Yet the Commission does not even discuss inflation, much less whether increased prices would swamp the small wage increases it predicts for hourly workers. The Commission's failure to consider the inflationary effect of its Proposal is even more stark given that the Proposed Rule's primary beneficiaries—by the Commission's own admission—are CEOs and other highly paid workers, not low wage workers. *See id.* at 3524. It is senseless policy to incur the Proposal's likely price impacts, which would further diminish the meager benefit projected for low wage workers, in order to give CEOs and other highly paid workers a pay raise.

Second, the Commission entirely ignores the Proposed Rule's potential impact on shareholders and investors. The Commission repeatedly claims that the Proposed Rule would lead to higher wages, *see, e.g.*, 88 Fed. Reg. at 3539, and, as discussed above, it may disincentivize firms from training workers, resulting in lower-quality or higher-cost products and services, *supra* at 30–32. This would result in lower corporate earnings, which would harm shareholders (including pension investments) and chill investment in businesses.

Third, the Commission fails to consider the possibility that firms would respond to a ban on non-competes by outsourcing jobs to countries where non-competes are legal. Many highly industrialized countries such as Australia, Canada, France, Japan, the Netherlands, and Singapore allow non-competes when necessary to protect a firm's proprietary information. *See* Association of Corporation Counsel, *Multi-Country Survey on Covenants Not to Compete* (2018). If non-competes were banned in the United States, American firms with highly sensitive trade secrets and proprietary information might hire non-U.S. workers with whom they can enter non-competes. Conversely, firms in countries that allow non-competes would be less likely to hire American workers if the Proposed Rule goes into effect.

Fourth, the Commission does not address how state governments would respond to a dramatically altered regulatory environment and federal preemption of their non-compete laws. States that currently allow non-competes might enact legislation that increases the ability of firms to use alternatives such as non-disclosure agreements, trade-secrets actions, bonus clawbacks, and training-costs repayment agreements. States supportive of the Proposed Rule might attempt to supplement the Commission's actions by restricting these alternatives. It is unclear how state governments would respond, but many responses are likely to impose deadweight loss or costs on workers or firms.

Fifth, the Proposal does not account for costs to the federal government. In addition to the Commission's enforcement and litigation costs, the executive branch and military might face increased procurement costs insofar as the Proposed Rule has anticompetitive effects on industries that serve the federal government.

CONCLUSION

For all the foregoing reasons, the Commission should withdraw the Proposed Rule. It is both unlawful and unwise.

SMALL BUSINESS MAJORITY

April 19, 2023

The Honorable April J. Tabor
Secretary
Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, DC 20580

Re: Notice of Proposed Rulemaking, Federal Trade Commission; Non-Compete Clause Rule; 88 Fed. Reg. 3482 (RIN: 3084-AB74) (January 19, 2023)

Dear Secretary Tabor:

As a representative of America's 33 million small businesses, we urge the Federal Trade Commission (FTC) to enact its proposed rule to ban most non-compete agreements. Non-compete agreements are a significant impediment to entrepreneurship, create a non-level playing field and impede the ability of employees to maximize their skills. They are not only a barrier to entry for entrepreneurs, but they also prevent small firms from hiring the most diverse, qualified and skilled talent.

Small Business Majority is a national small business organization that empowers America's diverse entrepreneurs to build a thriving and equitable economy. From our nine offices across the country we engage our network of more than 85,000 small businesses and 1,500 business and community organizations to deliver resources to entrepreneurs and advocate for public policy solutions that promote inclusive small business growth. Our work is bolstered by extensive research and deep connections with the small business community that enable us to educate stakeholders about key issues impacting America's entrepreneurs, with a special focus on the smallest businesses and those facing systemic inequities.

Small businesses support banning non-compete agreements because they are antithetical to the free, fair and open competition that is essential to a thriving and equitable economy. Not only do non-compete clauses impede workers' ability to maximize their value in our economy, they create barriers for aspiring entrepreneurs—particularly for people in our most under-resourced communities where the recent surge in business formation has been most pronounced and where entrepreneurship is so vital to building an inclusive economy. Indeed, the growth rate of Black entrepreneurship has tripled in recent years; Hispanic entrepreneurs started businesses 44% faster than their non-Hispanic counterparts; and the rate of women starting new businesses has doubled.

Moreover, non-compete agreements stifle innovation. Indeed, a recent study by the Federal Reserve Bank of Minneapolis found that non-compete contracts limit our economy's potential by making it more difficult for employers and entrepreneurs to recruit new workers and start new businesses. And, non-compete agreements contribute to corporate concentration, and thus higher prices for goods and services.

Our opposition to non-competes is supported by our recent research, which found almost half (46%) of small business owners have been the subject of a non-compete agreement that prevented them from starting or expanding their business. What's more, more than 1 in 3 (35%) said they have been prevented from hiring someone due to a non-compete agreement. Nearly 6 in 10 small businesses support the FTC's proposed rule to ban non-compete agreements, with only 14% opposing the ban.

1015 15th Street NW, Suite 450, Washington, DC 20005 | (202) 828-8357 www.smallbusinessmajority.org

It is reasonable for a business to protect its proprietary assets and trade secrets; however, non-disclosure or confidentiality agreements are more than sufficient to accomplish this goal. Our research found more than two thirds (69%) of small business owners believe that non-disclosure agreements can protect their confidential information or trade secrets as effectively as a non-compete agreement. In another survey, 87% said that leveling the playing field for small businesses via anti-trust enforcement and restricting non-compete agreements was a priority for policymakers.

It's also important to note that states like California, Oklahoma and North Dakota already prohibit the enforcement of non-compete agreements with no loss of business success and entrepreneurial spirit in any of these states.

We've also heard directly from small business owners around the country about how non-compete agreements have prevented them from starting and growing their businesses or from hiring talented employees. A sample of these stories is included below.

All small business want is a level playing field on which to compete; however, non-compete agreements distort the ability to compete in the marketplace freely and fairly. For these reasons, we urge you to enact this rule to support aspiring entrepreneurs and help small businesses access qualified workers.

Sincerely,

John C. Arensmeyer

John Arensmeyer,
Founder & CEO
Small Business Majority

Feedback from small business owners in our network

"I can only do so much to keep people here. I simply make it difficult for them to want to leave. The best way I can go about it is do what I can to make them stay. I see how companies use non-competes as a weapon and harass people. They inhibit their ability to provide for their families. I think that there needs to be more education for employees. From what I've witnessed, I think non-competes are used to penalize employees and people are manipulated. Companies are really smart about how they use them."

Jacob Hanson, PR with Panache, Minnesota

"I think it's a hindrance to people that want to start a small business. I think it's ridiculous. I didn't have a choice but to sign it. I was looking at a promotion and was told what's the big deal? You're not going anywhere, just sign it. It turns out the agreement wasn't well written, however enforceable in the state of Illinois. I had to wait one year before being able to start the business with my partners."

Jean Underwood, Design Mavens Architecture, Illinois

"I honestly think doing a better job at your business is the way you compete, not by squashing the competition with legal arguments. I can't control any business except my own, and I succeed if I do a great job with my business. I hope to corner the market on Paint Your Own Pottery in my area just by being awesome at it. I have no problem with disallowing non-competes in most situations."

Tracy DuCharme, Color Me Mine, Colorado

"I have never believed that any employer has the right to restrict opportunities of workers as relative to the worker's well-being and that of their family. As workers gain skills and experience throughout their careers, they must be allowed to use that knowledge to further their livelihoods in ways that are in their best interest."

Shirley Modlin, 3D Design and Manufacturing, LLC, Virginia

"I really believe this new ban on non-competes is a very good thing for most small businesses and that it would increase the new small business formation rate. I appreciate the new thinking of the president in proposing it."

Mike Roach, Paloma Clothing, Oregon

"It's not fair to them. I understand life changes and is very difficult at this time. So, if they have a better opportunity and a better chance, I won't prevent that. I call it a containment of control. It's like being in prison if I'm making you sign a non-compete but the guy next door has a security company to pay you $3 an hour more and it's within a mile distance from your home. I can totally understand."

Filipe Monteiro, Guardian Capital Security, Massachusetts

"Non-compete agreements tend to only benefit the previous employer. Employees working under the mandates of a non-compete agreement are restricted from seeking new employment, preventing them from opportunities to earn more in wages, upward mobility with another company, etc. It prevents the employee from capitalizing on their own skills and knowledge. This is particularly unfair to people who have worked diligently towards self-improvement and have acquired and developed new skills but are restricted to using them for one employer only.

This causes undue stress and psychological burden on employees under the guise of non-compete agreements when they contemplate or actually try to move on from their employer or company. They might need to seek legal employment law assistance and thus incur some costs."

Leo Carr, Elite Group, Michigan

"If there are people going out to work, those individuals need my support. There's more of them than just me that can do what I do... But our business is so unique that you can come here and become accustomed to my services... It would be hard to duplicate it if that's your motive. You have to feel confident in what you do. I encourage people to know what their talents and skills are because you can do something that nobody else can. You were put here for a reason. I believe that the more I give, the more that I get back. I don't always get it back from where I give. It's the giving part and the gratitude associated with giving."

Monica Jackson, Jackson Family Child Care and Foster Family Respite Care, Virginia

April 19, 2023

As small business owners and representatives of the small business community, we urge the Federal Trade Commission to enact its proposed rule to ban non-compete agreements. Non-compete agreements are a significant impediment to entrepreneurship, create a non-level playing field and impede the ability of employees to maximize their skills. They are not only a barrier to entry for entrepreneurs, but they also prevent small firms from hiring the most diverse, qualified and skilled talent.

In our economy, competition spurs innovation and leads to lower prices for goods and services. Non-compete agreements stifle free, fair and open competition—the hallmark of a market-based economy that is grounded on a level playing field. It is reasonable for a business to protect its proprietary assets and trade secrets; however, non-disclosure or confidentiality agreements are more than sufficient to accomplish this goal.

We're not alone in opposing non-compete agreements. Small Business Majority's polling found a majority of entrepreneurs say that non-compete agreements are a significant issue for small business, and 1 in 5 reported their own business had been negatively affected by non-compete agreements. In another survey, 87% said that leveling the playing field for small businesses via anti-trust enforcement and restricting non-compete agreements was a priority for policymakers.

What's more, states like California, Oklahoma and North Dakota already prohibit the enforcement of non-compete agreements with no loss of business success and entrepreneurial spirit in any of these states.

For these reasons and more, we urge you to enact this rule to support aspiring entrepreneurs and help small businesses access qualified workers.

April 1, 2023

The Honorable Lina M. Khan
Chair
Federal Trade Commission
600 Pennsylvania Avenue, NW
Washington, D.C. 20580

Re: Notice of Proposed Rulemaking, Federal Trade Commission; Non-Compete Clause Rule; 88 Fed. Reg. 3482 (RIN: 3084-AB74) (January 19, 2023)

Dear Chair Khan:

Stamford Health opposes the Federal Trade Commission's (FTC) proposed Non-Compete Clause Rule (the "proposed rule") in its current form.

Stamford Health is a comprehensive, independent non-profit health care system that serves Lower Fairfield and Westchester counties. We employ more than 3,800 people, making us the largest employer in the city of Stamford and one of the largest in Fairfield County. Beyond the lifesaving care we provide 24 hours a day, 365 days a year, we contribute more than $1 billion to our state and local economy and provide more than $106 million in uncompensated care to the residents that need it most. We are committed to providing compassionate, personal care coupled with the most sophisticated services to all residents of lower Fairfield County.

Stamford Health respects the FTC's efforts to address issues of genuine unequal bargaining power between certain employers and certain types of workers. Hospitals and health systems employ a wide variety of personnel, from food service employees in their cafeterias, to nurses, translators, and social workers in their patient rooms, to surgeons in their operating rooms. Some hospital employees are highly trained; some are lower skilled. Some are highly-compensated; some are lower-wage. But hospital employees, especially physicians and senior executives, do not present the same considerations with respect to non-compete agreements as other types of employees. **The proposed regulation errs by seeking to create a one-size-fits-all rule for all employees across all industries. In addition, Congress has not granted the FTC the authority to act in such a sweeping manner.**

Even if the FTC had the legal authority to issue this proposed rule, now is not the time to upend the health care labor markets with a rule like this. The COVID-19 pandemic exacerbated existing shortages of skilled health care workers, and shortages will persist well beyond the pandemic. Data shows, for example, that nearly one-quarter of health care workers say they are likely to leave the field soon.[1]

Similarly, the United States will face a physician shortage of as many as 124,000 by 2034.[2] A sister federal agency – indeed, the federal agency with far more expertise with the health care workforce – has reached the same conclusion. The Department of Health and Human Services (HHS) has observed that "[s]hortages and maldistribution of health care workers … were a major concern even before the pandemic."[3] The COVID-19 pandemic "put extreme stress on the health care workforce in the United States," causing many hospitals to report "critical staffing shortages."[4] And looking to the future, "many of the impacts the pandemic has had on the workforce are cumulative and may not resolve quickly," and "the longer-term workforce challenges remain."[5]

Despite these long-term workforce challenges, the proposed rule would profoundly transform the health care labor market – particularly for physicians and senior hospital executives. It would instantly invalidate millions of dollars of existing contracts, while exacerbating problems of health care labor scarcity, especially for medically underserved areas. Perhaps most troubling, the FTC would take this monumental step on the apparent basis of economic research that does not actually support the proposed rule.

As noted, the proposed rule should be withdrawn because Congress has not given the FTC the power to promulgate it. But if the FTC chooses to proceed with a final rule, it cannot invalidate or ban non-compete agreements without far greater particularized study of the health care labor markets. At the very least, any rule that the FTC finalizes must specifically exempt physicians and senior hospital executives or, more generally, highly-skilled, highly-compensated employees using, for instance, categories that are already well-established in federal law under the exemptions from minimum wage and overtime pay provided by Section 13(a)(1) of the Fair Labor Standards Act.

A. THE FTC LACKS LEGAL AUTHORITY TO ISSUE THE PROPOSED RULE

Before turning to our specific policy concerns, it is critical to identify our legal objections to the proposed rule. **Put simply, the FTC has no statutory authority to issue a rule that would invalidate both existing and future non-compete agreements.**

[4] *Id*.

[5] Id.

Our legal concerns have been well articulated by others, and so we need not to repeat them in great detail here. It is nevertheless important to underscore the proposed rule's many legal shortcomings:

- **First, the proposed rule makes clear that the Commission would be acting under Sections 5 and 6(g) of the FTC Act. But those provisions do not authorize the agency to engage in rulemaking to prohibit business practices that it deems an unfair method of competition.** Critically, the text of Section 6(g)'s rulemaking authority is limited to agency procedural rules, and Congress has been clear in other contexts (e.g., Fairness to Contact Lens Consumers Act, Children's Online Privacy Protection Act, Telemarketing and Consumer Fraud and Abuse Prevention Act) when it intends to grant the FTC substantive rulemaking authority.[6] Similarly, Magnuson-Moss Act of 1975 expressly excluded rulemaking for unfair methods of competition, and the FTC has not attempted to promulgate such a rule in the nearly half-century since that legislation was enacted.[7] Taken together, statutory text, legislative history, and historical agency practice make it clear that the FTC cannot rely on Sections 5 and 6(g) to issue the proposed rule.
- **Second, even if the FTC had some rulemaking authority under those provisions, Congress has not granted it the authority to regulate such an extensive portion of the American economy in one fell swoop.** As a substantive matter, the FTC grounds its authority to act in Section 5's vague term "unfair method of competition." But "[e]xtraordinary grants of regulatory authority are rarely accomplished through words" like that.[8] And make no mistake, if the Commission were to issue anything remotely resembling the proposed rule, it would be an extraordinary exercise of regulatory authority over "a significant portion of the

[6] *See generally* Thomas W. Merrill, Antitrust Rulemaking: The FTC's Delegation Deficit, *at* https://administrativestate.gmu.edu/wp-content/uploads/2022/09/Merrill_22-18.pdf ("As evinced by the drafting conventions at the time Congress passed the Federal Trade Commission Act, the original law was never intended to grant legislative rulemaking authority to the FTC. Likewise, Congress repeatedly ratified this interpretation by enacting limited grants of rulemaking power to the FTC in the decades after the original Act. The evidence that the FTC has the power to promulgate legislative rules regulating anticompetitive behavior consists of a single activist D.C. Circuit opinion and a plethora of arguments about why legislative rulemaking power would be a good thing. The Supreme Court should make quick work of these arguments if and when any upcoming rules are challenged."); Thomas W. Merrill and Kathryn Tongue Watts, *Agency Rules with the Force of Law: The Original Convention*), 116 HARV. L. REV. 467 (2002) (reviewing history and reaching same conclusion).

[7] [7] *See, e.g.*, Am. Bar Ass'n, Comments of the Antitrust Law Section of the American Bar Association in Connection with the Federal Trade Commission Workshop on "Non-Competes in the Workplace: Examining Antitrust and Consumer Protection Issues" 57 (April 24, 2020), https://ourcuriousamalgam.com/wpcontent/uploads/Comment-on-Non-Competes-in-the-Workplace_Final_4.24.2020.pdf ("[G]iven that Magnuson-Moss was enacted to address concerns raised by *National Petroleum Refiners* and similar cases, it's hard to see Section 6(g), with its vague and broad language, as providing a firm footing for informal antitrust rulemaking by the Commission .... There have been no antitrust rules promulgated by the Commission post-Magnuson-Moss. Accordingly, the Section remains skeptical of the Commission's authority under Section 6(g) of the Federal Trade Commission Act

[8] [8]*West Virginia v. EPA*, 142 S. Ct. 2587, 2609 (2022).

American economy.'"[9] As the proposed rule itself observes, this rule would impact one in five workers, invalidating millions of private contracts across all American industries. The Commission "must point to clear congressional authorization for the power it claims" here.[10] There is none.

- **Third, even if the FTC had the extraordinary regulatory authority to prospectively prohibit future non-compete agreements, it lacks such authority to act to invalidate existing private contracts.** "Retroactivity is not favored in the law," and an agency may not issue retroactive rules without express congressional authorization.[11] **Here, there is no indication in the text, structure, or history of the FTC Act that Congress intended to grant the Commission the vast authority to retroactively upend millions of preexisting private contracts, worth billions of dollars of negotiated value.** It is typically understood, moreover, that the consideration for a non-compete clause is the employment itself.[12] Put another way, employers have already performed their duty under the contract by hiring the employee; the employee, by contrast, still has not completed her duty to abide by the non-compete agreement. As such, there are legitimate constitutional doubts under the Takings Clause because the FTC would be appropriating services by employees not yet rendered – namely, their agreement not to compete – even though those services had already been paid for.[13] Thus, to the extent the FTC can identify any statutory authority for the retrospective invalidation of agreed-upon contracts, or to the extent the Commission seeks to evade that characterization by inaccurately claiming it is merely halting the enforcement of future enforcement of contract provisions, these constitutional concerns should inform any statutory analysis.[14][15] **Ultimately, given these twin legal infirmities, the FTC, at the very least, should not act retroactively by invalidating existing non-compete agreements.**

11 Bowen v. Georgetown Univ. Hosp., 488 U.S. 204, 208 (1988).

12 See, e.g., Socko v. Mid-Atlantic Sys. of CPA, Inc., 633 Pa. 555, 126 A.3d 1266, 1275 (2015) ("If a noncompetition clause is executed at the inception of the employment, the consideration...may be the award of the position."); Stone Legal Resources Group, Inc. v. Glebus, No. CA025136, 2002 WL 35654421, at *5 (Mass. Super. Dec. 16, 2002) (there is sufficient consideration at the beginning of employment because the non-competition is signed in exchange for employment); Farm Bureau Serv. Co. of Maynard v. Kohls, 203 N.W.2d 209, (Iowa 1972) ("continuing employment for an indefinite period is sufficient consideration to support a covenant not to compete").

13 E.g., Chang v. United States, 859 F.2d 893, 895, 899 (Fed. Cir. 1988) ("[A]s the Supreme Court also recognized in Connolly [v. Pension Benefit Guaranty Corp, 475 U.S. 211, 224], "'[t]his is not to say that contractual rights are never property rights or that the Government may always take them for its own benefit without compensation."… Most importantly, the plaintiffs do not complain that the sanctions resulted in a loss of income for services previously provided but not yet paid for, merely the loss of the contingent right to future income for services yet to be rendered." (emphasis added)).

14 *E.g*., *Jennings v. Rodriguez*, 138 S.Ct. 830, 842 (2018) ("When 'a serious doubt' is raised about the constitutionality of an act of Congress, 'it is a cardinal principle that this Court will first ascertain whether a construction of the statute is fairly possible by which the question may be avoided.' (quoting *Crowell v. Benson*, 285 U.S. 22, 62 (1932))).

15 U.S.C. § 44.

- **Fourth, the FTC lacks legal authority to exercise its Section 5 powers with respect to non-profit entities, including non-profit hospitals and health systems.** Section 5 provides that the Commission is "empowered and directed to prevent persons, partnerships, or corporations." But the Act defines "corporations" as "any company, trust, so-called Massachusetts trust, or association, incorporated or unincorporated, which is organized to carry on business for its own profit or that of its members."[16] This text plainly does not include non-profit entities. Although the proposed rule alludes to this legal limitation (88 Fed. Reg. at 3510), any final rule should unmistakably indicate that it does not apply to non-profits, including non-profit hospitals and health systems.

For all of these reasons, the proposed rule cannot survive legal scrutiny. The Commission should withdraw it. Withdrawing the proposed rule will not mean that non-compete agreements will go unregulated. States have long demonstrated an ability to regulate noncompete agreements in a nuanced manner, consistent with local conditions and markets. In particular, states have demonstrated an ability to address noncompete agreements in the health care field in a thoughtful, finely-drawn manner. Connecticut is one such example.

This considered variation, on its own, makes clear that a one-size-fits-all rule for physicians is unwise, let alone a one-size-fits all rule across the entire United States economy. In addition, state courts have been evaluating the reasonableness of non-compete agreements on a fact-specific basis for decades, and there is no indication that they cannot continue to do so in a responsible and effective manner. There is, therefore, good reason why Congress has not given the Commission or any other federal agency the authority to regulate non-compete agreements. **Consequently, absent any federal statutory authority to impose a sweeping rule of this kind, questions regarding non-compete agreements' enforceability should continue to be left to the states.**

B. IF THE AGENCY MOVES FORWARD DESPITE THESE LEGAL INFIRMITIES, IT MUST EXEMPT THE HOSPITAL FIELD OR, AT THE VERY LEAST, DOCTORS AND SENIOR HOSPITAL EXECUTIVES FROM ITS BAN ON NON-COMPETE CLAUSES

"Agencies do not ordinarily have to regulate a particular area all at once."[17] In fact, more often than not, that is the best approach when faced with complex economic issues. In this situation, the FTC not only lacks the legal authority to issue this far-reaching ban on non-compete agreements, it lacks the evidentiary support to do so. As explained below, the weight of the existing research indicates that non-compete agreements for certain categories of employees are beneficial – namely, doctors and senior hospital executives.

---

[16] As explained below (at page 16), the consequences of this differential treatment between non-profit and for-profit hospitals requires further study by the Commission. Without additional study, any application of the proposed rule to the hospital field would be arbitrary and capricious.

[17] *Transportation Div. of the Int'l Ass'n of Sheet Metal, Air, Rail & Transp. Workers v. Federal R.R. Admin.*, 10 F.4th 869, 875 (D.C. Cir. 2021).

This is exactly the experience of Stamford Health. Accordingly, if the FTC issues a final rule banning non-compete agreements at all, that rule should exempt hospitals and health systems or, at the very least, be limited to lower-skilled, low wage workers.

1. THE EVIDENCE CITED IN THE PROPOSED RULE (AND OTHERWISE AVAILABLE TO THE COMMISSION) DOES NOT SUPPORT APPLYING THE PROPOSED RULE TO PHYSICIANS

One of the FTC's primary justifications for the proposed rule is that it "would increase earnings for workers in all of the subgroups of the labor force for which sufficient data is available."[18] According to the Commission, "the evidentiary record indicates noncompete clauses depress wages for a wide range of subgroups of workers across the spectrum of income and job function."[19] But the evidentiary record – including the primary study cited by the Commission regarding physicians – demonstrates the opposite. The use of non-compete clauses actually increases the rate of earnings growth for doctors. In addition, the lead author of that study, Professor Kurt Lavetti, presented at a January 2020 FTC workshop on non-competes, where he stated that "both physician firms and workers appear to benefit from the use of non-compete agreements."[20] Given this evidence already in the administrative record, it would be arbitrary and capricious for the FTC to apply its proposed rule to physicians.

Throughout the proposed rule, the FTC cites to a study that focuses on physician earnings: Kurt Lavetti, Carol Simon, & William D. White, The Impacts of Restricting Mobility of Skilled Service Workers Evidence from Physicians, 55 J. Hum. Res. 1025, 1042 (2020). As the Commission observes, that study found that the "use of noncompete clauses among physicians is associated with greater earnings (by 14%) and greater earnings growth.[21]

Faced with findings that squarely contradict the FTC's basis for the proposed rule, the Commission attempts to downplay or evade them. Its efforts are unavailing. For example, the proposed rule contends in one breath (at 3487) that the study "does not consider how changes in non-compete clause enforceability affect physicians' earnings," but later concedes that the study concluded (at 3501 n.248) that "there is evidence that increased enforceability of non-compete clauses increases the rate of earnings growth for physicians."[22] And in an even greater indication that the evidence does not support its preferred policy result, the FTC gratuitously reinterprets data from that study (at 3524) to

[18] 88 Fed. Reg. at 3501.

Trade Comm'n Workshop on Non-Compete Clauses in the Workplace (Jan. 9, 2020) (emphasis added), *at* https://www.ftc.gov/system/files/documents/public_events/1556256/non-compete-workshop-transcript- full.pdf.
[21] 88 Fed. Reg. at 3487.
[22] *See Nat. Res. Def. Council v. U.S. Nuclear Regul. Comm'n*, 879 F.3d 1202, 1214 (D.C. Cir. 2018) ("it would be arbitrary and capricious for [an] agency's decision making to be internally inconsistent." (internal quotation marks omitted)).

reach conclusions that the authors never actually studied or reached themselves.[23] Yet even then, the most the proposed rule can say (at 3501 n.248) is that the "proposed rule may increase physicians' earnings, although the study does not allow for a precise calculation." What is clear is that the only actual study regarding physician pay supports the use of non-competes. The FTC's efforts to avoid that conclusion highlights the lack of any evidentiary basis for applying its proposed rule to that class of workers and demonstrates the arbitrary and capricious nature of the proposed rule. For this reason alone, the Commission should withdraw its proposed rule as to physicians.

To make matters worse, the FTC ignores other features of the study that were presented at one of the Commission's own workshops. There, Professor Lavetti explained: "What we find is that in physician groups that use non-compete agreements, doctors are much more likely to make referrals of their patients to other doctors within the same practice, because they don't have to be as concerned about their fellow colleagues getting to know their patients and then opening a business next-door and poaching the patients."[24]

According to Professor Lavetti, these increased referrals have three important pro-competitive and pro-health care consequences. As noted, doctors, on average, are able to bargain for higher wages over the course of their careers.[25] Employers increase their overall revenue because there is greater intra-institutional referrals.[26] And patients receive better, more integrated care through, what Lavetti called, "this patient-sharing story."[27] The experience of Stamford Health supports these conclusions.[28]

Trade Comm'n Workshop on Non-Compete Clauses in the Workplace (Jan. 9, 2020) (emphasis added), *at* https://www.ftc.gov/system/files/documents/public_events/1556256/non-compete-workshop-transcript- full.pdf.

[25] *Id*. ("For an average physician who signs a non-compete agreement, the net present value of the earnings effect at the time that they sign the contract is positive $650,000 over a single job spell, which is about 15 years, on average. They make substantially more money, and all of that difference comes from larger within-job earnings growth.").

[26] *Id*. ("That, in turn, leads these practices to generate percent more revenue per hour worked.... There's much more fluid referral of patients across doctors within groups that use these types of contracts. These gains don't seem to occur in states that have nonenforceable NCA laws.").

[27] *Id.*; *see, e.g.*, Kaiser Permanent Institute for Health Policy, *An overview of our integrated care model*, *at* https://www.kpihp.org/integrated-care-stories/overview/ (discussing the benefits of integrated care); Cleveland Clinic, *Integrated Care*, *at* https://my.clevelandclinic.org/about/community/sustainability/sustainability-global-citizenship/patients/integrated-care#overview-tab (same).

[28] Lavetti, Simon and White's finding that non-compete agreements increase physician wages and intra- firm patient referrals undermines the Commission's reliance on another study by Professor Lavetti that the Commission relies on in the proposed rule. The Commission cites a study by Naomi Hausman and Professor Lavetti for the Commission's assertion (at 3490) that there "is evidence that non-compete clauses increase consumer prices and concentration in the health care sector." Whatever evidence exists, however, should be taken with a grain of salt. As an initial matter, the Hausman-Lavetti study did *not* focus on whether the use or enforceability of non-compete agreements increases concentration; instead, it focused on whether concentration leads to an increase in consumer prices, and only used variation in non-compete agreement enforcement as the natural experiment that generates 'experimental' variation in concentration. Even so, the paper never clearly shows whether increased enforcement causes an increase in *firm-level* concentration,

More to the point, Professor Lavetti's other research likely explains why consumer prices may slightly increase in connection with the enforcement of non-compete agreements. As noted, the Lavetti, Simon and White study indicates that the use of non-compete agreements can increase physician wage growth, which may be passed along to patients as higher prices. Thus, the increased prices associated with noncompete agreement enforcement may be the result of improvements for workers (physicians). Likewise, increased consumer prices may be the result of improved quality of care (e.g., increases intra-institution patient referrals and all of the other reasons, discussed below, why non-compete agreements incentivize investments that lead to improved care), which Hausman and Lavetti do not study. Again, as Professor Lavetti himself testified before the FTC, more evidence is needed, including with respect to his work on concentration and consumer prices. See Kurt Lavetti, Economic Welfare Aspects of Non-Compete Agreements, Remarks at the Fed. Trade Comm'n Workshop on Non-Compete Clauses in the Workplace (Jan. 9, 2020) (emphasis added), at https://www.ftc.gov/system/files/documents/public_events/1556256/non-compete-workshop-transcriptfull.pdf ("Consumers may, of course, value access to convenient, integrated practices, where records and computer systems are shared across locations."); see id. ("Now, a lot of this, I want to caution, comes from the fact that we see smaller establishments. Because establishment size is shrinking, small establishments tend to have higher overhead and, therefore, higher prices.").

All in all, the Commission cannot justify a ban on non-compete agreements for physicians based on the evidence it cites in the proposed rule or what was presented at FTC-sponsored workshops.[29] At a minimum, as Professor Lavetti testified, "more empirical

---

and the proposed rule itself explains (at 3490 n.101) that "[f]or the purposes of consumer outcomes such as a price or product quality, the relevant measure of concentration is at the firm level, since firms are unlikely to compete against themselves on price or quality."

More to the point, Professor Lavetti's other research likely explains why consumer prices may slightly increase in connection with the enforcement of non-compete agreements. As noted, the Lavetti, Simon and White study indicates that the use of non-compete agreements can increase physician wage growth, which may be passed along to patients as higher prices. Thus, the increased prices associated with non- compete agreement enforcement may be the result of improvements for workers (physicians). Likewise, increased consumer prices may be the result of improved quality of care (*e.g.*, increases intra-institution patient referrals and all of the other reasons, discussed below, why non-compete agreements incentivize investments that lead to improved care), which Hausman and Lavetti do not study. Again, as Professor Lavetti himself testified before the FTC, more evidence is needed, including with respect to his work on concentration and consumer prices. *See* Kurt Lavetti, *Economic Welfare Aspects of Non-Compete Agreements*, Remarks at the Fed. Trade Comm'n Workshop on Non-Compete Clauses in the Workplace (Jan. 9, 2020) (emphasis added), *at* https://www.ftc.gov/system/files/documents/public_events/1556256/non-compete-workshop-transcript- full.pdf ("Consumers may, of course, value access to convenient, integrated practices, where records and computer systems are shared across locations."); *see id*. ("Now, a lot of this, I want to caution, comes from the fact that we see smaller establishments. Because establishment size is shrinking, small establishments tend to have higher overhead and, therefore, higher prices.").

[29] At a minimum, as Professor Lavetti testified, "more empirical evidence is necessary before a comprehensive ban would be scientifically justified to curtail non-competes in all contexts…." *Id.*; *see id*. ("My summary opinion overall, just to wrap up, is that my own opinion is that the scientific standard for a complete ban on non-compete agreements should be quite high. Non-competes have been used for a long time, and the literature is, in a relative

evidence is necessary before a comprehensive ban would be scientifically justified to curtail non-competes in all contexts…."[30]

2. ADDITIONAL EVIDENCE DEMONSTRATES THE VALUE OF NON-COMPETE AGREEMENTS FOR PHYSICIANS AND SENIOR HOSPITAL EXECUTIVES

In addition to increasing physician wage growth and promoting patient referrals (and, in turn, integrated care), there are several other benefits of reasonable non-compete agreements with physicians and senior hospital executives.

First, non-compete agreements are valuable tools for protecting investments that hospitals make to recruit doctors and senior executives. This is particularly important in medically underserved areas. According to data from HHS, in March 2020 almost 70% of areas designated as primary medical health professional shortage areas were considered rural or partially rural.[31] This shortage will only worsen in the coming years because the rural physician population is disproportionately older, with one-quarter anticipated to retire by 2030.[32] What's more, "shortages among one profession or specialty have a domino effect on others," with serve adverse consequences for rural hospitals.[33] As an expert panel explained last year in a report to Congress and the HHS Secretary:

[L]ack of access to a general surgeon as backup limits the availability of other hospital services such as trauma care, oncology treatment and colonoscopy screening. This interdependence is not limited to general surgeons. Recent reports have highlighted declining access to maternity care in rural communities, in part because hospitals face chronic shortages of maternity-care providers such as family physicians, obstetricians, certified nurse midwives, and labor and delivery nurses, as well as surgeons and anesthesiology providers. Primary care workforce shortages and difficulty accessing specialty services result in unnecessary trips to the emergency room, further straining hospitals that are already underfunded and understaffed.[34]

For these reasons, it is apparent why rural and other understaffed hospitals would want to negotiate reasonable non-compete agreements. If, however, hospitals and health systems

---

sense, nascent compared to the history of the use of non- compete agreements. I think there are policies that can be used to protect vulnerable workers while still permitting non-competes in other contexts.").

[30] *Id.*; *see id*. ("My summary opinion overall, just to wrap up, is that my own opinion is that the scientific standard for a complete ban on non-compete agreements should be quite high. Non-competes have been used for a long time, and the literature is, in a relative sense, nascent compared to the history of the use of non-compete agreements. I think there are policies that can be used to protect vulnerable workers while still permitting non-competes in other contexts.").

[34] *Id*.

were unable to negotiate reasonable non-compete agreements as a result of the FTC's proposed rule, there would be a range of negative outcomes. For instance, nearby employers could free-ride on the initial hospital's investment in recruiting both doctors and senior executives by offering more pay to convince the employee to move a close by. The initial hospital's investments in searching for candidates, providing a signing bonus, relocation pay, and guaranteeing a salary for a period of time while that physician established herself in the community would be lost. This, in turn, would discourage these kinds of recruiting investments in the first place. Similarly, it would create a classic "holdup problem," whereby the recruited doctor or senior executive would have the ability to threaten to leave her initial hospital unless economically-unsupportable demands are met.[35] Here, the holdup problem would be exacerbated by existing workforce shortages.

Second, non-compete agreements encourage hospitals and health systems to make investments in training their employees. While much of a physician's training occurs in medical school and residency, doctors must stay current with scientific developments and innovation. There is a constant stream of new research and technological innovations with the potential to improve patient care, and every practicing physician is always continuing his or her education. This also is the case for senior executives, who often receive management training, attend conferences and generally develop relevant leadership skills.

In standard economic terms, this kind of continued learning is considered "general human capital," i.e., skills or knowledge that has productive value in other firms, as well as her employing firm.[36] A doctor or executive who receives training in "general human capital" can quit and get a higher wage at another firm on the basis of that increased skill and knowledge. As a result, firms have weaker incentives to invest in training unless a non-compete agreement is in place. Non-compete agreements thus encourage hospitals to make sound investments in training because they know it will redound to their own patients' and communities' benefit. This is exactly the experience of Stamford Health care physicians "turnover reductions appear to be substantial, [but] they are very unlikely to be the primary motivation behind the use of NCAs among physician practices."[37]

Studies support this commonsense economic principle and real-world experience of hospitals. In fact, as FTC economist John McAdams has generally observed: "The bulk of the

---

[35] The previously discussed study by Professor Lavetti and others analyze whether the desire to retain employees motivated firms to negotiate non-compete agreements. The authors found that for primary care physicians "turnover reductions appear to be substantial, [but] they are very unlikely to be the primary motivation behind the use of NCAs among physician practices." Kurt Lavetti, Carol Simon, & William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers Evidence from Physicians*, 55 J. Hum. Res. 1025, 1042 (2020). The AHA agrees with this to the extent the study recognizes that limiting turnover is a "substantial" motivation, and emphasizes that not all hospitals have the same motivations for pursuing non-compete agreements. As noted, retention may be a greater motivator for rural or other geographically isolated hospitals.

[36] *See generally* Gary S. Becker, *Human Capital* (3d ed. 1993).

[37] John McAdams, *Non-Compete Agreements: A Review of the Literature*, SSRN Working Paper, SSRN- id3513639, *at* https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3513639; *see id*. ("The papers relying on state policy changes for identification find that non-competes lead to more firm-sponsored training among top public executives.").

empirical literature finds that workers signing non-compete agreements, or workers who reside in areas with a higher incidence of NCAs, receive more training." In fact, the proposed rule cites two studies but fails to acknowledge the relevant finding with respect to increased training. For example, one study found that for those who accept non-compete agreements before accepting a job, those employees are 11% more likely to have received training in the prior year.[38] Similarly, another study compared workers in states with different degrees of enforcement of non-compete agreements. It found that moving from no enforcement to the average degree of enforcement was associated with a 14% increase in employer-sponsored training of workers and no change in worker-sponsored training.[39] Although these studies did not focus specifically on physicians, the findings are significant because they again align with the experience of Stamford Health. While hospitals and health systems always strive to provide the most cutting-edge medical care and executive leadership, noncompete agreements allow us to best internalize the value of our investments.

Third, non-competes encourage the sharing of proprietary information within hospitals and health systems. For physicians, that information could include anything from patient lists to innovative research and development that can lead to improved care. For senior hospital executives, that proprietary information could include company strategy, internal business processes, names of key suppliers and customers, data with respect to payers, strengths and weaknesses vis-à-vis competitors, and more. Hospitals and health systems will want to protect the intellectual capital acquired by doctors and senior executives from falling into the hands of rivals because this information could give them an advantage. Ultimately, hospitals are by no means unique in this regard, but it is important to emphasize that this is precisely the kind of proprietary information that hospitals and health systems need to retain within their walls to stay competitive and thrive.

Crucially, non-disclosure agreements or other contractual provisions cannot fully protect employers from the outflow of proprietary information because a former employee cannot completely erase information from her own mind. And, in many instances relevant to hospital research, former employees cannot help but rely on valuable information in their subsequent employment (e.g., a medical scientist will not have to rerun all of the same failed experiments she ran for her initial employer, which that initial employer paid for but her next employer will not). What's more, NDAs do not allow employers to monitor ex-employees' disclosures on a regular basis. Reasonable noncompete clauses are thus the only way employers can negotiate protections for their proprietary information.

---

[38] *See* Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & Econ. 53, 53 (2021); *id*. ("Several of the facts we document are consistent with the traditional economic perspective, which views the noncompete as an efficient contracting device.... [O]ur evidence that employees with early notice of a noncompete are compensated—with higher wages, more training, information, and job satisfaction—is compatible with theories that identify noncompetes as a solution to a holdup problem.").

[39] *See* Evan Starr, *Consider This: Training, Wages, and the Enforceability of Non-Compete Clauses*, 72 I.L.R. Rev. 783, 799 (2019). To be sure, the study also found that the same increase in non-compete enforcement was associated with 4% lower hourly wages, which the author attributes to decreased worker bargaining power. This result is based on decreases in hourly wages as workers remain at the same employer. Notably, the previously-discussed study by Lavetti, Simon, and White found an increase in earnings growth for physicians.

Non-compete agreements enable firms to encourage the sharing of proprietary information across the firm because they know that it will be protected. Again, economic studies support this. Similar to his above-quoted observation with respect to training, FTC economist John McAdams found that the "bulk of the research" concludes that non-compete agreements provide workers with "more access to information."[40] For example, the Starr, Prescott, and Bishara study, discussed above, of non-compete agreements reached before an employee starts employment found that those agreements increased the likelihood, by 7.8%, that the worker reported that her employer shares all job-related information.[41] Similarly, the Lavetti, Simon, and White study found that non-compete agreements lead to the sharing of information about what they call a firm's "most valuable" asset: client (i.e., patient) relationships.[42]

Regrettably, the proposed rule fails to acknowledge these and other beneficial aspects of non-compete agreements. **Any final rule must take full account of both the existing economic literature and the real-world experience of hospitals and health systems, which has been that non-compete agreements for physicians and senior executives incentivize recruitment, retention, training, investments in career building (e.g., marketing and building individual physician practices) and the sharing of a broad range of proprietary information.**

3. ANY FINAL RULE MUST EXEMPT PHYSICIANS AND SENIOR HOSPITAL EXECUTIVES, OR SIMILARLY-SITUATED CATEGORIES OF EMPLOYEES

For all of the reasons stated in the previous two subsections, the FTC should exclude physicians and senior hospital executives from any final rule it may issue. As to physicians, the only available evidence demonstrates that the Commission was simply incorrect when it stated (at 3518) that excluding these kinds of highly-skilled workers "would deny these workers the benefits of higher earnings." As to both physicians and senior executives, the FTC failed to account for the many benefits that reasonable noncompete agreements carry, all of which are supported by both economic research and the real-world experience of Stamford Health. **There is simply no legal, evidentiary, or policy reason to include physicians or senior hospital executives in the FTC's across-the-board ban on non-compete agreements.**

Based on the language of the proposed rule and public statements by FTC officials since its publication, such exclusions would be consistent with what appears to be the Commission's primary goal. Doctors and executives are fundamentally different from other workers that

[40] John McAdams, *Non-Compete Agreements: A Review of the Literature*, SSRN Working Paper, SSRN- id3513639, *at* https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3513639; *see id*. ("Studies relying on cross-sectional comparisons tend to find that non-competes are associated with more training and information sharing.").

[41] *See* Evan P. Starr, James J. Prescott, & Norman D. Bishara, *Noncompete Agreements in the U.S. Labor Force*, 64 J.L. & Econ. 53, 53 (2021).

[42] Kurt Lavetti, Carol Simon, & William D. White, *The Impacts of Restricting Mobility of Skilled Service Workers Evidence from Physicians*, 55 J. Hum. Res. 1025, 1042 (2020).

have received the most attention from the FTC.[43] Critically, the FTC's core concerns of genuinely unequal bargaining power at the time of hiring or exit do not apply. As the Commission itself found (at 3503), "senior executives are likely to negotiate the terms of their employment and may often do so with the assistance of counsel." In the experience of Stamford Health, the same is true for physicians. These categories of employees negotiate on an even playing field with their employers, especially as compared to lower-skilled and lower-wage workers.

Accordingly, the Commission should exercise its "great discretion to treat a problem partially" and "regulat[e] in a piecemeal fashion" by exempting physicians and senior hospital executives. It should instead direct its limited resources on those who truly experience unequal bargaining power.[44]

Relatedly, the FTC requested comment on whether, as a general matter, different standards should apply to highly-skilled and highly-paid workers, and how senior executives could be defined. To the extent the Commission does not wish to simply exclude physicians and senior hospital executives from its rule, it can look to other areas of federal law to more broadly exempt highly-skilled and highly-compensated workers.

In particular, the Fair Labor Standards Act (FLSA) and its implementing regulations provides a closely analogous model. The FLSA generally requires that employees in the United States be paid at least the federal minimum wage for all hours worked and overtime pay at not less than time and one-half the regular rate of pay for all hours worked over 40 hours in a workweek. But, as authorized by statute[45], Department of Labor regulations contain exemptions from this requirement, including for "learned professionals," "highly compensated employees," and even employees in the practice of medicine.[46] **These are finely-drawn, well-established legal categories that the Commission can – and should – look to when re-evaluating its rule regarding non-compete agreements.** Relying on these three categories would address the Stamford Health's concerns about invalidating non-compete agreements for physicians and senior executives. But more important for the Commission's ostensible purposes here, several of the FLSA-exemption categories would carve out those with equal bargaining power, while allowing the Commission to exercise any regulatory authority it believes it has towards protecting lower-skilled and lower-wage employees.

[45] 29 U.S.C. § 213(a)(7).

[46] *See* 29 C.F.R. § 541.301 (learned professionals); 29 C.F.R. § 541.304 ("practice of law or medicine"); 29 C.F.R. § 541.601 (highly compensated employees).

C. CONCLUSION

For all of the reasons stated above – including its lack of authority to issue it – the FTC should withdraw the proposed rule. If it persists in issuing a final rule, the FTC would serve itself and the public best by heeding the Supreme Court's observation: "Agencies, like legislatures, do not generally resolve massive problems in one fell regulatory swoop.… They instead whittle away at them over time, refining their preferred approach as circumstances change and as they develop a more nuanced understanding of how best to proceed." Massachusetts v. EPA, 549 U.S. 497, 524 (2007). Here, that wise approach requires the Commission to exempt hospital and health systems altogether or, at the very least, more narrowly focus its attention on lower-skilled, lower-wage workers who have genuinely unequal bargaining power vis-àvis their employers.

Re: Notice of Proposed Rulemaking, Federal Trade Commission; Non-Compete Clause Rule (88 Fed. Reg. 3,482-3,546, January 19, 2023)

Dear Ms. Tabor:

The U.S. Chamber of Commerce appreciates the opportunity to submit comments regarding the Commission's proposed Noncompete Rule.[1]

The Chamber and its membership are strongly opposed to the Proposed Rule. It would categorically ban nearly *all* noncompete agreements—regardless of individual circumstances, such as a worker's skill, job responsibilities, access to competitively sensitive and proprietary information, bargaining power, or compensation—and require that organizations rescind all existing agreements and provide notice to affected workers of such rescission. Such a proposal fails to recognize that noncompete agreements can serve vital procompetitive business and individual interests—such as protecting investments in research and development, promoting workforce training, and reducing free-riding—that cannot be adequately protected through other mechanisms such as trade-secret suits or nondisclosure agreements. For centuries, courts have recognized the procompetitive benefits of noncompete agreements and balanced those benefits against any negative costs imposed by particular noncompete agreements. As perhaps acknowledged by the Commission's request for comments on narrower alternatives, the Commission's categorical ban would sweep in millions of noncompete agreements that pose no harm to competition, and in fact benefit the U.S. business community, economy, workers, and consumers.

---

1 *See* Fed. Trade Comm'n, Notice of Proposed Rulemaking: Non-Compete Clause Rule, RIN 3084-AB74, at 213-214 (Jan. 5, 2023).

The Commission should withdraw the Proposed Rule for three basic reasons. First, the Commission is not authorized under the Federal Trade Commission Act to promulgate binding regulations related to "unfair methods of competition." The Commission relies on Section 6(g) of the Act, but that provision grants the Commission the narrow authority to develop internal procedural rules related to its powers to investigate suspected violations of the law and to publish reports. Section 6(g) does not empower the Commission to issue sweeping substantive regulations that bind private parties. The major-questions doctrine also cuts firmly against reading such powers into the Act.

Second, noncompete agreements are not categorically "unfair," as history and precedent demonstrate. Noncompete agreements have never been considered *per se* violations of the antitrust laws. On the contrary, courts have long recognized that such agreements serve a range of procompetitive ends. If the statutory phrase "unfair methods of competition" allows the Commission to prohibit agreements not shown to limit competition in any way, then the Commission's authority under the FTC Act would lack any intelligible limiting principle and reflect an unconstitutional delegation of legislative power. And its proposal to retroactively invalidate existing noncompete agreements raises serious due-process concerns.

Third, the Commission's proposal would represent arbitrary and capricious decision-making in violation of the Administrative Procedure Act. The Proposed Rule's justifications for a categorical ban on noncompete agreements rest on an inaccurate and selective assessment of the available research. In particular, the Commission's dismissal of business justifications for noncompete agreements ignores the inadequacy of alternatives and elevates speculative competitive harms over well-recognized procompetitive benefits. The Proposed Rule also would generate considerable uncertainty and frustrate compliance with other laws.

I. BACKGROUND

Firms in every sector of the economy rely on noncompete agreements to protect investments in their workforce, to prevent workers with access to confidential information from aiding competitors, and to structure compensation programs. Similarly, employees subject to noncompete agreements benefit from training opportunities and increased compensation or severance payments. Agreements temporarily restricting a worker's ability to work for a competitor have been enforced since the Founding. Each State has developed a legal framework to determine when worker noncompetes are valid and enforceable, virtually always based on a fact-dependent assessment of competing interests. As the Commission's proposal recognizes, there are very few decisions assessing worker noncompetes under the federal antitrust laws, and only one case challenging such an agreement under the FTC Act. In none of those decisions was a noncompete agreement held to violate federal law. Those decisions do not justify any rulemaking, let alone a blanket ban.

A. Businesses Have Long Entered Into Noncompete Agreements For Reasons That Benefit Both Firms And Workers And Increase Innovation and Competition.

Noncompete agreements benefit both companies and workers. First, these agreements benefit employees by promoting employers' investments in their workers. As the Commission's own economist John McAdams recently explained, noncompete agreements can "solve a 'holdup' problem for certain types of investment (*e.g.*, training, information sharing) into employees," which emerges when employers "forgo making certain investments in their workforce knowing that employees would be able to subsequently quit and appropriate the value of the investment."[2] In other words, employers are more likely to spend resources on employee training and development when they do not fear that the employees will immediately take that knowledge to a competitor. "[B]y discouraging worker attrition before the firm has had the time to recoup the cost of its upfront investment," noncompetes encourage "mutually beneficial" investments.[3] McAdams also notes that noncompete agreements "allow firms to reduce recruitment and training costs by lowering turnover."[4] Noncompetes can also help firms prevent a free-riding problem wherein competitor firms rely on poaching workers to reduce their own training costs. Thus, firms benefit by retaining well-trained employees, and employees benefit from more training opportunities and the stability of lower workplace turnover, which can improve team efficiency and morale.[5]

Second, and relatedly, employees benefit from negotiated noncompetes through increased wages and other benefits exchanged for the noncompete agreement.[6] For

Trade Comm'n, *Forum Examining Proposed Rule to Ban Noncompete Clauses* at 18-19 (Feb. 16, 2023) (Testimony of LeAnn Goheen) ("Employment agreements that include a non-compete clause are signed in exchange for higher compensation.") (hereinafter Forum); *See also id.* at 42 (Testimony of Eric Poggemiller) (explaining that "many [agreements] have been signed as part of a negotiated severance

instance, many businesses offer forfeiture-for-competition agreements that do not actually restrict where an employee can work. Instead, those agreements condition supplementary payments on an employee's not working for a competitor for a certain amount of time after leaving his or her job.[7] Thus, these agreements, which may fall within the scope of the Proposed Rule, serve as a bargaining chip for both employers and employees.

Third, noncompete agreements protect crucial business information and "increase the returns to research and development," thereby promoting innovation.[8] It is undeniable "that innovation and business developments take large amounts of time, money and trial and error."[9] Without the protections afforded by noncompete agreements, firms will be less willing to engage in this essential development, or to involve a broad range of employees in such efforts. Noncompete agreements are therefore an essential component of how businesses protect their confidential information.[10] Recent scholarship demonstrates that noncompete agreements are not easily replaced by other forms of protection, such as trade-secret laws or nondisclosure agreements. Although trade-secret laws provide some protection, noncompete agreements "may represent a more efficient mechanism to prevent proprietary knowledge transfers in certain circumstances, particularly when monitoring and the enforcement of trade-secrets law is costly."[11]

Finally, noncompete agreements help ensure that stronger competitors enter the marketplace. Recent empirical studies show that, although increased enforcement of noncompete agreements tends to be "associated with fewer spin-off firms within the same industry," the spin-off firms that do emerge must be willing and able to take on incumbent firms protected by noncompetes, and are therefore "larger, faster growing, and have a higher likelihood of surviving the initial years."[12] As a result, evidence

suggests that, even in areas where noncompetes reduce the number of total players in the market, noncompetes encourage the development of more viable market entrants.[13]

B. The Longstanding Legal Framework Governing Noncompete Agreements Both Recognizes Their Benefits And Limits Their Overreach.

1. State law

Noncompete agreements have always been regulated by the States, whether through state statutes or common law.[14] In some States, legislatures and courts have regulated the use of such agreements for over two centuries.[15] And the debate over the enforceability of noncompete agreements continues in statehouses around the country, with many States considering new noncompete legislation in the last year.[16] As a result, there is currently significant variation (and innovation) regarding the treatment of noncompete agreements in the United States. But the vast majority of States recognize that noncompete agreements provide meaningful benefits to workers and businesses alike, and thus should be enforced in many circumstances.

In most States, noncompete agreements are considered on a case-by-case basis and enforced so long as they are reasonable. In Michigan, for example, a statute provides factors for courts to consider in determining whether a noncompete agreement is valid and enforceable, including the duration of the agreement, its geographic scope, and the line of business involved.[17] Those factors resemble the requirements that

---

[13] *Ibid.*; *see* Forum, *supra* note 6, at 20 (testimony of Jim Paretti) (Commenters also noted the important role that noncompetes have in protecting small, nascent companies, explaining that "restrictive covenants help small startup businesses from large, predatory competitors who can afford to pay over market simply to buy away their key talent.").

[14] *See* 88 Fed. Reg. 3482, 3482 (Jan. 19, 2023) ("[N]on-compete clauses between employers and workers are traditionally subject to more exacting review under state common law than other contractual terms.").

[17] Mich. Comp. Laws Ann. § 445.774a(1) (a noncompete agreement is valid and enforceable "if the agreement or covenant is reasonable as to its duration, geographical area, and the type of employment or line of business"); 88 Fed. Reg. at 3494 ("In the 47 states where at least some non-compete clauses may be enforced, courts use a reasonableness inquiry to determine

developed under the common law of many other States to determine when a particular agreement is "reasonable."[18] Applying that flexible standard, numerous state courts have recognized that businesses have legitimate and procompetitive interests in, among other things, protecting goodwill and investments in worker training,[19] preventing competitors from exploiting access to confidential information,[20] and ensuring that the seller of a business will not turn around and compete for the buyer's clients.[21]

Some States place more restrictive conditions on the enforceability of noncompete agreements. In Massachusetts, for example, the term of agreements normally must not "exceed 12 months."[22] Massachusetts also has a strict notice requirement, mandating that the agreement "be provided to the employee by the earlier of a formal offer of employment or 10 business days before the commencement of the employee's employment."[23] Other States regulate noncompete agreements by making them unenforceable against certain types of workers, particularly low-wage employees.[24] In Maine, for example, "an employer may not require or permit an employee earning wages at or below 400% of the federal poverty level to enter into a noncompete agreement with the employer."[25] But again, notwithstanding these restrictions, each of these States recognizes that noncompete agreements "allow

[25] Me. Rev. Stat. tit. 26, § 599-A(3).

[private] parties to work together to expand output and competition" and thus readily enforces agreements that satisfy the statutory requirements.[26]

Only a few States prohibit noncompete agreements or treat them as largely unenforceable.[27] In California, for example, an agreement "by which anyone is restrained from engaging in a lawful profession, trade, or business of any kind is to that extent void."[28] Even California provides certain limited exceptions, however, and will enforce noncompete agreements arising in connection with a merger or sale of a business.[29] In any event, the key point is that from the time of the Founding to the present, the enforceability of noncompete agreements has been governed by state and common law, and States have taken different approaches consistent with principles of federalism.

2. Federal law

As the Commission's proposal recognizes, there has never been a successful challenge to a worker noncompete agreement under the FTC Act, the Clayton Act, or the Sherman Act.[30] Although a few plaintiffs have pursued federal challenges to worker noncompetes, those claims have uniformly failed.

[26] *Lake Land Employment Group of Akron* v. *Columber*, 804 N.E.2d 27, 30 (Ohio 2004) (explaining that "[m]odern economic realities . . . do not justify a strict prohibition of noncompetition agreements between employer and employee in an at-will relationship" and recognizing that "[i]f one party can trust the other with confidential information and secrets, then both parties are better positioned to compete with the rest of the world.") (internal quotation marks omitted).

[27] *See*, *e.g.*, Brandon Kemp, *Noncompetes in Oklahoma Mergers and Acquisitions*, 88 Okla. B.J. 128, 128 (2017) (noncompete agreements "have been prohibited by statute in Oklahoma since 1890," before Oklahoma was admitted as a state).

[28] Cal. Bus. & Prof. Code § 16600.

[29] *Id.* §§ 16600-16602.5. For example, California does not restrict noncompetes to individuals who own above a certain percentage of a business but rather states that "[a]ny member may . . . agree that he or she or it will not carry on a similar business within a specified geographic area." *Id.* § 16602.5.

[30] 88 Fed. Reg. at 3496-3497. The Commission cites *United States* v. *American Tobacco Corp.*, 221 U.S. 106 (1911), as an example of a plaintiff's achieving "some degree" of "success" in a challenge to a noncompete provision. But *American Tobacco* involved a series of anticompetitive acts, including a string of acquisitions that the Court viewed as predatory. Noncompete agreements were discussed in a single sentence, where the Court stated it was not considering the "legality" of the noncompete agreements "isolatedly viewed." *Id.* at 183. The Commission also points to *Signature MD, Inc.* v. *MDVIP, Inc.*, 2015 WL 3988959 (C.D. Cal. Apr. 21, 2015). But that decision, which was resolved at the motion-to-dismiss stage, noted the "legitimate business concerns" served by noncompete agreements and held that "the

First, contrary to the approach taken by the Proposed Rule, worker noncompetes are not per se violations of the FTC Act or Sherman Act. *Per se* rules are reserved for situations in which courts have extensive experience with a restraint and are certain that the competitive harms outweigh any competitive benefits.[31] Under current law, *per se* condemnation is reserved for agreements to fix prices, allocate markets, or rig bids. Worker noncompete agreements, by contrast, do not qualify for *per se* treatment because "postemployment restraints . . . serve legitimate business purposes," such as "prevent[ing] a departing employee from expropriating his employer's secrets and clientele."[32] In fact, the Seventh Circuit concluded decades ago that "[t]he recognized benefits of reasonably enforced noncompetition covenants are by now beyond question."[33] Accordingly, courts assess those agreements under a more flexible rule-of-reason framework.

Second, under the rule of reason, a single firm's noncompete agreements will almost never have a substantial effect on competition—an essential prerequisite for liability when an agreement is not a per se violation of the law.[34] As opposed to agreements among competitors to fix wages or to not poach one another's employees, there will be few if any circumstances in which a single employer's noncompete agreements would harm competition in a relevant market.[35] And if agreements pass muster under state law, meaning they are necessarily limited in scope and duration, it is hard to see how they would harm competition. Unsurprisingly, the Commission does not cite a single case where a plaintiff successfully alleged that a noncompete agreement violated the federal antitrust laws.

---

reasonableness of the [noncompete agreements] will ultimately be a factual determination." *Id.* at *6-7.

[31] *See Arizona* v. *Maricopa Cty. Med. Soc.*, 457 U.S. 332, 343-344 (1982) ("Once experience with a particular kind of restraint enables the Court to predict with confidence that the rule of reason will condemn it, it has applied a conclusive presumption that the restraint is unreasonable.").

C. The Commission Nonetheless Proposes A Rule That Would Effectively Ban Noncompete Agreements Nationwide.

On January 19, 2023, the Commission issued a proposed rule regarding noncompete agreements, which would ban noncompete agreements nationwide, with only a possible narrow exception for certain agreements connected to the sale of a business. The Proposed Rule is striking in its breadth. It would reach agreements with employees and independent contractors; it defines "non-compete clauses" to include any agreement that "has the effect of prohibiting [a] worker from seeking or accepting employment"; and it draws no distinctions between workers, including based on their status as partner or owners (versus employees or independent contractors), their seniority, their access to competitively sensitive or proprietary information, the skill required to perform their jobs, their bargaining power, or their compensation.[36] If adopted, according to the Commission's own data, the rule would immediately outlaw more than 30 million noncompete provisions negotiated by companies and workers,[37] and require businesses to notify workers those agreements are no longer in effect.[38]

As statutory authority for this rulemaking, the Commission has invoked Sections 5 and 6(g) of the FTC Act. Section 5 "declare[s] unlawful" "[u]nfair methods of competition in or affecting commerce" and "empower[s]" the Commission to "prevent" those acts.[39] Section 6(g) relates to the Commission's investigative powers, and authorizes the Commission to "[f]rom time to time classify corporations and . . . to make rules and regulations for the purpose of carrying out" the FTC Act.[40]

Perhaps acknowledging the impermissible breadth of its proposed categorical ban—and despite stating that it has already evaluated the costs and benefits of possible alternatives[41]—the Commission has requested comments regarding possible alternatives. According to the Commission "[t]hese alternatives flow from two key questions: (1) whether the rule should impose a categorical ban on noncompete clauses or a rebuttable presumption of unlawfulness, and (2) whether the rule should apply uniformly to all workers or whether there should be exemptions or different standards for different categories of workers."[42] With respect to the second question, the

---

[36] 88 Fed. Reg. at 3535.

[37] *Id.* at 3485 ("Based on the available evidence, the Commission estimates that approximately one in five American workers—or approximately 30 million workers—is bound by a non-compete clause.").

[38] *Id.* at 3511.

[39] 15 U.S.C. § 45(a).

[40] *Id.* § 46(g).

[41] 88 Fed. Reg. at 3530-3531.

[42] *Id.* at 3516.

proposed rule explores partial bans that "apply different rules to different categories of workers based on a worker's job function, occupation, earnings, another factor, or some combination of factors."[43] For example, the Commission has requested comments on an approach that would prohibit noncompete clauses for most workers but not senior executives or other "highly paid and highly skilled workers."[44] But as presently proposed, its Rule does not include any such distinctions, but rather applies categorically to all noncompete agreements applicable to all categories of workers.

II. DISCUSSION

The Commission lacks the legal authority to pursue its proposed Noncompete Rule, both because the FTC Act does not empower the Commission to issue regulations respecting unfair methods of competition and because worker noncompetes are not categorically unfair. As noted above, noncompetes may even benefit competition in the market for products and services. And even if the Commission had the legal authority, its sweeping national ban is not supported by the available evidence. Given these defects, the Commission should rescind its proposal. If the Commission nonetheless decides to move forward, any alternatives to limit the reach of the Rule would be preferable to the proposed categorical ban.

A. The Commission Lacks The Authority To Promulgate Rules Respecting Unfair Methods of Competition.

Section 5 of the FTC Act declares unlawful "unfair methods of competition" and empowers the Commission to pursue individual enforcement actions to adjudicate potential violations. The FTC Act has never authorized the Commission to adopt generally applicable substantive rules defining unfair methods of competition, and the Commission did not assert the authority to do so in the century-plus following the enactment of the FTC Act. The Commission must exercise its Section 5 authority through existing adjudicatory procedures on a case-by-case basis.

The Commission now claims that it can promulgate "unfair method of competition" rules under Section 6(g) of the FTC Act.[45] But the structure and history of the Act, as well as the Commission's own historical understanding of its authority, demonstrate that Section 6(g) empowers the Commission to develop internal rules to govern its own affairs. It is not a font of authority to issue substantive rules that bind private parties. That reading is confirmed by Congress's subsequent amendments to the Act, which reinforce the background understanding that the Commission lacks the authority to issue competition regulations. And if there were any doubt about the

43 *Id.* at 3518.

44 *Id*. at 3502.

45 *Id.* at 3499.

Commission's authority on this score, it is resolved by the major-questions doctrine, which cautions agencies against reading vague and ancillary provisions to authorize powers with "vast economic and political significance."[46]

1. The structure and history of the FTC Act

The FTC Act was enacted in 1914. Section 5 of the Act "declared unlawful" "unfair methods of competition," and authorized the Commission to enforce that prohibition through individual orders.[47] Under Section 5, "[w]henever the [C]ommission shall have reason to believe that any [person] has been or is using any unfair method of competition in commerce," the Commission "shall issue and serve upon such person . . . a complaint stating its charges."[48] That complaint initiates "administrative proceedings" before the Commission, which may require the violator to cease and desist the unlawful practice.[49] In 1938, Congress amended Section 5 to also prohibit "unfair or deceptive acts or practices in commerce" and gave the Commission the authority to investigate and punish individual violations in the same manner.[50]

Section 6 of the FTC Act is titled "additional powers of Commission."[51] From its enactment until now, Section 6 has given the Commission various investigative and administrative powers, including the authority to "gather and compile information" as part of its investigations, "to require" regulated parties "to file . . . annual and special" reports, to "investigate and report the facts relating to any alleged violations of the antitrust [laws]," and to publish reports in the public interest.[52] As relevant here, Section 6(g) provides the Commission authority to "from time to time classify corporations and . . . to make rules and regulations for the purpose of carrying out the provisions of this subchapter."[53]

The text and structure of the FTC Act demonstrate that Section 6(g) empowers the Commission to develop internal rules needed to "carry[] out" its investigative and reporting functions—*e.g.*, "establishing procedures to protect the confidentiality of . . .

[52] *Ibid.*

[53] *Id.* § 46(g).

information" provided by private companies[54]—not substantive rules that bind private parties.[55] First, Section 6(g) says nothing whatsoever about unfair methods of competition or any other substantive authority of the Commission. On the contrary, Section 6(g) makes explicit reference only to "classify[ing] corporations"—an ancillary power related to the Commission's authority to require reports from corporations. Similarly, the surrounding provisions of Section 6 only discuss investigative and reporting powers, further confirming that Congress did not in the second half of Section 6(g) grant the Commission overarching authority to create substantive rules.[56]

Finally, Section 6(g)'s grant of rulemaking authority is not accompanied by any sanction. At the time of the FTC Act's passage, Congress followed "a convention for indicating whether an agency had the power to promulgate legislative rules," whereby "the inclusion of a separate provision in the statute attaching 'sanctions' to the violation of rules and regulations promulgated under a particular rulemaking grant" was understood to convey substantive rulemaking power.[57] For instance, the Warehouse Act of 1916 authorized the Secretary of Agriculture to "suspend or revoke any warehouseman's license for any violation of the rules and regulations made under the Act."[58] Given that history, the omission of any particular sanction for violating Section 6(g) signals that it is only directed at internal administrative matters.

The drafting history of the Act confirms Section 6(g)'s limited place in the overall scheme. During the congressional debates over the FTC Act, the House of Representatives envisioned the Commission as a purely investigative body. In the House proposal, the Commission would gather information and produce reports, and then make recommendations to the Attorney General, who would ultimately decide how best to enforce the law.[59] By contrast, the Senate wanted the Commission to be an enforcement agency in its own right, with the power to punish potential violations through "case-by-case proceedings."[60] After the two chambers negotiated over the

draft legislation, the final FTC Act reflected both visions: the Senate-proposed enforcement powers became Section 5 of the Act, while the House-proposed investigative powers became Section 6. Importantly, throughout the entire legislative process, neither the House nor the Senate ever suggested that the Commission would have broad *substantive* rulemaking authority.[61]

2. Subsequent amendments to the FTC Act

Amendments to the FTC Act confirm that the Commission lacks substantive rulemaking authority related to unfair methods of competition. Congress has repeatedly passed legislation granting the Commission authority to promulgate substantive rules on specific subjects. That was necessary precisely because the Commission does not have general rulemaking authority related to unfair methods of competition. And each time Congress has granted the Commission the power to write new regulations, it has clearly identified the substantive authority at issue.

First, in the decades following passage of the FTC Act, Congress enacted a number of laws granting the Commission narrow rulemaking authority to address specific industries. Those statutes include:

- the Wool Products Labeling Act, 15 U.S.C. § 68d, which authorized the Commission "to make rules and regulations for the manner and form of disclosing information required by this subchapter, and for segregation of such information for different portions of a wool product as may be necessary to avoid deception or confusion, and to make such further rules and regulations under and in pursuance of the terms of this subchapter as may be necessary and proper for administration and enforcement";
- the Textile Fiber Products Identification Act, 15 U.S.C. § 70e(c), which authorized the Commission "to make such rules and regulations, including the establishment of generic names of manufactured fibers, under and in pursuance of the terms of this subchapter as may be necessary and proper for administration and enforcement";
- the Fur Products Labeling Act, 15 U.S.C. § 69f(b), which authorized the Commission "to prescribe rules and regulations governing the manner and form of disclosing information required by this subchapter, and such further rules and regulations as may be necessary and proper for purposes of administration and enforcement of this subchapter";
- the Flammable Fabrics Act, 15 U.S.C. § 1194(c), which authorized the Commission "to prescribe such rules and regulations, including provisions for maintenance of

[61] Merrill & Watts, *supra* note 57, at 505 ("Under established practices for reconciling bills in conference, the Committee could not have granted the FTC legislative rulemaking powers, because neither bill granted the agency such authority."); Philips, *supra* note 59, at 2.

records relating to fabrics, related materials, and products, as may be necessary and proper for administration and enforcement of this chapter. The violation of such rules and regulations shall be unlawful and shall be an unfair method of competition and an unfair and deceptive act or practice, in commerce, under the Federal Trade Commission Act"; and

- the Fair Packaging and Labeling Act, 15 U.S.C. § 1454(a), which authorized the Commission "to promulgate regulations" "with respect to . . . consumer commodit[ies]."

As these examples demonstrate, Congress knows how to specifically give the Commission the power to make substantive rules in furtherance of its "enforcement" authority when it wants to. And Congress would have had no need to provide the Commission with new rulemaking authority related to an unfair method of competition—as it did in the Flammable Fabrics Act—if, as the Proposed Rule assumes, the Commission had that authority all along.

Second, Congress enacted a major overhaul of the Commission's enforcement authority in the Magnuson-Moss Warranty—FTC Improvement Act of 1975. The Magnuson-Moss Act authorized the Commission to issue rules related to its Section 5 enforcement powers. But that legislation singled out *only* the Commission's "unfair or deceptive acts and practices" authority, and left the Commission's authority regarding "unfair methods of competition" unchanged.[62] Moreover, Magnuson-Moss subjected the Commission's new rulemaking powers to extensive procedural requirements, such as the obligation to hold an informal hearing, if requested, that would include, among other things, cross-examination of witnesses by interested parties.[63] By authorizing the Commission to engage in rulemaking subject to more onerous procedural requirements for "unfair and deceptive trade practices," Congress did not bless the Commission's authority to issue more lax rules respecting "unfair methods of competition."[64]

[62] Pub. L. 93-637, § 202 (codified at 15 U.S.C. § 57a); *See Comments of the Am. Bar Ass'n in Connection with the Fed. Trade Comm'n Workshop on "Non-Competes in the Workplace: Examining Antitrust and Consumer Protection Issues"* 56 (Apr. 24, 2020) ("Magnuson-Moss represented a compromise between those who opposed the idea of giving the FTC broad legislative rulemaking authority, especially when unaccompanied by restrictions on its exercise, and those who thought that the FTC always had rulemaking authority, but acknowledged that explicit codification of that authority would be helpful.").

[63] 15 U.S.C. § 57a(c).

[64] Congress amended the Commission's rulemaking authority for unfair and deceptive trade practices in 1980. *See* Pub. L. 96-252, 94 Stat. 374. Once again, those amendments said nothing about rulemaking authority for unfair methods of competition. *See* Christine S. Wilson, Commissioner, *Dissenting Statement of Commissioner Christine S. Wilson Regarding the "Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act"* 15-16 (Nov. 10, 2022) (hereinafter Wilson Dissent).

Finally, Congress again revisited the Commission's rulemaking authority in 1994 by codifying the agency's policy statement with respect to "unfair or deceptive acts or practices."[65] Those amendments specifically mentioned the Commission's rulemaking procedures under the Magnuson-Moss Act. Here again, Congress's considered judgment of rulemaking for "unfair or deceptive acts or practices," and its complete silence on rulemaking for "unfair methods of competition," further signals that the Commission lacks substantive rulemaking authority under Section 6(g).

All told, Congress has acted many times to empower the Commission to write substantive rules, and it has used unmistakably clear language to do so. Yet it has never seen fit to give the Commission the general power to promulgate regulations respecting unfair methods of competition.

The Commission has long been aware that it lacks the power to issue substantive rules. Before 1962, the Commission never sought to do so. On the contrary, it indicated that it lacked the power to do so.[66] And when Congress revisited the Commission's rulemaking authority a decade later, the Commission's statement to Congress asserted rulemaking authority related only to unfair and deceptive trade practices, rather than unfair methods of competition.[67]

3. Major-questions doctrine

If there were any doubt that the Commission lacks the authority to promulgate "unfair method of competition" rules, the major-questions doctrine cuts decisively against the Commission's interpretation. As the Supreme Court recently explained in

[66] *National Petroleum Refiners Ass'n* v. *Fed Trade Comm'n*, 482 F.2d 672, 693 (D.C. Cir. 1973) ("[T]he agency itself did not assert the power to promulgate substantive rules until 1962 and indeed indicated intermittently before that time that it lacked such power."); *see generally* Maureen Olhausen & Ben Rossen, *Dead End Road:* National Petroleum Refiners Association *and FTC "Unfair Methods of Competition" Rulemaking*, The FTC's Rulemaking Authority: Concurrences (forthcoming 2023).

[67] H. Rep. 161, 95th Cong., at 45 (Feb. 23, 1977) (Appendix II, Federal Trade Commission—Agency Views, Statement of Federal Trade Commission by Christian S. White, Asst. Director for Special Statutes). This report characterizes the Commission's octane rules as implicating only "unfair or deceptive acts and practices," even though the Commission had earlier taken the position that the octane rules also proscribed "unfair methods of competition." *See* Olhausen & Rossen, *supra* note 66, at 9-10.

West Virginia v. *EPA*, courts "expect Congress to speak clearly if it wishes to assign to an agency decisions of vast economic and political significance."[68] That principle recognizes that "[e]xtraordinary grants of regulatory authority are rarely accomplished through modest words, vague terms, or subtle devices," even when there is a "colorable textual basis" for the agency's position.[69]

The Commission's claim of competition rulemaking authority undoubtedly qualifies as a major question under *West Virginia*. As the Proposed Rule demonstrates, the Commission could use regulations related to unfair methods of competition to fundamentally alter the American economy. Given the expansive scope of Section 5, the Commission's enforcement authority under that statute extends to a wide range of nationwide economic activity, including mergers and acquisitions, exclusive dealing contracts, and even patent suits.[70] When Congress gave the Commission such broad authority to bring these kinds of enforcement actions, it required the Commission to prove that the *specific conduct* at issue harmed competition, meaning that each enforcement action turned on its particular facts. But if the Commission has the authority to issue substantive *rules* categorically defining "unfair methods of competition," then it may do so in *all* of the areas to which its Section 5 authority extends, thereby outlawing a massive number of private agreements or business activities without regard to whether each one actually harms competition and upending decades of antitrust jurisprudence on which the business community relies. Congress would never have authorized the Commission to make nationwide decisions with such "economic and political significance" without saying so explicitly, particularly at a time when administrative rulemaking was still uncommon and Congress was decades away from enacting the APA.[71]

Moreover, at the time of the FTC Act's passage, several amendments providing substantive rulemaking were considered and rejected by Congress.[72] And after a federal court rejected the Commission's attempt to issue a substantive rule in 1972, Congress once against considered and rejected "legislation that would confer legislative

rulemaking authority on the FTC."[73] In analyzing a major question, a lack of authority not previously exercised may be "reinforced by the Commission's unsuccessful attempt . . . to secure from Congress an express grant of [the challenged] authority."[74]

Finally, the Commission's claimed authority here is particularly suspect because it rests on a "newfound power in the vague language of an ancillary provision" of a statute.[75] In *West Virginia*, for example, the Supreme Court noted that a minor provision of the Clean Air Act, which the agency had consistently used to impose requirements on specific sources of pollution, could not be used to require coal plants to subsidize the production of clean energy.[76] The same logic applies here. Section 6(g) is a minor part of the FTC Act. It is housed in a part of the statute that relates to investigative powers, and it refers to rulemaking authority alongside the power to "classify corporations." Not only does Section 6(g) say nothing directly about substantive rulemaking authority, but it does not mention the Commission's enforcement powers at all. And prior to its proposed Noncompete Rule, the Commission had not relied on that authority in nearly fifty years.

4. *National Petroleum Refiners*

The Commission's view that Section 6(g) confers substantive rulemaking power to prohibit "unfair methods of competition" relies on a single authority: the D.C. Circuit's opinion in *National Petroleum Refiners Association* v. *Federal Trade Commission*.[77] The Commission's reliance is misplaced. *National Petroleum Refiners* was wrongly decided and is inconsistent with modern principles of statutory interpretation, particularly those that apply when agencies claim a broad grant of statutory authority.

[76] *Ibid.*

[77] Fed. Trade Comm'n, *A Brief Overview of the Federal Trade Commission's Investigative, Law Enforcement, and Rulemaking Authority* (May 2021), https://www.ftc.gov/about-ftc/mission/enforcement-authority.

In 1971, the Commission adopted a rule declaring it unlawful for gas stations not to post octane-rating numbers on their pumps.[78] That rule marked the Commission's first attempt to issue a rule enforcing Section 5 in the nearly 60 years since the Act's passage.[79] When the rule was challenged in court, the district court held that the Act "[did] not confer upon the Federal Trade Commission the authority to promulgate Trade Regulation Rules that have the effect of substantive law."[80] But the D.C. Circuit reversed, holding that Section 6(g) was a broad grant of substantive rulemaking power to define "unfair methods of competition" and "unfair or deceptive acts or practices."[81]

That conclusion rested on a number of errors. First, the court reasoned that because Section 5 did not include language *excluding* rulemaking as a means of enforcement, Section 6 could be used to create legislative rules to further the purposes of Section 5.[82] According to *National Petroleum Refiners*, "unless the legislative history reveals a clear intent to the contrary, courts should resolve any uncertainty about the scope of an agency's rulemaking authority in favor of finding a delegation of the full measure of power to the agency."[83] As explained above, courts should apply the opposite presumption. Before an agency claims a broad new power, it must point to clear congressional authorization. And it must identify more than a statutory "mousehole[]" as support for its newfound authority.[84]

Second, *National Petroleum Refiners* elevated legislative history and policy judgments above the text and structure of the FTC Act.[85] In so doing, it ignored the many textual indications that Section 6(g) is not a grant of broad substantive rulemaking authority, such as the reference to "classifying corporations." And it failed to account

[78] Merrill & Watts, *supra* note 57, at 554-55 (2002); *see* 36 Fed. Reg. 23871 (Dec. 16, 1971).

[79] The Commission first experimented with legislative rulemaking in 1962, when the agency instituted a new procedure: Trade Regulation Rules. Merrill & Watts, *supra* note 57, at 551-553. "The actual effect of the rules was unclear because the FTC did not immediately attempt to bring any enforcement actions based on them." *Id.* at 553. In 1964, the agency promulgated its first major Trade Regulation Rule dealing with the unfair and deceptive practices surrounding the advertising and labeling of cigarettes. *Ibid.* Congress responded to this exercise of rulemaking by overriding the Commission's rule one year later, and "enact[ed] a weak labeling bill as a substitute for the strong restrictions contained in the FTC cigarette rule." *Id.* at 553.

[80] *National Petroleum Refiners Ass'n* v. *Fed. Trade Comm'n*, 340 F. Supp. 1343, 1345-49, 1350 (D.D.C. 1972).

[81] *National Petroleum Refiners Ass'n*, 482 F.2d at 698.

[82] *Id.* at 675-677.

[83] Merrill & Watts, *supra* note 57, at 557.

[85] *National Petroleum Refiners*, 482 F.2d at 686.

for the FTC Act's overall structure, wherein Section 6(g) is a minor part of a provision that grants the Commission no regulatory authority at all.

Finally, *National Petroleum Refiners* disregarded Congress's practice in granting agencies rulemaking authority in other statutes. At the time of the FTC Act's passage, Congress normally paired broad grants of rulemaking authority with specific sanctions applicable to violations of the agency's rule.[86] As discussed above, that was true of many statutes authorizing rulemaking by the Commission prior to the D.C. Circuit's decision. By contrast, Section 6 of the FTC Act provided no specific sanction for violating any rules issued under Section 6(g). In fact, Congress acted within two years of the *National Petroleum Refiners* decision to clearly authorize substantive "unfair and deceptive acts or practices" regulations through the Magnuson-Moss Act, without providing similar authority for "unfair methods of competition."

Notably, although the Commission now invokes *National Petroleum Refiners* as a clear source of substantive rulemaking authority, the Commission did not attempt to issue a substantive competition rule in the half-century after that decision was issued. For the last 50 years, the Commission has not been willing to rely on *National Petroleum Refiners* and test the extent of its rulemaking authority. The rule at issue in *National Petroleum Refiners* thus remains the FTC's only competition rulemaking in more than a century.[87] Further, the Commission has never attempted to write a standalone competition rule, as the rule at issue in *National Petroleum Refiners* relied on the Commission's authority to proscribe both "unfair methods of competition" and "unfair or deceptive acts and practices."

B. The Commission Lacks The Authority To Decree That All Worker Noncompete Agreements Are Unfair.

Section 5 proscribes "unfair methods of competition."[88] Although that phrase covers a range of anticompetitive acts and agreements, it cannot be read to include all worker noncompete agreements. Worker noncompete agreements were commonly enforced at the time Congress enacted the FTC Act. Numerous court decisions have

[86] *See* Merrill & Watts, *supra* note 57, at 472.

[87] *See Loving*, 742 F.3d at 1021 ("And in the circumstances of this case, we find it rather telling that the IRS had never before maintained that it possessed this authority."); *Fin. Plan. Ass'n*, 482 F.3d at 490–91; *see also West Virginia*, 142 S. Ct. at 2609 ("[B]oth separation of powers principles and a practical understanding of legislative intent make us reluctant to read into ambiguous statutory text the delegation claimed to be lurking there. To convince us otherwise, something more than a merely plausible textual basis for the agency action is necessary. The agency instead must point to clear congressional authorization for the power it claims.") (internal citations omitted) (internal quotation marks omitted).

[88] 15 U.S.C. § 45(a).

recognized the procompetitive benefits of such agreements and have upheld them against challenges under the FTC Act and the Sherman Act. Were there any doubt, as with the Commission's interpretation of Section 6(g), its claim of sweeping authority to condemn all worker noncompetes—regardless of whether the individual is a partner or owner, the breadth of the restriction, the nature of the worker's job, or the business interests in enforcing the agreement—does not survive scrutiny under the major-questions doctrine.

To defend the position that *all* worker noncompetes are "unfair," the Commission's proposal invokes its recent Policy Statement on Section 5.[89] The Chamber has previously raised concerns about the Commission's Policy Statement, which marks a fundamental departure from the agency's previous policy and purports to allow the Commission "to deem any business conduct 'unfair' without any showing of harm to consumers, anticompetitive intent, market power, or market definition."[90] The proposed Noncompete Rule highlights each of those concerns. It also demonstrates that, if the Commission is right about the meaning of "unfair methods of competition," then Section 5 constitutes an unconstitutional delegation of legislative power to the Executive Branch.

History, precedent, and ordinary tools of statutory interpretation undercut the Commission's view that worker noncompetes are categorically "unfair." Given the lack of support for the Commission's legal position—and the clear constitutional problems raised by its interpretation—the Commission should reconsider the legal analysis of Section 5 reflected in the proposed Noncompete Rule.

1. The history of noncompete agreements

Noncompete agreements have been known to the common law since the 15th century[91] and have been present in the United States since the Founding.[92] As the Commission's proposal recognizes, state courts have long applied case-specific tests to determine when noncompete agreements are enforceable. When Congress enacted the FTC Act in 1914, covenants "by an . . . agent not to compete with his . . . employer

91 *See Bradford* v. *New York Times Co.*, 501 F.2d 51, 60 (2d Cir. 1974). The first recorded decision involving a noncompete agreement in the common law appears to be *Dyer's Case* in 1414. Y.B. 2 Hen. V, f.5, pl. (1414).

92 *See Pierce* v. *Fuller*, 8 Mass. 223 (1811) (finding valid an early noncompete agreement involving stage coaches between Boston and Providence).

after the expiration of his time to service" were "generally upheld as valid."[93] Courts presume that Congress was well aware of this settled law when it passed the FTC Act.[94] Yet there is no indication that Congress intended the Act to categorically ban as an "unfair method of competition" what was at that time a common (and lawful) business practice.

Precedent also confirms that noncompetes are not categorically "unfair." Courts applying the antitrust laws have recognized that noncompete agreements "often serve legitimate business concerns such as preserving trade secrets and protecting investments in personnel."[95] As a result, those agreements are assessed under the case-specific "rule of reason," rather than through categorical per se rules.[96] In fact, the only litigated decision challenging a noncompete under Section 5 found that the agreement was lawful.[97] Although the Commission acknowledges the weight of authority holding that noncompetes do not invariably violate antitrust laws, they point to no authority going the other way.[98]

The Commission's proposal to categorically ban worker noncompete agreements is a stark departure from this body of law. The Supreme Court has long cautioned against creating new *per se* rules in competition law, noting "[i]t is only after considerable experience with certain business relationships that courts classify them as per se violations of the Sherman Act."[99] Here, not only is there no "considerable experience" demonstrating that noncompete agreements are anticompetitive, there is a deep and longstanding body of state law suggesting the opposite.

2. Longstanding state regulation of noncompete agreements

The Commission's interpretation of Section 5 is also incompatible with bedrock principles of federalism. If Congress "intends to alter the usual constitutional balance

between the States and the Federal government," it must be "unmistakably clear."[100] That principle is particularly apt when an agency's regulation would disrupt areas of "traditional state regulation."[101]

As discussed above, every State has developed its own body of statutory and case law to determine the enforceability of noncompete agreements.[102] Those state-law regimes reflect specific judgments about how best to weigh the interests of workers, employers, and the public at large. Although some States have adopted a restrictive approach to worker noncompete agreements,[103] others are more permissive.[104] In fact, many state-law decisions address the very same concerns that motivate the Commission's proposal. State noncompete laws vary based on the occupation of the worker at issue,[105] and many decisions distinguish between noncompetes that restrict higher-paid and lower-paid workers.[106] And some states continue experimenting, choosing to move towards greater enforceability of noncompetes. In 2011, Georgia passed the Restrictive Covenants in Contracts Act, making noncompete agreements entered into after passage of the Act generally enforceable by statute. Ga. Code Ann. § 13-8-50. The Act does not apply to noncompetes entered into before 2011, which continue to be subject to greater scrutiny.[107] Critically, nearly every state recognizes that worker noncompetes are beneficial in some circumstances and can serve a range of legitimate and procompetitive purposes. *Supra*, at Section I.B.1.[108]

Gomulkiewicz, *Leaky Covenants-Not-to-Compete as the*

The Commission recognized all of this in its Proposed Rule, noting both the states' longstanding regulation of worker noncompete agreements and the tremendous variety of regulatory approaches.[109] But the Commission's rule nonetheless seeks to federalize a huge swath of state contract law. Although it is true that both States and the federal government have long exercised power over competition, the federal antitrust laws have not historically been used to challenge ordinary employment and commercial agreements. Instead, antitrust enforcement in the labor market has focused on agreements among competing employers. Before adopting a rule that would fundamentally reshape the federal-state balance of power over longstanding contractual agreements between employers and their employees, the Commission should be assured that Congress has approved of its policy. Congress has never provided such authorization, let alone clearly.

3. Major-questions doctrine

As with the Commission's claim of newfound rulemaking authority under Section 6(g), its attempt to categorically ban all worker noncompetes under Section 5 also violates the major-questions doctrine. The Commission's proposed ban would clearly have "vast economic and political significance."[110] If the proposed Noncompete Rule is adopted, employers and workers across the United States, in every sector of the economy, would be forced to rescind noncompete clauses. And the proposed Rule would require employers to engage in a costly effort to provide notice regarding existing noncompetes to all current and former employees.[111] Given the sheer magnitude of the Rule's implications, the Commission's interpretation "falls comfortably within the class of authorizations that [courts] have been reluctant to read into ambiguous statutory text."[112]

The language "unfair methods of competition" does not clearly authorize a categorical ban on worker noncompete agreements. The Supreme Court's recent decision in *NFIB* v. *OSHA* is instructive. In response to the Covid-19 pandemic, the Occupational Safety and Health Administration invoked its broad authority to issue "emergency temporary standards" to promulgate a rule requiring employers to either

[112] *Utility Air Regulatory Grp.*, 573 U.S. at 324.

mandate the vaccination of their workforce or impose weekly testing protocols. Applying the major-questions doctrine, the Supreme Court held that the broad words of the statute did not "plainly authorize[]" the agency's actions.[113] Although OSHA had the authority to "regulate [Covid-19] risks associated with working in particularly crowded or cramped environments," it could not use that authority to regulate other workplaces where "the danger . . . differs in both degree and kind."[114] The same logic applies here: the Commission's proposal tries to exploit ambiguity in a vague phrase like "unfair methods of competition" to pursue an unprecedented policy of vast significance. Even assuming the Commission may challenge particular noncompetes as injurious to competition, it may not impose a blanket ban on noncompete agreements.

Two additional considerations confirm that Congress should not be understood to have given the Commission the authority to issue a sweeping, nationwide ban on noncompete agreements. First, the Commission's policy suffers from "a lack of historical precedent."[115] Never before has the Commission taken the position that worker noncompete agreements are unlawful regardless of their terms or business justifications. Nor has the Commission ever sought to ban a common business practice as an "unfair method of competition" without any opportunity for the defendant to show that the benefits of the agreement outweigh the harms.[116] In both respects, the proposed Noncompete Rule is entirely unprecedented.

Second, Congress recently considered and rejected legislation to address worker noncompete agreements at the federal level.[117] And earlier this year, members of the Senate and House from both parties reintroduced the Workforce Mobility Act, which would have limited the use of worker noncompetes. That legislation, which has repeatedly been proposed for years without receiving a vote, would give the Commission authority to enforce violations of the statute.[118] Notably, the legislation would empower the Commission by designating worker noncompetes as "unfair or deceptive acts and

[114] *Id.* at 666.

[115] *Ibid.* (citing *Free Enterprise Fund* v. *Pub. Co. Accounting Oversight Bd.*, 561 U.S. 477, 505 (2010)).

[116] Apart from suits alleging per se violations of the antitrust laws, the Commission has previously argued that business practices should be "*presumptively* unlawful," thereby giving the defendants the chance to demonstrate that the challenged agreement was valid in their particular circumstances. *Fed. Trade Comm'n* v. *Actavis, Inc.*, 570 U.S. 136, 159 (2013).

[117] *See, e.g.*, Restoring Workers' Rights Act of 2022, H.R. 8755, 117th Cong. § 2 (2022); Freedom To Compete Act of 2019, S.124, 116th Cong. § 3 (2019).

[118] Workforce Mobility Act of 2023, S. 220, H.R. 731, 118th Cong., 1st Sess., §§ 3, 6.

practices," not as "unfair methods of competition."[119] This legislation is strong evidence both that the Commission currently lacks the power to regulate worker noncompetes and that the Commission is wrong to think about those agreements as "unfair methods of competition."

Taken together, the Commission's interpretation of Section 5 in the proposed Noncompete Rule has all of the hallmarks of a major-questions case. The Commission is claiming the authority to fundamentally transform the economy in a way that improperly "intrude[s] into an area that is the particular domain of state law" and curtails the power of state governments; it is doing so without any historical precedent for its interpretation; and its proposal would achieve through regulatory fiat what Congress has consistently declined to accomplish through the legislative process.[120] The Commission should abandon its effort to do so unless and until Congress provides the necessary authorization.

4. Nondelegation doctrine

To support its novel view of Section 5, the Commission's proposal relies on its recent "Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act."[121] That Policy Statement marked a fundamental departure from longstanding agency policy, which "had been adopted on a bipartisan basis by the Commission six years prior because it embodied a sound approach to antitrust law that reflected decades of legal precedent and economic learning."[122] According to the Policy Statement, it is now the Commission's view that

---

[119] *Id.* § 6.

[120] *West Virginia*, 142 S. Ct. at 2621 (Gorsuch, J, concurring) (internal citation omitted). Justice Gorsuch's concurrence in *West Virginia* identified three factors to determine when the major-questions doctrine should apply: first, if Congress has " 'considered and rejected' bills authorizing something akin to the agency's proposed course of action"; second, if the agency "seeks to regulate 'a significant portion of the American economy'"; and finally, if the agency's proposed action "seeks to 'intrud[e] into an area that is the particular domain of state law." *Id.* at 2620-21. As shown herein, the Commission's interpretation of Section 5 checks all three boxes.

[121] Fed. Trade Comm'n, Comm'n File No. P221202 (Nov. 10, 2022), https://www.ftc.gov/system/files/ftc_gov/pdf/P221202Section5PolicyStatement.pdf (hereinafter policy statement).

[122] Wilson Dissent, *supra* note 64, at 1.

"Section 5 reaches beyond the Sherman and Clayton Acts to encompass various types of unfair conduct that tend to negatively affect competitive conditions."[123]

As the Chamber has previously explained, the Section 5 Policy Statement provides very little guidance on what conduct violates the FTC Act. For instance, it states that conduct is "unfair" when it "goes beyond competition on the merits" and "tends to foreclose or impair the opportunities of market participants."[124] The Commission's Policy Statement has already generated considerable uncertainty for the Chamber and its members and has chilled procompetitive conduct in the marketplace.

As the Proposed Rule demonstrates, the Section 5 Policy Statement also raises grave constitutional concerns. The Commission's view that worker noncompetes are categorically unlawful runs counter to centuries of precedent recognizing that some noncompete agreements serve legitimate business interests. Yet the Commission believes it can nonetheless prohibit all of those agreements—as well as any other agreement that "effectively precludes [a] worker from working in the same field after the conclusion of the worker's employment with the employer"—under Section 5.[125] If that is correct, and the Commission can condemn ordinary business practices as "unfair methods of competition," then Section 5 of the FTC Act reflects an unconstitutional delegation of power from Congress to the Executive Branch.

A statutory delegation to an executive agency is constitutional only so "long as Congress lays down by legislative act an intelligible principle" to cabin the agency's discretion.[126] "[A] nondelegation inquiry always begins (and often almost ends) with statutory interpretation."[127] If the term "unfair methods of competition" is not understood in light of history and precedent, and if the Commission can condemn any business practice as unfair based on nothing more than "nefarious-sounding adjectives,"[128] then there is effectively no limit to what the Commission may do under Section 5.[129] To the extent there is any doubt about the proper meaning of "unfair

methods of competition," the Commission should interpret the statute to avoid an unlawful delegation of legislative power.

5. Retroactivity

The Commission's proposal also raises significant constitutional and fairness concerns due to its sweeping retroactivity. As the Supreme Court has noted, "a statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms."[130] That presumption recognizes that "retroactivity is generally disfavored in the law, in accordance with 'fundamental notions of justice' that have been recognized throughout history."[131] In particular, retroactively applicable regulations may violate the Constitution when they severely disrupt settled expectations.[132]

The Commission's categorical ban would impose considerable retroactive consequences. The Proposed Rule not only prohibits virtually all noncompete clauses going forward, it seeks to unilaterally void almost every existing noncompete agreement and force employers to notify current and former employees of the now-invalidated clauses.[133] In doing so, the Proposed Rule undercuts strong reliance interests for both employers and workers, as well as buyers and sellers in the context of negotiated transactions, and undermines the benefit of the bargain obtained by parties for contracts agreed to in the past. If the Proposed Rule goes into effect, employers may lose the benefit of noncompete agreements they already paid for, while workers may be asked to return severance payments or other compensation that was conditioned on agreeing to a noncompete.[134]

[133] 88 Fed. Reg. at 3535.

[134] Forum, *supra* note 6, at 42 (Testimony of Eric Poggemiller) ("If these contracts are rescinded, rescission typically restores the parties to the position that they occupied prior to the contract. So would the employer then be entitled to sue the employee to require a repayment of any consideration that's granted?").

The Commission asserts that the Proposed Rule "would not apply retroactively" because all an employer must do is rescind existing noncompete agreements by a compliance date in the future.[135] But that argument is a complete *non sequitur*. Noncompete agreements in existence today reflect promises made and transactions negotiated in the past. For instance, an executive who agreed to receive additional compensation from his former employer on the condition that he not work for a competitor would be able to ignore his end of the bargain following the Commission's categorical ban, even though his former employer had already satisfied its part of the deal. Given the significant retroactive consequences of the proposal, the Commission should wait for a clear statement from Congress confirming its authority to invalidate tens of millions of preexisting contracts before proceeding with its Noncompete Rule.

C. The Commission's Proposed Rule Is Poorly Reasoned.

Even if the Commission had the legal authority to issue a rule outlawing noncompete agreements, the Administrative Procedure Act requires that it do so only as the result of a thorough and well-reasoned decision-making process. The Commission's proposal does not meet that standard for at least five reasons. First, the Commission drastically underestimates the costs of its proposal by ignoring or minimizing the business justifications for noncompete agreements and by erroneously concluding that the benefits of noncompetes—including intellectual-property and goodwill protection and investments in the labor force—can be achieved through other means. Second, the Commission overstates the benefits of the Noncompete Rule. Contrary to the Commission's assertions, the economic literature on noncompetes paints a complicated picture, and includes a number of studies demonstrating that noncompete agreements may advance competition and benefit workers. Third, the Commission fails to justify the considerable breadth of the Noncompete Rule—which applies to independent contractors, exempt organizations, and most agreements connected to the sale of a business—or to account for the significant uncertainty created by many aspects of the Noncompete Rule, such as its definition of "de facto" noncompete agreements. Fourth, the Commission's proposal does not comply with the requirement to consider burdens on small business under the Regulatory Flexibility Act. Fifth, the Commission's proposal conflicts with other federal laws that recognize or rely on the validity of noncompete agreements.

1. The Commission underestimates the costs of its categorical ban.

The Commission's proposal distorts the available evidence, leaning heavily on inconclusive, ungeneralizable studies, while disregarding more robust research showing that noncompetes can benefit workers and competition. In the process, the Commission greatly discounts the costs of its proposed categorical ban, an error that

[135] 88 Fed. Reg. at 3512.

undermines the entire basis for the Commission's rule. As Commissioner Wilson explained in dissent, "the Commission's decision to rely on cherry-picking evidence that conforms to [a predetermined] narrative provide[s] little confidence in the integrity of the rulemaking process or the ultimate outcome."[136]

First, the Commission gives short shrift to research showing the value of noncompetes. The Commission devotes only four paragraphs to describing the many ways in which noncompete agreements can benefit workers and businesses—a discussion that pales in comparison to the many pages discussing their potential harms. As a result, the Commission overlooks important evidence.[137] One recent study not cited by the Commission concluded that noncompete agreements are "related to increases in firm-sponsored training, riskier [research and development] investments, and increases in firm value and the likelihood of acquisition."[138] Another study emphasizes the importance of noncompete agreements to reducing employee turnover, which can cost businesses "approximately twenty five percent of an employee's annual salary."[139] And one of the studies relied on by the Commission found that "total compensation and incentive pay are higher if CEOs have more enforceable [noncompete agreements]," even though the Commission nowhere mentions that conclusion.[140] In addition to those studies, commenters at the Commission's recent forum on noncompete agreements also explained that "[i]n many states where non-competes are banned, [their] members have problems with recruitment and retention," as well as "problems with proprietary information."[141]

The Commission's proposal failed to give these studies their proper weight. Even though the proposal makes passing reference to research that undermines its ban, it simply asserts that "the evidence that noncompete clauses benefit workers or consumers is scant."[142] Given the body of research showing that noncompetes provide real benefits, that conclusion is not consistent with the existing literature. Indeed, as

---

[142] 88 Fed. Reg. at 3508.

discussed above, courts have repeatedly recognized the competitive benefits of noncompetes, finding that such benefits were "beyond question."[143]

Second, the Commission incorrectly assumes that businesses have alternative means of achieving the legitimate benefits of noncompete agreements. Specifically, it suggests that businesses could use nondisclosure agreements or lawsuits under state trade-secret law as a way to protect their confidential information if noncompete agreements were no longer available. But there are important differences between each of these tools that make nondisclosure agreements and trade secret laws poor substitutes for noncompetes. In particular, the confidential information that businesses may wish to protect is much broader than the scope of trade-secret law, so even if an employer took on the expense of pursuing trade-secret litigation, that alternative could still be inadequate.[144] Additionally, noncompete agreements are prophylactic; they are "used as a means of minimizing the potential for trade secret misappropriation by preventing an employee from working for a competitor or engaging in a competing enterprise" in the first place.[145]

Commenters at the Commission's forum highlighted those important distinctions, noting that noncompetes "provide a different kind of protection" from nondisclosure agreements.[146] In particular, the speakers emphasized that nondisclosures are inadequate because a worker "cannot excise [a company's] confidential information from her brain" and "knows what avenues [a] competitor should follow and what blind alleys it should avoid."[147] Thus a worker can use confidential information from a former employer to provide significant advantages to a competitor without truly violating the terms of a nondisclosure agreement.

Nondisclosure agreements and trade-secret violations are also difficult to prove and costly to litigate. By relying on noncompetes over nondisclosure agreements or trade-secret law, "employers avoid the difficulties of proving an actual or threatened misappropriation of trade secrets to secure an injunction," a costly and time-consuming process.[148] For example, to prove a typical trade-secret violation, an "employer must prove that the employee misappropriated trade secret information," which requires that the employer "separate its trade secrets from the employee's general skill and knowledge," and "prove that the employee took trade secrets through improper

[143] *Lektro-Vend Corp.*, 660 F.2d at 265.

[144] Noncompetes can also prevent the transfer of potentially sensitive technology and business secrets to foreign entities, thereby protecting the U.S. economy as a whole.

[145] Michael J. Garrison & John T. Wendt, *The Evolving Law of Employee Noncompete Agreements: Recent Trends and an Alternative Policy Approach*, 45 Am. Bus. L.J. 107, 117 (2008).

[146] Forum, *supra* note 6, at 8 (Testimony of Emily Glendinning).

[147] *Ibid.*

[148] Garrison & Wendt, *supra* note 145, at 117.

means."[149] Proving one, let alone both, of those features is no easy feat. Indeed, a recent survey suggests that the median cost of litigating a trade secret case is $4.1 million when between $10 million and $25 million is at risk and $7.4 million when more than $25 million is at risk.[150]

Moreover, some States make trade-secret suits even more difficult to prove by failing to apply the "inevitable disclosure" doctrine. That doctrine helps a plaintiff-former employer "prove a claim of trade secret misappropriation by demonstrating that defendant's new employment will inevitably lead him to rely on the plaintiff's trade secrets."[151] But many States do not accept that presumption, and thereby require an employer to prove that trade secrets were already used by a competitor before prevailing on its claim.[152]

The Commission's proposal does not meaningfully engage with these differences. The record compiled by the Commission "provides no evidence that" nondisclosure agreements or trade-secret protections "are effective substitutes for non-compete agreements," and the Commission "cites no instances where these mechanisms have been used effectively in lieu of non-compete clauses."[153] The Proposed Rule also fails to explain the widespread use of noncompete agreements today despite the availability of other mechanisms to protect employer information—particularly in States with robust trade-secret protections.[154] If noncompetes are as unnecessary as the Commission suggests, it is unlikely so many businesses would still rely on them.

The Commission's own proposal undermines its suggestion that businesses use nondisclosure agreements as viable alternatives to noncompetes. The proposed Noncompete Rule defines noncompetes to include "de facto non-compete clauses," a

[153] 88 Fed. Reg. at 3543.

[154] *Id.* at 3505 ("Trade secret law provides employers with an alternative means of protecting their investments in trade secrets.").

definition the Commission admits would sweep in many nondisclosure agreements.[155] The proposed Noncompete Rule therefore suggests that employers can avoid the costs of its ban by relying on nondisclosure agreements, while also conceding that its ban could prohibit those agreements as well.

Third, the Commission glosses over the costs to workers of its categorical ban. For example, the Commission estimates that "3.1% fewer workers would receive training in a given year, as a result of the proposed rule."[156] Although that decline in workforce training is problematic in its own right, there are reasons to question the Commission's analysis. The Commission's figures are based on a single study, which it then extrapolates across the entire workforce.[157] And the Commission's assessment of costs fails to discuss how the lack of employer-provided training will impact affected workers, including by increasing out-of-pocket training costs or by decreasing workers' competitiveness in the job market. The Commission also fails to consider other losses workers may experience in the face of a non-compete ban, such as lower compensation resulting from employers' reduced motivation to offer long-term incentive-based awards (*e.g.*, company stock).

The Commission also grossly underestimates the costs to businesses of implementing the Proposed Rule, particularly as they are forced to adopt more expensive and time-consuming methods to protect their valuable information. The Commission recognizes that "[f]irms may seek to update their contractual practices by expanding the scope of non-disclosure agreements (NDAs) or other contractual provisions to ensure that they are expansive enough to protect trade secrets and other valuable investments" (though the Commission also says such provisions could be deemed *de facto* noncompetes).[158] The Commission then estimates the total cost of updating those provisions will range from about $246 to $493 in lawyer fees per business.[159] That estimate fails to account for the costs to workers and employers

---

[155] *Id.* at 3482 (recognizing that "under the proposed definition of 'non-compete clause,' such covenants would be considered non-compete clauses where they are so unusually broad in scope that they function as such").

[156] *Id.* at 3529.

[157] *Id.* at 3529 n.504. The cited study, which "examines the effect of noncompete enforceability on training and wages," shows that "[a]n increase from non-enforcement to mean enforceability is associated with a 14% increase in training, which tends to be firm-sponsored and designed to upgrade or teach new skills." *Id.* at 3529 n.504 (citing Evan Starr, *Consider This: Training, Wages, and the Enforceability of Covenants Not to Compete* (May 24, 2018), https://ssrn.com/abstract=2556669).

[158] 88 Fed. Reg. at 3528.

[159] *Id.* at 3529. We arrive at this range for individual firms using the Commission's estimate. The Commission assumes that "the average firm that uses a non-compete clause employs the

based on increased reliance on nondisclosure litigation.[160] Such suits are costly to bring and very difficult to prove.[161] And the costs of complying with the Commission's proposed rule are magnified by the requirement to notify all current and former workers of rescinded noncompete agreements. Yet the Commission's cost-benefit analysis leaves out or underestimates many of those important costs.

The Proposed Rule also ignores the costs associated with businesses' inability to protect their confidential information, even when a non-disclosure agreement is in place. Under the Proposed Rule, employers will be powerless to prevent a key employee from using sensitive, confidential, and critical data or product knowledge to aid a competitor firm. While perhaps hard to calculate, these costs would be real and significant—the very reason firms use noncompetes in the first place. At a minimum, there will be *some* cost to protecting sensitive information, and the Proposed Rule wholly ignores that cost and does not even attempt to quantify it. And those costs will ultimately be borne both by employers who must protect their confidential information to succeed and by employees who rely on that success for their livelihood.

Finally, the Commission's proposal ignores the tax consequences of banning noncompetes. For tax purposes, "[a] covenant not to compete constitutes an intangible asset."[162] During acquisitions, companies typically record noncompete agreements as assets of the firm. But if those agreements are banned, firms would be required to write off those assets, leading to financial costs.

2. The Commission overestimates the benefits of its categorical ban.

The Commission's analysis of benefits attributable to its categorical ban also is deeply flawed. At various points in the rulemaking, the Commission relies on stale or limited data, without accounting for recent legal developments or contrary research. All

equivalent of four to eight hours of a lawyer's time" and thus "calculate[s] the total expenditure on updating contractual practices to range from $61.54*4*49.4%*6,102,412=$742.07 million to $61.54*8*49.4%*6,102,412=$1.48 billion." *Id.* Using these numbers, we find that the Commission is predicting an individual business will spend between $61.54*4 = $246.16 and $61.54*8= $492.32 on lawyers' fees.

160 Rosemary Scott, *FTC's Non-Compete Law Could Propel Rise in Trade Secrets Lawsuits*, BioSpace (Feb. 8, 2023), https://www.biospace.com/article/ftc-s-non-compete-law-could-propel-rise-in-trade-secrets-lawsuits-/.

161 *Ibid.* (noting that "when a plaintiff is presenting their case in court, they walk a tightrope between proving sensitive information has been shared and not revealing said information to the public," which is just one of the many difficulties plaintiffs face in bringing these cases).

162 *Lorvic Holdings, Inc.* v. *Commissioner of Internal Revenue*, 1998 WL 437287, at *7 (Tax Ct. 1998).

told, the limited evidence relied on by the Commission does not support its incredibly broad proposal.

First, the Commission's proposed rulemaking does not fully engage with contrary views. During its 2020 workshop on noncompete agreements, the Commission heard testimony that economic literature on noncompetes is "[s]till far from reaching a scientific standard for concluding [that noncompete agreements] are bad for overall welfare" and that "welfare tradeoffs are likely context-specific, and may be heterogeneous."[163] Yet the Commission never explains what has changed in recent years to allay those concerns.

Second, the Commission at numerous points draws major conclusions from stale and incomplete data. For instance, the Commission's top-line conclusion that "one in five American workers—or approximately 30 million workers—is bound by a non-compete clause," is based in large part on a single study from 2021.[164] According to the Commission, this study is entitled to considerable weight because it had "the broadest and likely the most representative coverage of the U.S. labor force."[165] But that paper based all of its findings on a survey conducted nearly a decade earlier.[166] Reliance on this old survey is particularly concerning because, as the Commission points out, "there is no consistent data available on the prevalence of non-compete clauses over time."[167] And that study was also based on a nonrepresentative online sample—a selection-bias issue the authors were careful to note in presenting their findings. The other estimates of the prevalence of noncompetes mentioned by the Commission suffer from limitations as well, either because they rely on unrepresentative samples[168] or cover only subsets of the labor force.[169] The unreliability of the Commission's estimate of the prevalence of noncompetes is important. If the Commission's estimate is too high, the Commission may be failing to account for recent state laws that have reduced the number of noncompete agreements and may be overestimating the benefits of its rule against the

status quo. On the other hand, if the Commission's estimate is too low, it may suggest that more businesses are relying on these agreements, leading to higher compliance costs than the Commission has anticipated if the Rule were to become effective.

The Commission similarly relies on stale and flawed data in its estimate of increased worker earnings. The Commission's analysis of that issue is primarily based on a 2020 economic study,[170] which apparently provides "the most direct estimate of the increase in workers' earnings given a prohibition on non-compete clauses."[171] But that study too relies on an outdated dataset examining noncompete enforceability between 1991 to 2014.[172] The same is true yet again of the Commission's reliance on another study to estimate that its ban would increase worker earnings by 1%. That study relied on case panel data from 1996, 2001, 2004, and 2008.[173] And when the Commission applied that 1% figure to each State to project the benefits of its Rule, it used state-law data that was fifteen years old.[174]

The Commission's failure to rely on more recent data is inconsistent with both its acknowledgment that the legal landscape for worker noncompetes is rapidly evolving and the sheer breadth of its proposed rule. The proposal notes that "States have been particularly active in restricting noncompete clauses in recent years,"[175] and that, of the twelve recent state statutes that restrict the use of noncompetes, "eleven were enacted

[173] 88 Fed. Reg. at 3522; Starr, *supra* note 157.

[174] 88 Fed. Reg. at 3523. Others have noted the errors in the Commission's analysis of worker earnings following its proposed ban. For instance, a recent article explained that all of the studies cited by the Commission to support its wage increase estimate suffer from an "inability to adequately measure employees' skills and relevant prior work experience." Stephen G. Bronars, *FTC Evidence that Non-Competes Reduce Earnings is Inconclusive*, Bloomberg Law (Mar. 7, 2023), https://news.bloomberglaw.com/us-law-week/ftc-evidence-that-non-competes-reduce-earnings-is-inconclusive. Because these studies do not actually compare the job qualifications of new hires at different levels of enforceability, it is impossible to "distinguish between an increase in competition and firms hiring slightly more experienced" workers post-ban. *Id.* In other words, because firms may have a preference to hire more experienced workers if noncompete agreements are unenforceable (meaning they cannot always protect their investments in worker training), any visibly higher earnings are actually related to firms hiring more qualified and skilled employees, not the result of a ban on noncompetes. *Id.*

[175] 88 Fed. Reg. at 3494.

in the past ten years."[176] By relying on studies of enforcement practices from decades ago, the Commission's analysis ignores the possibility that many of the expected benefits it attributes to its Noncompete Rule have already been realized through developments in state law. The authors of the 2014 survey relied on by the Commission put the point well: "When researchers opt to rely on an outmoded and inaccurate binary legal enforcement variable, they are, in effect, incorporating into their empirical analysis demonstrably false assumptions about state legal environments."[177]

The Commission's proposal tried to address this defect in its reasoning by acknowledging that because "some states have passed legislation causing non-compete clauses to be more difficult to enforce for subsets of their workforces, [a] prohibition on non-compete clauses today [would] have a *slightly lesser effect* than a prohibition would have had in 2014."[178] But the Commission's failure to consider more recent evidence does not just undermine its analysis at the margins; it calls into question the rationale for a categorical ban in the first place. Although an administrative agency may sometimes be forced to rely on outdated research, the APA demands that the agency's chosen policy go no further than the evidence can support. Here, the Commission has proposed a sweeping noncompete ban that will displace huge swaths of state law on a categorical basis. Yet the Commission has not pointed to any meaningful evidence evaluating the effects of current state laws on the costs and benefits of worker noncompetes.

The Commission's recent enforcement actions demonstrate the problem. At the same time the Commission proposed its categorical ban, it also announced three consent orders involving noncompete agreements.[179] One of those enforcement actions centered on noncompete agreements for a security company in Michigan that imposed very restrictive conditions on former security guards. But even before the Commission initiated its unprecedented action, a Michigan trial court had already held those agreements could not be enforced as a matter of state law.[180] As the state court explained, those agreements were "not legally reasonable in scope (100 miles), duration (two years) or the type of service (employment as a security guard) prohibited."[181] The

other two enforcement actions were brought against the largest U.S. manufacturers of glass food and beverage containers. Both of the companies had imposed extremely broad noncompetes on hundreds of employees.[182] According to the Commission, one company prevented former employees "from working for, owning, or being involved in any other way with any business in the United States" selling similar products.[183] The other was even broader, preventing former employees "from directly or indirectly performing" a similar service "for any business in the United States, Canada, or Mexico."[184] Both sets of agreements exemplify contracts that would be held unlawful under the common law because of their extremely broad geographic scope.[185] As those enforcement actions aptly demonstrate, a federal across-the-board ban is not necessary to address the Commission's concerns about noncompete agreements, and the Commission can hardly claim expertise in the area of noncompetes by cherry-picking a few extreme examples that would likely be invalid under any test.

Third, the Commission suggests that it has identified the benefits from the Proposed Rule through its "years of work on noncompetes."[186] But as Commissioner Wilson noted in her dissent, until the day before the proposed rulemaking was made public, "the Commission had announced no cases (and therefore had no experience and no evidence) to conclude that non-compete clauses harm competition in labor markets."[187] Even more troubling, "the only litigated FTC case challenging a non-compete clause found that a non-compete provision covering franchise dealers did *not* violate Section 5 of the FTC Act."[188] Although the Commission has also sponsored a series of workshops related to noncompetes, the expert views at those workshops also do not support a categorical ban. As discussed above, Professor Kurt Lavetti, the author of three studies cited in the proposed rulemaking, stated at a recent workshop that the economic literature is ''[s]till far from reaching a scientific standard for concluding [that non-compete agreements] are bad for overall welfare" and that there is no full understanding of "the distribution of effects on workers."[189] Given this record, the

Commission has no basis to rely on its experience in forecasting that the proposed rule will benefit workers and employers.

3. The Commission's categorical ban is overly broad and will generate considerable uncertainty.

The breadth and imprecision of the Noncompete Rule as currently proposed will create considerable costs for businesses and workers that the Commission has not adequately taken into account.[190] The Commission's proposed ban relies on vague definitions that sweep in a huge number of private contracts, and the evidence and analysis included in the proposal do not offer sufficient guidance regarding the rule's scope or the rationale for its application to many ordinary commercial agreements.

First, the Commission has defined noncompete agreements to include any "contractual term that is a *de facto* non-compete clause because it has the effect of prohibiting the worker from seeking or accepting work with a person or operating a business after the conclusion of the worker's employment with the employer."[191] As the Commission recognizes, that definition could apply to many agreements that do *not* prohibit employment at another firm or that only refer to nondisclosure obligations.[192] If the proposed Noncompete Rule were to go into effect as written, businesses would face extreme uncertainty and consequently be forced to spend considerable resources trying to identify *de facto* non-competes. And the uncertainty regarding that definition would have a chilling effect on research, development, and innovation, causing employers to abandon agreements that protect their confidential information out of fear of unprecedented enforcement actions by the Commission. The Commission has not accounted for the costs of this uncertainty in its proposal.

Second, the Commission's categorical ban would apply to high-income workers, senior executives, partners, and owners of organizations. The Commission's own proposal notes that noncompete agreements are not exploitative or coercive in those contexts in part because "many senior executives negotiate their noncompete clauses

[192] *Id.* at 3509-3510 (stating that "a covenant between an employer and a worker that requires the worker to pay the employer or a third-party entity for training costs if the worker's employment terminates within a specified time period, where the required payment is not reasonably related to the costs the employer incurred for training the worker," would be a *de facto* noncompete).

with the assistance of expert counsel."[193] And the proposal cites research demonstrating that the increased enforcement of noncompete agreements is associated with wage increases for highly skilled workers.[194] Therefore, even taking the Commission's proposal at face value, a categorical ban on noncompete agreements for higher-income workers is not justified by the evidence.

Third, the Commission has defined "worker" to include "a natural person who works, whether paid or unpaid" for "any natural person, partnership, corporation, association, or other legal entity, including any person acting under color or authority of State law."[195] The Commission's definition reaches employees, independent contractors, and arguably partners and owners.[196] That definition is inconsistent with the arguments the Commission offers for its categorical ban. The Proposed Rule repeatedly notes abusive or oppressive practices involving noncompete agreements in employment relationships, particularly in the context of entry-level or low-wage employees. But partners, owners, and independent contractors do not fit this paradigm and their engagements exist outside of the employer-employee relationship.[197] Partners or owners enjoy a position of bargaining power and information symmetry that makes restrictions on competition reasonable and pro-competitive. And independent contractors will frequently have an economic incentive to negotiate with the firms that engage them. The Commission did not consider these salient differences in its proposal, nor did it cite any evidence about the effect of noncompete agreements on independent contractors. Instead, it asserted that it was including independent contractors in its rule out of concern that an employee-only ban would lead employers to misclassify their workers under federal law.[198] But the Commission cannot justify its ban on noncompete agreements for independent contractors based on mere speculation employers might violate other laws.

Fourth, the Commission's proposed Noncompete Rule would apply to noncompete agreements included in the sale of a business, so long as a worker holds less than a 25% stake in the business being sold.[199] No State has limited noncompete

[199] *Id.* at 3515.

agreements so drastically in that context. California, for example, enforces any noncompete agreement involved in the sale of a business, regardless of ownership stake.[200] Under the Commission's proposal, noncompete commitments paid for as part of the sale of a business would be invalid for many partnerships and closely held corporations, even though those agreements have long been an important part of commercial transactions. Sellers of a business frequently obtain material financial benefits in a transaction at substantially lower levels of ownership than 25%, and buyers have valid commercial interests in protecting the value of the acquired business through a noncompete. The Commission's proposal is likely to have a chilling effect on the acquisition of partnerships and closely held companies. Although the Commission notes that its 25% threshold is necessary to protect "a few entrepreneurs sharing ownership interest in a startup [that] sell their firm," it makes no attempt to explain why an arbitrary figure of 25% is preferable to a lower threshold.[201] And the Commission fails to account for the obvious fact that the sale of a business does not typically involve unequal bargaining power or coercion.

Fifth, it is unclear whether the definition of noncompete agreements in the Proposed Rule sweeps in forfeiture-for-competition arrangements and clawback provisions typically included in the compensation and benefits programs for highly paid workers. Those provisions "condition an employee's receipt of certain benefits [such as stock options or other compensation] on that employee's promise not to compete with the former employer" for a period of time.[202] By their plain terms, those agreements do not prevent a worker from accepting any employment whatsoever. Instead, the only consequence of taking new employment with a competitor is forfeiting (or being obligated to repay) a bonus, a nonqualified retirement benefit, or other supplementary compensation.[203] The Commission has not explained how such forfeiture or clawback provisions (some of which are governed by the federal Employee Retirement Income Security Act) could harm competition, nor has it accounted for the costs of its ban to workers who have negotiated for increased compensation through those arrangements.

---

[200] Noncompete agreements are permitted in California if the clause is executed in conjunction with the dissolution or sale of a business entity by (i) business owners, (ii) members of limited liability companies, or (iii) partners in a partnership. *See* Cal. Bus. & Prof. Code §§ 16601, 16602, 16602.5.

[201] 88 Fed. Reg. at 3510.

[202] Daniel J. Raker, *A Lower Level of Scrutiny? New Alternatives for an Effective Restraint on Competitive Activity*, 39 Loy. U. Chi. L.J. 751, 751 (2008). Apart from forfeiture-for-competition clauses, the Proposed Rule may also sweep in agreements that allow a "worker" to join a competitor upon the payment of a reasonable liquidated damages amount to compensate an employer for damages resulting from the competitive activity.

[203] *Ibid*.

Sixth, the proposal creates uncertainty and unfairness for employers that compete with businesses outside the Commission's jurisdiction. The Commission lacks the authority to regulate non-profit employers, as well as certain firms from various sectors of the economy.[204] As a result, the proposed ban on noncompete agreements will not apply to those organizations. But many employers within the Commission's jurisdiction actively compete with exempt organizations. For instance, a for-profit hospital may compete with a non-profit hospital. Under the Commission's rule, the exempt businesses could require noncompete agreements from their workforce, while the non-exempt business could not.[205] Given the data suggesting that noncompete agreements are associated with increased training and innovation, that disparity will give some employers an unfair competitive advantage.[206] This unfairness would be greatly reduced if the Commission challenged noncompete agreements case by case. But the proposal's categorical ban will inevitably create winners and losers across a large number of industries where the Commission does not have the authority to regulate every competitor in the market.

For all of those reasons, the Commission's across-the-board rule is both overbroad and imprecise. Both concerns could be addressed by challenging specific noncompete agreements on a case-by-case basis through the adjudicatory procedures created by the FTC Act, rather than through a rulemaking. Yet the Commission's proposal does not discuss its authority to engage in adjudication, nor does it explain why it believes rulemaking is preferable to adjudication in this context.

4. The Commission's consideration of burdens on small businesses lacked rigor.

The Regulatory Flexibility Act requires the Commission to consider effects on small businesses as part of its rulemaking. Although the Commission acknowledged this obligation in its proposal, it concluded that the Noncompete Rule was not expected

---

[204] 88 Fed. Reg. at 3510 (citing 15 U.S.C. §§ 44 and 45(a)(2)).

[205] As one commenter at the Commission's public forum pointed out, "the non-compete ban would apply to some 20% of hospitals across the country that [are] tax paying hospitals. But the ban would not apply to 80% of hospitals in this country that are tax-exempt." Forum, *supra* note 6, at 29-30 (Testimony of Kathleen Tenoever). That commenter further explained, "[t]his uneven playing field between tax paying and tax-exempt hospitals is illogical" and it would also "create significant unintended distortions in the competitive playing field" and "create fundamentally different rules of the game for different entities in the same industry based solely on tax status." *Id.* at 30.

[206] *Supra*, at 26-27.

to "have significant impact on a substantial number of small entities."[207] That conclusion is obviously wrong.

First, the Commission's estimate as to the number of small businesses that would be burdened by the Rule was based on a single, incomplete study.[208] That study "only counted firms with no union members who said all employees signed noncompetes" and restricted the survey population to "private-sector business establishments of 50 or more employees."[209] Reliance on one incomplete study to calculate the impact on small businesses risks significantly undercounting the number of firms that will need to comply with the Noncompete Rule.

Second, the Commission's estimate of projected small business costs ignores important considerations. The Commission's cost estimate assumes between four and eight hours of a lawyer's time to ensure compliance (calculated as $723.7 million and $1.45 billion, respectively).[210] But as discussed above, the Noncompete Rule would likely trigger new litigation costs for small businesses forced to rely on trade-secret protections, new costs related to businesses' ability to satisfy the demanding standards for injunctive relief, and a bevy of associated costs related to lost business relationships and ideas. The Commission barely mentions this concern in another part of the rulemaking, stating it is merely "possible" that litigation costs will increase, and the "Commission is not aware of any evidence" to measure this change.[211] As one industry report notes, the Commission's categorical ban will "force biotech companies to find another way to protect themselves against the unlawful sharing of confidential information," likely through the increased use of trade-secret litigation.[212] As that report recognizes, noncompetes are critical to small start-ups in the biotech and other tech sectors and allow them to protect their intellectual property, which may be their defining asset. Eliminating noncompetes for these firms would prevent them from developing and expanding their businesses, and may deal a catastrophic blow if employees with their most important secrets and IP could walk out the door at any time.[213] And

[210] 88 Fed. Reg. at 3533.

[211] *Id.* at 3530.

[212] Scott, *supra* note 154.

[213] *See* Forum, *supra* note 6, at 47 (Testimony of Sam Westgate) ("We are deeply concerned that if non-compete agreements are not allowed for key employees, the revolving door for those employees could eventually force smaller companies out of business, as they're constantly training new competition, and sensitive internal information is readily available to competitors.

preventing small businesses from recording the value of their noncompete agreements as intangible assets of the firm may significantly diminish the firm's value to potential buyers. The Commission is required to consider those costs to small businesses under the Regulatory Flexibility Act.

Notably, the U.S. Small Business Administration's Office of Advocacy, which is tasked with "represent[ing] the views of small entities before federal agencies and Congress," recently noted its opposition to the Commission's Proposed Rule.[214] The Office of Advocacy explained that the Commission ignored certain costs associated with its proposal, including "the costs of hiring additional legal resources" and "hiring and retaining workers, which some small entities are currently struggling with."[215] It also disagreed with the Commission's "universal ban" and encouraged a more nuanced and targeted approach.[216] This call for caution from another independent agency in the Executive Branch should give the Commission serious pause before it charges ahead with a noncompete ban that will significantly alter the ability of small businesses to compete.

5. The Commission's categorical ban conflicts with other federal laws.

Many aspects of federal law recognize the benefits of noncompete agreements. First, the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), of which the United States is a signatory, ensures that "natural and legal persons" have the right to protect commercially valuable secrets through contract law.[217] The Commission's categorical ban would undermine the United States' ability to meet that obligation. Second, the Tax Code recognizes that payments made to a former employee for "refraining from performing services" should not be treated as a bonus subject to higher tax requirements.[218] That policy presumes that some employees will receive adequate consideration for an agreement not to compete, apart from the compensation they received for performing their job. But the Commission's categorical ban would prevent workers from bargaining for that pay. Third, another provision of the federal antitrust laws, Section 8 of the Clayton Act, prohibits simultaneous service as a director

[217] TRIPS, art. 39(2).

[218] 26 C.F.R. § 1.280G-1.

or officer of two corporations that compete with one another. Under the Commission's rule, a company might violate Section 5 of the FTC Act by simply including a provision in an officer's contract requiring compliance with the Clayton Act. Each of those conflicts would be avoided by a more balanced position that singles out abusive noncompete agreements. If the Commission continues with a categorical ban, those conflicts are unavoidable.

D. The Commission Should Abandon or Substantially Revise The Proposed Rule.

The Commission lacks the authority to issue rules respecting unfair methods of competition. And Section 5 does not authorize the Commission to issue categorical bans on noncompete agreements. For those reasons, the Commission should abandon its rule. But if the Commission decides to move forward with rulemaking to address noncompetes, there are a number of alternatives it should consider.

First, the Commission should consider issuing a rule under its Section 5 authority related to unfair and deceptive acts and practices. Through the Magnuson-Moss Act, Congress has authorized Commission rulemaking to address consumer protection, and has required the Commission to follow rigorous procedures when crafting rules in that area. The Commission could utilize those procedures to explore a rule requiring greater transparency around noncompete agreements, which would ensure that employees know about these restrictions before accepting a job.

Second, setting to the side the Commission's legal authority, the Commission should revise the definition of "non-compete clause" to exclude *de facto* noncompetes. As explained above, that unbounded definition will create considerable uncertainty about the scope of the Commission's proposed rule and will inevitably sweep in a large number of agreements that do not implicate any of the concerns noted by the Commission. Moreover, the Commission's decision to include *de facto* noncompetes undermines its argument that the benefits of its proposed rule outweigh the costs. The research relied on by the Commission is focused on contractual terms that are clearly noncompetes, not contractual terms that in some way "ha[ve] the effect of prohibiting the worker from seeking or accepting work with a person or operating a business after the conclusion of the worker's employment."[219] As such, even if the Commission's view of the evidence were correct, it would not support a definition that includes *de facto* noncompetes.

Third, the Commission should also consider any and all alternatives to limit the Rule's scope. Those limits would include the following, which are not mutually exclusive:

---

[219] 88 Fed. Reg. at 3509.

- An amendment to apply the noncompete rule only to new agreements rather than agreements that are already in effect;
- An amendment to the rule's definition of "worker" to exclude independent contractors, partners, and owners;
- An amendment adding an income threshold to allow noncompete agreements for highly paid workers and/or corporate officers;
- An amendment allowing noncompete agreements that are reasonable in scope (duration, geography, etc.);
- An exemption for agreements that involve the sale of a business or equity in a company, regardless of ownership level;
- An exemption for forfeiture-for-competition agreements or agreements that allow a worker to join a competitor upon payment of a reasonable liquidated damages amount, which do not prevent workers from seeking employment with a competitor;
- An exemption permitting noncompete agreements associated with severance, retirement, or garden leave payments; and
- An exemption permitting noncompete agreements associated with intellectual property or confidential business information where the agreement is used in conjunction with other restrictive covenants.

Even with those limitations, the Rule would still exceed the Commission's statutory authority and may impose costs that cannot be justified by the Rule's estimated benefits. But any more limited alternative is preferable to the categorical ban proposed by the Commission. Given the number and complexity of available alternatives, the Commission should also take more time to fully analyze each one to determine if it is preferable to existing regulation.

If the Commission determines that the Proposed Rule requires significant changes, the Commission will likely need to resubmit the rule for public comment. Under the APA, a notice of proposed rulemaking must "provide sufficient factual detail and rationale for the rule to permit interested parties to comment meaningfully."[220] That requirement "improves the quality of agency rulemaking by ensuring that agency regulations will be tested by exposure to diverse public comment."[221] When an agency's final rule significantly departs from what was proposed or includes detailed regulations

[220] *United States Telecom Ass'n* v. *Fed. Commc'ns Comm'n*, 825 F.3d 674, 700 (D.C. Cir. 2016) (internal quotation marks omitted).

[221] *Small Refiner Lead Phase-Down Task Force* v. *Envt'l Protection Agency*, 705 F.2d 506, 547 (D.C. Cir. 1983) (internal quotation marks omitted).

that were not adequately previewed in the initial proposal, a new round of comment is necessary to afford interested parties an opportunity to participate.[222]

Although the Commission has stated that it is considering certain alternatives, many of the other alternatives listed above were not mentioned in its proposal. And even though the Commission discussed in broad strokes the idea of adding a rebuttable presumption or income threshold, the APA requires agencies to "describe the range of alternatives being considered with reasonable specificity."[223] "Otherwise, interested parties will not know what to comment on, and notice will not lead to better-informed agency decision-making."[224] For that reason, the mere suggestion of an income threshold or rebuttable presumption does not provide the public with a specific range of alternatives to study and submit reasoned comments. For example, the costs and benefits of an income threshold designed to protect only low-wage workers (*e.g.*, income threshold at 250% of the federal poverty level) would be very different from a threshold meant to apply to every worker except senior executives (*e.g.*, income threshold set at $500,000). Given the significant implications of a nationwide noncompete ban of any form and the legal requirement to provide meaningful opportunities for participation, the Commission should seek additional comments from the public if it makes important changes to the Proposed Rule.
